Replace range of characters with string.

**Parameters:**

- i1* Iterator referencing start of range to replace.
- i2* Iterator referencing end of range to replace.
- str* String value to insert.

**Returns:**

Reference to this string.

**Exceptions:**

[\*std::length\\_error\*](#) If new length exceeds `max_size()`.

Removes the characters in the range [i1,i2). In place, the value of *str* is inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1464 of file `basic_string.h`.

**5.89.3.101** `basic_string& std::basic_string<_CharT, _Traits, _Allocator>::replace (size_type __pos, size_type __n1, size_type __n2, _CharT __c) [inline, inherited]`

Replace characters with multiple characters.

**Parameters:**

- pos* Index of first character to replace.
- n1* Number of characters to be replaced.
- n2* Number of characters to insert.
- c* Character to insert.

## 5.89 `__gnu_debug::basic_string<_CharT, _Traits, _Allocator>` Class Template Reference 1117

---

### Returns:

Reference to this string.

### Exceptions:

*std::out\_of\_range* If *pos* > `size()`.

*std::length\_error* If new length exceeds `max_size()`.

Removes the characters in the range `[pos, pos + n1)` from this string. In place, *n2* copies of *c* are inserted. If *pos* is beyond end of string, `out_of_range` is thrown. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1446 of file `basic_string.h`.

### 5.89.3.102 `basic_string& std::basic_string<_CharT, _Traits, _Allocator>::replace(size_type __pos, size_type __n1, const _CharT* __s)` [inline, inherited]

Replace characters with value of a C string.

### Parameters:

*pos* Index of first character to replace.

*n1* Number of characters to be replaced.

*s* C string to insert.

### Returns:

Reference to this string.

### Exceptions:

*std::out\_of\_range* If *pos* > `size()`.

*std::length\_error* If new length exceeds `max_size()`.

Removes the characters in the range `[pos, pos + n1)` from this string. In place, the first *n* characters of *s* are inserted. If *pos* is beyond end of string, `out_of_range` is thrown. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1423 of file `basic_string.h`.

**5.89.3.103** `basic_string& std::basic_string<_CharT, _Traits, _Allocator>::replace (size_type __pos, size_type __n1, const _CharT * __s, size_type __n2) [inherited]`

Replace characters with value of a C substring.

**Parameters:**

*pos* Index of first character to replace.  
*n1* Number of characters to be replaced.  
*s* C string to insert.  
*n2* Number of characters from *s* to use.

**Returns:**

Reference to this string.

**Exceptions:**

*std::out\_of\_range* If *pos1* > size().  
*std::length\_error* If new length exceeds max\_size().

Removes the characters in the range [*pos*,*pos* + *n1*) from this string. In place, the first *n2* characters of *s* are inserted, or all of *s* if *n2* is too large. If *pos* is beyond end of string, *out\_of\_range* is thrown. If the length of result exceeds max\_size(), *length\_error* is thrown. The value of the string doesn't change if an error is thrown.

**5.89.3.104** `basic_string& std::basic_string<_CharT, _Traits, _Allocator>::replace (size_type __pos1, size_type __n1, const basic_string<_CharT, _Traits, _Allocator> & __str, size_type __pos2, size_type __n2) [inline, inherited]`

Replace characters with value from another string.

**Parameters:**

*pos1* Index of first character to replace.  
*n1* Number of characters to be replaced.  
*str* String to insert.  
*pos2* Index of first character of *str* to use.  
*n2* Number of characters from *str* to use.

**Returns:**

Reference to this string.

## 5.89 `__gnu_debug::basic_string<_CharT, _Traits, _Allocator>` Class Template Reference 1119

---

### Exceptions:

*std::out\_of\_range* If *pos1* > `size()` or *pos2* > `str.size()`.

*std::length\_error* If new length exceeds `max_size()`.

Removes the characters in the range [*pos1*, *pos1* + *n*) from this string. In place, the value of *str* is inserted. If *pos* is beyond end of string, `out_of_range` is thrown. If the length of the result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1380 of file `basic_string.h`.

### 5.89.3.105 `basic_string& std::basic_string<_CharT, _Traits, _Allocator>::replace (size_type __pos, size_type __n, const basic_string<_CharT, _Traits, _Allocator> & __str) [inline, inherited]`

Replace characters with value from another string.

### Parameters:

*pos* Index of first character to replace.

*n* Number of characters to be replaced.

*str* String to insert.

### Returns:

Reference to this string.

### Exceptions:

*std::out\_of\_range* If *pos* is beyond the end of this string.

*std::length\_error* If new length exceeds `max_size()`.

Removes the characters in the range [*pos*, *pos*+*n*) from this string. In place, the value of *str* is inserted. If *pos* is beyond end of string, `out_of_range` is thrown. If the length of the result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1358 of file `basic_string.h`.

### 5.89.3.106 `void std::basic_string<_CharT, _Traits, _Allocator>::reserve (size_type __res_arg = 0) [inherited]`

Attempt to preallocate enough memory for specified number of characters.

**Parameters:**

*res\_arg* Number of characters required.

**Exceptions:**

*std::length\_error* If *res\_arg* exceeds `max_size()`.

This function attempts to reserve enough memory for the string to hold the specified number of characters. If the number requested is more than `max_size()`, `length_error` is thrown.

The advantage of this function is that if optimal code is a necessity and the user can determine the string length that will be required, the user can reserve the memory in advance, and thus prevent a possible reallocation of memory and copying of string data.

**5.89.3.107 void std::basic\_string<\_CharT, \_Traits, \_Allocator >::resize (size\_type \_\_n) [inline, inherited]**

Resizes the string to the specified number of characters.

**Parameters:**

*n* Number of characters the string should contain.

This function will resize the string to the specified length. If the new size is smaller than the string's current size the string is truncated, otherwise the string is extended and new characters are default-constructed. For basic types such as `char`, this means setting them to 0.

Definition at line 738 of file `basic_string.h`.

**5.89.3.108 void std::basic\_string<\_CharT, \_Traits, \_Allocator >::resize (size\_type \_\_n, \_CharT \_\_c) [inherited]**

Resizes the string to the specified number of characters.

**Parameters:**

*n* Number of characters the string should contain.

*c* Character to fill any new elements.

This function will resize the string to the specified number of characters. If the number is smaller than the string's current size the string is truncated, otherwise the string is extended and new elements are set to *c*.

**5.89 `__gnu_debug::basic_string<_CharT, _Traits, _Allocator>` Class Template Reference** **1121**

---

**5.89.3.109** `size_type std::basic_string<_CharT, _Traits, _Allocator>::rfind`  
(`_CharT __c, size_type __pos = npos`) `const` [`inherited`]

Find last position of a character.

**Parameters:**

*c* Character to locate.

*pos* Index of character to search back from (default end).

**Returns:**

Index of last occurrence.

Starting from *pos*, searches backward for *c* within this string. If found, returns the index where it was found. If not found, returns `npos`.

**5.89.3.110** `size_type std::basic_string<_CharT, _Traits, _Allocator>::rfind`  
(`const _CharT * __s, size_type __pos = npos`) `const` [`inline, inherited`]

Find last position of a C string.

**Parameters:**

*s* C string to locate.

*pos* Index of character to start search at (default end).

**Returns:**

Index of start of last occurrence.

Starting from *pos*, searches backward for the value of *s* within this string. If found, returns the index where it begins. If not found, returns `npos`.

Definition at line 1839 of file `basic_string.h`.

**5.89.3.111** `size_type std::basic_string<_CharT, _Traits, _Allocator>::rfind`  
(`const _CharT * __s, size_type __pos, size_type __n`) `const` [`inherited`]

Find last position of a C substring.

**Parameters:**

*s* C string to locate.

*pos* Index of character to search back from.

*n* Number of characters from *s* to search for.

**Returns:**

Index of start of last occurrence.

Starting from *pos*, searches backward for the first *n* characters in *s* within this string. If found, returns the index where it begins. If not found, returns *npos*.

**5.89.3.112** `size_type std::basic_string<_CharT, _Traits, _Allocator>::rfind  
(const basic_string<_CharT, _Traits, _Allocator> & __str,  
size_type __pos = npos) const [inline, inherited]`

Find last position of a string.

**Parameters:**

*str* String to locate.

*pos* Index of character to search back from (default end).

**Returns:**

Index of start of last occurrence.

Starting from *pos*, searches backward for value of *str* within this string. If found, returns the index where it begins. If not found, returns *npos*.

Definition at line 1811 of file `basic_string.h`.

**5.89.3.113** `void std::basic_string<_CharT, _Traits, _Allocator>::shrink_to_fit() [inline, inherited]`

A non-binding request to reduce `capacity()` to `size()`.

Definition at line 744 of file `basic_string.h`.

**5.89.3.114** `size_type std::basic_string<_CharT, _Traits, _Allocator>::size() const [inline, inherited]`

Returns the number of characters in the string, not including any null-termination.

Definition at line 700 of file `basic_string.h`.

## 5.89 `__gnu_debug::basic_string<_CharT, _Traits, _Allocator>` Class Template Reference 1123

---

**5.89.3.115** `basic_string` `std::basic_string<_CharT, _Traits, _Allocator>::substr (size_type __pos = 0, size_type __n = npos) const` `[inline, inherited]`

Get a substring.

### Parameters:

- pos* Index of first character (default 0).
- n* Number of characters in substring (default remainder).

### Returns:

The new string.

### Exceptions:

[\*std::out\\_of\\_range\*](#) If *pos* > `size()`.

Construct and return a new string using the *n* characters starting at *pos*. If the string is too short, use the remainder of the characters. If *pos* is beyond the end of the string, `out_of_range` is thrown.

Definition at line 2111 of file `basic_string.h`.

**5.89.3.116** `void` `std::basic_string<_CharT, _Traits, _Allocator>::swap (basic_string<_CharT, _Traits, _Allocator> & __s)` `[inherited]`

Swap contents with another string.

### Parameters:

- s* String to swap with.

Exchanges the contents of this string with that of *s* in constant time.

## 5.89.4 Member Data Documentation

**5.89.4.1** `_Safe_iterator_base* __gnu_debug::Safe_sequence_base::M_const_iterators` `[inherited]`

The list of constant iterators that reference this container.

Definition at line 166 of file `safe_base.h`.

Referenced by `__gnu_debug::Safe_sequence<_Sequence>::_M_invalidate_if()`, `__gnu_debug::Safe_iterator<_Iterator, _Sequence>::_M_invalidate_single()`, and `__gnu_debug::Safe_sequence<_Sequence>::_M_transfer_iter()`.

**5.89.4.2** `_Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_`  
`iterators` **[inherited]**

The list of mutable iterators that reference this container.

Definition at line 163 of file `safe_base.h`.

Referenced by `__gnu_debug::_Safe_sequence<_Sequence >::_M_invalidate_if()`, `__gnu_debug::_Safe_iterator<_Iterator, _Sequence >::_M_invalidate_single()`, and `__gnu_debug::_Safe_sequence<_Sequence >::_M_transfer_iter()`.

**5.89.4.3** `unsigned int __gnu_debug::_Safe_sequence_base::_M_version`  
`[mutable, inherited]`

The container version number. This number may never be 0.

Definition at line 169 of file `safe_base.h`.

**5.89.4.4** `const size_type std::basic_string<_CharT, _Traits, _Allocator`  
`>::npos` **[static, inherited]**

Value returned by various member functions when they fail.

Definition at line 270 of file `basic_string.h`.

The documentation for this class was generated from the following file:

- [debug/string](#)

## 5.90 `__gnu_parallel::__accumulate_binop_reduct<_BinOp>` Struct Template Reference

General reduction, using a binary operator.

### Public Member Functions

- `__accumulate_binop_reduct` (`_BinOp` &`__b`)
- `template<typename _Result, typename _Addend> _Result operator()` (`const _Result` &`__x`, `const _Addend` &`__y`)

### Public Attributes

- `_BinOp` & `__binop`

#### 5.90.1 Detailed Description

```
template<typename _BinOp> struct __gnu_parallel::__accumulate_binop_reduct<_BinOp>
```

General reduction, using a binary operator.

Definition at line 335 of file `for_each_selectors.h`.

The documentation for this struct was generated from the following file:

- [for\\_each\\_selectors.h](#)

## 5.91 `__gnu_parallel::__accumulate_selector< _It >` Struct Template Reference

`std::accumulate()` selector. Inheritance diagram for `__gnu_parallel::__accumulate_selector< _It >`:

### Public Member Functions

- `template<typename _Op > std::iterator_traits< _It >::value_type operator() (_Op __o, _It __i)`

### Public Attributes

- `_It \_M\_finish\_iterator`

#### 5.91.1 Detailed Description

`template<typename _It> struct __gnu_parallel::__accumulate_selector< _It >`

`std::accumulate()` selector.

Definition at line 208 of file `for_each_selectors.h`.

#### 5.91.2 Member Function Documentation

**5.91.2.1** `template<typename _It> template<typename _Op > std::iterator_traits< _It >::value_type __gnu_parallel::__accumulate_selector< _It >::operator() (_Op __o, _It __i) [inline]`

Functor execution.

## 5.91 `__gnu_parallel::__accumulate_selector<_It>` Struct Template Reference

### Parameters:

- `__o` Operator (unused).
- `__i` iterator referencing object.

### Returns:

The current value.

Definition at line 216 of file `for_each_selectors.h`.

## 5.91.3 Member Data Documentation

### 5.91.3.1 `template<typename _It> _It __gnu_parallel::__generic_for_each_selector<_It>::__M_finish_iterator` [`inherited`]

`_Iterator` on last element processed; needed for some algorithms (e. g. `std::transform()`).

Definition at line 47 of file `for_each_selectors.h`.

The documentation for this struct was generated from the following file:

- [for\\_each\\_selectors.h](#)

## 5.92 `__gnu_parallel::__adjacent_difference_selector<_It >` Struct Template Reference

Selector that returns the difference between two adjacent `__elements`. Inheritance diagram for `__gnu_parallel::__adjacent_difference_selector<_It >`:

### Public Member Functions

- `template<typename _Op >`  
`bool operator() (_Op &__o, _It __i)`

### Public Attributes

- `_It \_M\_finish\_iterator`

### 5.92.1 Detailed Description

`template<typename _It > struct __gnu_parallel::__adjacent_difference_selector<_It >`

Selector that returns the difference between two adjacent `__elements`.

Definition at line 269 of file `for_each_selectors.h`.

### 5.92.2 Member Data Documentation

**5.92.2.1** `template<typename _It > _It __gnu_parallel::__generic_for_each_selector<_It >::__M_finish_iterator`  
**[inherited]**

`_Iterator` on last element processed; needed for some algorithms (e. g. `std::transform()`).

## 5.92 `__gnu_parallel::__adjacent_difference_selector<_It>` Struct Template Reference 1129

---

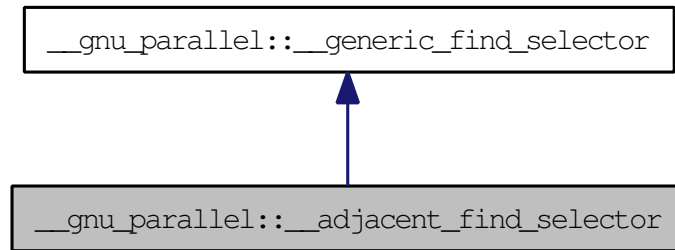

Definition at line 47 of file `for_each_selectors.h`.

The documentation for this struct was generated from the following file:

- [for\\_each\\_selectors.h](#)

## 5.93 `__gnu_parallel::__adjacent_find_selector` Struct Reference

Test predicate on two adjacent elements. Inheritance diagram for `__gnu_parallel::__adjacent_find_selector`:

### Public Member Functions

- `template<typename _RAIter1, typename _RAIter2, typename _Pred > std::pair< _RAIter1, _RAIter2 > \_M\_sequential\_algorithm (_RAIter1 __begin1, _RAIter1 __end1, _RAIter2 __begin2, _Pred __pred)`
- `template<typename _RAIter1, typename _RAIter2, typename _Pred > bool operator\(\) (_RAIter1 __i1, _RAIter2 __i2, _Pred __pred)`

### 5.93.1 Detailed Description

Test predicate on two adjacent elements.

Definition at line 80 of file `find_selectors.h`.

### 5.93.2 Member Function Documentation

**5.93.2.1** `template<typename _RAIter1, typename _RAIter2, typename _Pred > std::pair<_RAIter1, _RAIter2> __gnu_parallel::__adjacent_find_selector::_M_sequential_algorithm (_RAIter1 __begin1, _RAIter1 __end1, _RAIter2 __begin2, _Pred __pred) \[inline\]`

Corresponding sequential algorithm on a sequence.

**Parameters:**

`__begin1` Begin iterator of first sequence.

`__end1` End iterator of first sequence.

`__begin2` Begin iterator of second sequence.

`__pred` Find predicate.

Definition at line 105 of file `find_selectors.h`.

```
5.93.2.2 template<typename _RAIter1 , typename _RAIter2 , typename
 _Pred > bool __gnu_parallel::__adjacent_find_selector::operator()
 (_RAIter1 __i1, _RAIter2 __i2, _Pred __pred) [inline]
```

Test on one position.

**Parameters:**

`__i1` \_Iterator on first sequence.

`__i2` \_Iterator on second sequence (unused).

`__pred` Find predicate.

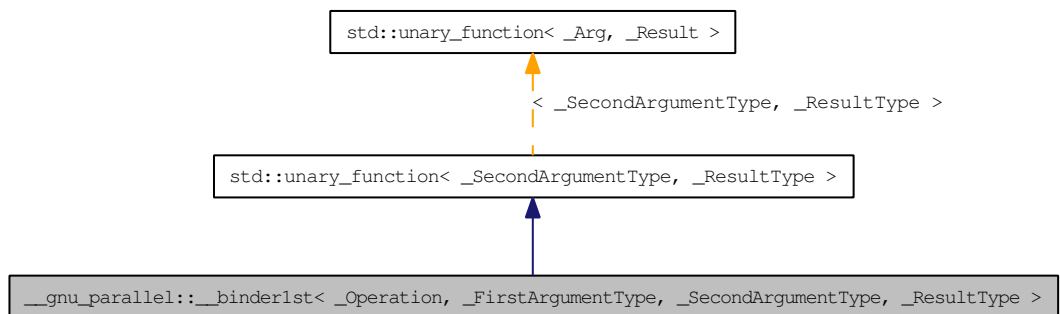

Definition at line 90 of file `find_selectors.h`.

The documentation for this struct was generated from the following file:

- [find\\_selectors.h](#)

## 5.94 `__gnu_parallel::__binder1st`< `_Operation`, `_FirstArgumentType`, `_SecondArgumentType`, `_ResultType` > Class Template Reference

Similar to [std::binder1st](#), but giving the argument types explicitly. Inheritance diagram for `__gnu_parallel::__binder1st`< `_Operation`, `_FirstArgumentType`, `_SecondArgumentType`, `_ResultType` >:

### Public Types

- typedef `_SecondArgumentType` [argument\\_type](#)
- typedef `_ResultType` [result\\_type](#)

### Public Member Functions

- `__binder1st` (`const _Operation &__x`, `const _FirstArgumentType &__y`)
- `_ResultType operator()` (`_SecondArgumentType &__x`) `const`
- `_ResultType operator()` (`const _SecondArgumentType &__x`)

### Protected Attributes

- `_Operation` `_M_op`
- `_FirstArgumentType` `_M_value`

### 5.94.1 Detailed Description

```
template<typename _Operation, typename _FirstArgumentType, typename
_SecondArgumentType, typename _ResultType> class __gnu_parallel::__-
binder1st< _Operation, _FirstArgumentType, _SecondArgumentType, _-
ResultType >
```

Similar to [std::binder1st](#), but giving the argument types explicitly.

Definition at line 192 of file `parallel/base.h`.

### 5.94.2 Member Typedef Documentation

**5.94.2.1** `typedef _SecondArgumentType std::unary_function< _SecondArgumentType , _ResultType >::argument_type [inherited]`

`argument_type` is the type of the argument (no surprises here)

Definition at line 102 of file `stl_function.h`.

**5.94.2.2** `typedef _ResultType std::unary_function< _SecondArgumentType , _ResultType >::result_type [inherited]`

`result_type` is the return type

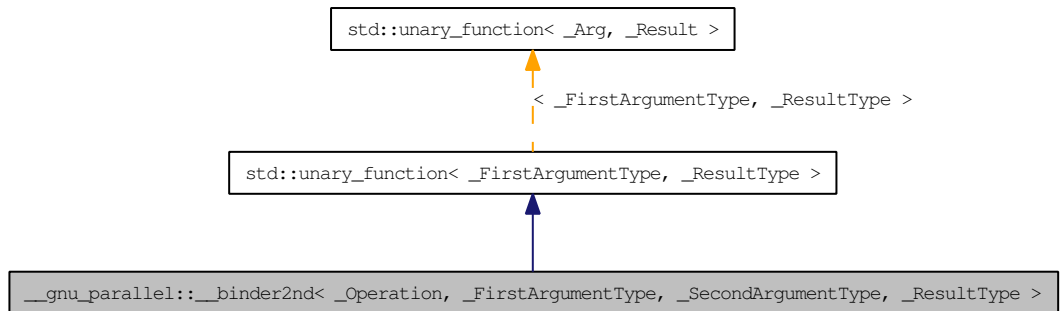

Definition at line 105 of file `stl_function.h`.

The documentation for this class was generated from the following file:

- [parallel/base.h](#)

## 5.95 `__gnu_parallel::__binder2nd`< `_Operation`, `_FirstArgumentType`, `_SecondArgumentType`, `_ResultType` > Class Template Reference

Similar to [std::binder2nd](#), but giving the argument types explicitly. Inheritance diagram for `__gnu_parallel::__binder2nd`< `_Operation`, `_FirstArgumentType`, `_SecondArgumentType`, `_ResultType` >:

### Public Types

- typedef `_FirstArgumentType` [argument\\_type](#)
- typedef `_ResultType` [result\\_type](#)

### Public Member Functions

- `__binder2nd` (`const _Operation &__x`, `const _SecondArgumentType &__y`)
- `_ResultType operator()` (`_FirstArgumentType &__x`)
- `_ResultType operator()` (`const _FirstArgumentType &__x`) `const`

### Protected Attributes

- `_Operation` `_M_op`
- `_SecondArgumentType` `_M_value`

### 5.95.1 Detailed Description

```
template<typename _Operation, typename _FirstArgumentType, typename
_SecondArgumentType, typename _ResultType> class __gnu_parallel::__-
binder2nd< _Operation, _FirstArgumentType, _SecondArgumentType, _-
ResultType >
```

Similar to `std::binder2nd`, but giving the argument types explicitly.

Definition at line 220 of file `parallel/base.h`.

### 5.95.2 Member Typedef Documentation

**5.95.2.1** `typedef _FirstArgumentType std::unary_function<  
_FirstArgumentType , _ResultType >::argument_type  
[inherited]`

`argument_type` is the type of the argument (no surprises here)

Definition at line 102 of file `stl_function.h`.

**5.95.2.2** `typedef _ResultType std::unary_function< _FirstArgumentType ,  
_ResultType >::result_type [inherited]`

`result_type` is the return type

Definition at line 105 of file `stl_function.h`.

The documentation for this class was generated from the following file:

- [parallel/base.h](#)

## 5.96 `__gnu_parallel::__count_if_selector<_It, _Diff>` Struct Template Reference

`std::count_if()` selector. Inheritance diagram for `__gnu_parallel::__count_if_selector<_It, _Diff>`:

### Public Member Functions

- `template<typename _Op > _Diff operator() (_Op &__o, _It __i)`

### Public Attributes

- `_It \_M\_finish\_iterator`

### 5.96.1 Detailed Description

`template<typename _It, typename _Diff> struct \_\_gnu\_parallel::\_\_count\_if\_selector<\_It, \_Diff >`

`std::count_if()` selector.

Definition at line 194 of file `for_each_selectors.h`.

### 5.96.2 Member Function Documentation

**5.96.2.1** `template<typename _It, typename _Diff > template<typename _Op > _Diff \_\_gnu\_parallel::\_\_count\_if\_selector<\_It, \_Diff >::operator\(\) \(\_Op & \_\_o, \_It \_\_i\) \[inline\]`

Functor execution.

## 5.96 `__gnu_parallel::__count_if_selector<_It, _Diff>` Struct Template Reference

1137

### Parameters:

- `__o` Operator.
- `__i` iterator referencing object.

### Returns:

1 if count, 0 if does not count.

Definition at line 202 of file `for_each_selectors.h`.

## 5.96.3 Member Data Documentation

### 5.96.3.1 `template<typename _It > _It __gnu_parallel::__generic_for_each_selector<_It >::_M_finish_iterator` [inherited]

`_Iterator` on last element processed; needed for some algorithms (e. g. `std::transform()`).

Definition at line 47 of file `for_each_selectors.h`.

The documentation for this struct was generated from the following file:

- [for\\_each\\_selectors.h](#)

## 5.97 `__gnu_parallel::__count_selector< _It, _Diff >` Struct Template Reference

`std::count()` selector. Inheritance diagram for `__gnu_parallel::__count_selector< _It, _Diff >`:

### Public Member Functions

- `template<typename _ValueType > _Diff operator() (_ValueType &__v, _It __i)`

### Public Attributes

- `_It _M_finish_iterator`

#### 5.97.1 Detailed Description

```
template<typename _It, typename _Diff> struct __gnu_parallel::__count_selector< _It, _Diff >
```

`std::count()` selector.

Definition at line 180 of file `for_each_selectors.h`.

#### 5.97.2 Member Function Documentation

**5.97.2.1** `template<typename _It, typename _Diff> template<typename _ValueType > _Diff __gnu_parallel::__count_selector< _It, _Diff >::operator() (_ValueType & __v, _It __i) [inline]`

Functor execution.

## 5.97 \_\_gnu\_parallel::\_\_count\_selector<\_It, \_Diff> Struct Template Reference

### Parameters:

- `__v` Current value.
- `__i` iterator referencing object.

### Returns:

1 if count, 0 if does not count.

Definition at line 188 of file `for_each_selectors.h`.

## 5.97.3 Member Data Documentation

### 5.97.3.1 `template<typename _It > _It __gnu_parallel::__generic_for_each_selector<_It >::_M_finish_iterator` [`inherited`]

`_Iterator` on last element processed; needed for some algorithms (e. g. `std::transform()`).

Definition at line 47 of file `for_each_selectors.h`.

The documentation for this struct was generated from the following file:

- [for\\_each\\_selectors.h](#)

## 5.98 `__gnu_parallel::__fill_selector< _It >` Struct Template Reference

`std::fill()` selector. Inheritance diagram for `__gnu_parallel::__fill_selector< _It >`:

### Public Member Functions

- `template<typename _ValueType > bool operator() (_ValueType &__v, _It __i)`

### Public Attributes

- `_It _M_finish_iterator`

### 5.98.1 Detailed Description

`template<typename _It> struct __gnu_parallel::__fill_selector< _It >`

`std::fill()` selector.

Definition at line 84 of file `for_each_selectors.h`.

### 5.98.2 Member Function Documentation

**5.98.2.1** `template<typename _It > template<typename _ValueType > bool __gnu_parallel::__fill_selector< _It >::operator() (_ValueType & __v, _It __i) [inline]`

Functor execution.

#### Parameters:

- `__v` Current value.

`__i` iterator referencing object.

Definition at line 91 of file `for_each_selectors.h`.

### 5.98.3 Member Data Documentation

#### 5.98.3.1 `template<typename _It> _It __gnu_parallel::__generic_for_each_selector<_It>::__M_finish_iterator` [`inherited`]

`_Iterator` on last element processed; needed for some algorithms (e. g. `std::transform()`).

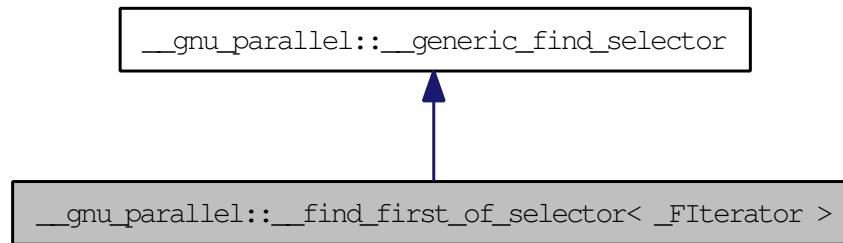

Definition at line 47 of file `for_each_selectors.h`.

The documentation for this struct was generated from the following file:

- [for\\_each\\_selectors.h](#)

## 5.99 `__gnu_parallel::__find_first_of_selector<_FIterator>` Struct Template Reference

Test predicate on several elements. Inheritance diagram for `__gnu_parallel::__find_first_of_selector<_FIterator>`:

### Public Member Functions

- `__find_first_of_selector` (`_FIterator __begin`, `_FIterator __end`)
- `template<typename _RAIter1, typename _RAIter2, typename _Pred > std::pair<_RAIter1, _RAIter2 > \_M\_sequential\_algorithm (_RAIter1 __begin1, _RAIter1 __end1, _RAIter2 __begin2, _Pred __pred)`
- `template<typename _RAIter1, typename _RAIter2, typename _Pred > bool operator() (_RAIter1 __i1, _RAIter2 __i2, _Pred __pred)`

### Public Attributes

- `_FIterator \_M\_begin`
- `_FIterator \_M\_end`

#### 5.99.1 Detailed Description

```
template<typename _FIterator> struct __gnu_parallel::__find_first_of_selector<_FIterator >
```

Test predicate on several elements.

Definition at line 153 of file `find_selectors.h`.

## 5.99.2 Member Function Documentation

**5.99.2.1** `template<typename _FIterator> template<typename _RAIter1, typename _RAIter2, typename _Pred> std::pair<_RAIter1, _RAIter2> __gnu_parallel::__find_first_of_selector<_FIterator>::__M_sequential_algorithm(_RAIter1 __begin1, _RAIter1 __end1, _RAIter2 __begin2, _Pred __pred) [inline]`

Corresponding sequential algorithm on a sequence.

### Parameters:

- `__begin1` Begin iterator of first sequence.
- `__end1` End iterator of first sequence.
- `__begin2` Begin iterator of second sequence.
- `__pred` Find predicate.

Definition at line 186 of file `find_selectors.h`.

**5.99.2.2** `template<typename _FIterator> template<typename _RAIter1, typename _RAIter2, typename _Pred> bool __gnu_parallel::__find_first_of_selector<_FIterator>::operator()(_RAIter1 __i1, _RAIter2 __i2, _Pred __pred) [inline]`

Test on one position.

### Parameters:

- `__i1` Iterator on first sequence.
- `__i2` Iterator on second sequence (unused).
- `__pred` Find predicate.

Definition at line 169 of file `find_selectors.h`.

The documentation for this struct was generated from the following file:

- [find\\_selectors.h](#)

## 5.100 `__gnu_parallel::__find_if_selector` Struct Reference

Test predicate on a single element, used for `std::find()` and `std::find_if()`. Inheritance diagram for `__gnu_parallel::__find_if_selector`:

### Public Member Functions

- `template<typename _RAIter1, typename _RAIter2, typename _Pred > std::pair< _RAIter1, _RAIter2 > \_M\_sequential\_algorithm (_RAIter1 __begin1, _RAIter1 __end1, _RAIter2 __begin2, _Pred __pred)`
- `template<typename _RAIter1, typename _RAIter2, typename _Pred > bool operator\(\) (_RAIter1 __i1, _RAIter2 __i2, _Pred __pred)`

#### 5.100.1 Detailed Description

Test predicate on a single element, used for `std::find()` and `std::find_if()`.

Definition at line 50 of file `find_selectors.h`.

#### 5.100.2 Member Function Documentation

**5.100.2.1** `template<typename _RAIter1, typename _RAIter2, typename _Pred > std::pair<_RAIter1, _RAIter2> __gnu_parallel::__find_if_selector::__M_sequential_algorithm (_RAIter1 __begin1, _RAIter1 __end1, _RAIter2 __begin2, _Pred __pred) [inline]`

Corresponding sequential algorithm on a sequence.

#### Parameters:

*\_\_begin1* Begin iterator of first sequence.

`__end1` End iterator of first sequence.

`__begin2` Begin iterator of second sequence.

`__pred` Find predicate.

Definition at line 72 of file `find_selectors.h`.

```
5.100.2.2 template<typename _RAIter1 , typename _RAIter2 , typename
 _Pred > bool __gnu_parallel::__find_if_selector::operator()
 (_RAIter1 __i1, _RAIter2 __i2, _Pred __pred) [inline]
```

Test on one position.

**Parameters:**

`__i1` Iterator on first sequence.

`__i2` Iterator on second sequence (unused).

`__pred` Find predicate.

Definition at line 60 of file `find_selectors.h`.

The documentation for this struct was generated from the following file:

- [find\\_selectors.h](#)

## 5.101 `__gnu_parallel::__for_each_selector< _It >` Struct Template Reference

`std::for_each()` selector. Inheritance diagram for `__gnu_parallel::__for_each_selector< _It >`:

### Public Member Functions

- `template<typename _Op >`  
`bool operator() (_Op &__o, _It __i)`

### Public Attributes

- `_It \_M\_finish\_iterator`

### 5.101.1 Detailed Description

`template<typename _It> struct __gnu_parallel::__for_each_selector< _It >`

`std::for_each()` selector.

Definition at line 52 of file `for_each_selectors.h`.

### 5.101.2 Member Function Documentation

**5.101.2.1** `template<typename _It> template<typename _Op > bool`  
`__gnu_parallel::__for_each_selector< _It >::operator() (_Op &__o,`  
`__It __i) [inline]`

Functor execution.

## **5.101 \_\_gnu\_parallel::\_\_for\_each\_selector<\_It> Struct Template Reference 147**

### **Parameters:**

- `__o` Operator.
- `__i` iterator referencing object.

Definition at line 59 of file `for_each_selectors.h`.

### **5.101.3 Member Data Documentation**

#### **5.101.3.1 `template<typename _It> _It __gnu_parallel::__generic_for_each_selector<_It>::_M_finish_iterator` [inherited]**

`_Iterator` on last element processed; needed for some algorithms (e. g. `std::transform()`).

Definition at line 47 of file `for_each_selectors.h`.

The documentation for this struct was generated from the following file:

- [for\\_each\\_selectors.h](#)

## 5.102 `__gnu_parallel::__generate_selector< _It >` Struct Template Reference

`std::generate()` selector. Inheritance diagram for `__gnu_parallel::__generate_selector< _It >`:

### Public Member Functions

- `template<typename _Op >`  
`bool operator() (_Op &__o, _It __i)`

### Public Attributes

- `_It \_M\_finish\_iterator`

### 5.102.1 Detailed Description

`template<typename _It> struct __gnu_parallel::__generate_selector< _It >`

`std::generate()` selector.

Definition at line 68 of file `for_each_selectors.h`.

### 5.102.2 Member Function Documentation

**5.102.2.1** `template<typename _It> template<typename _Op > bool`  
`__gnu_parallel::__generate_selector< _It >::operator() (_Op &__o,`  
`__It __i) [inline]`

Functor execution.

## 5.102 `__gnu_parallel::__generate_selector<_It>` Struct Template Reference 149

### Parameters:

- `__o` Operator.
- `__i` iterator referencing object.

Definition at line 75 of file `for_each_selectors.h`.

### 5.102.3 Member Data Documentation

#### 5.102.3.1 `template<typename _It> _It __gnu_parallel::__generic_for_each_selector<_It>::_M_finish_iterator` [`inherited`]

`_Iterator` on last element processed; needed for some algorithms (e. g. `std::transform()`).

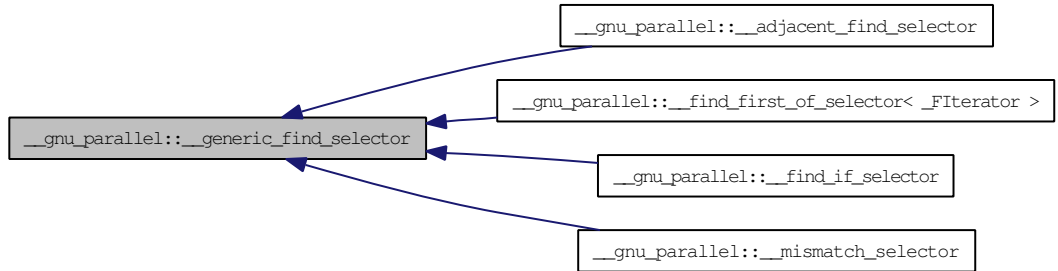

Definition at line 47 of file `for_each_selectors.h`.

The documentation for this struct was generated from the following file:

- [for\\_each\\_selectors.h](#)

### 5.103 `__gnu_parallel::__generic_find_selector` Struct Reference

Base class of all `__gnu_parallel::__find_template` selectors. Inheritance diagram for `__gnu_parallel::__generic_find_selector`:

#### 5.103.1 Detailed Description

Base class of all `__gnu_parallel::__find_template` selectors.

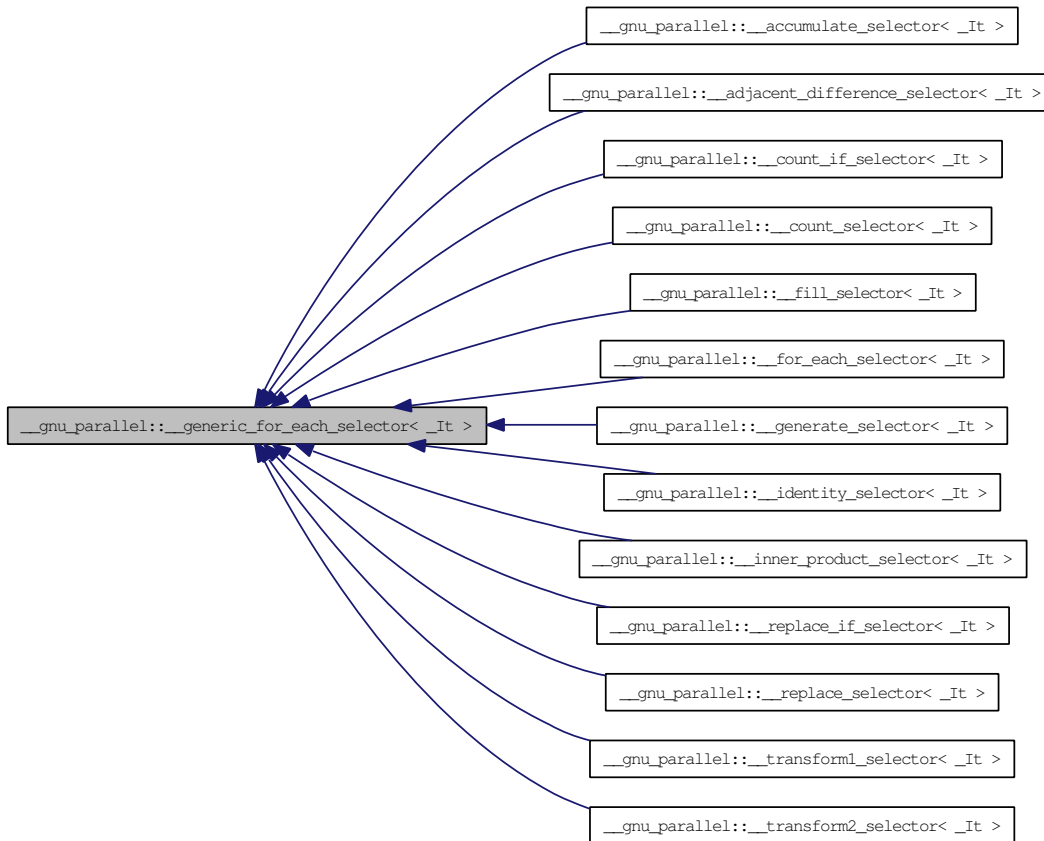

Definition at line 43 of file `find_selectors.h`.

The documentation for this struct was generated from the following file:

- [find\\_selectors.h](#)

## 5.104 `__gnu_parallel::__generic_for_each_selector<_It >` Struct Template Reference

Generic `__selector` for embarrassingly parallel functions. Inheritance diagram for `__gnu_parallel::__generic_for_each_selector<_It >`:

### Public Attributes

- [\\_It\\_M\\_finish\\_iterator](#)

### 5.104.1 Detailed Description

`template<typename _It> struct __gnu_parallel::__generic_for_each_selector<_It >`

Generic \_\_selector for embarrassingly parallel functions.

Definition at line 42 of file `for_each_selectors.h`.

### 5.104.2 Member Data Documentation

**5.104.2.1 `template<typename _It > _It __gnu_parallel::__generic_for_each_selector<_It >::_M_finish_iterator`**

\_Iterator on last element processed; needed for some algorithms (e. g. `std::transform()`).

Definition at line 47 of file `for_each_selectors.h`.

The documentation for this struct was generated from the following file:

- [for\\_each\\_selectors.h](#)

## 5.105 `__gnu_parallel::__identity_selector<_It>` Struct Template Reference

Selector that just returns the passed iterator. Inheritance diagram for `__gnu_parallel::__identity_selector<_It>`:

### Public Member Functions

- `template<typename _Op> _It operator() (_Op __o, _It __i)`

### Public Attributes

- `_It _M_finish_iterator`

#### 5.105.1 Detailed Description

`template<typename _It> struct __gnu_parallel::__identity_selector<_It>`

Selector that just returns the passed iterator.

Definition at line 253 of file `for_each_selectors.h`.

#### 5.105.2 Member Function Documentation

5.105.2.1 `template<typename _It> template<typename _Op> _It __gnu_parallel::__identity_selector<_It>::operator() (_Op __o, _It __i) [inline]`

Functor execution.

**Parameters:**

- `__o` Operator (unused).
- `__i` iterator referencing object.

**Returns:**

Passed iterator.

Definition at line 261 of file `for_each_selectors.h`.

### 5.105.3 Member Data Documentation

#### 5.105.3.1 `template<typename _It > _It __gnu_parallel::__generic_for_each_selector< _It >::_M_finish_iterator` [**inherited**]

`_Iterator` on last element processed; needed for some algorithms (e. g. `std::transform()`).

Definition at line 47 of file `for_each_selectors.h`.

The documentation for this struct was generated from the following file:

- [for\\_each\\_selectors.h](#)

## 5.106 `__gnu_parallel::__inner_product_selector<_It, _It2, _Tp>` Struct Template Reference

`std::inner_product()` selector. Inheritance diagram for `__gnu_parallel::__inner_product_selector<_It, _It2, _Tp>`:

### Public Member Functions

- `__inner_product_selector` (`_It __b1, _It2 __b2`)
- `template<typename _Op>`  
`_Tp operator() (_Op __mult, _It __current)`

### Public Attributes

- `_It __begin1_iterator`
- `_It2 __begin2_iterator`
- `_It __M_finish_iterator`

#### 5.106.1 Detailed Description

`template<typename _It, typename _It2, typename _Tp> struct __gnu_parallel::__inner_product_selector<_It, _It2, _Tp>`

`std::inner_product()` selector.

Definition at line 222 of file `for_each_selectors.h`.

## 5.106.2 Constructor & Destructor Documentation

**5.106.2.1** `template<typename _It , typename _It2 , typename _Tp >  
 __gnu_parallel::__inner_product_selector< _It, _It2, _Tp  
 >::__inner_product_selector (_It b1, _It2 b2) [inline,  
 explicit]`

Constructor.

**Parameters:**

- b1* Begin iterator of first sequence.
- b2* Begin iterator of second sequence.

Definition at line 234 of file `for_each_selectors.h`.

## 5.106.3 Member Function Documentation

**5.106.3.1** `template<typename _It , typename _It2 , typename _Tp >  
 template<typename _Op > _Tp __gnu_parallel::__inner_product_  
 selector< _It, _It2, _Tp >::operator() (_Op mult, _It current)  
 [inline]`

Functor execution.

**Parameters:**

- mult* Multiplication functor.
- current* iterator referencing object.

**Returns:**

Inner product elemental `__result`.

Definition at line 243 of file `for_each_selectors.h`.

References `__gnu_parallel::__inner_product_selector< _It, _It2, _Tp >::__begin1_`-iterator, and `__gnu_parallel::__inner_product_selector< _It, _It2, _Tp >::__begin2_`-iterator.

## 5.106.4 Member Data Documentation

**5.106.4.1** `template<typename _It , typename _It2 , typename _Tp >  
 _It __gnu_parallel::__inner_product_selector< _It, _It2, _Tp  
 >::__begin1_iterator`

Begin iterator of first sequence.

## 5.106 `__gnu_parallel::__inner_product_selector<_It, _It2, _Tp>` Struct Template Reference 1157

---

Definition at line 225 of file `for_each_selectors.h`.

Referenced by `__gnu_parallel::__inner_product_selector<_It, _It2, _Tp>::operator()`.

### 5.106.4.2 `template<typename _It, typename _It2, typename _Tp> __gnu_parallel::__inner_product_selector<_It, _It2, _Tp>::__begin2_iterator`

Begin iterator of second sequence.

Definition at line 228 of file `for_each_selectors.h`.

Referenced by `__gnu_parallel::__inner_product_selector<_It, _It2, _Tp>::operator()`.

### 5.106.4.3 `template<typename _It> _It __gnu_parallel::__generic_for_each_selector<_It>::__M_finish_iterator [inherited]`

`_Iterator` on last element processed; needed for some algorithms (e. g. `std::transform()`).

Definition at line 47 of file `for_each_selectors.h`.

The documentation for this struct was generated from the following file:

- [for\\_each\\_selectors.h](#)

## 5.107 `__gnu_parallel::__max_element_reduct<_Compare, _It >` Struct Template Reference

Reduction for finding the maximum element, using a comparator.

### Public Member Functions

- `__max_element_reduct` (`_Compare &__c`)
- `_It operator()` (`_It __x, _It __y`)

### Public Attributes

- `_Compare & __comp`

#### 5.107.1 Detailed Description

```
template<typename _Compare, typename _It> struct __gnu_parallel::__max_element_reduct<_Compare, _It >
```

Reduction for finding the maximum element, using a comparator.

Definition at line 321 of file `for_each_selectors.h`.

The documentation for this struct was generated from the following file:

- [for\\_each\\_selectors.h](#)

## 5.108 `__gnu_parallel::__min_element_reduct<_Compare, _It>` Struct Template Reference

Reduction for finding the maximum element, using a comparator.

### Public Member Functions

- `__min_element_reduct` (`_Compare &_c`)
- `_It operator()` (`_It __x, _It __y`)

### Public Attributes

- `_Compare & __comp`

#### 5.108.1 Detailed Description

`template<typename _Compare, typename _It> struct __gnu_parallel::__min_element_reduct<_Compare, _It>`

Reduction for finding the maximum element, using a comparator.

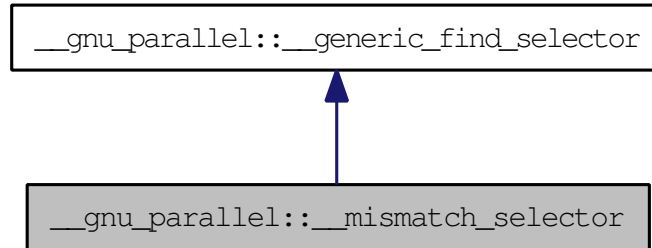

Definition at line 307 of file `for_each_selectors.h`.

The documentation for this struct was generated from the following file:

- [for\\_each\\_selectors.h](#)

## 5.109 `__gnu_parallel::__mismatch_selector` Struct Reference

Test inverted predicate on a single element. Inheritance diagram for `__gnu_parallel::__mismatch_selector`:

### Public Member Functions

- `template<typename _RAIter1, typename _RAIter2, typename _Pred > std::pair< _RAIter1, _RAIter2 > \_M\_sequential\_algorithm (_RAIter1 __begin1, _RAIter1 __end1, _RAIter2 __begin2, _Pred __pred)`
- `template<typename _RAIter1, typename _RAIter2, typename _Pred > bool operator\(\) (_RAIter1 __i1, _RAIter2 __i2, _Pred __pred)`

### 5.109.1 Detailed Description

Test inverted predicate on a single element.

Definition at line 119 of file `find_selectors.h`.

### 5.109.2 Member Function Documentation

**5.109.2.1** `template<typename _RAIter1, typename _RAIter2, typename _Pred > std::pair<_RAIter1, _RAIter2> __gnu_parallel::__mismatch_selector::M_sequential_algorithm (_RAIter1 __begin1, _RAIter1 __end1, _RAIter2 __begin2, _Pred __pred) [inline]`

Corresponding sequential algorithm on a sequence.

**Parameters:**

`__begin1` Begin iterator of first sequence.

`__end1` End iterator of first sequence.

`__begin2` Begin iterator of second sequence.

`__pred` Find predicate.

Definition at line 143 of file `find_selectors.h`.

**5.109.2.2** `template<typename _RAIter1 , typename _RAIter2 , typename  
_Pred > bool __gnu_parallel::__mismatch_selector::operator()  
(_RAIter1 __i1, _RAIter2 __i2, _Pred __pred) [inline]`

Test on one position.

**Parameters:**

`__i1` Iterator on first sequence.

`__i2` Iterator on second sequence (unused).

`__pred` Find predicate.

Definition at line 130 of file `find_selectors.h`.

The documentation for this struct was generated from the following file:

- [find\\_selectors.h](#)

## 5.110 `__gnu_parallel::__multiway_merge_3_variant_sentinel_switch`< `__sentinels`, `_RAIterIterator`, `_RAIter3`, `_DifferenceTp`, `_Compare` > Struct Template Reference

Switch for 3-way merging with `__sentinels` turned off.

### Public Member Functions

- `_RAIter3 operator()` (`_RAIterIterator __seqs_begin`, `_RAIterIterator __seqs_end`, `_RAIter3 __target`, `_DifferenceTp __length`, `_Compare __comp`)

#### 5.110.1 Detailed Description

```
template<bool __sentinels, typename _RAIterIterator, typename _RAIter3,
typename _DifferenceTp, typename _Compare> struct __gnu_parallel::__
multiway_merge_3_variant_sentinel_switch< __sentinels, _RAIterIterator, _
RAIter3, _DifferenceTp, _Compare >
```

Switch for 3-way merging with `__sentinels` turned off. Note that 3-way merging is always stable!

Definition at line 748 of file `multiway_merge.h`.

The documentation for this struct was generated from the following file:

- [multiway\\_merge.h](#)

5.111 `__gnu_parallel::__multiway_merge_3_variant_sentinel_switch`< true, `_RAIterIterator`, `_RAIter3`, `_DifferenceTp`, `_Compare` > Struct Template

Reference 1163  
**5.111 `__gnu_parallel::__multiway_merge_3_variant_sentinel_switch`< true, `_RAIterIterator`, `_RAIter3`, `_DifferenceTp`, `_Compare` > Struct Template Reference**

Switch for 3-way merging with `__sentinels` turned on.

## Public Member Functions

- `_RAIter3 operator()` (`_RAIterIterator` `__seqs_begin`, `_RAIterIterator` `__seqs_end`, `_RAIter3` `__target`, `_DifferenceTp` `__length`, `_Compare` `__comp`)

### 5.111.1 Detailed Description

```
template<typename _RAIterIterator, typename _RAIter3, typename _DifferenceTp,
typename _Compare> struct __gnu_parallel::__multiway_merge_3_variant_sentinel_switch<
true, _RAIterIterator, _RAIter3, _DifferenceTp, _Compare >
```

Switch for 3-way merging with `__sentinels` turned on. Note that 3-way merging is always stable!

Definition at line 768 of file `multiway_merge.h`.

The documentation for this struct was generated from the following file:

- [multiway\\_merge.h](#)

## 5.112 `__gnu_parallel::__multiway_merge_4_variant_sentinel_switch`< `__sentinels`, `_RAIterIterator`, `_RAIter3`, `_DifferenceTp`, `_Compare` > Struct Template Reference

Switch for 4-way merging with `__sentinels` turned off.

### Public Member Functions

- `_RAIter3 operator()` (`_RAIterIterator __seqs_begin`, `_RAIterIterator __seqs_end`, `_RAIter3 __target`, `_DifferenceTp __length`, `_Compare __comp`)

#### 5.112.1 Detailed Description

```
template<bool __sentinels, typename _RAIterIterator, typename _RAIter3,
typename _DifferenceTp, typename _Compare> struct __gnu_parallel::__
multiway_merge_4_variant_sentinel_switch< __sentinels, _RAIterIterator, _
RAIter3, _DifferenceTp, _Compare >
```

Switch for 4-way merging with `__sentinels` turned off. Note that 4-way merging is always stable!

Definition at line 791 of file `multiway_merge.h`.

The documentation for this struct was generated from the following file:

- [multiway\\_merge.h](#)

## Public Member Functions

- `_RAIter3 operator()` (`_RAIterIterator __seqs_begin`, `_RAIterIterator __seqs_end`, `_RAIter3 __target`, `const typename std::iterator_traits< typename std::iterator_traits< _RAIterIterator >::value_type::first_type >::value_type &__sentinel`, `_DifferenceTp __length`, `_Compare __comp`)

### 5.115.1 Detailed Description

`template<bool __stable, typename _RAIterIterator, typename _RAIter3, typename _DifferenceTp, typename _Compare> struct __gnu_parallel::__multiway_merge_k_variant_sentinel_switch`< `false`, `__stable`, `_RAIterIterator`, `_RAIter3`, `_DifferenceTp`, `_Compare` >

Switch for k-way merging with `__sentinels` turned off.

Definition at line 868 of file `multiway_merge.h`.

The documentation for this struct was generated from the following file:

- [multiway\\_merge.h](#)

## 5.116 `__gnu_parallel::__replace_if_selector< _It, _Op, _Tp >` Struct Template Reference

std::replace() selector. Inheritance diagram for `__gnu_parallel::__replace_if_selector< _It, _Op, _Tp >`:

### Public Member Functions

- `__replace_if_selector` (const `_Tp` & `__new_val`)
- `bool operator()` (`_Op` & `__o`, `_It __i`)

### Public Attributes

- `const _Tp` & `__new_val`
- `_It` `_M_finish_iterator`

#### 5.116.1 Detailed Description

```
template<typename _It, typename _Op, typename _Tp> struct __gnu_parallel::__replace_if_selector< _It, _Op, _Tp >
```

std::replace() selector.

Definition at line 156 of file `for_each_selectors.h`.

## 5.116.2 Constructor & Destructor Documentation

**5.116.2.1** `template<typename _It, typename _Op, typename _Tp  
> __gnu_parallel::__replace_if_selector<_It, _Op, _Tp  
>::__replace_if_selector(const _Tp & __new_val) [inline,  
explicit]`

Constructor.

### Parameters:

`__new_val` Value to replace with.

Definition at line 164 of file `for_each_selectors.h`.

## 5.116.3 Member Function Documentation

**5.116.3.1** `template<typename _It, typename _Op, typename _Tp > bool  
__gnu_parallel::__replace_if_selector<_It, _Op, _Tp >::operator()  
(_Op & __o, _It __i) [inline]`

Functor execution.

### Parameters:

`__o` Operator.

`__i` iterator referencing object.

Definition at line 170 of file `for_each_selectors.h`.

References `__gnu_parallel::__replace_if_selector<_It, _Op, _Tp >::__new_val`.

## 5.116.4 Member Data Documentation

**5.116.4.1** `template<typename _It, typename _Op, typename _Tp > const  
_Tp& __gnu_parallel::__replace_if_selector<_It, _Op, _Tp  
>::__new_val`

Value to replace with.

Definition at line 159 of file `for_each_selectors.h`.

Referenced by `__gnu_parallel::__replace_if_selector<_It, _Op, _Tp >::operator()`.

**5.116.4.2** `template<typename _It > _It __gnu_parallel::__-`  
`generic_for_each_selector< _It >::_M_finish_iterator`  
`[inherited]`

`_Iterator` on last element processed; needed for some algorithms (e. g. `std::transform()`).

Definition at line 47 of file `for_each_selectors.h`.

The documentation for this struct was generated from the following file:

- [for\\_each\\_selectors.h](#)

## 5.117 `__gnu_parallel::__replace_selector<_It, _Tp>` Struct Template Reference

### 5.117 `__gnu_parallel::__replace_selector<_It, _Tp>` Struct Template Reference

`std::replace()` selector. Inheritance diagram for `__gnu_parallel::__replace_selector<_It, _Tp>`:

#### Public Member Functions

- `__replace_selector` (const `_Tp` & `__new_val`)
- bool `operator()` (`_Tp` & `__v`, `_It` `__i`)

#### Public Attributes

- const `_Tp` & `__new_val`
- `_It` `__M_finish_iterator`

#### 5.117.1 Detailed Description

`template<typename _It, typename _Tp> struct __gnu_parallel::__replace_selector<_It, _Tp>`

`std::replace()` selector.

Definition at line 132 of file `for_each_selectors.h`.

#### 5.117.2 Constructor & Destructor Documentation

5.117.2.1 `template<typename _It, typename _Tp> __gnu_parallel::__replace_selector<_It, _Tp>::__replace_selector` (const `_Tp` & `__new_val`) [`inline`, `explicit`]

Constructor.

**Parameters:**

*\_\_new\_val* Value to replace with.

Definition at line 140 of file `for_each_selectors.h`.

**5.117.3 Member Function Documentation**

**5.117.3.1** `template<typename _It, typename _Tp> bool  
__gnu_parallel::__replace_selector<_It, _Tp>::operator()(_Tp &  
__v, _It __i) [inline]`

Functor execution.

**Parameters:**

*\_\_v* Current value.

*\_\_i* iterator referencing object.

Definition at line 146 of file `for_each_selectors.h`.

References `__gnu_parallel::__replace_selector<_It, _Tp>::__new_val`.

**5.117.4 Member Data Documentation**

**5.117.4.1** `template<typename _It, typename _Tp> const _Tp &  
__gnu_parallel::__replace_selector<_It, _Tp>::__new_val`

Value to replace with.

Definition at line 135 of file `for_each_selectors.h`.

Referenced by `__gnu_parallel::__replace_selector<_It, _Tp>::operator()()`.

**5.117.4.2** `template<typename _It> _It __gnu_parallel::__-  
generic_for_each_selector<_It>::__M_finish_iterator  
[inherited]`

*\_Iterator* on last element processed; needed for some algorithms (e. g. `std::transform()`).

Definition at line 47 of file `for_each_selectors.h`.

The documentation for this struct was generated from the following file:

- [for\\_each\\_selectors.h](#)

## 5.118 `__gnu_parallel::__transform1_selector<_It>` Struct Template Reference

### 5.118 `__gnu_parallel::__transform1_selector<_It>` Struct Template Reference

`std::transform()` `__selector`, one input sequence variant. Inheritance diagram for `__gnu_parallel::__transform1_selector<_It>`:

#### Public Member Functions

- `template<typename _Op > bool operator() (_Op &__o, _It __i)`

#### Public Attributes

- `_It __M_finish_iterator`

#### 5.118.1 Detailed Description

`template<typename _It> struct __gnu_parallel::__transform1_selector<_It>`

`std::transform()` `__selector`, one input sequence variant.

Definition at line 100 of file `for_each_selectors.h`.

#### 5.118.2 Member Function Documentation

**5.118.2.1** `template<typename _It> template<typename _Op > bool __gnu_parallel::__transform1_selector<_It>::operator() (_Op &__o, _It __i) [inline]`

Functor execution.

**Parameters:**

- `__o` Operator.
- `__i` iterator referencing object.

Definition at line 107 of file `for_each_selectors.h`.

### 5.118.3 Member Data Documentation

#### 5.118.3.1 `template<typename _It > _It __gnu_parallel::__generic_for_each_selector< _It >::_M_finish_iterator` [`inherited`]

`_Iterator` on last element processed; needed for some algorithms (e. g. `std::transform()`).

Definition at line 47 of file `for_each_selectors.h`.

The documentation for this struct was generated from the following file:

- [for\\_each\\_selectors.h](#)

## 5.119 `__gnu_parallel::__transform2_selector<_It>` Struct Template Reference

### 5.119 `__gnu_parallel::__transform2_selector<_It>` Struct Template Reference

`std::transform()` `__selector`, two input sequences variant. Inheritance diagram for `__gnu_parallel::__transform2_selector<_It>`:

#### Public Member Functions

- `template<typename _Op > bool operator() (_Op &__o, _It __i)`

#### Public Attributes

- `_It __M_finish_iterator`

#### 5.119.1 Detailed Description

`template<typename _It> struct __gnu_parallel::__transform2_selector<_It >`

`std::transform()` `__selector`, two input sequences variant.

Definition at line 116 of file `for_each_selectors.h`.

#### 5.119.2 Member Function Documentation

**5.119.2.1** `template<typename _It> template<typename _Op > bool __gnu_parallel::__transform2_selector<_It >::operator() (_Op &__o, _It __i) [inline]`

Functor execution.

**Parameters:**

- `__o` Operator.
- `__i` iterator referencing object.

Definition at line 123 of file `for_each_selectors.h`.

### 5.119.3 Member Data Documentation

#### 5.119.3.1 `template<typename _It > _It __gnu_parallel::__generic_for_each_selector< _It >::_M_finish_iterator` [`inherited`]

`_Iterator` on last element processed; needed for some algorithms (e. g. `std::transform()`).

Definition at line 47 of file `for_each_selectors.h`.

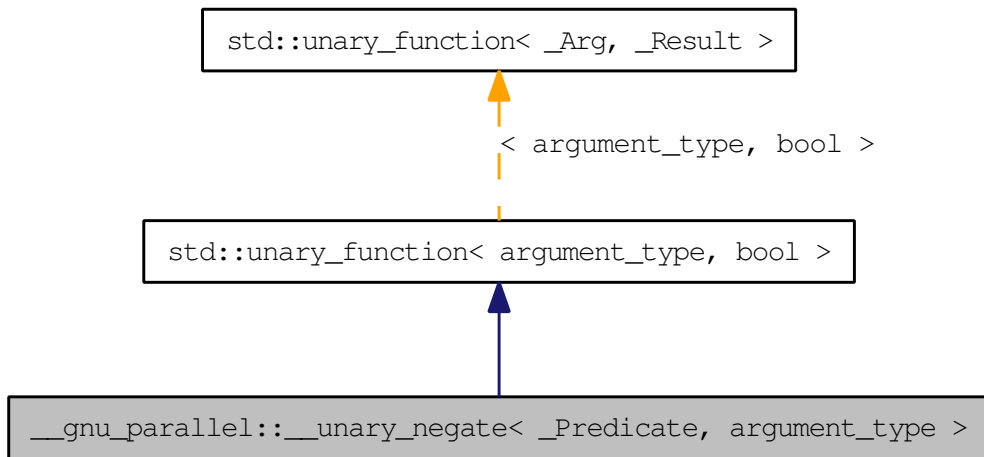

The documentation for this struct was generated from the following file:

- [for\\_each\\_selectors.h](#)

## 5.120 `__gnu_parallel::__unary_negate<_Predicate, argument_type >` Class Template Reference

Similar to `std::unary_negate`, but giving the argument types explicitly. Inheritance diagram for `__gnu_parallel::__unary_negate<_Predicate, argument_type >`:

### Public Types

- typedef `argument_type` `argument_type`
- typedef `bool` `result_type`

### Public Member Functions

- `__unary_negate` (`const _Predicate &__x`)
- `bool operator()` (`const argument_type &__x`)

### Protected Attributes

- `_Predicate` `_M_pred`

### 5.120.1 Detailed Description

```
template<typename _Predicate, typename argument_type> class __gnu_parallel::__unary_negate< _Predicate, argument_type >
```

Similar to [std::unary\\_negate](#), but giving the argument types explicitly.

Definition at line 173 of file `parallel/base.h`.

### 5.120.2 Member Typedef Documentation

**5.120.2.1** `typedef argument_type std::unary_function< argument_type , bool >::argument_type [inherited]`

`argument_type` is the type of the argument (no surprises here)

Definition at line 102 of file `stl_function.h`.

**5.120.2.2** `typedef bool std::unary_function< argument_type , bool >::result_type [inherited]`

`result_type` is the return type

Definition at line 105 of file `stl_function.h`.

The documentation for this class was generated from the following file:

- [parallel/base.h](#)

## 5.121 `__gnu_parallel::_DRandomShufflingGlobalData<_RAIter >` Struct Template Reference

Data known to every thread participating in `__gnu_parallel::__parallel_random_shuffle()`.

### Public Types

- typedef `_TraitsType::difference_type` `_DifferenceType`
- typedef `std::iterator_traits<_RAIter >` `_TraitsType`
- typedef `_TraitsType::value_type` `_ValueType`

### Public Member Functions

- `_DRandomShufflingGlobalData` (`_RAIter &` `__source`)

### Public Attributes

- `_ThreadIndex * _M_bin_proc`
- `_DifferenceType ** _M_dist`
- `int _M_num_bins`
- `int _M_num_bits`
- `_RAIter & _M_source`
- `_DifferenceType * _M_starts`
- `_ValueType ** _M_temporaries`

#### 5.121.1 Detailed Description

```
template<typename _RAIter> struct __gnu_parallel::_
DRandomShufflingGlobalData<_RAIter >
```

Data known to every thread participating in `__gnu_parallel::__parallel_random_shuffle()`.

Definition at line 52 of file `random_shuffle.h`.

## 5.121.2 Constructor & Destructor Documentation

**5.121.2.1** `template<typename _RAIter> __gnu_parallel::_DRandomShufflingGlobalData<_RAIter>::__DRandomShufflingGlobalData (_RAIter & __source)`  
**[inline]**

Constructor.

Definition at line 83 of file random\_shuffle.h.

## 5.121.3 Member Data Documentation

**5.121.3.1** `template<typename _RAIter> _ThreadIndex* __gnu_parallel::_DRandomShufflingGlobalData<_RAIter>::__M_bin_proc`

Number of the thread that will further process the corresponding bin.

Definition at line 74 of file random\_shuffle.h.

Referenced by `__gnu_parallel::__parallel_random_shuffle_drs()`.

**5.121.3.2** `template<typename _RAIter> _DifferenceType** __gnu_parallel::_DRandomShufflingGlobalData<_RAIter>::__M_dist`

Two-dimensional array to hold the thread-bin distribution. Dimensions (`_M_num_threads + 1`) `__x` (`_M_num_bins + 1`).

Definition at line 67 of file random\_shuffle.h.

Referenced by `__gnu_parallel::__parallel_random_shuffle_drs()`, and `__gnu_parallel::__parallel_random_shuffle_drs_pu()`.

**5.121.3.3** `template<typename _RAIter> int __gnu_parallel::_DRandomShufflingGlobalData<_RAIter>::__M_num_bins`

Number of bins to distribute to.

Definition at line 77 of file random\_shuffle.h.

Referenced by `__gnu_parallel::__parallel_random_shuffle_drs()`, and `__gnu_parallel::__parallel_random_shuffle_drs_pu()`.

**5.121 \_\_gnu\_parallel::\_DRandomShufflingGlobalData<\_RAIter> Struct**  
**Template Reference** **1181**

---

**5.121.3.4** `template<typename _RAIter> int __gnu_parallel::_DRandomShufflingGlobalData<_RAIter>::_M_num_bits`

Number of bits needed to address the bins.

Definition at line 80 of file `random_shuffle.h`.

Referenced by `__gnu_parallel::__parallel_random_shuffle_drs()`, and `__gnu_parallel::__parallel_random_shuffle_drs_pu()`.

**5.121.3.5** `template<typename _RAIter> _RAIter& __gnu_parallel::_DRandomShufflingGlobalData<_RAIter>::_M_source`

Begin iterator of the `__source`.

Definition at line 59 of file `random_shuffle.h`.

**5.121.3.6** `template<typename _RAIter> _DifferenceType* __gnu_parallel::_DRandomShufflingGlobalData<_RAIter>::_M_starts`

Start indexes of the threads' `__chunks`.

Definition at line 70 of file `random_shuffle.h`.

Referenced by `__gnu_parallel::__parallel_random_shuffle_drs()`, and `__gnu_parallel::__parallel_random_shuffle_drs_pu()`.

**5.121.3.7** `template<typename _RAIter> _ValueType** __gnu_parallel::_DRandomShufflingGlobalData<_RAIter>::_M_temporaries`

Temporary arrays for each thread.

Definition at line 62 of file `random_shuffle.h`.

Referenced by `__gnu_parallel::__parallel_random_shuffle_drs()`.

The documentation for this struct was generated from the following file:

- [random\\_shuffle.h](#)

## 5.122 `__gnu_parallel::_DRSSorterPU<_RAIter, _RandomNumberGenerator>` Struct Template Reference

Local data for a thread participating in `__gnu_parallel::__parallel_random_shuffle()`.

### Public Attributes

- `_BinIndex __bins_end`
- `_BinIndex _M_bins_begin`
- `int _M_num_threads`
- `_DRandomShufflingGlobalData<_RAIter> * _M_sd`
- `uint32_t _M_seed`

### 5.122.1 Detailed Description

`template<typename _RAIter, typename _RandomNumberGenerator> struct __gnu_parallel::_DRSSorterPU<_RAIter, _RandomNumberGenerator>`

Local data for a thread participating in `__gnu_parallel::__parallel_random_shuffle()`.

Definition at line 91 of file `random_shuffle.h`.

### 5.122.2 Member Data Documentation

**5.122.2.1** `template<typename _RAIter, typename _RandomNumberGenerator> _BinIndex __gnu_parallel::_DRSSorterPU<_RAIter, _RandomNumberGenerator>::__bins_end`

End index for bins taken care of by this thread.

Definition at line 100 of file `random_shuffle.h`.

Referenced by `__gnu_parallel::__parallel_random_shuffle_drs()`.

**5.122.2.2** `template<typename _RAIter, typename _RandomNumberGenerator> _BinIndex __gnu_parallel::_DRSSorterPU<_RAIter, _RandomNumberGenerator>::__M_bins_begin`

Begin index for bins taken care of by this thread.

**5.122 \_\_gnu\_parallel::DRSSorterPU<\_RAIter, \_RandomNumberGenerator >  
Struct Template Reference 1183**

---

Definition at line 97 of file random\_shuffle.h.

Referenced by \_\_gnu\_parallel::\_\_parallel\_random\_shuffle\_drs().

**5.122.2.3 template<typename \_RAIter, typename  
\_RandomNumberGenerator> int \_\_gnu\_parallel::DRSSorterPU<  
\_RAIter, \_RandomNumberGenerator >::\_M\_num\_threads**

Number of threads participating in total.

Definition at line 94 of file random\_shuffle.h.

Referenced by \_\_gnu\_parallel::\_\_parallel\_random\_shuffle\_drs(), and \_\_gnu\_parallel::\_\_parallel\_random\_shuffle\_drs\_pu().

**5.122.2.4 template<typename \_RAIter, typename  
\_RandomNumberGenerator> \_DRandomShufflingGlobalData<\_  
RAIter>\* \_\_gnu\_parallel::DRSSorterPU<\_RAIter,  
\_RandomNumberGenerator >::\_M\_sd**

Pointer to global data.

Definition at line 106 of file random\_shuffle.h.

Referenced by \_\_gnu\_parallel::\_\_parallel\_random\_shuffle\_drs(), and \_\_gnu\_parallel::\_\_parallel\_random\_shuffle\_drs\_pu().

**5.122.2.5 template<typename \_RAIter, typename  
\_RandomNumberGenerator> uint32\_t \_\_gnu\_parallel::\_  
DRSSorterPU<\_RAIter, \_RandomNumberGenerator  
>::\_M\_seed**

Random \_M\_seed for this thread.

Definition at line 103 of file random\_shuffle.h.

Referenced by \_\_gnu\_parallel::\_\_parallel\_random\_shuffle\_drs(), and \_\_gnu\_parallel::\_\_parallel\_random\_shuffle\_drs\_pu().

The documentation for this struct was generated from the following file:

- [random\\_shuffle.h](#)

## 5.123 `__gnu_parallel::_DummyReduct` Struct Reference

Reduction function doing nothing.

### Public Member Functions

- `bool operator()` (bool, bool) const

#### 5.123.1 Detailed Description

Reduction function doing nothing.

Definition at line 298 of file `for_each_selectors.h`.

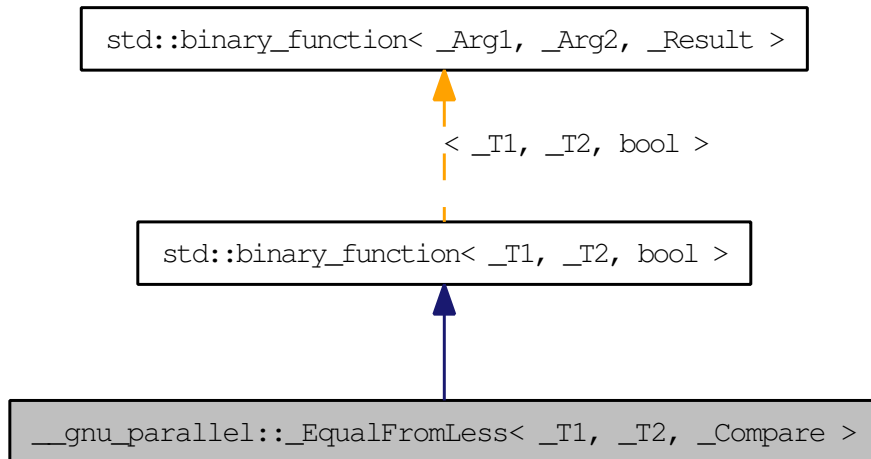

The documentation for this struct was generated from the following file:

- [for\\_each\\_selectors.h](#)

## 5.124 `__gnu_parallel::_EqualFromLess<_T1, _T2, _Compare>` Class Template Reference

Constructs predicate for equality from strict weak ordering predicate. Inheritance diagram for `__gnu_parallel::_EqualFromLess<_T1, _T2, _Compare>`:

### Public Types

- typedef `_T1` [first\\_argument\\_type](#)
- typedef `bool` [result\\_type](#)
- typedef `_T2` [second\\_argument\\_type](#)

### Public Member Functions

- `_EqualFromLess` (`_Compare &__comp`)
- `bool operator()` (`const _T1 &__a, const _T2 &__b`)

#### 5.124.1 Detailed Description

```
template<typename _T1, typename _T2, typename _Compare> class __gnu_parallel::_EqualFromLess<_T1, _T2, _Compare>
```

Constructs predicate for equality from strict weak ordering predicate.

Definition at line 157 of file `parallel/base.h`.

## 5.124.2 Member Typedef Documentation

**5.124.2.1** `typedef _T1 std::binary_function< _T1 , _T2 , bool  
>::first_argument_type [inherited]`

the type of the first argument (no surprises here)

Definition at line 114 of file `stl_function.h`.

**5.124.2.2** `typedef bool std::binary_function< _T1 , _T2 , bool >::result_type  
[inherited]`

type of the return type

Definition at line 118 of file `stl_function.h`.

**5.124.2.3** `typedef _T2 std::binary_function< _T1 , _T2 , bool  
>::second_argument_type [inherited]`

the type of the second argument

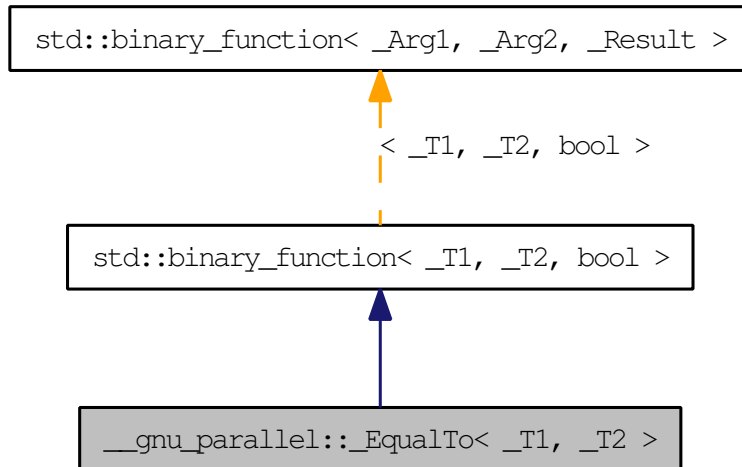

Definition at line 117 of file `stl_function.h`.

The documentation for this class was generated from the following file:

- [parallel/base.h](#)

## 5.125 `__gnu_parallel::_EqualTo<_T1, _T2>` Struct Template Reference

Similar to [std::equal\\_to](#), but allows two different types. Inheritance diagram for `__gnu_parallel::_EqualTo<_T1, _T2>`:

### Public Types

- typedef `_T1` [first\\_argument\\_type](#)
- typedef `bool` [result\\_type](#)
- typedef `_T2` [second\\_argument\\_type](#)

### Public Member Functions

- `bool operator() (const _T1 &__t1, const _T2 &__t2) const`

#### 5.125.1 Detailed Description

```
template<typename _T1, typename _T2> struct __gnu_parallel::_EqualTo<_T1, _T2>
```

Similar to [std::equal\\_to](#), but allows two different types.

Definition at line 244 of file `parallel/base.h`.

## 5.125.2 Member Typedef Documentation

**5.125.2.1** `typedef _T1 std::binary_function< _T1 , _T2 , bool >::first_argument_type [inherited]`

the type of the first argument (no surprises here)

Definition at line 114 of file `stl_function.h`.

**5.125.2.2** `typedef bool std::binary_function< _T1 , _T2 , bool >::result_type [inherited]`

type of the return type

Definition at line 118 of file `stl_function.h`.

**5.125.2.3** `typedef _T2 std::binary_function< _T1 , _T2 , bool >::second_argument_type [inherited]`

the type of the second argument

Definition at line 117 of file `stl_function.h`.

The documentation for this struct was generated from the following file:

- [parallel/base.h](#)

## 5.126 `__gnu_parallel::_GuardedIterator<_RAIter, _Compare >` Class Template Reference

`_Iterator` wrapper supporting an implicit supremum at the end of the sequence, dominating all comparisons.

### Public Member Functions

- `_GuardedIterator` (`_RAIter __begin`, `_RAIter __end`, `_Compare &__comp`)
- `operator _RAIter` ()
- `std::iterator_traits<_RAIter >::value_type & operator*` ()
- `_GuardedIterator<_RAIter, _Compare > & operator++` ()

### Friends

- `bool operator<` (`_GuardedIterator<_RAIter, _Compare > &__bi1`, `_GuardedIterator<_RAIter, _Compare > &__bi2`)
- `bool operator<=` (`_GuardedIterator<_RAIter, _Compare > &__bi1`, `_GuardedIterator<_RAIter, _Compare > &__bi2`)

### 5.126.1 Detailed Description

`template<typename _RAIter, typename _Compare> class __gnu_parallel::_GuardedIterator<_RAIter, _Compare >`

`_Iterator` wrapper supporting an implicit supremum at the end of the sequence, dominating all comparisons. The implicit supremum comes with a performance cost.

Deriving from `_RAIter` is not possible since `_RAIter` need not be a class.

Definition at line 66 of file `multiway_merge.h`.

### 5.126.2 Constructor & Destructor Documentation

**5.126.2.1** `template<typename _RAIter, typename _Compare > __gnu_parallel::_GuardedIterator<_RAIter, _Compare >::_GuardedIterator` (`_RAIter __begin`, `_RAIter __end`, `_Compare &__comp`) [`inline`]

Constructor. Sets iterator to beginning of sequence.

**Parameters:**

- `__begin` Begin iterator of sequence.
- `__end` End iterator of sequence.
- `__comp` Comparator provided for associated overloaded compare operators.

Definition at line 84 of file `multiway_merge.h`.

**5.126.3 Member Function Documentation**

**5.126.3.1** `template<typename _RAIter, typename _Compare >`  
`__gnu_parallel::_GuardedIterator<_RAIter, _Compare >::operator`  
`_RAIter () [inline]`

Convert to wrapped iterator.

**Returns:**

Wrapped iterator.

Definition at line 105 of file `multiway_merge.h`.

**5.126.3.2** `template<typename _RAIter, typename _Compare`  
`> std::iterator_traits<_RAIter>::value_type&`  
`__gnu_parallel::_GuardedIterator<_RAIter, _Compare`  
`>::operator* () [inline]`

Dereference operator.

**Returns:**

Referenced element.

Definition at line 100 of file `multiway_merge.h`.

**5.126.3.3** `template<typename _RAIter, typename _Compare`  
`> _GuardedIterator<_RAIter, _Compare>&`  
`__gnu_parallel::_GuardedIterator<_RAIter, _Compare`  
`>::operator++ () [inline]`

Pre-increment operator.

**Returns:**

This.

Definition at line 91 of file `multiway_merge.h`.

### 5.126.4 Friends And Related Function Documentation

**5.126.4.1** `template<typename _RAIter, typename _Compare > bool  
operator< (_GuardedIterator<_RAIter, _Compare > & __bi1,  
_GuardedIterator<_RAIter, _Compare > & __bi2) [friend]`

Compare two elements referenced by guarded iterators.

**Parameters:**

`__bi1` First iterator.  
`__bi2` Second iterator.

**Returns:**

`true` if less.

Definition at line 113 of file `multiway_merge.h`.

**5.126.4.2** `template<typename _RAIter, typename _Compare > bool  
operator<= (_GuardedIterator<_RAIter, _Compare > & __bi1,  
_GuardedIterator<_RAIter, _Compare > & __bi2) [friend]`

Compare two elements referenced by guarded iterators.

**Parameters:**

`__bi1` First iterator.  
`__bi2` Second iterator.

**Returns:**

`True` if less equal.

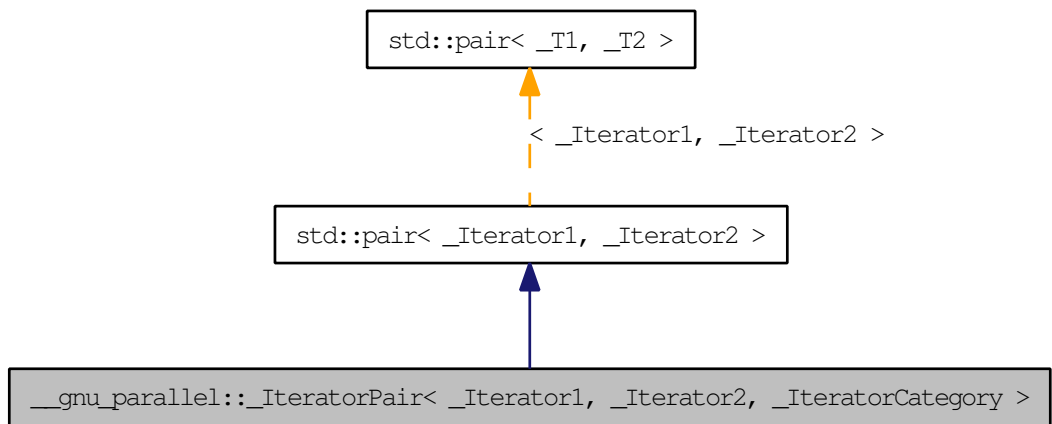

Definition at line 128 of file `multiway_merge.h`.

The documentation for this class was generated from the following file:

- [multiway\\_merge.h](#)

## 5.127 `__gnu_parallel::_IteratorPair`< `_Iterator1`, `_Iterator2`, `_IteratorCategory` > Class Template Reference

A pair of iterators. The usual iterator operations are applied to both child iterators. Inheritance diagram for `__gnu_parallel::_IteratorPair`< `_Iterator1`, `_Iterator2`, `_IteratorCategory` >:

### Public Types

- typedef `std::iterator_traits`< `_Iterator1` > `_TraitsType`
- typedef `_TraitsType::difference_type` `difference_type`
- typedef `_Iterator1` `first_type`
- typedef `_IteratorCategory` `iterator_category`
- typedef `_IteratorPair` \* `pointer`
- typedef `_IteratorPair` & `reference`
- typedef `_Iterator2` `second_type`
- typedef void `value_type`

### Public Member Functions

- `_IteratorPair` (`const _Iterator1` &\_\_first, `const _Iterator2` &\_\_second)
- `operator _Iterator2` () const
- `_IteratorPair` `operator+` (`difference_type` \_\_delta) const
- `const _IteratorPair` `operator++` (int)
- `_IteratorPair` & `operator++` ()

- `_IteratorPair` & **operator--** ()
- `_IteratorPair` & **operator=** (const `_IteratorPair` &\_\_other)
- void **swap** (pair &\_\_p)

## Public Attributes

- `_Iterator1` `first`
- `_Iterator2` `second`

### 5.127.1 Detailed Description

```
template<typename _Iterator1, typename _Iterator2, typename _-
IteratorCategory> class __gnu_parallel::IteratorPair< _Iterator1, _Iterator2,
_IteratorCategory >
```

A pair of iterators. The usual iterator operations are applied to both child iterators.

Definition at line 45 of file `iterator.h`.

### 5.127.2 Member Typedef Documentation

**5.127.2.1** `typedef _Iterator1 std::pair< _Iterator1 , _Iterator2 >::first_type`  
[`inherited`]

`first_type` is the first bound type

Definition at line 73 of file `stl_pair.h`.

**5.127.2.2** `typedef _Iterator2 std::pair< _Iterator1 , _Iterator2 >::second_type`  
[`inherited`]

`second_type` is the second bound type

Definition at line 74 of file `stl_pair.h`.

### 5.127.3 Member Data Documentation

**5.127.3.1** `_Iterator1 std::pair< _Iterator1 , _Iterator2 >::first` [`inherited`]

`first` is a copy of the first object

Definition at line 76 of file `stl_pair.h`.

### 5.127.3.2 `_Iterator2 std::pair<_Iterator1 ,_Iterator2 >::second` [`inherited`]

`second` is a copy of the second object

Definition at line 77 of file `stl_pair.h`.

The documentation for this class was generated from the following file:

- [iterator.h](#)

## 5.128 `__gnu_parallel::IteratorTriple<_Iterator1, _Iterator2, _Iterator3, _IteratorCategory>` Class Template Reference

A triple of iterators. The usual iterator operations are applied to all three child iterators.

### Public Types

- typedef `std::iterator_traits<_Iterator1>::difference_type` **difference\_type**
- typedef `_IteratorCategory` **iterator\_category**
- typedef `_IteratorTriple *` **pointer**
- typedef `_IteratorTriple &` **reference**
- typedef void **value\_type**

### Public Member Functions

- **\_IteratorTriple** (const `_Iterator1` &\_\_first, const `_Iterator2` &\_\_second, const `_Iterator3` &\_\_third)
- **operator \_Iterator3** () const
- `_IteratorTriple` **operator+** (difference\_type \_\_delta) const
- const `_IteratorTriple` **operator++** (int)
- `_IteratorTriple` & **operator++** ()
- difference\_type **operator-** (const `_IteratorTriple` &\_\_other) const
- const `_IteratorTriple` **operator--** (int)
- `_IteratorTriple` & **operator--** ()
- `_IteratorTriple` & **operator=** (const `_IteratorTriple` &\_\_other)

### Public Attributes

- `_Iterator1` **\_M\_first**
- `_Iterator2` **\_M\_second**
- `_Iterator3` **\_M\_third**

#### 5.128.1 Detailed Description

```
template<typename _Iterator1, typename _Iterator2, typename _Iterator3, typename _IteratorCategory> class __gnu_parallel::IteratorTriple<_Iterator1, _Iterator2, _Iterator3, _IteratorCategory>
```

A triple of iterators. The usual iterator operations are applied to all three child iterators.

Definition at line 120 of file iterator.h.

The documentation for this class was generated from the following file:

- [iterator.h](#)

## 5.129 `__gnu_parallel::_Job<_DifferenceTp>` Struct Template Reference

One `__job` for a certain thread.

### Public Types

- typedef `_DifferenceTp` `_DifferenceType`

### Public Attributes

- volatile `_DifferenceType` `_M_first`
- volatile `_DifferenceType` `_M_last`
- volatile `_DifferenceType` `_M_load`

#### 5.129.1 Detailed Description

`template<typename _DifferenceTp> struct __gnu_parallel::_Job<_DifferenceTp>`

One `__job` for a certain thread.

Definition at line 54 of file `workstealing.h`.

#### 5.129.2 Member Data Documentation

**5.129.2.1** `template<typename _DifferenceTp> volatile _DifferenceType __gnu_parallel::_Job<_DifferenceTp>::_M_first`

First element. Changed by owning and stealing thread. By stealing thread, always incremented.

Definition at line 62 of file `workstealing.h`.

Referenced by `__gnu_parallel::__for_each_template_random_access_workstealing()`.

**5.129.2.2** `template<typename _DifferenceTp> volatile _DifferenceType __gnu_parallel::_Job<_DifferenceTp>::_M_last`

Last element. Changed by owning thread only.

Definition at line 67 of file `workstealing.h`.

Referenced by `__gnu_parallel::__for_each_template_random_access_workstealing()`.

**5.129.2.3** `template<typename _DifferenceTp> volatile _DifferenceType  
__gnu_parallel::_Job<_DifferenceTp >::_M_load`

Number of elements, i.e. `_M_last-_M_first+1`. Changed by owning thread only.

Definition at line 72 of file `workstealing.h`.

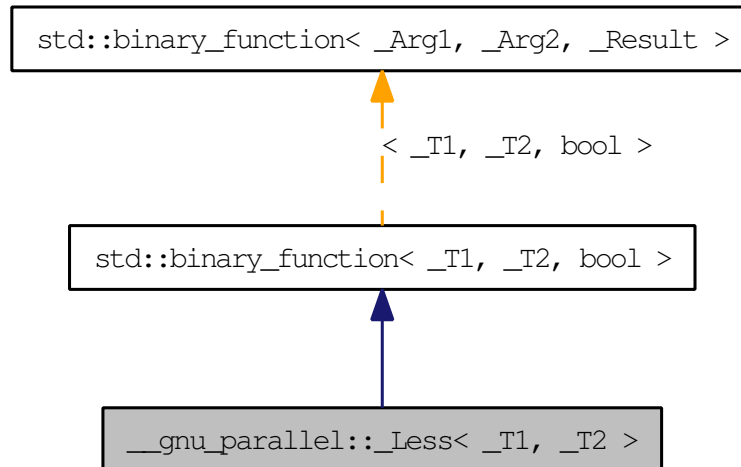

Referenced by `__gnu_parallel::_for_each_template_random_access_workstealing()`.

The documentation for this struct was generated from the following file:

- [workstealing.h](#)

## 5.130 `__gnu_parallel::_Less<_T1, _T2>` Struct Template Reference

Similar to `std::less`, but allows two different types. Inheritance diagram for `__gnu_parallel::_Less<_T1, _T2>`:

### Public Types

- typedef `_T1` `first_argument_type`
- typedef `bool` `result_type`
- typedef `_T2` `second_argument_type`

### Public Member Functions

- `bool operator() (const _T2 &__t2, const _T1 &__t1) const`
- `bool operator() (const _T1 &__t1, const _T2 &__t2) const`

#### 5.130.1 Detailed Description

```
template<typename _T1, typename _T2> struct __gnu_parallel::_Less<_T1, _T2>
```

Similar to `std::less`, but allows two different types.

Definition at line 252 of file `parallel/base.h`.

## 5.130.2 Member Typedef Documentation

**5.130.2.1** `typedef _T1 std::binary_function< _T1 , _T2 , bool  
>::first_argument_type [inherited]`

the type of the first argument (no surprises here)

Definition at line 114 of file `stl_function.h`.

**5.130.2.2** `typedef bool std::binary_function< _T1 , _T2 , bool >::result_type  
[inherited]`

type of the return type

Definition at line 118 of file `stl_function.h`.

**5.130.2.3** `typedef _T2 std::binary_function< _T1 , _T2 , bool  
>::second_argument_type [inherited]`

the type of the second argument

Definition at line 117 of file `stl_function.h`.

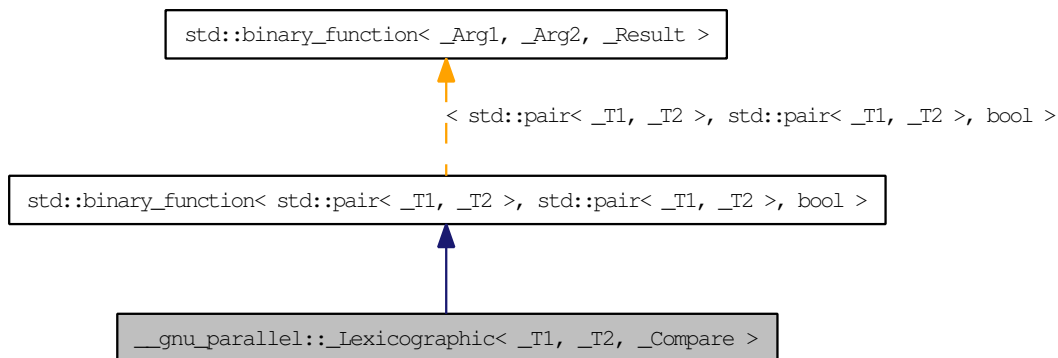

The documentation for this struct was generated from the following file:

- [parallel/base.h](#)

## 5.131 `__gnu_parallel::_Lexicographic<_T1, _T2, _Compare>` Class Template Reference

Compare \_\_a pair of types lexicographically, ascending. Inheritance diagram for `__gnu_parallel::_Lexicographic<_T1, _T2, _Compare>`:

### Public Types

- typedef `std::pair<_T1, _T2 >` `first_argument_type`
- typedef `bool` `result_type`
- typedef `std::pair<_T1, _T2 >` `second_argument_type`

### Public Member Functions

- `_Lexicographic` (`_Compare &__comp`)
- `bool operator()` (`const std::pair<_T1, _T2 > &__p1, const std::pair<_T1, _T2 > &__p2`) `const`

#### 5.131.1 Detailed Description

`template<typename _T1, typename _T2, typename _Compare> class __gnu_parallel::_Lexicographic<_T1, _T2, _Compare >`

Compare \_\_a pair of types lexicographically, ascending.

Definition at line 55 of file `multiseq_selection.h`.

## 5.131.2 Member Typedef Documentation

**5.131.2.1** `typedef std::pair<_T1,_T2> std::binary_function< std::pair<_T1,_T2>, std::pair<_T1,_T2>, bool >::first_argument_type`  
[`inherited`]

the type of the first argument (no surprises here)

Definition at line 114 of file `stl_function.h`.

**5.131.2.2** `typedef bool std::binary_function< std::pair<_T1,_T2>, std::pair<_T1,_T2>, bool >::result_type` [`inherited`]

type of the return type

Definition at line 118 of file `stl_function.h`.

**5.131.2.3** `typedef std::pair<_T1,_T2> std::binary_function< std::pair<_T1,_T2>, std::pair<_T1,_T2>, bool >::second_argument_type`  
[`inherited`]

the type of the second argument

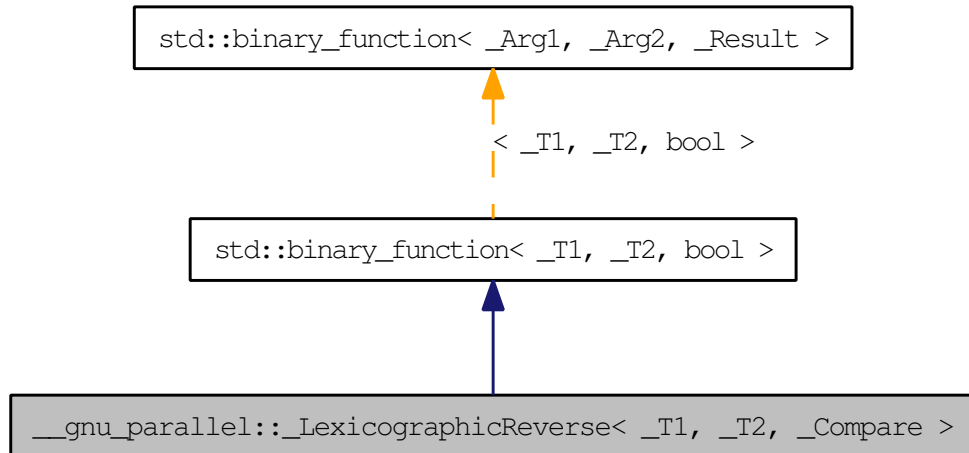

Definition at line 117 of file `stl_function.h`.

The documentation for this class was generated from the following file:

- [multiseq\\_selection.h](#)

## 5.132 `__gnu_parallel::_LexicographicReverse< _T1, _T2, _Compare >` Class Template Reference

Compare \_\_a pair of types lexicographically, descending. Inheritance diagram for `__gnu_parallel::_LexicographicReverse< _T1, _T2, _Compare >`:

### Public Types

- typedef `_T1` `first_argument_type`
- typedef `bool` `result_type`
- typedef `_T2` `second_argument_type`

### Public Member Functions

- `_LexicographicReverse` (`_Compare &__comp`)
- `bool operator()` (`const std::pair< _T1, _T2 > &__p1, const std::pair< _T1, _T2 > &__p2`) `const`

#### 5.132.1 Detailed Description

`template<typename _T1, typename _T2, typename _Compare> class __gnu_parallel::_LexicographicReverse< _T1, _T2, _Compare >`

Compare \_\_a pair of types lexicographically, descending.

Definition at line 82 of file `multiseq_selection.h`.

## 5.132.2 Member Typedef Documentation

**5.132.2.1** `typedef _T1 std::binary_function< _T1 , _T2 , bool  
>::first_argument_type [inherited]`

the type of the first argument (no surprises here)

Definition at line 114 of file `stl_function.h`.

**5.132.2.2** `typedef bool std::binary_function< _T1 , _T2 , bool >::result_type  
[inherited]`

type of the return type

Definition at line 118 of file `stl_function.h`.

**5.132.2.3** `typedef _T2 std::binary_function< _T1 , _T2 , bool  
>::second_argument_type [inherited]`

the type of the second argument

Definition at line 117 of file `stl_function.h`.

The documentation for this class was generated from the following file:

- [multiseq\\_selection.h](#)

## 5.133 `__gnu_parallel::_LoserTree< __stable, _Tp, _Compare >` Class Template Reference

Stable `_LoserTree` variant. Inheritance diagram for `__gnu_parallel::_LoserTree< __stable, _Tp, _Compare >`:

### Public Member Functions

- `_LoserTree` (unsigned int `__k`, `_Compare` `__comp`)
- void `__delete_min_insert` (`_Tp` `__key`, bool `__sup`)
- int `__get_min_source` ()
- void `__init` ()
- unsigned int `__init_winner` (unsigned int `__root`)
- void `__insert_start` (const `_Tp` &`__key`, int `__source`, bool `__sup`)

### Protected Attributes

- `_Compare` `_M_comp`
- bool `_M_first_insert`
- unsigned int `_M_ik`
- unsigned int `_M_k`
- unsigned int `_M_log_k`
- `_Loser` \* `_M_losers`
- unsigned int `_M_offset`

#### 5.133.1 Detailed Description

`template<bool __stable, typename _Tp, typename _Compare> class __gnu_parallel::_LoserTree< __stable, _Tp, _Compare >`

Stable `_LoserTree` variant. Provides the stable implementations of `insert_start`, `__init_winner`, `__init` and `__delete_min_insert`.

Unstable variant is done using partial specialisation below.

Definition at line 165 of file losertree.h.

## 5.133.2 Member Function Documentation

**5.133.2.1** `template<bool __stable, typename _Tp , typename _Compare  
> void __gnu_parallel::_LoserTree< __stable, _Tp, _Compare  
>::_delete_min_insert (_Tp __key, bool __sup) [inline]`

Delete the smallest element and insert a new element from the previously smallest element's sequence. This implementation is stable.

Definition at line 217 of file losertree.h.

References `std::swap()`.

**5.133.2.2** `template<typename _Tp , typename _Compare >  
int __gnu_parallel::_LoserTreeBase< _Tp, _Compare  
>::_get_min_source () [inline, inherited]`

### Returns:

the index of the sequence with the smallest element.

Definition at line 151 of file losertree.h.

References `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_losers`, and `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::_M_source`.

**5.133.2.3** `template<typename _Tp , typename _Compare > void  
__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_insert_start  
(const _Tp & __key, int __source, bool __sup) [inline,  
inherited]`

Initializes the sequence "`_M_source`" with the element "`__key`".

### Parameters:

`__key` the element to insert

`__source` \_\_index of the `__source` \_\_sequence

`__sup` flag that determines whether the value to insert is an explicit `__supremum`.

Definition at line 130 of file losertree.h.

References `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_first_insert`, `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::_M_key`,

## 5.133 `__gnu_parallel::_LoserTree< __stable, _Tp, _Compare >` Class Template Reference 1207

---

`__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_losers`, `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::_M_source`, and `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::_M_sup`.

### 5.133.3 Member Data Documentation

#### 5.133.3.1 `template<typename _Tp, typename _Compare > _Compare __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_comp` [protected, inherited]

`_Compare` to use.

Definition at line 78 of file `losertree.h`.

#### 5.133.3.2 `template<typename _Tp, typename _Compare > bool __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_first_insert` [protected, inherited]

State flag that determines whether the `_LoserTree` is empty. Only used for building the `_LoserTree`.

Definition at line 85 of file `losertree.h`.

Referenced by `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_insert_start()`, and `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_LoserTreeBase()`.

#### 5.133.3.3 `template<typename _Tp, typename _Compare > unsigned int __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_log_k` [protected, inherited]

`log_2{ _M_k }`

Definition at line 72 of file `losertree.h`.

Referenced by `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_LoserTreeBase()`.

#### 5.133.3.4 `template<typename _Tp, typename _Compare > _Loser* __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_losers` [protected, inherited]

`_LoserTree` `__elements`.

Definition at line 75 of file `losertree.h`.

Referenced by `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_get_min_source()`, `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_insert_start()`, `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_LoserTreeBase()`, and `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::~~LoserTreeBase()`.

The documentation for this class was generated from the following file:

- [losertree.h](#)

## 5.134 `__gnu_parallel::_LoserTree< false, _Tp, _Compare >` Class Template Reference

Unstable `_LoserTree` variant. Inheritance diagram for `__gnu_parallel::_LoserTree< false, _Tp, _Compare >`:

### Public Member Functions

- `_LoserTree` (unsigned int `__k`, `_Compare` `__comp`)
- void `__delete_min_insert` (`_Tp` `__key`, bool `__sup`)
- int `__get_min_source` ()
- void `__init` ()
- unsigned int `__init_winner` (unsigned int `__root`)
- void `__insert_start` (const `_Tp` &`__key`, int `__source`, bool `__sup`)

### Protected Attributes

- `_Compare` `_M_comp`
- bool `_M_first_insert`
- unsigned int `_M_ik`
- unsigned int `_M_k`
- unsigned int `_M_log_k`
- `_Loser` \* `_M_losers`
- unsigned int `_M_offset`

#### 5.134.1 Detailed Description

```
template<typename _Tp, typename _Compare> class __gnu_parallel::_LoserTree< false, _Tp, _Compare >
```

Unstable `_LoserTree` variant. Stability (non-stable here) is selected with partial specialization.

Definition at line 255 of file losertree.h.

## 5.134.2 Member Function Documentation

**5.134.2.1** `template<typename _Tp , typename _Compare > void  
__gnu_parallel::_LoserTree< false, _Tp, _Compare  
>::_delete_min_insert (_Tp __key, bool __sup) [inline]`

Delete the `_M_key` smallest element and insert the element `__key` instead.

### Parameters:

`__key` the `_M_key` to insert

`__sup` true iff `__key` is an explicitly marked supremum

Definition at line 317 of file losertree.h.

References `std::swap()`.

**5.134.2.2** `template<typename _Tp , typename _Compare >  
int __gnu_parallel::_LoserTreeBase< _Tp, _Compare  
>::_get_min_source () [inline, inherited]`

### Returns:

the index of the sequence with the smallest element.

Definition at line 151 of file losertree.h.

References `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_losers`, and `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::_M_source`.

**5.134.2.3** `template<typename _Tp , typename _Compare > unsigned int  
__gnu_parallel::_LoserTree< false, _Tp, _Compare >::_init_winner  
(unsigned int __root) [inline]`

Computes the winner of the competition at position "`__root`".

Called recursively (starting at 0) to build the initial tree.

### Parameters:

`__root` `__index` of the "game" to start.

Definition at line 277 of file losertree.h.

## 5.134 `__gnu_parallel::_LoserTree< false, _Tp, _Compare >` Class Template Reference 1211

---

**5.134.2.4** `template<typename _Tp, typename _Compare > void  
__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_insert_start  
(const _Tp & __key, int __source, bool __sup) [inline,  
inherited]`

Initializes the sequence "`_M_source`" with the element "`__key`".

### Parameters:

`__key` the element to insert

`__source` `__index` of the `__source` `__sequence`

`__sup` flag that determines whether the value to insert is an explicit `__supremum`.

Definition at line 130 of file `losertree.h`.

References `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_first_insert`, `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::_M_key`, `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_losers`, `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::_M_source`, and `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::_M_sup`.

## 5.134.3 Member Data Documentation

**5.134.3.1** `template<typename _Tp, typename _Compare > _Compare  
__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_comp  
[protected, inherited]`

`_Compare` to use.

Definition at line 78 of file `losertree.h`.

**5.134.3.2** `template<typename _Tp, typename _Compare >  
bool __gnu_parallel::_LoserTreeBase< _Tp, _Compare  
>::_M_first_insert [protected, inherited]`

State flag that determines whether the `_LoserTree` is empty. Only used for building the `_LoserTree`.

Definition at line 85 of file `losertree.h`.

Referenced by `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_insert_start()`, and `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_LoserTreeBase()`.

**5.134.3.3** `template<typename _Tp, typename _Compare > unsigned int  
__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_log_k  
[protected, inherited]`

`log_2{ _M_k }`

Definition at line 72 of file `losertree.h`.

Referenced by `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_LoserTreeBase()`.

**5.134.3.4** `template<typename _Tp, typename _Compare > _Loser*  
__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_losers  
[protected, inherited]`

[\\_LoserTree](#) \_\_elements.

Definition at line 75 of file `losertree.h`.

Referenced by `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_get_min_source()`, `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_insert_start()`, `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_LoserTreeBase()`, and `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::~~_LoserTreeBase()`.

The documentation for this class was generated from the following file:

- [losertree.h](#)

## 5.135 `__gnu_parallel::_LoserTreeBase<_Tp, _Compare >` Class Template Reference

Guarded loser/tournament tree. Inheritance diagram for `__gnu_parallel::_LoserTreeBase<_Tp, _Compare >`:

### Classes

- struct `_Loser`  
*Internal representation of a `_LoserTree` element.*

### Public Member Functions

- `_LoserTreeBase` (unsigned int `__k`, `_Compare` `__comp`)
- `~_LoserTreeBase` ()
- int `__get_min_source` ()
- void `__insert_start` (const `_Tp` &`__key`, int `__source`, bool `__sup`)

### Protected Attributes

- `_Compare` `_M_comp`
- bool `_M_first_insert`
- unsigned int `_M_ik`
- unsigned int `_M_k`
- unsigned int `_M_log_k`
- `_Loser` \* `_M_losers`
- unsigned int `_M_offset`

#### 5.135.1 Detailed Description

```
template<typename _Tp, typename _Compare> class __gnu_parallel::_LoserTreeBase<_Tp, _Compare >
```

Guarded loser/tournament tree. The smallest element is at the top.

Guarding is done explicitly through one flag `_M_sup` per element, `inf` is not needed due to a better initialization routine. This is a well-performing variant.

**Parameters:**

`_Tp` the element type

`_Compare` the comparator to use, defaults to `std::less<_Tp>`

Definition at line 55 of file `losertree.h`.

## 5.135.2 Constructor & Destructor Documentation

**5.135.2.1** `template<typename _Tp , typename _Compare >`  
`__gnu_parallel::LoserTreeBase< _Tp, _Compare`  
`>::LoserTreeBase (unsigned int __k, _Compare __comp)`  
`[inline]`

The constructor.

**Parameters:**

`__k` The number of sequences to merge.

`__comp` The comparator to use.

Definition at line 94 of file `losertree.h`.

References `__gnu_parallel::__rd_log2()`, `__gnu_parallel::LoserTreeBase< _Tp, _Compare >::_M_first_insert`, `__gnu_parallel::LoserTreeBase< _Tp, _Compare >::_M_log_k`, and `__gnu_parallel::LoserTreeBase< _Tp, _Compare >::_M_losers`.

**5.135.2.2** `template<typename _Tp , typename _Compare >`  
`__gnu_parallel::LoserTreeBase< _Tp, _Compare`  
`>::~~LoserTreeBase () [inline]`

The destructor.

Definition at line 118 of file `losertree.h`.

References `__gnu_parallel::LoserTreeBase< _Tp, _Compare >::_M_losers`.

### 5.135.3 Member Function Documentation

**5.135.3.1** `template<typename _Tp, typename _Compare >  
int __gnu_parallel::LoserTreeBase<_Tp, _Compare  
>::__get_min_source() [inline]`

**Returns:**

the index of the sequence with the smallest element.

Definition at line 151 of file `losertree.h`.

References `__gnu_parallel::LoserTreeBase<_Tp, _Compare>::__M_losers`, and `__gnu_parallel::LoserTreeBase<_Tp, _Compare>::__Loser::__M_source`.

**5.135.3.2** `template<typename _Tp, typename _Compare > void  
__gnu_parallel::LoserTreeBase<_Tp, _Compare >::__insert_start  
(const _Tp & __key, int __source, bool __sup) [inline]`

Initializes the sequence "`__M_source`" with the element "`__key`".

**Parameters:**

`__key` the element to insert

`__source` \_\_index of the `__source` \_\_sequence

`__sup` flag that determines whether the value to insert is an explicit `__supremum`.

Definition at line 130 of file `losertree.h`.

References `__gnu_parallel::LoserTreeBase<_Tp, _Compare >::__M_first_insert`, `__gnu_parallel::LoserTreeBase<_Tp, _Compare >::__Loser::__M_key`, `__gnu_parallel::LoserTreeBase<_Tp, _Compare >::__M_losers`, `__gnu_parallel::LoserTreeBase<_Tp, _Compare >::__Loser::__M_source`, and `__gnu_parallel::LoserTreeBase<_Tp, _Compare >::__Loser::__M_sup`.

### 5.135.4 Member Data Documentation

**5.135.4.1** `template<typename _Tp, typename _Compare > _Compare  
__gnu_parallel::LoserTreeBase<_Tp, _Compare >::__M_comp  
[protected]`

`__Compare` to use.

Definition at line 78 of file `losertree.h`.

**5.135.4.2** `template<typename _Tp , typename _Compare >`  
`bool __gnu_parallel::_LoserTreeBase< _Tp, _Compare`  
`>::_M_first_insert [protected]`

State flag that determines whether the [\\_LoserTree](#) is empty. Only used for building the [\\_LoserTree](#).

Definition at line 85 of file `losertree.h`.

Referenced by `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_insert_start()`, and `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_LoserTreeBase()`.

**5.135.4.3** `template<typename _Tp , typename _Compare > unsigned int`  
`__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_log_k`  
`[protected]`

`log_2{ _M_k }`

Definition at line 72 of file `losertree.h`.

Referenced by `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_LoserTreeBase()`.

**5.135.4.4** `template<typename _Tp , typename _Compare > _Loser*`  
`__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_losers`  
`[protected]`

[\\_LoserTree](#) `__elements`.

Definition at line 75 of file `losertree.h`.

Referenced by `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_get_min_source()`, `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_insert_start()`, `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_LoserTreeBase()`, and `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::~~_LoserTreeBase()`.

The documentation for this class was generated from the following file:

- [losertree.h](#)

## 5.136 `__gnu_parallel::_LoserTreeBase<_Tp, _Compare>::_Loser` Struct Reference

Internal representation of a [\\_LoserTree](#) element.

### Public Attributes

- [\\_Tp](#) [\\_M\\_key](#)
- [int](#) [\\_M\\_source](#)
- [bool](#) [\\_M\\_sup](#)

#### 5.136.1 Detailed Description

`template<typename _Tp, typename _Compare> struct __gnu_parallel::_LoserTreeBase<_Tp, _Compare>::_Loser`

Internal representation of a [\\_LoserTree](#) element.

Definition at line 59 of file `losertree.h`.

#### 5.136.2 Member Data Documentation

**5.136.2.1** `template<typename _Tp, typename _Compare> __gnu_parallel::_LoserTreeBase<_Tp, _Compare>::_Loser::_M_key`

`_M_key` of the element in the [\\_LoserTree](#).

Definition at line 66 of file `losertree.h`.

Referenced by `__gnu_parallel::_LoserTreeBase<_Tp, _Compare>::_insert_start()`.

**5.136.2.2** `template<typename _Tp, typename _Compare> __gnu_parallel::_LoserTreeBase<_Tp, _Compare>::_Loser::_M_source`

`__index` of the `__source` `__sequence`.

Definition at line 64 of file `losertree.h`.

Referenced by `__gnu_parallel::_LoserTreeBase<_Tp, _Compare>::_get_min_source()`, and `__gnu_parallel::_LoserTreeBase<_Tp, _Compare>::_insert_start()`.

**5.136.2.3** `template<typename _Tp , typename _Compare >`  
`bool __gnu_parallel::_LoserTreeBase< _Tp, _Compare`  
`>::_Loser::_M_sup`

flag, true iff this is a "maximum" \_\_sentinel.

Definition at line 62 of file losertree.h.

Referenced by `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_insert_start()`.

The documentation for this struct was generated from the following file:

- [losertree.h](#)

## 5.137 `__gnu_parallel::_LoserTreePointer< __stable, _Tp, _Compare >` Class Template Reference

Stable `_LoserTree` implementation. Inheritance diagram for `__gnu_parallel::_LoserTreePointer< __stable, _Tp, _Compare >`:

### Public Member Functions

- `_LoserTreePointer` (unsigned int \_\_k, \_Compare \_\_comp=`std::less< _Tp >()`)
- void `__delete_min_insert` (const \_Tp &\_\_key, bool \_\_sup)
- int `__get_min_source` ()
- void `__init` ()
- unsigned int `__init_winner` (unsigned int \_\_root)
- void `__insert_start` (const \_Tp &\_\_key, int \_\_source, bool \_\_sup)

### Protected Attributes

- `_Compare` `_M_comp`
- unsigned int `_M_ik`
- unsigned int `_M_k`
- `_Loser` \* `_M_losers`
- unsigned int `_M_offset`

#### 5.137.1 Detailed Description

`template<bool __stable, typename _Tp, typename _Compare> class __gnu_parallel::_LoserTreePointer< __stable, _Tp, _Compare >`

Stable `_LoserTree` implementation. The unstable variant is implemented using partial instantiation below.

Definition at line 401 of file `losertree.h`.

The documentation for this class was generated from the following file:

- [losertree.h](#)

## 5.138 `__gnu_parallel::_LoserTreePointer< false, _Tp, _Compare >` Class Template Reference

Unstable `_LoserTree` implementation. Inheritance diagram for `__gnu_parallel::_LoserTreePointer< false, _Tp, _Compare >`:

### Public Member Functions

- `_LoserTreePointer` (unsigned int `__k`, `_Compare` `__comp=std::less< _Tp >()`)
- void `__delete_min_insert` (const `_Tp` &`__key`, bool `__sup`)
- int `__get_min_source` ()
- void `__init` ()
- unsigned int `__init_winner` (unsigned int `__root`)
- void `__insert_start` (const `_Tp` &`__key`, int `__source`, bool `__sup`)

### Protected Attributes

- `_Compare` `_M_comp`
- unsigned int `_M_ik`
- unsigned int `_M_k`
- `_Loser` \* `_M_losers`
- unsigned int `_M_offset`

#### 5.138.1 Detailed Description

```
template<typename _Tp, typename _Compare> class __gnu_parallel::_LoserTreePointer< false, _Tp, _Compare >
```

Unstable `_LoserTree` implementation. The stable variant is above.

Definition at line 482 of file `losertree.h`.

The documentation for this class was generated from the following file:

- [losertree.h](#)

## 5.139 `__gnu_parallel::_LoserTreePointerBase< _Tp, _Compare >` Class Template Reference

Base class of `_Loser` Tree implementation using pointers. Inheritance diagram for `__gnu_parallel::_LoserTreePointerBase< _Tp, _Compare >`:

### Classes

- struct `_Loser`  
*Internal representation of `_LoserTree` `_elements`.*

### Public Member Functions

- `_LoserTreePointerBase` (unsigned int `__k`, `_Compare` `__comp=std::less< _Tp >()`)
- int `__get_min_source` ()

- unsigned int `_M_k`
- `_Loser` \* `_M_losers`
- unsigned int `_M_offset`

#### 5.139.1 Detailed Description

`template<typename _Tp, typename _Compare> class __gnu_parallel::_LoserTreePointerBase< _Tp, _Compare >`

Base class of `_Loser` Tree implementation using pointers.

Definition at line 349 of file `losertree.h`.

The documentation for this class was generated from the following file:

- [losertree.h](#)

## 5.140 `__gnu_parallel::_LoserTreePointerBase<_Tp, _Compare >::_Loser` Struct Reference

Internal representation of [\\_LoserTree](#) \_\_elements.

### Public Attributes

- `const _Tp * _M_keyp`
- `int _M_source`
- `bool _M_sup`

### 5.140.1 Detailed Description

`template<typename _Tp, typename _Compare> struct __gnu_parallel::_LoserTreePointerBase<_Tp, _Compare >::_Loser`

Internal representation of [\\_LoserTree](#) \_\_elements.

Definition at line 353 of file `losertree.h`.

The documentation for this struct was generated from the following file:

- [losertree.h](#)

## 5.141 `__gnu_parallel::_LoserTreePointerUnguarded<__stable, _Tp, _Compare >` Class Template Reference

Stable unguarded [LoserTree](#) variant storing pointers. Inheritance diagram for `__gnu_parallel::_LoserTreePointerUnguarded<__stable, _Tp, _Compare >`:

### Public Member Functions

- `_LoserTreePointerUnguarded` (unsigned int \_\_k, const \_Tp &\_\_sentinel, \_Compare \_\_comp=`std::less<_Tp >()`)

Definition at line 953 of file losertree.h.

The documentation for this class was generated from the following file:

- [losertree.h](#)

## 5.143 `__gnu_parallel::_LoserTreePointerUnguardedBase<_Tp, _Compare >` Class Template Reference

Unguarded loser tree, keeping only pointers to the elements in the tree structure. Inheritance diagram for `__gnu_parallel::_LoserTreePointerUnguardedBase<_Tp, _Compare >`:

### Public Member Functions

- `_LoserTreePointerUnguardedBase` (unsigned int \_\_k, const \_Tp &\_\_sentinel, \_Compare \_\_comp=`std::less`<\_Tp >())
- int `__get_min_source` ()
- void `__insert_start` (const \_Tp &\_\_key, int \_\_source, bool)

### Protected Attributes

- `_Compare _M_comp`
- unsigned int `_M_ik`
- unsigned int `_M_k`
- `_Loser * _M_losers`
- unsigned int `_M_offset`

#### 5.143.1 Detailed Description

`template<typename _Tp, typename _Compare> class __gnu_parallel::_LoserTreePointerUnguardedBase<_Tp, _Compare >`

Unguarded loser tree, keeping only pointers to the elements in the tree structure. No guarding is done, therefore not a single input sequence must run empty. This is a very fast variant.

Definition at line 805 of file `losertree.h`.

The documentation for this class was generated from the following file:

- [losertree.h](#)

## 5.144 `__gnu_parallel::_LoserTreeTraits<_Tp>` Struct Template Reference 1231

### 5.144 `__gnu_parallel::_LoserTreeTraits<_Tp>` Struct Template Reference

Traits for determining whether the loser tree should use pointers or copies.

#### Static Public Attributes

- static const bool `_M_use_pointer`

#### 5.144.1 Detailed Description

`template<typename _Tp> struct __gnu_parallel::_LoserTreeTraits<_Tp>`

Traits for determining whether the loser tree should use pointers or copies. The field "`_M_use_pointer`" is used to determine whether to use pointers in the loser trees or whether to copy the values into the loser tree.

The default behavior is to use pointers if the data type is 4 times as big as the pointer to it.

Specialize for your data type to customize the behavior.

Example:

```
template<> struct _LoserTreeTraits<int> { static const bool _M_use_pointer = false;
};

template<> struct _LoserTreeTraits<heavyweight_type> { static const bool _M_
use_pointer = true; };
```

#### Parameters:

- `_Tp` type to give the loser tree traits for.

Definition at line 727 of file `multiway_merge.h`.

#### 5.144.2 Member Data Documentation

5.144.2.1 `template<typename _Tp> const bool __gnu_parallel::_LoserTreeTraits<_Tp>::_M_use_pointer`  
[static]

True iff to use pointers instead of values in loser trees. The default behavior is to use pointers if the data type is four times as big as the pointer to it.

Definition at line 735 of file `multiway_merge.h`.

The documentation for this struct was generated from the following file:

- [multiway\\_merge.h](#)

5.145 `__gnu_parallel::_LoserTreeUnguarded< __stable, _Tp, _Compare >` Class  
Template Reference 1233

## 5.145 `__gnu_parallel::_LoserTreeUnguarded< __stable, _Tp, _Compare >` Class Template Reference

Stable implementation of unguarded [\\_LoserTree](#). Inheritance diagram for `__gnu_parallel::_LoserTreeUnguarded< __stable, _Tp, _Compare >`:

### Public Member Functions

- `_LoserTreeUnguarded` (unsigned int `__k`, const `_Tp` `__sentinel`, `_Compare` `__comp=std::less< _Tp >()`)
- void `__delete_min_insert` (`_Tp` `__key`, bool)
- int `__get_min_source` ()
- void `__init` ()
- unsigned int `__init_winner` (unsigned int `__root`)
- void `__insert_start` (const `_Tp` &`__key`, int `__source`, bool)

### Protected Attributes

- `_Compare` `_M_comp`
- unsigned int `_M_ik`
- unsigned int `_M_k`
- `_Loser` \* `_M_losers`
- unsigned int `_M_offset`

#### 5.145.1 Detailed Description

```
template<bool __stable, typename _Tp, typename _Compare> class __gnu_parallel::_LoserTreeUnguarded< __stable, _Tp, _Compare >
```

Stable implementation of unguarded [\\_LoserTree](#). Unstable variant is selected below with partial specialization.

Definition at line 627 of file losertree.h.

The documentation for this class was generated from the following file:

- [losertree.h](#)

## 5.146 `__gnu_parallel::_LoserTreeUnguarded< false, _Tp, _Compare >` Class Template Reference

Non-Stable implementation of unguarded `_LoserTree`. Inheritance diagram for `__gnu_parallel::_LoserTreeUnguarded< false, _Tp, _Compare >`:

### Public Member Functions

- `_LoserTreeUnguarded` (unsigned int `__k`, const `_Tp` `__sentinel`, `_Compare` `__comp=std::less< _Tp >()`)
- void `__delete_min_insert` (`_Tp` `__key`, bool)
- int `__get_min_source` ()
- void `__init` ()
- unsigned int `__init_winner` (unsigned int `__root`)
- void `__insert_start` (const `_Tp` & `__key`, int `__source`, bool)

### Protected Attributes

- `_Compare` `_M_comp`
- unsigned int `_M_ik`
- unsigned int `_M_k`
- `_Loser` \* `_M_losers`
- unsigned int `_M_offset`

#### 5.146.1 Detailed Description

```
template<typename _Tp, typename _Compare> class __gnu_parallel::_LoserTreeUnguarded< false, _Tp, _Compare >
```

Non-Stable implementation of unguarded `_LoserTree`. Stable implementation is above.  
Definition at line 713 of file `losertree.h`.

The documentation for this class was generated from the following file:

- [losertree.h](#)

## 5.147 `__gnu_parallel::_LoserTreeUnguardedBase< _Tp, _Compare >` Class Template Reference

Base class for unguarded `_LoserTree` implementation. Inheritance diagram for `__gnu_parallel::_LoserTreeUnguardedBase< _Tp, _Compare >`:

### Public Member Functions

- `_LoserTreeUnguardedBase` (unsigned int `__k`, const `_Tp` `__sentinel`, `_Compare` `__comp=std::less< _Tp >()`)
- int `__get_min_source` ()
- void `__insert_start` (const `_Tp` &`__key`, int `__source`, bool)

### Protected Attributes

- `_Compare` `_M_comp`
- unsigned int `_M_ik`
- unsigned int `_M_k`
- `_Loser` \* `_M_losers`
- unsigned int `_M_offset`

#### 5.147.1 Detailed Description

`template<typename _Tp, typename _Compare> class __gnu_parallel::_LoserTreeUnguardedBase< _Tp, _Compare >`

Base class for unguarded `_LoserTree` implementation. The whole element is copied into the tree structure.

No guarding is done, therefore not a single input sequence must run empty. Unused `__sequence` heads are marked with a sentinel which is `>` all elements that are to be merged.

This is a very fast variant.

Definition at line 564 of file `losertree.h`.

The documentation for this class was generated from the following file:

- [losertree.h](#)

## 5.148 `__gnu_parallel::_Multiplies<_Tp1, _Tp2 >` Struct Template Reference 239

### 5.148 `__gnu_parallel::_Multiplies<_Tp1, _Tp2 >` Struct Template Reference

Similar to `std::multiplies`, but allows two different types. Inheritance diagram for `__gnu_parallel::_Multiplies<_Tp1, _Tp2 >`:

#### Public Types

- typedef `_Tp1` `first_argument_type`
- typedef `_Tp1` `result_type`
- typedef `_Tp2` `second_argument_type`
- typedef `__typeof__(*)(const _Tp1 &__x, const _Tp2 &__y static_cast<_Tp2 * >(NULL)) __result; __resultoperator(`

#### 5.148.1 Detailed Description

```
template<typename _Tp1, typename _Tp2> struct __gnu_parallel::_Multiplies<_Tp1, _Tp2 >
```

Similar to `std::multiplies`, but allows two different types.

Definition at line 300 of file `parallel/base.h`.

## 5.148.2 Member Typedef Documentation

**5.148.2.1** `typedef _Tp1 std::binary_function< _Tp1 , _Tp2 , _Tp1 >::first_argument_type [inherited]`

the type of the first argument (no surprises here)

Definition at line 114 of file `stl_function.h`.

**5.148.2.2** `typedef _Tp1 std::binary_function< _Tp1 , _Tp2 , _Tp1 >::result_type [inherited]`

type of the return type

Definition at line 118 of file `stl_function.h`.

**5.148.2.3** `typedef _Tp2 std::binary_function< _Tp1 , _Tp2 , _Tp1 >::second_argument_type [inherited]`

the type of the second argument

Definition at line 117 of file `stl_function.h`.

The documentation for this struct was generated from the following file:

- [parallel/base.h](#)

## 5.149 `__gnu_parallel::_Nothing` Struct Reference

Functor doing nothing.

### Public Member Functions

- `template<typename _It >`  
`void operator() (_It)`

#### 5.149.1 Detailed Description

Functor doing nothing. For some `__reduction` tasks (this is not a function object, but is passed as `__selector` `__dummy` parameter.

Definition at line 288 of file `for_each_selectors.h`.

#### 5.149.2 Member Function Documentation

##### 5.149.2.1 `template<typename _It > void __gnu_parallel::_Nothing::operator() (_It) [inline]`

Functor execution.

#### Parameters:

- `__i` iterator referencing object.

Definition at line 294 of file `for_each_selectors.h`.

The documentation for this struct was generated from the following file:

- [for\\_each\\_selectors.h](#)

## 5.150 `__gnu_parallel::_Piece<_DifferenceTp>` Struct Template Reference

Subsequence description.

### Public Types

- `typedef _DifferenceTp _DifferenceType`

### Public Attributes

- `_DifferenceType _M_begin`
- `_DifferenceType _M_end`

#### 5.150.1 Detailed Description

```
template<typename _DifferenceTp> struct __gnu_parallel::_Piece< _-
DifferenceTp >
```

Subsequence description.

Definition at line 46 of file `multiway_mergesort.h`.

#### 5.150.2 Member Data Documentation

**5.150.2.1** `template<typename _DifferenceTp > _DifferenceType  
__gnu_parallel::_Piece<_DifferenceTp >::_M_begin`

Begin of subsequence.

Definition at line 51 of file `multiway_mergesort.h`.

**5.150.2.2** `template<typename _DifferenceTp > _DifferenceType  
__gnu_parallel::_Piece<_DifferenceTp >::_M_end`

End of subsequence.

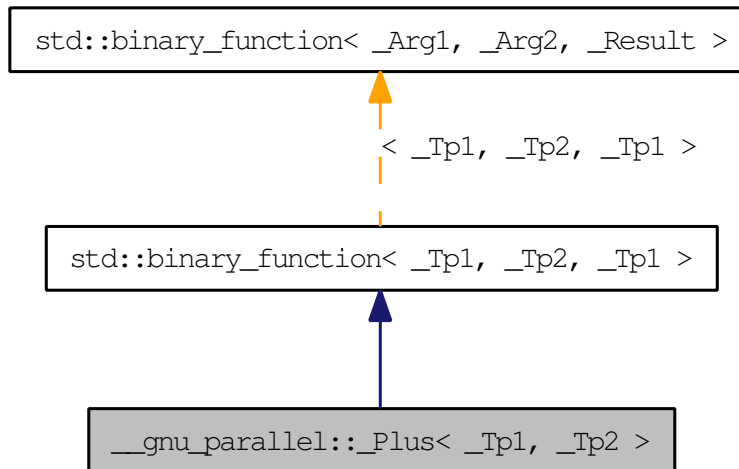

Definition at line 54 of file `multiway_mergesort.h`.

The documentation for this struct was generated from the following file:

- [multiway\\_mergesort.h](#)

## 5.151 `__gnu_parallel::_Plus< _Tp1, _Tp2 >` Struct Template Reference

Similar to `std::plus`, but allows two different types. Inheritance diagram for `__gnu_parallel::_Plus< _Tp1, _Tp2 >`:

### Public Types

- typedef `_Tp1` `first_argument_type`
- typedef `_Tp1` `result_type`
- typedef `_Tp2` `second_argument_type`
- typedef `__typeof__(*)(const _Tp1 &__x, const _Tp2 &__y static_cast<_Tp2 * >(NULL))+static_cast<_Tp2 * >(NULL)) __result; __resultoperator(`

#### 5.151.1 Detailed Description

```
template<typename _Tp1, typename _Tp2> struct __gnu_parallel::_Plus< _Tp1, _Tp2 >
```

Similar to `std::plus`, but allows two different types.

Definition at line 275 of file `parallel/base.h`.

## 5.151.2 Member Typedef Documentation

**5.151.2.1** `typedef _Tp1 std::binary_function< _Tp1 , _Tp2 , _Tp1  
>::first_argument_type [inherited]`

the type of the first argument (no surprises here)

Definition at line 114 of file `stl_function.h`.

**5.151.2.2** `typedef _Tp1 std::binary_function< _Tp1 , _Tp2 , _Tp1  
>::result_type [inherited]`

type of the return type

Definition at line 118 of file `stl_function.h`.

**5.151.2.3** `typedef _Tp2 std::binary_function< _Tp1 , _Tp2 , _Tp1  
>::second_argument_type [inherited]`

the type of the second argument

Definition at line 117 of file `stl_function.h`.

The documentation for this struct was generated from the following file:

- [parallel/base.h](#)

## 5.152 `__gnu_parallel::_PMWMSortingData<_RAIter >` Struct Template Reference

Data accessed by all threads.

### Public Types

- typedef `_TraitsType::difference_type` `_DifferenceType`
- typedef `std::iterator_traits<_RAIter >` `_TraitsType`
- typedef `_TraitsType::value_type` `_ValueType`

### Public Attributes

- `_ThreadIndex` `_M_num_threads`
- `_DifferenceType` \* `_M_offsets`
- `std::vector<_Piece<_DifferenceType > >` \* `_M_pieces`
- `_ValueType` \* `_M_samples`
- `_RAIter` `_M_source`
- `_DifferenceType` \* `_M_starts`
- `_ValueType` \*\* `_M_temporary`

### 5.152.1 Detailed Description

```
template<typename _RAIter> struct __gnu_parallel::_PMWMSortingData<_RAIter >
```

Data accessed by all threads. PMWMS = parallel multiway mergesort

Definition at line 61 of file `multiway_mergesort.h`.

### 5.152.2 Member Data Documentation

**5.152.2.1** `template<typename _RAIter> _ThreadIndex`  
`__gnu_parallel::_PMWMSortingData<_RAIter`  
`>::_M_num_threads`

Number of threads involved.

Definition at line 68 of file `multiway_mergesort.h`.

Referenced by `__gnu_parallel::parallel_sort_mwms()`, and `__gnu_parallel::parallel_sort_mwms_pu()`.

### 5.152.2.2 `template<typename _RAIter> _DifferenceType* __gnu_parallel::PMWMSortingData< _RAIter >::_M_offsets`

Offsets to add to the found positions.

Definition at line 83 of file `multiway_mergesort.h`.

Referenced by `__gnu_parallel::parallel_sort_mwms()`.

### 5.152.2.3 `template<typename _RAIter> std::vector<_Piece<_- _DifferenceType> >* __gnu_parallel::PMWMSortingData< _RAIter >::_M_pieces`

Pieces of data to merge [`thread`][`__sequence`].

Definition at line 86 of file `multiway_mergesort.h`.

Referenced by `__gnu_parallel::parallel_sort_mwms()`, and `__gnu_parallel::parallel_sort_mwms_pu()`.

### 5.152.2.4 `template<typename _RAIter> _ValueType* __gnu_parallel::PMWMSortingData< _RAIter >::_M_samples`

Samples.

Definition at line 80 of file `multiway_mergesort.h`.

Referenced by `__gnu_parallel::__determine_samples()`, and `__gnu_parallel::parallel_sort_mwms()`.

### 5.152.2.5 `template<typename _RAIter> _RAIter __gnu_parallel::PMWMSortingData< _RAIter >::_M_source`

Input `__begin`.

Definition at line 71 of file `multiway_mergesort.h`.

Referenced by `__gnu_parallel::__determine_samples()`, `__gnu_parallel::parallel_sort_mwms()`, and `__gnu_parallel::parallel_sort_mwms_pu()`.

### 5.152.2.6 `template<typename _RAIter> _DifferenceType* __gnu_parallel::PMWMSortingData< _RAIter >::_M_starts`

Start indices, per thread.

Definition at line 74 of file `multiway_mergesort.h`.

## 5.152 \_\_gnu\_parallel::\_PMWMSortingData<\_RAIter> Struct Template Reference 1247

---

Referenced by `__gnu_parallel::_determine_samples()`, `__gnu_parallel::parallel_sort_mwms()`, and `__gnu_parallel::parallel_sort_mwms_pu()`.

### 5.152.2.7 `template<typename _RAIter> _ValueType** __gnu_parallel::_PMWMSortingData<_RAIter>::_M_temporary`

Storage in which to sort.

Definition at line 77 of file `multiway_mergesort.h`.

Referenced by `__gnu_parallel::parallel_sort_mwms()`, and `__gnu_parallel::parallel_sort_mwms_pu()`.

The documentation for this struct was generated from the following file:

- [multiway\\_mergesort.h](#)

## 5.153 `__gnu_parallel::_PseudoSequence< _Tp, _DifferenceTp >` Class Template Reference

Sequence that conceptually consists of multiple copies of the same element. The copies are not stored explicitly, of course.

### Public Types

- typedef `_DifferenceTp` `_DifferenceType`
- typedef `_PseudoSequenceIterator< _Tp, uint64_t >` `iterator`

### Public Member Functions

- `_PseudoSequence` (`const _Tp &__val, _DifferenceType __count`)
- `iterator begin` () const
- `iterator end` () const

#### 5.153.1 Detailed Description

```
template<typename _Tp, typename _DifferenceTp> class __gnu_parallel::_PseudoSequence< _Tp, _DifferenceTp >
```

Sequence that conceptually consists of multiple copies of the same element. The copies are not stored explicitly, of course.

#### Parameters:

- `_Tp` Sequence `_M_value` type.
- `_DifferenceType` Sequence difference type.

Definition at line 386 of file `parallel/base.h`.

#### 5.153.2 Constructor & Destructor Documentation

```
5.153.2.1 template<typename _Tp, typename _DifferenceTp>
__gnu_parallel::_PseudoSequence< _Tp, _DifferenceTp
>::_PseudoSequence (const _Tp & __val, _DifferenceType __count)
[inline]
```

Constructor.

## 5.153 `__gnu_parallel::_PseudoSequence<_Tp, _DifferenceTp>` Class Template Reference 1249

---

### Parameters:

- `_M_val` Element of the sequence.
- `__count` Number of (virtual) copies.

Definition at line 398 of file `parallel/base.h`.

### 5.153.3 Member Function Documentation

**5.153.3.1** `template<typename _Tp, typename _DifferenceTp> iterator  
__gnu_parallel::_PseudoSequence<_Tp, _DifferenceTp>::begin ()  
const [inline]`

Begin iterator.

Definition at line 403 of file `parallel/base.h`.

**5.153.3.2** `template<typename _Tp, typename _DifferenceTp> iterator  
__gnu_parallel::_PseudoSequence<_Tp, _DifferenceTp>::end ()  
const [inline]`

End iterator.

Definition at line 408 of file `parallel/base.h`.

The documentation for this class was generated from the following file:

- [parallel/base.h](#)

## 5.154 `__gnu_parallel::_PseudoSequenceIterator< _Tp, _DifferenceTp >` Class Template Reference

`_Iterator` associated with `__gnu_parallel::_PseudoSequence`. If features the usual random-access iterator functionality.

### Public Types

- `typedef _DifferenceTp _DifferenceType`

### Public Member Functions

- `_PseudoSequenceIterator` (const `_Tp` &\_\_val, `_DifferenceType` \_\_pos)
- `_DifferenceType operator!=` (const `_PseudoSequenceIterator` &\_\_i2)
- const `_Tp` & `operator*` () const
- const `_PseudoSequenceIterator` `operator++` (int)
- `_PseudoSequenceIterator` & `operator++` ()
- `_DifferenceType operator-` (const `_PseudoSequenceIterator` &\_\_i2)
- bool `operator==` (const `_PseudoSequenceIterator` &\_\_i2)
- const `_Tp` & `operator[]` (`_DifferenceType`) const

#### 5.154.1 Detailed Description

```
template<typename _Tp, typename _DifferenceTp> class __gnu_parallel::_PseudoSequenceIterator< _Tp, _DifferenceTp >
```

`_Iterator` associated with `__gnu_parallel::_PseudoSequence`. If features the usual random-access iterator functionality.

#### Parameters:

- `_Tp` Sequence `_M_value` type.
- `_DifferenceType` Sequence difference type.

Definition at line 332 of file `parallel/base.h`.

The documentation for this class was generated from the following file:

- [parallel/base.h](#)

## 5.155 `__gnu_parallel::_QSBThreadLocal<_RAIter>` Struct Template Reference

Information local to one thread in the parallel quicksort run.

### Public Types

- typedef `_TraitsType::difference_type` `_DifferenceType`
- typedef `std::pair<_RAIter, _RAIter>` `_Piece`
- typedef `std::iterator_traits<_RAIter>` `_TraitsType`

### Public Member Functions

- `_QSBThreadLocal` (int `__queue_size`)

### Public Attributes

- volatile `_DifferenceType * _M_elements_leftover`
- `_Piece _M_global`
- `_Piece _M_initial`
- `_RestrictedBoundedConcurrentQueue<_Piece> _M_leftover_parts`
- `_ThreadIndex _M_num_threads`

#### 5.155.1 Detailed Description

```
template<typename _RAIter> struct __gnu_parallel::_QSBThreadLocal< _RAIter >
```

Information local to one thread in the parallel quicksort run.

Definition at line 62 of file `balanced_quicksort.h`.

#### 5.155.2 Member Typedef Documentation

**5.155.2.1** `template<typename _RAIter> typedef std::pair<_RAIter, _RAIter> __gnu_parallel::_QSBThreadLocal<_RAIter>::_Piece`

Continuous part of the sequence, described by an iterator pair.

Definition at line 69 of file `balanced_quicksort.h`.

### 5.155.3 Constructor & Destructor Documentation

#### 5.155.3.1 `template<typename _RAIter> __gnu_parallel::QSBThreadLocal<_RAIter >::_QSBThreadLocal (int __queue_size) [inline]`

Constructor.

##### Parameters:

`__queue_size` size of the work-stealing queue.

Definition at line 88 of file `balanced_quicksort.h`.

### 5.155.4 Member Data Documentation

#### 5.155.4.1 `template<typename _RAIter> volatile _DifferenceType* __gnu_parallel::QSBThreadLocal<_RAIter >::_M_elements_leftover`

Pointer to a counter of elements left over to sort.

Definition at line 81 of file `balanced_quicksort.h`.

Referenced by `__gnu_parallel::__qsb_conquer()`, and `__gnu_parallel::__qsb_local_sort_with_helping()`.

#### 5.155.4.2 `template<typename _RAIter> _Piece __gnu_parallel::_QSBThreadLocal<_RAIter >::_M_global`

The complete sequence to sort.

Definition at line 84 of file `balanced_quicksort.h`.

#### 5.155.4.3 `template<typename _RAIter> _Piece __gnu_parallel::_QSBThreadLocal<_RAIter >::_M_initial`

Initial piece to work on.

Definition at line 72 of file `balanced_quicksort.h`.

Referenced by `__gnu_parallel::__qsb_conquer()`, and `__gnu_parallel::__qsb_local_sort_with_helping()`.

**5.155 \_\_gnu\_parallel::\_QSBThreadLocal<\_RAIter> Struct Template Reference**

1253

**5.155.4.4 template<typename \_RAIter> \_-  
RestrictedBoundedConcurrentQueue<\_Piece>  
\_\_gnu\_parallel::\_QSBThreadLocal<\_RAIter>::\_M\_leftover\_parts**

Work-stealing queue.

Definition at line 75 of file balanced\_quicksort.h.

Referenced by \_\_gnu\_parallel::\_\_qsb\_local\_sort\_with\_helping().

**5.155.4.5 template<typename \_RAIter> \_ThreadIndex  
\_\_gnu\_parallel::\_QSBThreadLocal<\_RAIter>::\_M\_num\_threads**

Number of threads involved in this algorithm.

Definition at line 78 of file balanced\_quicksort.h.

Referenced by \_\_gnu\_parallel::\_\_qsb\_local\_sort\_with\_helping().

## 5.156 `__gnu_parallel::_RandomNumber` Class Reference

Random number generator, based on the Mersenne twister.

### Public Member Functions

- `_RandomNumber` (`uint32_t __seed`, `uint64_t _M_supremum=0x100000000ULL`)
- `_RandomNumber` ()
- `unsigned long __genrand_bits` (`int __bits`)
- `uint32_t operator()` (`uint64_t local_supremum`)
- `uint32_t operator()` ()

#### 5.156.1 Detailed Description

Random number generator, based on the Mersenne twister.

Definition at line 42 of file `random_number.h`.

#### 5.156.2 Constructor & Destructor Documentation

##### 5.156.2.1 `__gnu_parallel::_RandomNumber::_RandomNumber` () [`inline`]

Default constructor. Seed with 0.

Definition at line 74 of file `random_number.h`.

##### 5.156.2.2 `__gnu_parallel::_RandomNumber::_RandomNumber` (`uint32_t __seed`, `uint64_t _M_supremum = 0x100000000ULL`) [`inline`]

Constructor.

#### Parameters:

`__seed` Random `__seed`.

`_M_supremum` Generate integer random numbers in the interval `[0, _M_supremum)`.

Definition at line 85 of file `random_number.h`.

### 5.156.3 Member Function Documentation

#### 5.156.3.1 `unsigned long __gnu_parallel::_RandomNumber::_genrand_bits` (`int __bits`) [`inline`]

Generate a number of random bits, run-time parameter.

**Parameters:**

*bits* Number of bits to generate.

Definition at line 109 of file `random_number.h`.

#### 5.156.3.2 `uint32_t __gnu_parallel::_RandomNumber::operator() (uint64_t` `local_supremum)` [`inline`]

Generate unsigned random 32-bit integer in the interval [0,local\_supremum).

Definition at line 100 of file `random_number.h`.

#### 5.156.3.3 `uint32_t __gnu_parallel::_RandomNumber::operator() ()` [`inline`]

Generate unsigned random 32-bit integer.

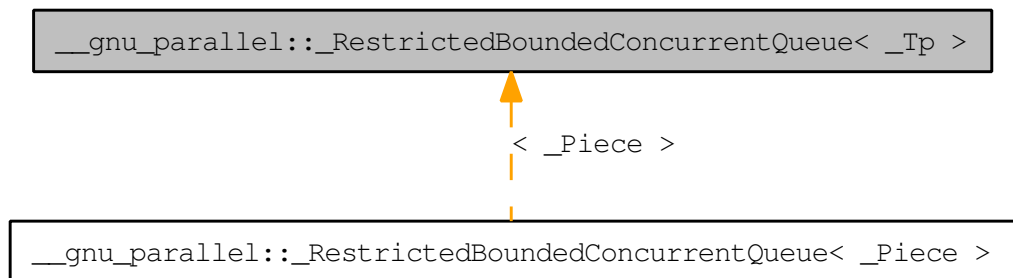

Definition at line 94 of file `random_number.h`.

The documentation for this class was generated from the following file:

- [random\\_number.h](#)

## 5.157 `__gnu_parallel::_RestrictedBoundedConcurrentQueue<_Tp >` Class Template Reference

Double-ended queue of bounded size, allowing lock-free atomic access. `push_front()` and `pop_front()` must not be called concurrently to each other, while `pop_back()` can be called concurrently at all times. `empty()`, `size()`, and `top()` are intentionally not provided. Calling them would not make sense in a concurrent setting. Inheritance diagram for `__gnu_parallel::_RestrictedBoundedConcurrentQueue<_Tp >`:

### Public Member Functions

- `_RestrictedBoundedConcurrentQueue` (`_SequenceIndex` `__max_size`)
- `~_RestrictedBoundedConcurrentQueue` ()
- `bool pop_back` (`_Tp &__t`)
- `bool pop_front` (`_Tp &__t`)
- `void push_front` (`const _Tp &__t`)

#### 5.157.1 Detailed Description

`template<typename _Tp>` **class** `__gnu_parallel::_RestrictedBoundedConcurrentQueue<_Tp >`

Double-ended queue of bounded size, allowing lock-free atomic access. `push_front()` and `pop_front()` must not be called concurrently to each other, while `pop_back()` can be called concurrently at all times. `empty()`, `size()`, and `top()` are intentionally not provided. Calling them would not make sense in a concurrent setting.

#### Parameters:

`_Tp` Contained element type.

Definition at line 52 of file `queue.h`.

## 5.157.2 Constructor & Destructor Documentation

**5.157.2.1** `template<typename _Tp> __gnu_parallel::_RestrictedBoundedConcurrentQueue<_Tp>::_RestrictedBoundedConcurrentQueue (_SequenceIndex _max_size) [inline]`

Constructor. Not to be called concurrent, of course.

### Parameters:

*\_M\_max\_size* Maximal number of elements to be contained.

Definition at line 68 of file `queue.h`.

**5.157.2.2** `template<typename _Tp> __gnu_parallel::_RestrictedBoundedConcurrentQueue<_Tp>::~~_RestrictedBoundedConcurrentQueue () [inline]`

Destructor. Not to be called concurrent, of course.

Definition at line 77 of file `queue.h`.

## 5.157.3 Member Function Documentation

**5.157.3.1** `template<typename _Tp> bool __gnu_parallel::_RestrictedBoundedConcurrentQueue<_Tp>::pop_back (_Tp & t) [inline]`

Pops one element from the queue at the front end. Must not be called concurrently with [pop\\_front\(\)](#).

Definition at line 127 of file `queue.h`.

**5.157.3.2** `template<typename _Tp> bool __gnu_parallel::_RestrictedBoundedConcurrentQueue<_Tp>::pop_front (_Tp & t) [inline]`

Pops one element from the queue at the front end. Must not be called concurrently with [pop\\_front\(\)](#).

Definition at line 100 of file `queue.h`.

Referenced by `__gnu_parallel::_qsb_local_sort_with_helping()`.

**5.157.3.3** `template<typename _Tp> void __gnu_parallel:: -  
RestrictedBoundedConcurrentQueue< _Tp >::push_front (const  
_Tp & __t) [inline]`

Pushes one element into the queue at the front end. Must not be called concurrently with [pop\\_front\(\)](#).

Definition at line 83 of file [queue.h](#).

Referenced by [\\_\\_gnu\\_parallel::\\_\\_qsb\\_local\\_sort\\_with\\_helping\(\)](#).

The documentation for this class was generated from the following file:

5.158 `__gnu_parallel::_SamplingSorter< __stable, _RAIter, _StrictWeakOrdering >` Struct Template Reference 1259

---

## 5.158 `__gnu_parallel::_SamplingSorter< __stable, _RAIter, _StrictWeakOrdering >` Struct Template Reference

Stable sorting functor.

### Public Member Functions

- `void operator() (_RAIter __first, _RAIter __last, _StrictWeakOrdering __comp)`

#### 5.158.1 Detailed Description

`template<bool __stable, class _RAIter, class _StrictWeakOrdering> struct __gnu_parallel::_SamplingSorter< __stable, _RAIter, _StrictWeakOrdering >`

Stable sorting functor. Used to reduce code instantiation in `multiway_merge_sampling_splitting`.

Definition at line 1004 of file `multiway_merge.h`.

The documentation for this struct was generated from the following file:

- [multiway\\_merge.h](#)

## 5.159 `__gnu_parallel::_SamplingSorter< false, _RAIter, _StrictWeakOrdering > Struct Template Reference`

Non-\_\_stable sorting functor.

### Public Member Functions

- `void operator() (_RAIter __first, _RAIter __last, _StrictWeakOrdering __comp)`

#### 5.159.1 Detailed Description

`template<class _RAIter, class _StrictWeakOrdering> struct __gnu_parallel::_SamplingSorter< false, _RAIter, _StrictWeakOrdering >`

Non-\_\_stable sorting functor. Used to reduce code instantiation in `multiway_merge_sampling_splitting`.

Definition at line 1017 of file `multiway_merge.h`.

The documentation for this struct was generated from the following file:

- [multiway\\_merge.h](#)

## 5.160 `__gnu_parallel::_Settings` Struct Reference

class `_Settings` Run-time settings for the parallel mode including all tunable parameters.

### Public Member Functions

- `__attribute__((__const__))` static const `_Settings` &get() throw ()

### Static Public Member Functions

- static void set (`_Settings` &) throw ()

### Public Attributes

- `_SequenceIndex` `accumulate_minimal_n`

### 5.160.1 Detailed Description

class [\\_Settings](#) Run-time settings for the parallel mode including all tunable parameters.

Definition at line 123 of file settings.h.

### 5.160.2 Member Function Documentation

#### 5.160.2.1 `__gnu_parallel::_Settings::__attribute__ ((__const__)) const throw ()`

Get the global settings.

#### 5.160.2.2 `static void __gnu_parallel::_Settings::set (_Settings &) throw ()` [`static`]

Set the global settings.

### 5.160.3 Member Data Documentation

#### 5.160.3.1 `_SequenceIndex __gnu_parallel::_Settings::accumulate_minimal_n`

Minimal input size for accumulate.

Definition at line 139 of file settings.h.

#### 5.160.3.2 `unsigned int __gnu_parallel::_Settings::adjacent_difference_minimal_n`

Minimal input size for adjacent\_difference.

Definition at line 142 of file settings.h.

#### 5.160.3.3 `unsigned int __gnu_parallel::_Settings::cache_line_size`

Overestimation of cache line size. Used to avoid false sharing, i.e. elements of different threads are at least this amount apart.

Definition at line 265 of file settings.h.

Referenced by `__gnu_parallel::_for_each_template_random_access_workstealing()`.

#### 5.160.3.4 `_SequenceIndex __gnu_parallel::_Settings::count_minimal_n`

Minimal input size for count and count\_if.

Definition at line 145 of file settings.h.

#### 5.160.3.5 `_SequenceIndex __gnu_parallel::_Settings::fill_minimal_n`

Minimal input size for fill.

Definition at line 148 of file settings.h.

#### 5.160.3.6 `double __gnu_parallel::_Settings::find_increasing_factor`

Block size increase factor for find.

Definition at line 151 of file settings.h.

Referenced by `__gnu_parallel::_find_template()`.

**5.160.3.7** `_SequenceIndex __gnu_parallel::_Settings::find_initial_block_size`

Initial block size for find.

Definition at line 154 of file settings.h.

Referenced by `__gnu_parallel::_find_template()`.

**5.160.3.8** `_SequenceIndex __gnu_parallel::_Settings::find_maximum_block_size`

Maximal block size for find.

Definition at line 157 of file settings.h.

Referenced by `__gnu_parallel::_find_template()`.

**5.160.3.9** `_SequenceIndex __gnu_parallel::_Settings::find_sequential_search_size`

Start with looking for this many elements sequentially, for find.

Definition at line 160 of file settings.h.

Referenced by `__gnu_parallel::_find_template()`.

**5.160.3.10** `_SequenceIndex __gnu_parallel::_Settings::for_each_minimal_n`

Minimal input size for `for_each`.

Definition at line 163 of file settings.h.

**5.160.3.11** `_SequenceIndex __gnu_parallel::_Settings::generate_minimal_n`

Minimal input size for `generate`.

Definition at line 166 of file settings.h.

**5.160.3.12** `unsigned long long __gnu_parallel::_Settings::L1_cache_size`

size of the L1 cache in bytes (underestimation).

Definition at line 254 of file settings.h.

**5.160.3.13** `unsigned long long __gnu_parallel::_Settings::L2_cache_size`

size of the L2 cache in bytes (underestimation).

Definition at line 257 of file settings.h.

Referenced by `__gnu_parallel::_parallel_random_shuffle_drs()`, and `__gnu_parallel::_sequential_random_shuffle()`.

**5.160.3.14** `_SequenceIndex __gnu_parallel::_Settings::max_element_minimal_n`

Minimal input size for `max_element`.

Definition at line 169 of file settings.h.

**5.160.3.15** `_SequenceIndex __gnu_parallel::_Settings::merge_minimal_n`

Minimal input size for `merge`.

Definition at line 172 of file settings.h.

**5.160.3.16** `unsigned int __gnu_parallel::_Settings::merge_oversampling`

Oversampling factor for `merge`.

Definition at line 175 of file settings.h.

**5.160.3.17** `_SequenceIndex __gnu_parallel::_Settings::min_element_minimal_n`

Minimal input size for `min_element`.

Definition at line 178 of file settings.h.

**5.160.3.18** `int __gnu_parallel::_Settings::multiway_merge_minimal_k`

Oversampling factor for `multiway_merge`.

Definition at line 184 of file settings.h.

**5.160.3.19** `_SequenceIndex __gnu_parallel::_Settings::multiway_merge_minimal_n`

Minimal input size for `multiway_merge`.

Definition at line 181 of file settings.h.

#### **5.160.3.20 unsigned int \_\_gnu\_parallel::\_Settings::multiway\_merge\_oversampling**

Oversampling factor for multiway\_merge.

Definition at line 187 of file settings.h.

#### **5.160.3.21 \_SequenceIndex \_\_gnu\_parallel::\_Settings::nth\_element\_minimal\_n**

Minimal input size for nth\_element.

Definition at line 190 of file settings.h.

Referenced by \_\_gnu\_parallel::\_parallel\_nth\_element().

#### **5.160.3.22 \_SequenceIndex \_\_gnu\_parallel::\_Settings::partial\_sort\_minimal\_n**

Minimal input size for partial\_sort.

Definition at line 203 of file settings.h.

#### **5.160.3.23 float \_\_gnu\_parallel::\_Settings::partial\_sum\_dilation**

Ratio for partial\_sum. Assume "sum and write result" to be this factor slower than just "sum".

Definition at line 207 of file settings.h.

Referenced by \_\_gnu\_parallel::\_parallel\_partial\_sum\_linear().

#### **5.160.3.24 unsigned int \_\_gnu\_parallel::\_Settings::partial\_sum\_minimal\_n**

Minimal input size for partial\_sum.

Definition at line 210 of file settings.h.

#### **5.160.3.25 double \_\_gnu\_parallel::\_Settings::partition\_chunk\_share**

Chunk size for partition, relative to input size. If > 0.0, this value overrides partition\_chunk\_size.

Definition at line 197 of file settings.h.

Referenced by \_\_gnu\_parallel::\_parallel\_partition().

**5.160.3.26** `_SequenceIndex __gnu_parallel::_Settings::partition_chunk_size`

Chunk size for partition.

Definition at line 193 of file settings.h.

Referenced by `__gnu_parallel::_parallel_partition()`.

**5.160.3.27** `_SequenceIndex __gnu_parallel::_Settings::partition_minimal_n`

Minimal input size for partition.

Definition at line 200 of file settings.h.

Referenced by `__gnu_parallel::_parallel_nth_element()`.

**5.160.3.28** `_SequenceIndex __gnu_parallel::_Settings::qsb_steals`

The number of stolen ranges in load-balanced quicksort.

Definition at line 270 of file settings.h.

**5.160.3.29** `unsigned int __gnu_parallel::_Settings::random_shuffle_minimal_n`

Minimal input size for `random_shuffle`.

Definition at line 213 of file settings.h.

**5.160.3.30** `_SequenceIndex __gnu_parallel::_Settings::replace_minimal_n`

Minimal input size for `replace` and `replace_if`.

Definition at line 216 of file settings.h.

**5.160.3.31** `_SequenceIndex __gnu_parallel::_Settings::search_minimal_n`

Minimal input size for `search` and `search_n`.

Definition at line 273 of file settings.h.

**5.160.3.32** `_SequenceIndex __gnu_parallel::_Settings::set_difference_minimal_n`

Minimal input size for `set_difference`.

Definition at line 219 of file settings.h.

**5.160.3.33** `_SequenceIndex __gnu_parallel::_Settings::set_intersection_ - minimal_n`

Minimal input size for `set_intersection`.

Definition at line 222 of file `settings.h`.

**5.160.3.34** `_SequenceIndex __gnu_parallel::_Settings::set_symmetric_ - difference_minimal_n`

Minimal input size for `set_symmetric_difference`.

Definition at line 225 of file `settings.h`.

**5.160.3.35** `_SequenceIndex __gnu_parallel::_Settings::set_union_minimal_n`

Minimal input size for `set_union`.

Definition at line 228 of file `settings.h`.

**5.160.3.36** `_SequenceIndex __gnu_parallel::_Settings::sort_minimal_n`

Minimal input size for parallel sorting.

Definition at line 231 of file `settings.h`.

**5.160.3.37** `unsigned int __gnu_parallel::_Settings::sort_mwms_oversampling`

Oversampling factor for parallel `std::sort` (MWMS).

Definition at line 234 of file `settings.h`.

**5.160.3.38** `unsigned int __gnu_parallel::_Settings::sort_qs_num_samples_ - preset`

Such many samples to take to find a good pivot (quicksort).

Definition at line 237 of file `settings.h`.

**5.160.3.39** `_SequenceIndex __gnu_parallel::_Settings::sort_qsb_base_case_ - maximal_n`

Maximal subsequence `__length` to switch to unbalanced `__base` case. Applies to `std::sort` with dynamically load-balanced quicksort.

Definition at line 241 of file `settings.h`.

#### 5.160.3.40 `unsigned int __gnu_parallel::_Settings::TLB_size`

size of the Translation Lookaside Buffer (underestimation).

Definition at line 260 of file `settings.h`.

Referenced by `__gnu_parallel::__parallel_random_shuffle_drs()`, and `__gnu_parallel::__sequential_random_shuffle()`.

#### 5.160.3.41 `_SequenceIndex __gnu_parallel::_Settings::transform_minimal_n`

Minimal input size for `parallel std::transform`.

Definition at line 244 of file `settings.h`.

#### 5.160.3.42 `_SequenceIndex __gnu_parallel::_Settings::unique_copy_minimal_n`

Minimal input size for `unique_copy`.

Definition at line 247 of file `settings.h`.

## 5.164 `__gnu_parallel::_VoidFunctor<_ValueType>` Class Template Reference 273

### 5.164 `__gnu_parallel::_VoidFunctor<_ValueType>` Class Template Reference

Functor that does nothing.

#### 5.164.1 Detailed Description

```
template<typename _ValueType> class __gnu_parallel::_VoidFunctor<_ValueType>
>
```

Functor that does nothing.

Definition at line 418 of file `parallel/base.h`.

The documentation for this class was generated from the following file:

- [parallel/base.h](#)

## 5.165 `__gnu_parallel::balanced_quicksort_tag` Struct Reference

Forces parallel sorting using balanced quicksort at compile time. Inheritance diagram for `__gnu_parallel::balanced_quicksort_tag`:

### Public Member Functions

- `balanced_quicksort_tag` (`_ThreadIndex` \_\_num\_threads)
- `_ThreadIndex` `__get_num_threads` ()
- void `set_num_threads` (`_ThreadIndex` \_\_num\_threads)

#### 5.165.1 Detailed Description

Forces parallel sorting using balanced quicksort at compile time.

Definition at line 164 of file tags.h.

#### 5.165.2 Member Function Documentation

##### 5.165.2.1 `_ThreadIndex` `__gnu_parallel::parallel_tag::__get_num_threads` () [inline, inherited]

Find out desired number of threads.

#### Returns:

Desired number of threads.

Definition at line 63 of file tags.h.

Referenced by `__gnu_parallel::__parallel_sort`().

5.165.2.2 `void __gnu_parallel::parallel_tag::set_num_threads (_ThreadIndex  
__num_threads) [inline, inherited]`

Set the desired number of threads.

**Parameters:**

*\_\_num\_threads* Desired number of threads.

Definition at line 73 of file `tags.h`.

The documentation for this struct was generated from the following file:

- [tags.h](#)

## 5.166 `__gnu_parallel::balanced_tag` Struct Reference

Recommends parallel execution using dynamic load-balancing at compile time. Inheritance diagram for `__gnu_parallel::balanced_tag`:

### Public Member Functions

- `_ThreadIndex __get_num_threads ()`
- `void set_num_threads (_ThreadIndex __num_threads)`

#### 5.166.1 Detailed Description

Recommends parallel execution using dynamic load-balancing at compile time.

Definition at line 88 of file `tags.h`.

#### 5.166.2 Member Function Documentation

##### 5.166.2.1 `_ThreadIndex __gnu_parallel::parallel_tag::__get_num_threads ()` [inline, inherited]

Find out desired number of threads.

#### Returns:

Desired number of threads.

Definition at line 63 of file `tags.h`.

Referenced by `__gnu_parallel::__parallel_sort()`.

**5.166.2.2** `void __gnu_parallel::parallel_tag::set_num_threads (_ThreadIndex  
__num_threads) [inline, inherited]`

Set the desired number of threads.

**Parameters:**

*\_\_num\_threads* Desired number of threads.

Definition at line 73 of file `tags.h`.

The documentation for this struct was generated from the following file:

- [tags.h](#)

## 5.167 `__gnu_parallel::constant_size_blocks_tag` Struct Reference

Selects the constant block size variant for `std::find()`. Inheritance diagram for `__gnu_parallel::constant_size_blocks_tag`:

### 5.167.1 Detailed Description

Selects the constant block size variant for `std::find()`.

## 5.168 `__gnu_parallel::default_parallel_tag` Struct Reference

Recommends parallel execution using the default parallel algorithm. Inheritance diagram for `__gnu_parallel::default_parallel_tag`:

### Public Member Functions

- `default_parallel_tag` (`_ThreadIndex` \_\_num\_threads)
- `_ThreadIndex` `__get_num_threads` ()
- void `set_num_threads` (`_ThreadIndex` \_\_num\_threads)

#### 5.168.1 Detailed Description

Recommends parallel execution using the default parallel algorithm.

Definition at line 79 of file tags.h.

#### 5.168.2 Member Function Documentation

##### 5.168.2.1 `_ThreadIndex` `__gnu_parallel::parallel_tag::__get_num_threads` () [inline, inherited]

Find out desired number of threads.

#### Returns:

Desired number of threads.

Definition at line 63 of file tags.h.

Referenced by `__gnu_parallel::__parallel_sort` ().

**5.168.2.2** `void __gnu_parallel::parallel_tag::set_num_threads (_ThreadIndex  
__num_threads) [inline, inherited]`

Set the desired number of threads.

**Parameters:**

`__num_threads` Desired number of threads.

Definition at line 73 of file tags.h.

The documentation for this struct was generated from the following file:

- [tags.h](#)

## 5.169 `__gnu_parallel::equal_split_tag` Struct Reference

Selects the equal splitting variant for `std::find()`. Inheritance diagram for `__gnu_parallel::equal_split_tag`:

### 5.169.1 Detailed Description

Selects the equal splitting variant for `std::find()`.

**See also:**

[\\_GLIBCXX\\_FIND\\_EQUAL\\_SPLIT](#)

Definition at line 182 of file `tags.h`.

The documentation for this struct was generated from the following file:

- [tags.h](#)

## 5.170 `__gnu_parallel::exact_tag` Struct Reference

Forces parallel merging with exact splitting, at compile time. Inheritance diagram for `__gnu_parallel::exact_tag`:

### Public Member Functions

- `exact_tag` (`_ThreadIndex` `__num_threads`)
- `_ThreadIndex` `__get_num_threads` ()
- void `set_num_threads` (`_ThreadIndex` `__num_threads`)

### 5.170.1 Detailed Description

Forces parallel merging with exact splitting, at compile time.

Definition at line 109 of file `tags.h`.

### 5.170.2 Member Function Documentation

#### 5.170.2.1 `_ThreadIndex` `__gnu_parallel::parallel_tag::__get_num_threads` () [`inline`, `inherited`]

Find out desired number of threads.

#### Returns:

Desired number of threads.

Definition at line 63 of file `tags.h`.

Referenced by `__gnu_parallel::__parallel_sort` ().

**5.170.2.2** `void __gnu_parallel::parallel_tag::set_num_threads (_ThreadIndex  
__num_threads) [inline, inherited]`

Set the desired number of threads.

**Parameters:**

*\_\_num\_threads* Desired number of threads.

Definition at line 73 of file `tags.h`.

The documentation for this struct was generated from the following file:

- [tags.h](#)

## 5.171 `__gnu_parallel::find_tag` Struct Reference

Base class for for `std::find()` variants. Inheritance diagram for `__gnu_parallel::find_tag`:

### 5.171.1 Detailed Description

Base class for for `std::find()` variants.

Definition at line 104 of file `tags.h`.

The documentation for this struct was generated from the following file:

- [tags.h](#)

## 5.172 `__gnu_parallel::growing_blocks_tag` Struct Reference

Selects the growing block size variant for `std::find()`. Inheritance diagram for `__gnu_parallel::growing_blocks_tag`:

### 5.172.1 Detailed Description

Selects the growing block size variant for `std::find()`.

**See also:**

[\\_GLIBCXX\\_FIND\\_GROWING\\_BLOCKS](#)

Definition at line 174 of file `tags.h`.

The documentation for this struct was generated from the following file:

- [tags.h](#)

## 5.173 `__gnu_parallel::multiway_mergesort_exact_tag` Struct Reference

Forces parallel sorting using multiway mergesort with exact splitting at compile time.  
Inheritance diagram for `__gnu_parallel::multiway_mergesort_exact_tag`:

### Public Member Functions

- `multiway_mergesort_exact_tag` (`_ThreadIndex` `__num_threads`)
- `_ThreadIndex` `__get_num_threads` ()
- void `set_num_threads` (`_ThreadIndex` `__num_threads`)

#### 5.173.1 Detailed Description

Forces parallel sorting using multiway mergesort with exact splitting at compile time.  
Definition at line 137 of file tags.h.

#### 5.173.2 Member Function Documentation

##### 5.173.2.1 `_ThreadIndex` `__gnu_parallel::parallel_tag::__get_num_threads` () [inline, inherited]

Find out desired number of threads.

#### Returns:

Desired number of threads.

Definition at line 63 of file tags.h.

Referenced by `__gnu_parallel::__parallel_sort`().

## 5.173 \_\_gnu\_parallel::multiway\_mergesort\_exact\_tag Struct Reference 1287

5.173.2.2 void \_\_gnu\_parallel::parallel\_tag::set\_num\_threads (\_ThreadIndex  
\_\_num\_threads) [inline, inherited]

Set the desired number of threads.

### Parameters:

*\_\_num\_threads* Desired number of threads.

Definition at line 73 of file tags.h.

The documentation for this struct was generated from the following file:

- [tags.h](#)

## 5.174 `__gnu_parallel::multiway_mergesort_samplng_tag` Struct Reference

Forces parallel sorting using multiway mergesort with splitting by sampling at compile time. Inheritance diagram for `__gnu_parallel::multiway_mergesort_samplng_tag`:

### Public Member Functions

- `multiway_mergesort_samplng_tag` (`_ThreadIndex` \_\_num\_threads)
- `_ThreadIndex` `__get_num_threads` ()
- void `set_num_threads` (`_ThreadIndex` \_\_num\_threads)

#### 5.174.1 Detailed Description

Forces parallel sorting using multiway mergesort with splitting by sampling at compile time.

Definition at line 146 of file tags.h.

#### 5.174.2 Member Function Documentation

##### 5.174.2.1 `_ThreadIndex` `__gnu_parallel::parallel_tag::__get_num_threads` () [inline, inherited]

Find out desired number of threads.

#### Returns:

Desired number of threads.

Definition at line 63 of file tags.h.

Referenced by `__gnu_parallel::__parallel_sort`().

## 5.174 \_\_gnu\_parallel::multiway\_mergesort\_sampling\_tag Struct Reference 1289

5.174.2.2 void \_\_gnu\_parallel::parallel\_tag::set\_num\_threads (\_ThreadIndex  
\_\_num\_threads) [inline, inherited]

Set the desired number of threads.

### Parameters:

*\_\_num\_threads* Desired number of threads.

Definition at line 73 of file tags.h.

The documentation for this struct was generated from the following file:

- [tags.h](#)

## 5.175 `__gnu_parallel::multiway_mergesort_tag` Struct Reference

Forces parallel sorting using multiway mergesort at compile time. Inheritance diagram for `__gnu_parallel::multiway_mergesort_tag`:

### Public Member Functions

- `multiway_mergesort_tag` (`_ThreadIndex` \_\_num\_threads)
- `_ThreadIndex` `__get_num_threads` ()
- void `set_num_threads` (`_ThreadIndex` \_\_num\_threads)

#### 5.175.1 Detailed Description

Forces parallel sorting using multiway mergesort at compile time.

Definition at line 128 of file tags.h.

#### 5.175.2 Member Function Documentation

##### 5.175.2.1 `_ThreadIndex` `__gnu_parallel::parallel_tag::__get_num_threads` () [inline, inherited]

Find out desired number of threads.

#### Returns:

Desired number of threads.

Definition at line 63 of file tags.h.

Referenced by `__gnu_parallel::__parallel_sort`().

**5.175.2.2** `void __gnu_parallel::parallel_tag::set_num_threads (_ThreadIndex  
__num_threads) [inline, inherited]`

Set the desired number of threads.

**Parameters:**

*\_\_num\_threads* Desired number of threads.

Definition at line 73 of file `tags.h`.

The documentation for this struct was generated from the following file:

- [tags.h](#)

## 5.176 `__gnu_parallel::omp_loop_static_tag` Struct Reference

Recommends parallel execution using OpenMP static load-balancing at compile time.  
Inheritance diagram for `__gnu_parallel::omp_loop_static_tag`:

### Public Member Functions

- [\\_ThreadIndex \\_\\_get\\_num\\_threads \(\)](#)
- void [set\\_num\\_threads \(\\_ThreadIndex \\_\\_num\\_threads\)](#)

#### 5.176.1 Detailed Description

Recommends parallel execution using OpenMP static load-balancing at compile time.  
Definition at line 100 of file tags.h.

#### 5.176.2 Member Function Documentation

##### 5.176.2.1 `_ThreadIndex __gnu_parallel::parallel_tag::__get_num_threads ()` [inline, inherited]

Find out desired number of threads.

#### Returns:

Desired number of threads.

Definition at line 63 of file tags.h.

Referenced by `__gnu_parallel::__parallel_sort()`.

**5.176.2.2 void \_\_gnu\_parallel::parallel\_tag::set\_num\_threads (\_ThreadIndex  
\_\_num\_threads) [inline, inherited]**

Set the desired number of threads.

**Parameters:**

*\_\_num\_threads* Desired number of threads.

Definition at line 73 of file tags.h.

The documentation for this struct was generated from the following file:

- [tags.h](#)

## 5.177 `__gnu_parallel::omp_loop_tag` Struct Reference

Recommends parallel execution using OpenMP dynamic load-balancing at compile time. Inheritance diagram for `__gnu_parallel::omp_loop_tag`:

### Public Member Functions

- [\\_ThreadIndex \\_\\_get\\_num\\_threads\(\)](#)
- void [set\\_num\\_threads\(\\_ThreadIndex \\_\\_num\\_threads\)](#)

#### 5.177.1 Detailed Description

Recommends parallel execution using OpenMP dynamic load-balancing at compile time.

Definition at line 96 of file tags.h.

#### 5.177.2 Member Function Documentation

##### 5.177.2.1 `_ThreadIndex __gnu_parallel::parallel_tag::__get_num_threads()` [inline, inherited]

Find out desired number of threads.

#### Returns:

Desired number of threads.

Definition at line 63 of file tags.h.

Referenced by `__gnu_parallel::__parallel_sort()`.

**5.177.2.2** void \_\_gnu\_parallel::parallel\_tag::set\_num\_threads (\_ThreadIndex  
\_\_num\_threads) [inline, inherited]

Set the desired number of threads.

**Parameters:**

\_\_num\_threads Desired number of threads.

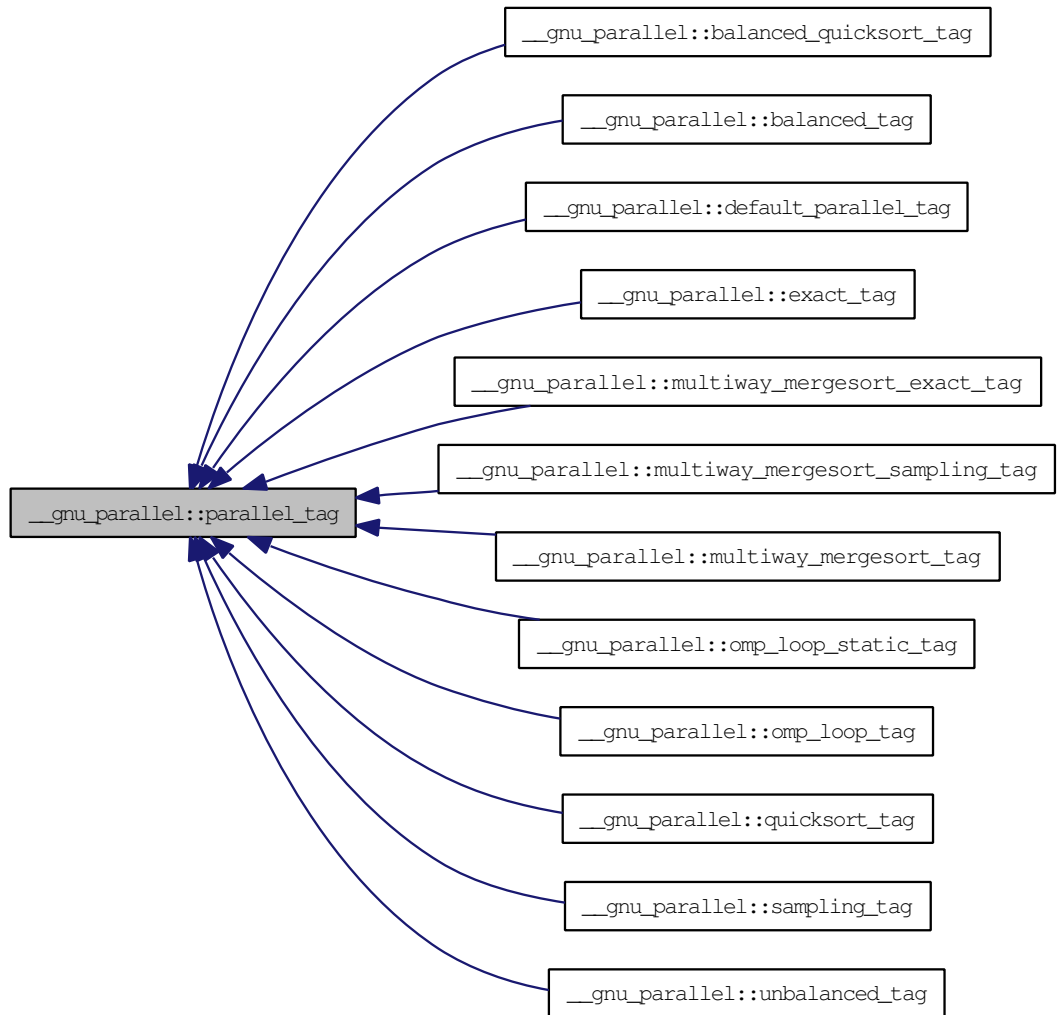

Definition at line 73 of file tags.h.

The documentation for this struct was generated from the following file:

- [tags.h](#)

## 5.178 `__gnu_parallel::parallel_tag` Struct Reference

Recommends parallel execution at compile time, optionally using a user-specified number of threads. Inheritance diagram for `__gnu_parallel::parallel_tag`:

### Public Member Functions

- `parallel_tag` (`_ThreadIndex` \_\_num\_threads)
- `parallel_tag` ()
- `_ThreadIndex` \_\_get\_num\_threads ()

- void `set_num_threads` (`_ThreadIndex` `__num_threads`)

### 5.178.1 Detailed Description

Recommends parallel execution at compile time, optionally using a user-specified number of threads.

Definition at line 46 of file `tags.h`.

### 5.178.2 Constructor & Destructor Documentation

#### 5.178.2.1 `__gnu_parallel::parallel_tag::parallel_tag ()` [`inline`]

Default constructor. Use default number of threads.

Definition at line 53 of file `tags.h`.

#### 5.178.2.2 `__gnu_parallel::parallel_tag::parallel_tag (_ThreadIndex __num_threads)` [`inline`]

Default constructor. Recommend number of threads to use.

#### Parameters:

`__num_threads` Desired number of threads.

Definition at line 58 of file `tags.h`.

### 5.178.3 Member Function Documentation

#### 5.178.3.1 `_ThreadIndex __gnu_parallel::parallel_tag::__get_num_threads ()` [`inline`]

Find out desired number of threads.

#### Returns:

Desired number of threads.

Definition at line 63 of file `tags.h`.

Referenced by `__gnu_parallel::__parallel_sort()`.

**5.178.3.2** `void __gnu_parallel::parallel_tag::set_num_threads (_ThreadIndex  
__num_threads) [inline]`

Set the desired number of threads.

**Parameters:**

`__num_threads` Desired number of threads.

Definition at line 73 of file tags.h.

The documentation for this struct was generated from the following file:

- [tags.h](#)

## 5.179 `__gnu_parallel::quicksort_tag` Struct Reference

Forces parallel sorting using unbalanced quicksort at compile time. Inheritance diagram for `__gnu_parallel::quicksort_tag`:

### Public Member Functions

- `quicksort_tag` (`_ThreadIndex` `__num_threads`)
- `_ThreadIndex` `__get_num_threads` ()
- void `set_num_threads` (`_ThreadIndex` `__num_threads`)

### 5.179.1 Detailed Description

Forces parallel sorting using unbalanced quicksort at compile time.

Definition at line 155 of file `tags.h`.

### 5.179.2 Member Function Documentation

#### 5.179.2.1 `_ThreadIndex` `__gnu_parallel::parallel_tag::__get_num_threads` () [inline, inherited]

Find out desired number of threads.

#### Returns:

Desired number of threads.

Definition at line 63 of file `tags.h`.

Referenced by `__gnu_parallel::__parallel_sort` ().

**5.179.2.2** `void __gnu_parallel::parallel_tag::set_num_threads (_ThreadIndex  
__num_threads) [inline, inherited]`

Set the desired number of threads.

**Parameters:**

`__num_threads` Desired number of threads.

Definition at line 73 of file tags.h.

The documentation for this struct was generated from the following file:

- [tags.h](#)

## 5.180 `__gnu_parallel::sampling_tag` Struct Reference

Forces parallel merging with exact splitting, at compile time. Inheritance diagram for `__gnu_parallel::sampling_tag`:

### Public Member Functions

- `sampling_tag` (`_ThreadIndex __num_threads`)
- `_ThreadIndex __get_num_threads` ()
- void `set_num_threads` (`_ThreadIndex __num_threads`)

### 5.180.1 Detailed Description

Forces parallel merging with exact splitting, at compile time.

Definition at line 118 of file `tags.h`.

### 5.180.2 Member Function Documentation

#### 5.180.2.1 `_ThreadIndex __gnu_parallel::parallel_tag::__get_num_threads` () [inline, inherited]

Find out desired number of threads.

#### Returns:

Desired number of threads.

Definition at line 63 of file `tags.h`.

Referenced by `__gnu_parallel::__parallel_sort` ().

**5.180.2.2** `void __gnu_parallel::parallel_tag::set_num_threads (_ThreadIndex  
__num_threads) [inline, inherited]`

Set the desired number of threads.

**Parameters:**

`__num_threads` Desired number of threads.

Definition at line 73 of file tags.h.

The documentation for this struct was generated from the following file:

- [tags.h](#)

## 5.181 `__gnu_parallel::sequential_tag` Struct Reference

Forces sequential execution at compile time.

### 5.181.1 Detailed Description

Forces sequential execution at compile time.

Definition at line 42 of file `tags.h`.

The documentation for this struct was generated from the following file:

- [tags.h](#)

## 5.182 `__gnu_parallel::unbalanced_tag` Struct Reference

Recommends parallel execution using static load-balancing at compile time. Inheritance diagram for `__gnu_parallel::unbalanced_tag`:

### Public Member Functions

- [\\_ThreadIndex \\_\\_get\\_num\\_threads \(\)](#)
- void [set\\_num\\_threads \(\\_ThreadIndex \\_\\_num\\_threads\)](#)

#### 5.182.1 Detailed Description

Recommends parallel execution using static load-balancing at compile time.

Definition at line 92 of file tags.h.

#### 5.182.2 Member Function Documentation

##### 5.182.2.1 `_ThreadIndex __gnu_parallel::parallel_tag::__get_num_threads ()` [inline, inherited]

Find out desired number of threads.

#### Returns:

Desired number of threads.

Definition at line 63 of file tags.h.

Referenced by `__gnu_parallel::__parallel_sort()`.

**5.182.2.2** void \_\_gnu\_parallel::parallel\_tag::set\_num\_threads (\_ThreadIndex  
\_\_num\_threads) [inline, inherited]

Set the desired number of threads.

**Parameters:**

\_\_num\_threads Desired number of threads.

Definition at line 73 of file tags.h.

The documentation for this struct was generated from the following file:

- [tags.h](#)

## 5.183 `__gnu_pbds::associative_container_tag` Struct Reference

Basic associative-container. Inheritance diagram for `__gnu_pbds::associative_container_tag`:

### 5.183.1 Detailed Description

Basic associative-container.

Definition at line 102 of file `tag_and_trait.hpp`.

The documentation for this struct was generated from the following file:

- [tag\\_and\\_trait.hpp](#)

5.184 `__gnu_pbds::basic_hash_table`< Key, Mapped, Hash\_Fn, Eq\_Fn, Resize\_Policy, Store\_Hash, Tag, Policy\_TL, Allocator > Class Template

<sup>Reference</sup>  
~~5.184~~ `__gnu_pbds::basic_hash_table`< <sup>1307</sup>Key, Mapped, Hash\_Fn, Eq\_Fn, Resize\_Policy, Store\_Hash, Tag, Policy\_TL, Allocator > Class Template Reference

An abstract basic hash-based associative container. Inheritance diagram for `__gnu_pbds::basic_hash_table`< Key, Mapped, Hash\_Fn, Eq\_Fn, Resize\_Policy, Store\_Hash, Tag, Policy\_TL, Allocator >:

---

## Public Types

## 5.192 `__gnu_pbds::container_base< Key, Mapped, Tag, Policy_Tl, Allocator >` Class Template Reference

An abstract basic associative container. Inheritance diagram for `__gnu_pbds::container_base< Key, Mapped, Tag, Policy_Tl, Allocator >`:

### Public Types

- typedef Allocator **allocator\_type**
- typedef base\_type::const\_iterator **const\_iterator**
- typedef key\_rebind::const\_pointer **const\_key\_pointer**
- typedef key\_rebind::const\_reference **const\_key\_reference**
- typedef mapped\_rebind::const\_pointer **const\_mapped\_pointer**
- typedef mapped\_rebind::const\_reference **const\_mapped\_reference**
- typedef base\_type::const\_point\_iterator **const\_point\_iterator**
- typedef value\_rebind::const\_pointer **const\_pointer**
- typedef value\_rebind::const\_reference **const\_reference**
- typedef Tag **container\_category**
- typedef allocator\_type::difference\_type **difference\_type**
- typedef base\_type::iterator **iterator**
- typedef key\_rebind::pointer **key\_pointer**
- typedef allocator\_type::template rebind< key\_type >::other **key\_rebind**
- typedef key\_rebind::reference **key\_reference**
- typedef allocator\_type::template rebind< Key >::other::value\_type **key\_type**
- typedef mapped\_rebind::pointer **mapped\_pointer**
- typedef allocator\_type::template rebind< mapped\_type >::other **mapped\_rebind**
- typedef mapped\_rebind::reference **mapped\_reference**
- typedef Mapped **mapped\_type**
- typedef base\_type::point\_iterator **point\_iterator**
- typedef value\_rebind::pointer **pointer**
- typedef value\_rebind::reference **reference**
- typedef allocator\_type::size\_type **size\_type**
- typedef allocator\_type::template rebind< value\_type >::other **value\_rebind**
- typedef base\_type::value\_type **value\_type**

### 5.192.1 Detailed Description

```
template<typename Key, typename Mapped, typename Tag, typename Policy_ -
TI, typename Allocator> class __gnu_pbds::container_base< Key, Mapped, Tag,
Policy_TI, Allocator >
```

An abstract basic associative container.

Definition at line 76 of file `assoc_container.hpp`.

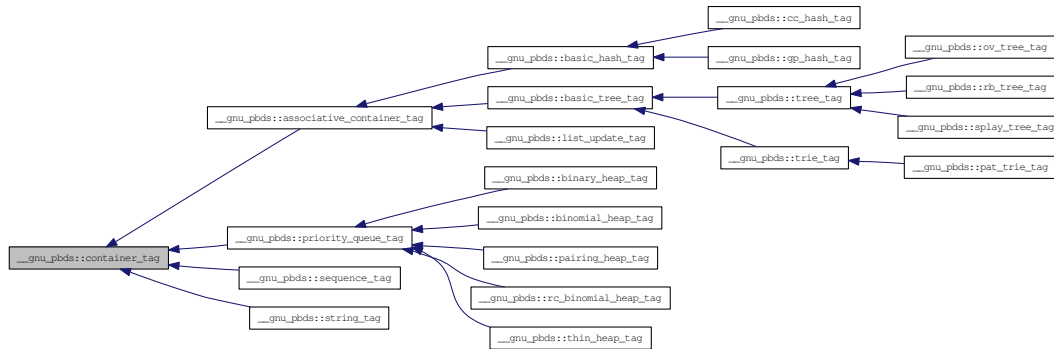

The documentation for this class was generated from the following file:

- [assoc\\_container.hpp](#)

## 5.193 `__gnu_pbds::container_tag` Struct Reference

Base data structure tag. Inheritance diagram for `__gnu_pbds::container_tag`:

### 5.193.1 Detailed Description

Base data structure tag.

Definition at line 92 of file `tag_and_trait.hpp`.

The documentation for this struct was generated from the following file:

- [tag\\_and\\_trait.hpp](#)

## 5.194 `__gnu_pbds::container_traits< Cntnr >` Struct Template Reference

[container\\_traits](#)

Inherits `container_traits_base< Cntnr::container_category >`.

### Public Types

- enum { `order_preserving`, `erase_can_throw`, `split_join_can_throw`, `reverse_iteration` }
- typedef `container_traits_base< container_category >` **base\_type**
- typedef `Cntnr::container_category` **container\_category**
- typedef `Cntnr` **container\_type**
- typedef `base_type::invalidation_guarantee` **invalidation\_guarantee**

### 5.194.1 Detailed Description

```
template<typename Cntnr> struct __gnu_pbds::container_traits< Cntnr >
```

[container\\_traits](#)

Definition at line 345 of file `tag_and_trait.hpp`.

The documentation for this struct was generated from the following file:

- [tag\\_and\\_trait.hpp](#)

## 5.195 `__gnu_pbds::detail::value_type_base< Key, Mapped, Allocator, false >` Struct Template Reference

### Public Types

- `typedef mapped_type_allocator::const_pointer const_mapped_pointer`
- `typedef mapped_type_allocator::const_reference const_mapped_reference`
- `typedef value_type_allocator::const_pointer const_pointer`
- `typedef value_type_allocator::const_reference const_reference`
- `typedef mapped_type_allocator::pointer mapped_pointer`
- `typedef mapped_type_allocator::reference mapped_reference`
- `typedef mapped_type_allocator::value_type mapped_type`
- `typedef Allocator::template rebind< Mapped >::other mapped_type_allocator`
  
- `typedef value_type_allocator::pointer pointer`
- `typedef value_type_allocator::reference reference`
- `typedef value_type_allocator::value_type value_type`
- `typedef Allocator::template rebind< std::pair< const Key, Mapped > >::other value_type_allocator`

### 5.195.1 Detailed Description

`template<typename Key, typename Mapped, typename Allocator> struct __gnu_pbds::detail::value_type_base< Key, Mapped, Allocator, false >`

Specialization of `value_type_base` for the case where the hash value is not stored alongside each value.

Definition at line 61 of file `basic_types.hpp`.

The documentation for this struct was generated from the following file:

- [basic\\_types.hpp](#)

## 5.196 `__gnu_pbds::detail::value_type_base< Key, Mapped, Allocator, true >` Struct Template Reference

### Public Types

- `typedef mapped_type_allocator::const_pointer const_mapped_pointer`
- `typedef mapped_type_allocator::const_reference const_mapped_reference`
- `typedef value_type_allocator::const_pointer const_pointer`
- `typedef value_type_allocator::const_reference const_reference`
- `typedef mapped_type_allocator::pointer mapped_pointer`
- `typedef mapped_type_allocator::reference mapped_reference`
- `typedef mapped_type_allocator::value_type mapped_type`
- `typedef Allocator::template rebind< Mapped >::other mapped_type_allocator`
  
- `typedef value_type_allocator::pointer pointer`
- `typedef value_type_allocator::reference reference`
- `typedef value_type_allocator::value_type value_type`
- `typedef Allocator::template rebind< std::pair< const Key, Mapped > >::other value_type_allocator`

### 5.196.1 Detailed Description

`template<typename Key, typename Mapped, typename Allocator> struct __gnu_pbds::detail::value_type_base< Key, Mapped, Allocator, true >`

Specialization of `value_type_base` for the case where the hash value is stored alongside each value.

Definition at line 88 of file `basic_types.hpp`.

The documentation for this struct was generated from the following file:

- [basic\\_types.hpp](#)

5.197 `__gnu_pbds::detail::value_type_base< Key, null_mapped_type, Allocator, false >` Struct Template Reference 1325

---

## 5.197 `__gnu_pbds::detail::value_type_base< Key, null_mapped_type, Allocator, false >` Struct Template Reference

### Public Types

### 5.216.1 Detailed Description

`template`<typename Key, typename Mapped, typename E\_Access\_Traits = typename `detail::default_trie_e_access_traits`<Key>::type, typename Tag = `pat_trie_tag`, `template`< typename Const\_Node\_Iterator, typename Node\_Iterator, typename E\_Access\_Traits\_, typename Allocator\_ > class `Node_Update = null_trie_node_update`, typename Allocator = `std::allocator`<char>> class `__gnu_pbds::trie`< Key, Mapped, E\_Access\_Traits, Tag, Node\_Update, Allocator >

A concrete basic trie-based associative container.

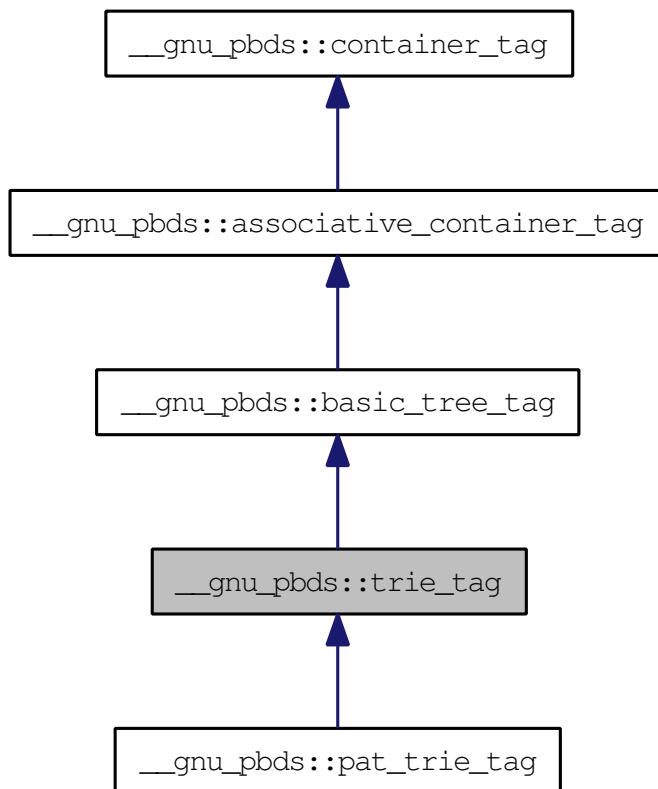

Definition at line 585 of file `assoc_container.hpp`.

The documentation for this class was generated from the following file:

- [assoc\\_container.hpp](#)

## 5.217 `__gnu_pbds::trie_tag` Struct Reference

[trie](#). Inheritance diagram for `__gnu_pbds::trie_tag`:

### 5.217.1 Detailed Description

[trie](#).

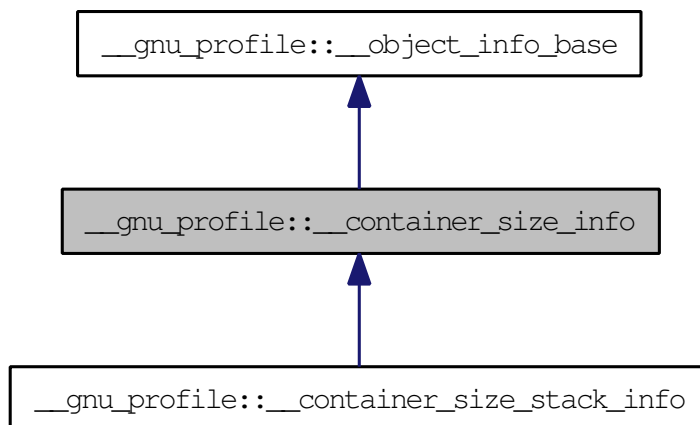

Definition at line 129 of file `tag_and_trait.hpp`.

The documentation for this struct was generated from the following file:

- [tag\\_and\\_trait.hpp](#)

## 5.218 `__gnu_profile::__container_size_info` Class Reference

A container size instrumentation line in the object table. Inheritance diagram for `__gnu_profile::__container_size_info`:

### Public Member Functions

- `__container_size_info` (`__stack_t __stack`, `size_t __num`)
- `__container_size_info` (`const __container_size_info &__o`)
- `const char * __advice` () const
- `void __destruct` (`size_t __num`, `size_t __inum`)
- `bool __is_valid` () const
- `float __magnitude` () const
- `void __merge` (`const __container_size_info &__o`)
- `void __resize` (`size_t __from`, `size_t __to`)
- `float __resize_cost` (`size_t __from`, `size_t __to`)
- `__stack_t __stack` () const
- `void __write` (`FILE *f`) const

### Protected Attributes

- `__stack_t _M_stack`
- `bool _M_valid`

### 5.218.1 Detailed Description

A container size instrumentation line in the object table.

Definition at line 60 of file profiler\_container\_size.h.

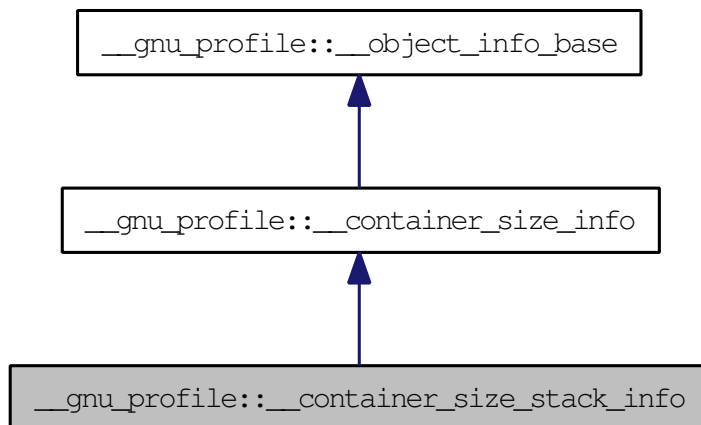

The documentation for this class was generated from the following file:

- profiler\_container\_size.h

## 5.219 `__gnu_profile::__container_size_stack_info` Class Reference

A container size instrumentation line in the stack table. Inheritance diagram for `__gnu_profile::__container_size_stack_info`:

### Public Member Functions

- `__container_size_stack_info` (const `__container_size_info` &`_o`)
- `const char * __advice () const`
- `void __destruct (size_t __num, size_t __inum)`
- `bool __is_valid () const`
- `float __magnitude () const`
- `void __merge (const __container_size_info &_o)`
- `void __resize (size_t __from, size_t __to)`
- `float __resize_cost (size_t __from, size_t __to)`
- `__stack_t __stack () const`
- `void __write (FILE *f) const`

### Protected Attributes

- `__stack_t _M_stack`
- `bool _M_valid`

### 5.219.1 Detailed Description

A container size instrumentation line in the stack table.

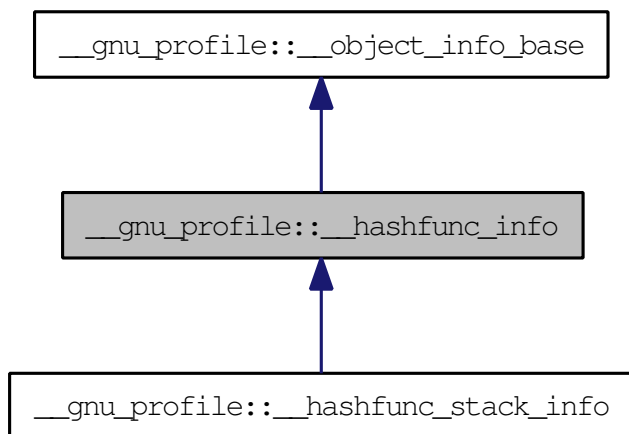

Definition at line 176 of file profiler\_container\_size.h.

The documentation for this class was generated from the following file:

- profiler\_container\_size.h

## 5.220 `__gnu_profile::__hashfunc_info` Class Reference

A hash performance instrumentation line in the object table. Inheritance diagram for `__gnu_profile::__hashfunc_info`:

### Public Member Functions

- `__hashfunc_info` (`__stack_t __stack`)
- `__hashfunc_info` (`const __hashfunc_info &o`)
- `const char * __advice` () const
- `void __destruct` (`size_t __chain`, `size_t __accesses`, `size_t __hops`)
- `bool __is_valid` () const
- `float __magnitude` () const
- `void __merge` (`const __hashfunc_info &o`)
- `__stack_t __stack` () const
- `void __write` (`FILE * __f`) const

### Protected Attributes

- `__stack_t _M_stack`
- `bool _M_valid`

#### 5.220.1 Detailed Description

A hash performance instrumentation line in the object table.

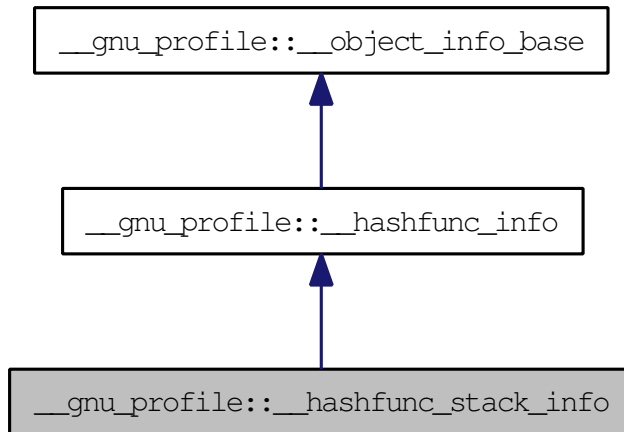

Definition at line 57 of file `profiler_hash_func.h`.

The documentation for this class was generated from the following file:

- profiler\_hash\_func.h

## 5.221 `__gnu_profile::__hashfunc_stack_info` Class Reference

A hash performance instrumentation line in the stack table. Inheritance diagram for `__gnu_profile::__hashfunc_stack_info`:

### Public Member Functions

- `__hashfunc_stack_info` (const `__hashfunc_info` &`_o`)
- `const char * __advice` () const
- `void __destruct` (size\_t `__chain`, size\_t `__accesses`, size\_t `__hops`)
- `bool __is_valid` () const
- `float __magnitude` () const
- `void __merge` (const `__hashfunc_info` &`_o`)
- `__stack_t __stack` () const
- `void __write` (FILE \*`_f`) const

### Protected Attributes

- `__stack_t _M_stack`
- `bool _M_valid`

#### 5.221.1 Detailed Description

A hash performance instrumentation line in the stack table.

Definition at line 104 of file profiler\_hash\_func.h.

The documentation for this class was generated from the following file:

- profiler\_hash\_func.h

## 5.222 `__gnu_profile::__list2vector_info` Class Reference

A list-to-vector instrumentation line in the object table. Inheritance diagram for `__gnu_profile::__list2vector_info`:

### Public Member Functions

- `__list2vector_info` (const `__list2vector_info` &\_\_o)
- `__list2vector_info` (`__stack_t` \_\_stack)
- const char \* `__advice` () const
- bool `__is_valid` () const
- bool `__is_valid` ()
- size\_t `__iterate` ()
- float `__list_cost` ()
- float `__magnitude` () const
- void `__merge` (const `__list2vector_info` &\_\_o)
- void `__opr_insert` (size\_t \_\_shift, size\_t \_\_size)
- void `__opr_iterate` (size\_t \_\_num)
- void `__resize` (size\_t \_\_from, size\_t \_\_to)
- size\_t `__resize` ()
- void `__set_invalid` ()
- void `__set_list_cost` (float \_\_lc)
- void `__set_vector_cost` (float \_\_vc)
- size\_t `__shift_count` ()
- `__stack_t` `__stack` () const
- void `__write` (FILE \* \_\_f) const

### Protected Attributes

- `__stack_t` `_M_stack`

### 5.222.1 Detailed Description

A list-to-vector instrumentation line in the object table.

Definition at line 59 of file profiler\_list\_to\_vector.h.

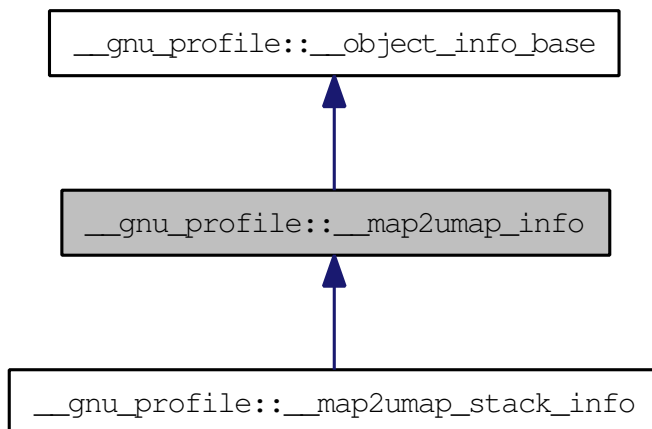

The documentation for this class was generated from the following file:

- [profiler\\_list\\_to\\_vector.h](#)

## 5.223 `__gnu_profile::__map2umap_info` Class Reference

A map-to-unordered\_map instrumentation line in the object table. Inheritance diagram for `__gnu_profile::__map2umap_info`:

### Public Member Functions

- `__map2umap_info` (const `__map2umap_info` &o)
- `__map2umap_info` (`__stack_t` \_\_stack)
- `const char * __advice` () const
- `bool __is_valid` () const
- `float __magnitude` () const
- `void __merge` (const `__map2umap_info` &o)
- `void __record_erase` (size\_t \_\_size, size\_t \_\_count)
- `void __record_find` (size\_t \_\_size)
- `void __record_insert` (size\_t \_\_size, size\_t \_\_count)
- `void __record_invalidate` ()
- `void __record_iterate` (size\_t \_\_count)
- `__stack_t __stack` () const
- `void __write` (FILE \* \_\_f) const

### Protected Attributes

- `__stack_t _M_stack`

### 5.223.1 Detailed Description

A map-to-unordered\_map instrumentation line in the object table.

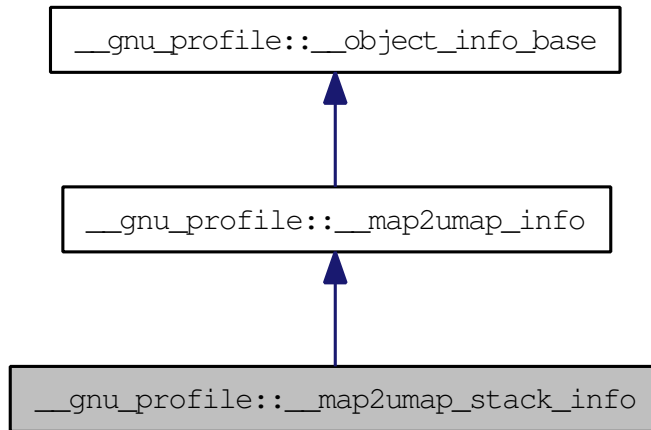

Definition at line 86 of file profiler\_map\_to\_unordered\_map.h.

The documentation for this class was generated from the following file:

- [profiler\\_map\\_to\\_unordered\\_map.h](#)

## 5.224 `__gnu_profile::__map2umap_stack_info` Class Reference

A map-to-unordered\_map instrumentation line in the stack table. Inheritance diagram for `__gnu_profile::__map2umap_stack_info`:

### Public Member Functions

- `__map2umap_stack_info` (const `__map2umap_info` &o)
- `const char * __advice` () const
- `bool __is_valid` () const
- `float __magnitude` () const
- `void __merge` (const `__map2umap_info` &o)
- `void __record_erase` (size\_t \_\_size, size\_t \_\_count)
- `void __record_find` (size\_t \_\_size)
- `void __record_insert` (size\_t \_\_size, size\_t \_\_count)
- `void __record_invalidate` ()
- `void __record_iterate` (size\_t \_\_count)
- `__stack_t __stack` () const
- `void __write` (FILE \*\_\_f) const

### Protected Attributes

- `__stack_t _M_stack`

### 5.224.1 Detailed Description

A map-to-unordered\_map instrumentation line in the stack table.

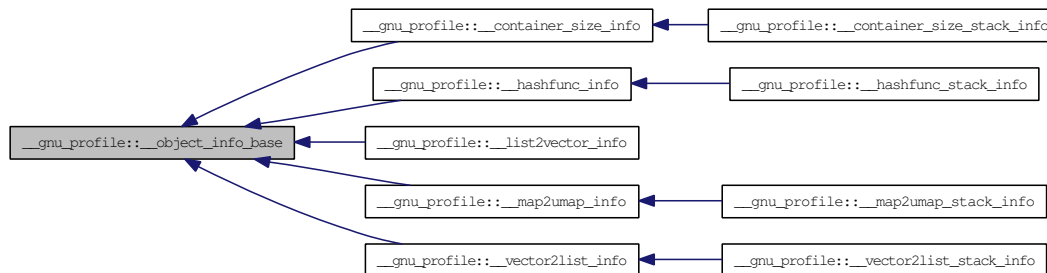

Definition at line 189 of file profiler\_map\_to\_unordered\_map.h.

The documentation for this class was generated from the following file:

- [profiler\\_map\\_to\\_unordered\\_map.h](#)

## 5.225 `__gnu_profile::__object_info_base` Class Reference

Base class for a line in the object table. Inheritance diagram for `__gnu_profile::__object_info_base`:

### Public Member Functions

- `__object_info_base` (const `__object_info_base` &o)
- `__object_info_base` (`__stack_t` \_\_stack)
- `bool __is_valid` () const
- `__stack_t __stack` () const
- virtual void `__write` (FILE \*f) const =0

### Protected Attributes

- `__stack_t _M_stack`
- `bool _M_valid`

#### 5.225.1 Detailed Description

Base class for a line in the object table.

Definition at line 130 of file `profiler_node.h`.

The documentation for this class was generated from the following file:

- [profiler\\_node.h](#)

## 5.226 `__gnu_profile::__reentrance_guard` Struct Reference

Reentrance guard.

### Static Public Member Functions

- static bool `__get_in` ()
- static bool & `__inside` ()

#### 5.226.1 Detailed Description

Reentrance guard. Mechanism to protect all `__gnu_profile` operations against recursion, multithreaded and exception reentrance.

Definition at line 62 of file `profiler.h`.

The documentation for this struct was generated from the following file:

- [profiler.h](#)

## 5.227 `__gnu_profile::__stack_hash` Class Reference

Hash function for summary trace using call stack as index.

### Public Member Functions

- `bool operator() (const __stack_t __stack1, const __stack_t __stack2) const`
- `size_t operator() (const __stack_t __s) const`

#### 5.227.1 Detailed Description

Hash function for summary trace using call stack as index.

Definition at line 101 of file `profiler_node.h`.

The documentation for this class was generated from the following file:

- [profiler\\_node.h](#)

## 5.228 `__gnu_profile::__stack_info_base< __object_info >` Class Template Reference

Base class for a line in the stack table.

### Public Member Functions

- `__stack_info_base` (const `__object_info` &`__info`)=0
- virtual const char \* `__get_id` () const =0
- virtual float `__magnitude` () const =0
- void `__merge` (const `__object_info` &`__info`)=0

### 5.228.1 Detailed Description

```
template<typename __object_info> class __gnu_profile::__stack_info_base< __object_info >
```

Base class for a line in the stack table.

Definition at line 160 of file `profiler_node.h`.

The documentation for this class was generated from the following file:

- [profiler\\_node.h](#)

## 5.229 `__gnu_profile::__trace_base< __object_info, __stack_info >` Class Template Reference

Base class for all trace producers. Inheritance diagram for `__gnu_profile::__trace_base< __object_info, __stack_info >`:

### Public Member Functions

- void `__add_object` (`__object_t` object, `__object_info` \_\_info)
- void `__collect_warnings` (`__warning_vector_t` &\_\_warnings)
- `__object_info` \* `__get_object_info` (`__object_t` \_\_object)
- void `__lock_object_table` ()
- void `__lock_stack_table` ()
- void `__retire_object` (`__object_t` \_\_object)
- void `__unlock_object_table` ()
- void `__unlock_stack_table` ()
- void `__write` (FILE \*f)

### Protected Attributes

- const char \* `__id`

#### 5.229.1 Detailed Description

`template<typename __object_info, typename __stack_info> class __gnu_profile::__trace_base< __object_info, __stack_info >`

Base class for all trace producers.

Definition at line 228 of file `profiler_trace.h`.

The documentation for this class was generated from the following file:

- [profiler\\_trace.h](#)

## 5.230 `__gnu_profile::__trace_container_size` Class Reference

Container size instrumentation trace producer. Inheritance diagram for `__gnu_profile::__trace_container_size`:

### Public Member Functions

- void **\_\_add\_object** (\_\_object\_t object, \_\_container\_size\_info\_\_info)
- void **\_\_collect\_warnings** (\_\_warning\_vector\_t &\_\_warnings)
- void **\_\_construct** (const void \*\_\_obj, size\_t \_\_inum)
- void **\_\_destruct** (const void \*\_\_obj, size\_t \_\_num, size\_t \_\_inum)
- `__container_size_info *` **\_\_get\_object\_info** (\_\_object\_t \_\_object)
- void **\_\_insert** (const \_\_object\_t \_\_obj, \_\_stack\_t \_\_stack, size\_t \_\_num)

- void **\_\_lock\_stack\_table** ()
- void **\_\_resize** (const void \*\_\_obj, int \_\_from, int \_\_to)
- void **\_\_retire\_object** (\_\_object\_t \_\_object)
- void **\_\_unlock\_object\_table** ()
- void **\_\_unlock\_stack\_table** ()
- void **\_\_write** (FILE \*f)

### Protected Attributes

- const char \* **\_\_id**

#### 5.230.1 Detailed Description

Container size instrumentation trace producer.

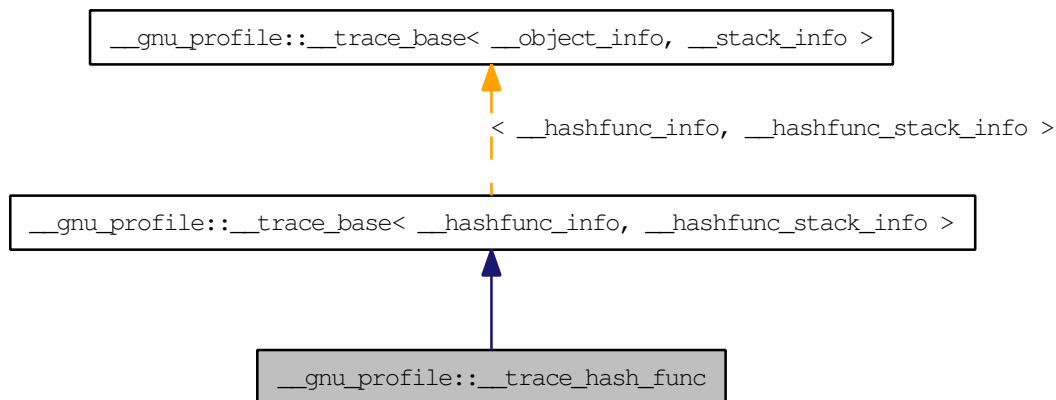

Definition at line 184 of file `profiler_container_size.h`.

The documentation for this class was generated from the following file:

- `profiler_container_size.h`

## 5.231 \_\_gnu\_profile::\_\_trace\_hash\_func Class Reference

Hash performance instrumentation producer. Inheritance diagram for \_\_gnu\_profile::\_\_trace\_hash\_func:

### Public Member Functions

- void **\_\_add\_object** (\_\_object\_t object, \_\_hashfunc\_info \_\_info)
- void **\_\_collect\_warnings** (\_\_warning\_vector\_t &\_\_warnings)
- void **\_\_destruct** (const void \*\_\_obj, size\_t \_\_chain, size\_t \_\_accesses, size\_t \_\_hops)
- **\_\_hashfunc\_info** \* **\_\_get\_object\_info** (\_\_object\_t \_\_object)
- void **\_\_insert** (\_\_object\_t \_\_obj, \_\_stack\_t \_\_stack)
- void **\_\_lock\_object\_table** ()
- void **\_\_lock\_stack\_table** ()
- void **\_\_retire\_object** (\_\_object\_t \_\_object)
- void **\_\_unlock\_object\_table** ()
- void **\_\_unlock\_stack\_table** ()
- void **\_\_write** (FILE \*f)

### Protected Attributes

- const char \* **\_\_id**

### 5.231.1 Detailed Description

Hash performance instrumentation producer.

Definition at line 110 of file profiler\_hash\_func.h.

The documentation for this class was generated from the following file:

- profiler\_hash\_func.h

## 5.232 `__gnu_profile::__trace_hashtable_size` Class Reference

Hashtable size instrumentation trace producer. Inheritance diagram for `__gnu_profile::__trace_hashtable_size`:

### Public Member Functions

- void `__add_object` (`__object_t` object, `__container_size_info__info`)
- void `__collect_warnings` (`__warning_vector_t` &`__warnings`)
- void `__construct` (const void \*`__obj`, `size_t` `__inum`)
- void `__destruct` (const void \*`__obj`, `size_t` `__num`, `size_t` `__inum`)
- `__container_size_info` \* `__get_object_info` (`__object_t` `__object`)
- void `__insert` (const `__object_t` `__obj`, `__stack_t` `__stack`, `size_t` `__num`)
- void `__lock_object_table` ()
- void `__lock_stack_table` ()
- void `__resize` (const void \*`__obj`, int `__from`, int `__to`)
- void `__retire_object` (`__object_t` `__object`)
- void `__unlock_object_table` ()
- void `__unlock_stack_table` ()
- void `__write` (FILE \*`f`)

### Protected Attributes

- const char \* `__id`

#### 5.232.1 Detailed Description

Hashtable size instrumentation trace producer.

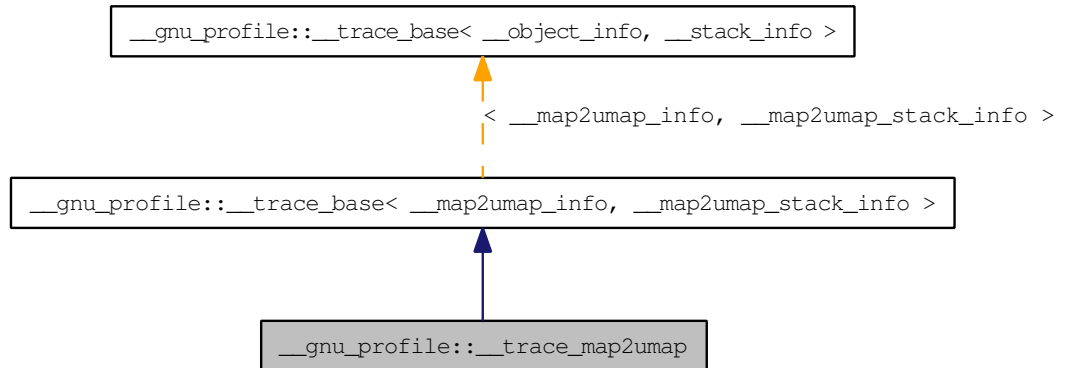

Definition at line 59 of file `profiler_hashtable_size.h`.

The documentation for this class was generated from the following file:

- [profiler\\_hashtable\\_size.h](#)

## 5.233 `__gnu_profile::__trace_map2umap` Class Reference

Map-to-unordered\_map instrumentation producer. Inheritance diagram for `__gnu_profile::__trace_map2umap`:

### Public Member Functions

- void `__add_object` (`__object_t` object, `__map2umap_info__info`)
- void `__collect_warnings` (`__warning_vector_t` & `__warnings`)
- `__map2umap_info` \* `__get_object_info` (`__object_t` \_\_object)
- void `__lock_object_table` ()
- void `__lock_stack_table` ()
- void `__retire_object` (`__object_t` \_\_object)
- void `__unlock_object_table` ()
- void `__unlock_stack_table` ()
- void `__write` (FILE \*f)

### Protected Attributes

- const char \* `__id`

#### 5.233.1 Detailed Description

Map-to-unordered\_map instrumentation producer.

Definition at line 196 of file `profiler_map_to_unordered_map.h`.

The documentation for this class was generated from the following file:

- [profiler\\_map\\_to\\_unordered\\_map.h](#)

## 5.234 `__gnu_profile::__trace_vector_size` Class Reference

Hashtable size instrumentation trace producer. Inheritance diagram for `__gnu_profile::__trace_vector_size`:

### Public Member Functions

- void **\_\_add\_object** (\_\_object\_t object, \_\_container\_size\_info\_\_info)
- void **\_\_collect\_warnings** (\_\_warning\_vector\_t &\_\_warnings)
- void **\_\_construct** (const void \*\_\_obj, size\_t \_\_inum)
- void **\_\_destruct** (const void \*\_\_obj, size\_t \_\_num, size\_t \_\_inum)
- `__container_size_info` \* **\_\_get\_object\_info** (\_\_object\_t \_\_object)
- void **\_\_insert** (const \_\_object\_t \_\_obj, \_\_stack\_t \_\_stack, size\_t \_\_num)
- void **\_\_lock\_object\_table** ()
- void **\_\_lock\_stack\_table** ()
- void **\_\_resize** (const void \*\_\_obj, int \_\_from, int \_\_to)
- void **\_\_retire\_object** (\_\_object\_t \_\_object)
- void **\_\_unlock\_object\_table** ()
- void **\_\_unlock\_stack\_table** ()
- void **\_\_write** (FILE \*f)

### Protected Attributes

- const char \* **\_\_id**

#### 5.234.1 Detailed Description

Hashtable size instrumentation trace producer.

Definition at line 59 of file `profiler_vector_size.h`.

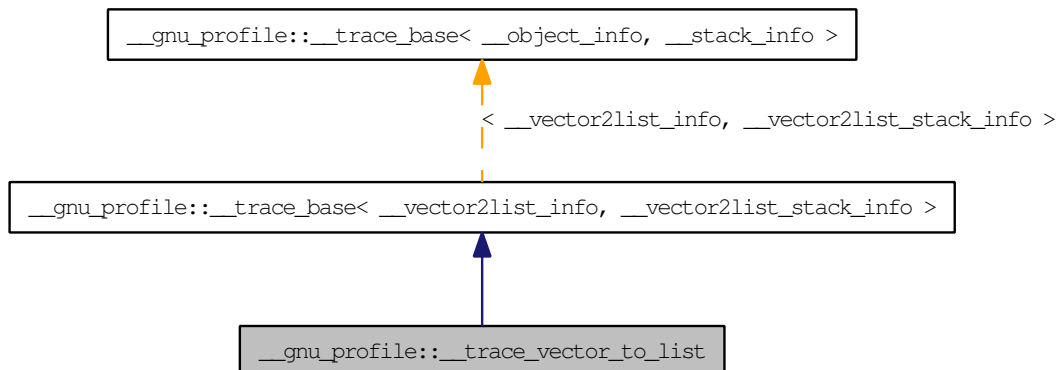

The documentation for this class was generated from the following file:

- [profiler\\_vector\\_size.h](#)

## 5.235 `__gnu_profile::__trace_vector_to_list` Class Reference

Vector-to-list instrumentation producer. Inheritance diagram for `__gnu_profile::__trace_vector_to_list`:

### Public Member Functions

- void `__add_object` (`__object_t` object, `__vector2list_info__info`)
- void `__collect_warnings` (`__warning_vector_t` &`__warnings`)
- void `__destruct` (`const void *``__obj`)
- `__vector2list_info *` `__find` (`const void *``__obj`)
- `__vector2list_info *` `__get_object_info` (`__object_t` `__object`)
- void `__insert` (`__object_t` `__obj`, `__stack_t` `__stack`)
- void `__invalid_operator` (`const void *``__obj`)
- float `__list_cost` (`size_t` `__shift`, `size_t` `__iterate`, `size_t` `__resize`)
- void `__lock_object_table` ()
- void `__lock_stack_table` ()
- void `__opr_find` (`const void *``__obj`, `size_t` `__size`)
- void `__opr_insert` (`const void *``__obj`, `size_t` `__pos`, `size_t` `__num`)
- void `__opr_iterate` (`const void *``__obj`, `size_t` `__num`)
- void `__resize` (`const void *``__obj`, `size_t` `__from`, `size_t` `__to`)
- void `__retire_object` (`__object_t` `__object`)
- void `__unlock_object_table` ()
- void `__unlock_stack_table` ()
- float `__vector_cost` (`size_t` `__shift`, `size_t` `__iterate`, `size_t` `__resize`)
- void `__write` (`FILE *``f`)

## Protected Attributes

- const char \* `__id`

### 5.235.1 Detailed Description

Vector-to-list instrumentation producer.

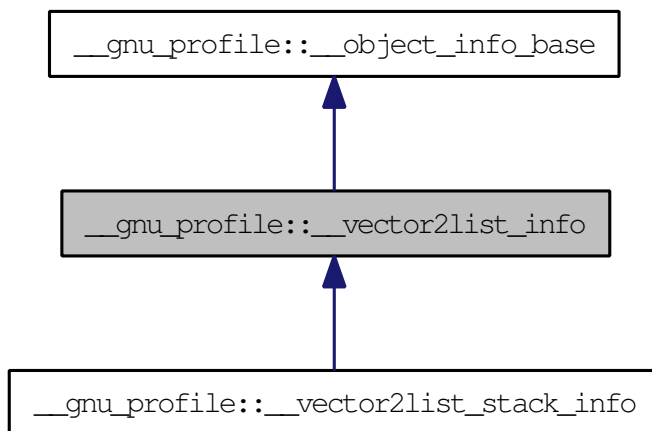

Definition at line 147 of file `profiler_vector_to_list.h`.

The documentation for this class was generated from the following file:

- [profiler\\_vector\\_to\\_list.h](#)

## 5.236 `__gnu_profile::__vector2list_info` Class Reference

A vector-to-list instrumentation line in the object table. Inheritance diagram for `__gnu_profile::__vector2list_info`:

### Public Member Functions

- `__vector2list_info` (const `__vector2list_info` &\_\_o)
- `__vector2list_info` (`__stack_t` \_\_stack)
- `const char * __advice` () const
- `bool __is_valid` () const
- `bool __is_valid` ()
- `size_t __iterate` ()
- `float __list_cost` ()
- `float __magnitude` () const
- `void __merge` (const `__vector2list_info` &\_\_o)
- `void __opr_find` (size\_t \_\_size)
- `void __opr_insert` (size\_t \_\_pos, size\_t \_\_num)
- `void __opr_iterate` (size\_t \_\_num)
- `void __resize` (size\_t \_\_from, size\_t \_\_to)
- `size_t __resize` ()
- `void __set_invalid` ()
- `void __set_list_cost` (float \_\_lc)
- `void __set_vector_cost` (float \_\_vc)
- `size_t __shift_count` ()
- `__stack_t __stack` () const
- `void __write` (FILE \* \_\_f) const

## Protected Attributes

- `__stack_t_M_stack`

### 5.236.1 Detailed Description

A vector-to-list instrumentation line in the object table.

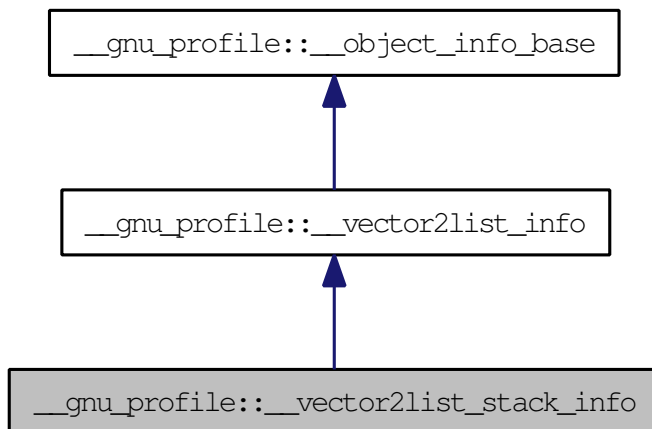

Definition at line 57 of file `profiler_vector_to_list.h`.

The documentation for this class was generated from the following file:

- [profiler\\_vector\\_to\\_list.h](#)

## 5.237 `__gnu_profile::__vector2list_stack_info` Class Reference

A vector-to-list instrumentation line in the stack table. Inheritance diagram for `__gnu_profile::__vector2list_stack_info`:

### Public Member Functions

- `__vector2list_stack_info` (const `__vector2list_info` &`_o`)
- `const char * __advice` () const
- `bool __is_valid` () const
- `bool __is_valid` ()
- `size_t __iterate` ()
- `float __list_cost` ()
- `float __magnitude` () const
- `void __merge` (const `__vector2list_info` &`_o`)
- `void __opr_find` (size\_t `_size`)
- `void __opr_insert` (size\_t `_pos`, size\_t `_num`)
- `void __opr_iterate` (size\_t `_num`)
- `void __resize` (size\_t `_from`, size\_t `_to`)
- `size_t __resize` ()
- `void __set_invalid` ()
- `void __set_list_cost` (float `_lc`)
- `void __set_vector_cost` (float `_vc`)
- `size_t __shift_count` ()
- `__stack_t __stack` () const
- `void __write` (FILE \*`_f`) const

### Protected Attributes

- `__stack_t_M_stack`

#### 5.237.1 Detailed Description

A vector-to-list instrumentation line in the stack table.

Definition at line 140 of file `profiler_vector_to_list.h`.

The documentation for this class was generated from the following file:

- [profiler\\_vector\\_to\\_list.h](#)

## 5.238 `__gnu_profile::__warning_data` Struct Reference

Representation of a warning.

### Public Member Functions

- `__warning_data` (float `__m`, `__stack_t` `__c`, const char \*`__id`, const char \*`__msg`)
- bool `operator>` (const struct `__warning_data` &other) const

### Public Attributes

- `__stack_t` `__context`
- float `__magnitude`
- const char \* `__warning_id`
- const char \* `__warning_message`

#### 5.238.1 Detailed Description

Representation of a warning.

Definition at line 95 of file `profiler_trace.h`.

The documentation for this struct was generated from the following file:

- [profiler\\_trace.h](#)

## 5.239 `std::__basic_future< _Res >` Class Template Reference

Common implementation for `future` and `shared_future`. Inheritance diagram for `std::__basic_future< _Res >`:

### Public Member Functions

- `__basic_future` (const `__basic_future` &)
- `__basic_future` & **operator=** (const `__basic_future` &)
- bool **valid** () const
- void **wait** () const
- template<typename `_Rep`, typename `_Period` >

### 5.240.1 Detailed Description

`template<typename _InternT, typename _ExternT, typename _StateT> class std::__codecvt_abstract_base<_InternT, _ExternT, _StateT>`

Common base for `codecvt` functions. This template class provides implementations of the public functions that forward to the protected virtual functions.

This template also provides abstract stubs for the protected virtual functions.

Definition at line 67 of file `codecvt.h`.

## 5.240.2 Member Function Documentation

**5.240.2.1** `template<typename _InternT, typename _ExternT, typename _StateT> virtual result std::_codecvt_abstract_base< _InternT, _ExternT, _StateT >::do_out (state_type & __state, const intern_type * __from, const intern_type * __from_end, const intern_type * & __from_next, extern_type * __to, extern_type * __to_end, extern_type * & __to_next) const` `[protected, pure virtual]`

Convert from internal to external character [set](#). Converts input string of `intern_type` to output string of `extern_type`. This function is a hook for derived classes to change the value returned.

**See also:**

[out](#) for more information.

Implemented in `std::codecvt< _InternT, _ExternT, _StateT >`, `std::codecvt< char, char, mbstate_t >`, `std::codecvt< wchar_t, char, mbstate_t >`, and `std::codecvt< _InternT, _ExternT, encoding_state >`.

**5.240.2.2** `template<typename _InternT, typename _ExternT, typename _StateT> result std::_codecvt_abstract_base< _InternT, _ExternT, _StateT >::in (state_type & __state, const extern_type * __from, const extern_type * __from_end, const extern_type * & __from_next, intern_type * __to, intern_type * __to_end, intern_type * & __to_next) const` `[inline]`

Convert from external to internal character [set](#). Converts input string of `extern_type` to output string of `intern_type`. This is analogous to `mbsrtowcs`. It does this by calling `codecvt::do_in`.

The source and destination character sets are determined by the facet's [locale](#), internal and external types.

The characters in `[from,from_end)` are converted and written to `[to,to_end)`. `from_next` and `to_next` are [set](#) to point to the character following the last successfully converted character, respectively. If the result needed no conversion, `from_next` and `to_next` are not affected.

The `state` argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how `state` is used.

The result returned is a member of `codecvt_base::result`. If all the input is converted, returns `codecvt_base::ok`. If no conversion is necessary, returns `codecvt_base::noconv`. If the input ends early or there is insufficient space in the output, returns `codecvt_base::partial`. Otherwise the conversion failed and `codecvt_base::error` is returned.

**Parameters:**

*state* Persistent conversion state data.  
*from* Start of input.  
*from\_end* End of input.  
*from\_next* Returns start of unconverted data.  
*to* Start of output buffer.  
*to\_end* End of output buffer.  
*to\_next* Returns start of unused output area.

**Returns:**

`codecvt_base::result`.

Definition at line 195 of file `codecvt.h`.

Referenced by `std::basic_filebuf< _CharT, _Traits >::underflow()`.

**5.240.2.3** `template<typename _InternT, typename _ExternT, typename  
_StateT> result std::__codecvt_abstract_base< _InternT, _ExternT,  
_StateT >::out (state_type & __state, const intern_type * __from,  
const intern_type * __from_end, const intern_type *& __from_next,  
extern_type * __to, extern_type * __to_end, extern_type *&  
__to_next) const [inline]`

Convert from internal to external character set. Converts input string of `intern_type` to output string of `extern_type`. This is analogous to `wcsrtombs`. It does this by calling `codecvt::do_out`.

The source and destination character sets are determined by the facet's `locale`, internal and external types.

The characters in `[from,from_end)` are converted and written to `[to,to_end)`. `from_next` and `to_next` are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, `from_next` and `to_next` are not affected.

The `state` argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how `state` is used.

The result returned is a member of `codecvt_base::result`. If all the input is converted, returns `codecvt_base::ok`. If no conversion is necessary, returns `codecvt_base::noconv`. If the input ends early or there is insufficient space in the output, returns `codecvt_base::partial`. Otherwise the conversion failed and `codecvt_base::error` is returned.

**Parameters:**

*state* Persistent conversion state data.

*from* Start of input.  
*from\_end* End of input.  
*from\_next* Returns start of unconverted data.  
*to* Start of output buffer.  
*to\_end* End of output buffer.  
*to\_next* Returns start of unused output area.

**Returns:**

codecvt\_base::result.

Definition at line 115 of file codecvt.h.

**5.240.2.4** `template<typename _InternT, typename _ExternT, typename  
 _StateT> result std::__codecvt_abstract_base< _InternT,  
 _ExternT, _StateT >::unshift (state_type & __state, extern_type  
 * __to, extern_type * __to_end, extern_type *& __to_next) const  
 [inline]`

Reset conversion state. Writes characters to output that would restore *state* to initial conditions. The idea is that if a partial conversion occurs, then the converting the characters written by this function would leave the state in initial conditions, rather than partial conversion state. It does this by calling `codecvt::do_unshift()`.

For example, if 4 external characters always converted to 1 internal character, and input to `in()` had 6 external characters with state saved, this function would write two characters to the output and `set` the state to initialized conditions.

The source and destination character sets are determined by the facet's `locale`, internal and external types.

The result returned is a member of `codecvt_base::result`. If the state could be reset and data written, returns `codecvt_base::ok`. If no conversion is necessary, returns `codecvt_base::noconv`. If the output has insufficient space, returns `codecvt_base::partial`. Otherwise the reset failed and `codecvt_base::error` is returned.

**Parameters:**

*state* Persistent conversion state data.  
*to* Start of output buffer.  
*to\_end* End of output buffer.  
*to\_next* Returns start of unused output area.

**Returns:**

codecvt\_base::result.

### 5.241.1 Detailed Description

**template<typename \_CharT> class std::\_\_ctype\_abstract\_base<\_CharT >**

Common base for [ctype](#) facet. This template class provides implementations of the public functions that forward to the protected virtual functions.

This template also provides abstract stubs for the protected virtual functions.

Definition at line 143 of file [locale\\_facets.h](#).

### 5.241.2 Member Typedef Documentation

**5.241.2.1 template<typename \_CharT> typedef \_CharT  
std::\_\_ctype\_abstract\_base<\_CharT >::char\_type**

Typedef for the template parameter.

Reimplemented in [std::ctype<\\_CharT >](#), and [std::ctype<wchar\\_t >](#).

Definition at line 148 of file [locale\\_facets.h](#).

### 5.241.3 Member Function Documentation

**5.241.3.1** `template<typename _CharT> virtual const char_type*  
std::__ctype_abstract_base<_CharT>::do_is (const char_type *  
__lo, const char_type * __hi, mask * __vec) const [protected,  
pure virtual]`

Return a mask [array](#). This function finds the mask for each `char_type` in the range `[lo,hi)` and successively writes it to `vec`. `vec` must have as many elements as the input.

`do_is()` is a hook for a derived facet to change the behavior of classifying. `do_is()` must always return the same result for the same input.

**Parameters:**

- lo* Pointer to start of range.
- hi* Pointer to end of range.
- vec* Pointer to an [array](#) of mask storage.

**Returns:**

*hi*.

Implemented in `std::ctype<_CharT>`, and `std::ctype<wchar_t>`.

**5.241.3.2** `template<typename _CharT> virtual bool std::__ctype_abstract_ -  
base<_CharT>::do_is (mask __m, char_type __c) const  
[protected, pure virtual]`

Test `char_type` classification. This function finds a mask `M` for `c` and compares it to mask `m`.

`do_is()` is a hook for a derived facet to change the behavior of classifying. `do_is()` must always return the same result for the same input.

**Parameters:**

- c* The `char_type` to find the mask of.
- m* The mask to compare against.

**Returns:**

$(M \& m) \neq 0$ .

Implemented in `std::ctype<_CharT>`, and `std::ctype<wchar_t>`.

**5.241.3.3** `template<typename _CharT> virtual const char_type*  
 std::__ctype_abstract_base<_CharT >::do_narrow (const char_type  
 * __lo, const char_type * __hi, char __dfault, char * __dest) const  
 [protected, pure virtual]`

Narrow `char_type` `array` to `char`. This virtual function converts each `char_type` in the range `[lo,hi)` to `char` using the simplest reasonable transformation and writes the results to the destination `array`. For any element in the input that cannot be converted, `dfault` is used instead.

`do_narrow()` is a hook for a derived facet to change the behavior of narrowing. `do_narrow()` must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See [codecvt](#) for that.

**Parameters:**

*lo* Pointer to start of range.  
*hi* Pointer to end of range.  
*dfault* Char to use if conversion fails.  
*to* Pointer to the destination `array`.

**Returns:**

*hi*.

Implemented in [std::ctype<\\_CharT >](#), and [std::ctype<wchar\\_t >](#).

**5.241.3.4** `template<typename _CharT> virtual char std::__ctype_abstract_-  
 base<_CharT >::do_narrow (char_type, char __dfault) const  
 [protected, pure virtual]`

Narrow `char_type` to `char`. This virtual function converts the argument to `char` using the simplest reasonable transformation. If the conversion fails, `dfault` is returned instead.

`do_narrow()` is a hook for a derived facet to change the behavior of narrowing. `do_narrow()` must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See [codecvt](#) for that.

**Parameters:**

*c* The `char_type` to convert.  
*dfault* Char to return if conversion fails.

**Returns:**

The converted `char`.

Implemented in [std::ctype<\\_CharT >](#), and [std::ctype<wchar\\_t >](#).

```
5.241.3.5 template<typename _CharT> virtual const char_type*
std::_ctype_abstract_base<_CharT>::do_scan_is (mask
__m, const char_type * __lo, const char_type * __hi) const
[protected, pure virtual]
```

Find `char_type` matching mask. This function searches for and returns the first `char_type` `c` in `[lo,hi)` for which `is(m,c)` is true.

`do_scan_is()` is a hook for a derived facet to change the behavior of match searching. `do_is()` must always return the same result for the same input.

**Parameters:**

*m* The mask to compare against.

*lo* Pointer to start of range.

*hi* Pointer to end of range.

**Returns:**

Pointer to a matching `char_type` if found, else *hi*.

Implemented in `std::ctype<_CharT>`, and `std::ctype<wchar_t>`.

```
5.241.3.6 template<typename _CharT> virtual const char_type*
std::_ctype_abstract_base<_CharT>::do_scan_not (mask
__m, const char_type * __lo, const char_type * __hi) const
[protected, pure virtual]
```

Find `char_type` not matching mask. This function searches for and returns a pointer to the first `char_type` `c` of `[lo,hi)` for which `is(m,c)` is false.

`do_scan_is()` is a hook for a derived facet to change the behavior of match searching. `do_is()` must always return the same result for the same input.

**Parameters:**

*m* The mask to compare against.

*lo* Pointer to start of range.

*hi* Pointer to end of range.

**Returns:**

Pointer to a non-matching `char_type` if found, else *hi*.

Implemented in `std::ctype<_CharT>`, and `std::ctype<wchar_t>`.

**5.241.3.7** `template<typename _CharT> virtual const char_type*  
std::__ctype_abstract_base<_CharT >::do_tolower (char_type  
* __lo, const char_type * __hi) const [protected, pure  
virtual]`

Convert [array](#) to lowercase. This virtual function converts each `char_type` in the range `[lo,hi)` to lowercase if possible. Other elements remain untouched.

[do\\_tolower\(\)](#) is a hook for a derived facet to change the behavior of lowercasing. [do\\_tolower\(\)](#) must always return the same result for the same input.

**Parameters:**

*lo* Pointer to start of range.

*hi* Pointer to end of range.

**Returns:**

*hi*.

Implemented in [std::ctype<\\_CharT >](#), and [std::ctype<wchar\\_t >](#).

**5.241.3.8** `template<typename _CharT> virtual char_type  
std::__ctype_abstract_base<_CharT >::do_tolower (char_type)  
const [protected, pure virtual]`

Convert to lowercase. This virtual function converts the argument to lowercase if possible. If not possible (for example, '2'), returns the argument.

[do\\_tolower\(\)](#) is a hook for a derived facet to change the behavior of lowercasing. [do\\_tolower\(\)](#) must always return the same result for the same input.

**Parameters:**

*c* The `char_type` to convert.

**Returns:**

The lowercase `char_type` if convertible, else *c*.

Implemented in [std::ctype<\\_CharT >](#), and [std::ctype<wchar\\_t >](#).

```
5.241.3.9 template<typename _CharT> virtual const char_type*
std::__ctype_abstract_base<_CharT>::do_toupper(char_type
* __lo, const char_type * __hi) const [protected, pure
virtual]
```

Convert `array` to uppercase. This virtual function converts each `char_type` in the range `[lo,hi)` to uppercase if possible. Other elements remain untouched.

`do_toupper()` is a hook for a derived facet to change the behavior of uppercasing. `do_toupper()` must always return the same result for the same input.

**Parameters:**

*lo* Pointer to start of range.

*hi* Pointer to end of range.

**Returns:**

*hi*.

Implemented in `std::ctype<_CharT>`, and `std::ctype<wchar_t>`.

```
5.241.3.10 template<typename _CharT> virtual char_type
std::__ctype_abstract_base<_CharT>::do_toupper(char_type)
const [protected, pure virtual]
```

Convert to uppercase. This virtual function converts the `char_type` argument to uppercase if possible. If not possible (for example, '2'), returns the argument.

`do_toupper()` is a hook for a derived facet to change the behavior of uppercasing. `do_toupper()` must always return the same result for the same input.

**Parameters:**

*c* The `char_type` to convert.

**Returns:**

The uppercase `char_type` if convertible, else *c*.

Implemented in `std::ctype<_CharT>`, and `std::ctype<wchar_t>`.

**5.241.3.11** `template<typename _CharT> virtual const char*  
std::__ctype_abstract_base<_CharT >::do_widen (const char *  
__lo, const char * __hi, char_type * __dest) const [protected,  
pure virtual]`

Widen char [array](#). This function converts each char in the input to char\_type using the simplest reasonable transformation.

[do\\_widen\(\)](#) is a hook for a derived facet to change the behavior of widening. [do\\_widen\(\)](#) must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See [codecvt](#) for that.

**Parameters:**

- lo* Pointer to start range.
- hi* Pointer to end of range.
- to* Pointer to the destination [array](#).

**Returns:**

*hi*.

Implemented in [std::ctype<\\_CharT >](#), and [std::ctype<wchar\\_t >](#).

**5.241.3.12** `template<typename _CharT> virtual char_type  
std::__ctype_abstract_base<_CharT >::do_widen (char) const  
[protected, pure virtual]`

Widen char. This virtual function converts the char to char\_type using the simplest reasonable transformation.

[do\\_widen\(\)](#) is a hook for a derived facet to change the behavior of widening. [do\\_widen\(\)](#) must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See [codecvt](#) for that.

**Parameters:**

- c* The char to convert.

**Returns:**

The converted char\_type

Implemented in [std::ctype<\\_CharT >](#), and [std::ctype<wchar\\_t >](#).

---

**5.241.3.13** `template<typename _CharT> const char_type*  
std::__ctype_abstract_base<_CharT>::is (const char_type * __lo,  
const char_type * __hi, mask * __vec) const [inline]`

Return a mask [array](#). This function finds the mask for each char\_type in the range [lo,hi) and successively writes it to vec. vec must have as many elements as the char [array](#). It does so by returning the value of `ctype<char_type>::do_is()`.

**Parameters:**

- lo* Pointer to start of range.
- hi* Pointer to end of range.
- vec* Pointer to an [array](#) of mask storage.

**Returns:**

*hi*.

Definition at line 178 of file locale\_facets.h.

**5.241.3.14** `template<typename _CharT> bool std::__ctype_abstract_base<  
_CharT>::is (mask __m, char_type __c) const [inline]`

Test char\_type classification. This function finds a mask M for *c* and compares it to mask *m*. It does so by returning the value of `ctype<char_type>::do_is()`.

**Parameters:**

- c* The char\_type to compare the mask of.
- m* The mask to compare against.

**Returns:**

$(M \& m) \neq 0$ .

Definition at line 161 of file locale\_facets.h.

Referenced by `std::regex_traits<_Ch_type>::isctype()`, and `std::basic_istream<_CharT, _Traits>::sentry::sentry()`.

**5.241.3.15** `template<typename _CharT> const char_type*  
std::__ctype_abstract_base<_CharT>::narrow (const char_type *  
__lo, const char_type * __hi, char __dfault, char * __to) const  
[inline]`

Narrow [array](#) to char [array](#). This function converts each char\_type in the input to char using the simplest reasonable transformation and writes the results to the destination

[array](#). For any `char_type` in the input that cannot be converted, *dfault* is used instead. It does so by returning `ctype<char_type>::do_narrow(lo, hi, dfault, to)`.

Note: this is not what you want for codepage conversions. See [codecv](#) for that.

**Parameters:**

- lo* Pointer to start of range.
- hi* Pointer to end of range.
- dfault* Char to use if conversion fails.
- to* Pointer to the destination [array](#).

**Returns:**

*hi*.

Definition at line 345 of file `locale_facets.h`.

**5.241.3.16** `template<typename _CharT> char std::__ctype_abstract_base<_CharT >::narrow(char_type __c, char __dfault) const [inline]`

Narrow `char_type` to `char`. This function converts the `char_type` to `char` using the simplest reasonable transformation. If the conversion fails, *dfault* is returned instead. It does so by returning `ctype<char_type>::do_narrow(c)`.

Note: this is not what you want for codepage conversions. See [codecv](#) for that.

**Parameters:**

- c* The `char_type` to convert.
- dfault* Char to return if conversion fails.

**Returns:**

The converted `char`.

Definition at line 323 of file `locale_facets.h`.

Referenced by `std::time_put<_CharT, _OutIter >::put()`.

**5.241.3.17** `template<typename _CharT> const char_type* std::__ctype_abstract_base<_CharT >::scan_is(mask __m, const char_type * __lo, const char_type * __hi) const [inline]`

Find `char_type` matching a mask. This function searches for and returns the first `char_type` `c` in `[lo,hi)` for which `is(m,c)` is true. It does so by returning `ctype<char_type>::do_scan_is()`.

**Parameters:**

- m* The mask to compare against.
- lo* Pointer to start of range.
- hi* Pointer to end of range.

**Returns:**

Pointer to matching char\_type if found, else *hi*.

Definition at line 194 of file locale\_facets.h.

```
5.241.3.18 template<typename _CharT> const char_type*
std::__ctype_abstract_base<_CharT >::scan_not (mask __m,
const char_type * __lo, const char_type * __hi) const [inline]
```

Find char\_type not matching a mask. This function searches for and returns the first char\_type c in [lo,hi) for which is(m,c) is false. It does so by returning `ctype<char_type>::do_scan_not()`.

**Parameters:**

- m* The mask to compare against.
- lo* Pointer to first char in range.
- hi* Pointer to end of range.

**Returns:**

Pointer to non-matching char if found, else *hi*.

Definition at line 210 of file locale\_facets.h.

```
5.241.3.19 template<typename _CharT> const char_type*
std::__ctype_abstract_base<_CharT >::tolower (char_type * __lo,
const char_type * __hi) const [inline]
```

Convert `array` to lowercase. This function converts each char\_type in the range [lo,hi) to lowercase if possible. Other elements remain untouched. It does so by returning `ctype<char_type>::do_tolower(lo, hi)`.

**Parameters:**

- lo* Pointer to start of range.
- hi* Pointer to end of range.

**Returns:**

*hi*.

Definition at line 268 of file locale\_facets.h.

**5.241.3.20** `template<typename _CharT> char_type std::_ctype_-  
abstract_base< _CharT >::tolower (char_type __c) const  
[inline]`

Convert to lowercase. This function converts the argument to lowercase if possible. If not possible (for example, '2'), returns the argument. It does so by returning `ctype<char_type>::do_tolower(c)`.

**Parameters:**

*c* The `char_type` to convert.

**Returns:**

The lowercase `char_type` if convertible, else *c*.

Definition at line 253 of file locale\_facets.h.

**5.241.3.21** `template<typename _CharT> const char_type*  
std::_ctype_abstract_base< _CharT >::toupper (char_type * __lo,  
const char_type * __hi) const [inline]`

Convert [array](#) to uppercase. This function converts each `char_type` in the range `[lo,hi)` to uppercase if possible. Other elements remain untouched. It does so by returning `ctype<char_type>::do_toupper(lo, hi)`.

**Parameters:**

*lo* Pointer to start of range.

*hi* Pointer to end of range.

**Returns:**

*hi*.

Definition at line 239 of file locale\_facets.h.

**5.241.3.22** `template<typename _CharT> char_type std::__ctype_abstract_base<_CharT>::toupper(char_type __c) const [inline]`

Convert to uppercase. This function converts the argument to uppercase if possible. If not possible (for example, '2'), returns the argument. It does so by returning `ctype<char_type>::do_toupper()`.

**Parameters:**

*c* The `char_type` to convert.

**Returns:**

The uppercase `char_type` if convertible, else *c*.

Definition at line 224 of file `locale_facets.h`.

**5.241.3.23** `template<typename _CharT> const char* std::__ctype_abstract_base<_CharT>::widen(const char * __lo, const char * __hi, char_type * __to) const [inline]`

Widen `array` to `char_type`. This function converts each char in the input to `char_type` using the simplest reasonable transformation. It does so by returning `ctype<char_type>::do_widen(c)`.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

**Parameters:**

*lo* Pointer to start of range.

*hi* Pointer to end of range.

*to* Pointer to the destination `array`.

**Returns:**

*hi*.

Definition at line 304 of file `locale_facets.h`.

**5.241.3.24** `template<typename _CharT> char_type std::__ctype_abstract_base<_CharT>::widen(char __c) const [inline]`

Widen `char` to `char_type`. This function converts the `char` argument to `char_type` using the simplest reasonable transformation. It does so by returning `ctype<char_type>::do_widen(c)`.

Note: this is not what you want for codepage conversions. See [codecv](#) for that.

**Parameters:**

*c* The char to convert.

**Returns:**

The converted `char_type`.

Definition at line 285 of file `locale_facets.h`.

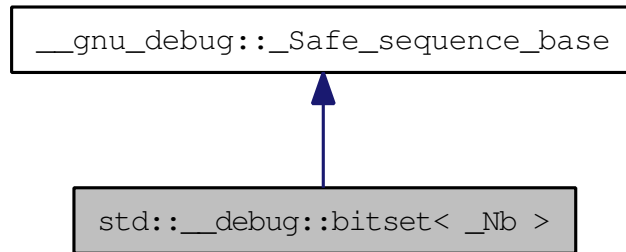

Referenced by `std::money_get< _CharT, _InIter >::do_get()`, `std::time_put< _CharT, _OutIter >::do_put()`, `std::money_put< _CharT, _OutIter >::do_put()`, `std::regex_traits< _Ch_type >::isctype()`, and `std::operator<<()`.

### 5.242.1 Detailed Description

`template<size_t _Nb> class std::__debug::bitset< _Nb >`

Class [std::bitset](#) with additional safety/checking/debug instrumentation.

Definition at line 43 of file `debug/bitset`.

### 5.242.2 Member Function Documentation

**5.242.2.1** void [\\_\\_gnu\\_debug::\\_Safe\\_sequence\\_base::\\_M\\_detach\\_all](#) ()  
[protected, inherited]

Detach all iterators, leaving them singular.

**5.242.2.2** void [\\_\\_gnu\\_debug::\\_Safe\\_sequence\\_base::\\_M\\_detach\\_singular](#) ()  
[protected, inherited]

Detach all singular iterators.

#### Postcondition:

for all iterators *i* attached to this sequence, `i->_M_version == _M_version`.

**5.242.2.3** [\\_\\_gnu\\_cxx::\\_mutex& \\_\\_gnu\\_debug::\\_Safe\\_sequence\\_base::\\_M\\_get\\_mutex](#) () throw () [protected, inherited]

For use in [\\_Safe\\_sequence](#).

Referenced by [\\_\\_gnu\\_debug::\\_Safe\\_sequence< \\_Sequence >::\\_M\\_invalidate\\_if](#)(), and [\\_\\_gnu\\_debug::\\_Safe\\_sequence< \\_Sequence >::\\_M\\_transfer\\_iter](#)()

**5.242.2.4** void [\\_\\_gnu\\_debug::\\_Safe\\_sequence\\_base::\\_M\\_invalidate\\_all](#) () const  
[inline, inherited]

Invalidates all iterators.

Definition at line 215 of file `safe_base.h`.

Referenced by `__gnu_debug::basic_string<_CharT, _Traits, _Allocator>::append()`, `__gnu_debug::basic_string<_CharT, _Traits, _Allocator>::assign()`, `__gnu_debug::basic_string<_CharT, _Traits, _Allocator>::c_str()`, `__gnu_debug::basic_string<_CharT, _Traits, _Allocator>::clear()`, `__gnu_debug::basic_string<_CharT, _Traits, _Allocator>::data()`, `__gnu_debug::basic_string<_CharT, _Traits, _Allocator>::operator+=()`, `__gnu_debug::basic_string<_CharT, _Traits, _Allocator>::operator=()`, and `__gnu_debug::basic_string<_CharT, _Traits, _Allocator>::push_back()`.

#### 5.242.2.5 `void __gnu_debug::Safe_sequence_base::_M_revalidate_singular()` [protected, inherited]

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

#### 5.242.2.6 `void __gnu_debug::Safe_sequence_base::_M_swap` (`Safe_sequence_base & __x`) [protected, inherited]

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

### 5.242.3 Member Data Documentation

#### 5.242.3.1 `_Safe_iterator_base* __gnu_debug::Safe_sequence_base::_M_const_iterators` [inherited]

The list of constant iterators that reference this container.

Definition at line 166 of file `safe_base.h`.

Referenced by `__gnu_debug::_Safe_sequence<_Sequence>::_M_invalidate_if()`, `__gnu_debug::_Safe_iterator<_Iterator, _Sequence>::_M_invalidate_single()`, and `__gnu_debug::_Safe_sequence<_Sequence>::_M_transfer_iter()`.

#### 5.242.3.2 `_Safe_iterator_base* __gnu_debug::Safe_sequence_base::_M_iterators` [inherited]

The list of mutable iterators that reference this container.

Definition at line 163 of file `safe_base.h`.

Referenced by `__gnu_debug::_Safe_sequence<_Sequence>::_M_invalidate_if()`, `__gnu_debug::_Safe_iterator<_Iterator, _Sequence>::_M_invalidate_single()`, and `__gnu_debug::_Safe_sequence<_Sequence>::_M_transfer_iter()`.

### 5.242.3.3 `unsigned int __gnu_debug::_Safe_sequence_base::_M_version` `[mutable, inherited]`

The container version number. This number may never be 0.

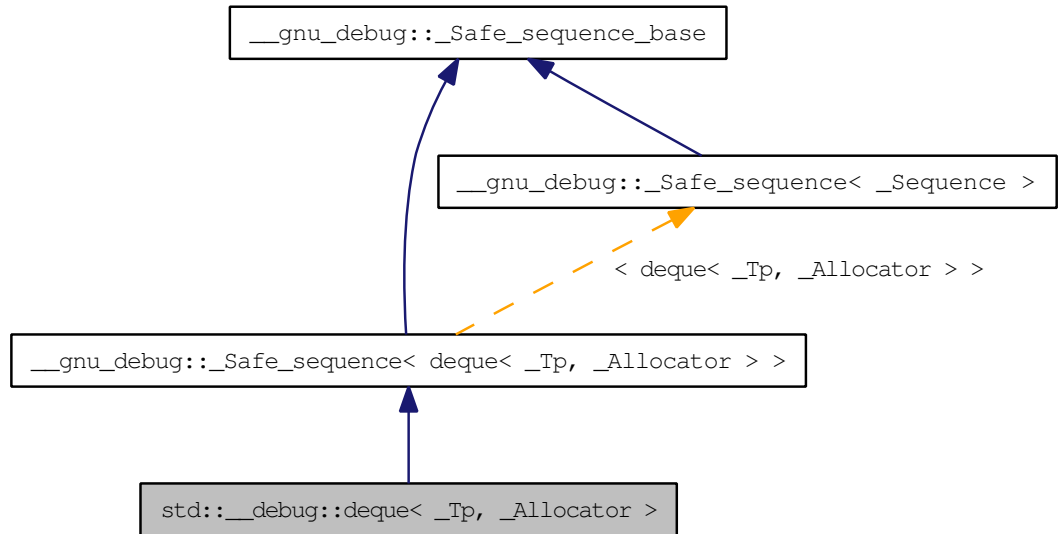

Definition at line 169 of file `safe_base.h`.

The documentation for this class was generated from the following file:

- [debug/bitset](#)

## 5.243 `std::__debug::deque< _Tp, _Allocator >` Class Template Reference

Class `std::deque` with safety/checking/debug instrumentation. Inheritance diagram for `std::__debug::deque< _Tp, _Allocator >`:

### Public Types

### 5.243.1 Detailed Description

```
template<typename _Tp, typename _Allocator = std::allocator<_Tp>> class
std::_debug::deque<_Tp, _Allocator >
```

Class `std::deque` with safety/checking/debug instrumentation.

Definition at line 43 of file `debug/deque`.

### 5.243.2 Member Function Documentation

5.243.2.1 `void __gnu_debug::Safe_sequence_base::_M_detach_all ()`  
[protected, inherited]

Detach all iterators, leaving them singular.

5.243.2.2 `void __gnu_debug::Safe_sequence_base::_M_detach_singular ()`  
[protected, inherited]

Detach all singular iterators.

#### Postcondition:

for all iterators `i` attached to this sequence, `i->_M_version == _M_version`.

5.243.2.3 `__gnu_cxx::mutex& __gnu_debug::Safe_sequence_base::_M_get_mutex () throw ()` [protected, inherited]

For use in `_Safe_sequence`.

Referenced by `__gnu_debug::Safe_sequence<_Sequence >::_M_invalidate_if()`, and `__gnu_debug::Safe_sequence<_Sequence >::_M_transfer_iter()`.

5.243.2.4 `void __gnu_debug::Safe_sequence_base::_M_invalidate_all () const` [inline, inherited]

Invalidates all iterators.

Definition at line 215 of file `safe_base.h`.

Referenced by `__gnu_debug::basic_string<_CharT, _Traits, _Allocator >::append()`, `__gnu_debug::basic_string<_CharT, _Traits, _Allocator >::assign()`, `__gnu_debug::basic_string<_CharT, _Traits, _Allocator >::c_str()`, `__gnu_debug::basic_string<_CharT, _Traits, _Allocator >::clear()`, `__gnu_debug::basic_string<_`

`CharT, _Traits, _Allocator >::data()`, `__gnu_debug::basic_string< _CharT, _Traits, _Allocator >::operator+=(())`, `__gnu_debug::basic_string< _CharT, _Traits, _Allocator >::operator=()`, and `__gnu_debug::basic_string< _CharT, _Traits, _Allocator >::push_back()`.

**5.243.2.5** `void __gnu_debug::_Safe_sequence< deque< _Tp, _Allocator > >::M_invalidate_if(_Predicate _pred) [inline, inherited]`

Invalidates all iterators `x` that reference this sequence, are not singular, and for which `pred(x)` returns `true`. The user of this routine should be careful not to make copies of the iterators passed to `pred`, as the copies may interfere with the invalidation.

**5.243.2.6** `void __gnu_debug::_Safe_sequence_base::M_revalidate_singular() [protected, inherited]`

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

**5.243.2.7** `void __gnu_debug::_Safe_sequence_base::M_swap(_Safe_sequence_base & _x) [protected, inherited]`

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

**5.243.2.8** `void __gnu_debug::_Safe_sequence< deque< _Tp, _Allocator > >::M_transfer_iter(const _Safe_iterator< _Iterator, deque< _Tp, _Allocator > > & _x) [inline, inherited]`

Transfers all iterators that reference this memory location to this sequence from whatever sequence they are attached to.

### 5.243.3 Member Data Documentation

**5.243.3.1** `_Safe_iterator_base* __gnu_debug::_Safe_sequence_base::M_const_iterators [inherited]`

The list of constant iterators that reference this container.

Definition at line 166 of file `safe_base.h`.

## **5.243 std::\_\_debug::deque< \_Tp, \_Allocator > Class Template Reference 1417**

Referenced by `__gnu_debug::_Safe_sequence< _Sequence >::_M_invalidate_if()`, `__gnu_debug::_Safe_iterator< _Iterator, _Sequence >::_M_invalidate_single()`, and `__gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_iter()`.

### **5.243.3.2 \_Safe\_iterator\_base\* \_\_gnu\_debug::\_Safe\_sequence\_base::\_M\_iterators [inherited]**

The list of mutable iterators that reference this container.

Definition at line 163 of file `safe_base.h`.

Referenced by `__gnu_debug::_Safe_sequence< _Sequence >::_M_invalidate_if()`, `__gnu_debug::_Safe_iterator< _Iterator, _Sequence >::_M_invalidate_single()`, and `__gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_iter()`.

### **5.243.3.3 unsigned int \_\_gnu\_debug::\_Safe\_sequence\_base::\_M\_version [mutable, inherited]**

The container version number. This number may never be 0.

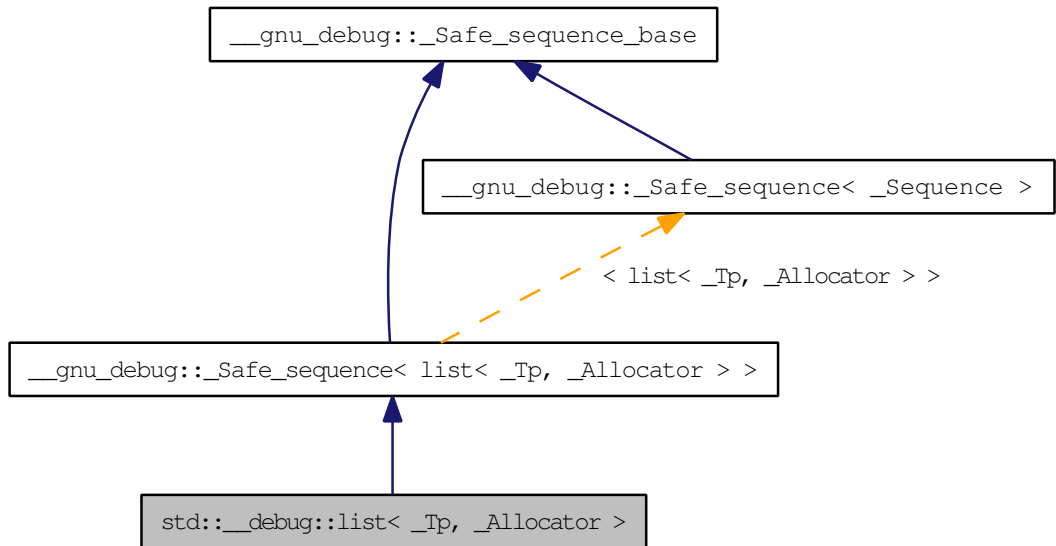

Definition at line 169 of file `safe_base.h`.

The documentation for this class was generated from the following file:

### 5.244.1 Detailed Description

`template<typename _Tp, typename _Allocator = std::allocator<_Tp>> class std::__debug::list<_Tp, _Allocator >`

Class `std::list` with safety/checking/debug instrumentation.

Definition at line 44 of file `debug/list`.

### 5.244.2 Member Function Documentation

**5.244.2.1** `void __gnu_debug::Safe_sequence_base::_M_detach_all ()`  
[protected, inherited]

Detach all iterators, leaving them singular.

**5.244.2.2** `void __gnu_debug::Safe_sequence_base::_M_detach_singular ()`  
[protected, inherited]

Detach all singular iterators.

#### Postcondition:

for all iterators `i` attached to this sequence, `i->_M_version == _M_version`.

**5.244.2.3** `__gnu_cxx::__mutex& __gnu_debug::Safe_sequence_base::_M_get_mutex () throw ()` [protected, inherited]

For use in `_Safe_sequence`.

Referenced by `__gnu_debug::Safe_sequence<_Sequence >::_M_invalidate_if()`, and `__gnu_debug::Safe_sequence<_Sequence >::_M_transfer_iter()`.

**5.244.2.4 void \_\_gnu\_debug::Safe\_sequence\_base::M\_invalidate\_all () const [inline, inherited]**

Invalidates all iterators.

Definition at line 215 of file safe\_base.h.

Referenced by \_\_gnu\_debug::basic\_string< \_CharT, \_Traits, \_Allocator >::append(), \_\_gnu\_debug::basic\_string< \_CharT, \_Traits, \_Allocator >::assign(), \_\_gnu\_debug::basic\_string< \_CharT, \_Traits, \_Allocator >::c\_str(), \_\_gnu\_debug::basic\_string< \_CharT, \_Traits, \_Allocator >::clear(), \_\_gnu\_debug::basic\_string< \_CharT, \_Traits, \_Allocator >::data(), \_\_gnu\_debug::basic\_string< \_CharT, \_Traits, \_Allocator >::operator+=(), \_\_gnu\_debug::basic\_string< \_CharT, \_Traits, \_Allocator >::operator=(), and \_\_gnu\_debug::basic\_string< \_CharT, \_Traits, \_Allocator >::push\_back().

**5.244.2.5 void \_\_gnu\_debug::Safe\_sequence< list< \_Tp, \_Allocator > >::M\_invalidate\_if(\_Predicate \_\_pred) [inline, inherited]**

Invalidates all iterators *x* that reference this sequence, are not singular, and for which *pred(x)* returns `true`. The user of this routine should be careful not to make copies of the iterators passed to *pred*, as the copies may interfere with the invalidation.

**5.244.2.6 void \_\_gnu\_debug::Safe\_sequence\_base::M\_revalidate\_singular () [protected, inherited]**

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

**5.244.2.7 void \_\_gnu\_debug::Safe\_sequence\_base::M\_swap (\_Safe\_sequence\_base & \_\_x) [protected, inherited]**

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

**5.244.2.8 void \_\_gnu\_debug::Safe\_sequence< list< \_Tp, \_Allocator > >::M\_transfer\_iter (const \_Safe\_iterator< \_Iterator, list< \_Tp, \_Allocator > > & \_\_x) [inline, inherited]**

Transfers all iterators that reference this memory location to this sequence from whatever sequence they are attached to.

### 5.244.3 Member Data Documentation

#### 5.244.3.1 `_Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_const_iterators` [inherited]

The list of constant iterators that reference this container.

Definition at line 166 of file `safe_base.h`.

Referenced by `__gnu_debug::_Safe_sequence< _Sequence >::_M_invalidate_if()`, `__gnu_debug::_Safe_iterator< _Iterator, _Sequence >::_M_invalidate_single()`, and `__gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_iter()`.

#### 5.244.3.2 `_Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_iterators` [inherited]

The list of mutable iterators that reference this container.

Definition at line 163 of file `safe_base.h`.

Referenced by `__gnu_debug::_Safe_sequence< _Sequence >::_M_invalidate_if()`, `__gnu_debug::_Safe_iterator< _Iterator, _Sequence >::_M_invalidate_single()`, and `__gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_iter()`.

#### 5.244.3.3 `unsigned int __gnu_debug::_Safe_sequence_base::_M_version` [mutable, inherited]

The container version number. This number may never be 0.

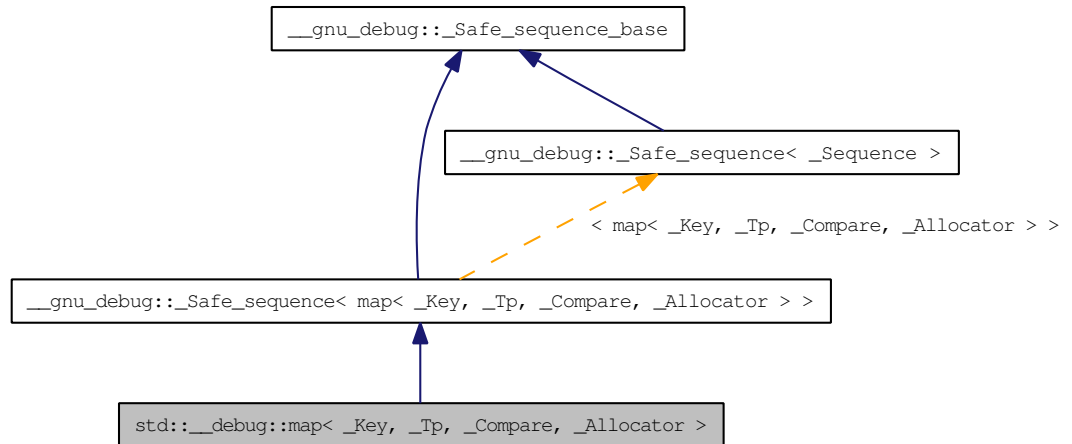

Definition at line 169 of file `safe_base.h`.

### 5.245.1 Detailed Description

```
template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>,
typename _Allocator = std::allocator<std::pair<const _Key, _Tp> >>
class std::__debug::map< _Key, _Tp, _Compare, _Allocator >
```

Class `std::map` with safety/checking/debug instrumentation.

Definition at line 44 of file `debug/map.h`.

### 5.245.2 Member Function Documentation

**5.245.2.1** void `__gnu_debug::Safe_sequence_base::_M_detach_all` ()  
**[protected, inherited]**

Detach all iterators, leaving them singular.

**5.245 std::\_\_debug::map< \_Key, \_Tp, \_Compare, \_Allocator > Class Template Reference** 1427

---

**5.245.2.2 void \_\_gnu\_debug::Safe\_sequence\_base::\_M\_detach\_singular ()**  
[protected, inherited]

Detach all singular iterators.

**Postcondition:**

for all iterators *i* attached to this sequence, *i*->\_M\_version == \_M\_version.

**5.245.2.3 \_\_gnu\_cxx::mutex& \_\_gnu\_debug::Safe\_sequence\_base::\_M\_get\_mutex () throw ()** [protected, inherited]

For use in [\\_Safe\\_sequence](#).

Referenced by `__gnu_debug::Safe_sequence< _Sequence >::_M_invalidate_if()`, and `__gnu_debug::Safe_sequence< _Sequence >::_M_transfer_iter()`.

**5.245.2.4 void \_\_gnu\_debug::Safe\_sequence\_base::\_M\_invalidate\_all () const**  
[inline, inherited]

Invalidates all iterators.

Definition at line 215 of file `safe_base.h`.

Referenced by `__gnu_debug::basic_string< _CharT, _Traits, _Allocator >::append()`, `__gnu_debug::basic_string< _CharT, _Traits, _Allocator >::assign()`, `__gnu_debug::basic_string< _CharT, _Traits, _Allocator >::c_str()`, `__gnu_debug::basic_string< _CharT, _Traits, _Allocator >::clear()`, `__gnu_debug::basic_string< _CharT, _Traits, _Allocator >::data()`, `__gnu_debug::basic_string< _CharT, _Traits, _Allocator >::operator+=(())`, `__gnu_debug::basic_string< _CharT, _Traits, _Allocator >::operator=()`, and `__gnu_debug::basic_string< _CharT, _Traits, _Allocator >::push_back()`.

**5.245.2.5 void \_\_gnu\_debug::Safe\_sequence< map< \_Key, \_Tp, \_Compare, \_Allocator > >::\_M\_invalidate\_if (\_Predicate \_\_pred)** [inline, inherited]

Invalidates all iterators *x* that reference this sequence, are not singular, and for which `pred(x)` returns `true`. The user of this routine should be careful not to make copies of the iterators passed to `pred`, as the copies may interfere with the invalidation.

**5.245.2.6** `void __gnu_debug::Safe_sequence_base::M_revalidate_singular ()`  
**[protected, inherited]**

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

**5.245.2.7** `void __gnu_debug::Safe_sequence_base::M_swap`  
`(Safe_sequence_base & __x) [protected, inherited]`

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

**5.245.2.8** `void __gnu_debug::Safe_sequence< map< _Key, _Tp, _Compare,`  
`_Allocator > >::M_transfer_iter (const Safe_iterator< _Iterator,`  
`map< _Key, _Tp, _Compare, _Allocator > & __x) [inline,`  
`inherited]`

Transfers all iterators that reference this memory location to this sequence from whatever sequence they are attached to.

### 5.245.3 Member Data Documentation

**5.245.3.1** `_Safe_iterator_base* __gnu_debug::Safe_sequence_base::M_`  
`const_iterators [inherited]`

The list of constant iterators that reference this container.

Definition at line 166 of file safe\_base.h.

**5.246.2.5 void \_\_gnu\_debug::Safe\_sequence< multimap< \_Key, \_Tp, \_Compare, \_Allocator > >::\_M\_invalidate\_if (\_Predicate \_\_pred)**  
**[inline, inherited]**

Invalidates all iterators *x* that reference this sequence, are not singular, and for which `pred(x)` returns `true`. The user of this routine should be careful not to make copies of the iterators passed to `pred`, as the copies may interfere with the invalidation.

**5.246.2.6** `void __gnu_debug::Safe_sequence_base::M_revalidate_singular ()`  
**[protected, inherited]**

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

**5.246.2.7** `void __gnu_debug::Safe_sequence_base::M_swap`  
`(Safe_sequence_base & __x) [protected, inherited]`

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

**5.246.2.8** `void __gnu_debug::Safe_sequence< multimap< _Key, _Tp,`  
`_Compare, _Allocator > >::M_transfer_iter (const Safe_iterator<`  
`_Iterator, multimap< _Key, _Tp, _Compare, _Allocator > > & __x)`  
**[inline, inherited]**

Transfers all iterators that reference this memory location to this sequence from whatever sequence they are attached to.

### 5.246.3 Member Data Documentation

**5.246.3.1** `_Safe_iterator_base* __gnu_debug::Safe_sequence_base::M_`  
`const_iterators [inherited]`

The list of constant iterators that reference this container.

Definition at line 166 of file safe\_base.h.

Referenced by `__gnu_debug::Safe_sequence< _Sequence >::M_invalidate_if()`, `__gnu_debug::Safe_iterator< _Iterator, _Sequence >::M_invalidate_single()`, and `__gnu_debug::Safe_sequence< _Sequence >::M_transfer_iter()`.

**5.246.3.2** `_Safe_iterator_base* __gnu_debug::Safe_sequence_base::M_`  
`iterators [inherited]`

The list of mutable iterators that reference this container.

Definition at line 163 of file safe\_base.h.

Referenced by `__gnu_debug::Safe_sequence< _Sequence >::M_invalidate_if()`, `__gnu_debug::Safe_iterator< _Iterator, _Sequence >::M_invalidate_single()`, and `__gnu_debug::Safe_sequence< _Sequence >::M_transfer_iter()`.

### 5.247.1 Detailed Description

`template<typename _Key, typename _Compare = std::less<_Key>, typename _Allocator = std::allocator<_Key>> class std::__debug::multiset< _Key, _Compare, _Allocator >`

Class `std::multiset` with safety/checking/debug instrumentation.

Definition at line 44 of file `debug/multiset.h`.

### 5.247.2 Member Function Documentation

**5.247.2.1** `void __gnu_debug::_Safe_sequence_base::_M_detach_all ()`  
**[protected, inherited]**

Detach all iterators, leaving them singular.

**5.247 std::\_\_debug::multiset< \_Key, \_Compare, \_Allocator > Class Template Reference** **1439**

---

**5.247.2.2 void \_\_gnu\_debug::Safe\_sequence\_base::\_M\_detach\_singular ()**  
[protected, inherited]

Detach all singular iterators.

**Postcondition:**

for all iterators *i* attached to this sequence, *i*->\_M\_version == \_M\_version.

**5.247.2.3 \_\_gnu\_cxx::mutex& \_\_gnu\_debug::Safe\_sequence\_base::\_M\_get\_mutex () throw ()** [protected, inherited]

For use in [\\_Safe\\_sequence](#).

Referenced by `__gnu_debug::Safe_sequence< _Sequence >::_M_invalidate_if()`, and `__gnu_debug::Safe_sequence< _Sequence >::_M_transfer_iter()`.

**5.247.2.4 void \_\_gnu\_debug::Safe\_sequence\_base::\_M\_invalidate\_all () const**  
[inline, inherited]

Invalidates all iterators.

Definition at line 215 of file `safe_base.h`.

Referenced by `__gnu_debug::basic_string< _CharT, _Traits, _Allocator >::append()`, `__gnu_debug::basic_string< _CharT, _Traits, _Allocator >::assign()`, `__gnu_debug::basic_string< _CharT, _Traits, _Allocator >::c_str()`, `__gnu_debug::basic_string< _CharT, _Traits, _Allocator >::clear()`, `__gnu_debug::basic_string< _CharT, _Traits, _Allocator >::data()`, `__gnu_debug::basic_string< _CharT, _Traits, _Allocator >::operator+=(())`, `__gnu_debug::basic_string< _CharT, _Traits, _Allocator >::operator=()`, and `__gnu_debug::basic_string< _CharT, _Traits, _Allocator >::push_back()`.

**5.247.2.5 void \_\_gnu\_debug::Safe\_sequence< multiset< \_Key, \_Compare, \_Allocator > >::\_M\_invalidate\_if (\_Predicate \_\_pred)** [inline, inherited]

Invalidates all iterators *x* that reference this sequence, are not singular, and for which `pred(x)` returns `true`. The user of this routine should be careful not to make copies of the iterators passed to `pred`, as the copies may interfere with the invalidation.

**5.247.2.6** `void __gnu_debug::Safe_sequence_base::M_revalidate_singular ()`  
**[protected, inherited]**

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

**5.247.2.7** `void __gnu_debug::Safe_sequence_base::M_swap`  
`(Safe_sequence_base & __x) [protected, inherited]`

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

**5.247.2.8** `void __gnu_debug::Safe_sequence< multiset< _Key, _Compare,`  
`_Allocator > >::M_transfer_iter (const Safe_iterator< _Iterator,`  
`multiset< _Key, _Compare, _Allocator > & __x) [inline,`  
`inherited]`

Transfers all iterators that reference this memory location to this sequence from whatever sequence they are attached to.

### 5.247.3 Member Data Documentation

**5.247.3.1** `_Safe_iterator_base* __gnu_debug::Safe_sequence_base::M_`  
`const_iterators [inherited]`

The list of constant iterators that reference this container.

Definition at line 166 of file safe\_base.h.

Referenced by `__gnu_debug::Safe_sequence< _Sequence >::M_invalidate_if()`, `__gnu_debug::Safe_iterator< _Iterator, _Sequence >::M_invalidate_single()`, and `__gnu_debug::Safe_sequence< _Sequence >::M_transfer_iter()`.

Invalidates all iterators.

Definition at line 215 of file safe\_base.h.

Referenced by `__gnu_debug::basic_string<_CharT, _Traits, _Allocator >::append()`, `__gnu_debug::basic_string<_CharT, _Traits, _Allocator >::assign()`, `__gnu_debug::basic_string<_CharT, _Traits, _Allocator >::c_str()`, `__gnu_debug::basic_string<_CharT, _Traits, _Allocator >::clear()`, `__gnu_debug::basic_string<_CharT, _Traits, _Allocator >::data()`, `__gnu_debug::basic_string<_CharT, _Traits, _Allocator >::operator+=()`, `__gnu_debug::basic_string<_CharT, _Traits, _Allocator >::operator=()`, and `__gnu_debug::basic_string<_CharT, _Traits, _Allocator >::push_back()`.

**5.249.2.5 void \_\_gnu\_debug::Safe\_sequence<unordered\_map<\_Key, \_Tp, \_Hash, \_Pred, \_Alloc >>::\_M\_invalidate\_if (\_Predicate \_\_pred)  
[inline, inherited]**

Invalidates all iterators  $x$  that reference this sequence, are not singular, and for which `pred(x)` returns `true`. The user of this routine should be careful not to make copies of the iterators passed to `pred`, as the copies may interfere with the invalidation.

**5.249.2.6 void \_\_gnu\_debug::Safe\_sequence\_base::\_M\_revalidate\_singular ()  
[protected, inherited]**

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

**5.249.2.7 void \_\_gnu\_debug::Safe\_sequence\_base::\_M\_swap  
(\_Safe\_sequence\_base & \_\_x) [protected, inherited]**

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

**5.249.2.8** `void __gnu_debug::_Safe_sequence< unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc > >::_M_transfer_iter (const _Safe_iterator< _Iterator, unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc > > & __x) [inline, inherited]`

Transfers all iterators that reference this memory location to this sequence from whatever sequence they are attached to.

### 5.249.3 Member Data Documentation

**5.249.3.1** `_Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_const_iterators [inherited]`

The list of constant iterators that reference this container.

Definition at line 166 of file `safe_base.h`.

Referenced by `__gnu_debug::_Safe_sequence< _Sequence >::_M_invalidate_if()`, `__gnu_debug::_Safe_iterator< _Iterator, _Sequence >::_M_invalidate_single()`, and `__gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_iter()`.

**5.249.3.2** `_Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_iterators [inherited]`

The list of mutable iterators that reference this container.

Definition at line 163 of file `safe_base.h`.

Referenced by `__gnu_debug::_Safe_sequence< _Sequence >::_M_invalidate_if()`, `__gnu_debug::_Safe_iterator< _Iterator, _Sequence >::_M_invalidate_single()`, and `__gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_iter()`.

**5.249.3.3** `unsigned int __gnu_debug::_Safe_sequence_base::_M_version [mutable, inherited]`

The container version number. This number may never be 0.

Definition at line 169 of file `safe_base.h`.

### 5.250.1 Detailed Description

```
template<typename _Key, typename _Tp, typename _Hash = std::hash<_Key>,
typename _Pred = std::equal_to<_Key>, typename _Alloc = std::allocator<_
Key>> class std::__debug::unordered_multimap<_Key, _Tp, _Hash, _Pred, _
Alloc >
```

Class `std::unordered_multimap` with safety/checking/debug instrumentation.

Definition at line 296 of file `debug/unordered_map`.

### 5.250.2 Member Function Documentation

**5.250.2.1** `void __gnu_debug::Safe_sequence_base::_M_detach_all ()`  
[protected, inherited]

Detach all iterators, leaving them singular.

**5.250.2.2** `void __gnu_debug::Safe_sequence_base::_M_detach_singular ()`  
[protected, inherited]

Detach all singular iterators.

**Postcondition:**

for all iterators `i` attached to this sequence, `i->_M_version == _M_version`.

**5.250.2.3** `__gnu_cxx::mutex& __gnu_debug::Safe_sequence_base::_M_get_mutex () throw ()` [protected, inherited]

For use in `_Safe_sequence`.

Referenced by `__gnu_debug::Safe_sequence<_Sequence >::_M_invalidate_if()`, and `__gnu_debug::Safe_sequence<_Sequence >::_M_transfer_iter()`.

**5.250.2.4** `void __gnu_debug::Safe_sequence_base::_M_invalidate_all () const`  
[inline, inherited]

Invalidates all iterators.

Definition at line 215 of file `safe_base.h`.

Referenced by `__gnu_debug::basic_string<_CharT, _Traits, _Allocator>::append()`, `__gnu_debug::basic_string<_CharT, _Traits, _Allocator>::assign()`, `__gnu_debug::basic_string<_CharT, _Traits, _Allocator>::c_str()`, `__gnu_debug::basic_string<_CharT, _Traits, _Allocator>::clear()`, `__gnu_debug::basic_string<_CharT, _Traits, _Allocator>::data()`, `__gnu_debug::basic_string<_CharT, _Traits, _Allocator>::operator+=()`, `__gnu_debug::basic_string<_CharT, _Traits, _Allocator>::operator=()`, and `__gnu_debug::basic_string<_CharT, _Traits, _Allocator>::push_back()`.

**5.250.2.5** `void __gnu_debug::Safe_sequence< unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc > >::M_invalidate_if ( _Predicate __pred)`  
[inline, inherited]

Invalidates all iterators `x` that reference this sequence, are not singular, and for which `pred(x)` returns `true`. The user of this routine should be careful not to make copies of the iterators passed to `pred`, as the copies may interfere with the invalidation.

**5.250.2.6** `void __gnu_debug::Safe_sequence_base::M_revalidate_singular ()`  
[protected, inherited]

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

**5.250.2.7** `void __gnu_debug::Safe_sequence_base::M_swap`  
(`Safe_sequence_base & __x`) [protected, inherited]

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

**5.250.2.8** `void __gnu_debug::Safe_sequence< unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc > >::M_transfer_iter (const`  
`Safe_iterator< Iterator, unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc > > & __x)` [inline, inherited]

Transfers all iterators that reference this memory location to this sequence from whatever sequence they are attached to.

### 5.250.3 Member Data Documentation

#### 5.250.3.1 `_Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_const_iterators` [inherited]

The list of constant iterators that reference this container.

Definition at line 166 of file `safe_base.h`.

Referenced by `__gnu_debug::_Safe_sequence<_Sequence >::_M_invalidate_if()`, `__gnu_debug::_Safe_iterator<_Iterator, _Sequence >::_M_invalidate_single()`, and `__gnu_debug::_Safe_sequence<_Sequence >::_M_transfer_iter()`.

#### 5.250.3.2 `_Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_iterators` [inherited]

The list of mutable iterators that reference this container.

Definition at line 163 of file `safe_base.h`.

Referenced by `__gnu_debug::_Safe_sequence<_Sequence >::_M_invalidate_if()`, `__gnu_debug::_Safe_iterator<_Iterator, _Sequence >::_M_invalidate_single()`, and `__gnu_debug::_Safe_sequence<_Sequence >::_M_transfer_iter()`.

#### 5.250.3.3 `unsigned int __gnu_debug::_Safe_sequence_base::_M_version` [mutable, inherited]

The container version number. This number may never be 0.

Definition at line 169 of file `safe_base.h`.

### 5.251.1 Detailed Description

```
template<typename _Value, typename _Hash = std::hash<_Value>, typename
_Pred = std::equal_to<_Value>, typename _Alloc = std::allocator<_Value>>
class std::__debug::unordered_multiset< _Value, _Hash, _Pred, _Alloc >
```

Class [std::unordered\\_multiset](#) with safety/checking/debug instrumentation.

Definition at line 295 of file `debug/unordered_set`.

### 5.251.2 Member Function Documentation

**5.251.2.1** `void __gnu_debug::Safe_sequence_base::_M_detach_all ()`  
**[protected, inherited]**

Detach all iterators, leaving them singular.

**5.251.2.2** `void __gnu_debug::Safe_sequence_base::_M_detach_singular ()`  
**[protected, inherited]**

Detach all singular iterators.

**Postcondition:**

for all iterators `i` attached to this sequence, `i->_M_version == _M_version`.

**5.251.2.3** `__gnu_cxx::__mutex& __gnu_debug::Safe_sequence_base::_M_get_mutex () throw ()`  
**[protected, inherited]**

For use in [\\_Safe\\_sequence](#).

Referenced by `__gnu_debug::Safe_sequence< _Sequence >::_M_invalidate_if()`,  
and `__gnu_debug::Safe_sequence< _Sequence >::_M_transfer_iter()`.

**5.251.2.4** `void __gnu_debug::Safe_sequence_base::_M_invalidate_all () const`  
**[inline, inherited]**

Invalidates all iterators.

Definition at line 215 of file `safe_base.h`.

Referenced by `__gnu_debug::basic_string< _CharT, _Traits, _Allocator >::append()`,  
`__gnu_debug::basic_string< _CharT, _Traits, _Allocator >::assign()`, `__gnu_debug::basic_string< _CharT, _Traits, _Allocator >::c_str()`, `__gnu_debug::basic_`

## 5.251 `std::__debug::unordered_multiset<_Value, _Hash, _Pred, _Alloc >` Class Template Reference 1461

---

`string<_CharT, _Traits, _Allocator >::clear()`, `__gnu_debug::basic_string<_CharT, _Traits, _Allocator >::data()`, `__gnu_debug::basic_string<_CharT, _Traits, _Allocator >::operator+=()`, `__gnu_debug::basic_string<_CharT, _Traits, _Allocator >::operator=()`, and `__gnu_debug::basic_string<_CharT, _Traits, _Allocator >::push_back()`.

### 5.251.2.5 `void __gnu_debug::Safe_sequence< unordered_multiset<_Value, _Hash, _Pred, _Alloc > >::M_invalidate_if (_Predicate __pred)` [`inline`, `inherited`]

Invalidates all iterators `x` that reference this sequence, are not singular, and for which `pred(x)` returns `true`. The user of this routine should be careful not to make copies of the iterators passed to `pred`, as the copies may interfere with the invalidation.

### 5.251.2.6 `void __gnu_debug::Safe_sequence_base::M_revalidate_singular ()` [`protected`, `inherited`]

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

### 5.251.2.7 `void __gnu_debug::Safe_sequence_base::M_swap` (`_Safe_sequence_base & __x`) [`protected`, `inherited`]

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

### 5.251.2.8 `void __gnu_debug::Safe_sequence< unordered_multiset<_Value, _Hash, _Pred, _Alloc > >::M_transfer_iter (const _Safe_iterator<_Iterator, unordered_multiset<_Value, _Hash, _Pred, _Alloc > > & __x)` [`inline`, `inherited`]

Transfers all iterators that reference this memory location to this sequence from whatever sequence they are attached to.

## 5.251.3 Member Data Documentation

### 5.251.3.1 `_Safe_iterator_base* __gnu_debug::Safe_sequence_base::M_const_iterators` [`inherited`]

The list of constant iterators that reference this container.

Definition at line 166 of file safe\_base.h.

Referenced by `__gnu_debug::_Safe_sequence<_Sequence>::_M_invalidate_if()`, `__gnu_debug::_Safe_iterator<_Iterator, _Sequence>::_M_invalidate_single()`, and `__gnu_debug::_Safe_sequence<_Sequence>::_M_transfer_iter()`.

### 5.251.3.2 `_Safe_iterator_base*` `__gnu_debug::_Safe_sequence_base::_M_iterators` [inherited]

The list of mutable iterators that reference this container.

Definition at line 163 of file safe\_base.h.

Referenced by `__gnu_debug::_Safe_sequence<_Sequence>::_M_invalidate_if()`, `__gnu_debug::_Safe_iterator<_Iterator, _Sequence>::_M_invalidate_single()`, and `__gnu_debug::_Safe_sequence<_Sequence>::_M_transfer_iter()`.

### 5.251.3.3 `unsigned int` `__gnu_debug::_Safe_sequence_base::_M_version` [mutable, inherited]

The container version number. This number may never be 0.

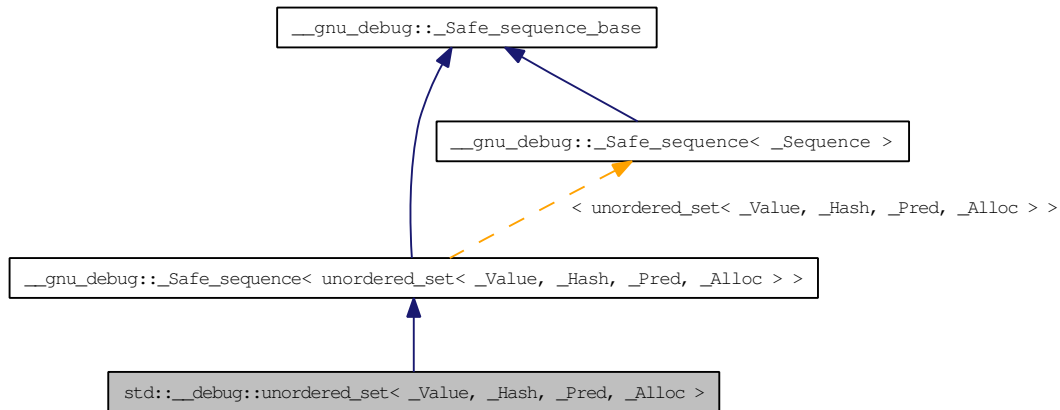

Definition at line 169 of file safe\_base.h.

```
template<typename _Value, typename _Hash = std::hash<_Value>, typename
_Pred = std::equal_to<_Value>, typename _Alloc = std::allocator<_Value>>>
class std::__debug::unordered_set<_Value, _Hash, _Pred, _Alloc >
```

Class `std::unordered_set` with safety/checking/debug instrumentation.

Definition at line 52 of file `debug/unordered_set`.

### 5.252.2 Member Function Documentation

**5.252.2.1** `void __gnu_debug::Safe_sequence_base::_M_detach_all ()`  
[protected, inherited]

Detach all iterators, leaving them singular.

**5.252.2.2** `void __gnu_debug::Safe_sequence_base::_M_detach_singular ()`  
[protected, inherited]

Detach all singular iterators.

#### Postcondition:

for all iterators `i` attached to this sequence, `i->_M_version == _M_version`.

**5.252.2.3** `__gnu_cxx::__mutex& __gnu_debug::Safe_sequence_base::_M_get_mutex () throw ()` [protected, inherited]

For use in `_Safe_sequence`.

Referenced by `__gnu_debug::Safe_sequence<_Sequence >::_M_invalidate_if()`, and `__gnu_debug::Safe_sequence<_Sequence >::_M_transfer_iter()`.

**5.252.2.4** `void __gnu_debug::Safe_sequence_base::_M_invalidate_all () const`  
**[inline, inherited]**

Invalidates all iterators.

Definition at line 215 of file `safe_base.h`.

Referenced by `__gnu_debug::basic_string<_CharT, _Traits, _Allocator>::append()`, `__gnu_debug::basic_string<_CharT, _Traits, _Allocator>::assign()`, `__gnu_debug::basic_string<_CharT, _Traits, _Allocator>::c_str()`, `__gnu_debug::basic_string<_CharT, _Traits, _Allocator>::clear()`, `__gnu_debug::basic_string<_CharT, _Traits, _Allocator>::data()`, `__gnu_debug::basic_string<_CharT, _Traits, _Allocator>::operator+=()`, `__gnu_debug::basic_string<_CharT, _Traits, _Allocator>::operator=()`, and `__gnu_debug::basic_string<_CharT, _Traits, _Allocator>::push_back()`.

**5.252.2.5** `void __gnu_debug::Safe_sequence<unordered_set<_Value, _Hash, _Pred, _Alloc>>::_M_invalidate_if (_Predicate _pred)`  
**[inline, inherited]**

Invalidates all iterators `x` that reference this sequence, are not singular, and for which `pred(x)` returns `true`. The user of this routine should be careful not to make copies of the iterators passed to `pred`, as the copies may interfere with the invalidation.

**5.252.2.6** `void __gnu_debug::Safe_sequence_base::_M_revalidate_singular ()`  
**[protected, inherited]**

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

**5.252.2.7** `void __gnu_debug::Safe_sequence_base::_M_swap`  
`(Safe_sequence_base & __x) [protected, inherited]`

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

## 5.252 std::\_\_debug::unordered\_set<\_Value, \_Hash, \_Pred, \_Alloc > Class Template Reference 1467

---

**5.252.2.8** void \_\_gnu\_debug::Safe\_sequence< unordered\_set<\_Value, \_Hash, \_Pred, \_Alloc >>::M\_transfer\_iter(const Safe\_iterator<\_Iterator, unordered\_set<\_Value, \_Hash, \_Pred, \_Alloc >> & \_\_x)  
[inline, inherited]

Transfers all iterators that reference this memory location to this sequence from whatever sequence they are attached to.

### 5.252.3 Member Data Documentation

**5.252.3.1** \_Safe\_iterator\_base\* \_\_gnu\_debug::Safe\_sequence\_base::M\_const\_iterators [inherited]

The list of constant iterators that reference this container.

Definition at line 166 of file safe\_base.h.

Referenced by \_\_gnu\_debug::Safe\_sequence<\_Sequence >::M\_invalidate\_if(), \_\_gnu\_debug::Safe\_iterator<\_Iterator, \_Sequence >::M\_invalidate\_single(), and \_\_gnu\_debug::Safe\_sequence<\_Sequence >::M\_transfer\_iter().

**5.252.3.2** \_Safe\_iterator\_base\* \_\_gnu\_debug::Safe\_sequence\_base::M\_iterators [inherited]

The list of mutable iterators that reference this container.

Definition at line 163 of file safe\_base.h.

Referenced by \_\_gnu\_debug::Safe\_sequence<\_Sequence >::M\_invalidate\_if(), \_\_gnu\_debug::Safe\_iterator<\_Iterator, \_Sequence >::M\_invalidate\_single(), and \_\_gnu\_debug::Safe\_sequence<\_Sequence >::M\_transfer\_iter().

**5.252.3.3** unsigned int \_\_gnu\_debug::Safe\_sequence\_base::M\_version [mutable, inherited]

The container version number. This number may never be 0.

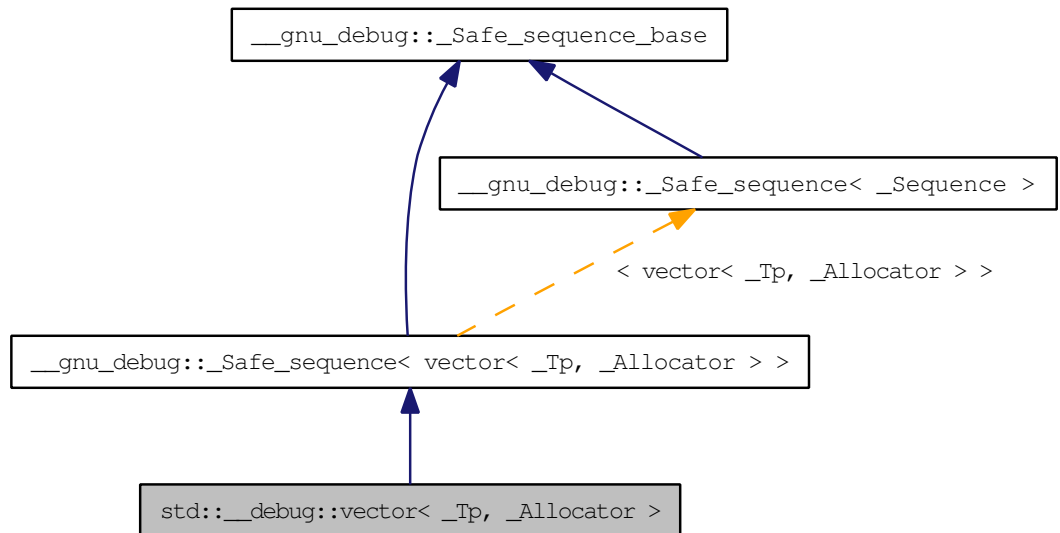

Definition at line 169 of file safe\_base.h.

### 5.253.1 Detailed Description

```
template<typename _Tp, typename _Allocator = std::allocator<_Tp>> class
std::__debug::vector<_Tp, _Allocator >
```

Class [std::vector](#) with safety/checking/debug instrumentation.

Definition at line 45 of file `debug/vector`.

### 5.253.2 Constructor & Destructor Documentation

```
5.253.2.1 template<typename _Tp, typename _Allocator =
std::allocator<_Tp>> std::__debug::vector<_Tp, _Allocator
>::vector (const _Base & __x) [inline]
```

Construction from a release-mode [vector](#).

Definition at line 94 of file `debug/vector`.

### 5.253.3 Member Function Documentation

```
5.253.3.1 void __gnu_debug::Safe_sequence_base::_M_detach_all ()
[protected, inherited]
```

Detach all iterators, leaving them singular.

```
5.253.3.2 void __gnu_debug::Safe_sequence_base::_M_detach_singular ()
[protected, inherited]
```

Detach all singular iterators.

#### Postcondition:

for all iterators `i` attached to this sequence, `i->_M_version == _M_version`.

```
5.253.3.3 __gnu_cxx::__mutex& __gnu_debug::Safe_sequence_-
base::_M_get_mutex () throw () [protected,
inherited]
```

For use in [\\_Safe\\_sequence](#).

Referenced by `__gnu_debug::Safe_sequence<_Sequence >::_M_invalidate_if()`,  
and `__gnu_debug::Safe_sequence<_Sequence >::_M_transfer_iter()`.

**5.253.3.4 void \_\_gnu\_debug::Safe\_sequence\_base::M\_invalidate\_all () const [inline, inherited]**

Invalidates all iterators.

Definition at line 215 of file safe\_base.h.

Referenced by \_\_gnu\_debug::basic\_string< \_CharT, \_Traits, \_Allocator >::append(), \_\_gnu\_debug::basic\_string< \_CharT, \_Traits, \_Allocator >::assign(), \_\_gnu\_debug::basic\_string< \_CharT, \_Traits, \_Allocator >::c\_str(), \_\_gnu\_debug::basic\_string< \_CharT, \_Traits, \_Allocator >::clear(), \_\_gnu\_debug::basic\_string< \_CharT, \_Traits, \_Allocator >::data(), \_\_gnu\_debug::basic\_string< \_CharT, \_Traits, \_Allocator >::operator+=( ), \_\_gnu\_debug::basic\_string< \_CharT, \_Traits, \_Allocator >::operator=( ), and \_\_gnu\_debug::basic\_string< \_CharT, \_Traits, \_Allocator >::push\_back().

**5.253.3.5 void \_\_gnu\_debug::Safe\_sequence< vector< \_Tp, \_Allocator > >::M\_invalidate\_if(\_Predicate \_\_pred) [inline, inherited]**

Invalidates all iterators  $x$  that reference this sequence, are not singular, and for which `pred(x)` returns `true`. The user of this routine should be careful not to make copies of the iterators passed to `pred`, as the copies may interfere with the invalidation.

**5.253.3.6 void \_\_gnu\_debug::Safe\_sequence\_base::M\_revalidate\_singular () [protected, inherited]**

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

**5.253.3.7 void \_\_gnu\_debug::Safe\_sequence\_base::M\_swap (\_Safe\_sequence\_base & \_\_x) [protected, inherited]**

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

**5.253.3.8 void \_\_gnu\_debug::Safe\_sequence< vector< \_Tp, \_Allocator > >::M\_transfer\_iter (const \_Safe\_iterator< \_Iterator, vector< \_Tp, \_Allocator > > & \_\_x) [inline, inherited]**

Transfers all iterators that reference this memory location to this sequence from whatever sequence they are attached to.

## 5.253.4 Member Data Documentation

### 5.253.4.1 `_Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_const_iterators` [inherited]

The list of constant iterators that reference this container.

Definition at line 166 of file `safe_base.h`.

Referenced by `__gnu_debug::_Safe_sequence< _Sequence >::_M_invalidate_if()`, `__gnu_debug::_Safe_iterator< _Iterator, _Sequence >::_M_invalidate_single()`, and `__gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_iter()`.

### 5.253.4.2 `_Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_iterators` [inherited]

The list of mutable iterators that reference this container.

Definition at line 163 of file `safe_base.h`.

Referenced by `__gnu_debug::_Safe_sequence< _Sequence >::_M_invalidate_if()`, `__gnu_debug::_Safe_iterator< _Iterator, _Sequence >::_M_invalidate_single()`, and `__gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_iter()`.

### 5.253.4.3 `unsigned int __gnu_debug::_Safe_sequence_base::_M_version` [mutable, inherited]

The container version number. This number may never be 0.

Definition at line 169 of file `safe_base.h`.

The documentation for this class was generated from the following file:

- [debug/vector](#)

## 5.254 `std::__declval_protector< _Tp >` Struct Template Reference

`declval`

### Static Public Member Functions

- static [add\\_rvalue\\_reference](#)< `_Tp` >::type `__delegate` ()

### Static Public Attributes

- static const bool `__stop`

#### 5.254.1 Detailed Description

`template<typename _Tp> struct std::__declval_protector< _Tp >`

`declval`

Definition at line 616 of file `type_traits`.

The documentation for this struct was generated from the following file:

- [type\\_traits](#)

## 5.255 `std::__exception_ptr::exception_ptr` Class Reference

An opaque pointer to an arbitrary [exception](#).

### Public Types

- `typedef void(exception_ptr::* __safe_bool )()`

### Public Member Functions

- `exception_ptr (exception_ptr &&__o) throw ()`
- `exception_ptr (const exception_ptr &) throw ()`
- `exception_ptr (__safe_bool) throw ()`

- `exception_ptr & operator= (exception_ptr &&__o) throw ()`
- `exception_ptr & operator= (const exception_ptr &) throw ()`
- `void swap (exception_ptr &) throw ()`

### Friends

- `bool operator== (const exception_ptr &, const exception_ptr &) __attribute__((__pure__)) throw ()`
- `exception_ptr std::current_exception () throw ()`
- `void std::rethrow_exception (exception_ptr)`

#### 5.255.1 Detailed Description

An opaque pointer to an arbitrary [exception](#).

Definition at line 73 of file `exception_ptr.h`.

The documentation for this class was generated from the following file:

- [exception\\_ptr.h](#)

## 5.256 std::\_\_future\_base Struct Reference

Base class and enclosing scope. Inheritance diagram for std::\_\_future\_base:

### Classes

- struct [\\_Ptr](#)  
A *unique\_ptr* based on the instantiating type.
- struct [\\_Result](#)  
*Result.*
- struct [\\_Result<\\_Res & >](#)  
*Partial specialization for reference types.*
- struct [\\_Result<void >](#)  
*Explicit specialization for void.*
- struct [\\_Result\\_base](#)  
*Base class for results.*
- class [\\_State](#)  
*Shared state between a [promise](#) and one or more associated futures.*

### 5.256.1 Detailed Description

Base class and enclosing scope.

Definition at line 136 of file future.

The documentation for this struct was generated from the following file:

- [future](#)

## 5.257 `std::__future_base::_Ptr<_Res>` > Struct Template Reference

A `unique_ptr` based on the instantiating type. Inheritance diagram for `std::__future_base::_Ptr<_Res>`:

### Public Types

- typedef `unique_ptr<_Res, _Result_base::_Deleter>` **type**

#### 5.257.1 Detailed Description

`template<typename _Res> struct std::__future_base::_Ptr<_Res>`

A `unique_ptr` based on the instantiating type.

Definition at line 211 of file `future`.

The documentation for this struct was generated from the following file:

- `future`

## 5.258 `std::__future_base::_Result< _Res >` Struct Template Reference

Result. Inheritance diagram for `std::__future_base::_Result< _Res >`:

### Public Member Functions

- `void _M_set (_Res &&__res)`
- `void _M_set (const _Res &__res)`
- `_Res & _M_value ()`

### Public Attributes

- `exception_ptr _M_error`

### 5.258.1 Detailed Description

`template<typename _Res> struct std::__future_base::_Result< _Res >`

Result.

Definition at line 161 of file `future`.

The documentation for this struct was generated from the following file:

- [future](#)

## 5.259 `std::__future_base::_Result<_Res &>` Struct Template Reference

Partial specialization for reference types. Inheritance diagram for `std::__future_base::_Result<_Res &>`:

### Public Member Functions

- `_Res & _M_get ()`
- `void _M_set (_Res &__res)`

### Public Attributes

- `exception_ptr _M_error`

### 5.259.1 Detailed Description

`template<typename _Res> struct std::__future_base::_Result<_Res &>`

Partial specialization for reference types.

Definition at line 455 of file `future`.

The documentation for this struct was generated from the following file:

- [future](#)

## 5.260 `std::__future_base::_Result< void >` Struct Template Reference

Explicit specialization for void. Inheritance diagram for `std::__future_base::_Result< void >`:

### Public Attributes

- `exception_ptr _M_error`

### 5.260.1 Detailed Description

`template<> struct std::__future_base::_Result< void >`

Explicit specialization for void.

Definition at line 471 of file future.

The documentation for this struct was generated from the following file:

- [future](#)

## 5.261 `std::__future_base::_Result_base` Struct Reference

Base class for results. Inheritance diagram for `std::__future_base::_Result_base`:

### Public Member Functions

- `_Result_base` (const `_Result_base` &)
- virtual void `_M_destroy` ()=0
- `_Result_base` & `operator=` (const `_Result_base` &)

### Public Attributes

- `exception_ptr` `_M_error`

#### 5.261.1 Detailed Description

Base class for results.

Definition at line 139 of file `future`.

The documentation for this struct was generated from the following file:

- `future`

## 5.262 `std::__future_base::_State` Class Reference

Shared state between a [promise](#) and one or more associated futures.

Inherited by `std::__future_base::_Async_state< _Res >`, `std::__future_base::_Deferred_state< _Res >`, and `std::__future_base::_Task_state< _Res(_Args...)>`.

### Public Member Functions

- `_State` (const [\\_State](#) &)
- `void _M_break_promise` (`_Ptr_type __res`)
- `void _M_set_result` (`function< _Ptr_type()> __res`, `bool __ignore_failure=false`)
- `void _M_set_retrieved_flag` ()
- `_State & operator=` (const [\\_State](#) &)
- `_Result_base & wait` ()
- `template<typename _Rep, typename _Period > bool wait_for` (const [chrono::duration](#)< `_Rep`, `_Period` > &\_\_rel)
- `template<typename _Clock, typename _Duration > bool wait_until` (const [chrono::time\\_point](#)< `_Clock`, `_Duration` > &\_\_abs)

### Static Public Member Functions

- `static _Setter< void, void > __setter` ([promise](#)< `void` > \*\_\_prom)
- `template<typename _Res > static _Setter< _Res, __exception_ptr_tag > __setter` (`exception_ptr &__ex`, [promise](#)< `_Res` > \*\_\_prom)
- `template<typename _Res, typename _Arg > static _Setter< _Res, _Arg && > __setter` ([promise](#)< `_Res` > \*\_\_prom, `_Arg &&__arg`)
- `template<typename _Tp > static bool _S_check` (const [shared\\_ptr](#)< `_Tp` > &\_\_p)

#### 5.262.1 Detailed Description

Shared state between a [promise](#) and one or more associated futures.

Definition at line 262 of file `future`.

The documentation for this class was generated from the following file:

- [future](#)

## 5.263 `std::__is_location_invariant< _Tp >` Struct Template Reference

Inheritance diagram for `std::__is_location_invariant< _Tp >`:

### Public Types

- typedef `integral_constant< bool, __v >` **type**
- typedef `bool` **value\_type**

### Static Public Attributes

- static const `bool` **value**

#### 5.263.1 Detailed Description

`template<typename _Tp> struct std::__is_location_invariant< _Tp >`

Trait identifying "location-invariant" types, meaning that the address of the object (or any of its members) will not escape. Also implies a trivial copy constructor and assignment operator.

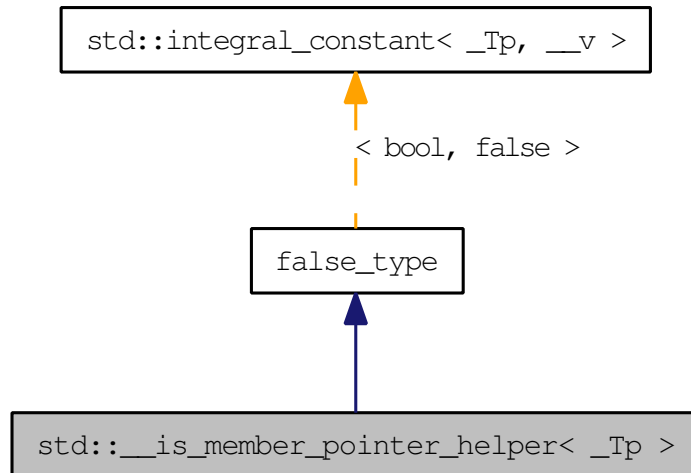

Definition at line 1420 of file `functional`.

The documentation for this struct was generated from the following file:

- [functional](#)

## 5.264 `std::__is_member_pointer_helper< _Tp >` Struct Template Reference

`is_member_pointer` Inheritance diagram for `std::__is_member_pointer_helper< _Tp >`:

### Public Types

- typedef `integral_constant< bool, __v >` **type**
- typedef `bool` **value\_type**

### Static Public Attributes

- static const `bool` **value**

#### 5.264.1 Detailed Description

```
template<typename _Tp> struct std::__is_member_pointer_helper< _Tp >
```

`is_member_pointer`

Definition at line 295 of file `tr1_impl/type_traits`.

The documentation for this struct was generated from the following file:

- [tr1\\_impl/type\\_traits](#)

## 5.265 std::\_\_numeric\_limits\_base Struct Reference

Part of `std::numeric_limits`. Inheritance diagram for `std::__numeric_limits_base`:

### Static Public Attributes

- static const int `digits`
- static const int `digits10`
- static const `float_denorm_style` `has_denorm`
- static const bool `has_denorm_loss`
- static const bool `has_infinity`
- static const bool `has_quiet_NaN`
- static const bool `has_signaling_NaN`
- static const bool `is_bounded`
- static const bool `is_exact`
- static const bool `is_iec559`
- static const bool `is_integer`
- static const bool `is_modulo`
- static const bool `is_signed`
- static const bool `is_specialized`
- static const int `max_digits10`
- static const int `max_exponent`
- static const int `max_exponent10`
- static const int `min_exponent`
- static const int `min_exponent10`
- static const int `radix`
- static const `float_round_style` `round_style`
- static const bool `tinyness_before`
- static const bool `traps`

### 5.265.1 Detailed Description

Part of [std::numeric\\_limits](#). The `static const` members are usable as integral constant expressions.

**Note:**

This is a separate class for purposes of efficiency; you should only access these members as part of an instantiation of the [std::numeric\\_limits](#) class.

Definition at line 190 of file `limits`.

### 5.265.2 Member Data Documentation

#### 5.265.2.1 `const int std::__numeric_limits_base::digits` [static]

The number of `radix` digits that be represented without change: for integer types, the number of non-sign bits in the mantissa; for floating types, the number of `radix` digits in the mantissa.

Definition at line 199 of file `limits`.

#### 5.265.2.2 `const int std::__numeric_limits_base::digits10` [static]

The number of base 10 digits that can be represented without change.

Definition at line 201 of file `limits`.

#### 5.265.2.3 `const float_denorm_style std::__numeric_limits_base::has_denorm` [static]

See [std::float\\_denorm\\_style](#) for more information.

Definition at line 244 of file `limits`.

#### 5.265.2.4 `const bool std::__numeric_limits_base::has_denorm_loss` [static]

*True if loss of accuracy is detected as a denormalization loss, rather than as an inexact result. [18.2.1.2]/42*

Definition at line 247 of file `limits`.

**5.265.2.5 const bool std::\_\_numeric\_limits\_base::has\_infinity [static]**

True if the type has a representation for positive infinity.

Definition at line 236 of file limits.

**5.265.2.6 const bool std::\_\_numeric\_limits\_base::has\_quiet\_NaN [static]**

True if the type has a representation for a quiet (non-signaling) *Not a Number*.

Definition at line 239 of file limits.

**5.265.2.7 const bool std::\_\_numeric\_limits\_base::has\_signaling\_NaN [static]**

True if the type has a representation for a signaling *Not a Number*.

Definition at line 242 of file limits.

**5.265.2.8 const bool std::\_\_numeric\_limits\_base::is\_bounded [static]**

*True if the set of values representable by the type is finite. All built-in types are bounded, this member would be false for arbitrary precision types. [18.2.1.2]/54*

Definition at line 255 of file limits.

**5.265.2.9 const bool std::\_\_numeric\_limits\_base::is\_exact [static]**

*True if the type uses an exact representation. All integer types are exact, but not all exact types are integer. For example, rational and fixed-exponent representations are exact but not integer. [18.2.1.2]/15*

Definition at line 216 of file limits.

**5.265.2.10 const bool std::\_\_numeric\_limits\_base::is\_iec559 [static]**

True if-and-only-if the type adheres to the IEC 559 standard, also known as IEEE 754. (Only makes sense for floating point types.)

Definition at line 251 of file limits.

**5.265.2.11 const bool std::\_\_numeric\_limits\_base::is\_integer [static]**

True if the type is integer. Is this supposed to be *if the type is integral?*

Definition at line 211 of file limits.

#### **5.265.2.12** `const bool std::__numeric_limits_base::is_modulo` `[static]`

True if the type is *modulo*, that is, if it is possible to add two positive numbers and have a result that wraps around to a third number that is [less](#). Typically false for floating types, true for unsigned integers, and true for signed integers.

Definition at line 260 of file limits.

#### **5.265.2.13** `const bool std::__numeric_limits_base::is_signed` `[static]`

True if the type is signed.

Definition at line 208 of file limits.

#### **5.265.2.14** `const bool std::__numeric_limits_base::is_specialized` `[static]`

This will be true for all fundamental types (which have specializations), and false for everything else.

Definition at line 194 of file limits.

#### **5.265.2.15** `const int std::__numeric_limits_base::max_digits10` `[static]`

The number of base 10 digits required to ensure that values which differ are always differentiated.

Definition at line 205 of file limits.

#### **5.265.2.16** `const int std::__numeric_limits_base::max_exponent` `[static]`

The maximum positive integer such that `radix` raised to the power of (one [less](#) than that integer) is a representable finite floating point number.

Definition at line 230 of file limits.

#### **5.265.2.17** `const int std::__numeric_limits_base::max_exponent10` `[static]`

The maximum positive integer such that 10 raised to that power is in the range of representable finite floating point numbers.

Definition at line 233 of file limits.

**5.265.2.18 const int std::\_\_numeric\_limits\_base::min\_exponent [static]**

The minimum negative integer such that `radix` raised to the power of (one less than that integer) is a normalized floating point number.

Definition at line 223 of file `limits`.

**5.265.2.19 const int std::\_\_numeric\_limits\_base::min\_exponent10 [static]**

The minimum negative integer such that 10 raised to that power is in the range of normalized floating point numbers.

Definition at line 226 of file `limits`.

**5.265.2.20 const int std::\_\_numeric\_limits\_base::radix [static]**

For integer types, specifies the base of the representation. For floating types, specifies the base of the exponent representation.

Definition at line 219 of file `limits`.

**5.265.2.21 const float\_round\_style std::\_\_numeric\_limits\_base::round\_style [static]**

See `std::float_round_style` for more information. This is only meaningful for floating types; integer types will all be `round_toward_zero`.

Definition at line 269 of file `limits`.

**5.265.2.22 const bool std::\_\_numeric\_limits\_base::tinyness\_before [static]**

True if tininess is detected before rounding. (see IEC 559)

Definition at line 265 of file `limits`.

**5.265.2.23 const bool std::\_\_numeric\_limits\_base::traps [static]**

True if trapping is implemented for this type.

Definition at line 263 of file `limits`.

The documentation for this struct was generated from the following file:

- [limits](#)

## 5.266 `std::__parallel::_CRandNumber< _MustBeInt >` Struct Template Reference

Functor wrapper for `std::rand()`.

### Public Member Functions

- `int operator() (int __limit)`

#### 5.266.1 Detailed Description

```
template<typename _MustBeInt = int> struct std::__parallel::_
CRandNumber<_MustBeInt >
```

Functor wrapper for `std::rand()`.

Definition at line 1656 of file `algo.h`.

The documentation for this struct was generated from the following file:

- [algo.h](#)

## 5.267 `std::__profile::bitset<_Nb>` Class Template Reference

Class `std::bitset` wrapper with performance instrumentation.

Inherits `bitset<_Nb>`.

### 5.282.1 Detailed Description

`template<typename _Tp, typename _Alloc> class std::_Deque_base< _Tp, _Alloc >`

Deque base class. This class provides the unified face for deque's allocation. This class's constructor and destructor allocate and deallocate (but do not initialize) storage. This makes exception safety easier.

Nothing in this class ever constructs or destroys an actual `Tp` element. (Deque handles that itself.) Only/All memory management is performed here.

Definition at line 436 of file `stl_deque.h`.

### 5.282.2 Member Function Documentation

**5.282.2.1** `template<typename _Tp, typename _Alloc > void std::_Deque_base< _Tp, _Alloc >::_M_initialize_map (size_t num_elements) [inline, protected]`

Layout storage.

#### Parameters:

*num\_elements* The count of `T`'s for which to allocate space at first.

#### Returns:

Nothing.

The initial underlying memory layout is a bit complicated...

Definition at line 568 of file `stl_deque.h`.

References `std::max()`.

Referenced by `std::deque<_Tp, _Alloc >::_M_range_initialize()`.

The documentation for this class was generated from the following file:

- [stl\\_deque.h](#)

## 5.283 `std::_Deque_iterator< _Tp, _Ref, _Ptr >` Struct Template Reference

A `deque::iterator`. Inheritance diagram for `std::_Deque_iterator< _Tp, _Ref, _Ptr >`:

### Public Types

- typedef `_Tp **` **Map\_pointer**
- typedef `_Deque_iterator` **Self**
- typedef `_Deque_iterator< _Tp, const _Tp &, const _Tp * >` **const\_iterator**
- typedef `ptrdiff_t` **difference\_type**
- typedef `_Deque_iterator< _Tp, _Tp &, _Tp * >` **iterator**
- typedef `std::random_access_iterator_tag` **iterator\_category**
- typedef `_Ptr` **pointer**
- typedef `_Ref` **reference**
- typedef `size_t` **size\_type**
- typedef `_Tp` **value\_type**

### Public Member Functions

- [\\_Tp](#) \* **\_M\_first**
- [\\_Tp](#) \* **\_M\_last**
- [\\_Map\\_pointer](#) **\_M\_node**

### 5.283.1 Detailed Description

`template<typename _Tp, typename _Ref, typename _Ptr> struct std::_Deque_iterator< _Tp, _Ref, _Ptr >`

A deque::iterator. Quite a bit of intelligence here. Much of the functionality of [deque](#) is actually passed off to this class. A [deque](#) holds two of these internally, marking its valid range. Access to elements is done as offsets of either of those two, relying on operator overloading in this class.

All the functions are op overloads except for `_M_set_node`.

Definition at line 103 of file `stl_deque.h`.

### 5.283.2 Member Function Documentation

**5.283.2.1** `template<typename _Tp, typename _Ref, typename _Ptr> void std::_Deque_iterator< _Tp, _Ref, _Ptr >::_M_set_node (_Map_pointer __new_node) [inline]`

Prepares to traverse `new_node`. Sets everything except `_M_cur`, which should therefore be [set](#) by the caller immediately afterwards, based on `_M_first` and `_M_last`.

Definition at line 231 of file `stl_deque.h`.

The documentation for this struct was generated from the following file:

- [stl\\_deque.h](#)

## 5.284 std::\_Derives\_from\_binary\_function< \_Tp > Struct Template Reference

### **5.284 std::\_Derives\_from\_binary\_function< \_Tp > Struct Template Reference**

Determines if the type `_Tp` derives from [binary\\_function](#).

Inherits `std::__sfinae_types`.

#### **Public Types**

- typedef char `__one`

#### **Static Public Attributes**

- static const bool `value`

#### **5.284.1 Detailed Description**

**template<typename \_Tp> struct std::\_Derives\_from\_binary\_function< \_Tp >**

Determines if the type `_Tp` derives from [binary\\_function](#).

Definition at line 201 of file `functional`.

The documentation for this struct was generated from the following file:

- [functional](#)

## 5.285 `std::_Derives_from_unary_function< _Tp >` Struct Template Reference

Determines if the type `_Tp` derives from [unary\\_function](#).

Inherits `std::__sfinae_types`.

### Public Types

- typedef char `__one`

### Static Public Attributes

- static const bool `value`

### 5.285.1 Detailed Description

`template<typename _Tp> struct std::_Derives_from_unary_function< _Tp >`

Determines if the type `_Tp` derives from [unary\\_function](#).

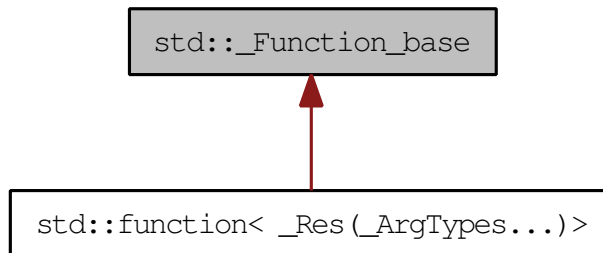

Definition at line 185 of file `functional`.

The documentation for this struct was generated from the following file:

- [functional](#)

## 5.286 `std::_Function_base` Class Reference

Base class of all polymorphic function object wrappers. Inheritance diagram for `std::_Function_base`:

### Public Types

- `typedef bool(* _Manager_type )(_Any_data &, const _Any_data &, _Manager_operation)`

### Public Member Functions

- `bool _M_empty () const`

### Public Attributes

- `_Any_data _M_functor`
- `_Manager_type _M_manager`

### Static Public Attributes

- `static const std::size_t _M_max_align`
- `static const std::size_t _M_max_size`

#### 5.286.1 Detailed Description

Base class of all polymorphic function object wrappers.

Definition at line 1498 of file `functional`.

The documentation for this class was generated from the following file:

- [functional](#)

**5.287** `std::_Function_to_function_pointer< _Tp, _IsFunctionType > Struct`  
Template Reference 1533

---

## **5.287** `std::_Function_to_function_pointer< _Tp, _IsFunctionType > Struct` Template Reference

Turns a function type into a function pointer type.

### **Public Types**

- `typedef _Tp type`

### **5.287.1 Detailed Description**

```
template<typename _Tp, bool _IsFunctionType = is_function<_Tp>::value>
struct std::_Function_to_function_pointer< _Tp, _IsFunctionType >
```

Turns a function type into a function pointer type.

Definition at line 217 of file functional.

The documentation for this struct was generated from the following file:

- [functional](#)

## 5.288 `std::_Fwd_list_base< _Tp, _Alloc >` Struct Template Reference

Base class for `forward_list`. Inheritance diagram for `std::_Fwd_list_base< _Tp, _Alloc >`:

### Public Types

- typedef `_Fwd_list_node< _Tp, _Tp_alloc_type > _Node`
- typedef `_Fwd_list_node_base< _Tp_alloc_type > _Node_base`
- typedef `_Fwd_list_const_iterator< _Tp, _Tp_alloc_type > const_iterator`
- typedef `_Fwd_list_iterator< _Tp, _Tp_alloc_type > iterator`

### Public Member Functions

- `_Fwd_list_base (_Fwd_list_base &&__lst)`
- `_Fwd_list_base (_Fwd_list_base &&__lst, const _Alloc &__a)`
- `_Fwd_list_base (const _Fwd_list_base &__lst, const _Alloc &__a)`
- `_Fwd_list_base (const _Alloc &__a)`
- `const _Node_alloc_type & _M_get_Node_allocator () const`
- `_Node_alloc_type & _M_get_Node_allocator ()`

### Protected Types

- typedef `_Alloc::template rebind< _Fwd_list_node< _Tp, _Tp_alloc_type > >::other _Node_alloc_type`
- typedef `_Alloc::template rebind< _Tp >::other _Tp_alloc_type`

## Protected Member Functions

- `template<typename... _Args> _Node::_Pointer M_create_node (_Args &&... __args)`
- `void M_erase_after (typename _Node_base::_Pointer __pos, typename _Node_base::_Pointer __last)`
- `void M_erase_after (typename _Node_base::_Pointer __pos)`

- `template<typename... _Args> _Node_base::_Pointer M_insert_after (const_iterator __pos, _Args &&... __args)`
- `void M_put_node (typename _Node::_Pointer __p)`

## Protected Attributes

- `_Fwd_list_impl M_impl`

### 5.288.1 Detailed Description

`template<typename _Tp, typename _Alloc> struct std::Fwd_list_base< _Tp, _Alloc >`

Base class for forward\_list.

Definition at line 254 of file forward\_list.h.

The documentation for this struct was generated from the following files:

- [forward\\_list.h](#)
- [forward\\_list.tcc](#)

## 5.289 `std::_Fwd_list_const_iterator< _Tp, _Alloc >` Struct Template Reference

A `forward_list::const_iterator`.

### Public Types

- `typedef const _Fwd_list_node< _Tp, _Alloc > _Node`
- `typedef const _Fwd_list_node_base< _Alloc > _Node_base`
- `typedef _Fwd_list_const_iterator< _Tp, _Alloc > _Self`
- `typedef _Alloc::difference_type difference_type`
- `typedef _Fwd_list_iterator< _Tp, _Alloc > iterator`
- `typedef std::forward\_iterator\_tag iterator_category`
- `typedef _Alloc::const_pointer pointer`
- `typedef _Alloc::const_reference reference`
- `typedef _Tp value_type`

### Public Member Functions

- `_Fwd_list_const_iterator` (const [iterator](#) &\_\_iter)
- `_Fwd_list_const_iterator` (typename `_Node_base::_Const_pointer` \_\_n)
- `_Self _M_next` () const
- `bool operator!=` (const `_Self` &\_\_x) const
- `reference operator*` () const
- `_Self operator++` (int)
- `_Self & operator++` ()
- `pointer operator->` () const
- `bool operator==` (const `_Self` &\_\_x) const

### Public Attributes

- `_Node_base::_Const_pointer` `_M_node`

#### 5.289.1 Detailed Description

```
template<typename _Tp, typename _Alloc> struct std::_Fwd_list_const_iterator< _Tp, _Alloc >
```

A `forward_list::const_iterator`. All the functions are op overloads.

Definition at line 167 of file `forward_list.h`.

The documentation for this struct was generated from the following file:

**5.289 std::\_Fwd\_list\_const\_iterator<\_Tp, \_Alloc > Struct Template Reference**

- [forward\\_list.h](#)

## 5.290 `std::_Fwd_list_iterator< _Tp, _Alloc >` Struct Template Reference

A `forward_list::iterator`.

### Public Types

- typedef `_Fwd_list_node< _Tp, _Alloc >` `_Node`
- typedef `_Fwd_list_node_base< _Alloc >` `_Node_base`
- typedef `_Fwd_list_iterator< _Tp, _Alloc >` `_Self`
- typedef `_Alloc::difference_type` `difference_type`
- typedef `std::forward_iterator_tag` `iterator_category`
- typedef `_Alloc::pointer` `pointer`
- typedef `_Alloc::reference` `reference`
- typedef `_Tp` `value_type`

### Public Member Functions

- `_Fwd_list_iterator` (typename `_Node_base::_Pointer __n`)
- `_Self _M_next` () const
- bool `operator!=` (const `_Self` &\_\_x) const
- reference `operator*` () const
- `_Self operator++` (int)
- `_Self & operator++` ()
- pointer `operator->` () const
- bool `operator==` (const `_Self` &\_\_x) const

### Public Attributes

- `_Node_base::_Pointer _M_node`

#### 5.290.1 Detailed Description

```
template<typename _Tp, typename _Alloc> struct std::_Fwd_list_iterator< _-
Tp, _Alloc >
```

A `forward_list::iterator`. All the functions are op overloads.

Definition at line 100 of file `forward_list.h`.

The documentation for this struct was generated from the following file:

- [forward\\_list.h](#)

## 5.291 `std::_Fwd_list_node< _Tp, _Alloc >` Struct Template Reference

A helper node class for `forward_list`. This is just a linked [list](#) with a data value in each node. There is a sorting utility method. Inheritance diagram for `std::_Fwd_list_node< _Tp, _Alloc >`:

### Public Types

- typedef `_Alloc::template rebind< \_Fwd\_list\_node\_base< _Alloc >>::other::const_pointer` **\_Const\_pointer**
- typedef `_Alloc::template rebind< \_Fwd\_list\_node< _Tp, _Alloc >>::other::pointer` **\_Pointer**

### Public Member Functions

- `template<typename... _Args> \_Fwd\_list\_node (_Args &&... __args)`
- `void \_M\_reverse\_after ()`
- `void \_M\_transfer\_after (_Pointer __bbegin, _Pointer __bend)`
- `void \_M\_transfer\_after (_Pointer __bbegin)`

### Static Public Member Functions

- `static void swap (\_Fwd\_list\_node\_base &__x, \_Fwd\_list\_node\_base &__y)`

### Public Attributes

- `_Pointer \_M\_next`
- `_Tp \_M\_value`

### 5.291.1 Detailed Description

```
template<typename _Tp, typename _Alloc> struct std::_Fwd_list_node< _Tp,
_Alloc >
```

A helper node class for `forward_list`. This is just a linked [list](#) with a data value in each node. There is a sorting utility method.

Definition at line 81 of file `forward_list.h`.

The documentation for this struct was generated from the following file:

- [forward\\_list.h](#)

## 5.292 `std::_Fwd_list_node_base<_Alloc>` Struct Template Reference

A helper basic node class for `forward_list`. This is just a linked `list` with nothing inside it. There are purely `list` shuffling utility methods here. Inheritance diagram for `std::_Fwd_list_node_base<_Alloc>`:

### Public Types

- typedef `_Alloc::template rebind<_Fwd_list_node_base<_Alloc>>::other::const_pointer` **\_Const\_pointer**
- typedef `_Alloc::template rebind<_Fwd_list_node_base<_Alloc>>::other::pointer` **\_Pointer**

### Public Member Functions

- void **\_M\_reverse\_after** ()
- void **\_M\_transfer\_after** (\_Pointer \_\_bbegin, \_Pointer \_\_bend)
- void **\_M\_transfer\_after** (\_Pointer \_\_bbegin)

### Static Public Member Functions

- static void **swap** (\_Fwd\_list\_node\_base &\_\_x, \_Fwd\_list\_node\_base &\_\_y)

### Public Attributes

- `_Pointer` **\_M\_next**

### 5.292.1 Detailed Description

**template<typename \_Alloc> struct std::\_Fwd\_list\_node\_base< \_Alloc >**

A helper basic node class for `forward_list`. This is just a linked [list](#) with nothing inside it. There are purely [list](#) shuffling utility methods here.

Definition at line 49 of file `forward_list.h`.

The documentation for this struct was generated from the following files:

- [forward\\_list.h](#)
- [forward\\_list.tcc](#)

## 5.293 `std::_Has_result_type_helper<_Tp>` Class Template Reference

Inherits `std::_sfnaf_types`.

### Static Public Attributes

- static const bool **value**

### Private Types

- typedef char **\_\_one**

### 5.293.1 Detailed Description

`template<typename _Tp> class std::_Has_result_type_helper<_Tp>`

Actual implementation of `_Has_result_type`, which uses SFINAE to determine if the type `_Tp` has a publicly-accessible member type `result_type`.

Definition at line 72 of file `functional`.

The documentation for this class was generated from the following file:

- [functional](#)

## 5.294 `std::_Index_tuple< _Indexes >` Struct Template Reference

### Public Types

- typedef `_Index_tuple< _Indexes..., sizeof...(_Indexes)> __next`

### 5.294.1 Detailed Description

`template<int... _Indexes> struct std::_Index_tuple< _Indexes >`

Stores a [tuple](#) of indices. Used by [bind\(\)](#) to extract the elements in a [tuple](#).

Definition at line 853 of file `functional`.

The documentation for this struct was generated from the following file:

- [functional](#)

## 5.295 `std::_List_base< _Tp, _Alloc >` Class Template Reference

See [bits/stl\\_deque.h's `\_Deque\_base`](#) for an explanation. Inheritance diagram for `std::_List_base< _Tp, _Alloc >`:

### Public Types

- typedef `_Alloc` **allocator\_type**

### Public Member Functions

- `_List_base` (`_List_base` &&\_x)
- `_List_base` (const `allocator_type` &\_a)
- void `_M_clear` ()
- const `_Node_alloc_type` & `_M_get_Node_allocator` () const
- `_Node_alloc_type` & `_M_get_Node_allocator` ()
- `_Tp_alloc_type` `_M_get_Tp_allocator` () const
- void `_M_init` ()
- `allocator_type` `get_allocator` () const

### Protected Types

- typedef `_Alloc::template rebind< \_List\_node< _Tp > >::other` **\_Node\_alloc\_type**
- typedef `_Alloc::template rebind< _Tp >::other` **\_Tp\_alloc\_type**

### Protected Member Functions

- `_List_node`< `_Tp` > \* `_M_get_node` ()
- void `_M_put_node` (`_List_node`< `_Tp` > \*\_\_p)

## Protected Attributes

- `_List_impl` `_M_impl`

### 5.295.1 Detailed Description

```
template<typename _Tp, typename _Alloc> class std::_List_base< _Tp, _Alloc
>
```

See [bits/stl\\_deque.h](#)'s `_Deque_base` for an explanation.

Definition at line 277 of file `stl_list.h`.

The documentation for this class was generated from the following files:

- [stl\\_list.h](#)
- [list.tcc](#)

## 5.296 `std::_List_const_iterator< _Tp >` Struct Template Reference

A `list::const_iterator`.

### Public Types

- typedef `const _List_node< _Tp > _Node`
- typedef `_List_const_iterator< _Tp > _Self`
- typedef `ptrdiff_t difference_type`
- typedef `_List_iterator< _Tp > iterator`
- typedef `std::bidirectional_iterator_tag iterator_category`
- typedef `const _Tp * pointer`
- typedef `const _Tp & reference`
- typedef `_Tp value_type`

### Public Member Functions

- `_List_const_iterator` (`const iterator &__x`)
- `_List_const_iterator` (`const _List_node_base *__x`)
- `bool operator!=(const _Self &__x) const`
- `reference operator* () const`
- `_Self operator++ (int)`
- `_Self & operator++ ()`
- `_Self operator-- (int)`
- `_Self & operator-- ()`
- `pointer operator-> () const`
- `bool operator==(const _Self &__x) const`

### Public Attributes

- `const _List_node_base * _M_node`

#### 5.296.1 Detailed Description

```
template<typename _Tp> struct std::_List_const_iterator< _Tp >
```

A `list::const_iterator`. All the functions are op overloads.

Definition at line 188 of file `stl_list.h`.

The documentation for this struct was generated from the following file:

- [stl\\_list.h](#)

## 5.297 `std::_List_iterator<_Tp>` Struct Template Reference

A list::iterator.

### Public Types

- typedef `_List_node<_Tp>` `_Node`
- typedef `_List_iterator<_Tp>` `_Self`
- typedef `ptrdiff_t` `difference_type`
- typedef `std::bidirectional_iterator_tag` `iterator_category`
- typedef `_Tp *` `pointer`
- typedef `_Tp &` `reference`
- typedef `_Tp` `value_type`

### Public Member Functions

- `_List_iterator` (`_List_node_base *__x`)
- `bool operator!=` (`const _Self &__x`) `const`
- `reference operator*` () `const`
- `_Self operator++` (`int`)
- `_Self & operator++` ()
- `_Self operator--` (`int`)
- `_Self & operator--` ()
- `pointer operator->` () `const`
- `bool operator==` (`const _Self &__x`) `const`

### Public Attributes

- `_List_node_base * _M_node`

#### 5.297.1 Detailed Description

```
template<typename _Tp> struct std::_List_iterator<_Tp>
```

A list::iterator. All the functions are op overloads.

Definition at line 113 of file `stl_list.h`.

The documentation for this struct was generated from the following file:

- [stl\\_list.h](#)

## 5.298 `std::_List_node< _Tp >` Struct Template Reference

An actual node in the list. Inheritance diagram for `std::_List_node< _Tp >`:

### Public Member Functions

- `template<typename... _Args> _List_node (_Args &&...__args)`
- `void _M_hook (_List_node_base *const __position) throw ()`
- `void _M_reverse () throw ()`
- `void _M_transfer (_List_node_base *const __first, _List_node_base *const __last) throw ()`
- `void _M_unhook () throw ()`

### Static Public Member Functions

- `static void swap (_List_node_base &__x, _List_node_base &__y) throw ()`

### Public Attributes

- `_Tp _M_data`
- `_List_node_base * _M_next`
- `_List_node_base * _M_prev`

#### 5.298.1 Detailed Description

```
template<typename _Tp> struct std::_List_node< _Tp >
```

An actual node in the list.

Definition at line 95 of file stl\_list.h.

## **5.298.2 Member Data Documentation**

### **5.298.2.1 template<typename \_Tp> \_Tp std::\_List\_node< \_Tp >::\_M\_data**

< User's data.

Definition at line 98 of file stl\_list.h.

The documentation for this struct was generated from the following file:

- [stl\\_list.h](#)

## 5.299 std::\_List\_node\_base Struct Reference

Common part of a node in the list. Inheritance diagram for std::\_List\_node\_base:

### Public Member Functions

- `void _M_hook (_List_node_base *const __position) throw ()`
- `void _M_reverse () throw ()`
- `void _M_transfer (_List_node_base *const __first, _List_node_base *const __last) throw ()`
- `void _M_unhook () throw ()`

### Static Public Member Functions

- `static void swap (_List_node_base &__x, _List_node_base &__y) throw ()`

### Public Attributes

- `_List_node_base * _M_next`
- `_List_node_base * _M_prev`

### 5.299.1 Detailed Description

Common part of a node in the list.

Definition at line 71 of file `stl_list.h`.

The documentation for this struct was generated from the following file:

- [stl\\_list.h](#)

## 5.300 `std::_Maybe_get_result_type<_Has_result_type, _Funcor > Struct` Template Reference

If we have found a `result_type`, extract it. Inheritance diagram for `std::_Maybe_get_result_type<_Has_result_type, _Funcor >`:

### 5.300.1 Detailed Description

```
template<bool _Has_result_type, typename _Funcor> struct std::_Maybe_get_result_type<_Has_result_type, _Funcor >
```

If we have found a `result_type`, extract it.

Definition at line 96 of file `functional`.

The documentation for this struct was generated from the following file:

- [functional](#)

### 5.301 `std::_Maybe_unary_or_binary_function<_Res, _ArgTypes>` Struct Template Reference

Inheritance diagram for `std::_Maybe_unary_or_binary_function<_Res, _ArgTypes>`:

#### 5.301.1 Detailed Description

`template<typename _Res, typename... _ArgTypes> struct std::_Maybe_unary_or_binary_function<_Res, _ArgTypes>`

Derives from `unary_function` or `binary_function`, or perhaps nothing, depending on the number of arguments provided. The primary template is the basis case, which derives nothing.

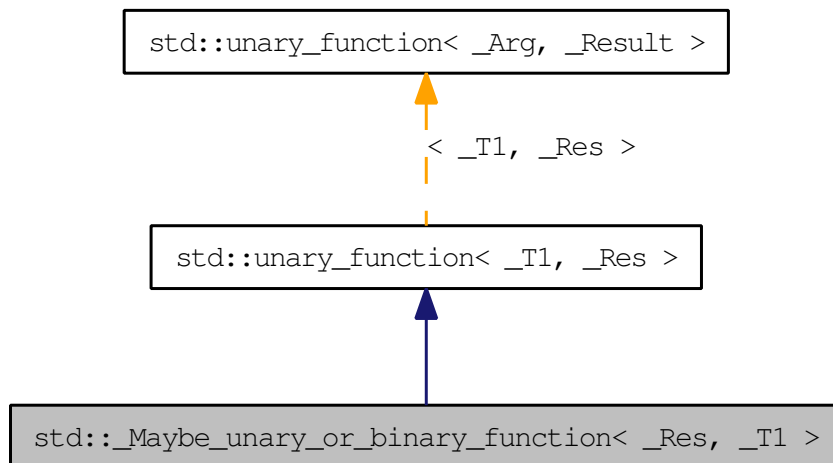

Definition at line 480 of file `functional`.

The documentation for this struct was generated from the following file:

- [functional](#)

## 5.302 `std::_Maybe_unary_or_binary_function<_Res, _T1>` Struct Template Reference

Derives from `unary_function`, as appropriate. Inheritance diagram for `std::_Maybe_unary_or_binary_function<_Res, _T1>`:

### Public Types

- typedef `_T1` `argument_type`
- typedef `_Res` `result_type`

### 5.302.1 Detailed Description

```
template<typename _Res, typename _T1> struct std::_Maybe_unary_or_binary_function<_Res, _T1>
```

Derives from `unary_function`, as appropriate.

Definition at line 484 of file `functional`.

### 5.302.2 Member Typedef Documentation

**5.302.2.1** typedef `_T1` `std::unary_function<_T1, _Res>::argument_type` [inherited]

`argument_type` is the type of the argument (no surprises here)

Definition at line 102 of file stl\_function.h.

**5.302.2.2** `typedef _Res std::unary_function< _T1 , _Res >::result_type`  
`[inherited]`

`result_type` is the return type

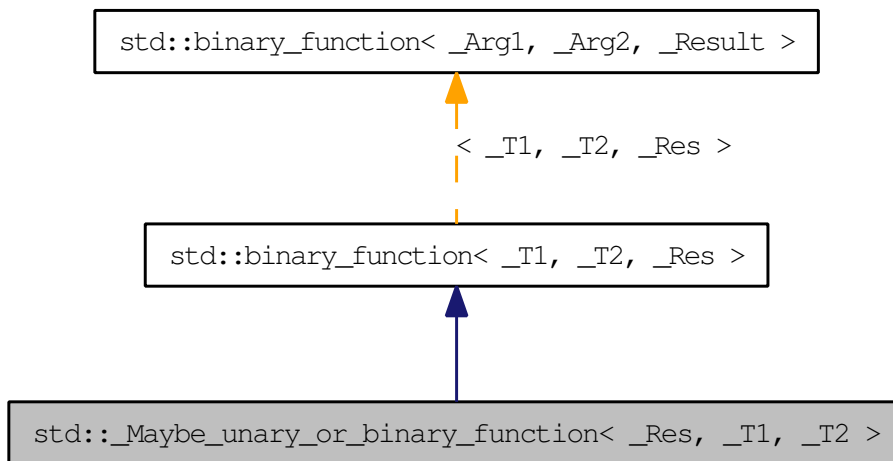

Definition at line 105 of file stl\_function.h.

The documentation for this struct was generated from the following file:

- [functional](#)

### 5.303 `std::_Maybe_unary_or_binary_function<_Res, _T1, _T2>` Struct Template Reference

Derives from `binary_function`, as appropriate. Inheritance diagram for `std::_Maybe_unary_or_binary_function<_Res, _T1, _T2>`:

#### Public Types

- typedef `_T1` `first_argument_type`
- typedef `_Res` `result_type`
- typedef `_T2` `second_argument_type`

#### 5.303.1 Detailed Description

```
template<typename _Res, typename _T1, typename _T2> struct std::_Maybe_unary_or_binary_function<_Res, _T1, _T2 >
```

Derives from `binary_function`, as appropriate.

Definition at line 489 of file `functional`.

### 5.303.2 Member Typedef Documentation

**5.303.2.1** `typedef _T1 std::binary_function< _T1 , _T2 , _Res  
>::first_argument_type [inherited]`

the type of the first argument (no surprises here)

Definition at line 114 of file `stl_function.h`.

**5.303.2.2** `typedef _Res std::binary_function< _T1 , _T2 , _Res >::result_type  
[inherited]`

type of the return type

Definition at line 118 of file `stl_function.h`.

**5.303.2.3** `typedef _T2 std::binary_function< _T1 , _T2 , _Res  
>::second_argument_type [inherited]`

the type of the second argument

Definition at line 117 of file `stl_function.h`.

The documentation for this struct was generated from the following file:

- [functional](#)

## 5.304 `std::_Maybe_wrap_member_pointer<_Tp>` Struct Template Reference 1559

### **5.304 `std::_Maybe_wrap_member_pointer<_Tp>` Struct Template Reference**

#### **Public Types**

- typedef `_Tp` type

#### **Static Public Member Functions**

- static const `_Tp & __do_wrap` (`const _Tp &__x`)

#### **5.304.1 Detailed Description**

`template<typename _Tp> struct std::_Maybe_wrap_member_pointer<_Tp>`

Maps member pointers into instances of `_Mem_fn` but leaves all other function objects untouched. Used by `tr1::bind()`. The primary template handles the non--member-pointer case.

Definition at line 1048 of file `functional`.

The documentation for this struct was generated from the following file:

- [functional](#)

## 5.305 `std::_Maybe_wrap_member_pointer< _Tp _Class::* >` Struct Template Reference

### Public Types

- `typedef _Mem_fn< _Tp _Class::* > type`

### Static Public Member Functions

- static type `__do_wrap (_Tp _Class::* __pm)`

#### 5.305.1 Detailed Description

`template<typename _Tp, typename _Class> struct std::_Maybe_wrap_member_pointer< _Tp _Class::* >`

Maps member pointers into instances of `_Mem_fn` but leaves all other function objects untouched. Used by `tr1::bind()`. This partial specialization handles the member pointer case.

Definition at line 1063 of file `functional`.

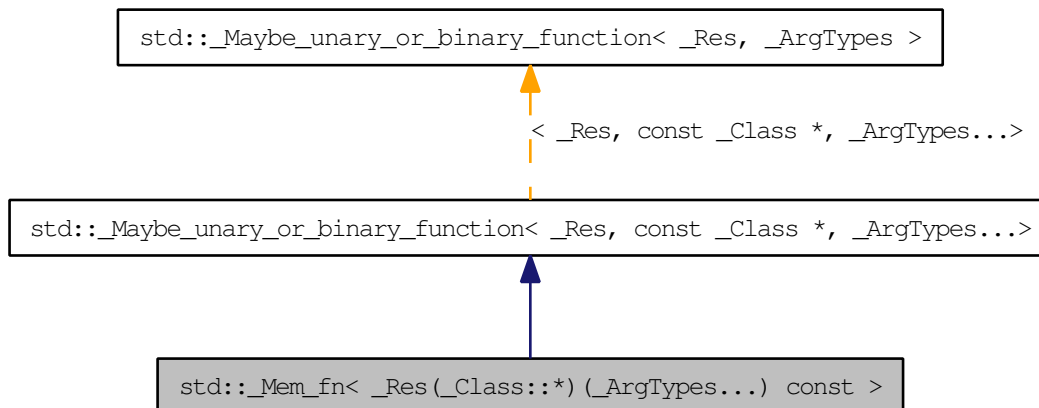

The documentation for this struct was generated from the following file:

- [functional](#)

## 5.306 `std::_Mem_fn< _Res(_Class::*)(_ArgTypes...) const >` Class Template Reference

Implementation of `mem_fn` for const member function pointers. Inheritance diagram for `std::_Mem_fn< _Res(_Class::*)(_ArgTypes...) const >`:

### Public Types

- typedef `_Res` `result_type`

### Public Member Functions

- `_Mem_fn` (`_Function __pmf`)
- `template<typename _Tp > _Res operator() (_Tp &__object, _ArgTypes... __args) const`
- `_Res operator() (const _Class *__object, _ArgTypes... __args) const`
- `_Res operator() (const _Class &__object, _ArgTypes... __args) const`

#### 5.306.1 Detailed Description

`template<typename _Res, typename _Class, typename... _ArgTypes> class std::_Mem_fn< _Res(_Class::*)(_ArgTypes...) const >`

Implementation of `mem_fn` for const member function pointers.

Definition at line 537 of file `functional`.

The documentation for this class was generated from the following file:

- [functional](#)

**5.307 std::\_Mem\_fn< \_Res(\_Class::\*)(\_ArgTypes...) const volatile > Class  
Template Reference 1563**

Implementation of mem\_fn for const volatile member function pointers. Inheritance diagram for std::\_Mem\_fn< \_Res(\_Class::\*)(\_ArgTypes...) const volatile >:

**Public Types**

- typedef \_Res result\_type

**Public Member Functions**

- **\_Mem\_fn** (\_Funcor \_\_pmf)
- template<typename \_Tp > **\_Res operator**() (\_Tp &\_\_object, \_ArgTypes...\_\_args) const
- **\_Res operator**() (const volatile \_Class \*\_\_object, \_ArgTypes...\_\_args) const
- **\_Res operator**() (const volatile \_Class &\_\_object, \_ArgTypes...\_\_args) const

**5.307.1 Detailed Description**

**template<typename \_Res, typename \_Class, typename... \_ArgTypes> class  
std::\_Mem\_fn< \_Res(\_Class::\*)(\_ArgTypes...) const volatile >**

Implementation of mem\_fn for const volatile member function pointers.

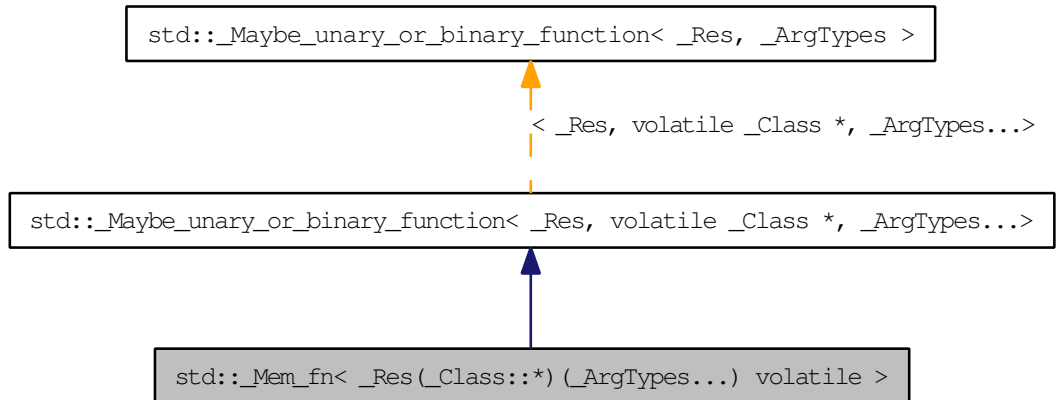

Definition at line 624 of file functional.

The documentation for this class was generated from the following file:

- [functional](#)

### 5.308 `std::_Mem_fn< _Res(_Class::*)(_ArgTypes...) volatile >` Class Template Reference

Implementation of `mem_fn` for volatile member function pointers. Inheritance diagram for `std::_Mem_fn< _Res(_Class::*)(_ArgTypes...) volatile >`:

#### Public Types

- typedef `_Res` **result\_type**

#### Public Member Functions

- `_Mem_fn` (`_Functor __pmf`)
- `template<typename _Tp > _Res operator() (_Tp &__object, _ArgTypes... __args) const`
- `_Res operator() (volatile _Class *__object, _ArgTypes... __args) const`
- `_Res operator() (volatile _Class &__object, _ArgTypes... __args) const`

#### 5.308.1 Detailed Description

`template<typename _Res, typename _Class, typename... _ArgTypes> class std::_Mem_fn< _Res(_Class::*)(_ArgTypes...) volatile >`

Implementation of `mem_fn` for volatile member function pointers.

Definition at line 580 of file `functional`.

The documentation for this class was generated from the following file:

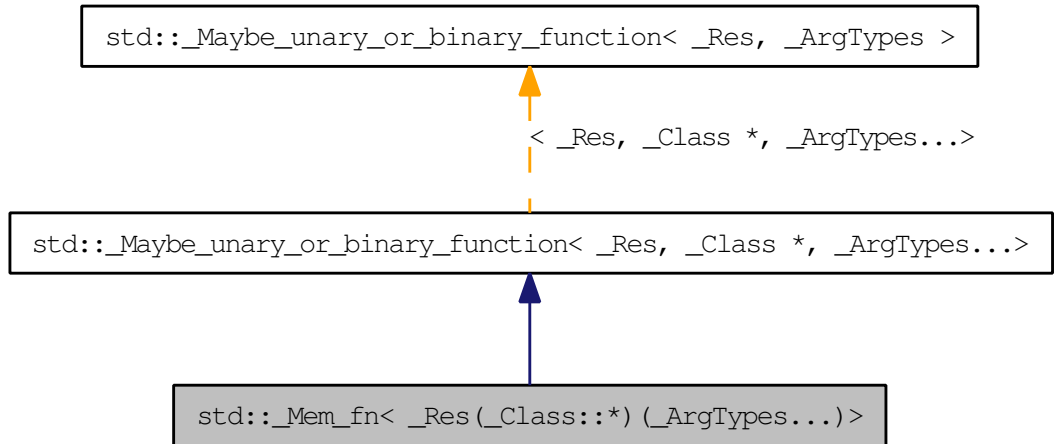

**5.308 std::\_Mem\_fn<\_Res(\_Class::\*)(\_ArgTypes...) volatile > Class Template Reference 1565**

---

- [functional](#)

### 5.309 `std::_Mem_fn<_Res(_Class::*)(_ArgTypes...)>` Class Template Reference

Implementation of `mem_fn` for member function pointers. Inheritance diagram for `std::_Mem_fn<_Res(_Class::*)(_ArgTypes...)>`:

#### Public Types

- `typedef _Res result_type`

#### Public Member Functions

- `_Mem_fn` (`_Functor __pmf`)
- `template<typename _Tp > _Res operator() (_Tp &__object, _ArgTypes... __args) const`
- `_Res operator() (_Class * __object, _ArgTypes... __args) const`
- `_Res operator() (_Class & __object, _ArgTypes... __args) const`

#### 5.309.1 Detailed Description

```
template<typename _Res, typename _Class, typename... _ArgTypes> class
std::_Mem_fn<_Res(_Class::*)(_ArgTypes...)>
```

Implementation of `mem_fn` for member function pointers.

Definition at line 494 of file `functional`.

### **5.309 std::\_Mem\_fn<\_Res(\_Class::\*)(\_ArgTypes...)> Class Template Reference**

The documentation for this class was generated from the following file:

- [functional](#)

## 5.310 `std::_Mu< _Arg, false, false >` Class Template Reference

### Public Member Functions

- `template<typename _CVArg, typename _Tuple > _CVArg && operator() (_CVArg &&__arg, _Tuple &&)` const volatile

### 5.310.1 Detailed Description

`template<typename _Arg> class std::_Mu< _Arg, false, false >`

If the argument is just a value, returns a reference to that value. The cv-qualifiers on the reference are the same as the cv-qualifiers on the `_Mu` object. [TR1 3.6.3/5 bullet 4]

Definition at line 1024 of file `functional`.

The documentation for this class was generated from the following file:

- [functional](#)

## 5.311 `std::_Mu<_Arg, false, true >` Class Template Reference

### Public Member Functions

- `template<typename _Tuple > result<_Mu(_Arg, _Tuple)>::type operator() (const volatile _Arg &, _Tuple &&__tuple) const volatile`

### 5.311.1 Detailed Description

`template<typename _Arg> class std::_Mu<_Arg, false, true >`

If the argument is a placeholder for the Nth argument, returns a reference to the Nth argument to the bind function object. [TR1 3.6.3/5 bullet 3]

Definition at line 990 of file `functional`.

The documentation for this class was generated from the following file:

- [functional](#)

## 5.312 `std::_Mu< _Arg, true, false >` Class Template Reference

### Public Member Functions

- `template<typename _CVArg, typename... _Args> result_of< _CVArg(_Args...)>::type operator() (_CVArg &__arg, tuple< _Args...> &&__tuple) const volatile`

### 5.312.1 Detailed Description

`template<typename _Arg> class std::_Mu< _Arg, true, false >`

If the argument is a bind expression, we invoke the underlying function object with the same cv-qualifiers as we are given and pass along all of our arguments (unwrapped). [TR1 3.6.3/5 bullet 2]

Definition at line 949 of file `functional`.

The documentation for this class was generated from the following file:

- [functional](#)

## 5.313 `std::_Mu< reference_wrapper< _Tp >, false, false >` Class Template Reference

### Public Types

- `typedef _Tp & result_type`

### Public Member Functions

- `template<typename _CVRef, typename _Tuple > result_type operator() (_CVRef &__arg, _Tuple &&) const volatile`

#### 5.313.1 Detailed Description

`template<typename _Tp> class std::_Mu< reference_wrapper< _Tp >, false, false >`

If the argument is `reference_wrapper<_Tp>`, returns the underlying reference. [TR1 3.6.3/5 bullet 1]

Definition at line 928 of file `functional`.

The documentation for this class was generated from the following file:

- [functional](#)

## 5.314 `std::_Placeholder< _Num >` Struct Template Reference

The type of placeholder objects defined by `libstdc++`.

### 5.314.1 Detailed Description

```
template<int _Num> struct std::_Placeholder< _Num >
```

The type of placeholder objects defined by `libstdc++`.

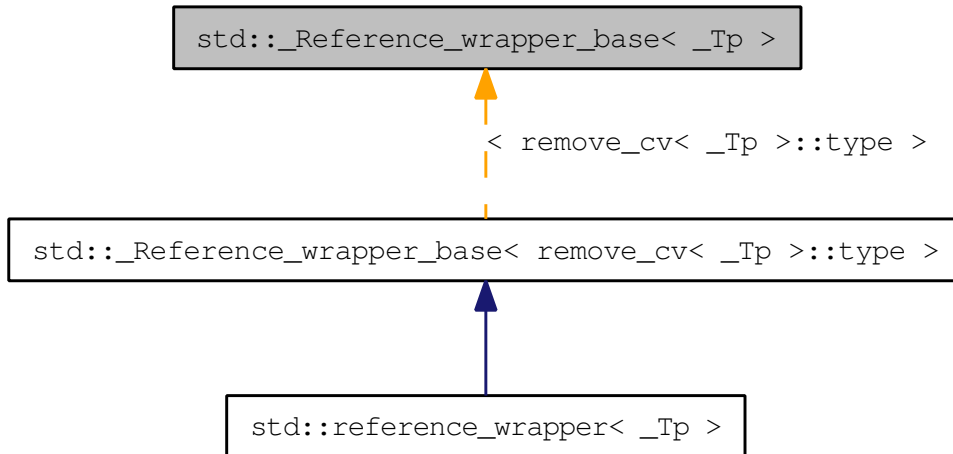

Definition at line 792 of file `functional`.

The documentation for this struct was generated from the following file:

- [functional](#)

## 5.315 `std::_Reference_wrapper_base<_Tp>` Struct Template Reference

Inheritance diagram for `std::_Reference_wrapper_base<_Tp>`:

### 5.315.1 Detailed Description

```
template<typename _Tp> struct std::_Reference_wrapper_base<_Tp>
```

Derives from [unary\\_function](#) or [binary\\_function](#) when it can. Specializations handle all of the easy cases. The primary template determines what to do with a class type, which may derive from both [unary\\_function](#) and [binary\\_function](#).

Definition at line 307 of file `functional`.

The documentation for this struct was generated from the following file:

- [functional](#)

## 5.316 `std::_Safe_tuple_element< __i, _Tuple >` Struct Template Reference

Inheritance diagram for `std::_Safe_tuple_element< __i, _Tuple >`:

### 5.316.1 Detailed Description

```
template<int __i, typename _Tuple> struct std::_Safe_tuple_element< __i, _-
Tuple >
```

Like `tuple_element`, but returns `_No_tuple_element` when `tuple_element` would return an error.

Definition at line 902 of file `functional`.

The documentation for this struct was generated from the following file:

- [functional](#)

## 5.318 `std::_Safe_tuple_element_impl< __i, _Tuple, false >` Struct Template Reference

### Public Types

- `typedef _No_tuple_element type`

### 5.318.1 Detailed Description

```
template<int __i, typename _Tuple> struct std::_Safe_tuple_element_impl< __i,
_Tuple, false >
```

Implementation helper for [\\_Safe\\_tuple\\_element](#). This partial specialization handles the case where it is not safe to use `tuple_element`. We just return `_No_tuple_element`.

Definition at line 892 of file `functional`.

The documentation for this struct was generated from the following file:

- [functional](#)

## 5.319 `std::_Temporary_buffer<_ForwardIterator, _Tp >` Class Template Reference

Inheritance diagram for `std::_Temporary_buffer<_ForwardIterator, _Tp >`:

### Public Types

- typedef pointer **iterator**
- typedef `value_type * pointer`
- typedef `ptrdiff_t size_type`
- typedef `_Tp value_type`

### Public Member Functions

- `_Temporary_buffer` (`_ForwardIterator __first, _ForwardIterator __last`)
- iterator `begin` ()
- iterator `end` ()
- `size_type requested_size` () const
- `size_type size` () const

### Protected Attributes

- pointer `_M_buffer`
- `size_type _M_len`
- `size_type _M_original_len`

### 5.319.1 Detailed Description

```
template<typename _ForwardIterator, typename _Tp> class std::_Temporary_
buffer< _ForwardIterator, _Tp >
```

This class is used in two places: [stl\\_algo.h](#) and `ext/memory`, where it is wrapped as the `temporary_buffer` class. See `temporary_buffer` docs for more notes.

Definition at line 122 of file `stl_tempbuf.h`.

### 5.319.2 Constructor & Destructor Documentation

```
5.319.2.1 template<typename _ForwardIterator , typename _Tp
> std::_Temporary_buffer< _ForwardIterator, _Tp
>::_Temporary_buffer (_ForwardIterator __first, _ForwardIterator
__last) [inline]
```

Constructs a temporary buffer of a size somewhere between zero and the size of the given range.

Definition at line 181 of file `stl_tempbuf.h`.

References `std::pair<_T1, _T2 >::first`, `std::get_temporary_buffer()`, `std::return_temporary_buffer()`, and `std::pair<_T1, _T2 >::second`.

### 5.319.3 Member Function Documentation

```
5.319.3.1 template<typename _ForwardIterator, typename _Tp> iterator
std::_Temporary_buffer< _ForwardIterator, _Tp >::begin ()
[inline]
```

As per Table mumble.

Definition at line 151 of file `stl_tempbuf.h`.

Referenced by `std::inplace_merge()`, `std::stable_partition()`, and `std::stable_sort()`.

```
5.319.3.2 template<typename _ForwardIterator, typename _Tp> iterator
std::_Temporary_buffer< _ForwardIterator, _Tp >::end ()
[inline]
```

As per Table mumble.

Definition at line 156 of file `stl_tempbuf.h`.

**5.319 std::\_Temporary\_buffer<\_ForwardIterator, \_Tp > Class Template Reference 1579**

---

**5.319.3.3** `template<typename _ForwardIterator, typename _Tp> size_type  
std::_Temporary_buffer<_ForwardIterator, _Tp >::requested_size  
() const [inline]`

Returns the size requested by the constructor; may be `>size()`.

Definition at line 146 of file `stl_tempbuf.h`.

Referenced by `std::stable_partition()`.

**5.319.3.4** `template<typename _ForwardIterator, typename _Tp> size_type  
std::_Temporary_buffer<_ForwardIterator, _Tp >::size() const  
[inline]`

As per Table mumble.

Definition at line 141 of file `stl_tempbuf.h`.

Referenced by `std::inplace_merge()`, `std::stable_partition()`, and `std::stable_sort()`.

The documentation for this class was generated from the following file:

- [stl\\_tempbuf.h](#)

## 5.320 `std::_Tuple_impl<_Idx>` Struct Template Reference

### Protected Member Functions

- `void _M_swap_impl (_Tuple_impl &)`

### 5.320.1 Detailed Description

`template<std::size_t _Idx> struct std::_Tuple_impl<_Idx>`

Zero-element [tuple](#) implementation. This is the basis case for the inheritance recursion.

Definition at line 125 of file `tuple`.

The documentation for this struct was generated from the following file:

- [tuple](#)

## 5.321 `std::_Tuple_impl<_Idx, _Head, _Tail...>` Struct Template Reference

Inherits `_Tuple_impl<_Idx+1, _Tail...>`, and `_Head_base<_Idx, _Head, std::is_empty<_Head>::value >`.

### Public Types

- `typedef _Head_base<_Idx, _Head, std::is_empty<_Head>::value > Base`
- `typedef _Tuple_impl<_Idx+1, _Tail...> Inherited`

### Public Member Functions

- `template<typename... _UElements>  
_Tuple_impl (_Tuple_impl<_Idx, _UElements...> &&__in)`
- `template<typename... _UElements>  
_Tuple_impl (const _Tuple_impl<_Idx, _UElements...> &__in)`
- `_Tuple_impl (_Tuple_impl &&__in)`
- `_Tuple_impl (const _Tuple_impl &__in)`
- `template<typename _UHead, typename... _UTail>  
_Tuple_impl (_UHead &&__head, _UTail &&...__tail)`
- `_Tuple_impl (const _Head &__head, const _Tail &...__tail)`
- `const _Head & M_head () const`
- `_Head & M_head ()`
- `const Inherited & M_tail () const`
- `Inherited & M_tail ()`
- `template<typename... _UElements>  
_Tuple_impl & operator= (_Tuple_impl<_Idx, _UElements...> &&__in)`
- `template<typename... _UElements>  
_Tuple_impl & operator= (const _Tuple_impl<_Idx, _UElements...> &__in)`
- `_Tuple_impl & operator= (_Tuple_impl &&__in)`
- `_Tuple_impl & operator= (const _Tuple_impl &__in)`

### Protected Member Functions

- `void M_swap_impl (_Tuple_impl &__in)`

### 5.321.1 Detailed Description

```
template<std::size_t _Idx, typename _Head, typename... _Tail> struct std::_-
Tuple_impl<_Idx, _Head, _Tail...>
```

Recursive [tuple](#) implementation. Here we store the `Head` element and derive from a `Tuple_impl` containing the remaining elements (which contains the `Tail`).

Definition at line 137 of file `tuple`.

The documentation for this struct was generated from the following file:

- [tuple](#)

## 5.322 std::\_Vector\_base< \_Tp, \_Alloc > Struct Template Reference

See [bits/stl\\_deque.h's \\_Deque\\_base](#) for an explanation. Inheritance diagram for std::\_Vector\_base< \_Tp, \_Alloc >:

### Public Types

- typedef \_Alloc::template rebind< \_Tp >::other **\_Tp\_alloc\_type**
- typedef \_Alloc **allocator\_type**

### Public Member Functions

- **\_Vector\_base** (**\_Vector\_base** &&\_\_x)
- **\_Vector\_base** (size\_t \_\_n, const allocator\_type &\_\_a)
- **\_Vector\_base** (const allocator\_type &\_\_a)
- **\_Tp\_alloc\_type::pointer** **\_M\_allocate** (size\_t \_\_n)
- void **\_M\_deallocate** (typename \_Tp\_alloc\_type::pointer \_\_p, size\_t \_\_n)
- const **\_Tp\_alloc\_type** & **\_M\_get\_Tp\_allocator** () const
- **\_Tp\_alloc\_type** & **\_M\_get\_Tp\_allocator** ()
- allocator\_type **get\_allocator** () const

### Public Attributes

- **\_Vector\_impl** **\_M\_impl**

#### 5.322.1 Detailed Description

```
template<typename _Tp, typename _Alloc> struct std::_Vector_base< _Tp, _Alloc >
```

See [bits/stl\\_deque.h's \\_Deque\\_base](#) for an explanation.

Definition at line 69 of file `stl_vector.h`.

The documentation for this struct was generated from the following file:

- [stl\\_vector.h](#)

## 5.323 `std::_Weak_result_type<_Functor>` Struct Template Reference

Inheritance diagram for `std::_Weak_result_type<_Functor>`:

### 5.323.1 Detailed Description

```
template<typename _Functor> struct std::_Weak_result_type<_Functor >
```

Strip top-level cv-qualifiers from the function object and let [\\_Weak\\_result\\_type\\_impl](#) perform the real work.

Definition at line 168 of file `functional`.

The documentation for this struct was generated from the following file:

- [functional](#)

## 5.324 `std::_Weak_result_type_impl< _Functor >` Struct Template Reference

Inheritance diagram for `std::_Weak_result_type_impl< _Functor >`:

### 5.324.1 Detailed Description

```
template<typename _Functor> struct std::_Weak_result_type_impl< _Functor
>
```

Base class for any function object that has a weak result type, as defined in 3.3/3 of TR1.

Definition at line 110 of file `functional`.

The documentation for this struct was generated from the following file:

- [functional](#)

## 5.325 `std::_Weak_result_type_impl<_Res(&)(_ArgTypes...)>` Struct Template Reference

Retrieve the result type for a function reference.

### Public Types

- `typedef _Res result_type`

#### 5.325.1 Detailed Description

```
template<typename _Res, typename... _ArgTypes> struct std::_Weak_result_type_impl<_Res(&)(_ArgTypes...)>
```

Retrieve the result type for a function reference.

Definition at line 123 of file `functional`.

The documentation for this struct was generated from the following file:

- [functional](#)

## 5.326 `std::_Weak_result_type_impl< _Res(*)(_ArgTypes...)>` Struct Template Reference

Retrieve the result type for a function pointer.

### Public Types

- `typedef _Res result_type`

#### 5.326.1 Detailed Description

```
template<typename _Res, typename... _ArgTypes> struct std::_Weak_result_type_impl< _Res(*)(_ArgTypes...)>
```

Retrieve the result type for a function pointer.

Definition at line 130 of file `functional`.

The documentation for this struct was generated from the following file:

- [functional](#)

**5.327** `std::_Weak_result_type_impl<_Res(_ArgTypes...)>` Struct Template Reference 1589

---

## **5.327** `std::_Weak_result_type_impl<_Res(_ArgTypes...)>` Struct Template Reference

Retrieve the result type for a function type.

### **Public Types**

- `typedef _Res result_type`

### **5.327.1 Detailed Description**

```
template<typename _Res, typename... _ArgTypes> struct std::_Weak_result_type_impl<_Res(_ArgTypes...)>
```

Retrieve the result type for a function type.

Definition at line 116 of file `functional`.

The documentation for this struct was generated from the following file:

- [functional](#)

## 5.328 `std::_Weak_result_type_impl<_Res(_Class::*)(_ArgTypes...) const >` Struct Template Reference

Retrieve result type for a const member function pointer.

### Public Types

- `typedef _Res result_type`

#### 5.328.1 Detailed Description

```
template<typename _Res, typename _Class, typename... _ArgTypes> struct
std::_Weak_result_type_impl<_Res(_Class::*)(_ArgTypes...) const >
```

Retrieve result type for a const member function pointer.

Definition at line 144 of file `functional`.

The documentation for this struct was generated from the following file:

- [functional](#)

**5.329** `std::_Weak_result_type_impl<_Res(_Class::*)(_ArgTypes...) const volatile > Struct` [Template Reference](#) 1591

---

## **5.329** `std::_Weak_result_type_impl<_Res(_Class::*)(_ArgTypes...) const volatile > Struct` [Template Reference](#)

Retrieve result type for a const volatile member function pointer.

### **Public Types**

- `typedef _Res result_type`

#### **5.329.1 Detailed Description**

```
template<typename _Res, typename _Class, typename... _ArgTypes> struct
std::_Weak_result_type_impl<_Res(_Class::*)(_ArgTypes...) const volatile >
```

Retrieve result type for a const volatile member function pointer.

Definition at line 158 of file functional.

The documentation for this struct was generated from the following file:

- [functional](#)

### 5.330 `std::_Weak_result_type_impl<_Res(_Class::*)(_ArgTypes...) volatile >` Struct Template Reference

Retrieve result type for a volatile member function pointer.

#### Public Types

- `typedef _Res result_type`

#### 5.330.1 Detailed Description

```
template<typename _Res, typename _Class, typename... _ArgTypes> struct
std::_Weak_result_type_impl<_Res(_Class::*)(_ArgTypes...) volatile >
```

Retrieve result type for a volatile member function pointer.

Definition at line 151 of file `functional`.

The documentation for this struct was generated from the following file:

## 5.338 `std::adopt_lock_t` Struct Reference

Assume the calling [thread](#) has already obtained [mutex](#) ownership and manage it.

### 5.338.1 Detailed Description

Assume the calling [thread](#) has already obtained [mutex](#) ownership and manage it.

Definition at line 383 of file `mutex`.

The documentation for this struct was generated from the following file:

- [mutex](#)

## 5.339 `std::aligned_storage<_Len, _Align >` Struct Template Reference

Alignment type.

### 5.339.1 Detailed Description

```
template<std::size_t _Len, std::size_t _Align = __alignof__(typename __-
aligned_storage_msa<_Len>::__type)> struct std::aligned_storage<_Len, _-
Align >
```

Alignment type. The value of `_Align` is a default-alignment which shall be the most stringent alignment requirement for any C++ object type whose size is no [greater](#) than `_Len` (3.9). The member typedef type shall be a POD type suitable for use as uninitialized storage for any object whose size is at most `_Len` and whose alignment is a divisor of `_Align`.

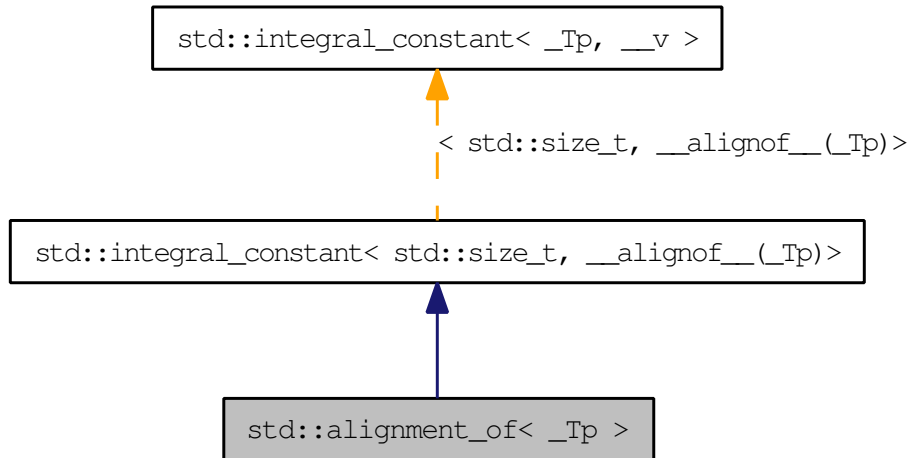

Definition at line 342 of file `type_traits`.

The documentation for this struct was generated from the following file:

- [type\\_traits](#)

## 5.340 `std::alignment_of< _Tp >` Struct Template Reference

[alignment\\_of](#) Inheritance diagram for `std::alignment_of< _Tp >`:

### Public Types

- typedef `integral_constant< std::size_t, __v >` **type**
- typedef `std::size_t` **value\_type**

### Static Public Attributes

- static const `std::size_t` **value**

#### 5.340.1 Detailed Description

`template<typename _Tp> struct std::alignment_of< _Tp >`

[alignment\\_of](#)

Definition at line 350 of file `tr1_impl/type_traits`.

The documentation for this struct was generated from the following file:

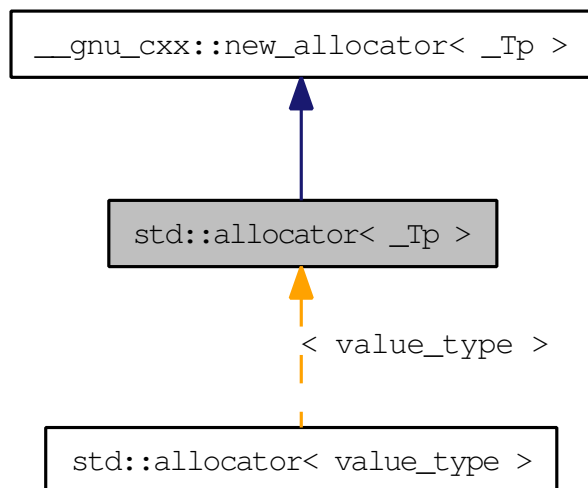

- [tr1\\_impl/type\\_traits](#)

## 5.341 `std::allocator<_Tp>` Class Template Reference

The *standard allocator*, as per [20.4].

Further details: <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt04ch11.html>.

Inheritance diagram for `std::allocator<_Tp>`:

### Public Types

- typedef `const _Tp *` **const\_pointer**
- typedef `const _Tp &` **const\_reference**
- typedef `ptrdiff_t` **difference\_type**
- typedef `_Tp *` **pointer**
- typedef `_Tp &` **reference**
- typedef `size_t` **size\_type**
- typedef `_Tp` **value\_type**

### Public Member Functions

- `template<typename _Tp1 >`  
**allocator** (`const allocator<_Tp1 > &`) `throw ()`
- **allocator** (`const allocator &__a`) `throw ()`
- `const_pointer` **address** (`const_reference __x`) `const`
- `pointer` **address** (`reference __x`) `const`
- `pointer` **allocate** (`size_type __n`, `const void * = 0`)

- `template<typename... _Args>`  
void **construct** (pointer \_\_p, \_Args &&... \_\_args)
- void **construct** (pointer \_\_p, const \_Tp &\_\_val)
- void **deallocate** (pointer \_\_p, size\_type)
- void **destroy** (pointer \_\_p)
- size\_type **max\_size** () const throw ()

### 5.341.1 Detailed Description

`template<typename _Tp> class std::allocator< _Tp >`

The *standard allocator*, as per [20.4].

Further details: <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt04ch11.html>.

Definition at line 86 of file `allocator.h`.

The documentation for this class was generated from the following file:

- [allocator.h](#)

## 5.342 `std::allocator< void >` Class Template Reference

[allocator<void>](#) specialization.

### Public Types

- typedef const void \* **const\_pointer**
- typedef ptrdiff\_t **difference\_type**
- typedef void \* **pointer**
- typedef size\_t **size\_type**
- typedef void **value\_type**

### 5.342.1 Detailed Description

`template<> class std::allocator< void >`

[allocator<void>](#) specialization.

Definition at line 64 of file `allocator.h`.

The documentation for this class was generated from the following file:

- [allocator.h](#)

## 5.343 `std::array< _Tp, _Nm >` Struct Template Reference

A standard container for storing a fixed size sequence of elements.

### Public Types

- typedef const value\_type \* **const\_iterator**
- typedef const \_Tp \* **const\_pointer**
- typedef const value\_type & **const\_reference**
- typedef [std::reverse\\_iterator](#)< const\_iterator > **const\_reverse\_iterator**
- typedef std::ptrdiff\_t **difference\_type**
- typedef value\_type \* **iterator**
- typedef \_Tp \* **pointer**
- typedef value\_type & **reference**
- typedef [std::reverse\\_iterator](#)< iterator > **reverse\_iterator**
- typedef std::size\_t **size\_type**
- typedef \_Tp **value\_type**

### Public Member Functions

- const\_reference **at** (size\_type \_\_n) const
- reference **at** (size\_type \_\_n)
- const\_reference **back** () const
- reference **back** ()
- const\_iterator **begin** () const
- iterator **begin** ()
- const\_iterator **cbegin** () const
- const\_iterator **end** () const
- [const\\_reverse\\_iterator](#) **crbegin** () const
- [const\\_reverse\\_iterator](#) **crend** () const
- const \_Tp \* **data** () const
- \_Tp \* **data** ()
- bool **empty** () const
- const\_iterator **end** () const
- iterator **end** ()
- void **fill** (const value\_type &\_\_u)
- const\_reference **front** () const
- reference **front** ()
- size\_type **max\_size** () const
- const\_reference **operator[]** (size\_type \_\_n) const

- reference `operator[]` (size\_type \_\_n)
- `const_reverse_iterator` `rbegin` () const
- `reverse_iterator` `rbegin` ()
- `const_reverse_iterator` `rend` () const
- `reverse_iterator` `rend` ()
- size\_type `size` () const
- void `swap` (array &\_\_other)

## Public Attributes

- value\_type `_M_instance` [\_Nm?\_Nm:1]

### 5.343.1 Detailed Description

`template<typename _Tp, std::size_t _Nm> struct std::array< _Tp, _Nm >`

A standard container for storing a fixed size sequence of elements. Meets the requirements of a [container](#), a [reversible container](#), and a [sequence](#).

Sets support random access iterators.

#### Parameters:

- `Tp`*** Type of element. Required to be a complete type.
- `N`*** Number of elements.

Definition at line 49 of file `tr1_impl/array`.

The documentation for this struct was generated from the following file:

- [tr1\\_impl/array](#)

## 5.344 `std::atomic< _Tp >` Struct Template Reference

[atomic](#) 29.4.3, Generic [atomic](#) type, primary class template.

### Public Member Functions

- `atomic` (`_Tp __i`)
- `atomic` (`const atomic &`)
- `bool compare_exchange_strong` (`_Tp &`, `_Tp`, `memory_order=memory_order_seq_cst`) `volatile`
- `bool compare_exchange_strong` (`_Tp &`, `_Tp`, `memory_order`, `memory_order`) `volatile`
- `bool compare_exchange_weak` (`_Tp &`, `_Tp`, `memory_order=memory_order_seq_cst`) `volatile`
- `bool compare_exchange_weak` (`_Tp &`, `_Tp`, `memory_order`, `memory_order`) `volatile`
- `_Tp exchange` (`_Tp __i`, `memory_order=memory_order_seq_cst`) `volatile`
- `bool is_lock_free` () `const volatile`
- `_Tp load` (`memory_order=memory_order_seq_cst`) `const volatile`
- `operator _Tp` () `const`
- `_Tp operator=` (`_Tp __i`)
- `atomic & operator=` (`const atomic &`) `volatile`
- `void store` (`_Tp`, `memory_order=memory_order_seq_cst`) `volatile`

### 5.344.1 Detailed Description

`template<typename _Tp> struct std::atomic< _Tp >`

[atomic](#) 29.4.3, Generic [atomic](#) type, primary class template.

Definition at line 86 of file `atomic`.

The documentation for this struct was generated from the following file:

- [atomic](#)

## 5.345 `std::atomic<_Tp*>` Struct Template Reference

Partial specialization for pointer types.

Inherits `atomic_address`.

### Public Member Functions

- `atomic` (`_Tp *__v`)
- `atomic` (const `atomic` &)
- bool `compare_exchange_strong` (`_Tp * &`, `_Tp *`, `memory_order=memory_order_seq_cst`)
- bool `compare_exchange_strong` (`_Tp * &`, `_Tp *`, `memory_order`, `memory_order`)
- bool `compare_exchange_weak` (`_Tp * &`, `_Tp *`, `memory_order=memory_order_seq_cst`)
- bool `compare_exchange_weak` (`_Tp * &`, `_Tp *`, `memory_order`, `memory_order`)
- `_Tp *` `exchange` (`_Tp *`, `memory_order=memory_order_seq_cst`)
- `_Tp *` `fetch_add` (`ptrdiff_t`, `memory_order=memory_order_seq_cst`)
- `_Tp *` `fetch_sub` (`ptrdiff_t`, `memory_order=memory_order_seq_cst`)
- `_Tp *` `load` (`memory_order=memory_order_seq_cst`) const
- `operator _Tp *` () const
- `_Tp *` `operator++` ()
- `_Tp *` `operator++` (int)
- `_Tp *` `operator+=` (`ptrdiff_t __d`)
- `_Tp *` `operator--` ()
- `_Tp *` `operator--` (int)
- `_Tp *` `operator-=` (`ptrdiff_t __d`)
- `_Tp *` `operator=` (`_Tp *__v`)
- `atomic` & `operator=` (const `atomic` &) volatile
- void `store` (`_Tp *`, `memory_order=memory_order_seq_cst`)

### 5.345.1 Detailed Description

`template<typename _Tp> struct std::atomic<_Tp*>`

Partial specialization for pointer types.

Definition at line 134 of file `atomic`.

The documentation for this struct was generated from the following file:

- `atomic`

## 5.346 `std::atomic< bool >` Struct Template Reference

Explicit specialization for `bool`.

Inherits `__atomic_bool_base`.

### Public Types

- `typedef atomic_bool __base_type`
- `typedef bool __integral_type`

### Public Member Functions

- `atomic` (`__integral_type __i`)
- `atomic` (`const atomic &`)
- `atomic & operator=` (`const atomic &`) `volatile`

### Public Attributes

- `bool _M_i`

#### 5.346.1 Detailed Description

`template<> struct std::atomic< bool >`

Explicit specialization for `bool`.

Definition at line 222 of file `atomic`.

The documentation for this struct was generated from the following file:

- `atomic`

## 5.347 `std::atomic< char >` Struct Template Reference

Explicit specialization for `char`.

Inherits `__atomic_char_base`.

### Public Types

- typedef `atomic_char_base_type`
- typedef `char __integral_type`

### Public Member Functions

- `atomic` (`__integral_type __i`)
- `atomic` (`const atomic &`)
- `atomic & operator=` (`const atomic &`) `volatile`

### Public Attributes

- `char _M_i`

#### 5.347.1 Detailed Description

`template<> struct std::atomic< char >`

Explicit specialization for `char`.

Definition at line 240 of file `atomic`.

The documentation for this struct was generated from the following file:

- `atomic`

## 5.348 `std::atomic< char16_t >` Struct Template Reference

Explicit specialization for `char16_t`.

Inherits `__atomic_short_base`.

### Public Types

- typedef `atomic_char16_t_base_type`
- typedef `char16_t __integral_type`

### Public Member Functions

- `atomic` (`__integral_type __i`)
- `atomic` (`const atomic &`)
- `atomic & operator=` (`const atomic &`) volatile

### Public Attributes

- `short _M_i`

#### 5.348.1 Detailed Description

`template<> struct std::atomic< char16_t >`

Explicit specialization for `char16_t`.

Definition at line 456 of file `atomic`.

The documentation for this struct was generated from the following file:

- `atomic`

## 5.349 `std::atomic< char32_t >` Struct Template Reference

Explicit specialization for `char32_t`.

Inherits `__atomic_int_base`.

### Public Types

- typedef `atomic_char32_t_base_type`
- typedef `char32_t_integral_type`

### Public Member Functions

- `atomic` (`__integral_type __i`)
- `atomic` (`const atomic &`)
- `atomic & operator=` (`const atomic &`) `volatile`

### Public Attributes

- `int_M_i`

#### 5.349.1 Detailed Description

`template<> struct std::atomic< char32_t >`

Explicit specialization for `char32_t`.

Definition at line 474 of file `atomic`.

The documentation for this struct was generated from the following file:

- `atomic`

## 5.350 `std::atomic< int >` Struct Template Reference

Explicit specialization for `int`.

Inherits `__atomic_int_base`.

### Public Types

- typedef `atomic_int_base_type`
- typedef `int __integral_type`

### Public Member Functions

- `atomic` (`__integral_type __i`)
- `atomic` (`const atomic &`)
- `atomic & operator=` (`const atomic &`) `volatile`

### Public Attributes

- `int _M_i`

#### 5.350.1 Detailed Description

`template<> struct std::atomic< int >`

Explicit specialization for `int`.

Definition at line 330 of file `atomic`.

The documentation for this struct was generated from the following file:

- `atomic`

## 5.351 `std::atomic< long >` Struct Template Reference

Explicit specialization for long.

Inherits `__atomic_long_base`.

### Public Types

- typedef `atomic_long_base_type`
- typedef long `__integral_type`

### Public Member Functions

- `atomic` (`__integral_type __i`)
- `atomic` (const `atomic` &)
- `atomic` & `operator=` (const `atomic` &) volatile

### Public Attributes

- `long _M_i`

#### 5.351.1 Detailed Description

`template<> struct std::atomic< long >`

Explicit specialization for long.

Definition at line 366 of file `atomic`.

The documentation for this struct was generated from the following file:

- `atomic`

## 5.352 `std::atomic< long long >` Struct Template Reference

Explicit specialization for long long.

Inherits `__atomic_llong_base`.

### Public Types

- typedef `atomic_llong __base_type`
- typedef long long `__integral_type`

### Public Member Functions

- `atomic` (`__integral_type __i`)
- `atomic` (`const atomic &`)
- `atomic & operator=` (`const atomic &`) volatile

### Public Attributes

- long long `_M_i`

#### 5.352.1 Detailed Description

`template<> struct std::atomic< long long >`

Explicit specialization for long long.

Definition at line 402 of file `atomic`.

The documentation for this struct was generated from the following file:

- `atomic`

## 5.353 `std::atomic< short >` Struct Template Reference

Explicit specialization for short.

Inherits `__atomic_short_base`.

### Public Types

- typedef `atomic_short_base_type`
- typedef short `__integral_type`

### Public Member Functions

- `atomic` (`__integral_type __i`)
- `atomic` (const `atomic` &)
- `atomic` & `operator=` (const `atomic` &) volatile

### Public Attributes

- short `_M_i`

#### 5.353.1 Detailed Description

`template<> struct std::atomic< short >`

Explicit specialization for short.

Definition at line 294 of file `atomic`.

The documentation for this struct was generated from the following file:

- `atomic`

## 5.354 `std::atomic< signed char >` Struct Template Reference

Explicit specialization for signed char.

Inherits `__atomic_schar_base`.

### Public Types

- typedef `atomic_schar_base_type`
- typedef signed char `__integral_type`

### Public Member Functions

- `atomic` (`__integral_type __i`)
- `atomic` (const `atomic` &)
- `atomic` & `operator=` (const `atomic` &) volatile

### Public Attributes

- signed char `_M_i`

#### 5.354.1 Detailed Description

`template<> struct std::atomic< signed char >`

Explicit specialization for signed char.

Definition at line 258 of file `atomic`.

The documentation for this struct was generated from the following file:

- `atomic`

## 5.355 `std::atomic< unsigned char >` Struct Template Reference

Explicit specialization for unsigned char.

Inherits `__atomic_uchar_base`.

### Public Types

- typedef `atomic_uchar __base_type`
- typedef `unsigned char __integral_type`

### Public Member Functions

- `atomic` (`__integral_type __i`)
- `atomic` (`const atomic &`)
- `atomic & operator=` (`const atomic &`) `volatile`

### Public Attributes

- `unsigned char _M_i`

#### 5.355.1 Detailed Description

`template<> struct std::atomic< unsigned char >`

Explicit specialization for unsigned char.

Definition at line 276 of file `atomic`.

The documentation for this struct was generated from the following file:

- `atomic`

## 5.356 `std::atomic< unsigned int >` Struct Template Reference

Explicit specialization for unsigned int.

Inherits `__atomic_uint_base`.

### Public Types

- typedef `atomic_uint __base_type`
- typedef unsigned int `__integral_type`

### Public Member Functions

- `atomic` (`__integral_type __i`)
- `atomic` (const `atomic` &)
- `atomic` & `operator=` (const `atomic` &) volatile

### Public Attributes

- unsigned int `_M_i`

#### 5.356.1 Detailed Description

`template<> struct std::atomic< unsigned int >`

Explicit specialization for unsigned int.

Definition at line 348 of file `atomic`.

The documentation for this struct was generated from the following file:

- `atomic`

## 5.357 `std::atomic< unsigned long >` Struct Template Reference

Explicit specialization for unsigned long.

Inherits `__atomic_ulong_base`.

### Public Types

- typedef `atomic_ulong` `__base_type`
- typedef unsigned long `__integral_type`

### Public Member Functions

- `atomic` (`__integral_type __i`)
- `atomic` (const `atomic` &)
- `atomic` & `operator=` (const `atomic` &) volatile

### Public Attributes

- unsigned long `_M_i`

#### 5.357.1 Detailed Description

`template<> struct std::atomic< unsigned long >`

Explicit specialization for unsigned long.

Definition at line 384 of file `atomic`.

The documentation for this struct was generated from the following file:

- `atomic`

## 5.358 `std::atomic< unsigned long long >` Struct Template Reference

Explicit specialization for unsigned long long.

Inherits `__atomic_ullong_base`.

### Public Types

- typedef `atomic_ullong_base_type`
- typedef unsigned long long `__integral_type`

### Public Member Functions

- `atomic` (`__integral_type __i`)
- `atomic` (const `atomic` &)
- `atomic` & `operator=` (const `atomic` &) volatile

### Public Attributes

- unsigned long long `_M_i`

#### 5.358.1 Detailed Description

`template<> struct std::atomic< unsigned long long >`

Explicit specialization for unsigned long long.

Definition at line 420 of file `atomic`.

The documentation for this struct was generated from the following file:

- `atomic`

## 5.359 `std::atomic< unsigned short >` Struct Template Reference

Explicit specialization for unsigned short.

Inherits `__atomic_ushort_base`.

### Public Types

- typedef `atomic_ushort_base_type`
- typedef unsigned short `__integral_type`

### Public Member Functions

- `atomic` (`__integral_type __i`)
- `atomic` (const `atomic` &)
- `atomic` & `operator=` (const `atomic` &) volatile

### Public Attributes

- unsigned short `_M_i`

### 5.359.1 Detailed Description

`template<> struct std::atomic< unsigned short >`

Explicit specialization for unsigned short.

Definition at line 312 of file `atomic`.

The documentation for this struct was generated from the following file:

- `atomic`

## 5.360 `std::atomic< void * >` Struct Template Reference

Explicit specialization for `void*`.

Inherits `atomic_address`.

### Public Types

- `typedef atomic_address __base_type`
- `typedef void * __integral_type`

### Public Member Functions

- `atomic` (`__integral_type __i`)
- `atomic` (`const atomic &`)
- `atomic & operator=` (`const atomic &`) `volatile`

#### 5.360.1 Detailed Description

`template<> struct std::atomic< void * >`

Explicit specialization for `void*`.

Definition at line 204 of file `atomic`.

The documentation for this struct was generated from the following file:

- `atomic`

## 5.361 `std::atomic< wchar_t >` Struct Template Reference

Explicit specialization for `wchar_t`.

Inherits `__atomic_wchar_t_base`.

### Public Types

- typedef `atomic_wchar_t_base_type`
- typedef `wchar_t_integral_type`

### Public Member Functions

- `atomic` (`__integral_type __i`)
- `atomic` (`const atomic &`)
- `atomic & operator=` (`const atomic &`) volatile

### Public Attributes

- `wchar_t_M_i`

#### 5.361.1 Detailed Description

`template<> struct std::atomic< wchar_t >`

Explicit specialization for `wchar_t`.

Definition at line 438 of file `atomic`.

The documentation for this struct was generated from the following file:

- `atomic`

## 5.362 `std::auto_ptr<_Tp>` Class Template Reference

A simple smart pointer providing strict ownership semantics.

### Public Types

- typedef `_Tp` `element_type`

### Public Member Functions

- `auto_ptr` (`auto_ptr_ref< element_type > __ref`) throw ()
- `template<typename _Tp1 >`  
`auto_ptr` (`auto_ptr<_Tp1 > &__a`) throw ()
- `auto_ptr` (`auto_ptr &__a`) throw ()
- `auto_ptr` (`element_type *__p=0`) throw ()
- `~auto_ptr` ()
- `element_type * get` () const throw ()
- `template<typename _Tp1 >`  
**`operator auto_ptr<_Tp1 >`** () throw ()

- `element_type * operator->` () const throw ()
- `auto_ptr & operator=` (`auto_ptr_ref< element_type > __ref`) throw ()
- `template<typename _Tp1 >`  
`auto_ptr & operator=` (`auto_ptr<_Tp1 > &__a`) throw ()
- `auto_ptr & operator=` (`auto_ptr &__a`) throw ()
- `element_type * release` () throw ()
- `void reset` (`element_type *__p=0`) throw ()

### 5.362.1 Detailed Description

`template<typename _Tp> class std::auto_ptr<_Tp>`

A simple smart pointer providing strict ownership semantics. The Standard says:

An `auto_ptr` owns the object it holds a pointer to. Copying an `auto_ptr` copies the pointer and transfers ownership to the destination. If more than one `auto_ptr` owns the same object at the same time the behavior of the program is undefined.

The uses of `auto_ptr` include providing temporary exception-safety for dynamically allocated memory, passing ownership of dynamically allocated memory to a function, and returning dynamically allocated memory from a function. `auto_ptr` does not meet the CopyCon requirements for Standard Library `container` elements and thus instantiating a Standard Library container with an `auto_ptr` results in undefined behavior.

Quoted from [20.4.5]/3.

Good examples of what can and cannot be done with `auto_ptr` can be found in the `libstdc++` test suite.

`_GLIBCXX_RESOLVE_LIB_DEFECTS` 127. `auto_ptr<>` conversion issues These resolutions have all been incorporated.

Definition at line 85 of file `auto_ptr.h`.

## 5.362.2 Member Typedef Documentation

### 5.362.2.1 `template<typename _Tp> typedef _Tp std::auto_ptr<_Tp>::element_type`

The pointed-to type.

Definition at line 92 of file `auto_ptr.h`.

## 5.362.3 Constructor & Destructor Documentation

### 5.362.3.1 `template<typename _Tp> std::auto_ptr<_Tp>::auto_ptr(element_type * __p = 0) throw () [inline, explicit]`

An `auto_ptr` is usually constructed from a raw pointer.

#### Parameters:

*p* A pointer (defaults to `NULL`).

This object now *owns* the object pointed to by *p*.

Definition at line 101 of file `auto_ptr.h`.

### 5.362.3.2 `template<typename _Tp> std::auto_ptr<_Tp>::auto_ptr(auto_ptr<_Tp> & __a) throw () [inline]`

An `auto_ptr` can be constructed from another `auto_ptr`.

**Parameters:**

*a* Another `auto_ptr` of the same type.

This object now *owns* the object previously owned by *a*, which has given up ownership.

Definition at line 110 of file `auto_ptr.h`.

**5.362.3.3** `template<typename _Tp> template<typename _Tp1 > std::auto_ptr< _Tp >::auto_ptr (auto_ptr< _Tp1 > & __a) throw () [inline]`

An `auto_ptr` can be constructed from another `auto_ptr`.

**Parameters:**

*a* Another `auto_ptr` of a different but related type.

A pointer-to-`Tp1` must be convertible to a pointer-to-`Tp/element_type`.

This object now *owns* the object previously owned by *a*, which has given up ownership.

Definition at line 123 of file `auto_ptr.h`.

**5.362.3.4** `template<typename _Tp> std::auto_ptr< _Tp >::~~auto_ptr () [inline]`

When the `auto_ptr` goes out of scope, the object it owns is deleted. If it no longer owns anything (i.e., `get ()` is `NULL`), then this has no effect.

The C++ standard says there is supposed to be an empty throw specification here, but omitting it is standard conforming. Its presence can be detected only if `_Tp::~~_Tp()` throws, but this is prohibited. [17.4.3.6]/2

Definition at line 168 of file `auto_ptr.h`.

**5.362.3.5** `template<typename _Tp> std::auto_ptr< _Tp >::auto_ptr (auto_ptr_ref< element_type > __ref) throw () [inline]`

Automatic conversions. These operations convert an `auto_ptr` into and from an `auto_ptr_ref` automatically as needed. This allows constructs such as

```
auto_ptr<Derived> func_returning_auto_ptr(...);
...
auto_ptr<Base> ptr = func_returning_auto_ptr(...);
```

Definition at line 258 of file `auto_ptr.h`.

## 5.362.4 Member Function Documentation

### 5.362.4.1 `template<typename _Tp> element_type* std::auto_ptr< _Tp >::get (void) const throw () [inline]`

Bypassing the smart pointer.

#### Returns:

The raw pointer being managed.

You can get a copy of the pointer that this object owns, for situations such as passing to a function which only accepts a raw pointer.

#### Note:

This auto\_ptr still owns the memory.

Definition at line 209 of file auto\_ptr.h.

### 5.362.4.2 `template<typename _Tp> element_type& std::auto_ptr< _Tp >::operator* () const throw () [inline]`

Smart pointer dereferencing. If this auto\_ptr no longer owns anything, then this operation will crash. (For a smart pointer, *no longer owns anything* is the same as being a null pointer, and you know what happens when you dereference one of those...)

Definition at line 179 of file auto\_ptr.h.

### 5.362.4.3 `template<typename _Tp> element_type* std::auto_ptr< _Tp >::operator-> () const throw () [inline]`

Smart pointer dereferencing. This returns the pointer itself, which the language then will automatically cause to be dereferenced.

Definition at line 192 of file auto\_ptr.h.

### 5.362.4.4 `template<typename _Tp> template<typename _Tp1 > auto_ptr& std::auto_ptr< _Tp >::operator= (auto_ptr< _Tp1 > & __a) throw () [inline]`

auto\_ptr assignment operator.

#### Parameters:

*a* Another auto\_ptr of a different but related type.

A pointer-to-Tp1 must be convertible to a pointer-to-Tp/element\_type.

This object now *owns* the object previously owned by *a*, which has given up ownership. The object that this one *used* to own and track has been deleted.

Definition at line 152 of file auto\_ptr.h.

```
5.362.4.5 template<typename _Tp> auto_ptr& std::auto_ptr< _Tp
>::operator= (auto_ptr< _Tp > & __a) throw () [inline]
```

auto\_ptr assignment operator.

**Parameters:**

*a* Another auto\_ptr of the same type.

This object now *owns* the object previously owned by *a*, which has given up ownership. The object that this one *used* to own and track has been deleted.

Definition at line 134 of file auto\_ptr.h.

```
5.362.4.6 template<typename _Tp> element_type* std::auto_ptr< _Tp
>::release () throw () [inline]
```

Bypassing the smart pointer.

**Returns:**

The raw pointer being managed.

You can get a copy of the pointer that this object owns, for situations such as passing to a function which only accepts a raw pointer.

**Note:**

This auto\_ptr no longer owns the memory. When this object goes out of scope, nothing will happen.

Definition at line 223 of file auto\_ptr.h.

```
5.362.4.7 template<typename _Tp> void std::auto_ptr< _Tp >::reset
(element_type * __p = 0) throw () [inline]
```

Forcibly deletes the managed object.

**Parameters:**

*p* A pointer (defaults to NULL).

This object now *owns* the object pointed to by *p*. The previous object has been deleted.

Definition at line 238 of file auto\_ptr.h.

The documentation for this class was generated from the following file:

- [auto\\_ptr.h](#)

## 5.363 `std::auto_ptr_ref< _Tp1 >` Struct Template Reference

### Public Member Functions

- `auto_ptr_ref(_Tp1 * __p)`

### Public Attributes

- `_Tp1 * _M_ptr`

#### 5.363.1 Detailed Description

`template<typename _Tp1> struct std::auto_ptr_ref< _Tp1 >`

A wrapper class to provide [auto\\_ptr](#) with reference semantics. For example, an [auto\\_ptr](#) can be assigned (or constructed from) the result of a function which returns an [auto\\_ptr](#) by value.

All the [auto\\_ptr\\_ref](#) stuff should happen behind the scenes.

Definition at line 46 of file `auto_ptr.h`.

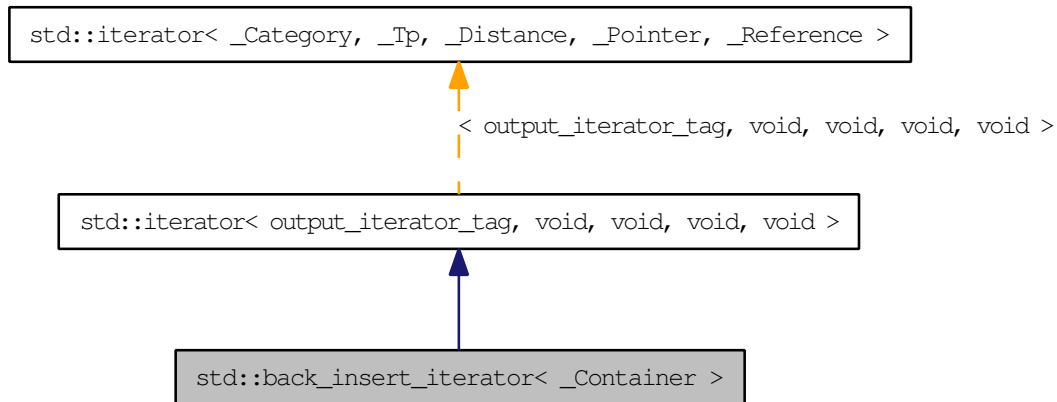

The documentation for this struct was generated from the following file:

- [auto\\_ptr.h](#)

## 5.364 `std::back_insert_iterator<_Container>` Class Template Reference

Turns assignment into insertion. Inheritance diagram for `std::back_insert_iterator<_Container>`:

### Public Types

- typedef `_Container` `container_type`
- typedef void `difference_type`
- typedef `output_iterator_tag` `iterator_category`
- typedef void `pointer`
- typedef void `reference`
- typedef void `value_type`

### Public Member Functions

- `back_insert_iterator` (`_Container &__x`)
- `back_insert_iterator` & `operator*` ()
- `back_insert_iterator` `operator++` (int)
- `back_insert_iterator` & `operator++` ()
- `back_insert_iterator` & `operator=` (typename `_Container::value_type` &&\_\_-value)
- `back_insert_iterator` & `operator=` (typename `_Container::const_reference` \_\_-value)

## Protected Attributes

- `_Container * container`

### 5.364.1 Detailed Description

`template<typename _Container> class std::back_insert_iterator<_Container >`

Turns assignment into insertion. These are output iterators, constructed from a container-of-T. Assigning a T to the `iterator` appends it to the container using `push_back`.

Tip: Using the `back_inserter` function to create these iterators can save typing.

Definition at line 394 of file `stl_iterator.h`.

### 5.364.2 Member Typedef Documentation

**5.364.2.1** `template<typename _Container > typedef _Container  
std::back_insert_iterator<_Container >::container_type`

A nested typedef for the type of whatever container you used.

Definition at line 402 of file `stl_iterator.h`.

**5.364.2.2** `typedef void std::iterator< output_iterator_tag , void , void , void ,  
void >::difference_type [inherited]`

Distance between iterators is represented as this type.

Definition at line 115 of file `stl_iterator_base_types.h`.

**5.364.2.3** `typedef output_iterator_tag std::iterator< output_iterator_tag , void  
, void , void , void >::iterator_category [inherited]`

One of the [tag types](#).

Definition at line 111 of file `stl_iterator_base_types.h`.

**5.364.2.4** `typedef void std::iterator< output_iterator_tag , void , void , void ,  
void >::pointer [inherited]`

This type represents a pointer-to-value\_type.

Definition at line 117 of file `stl_iterator_base_types.h`.

## **5.364 std::back\_insert\_iterator< \_Container > Class Template Reference 1635**

**5.364.2.5** `typedef void std::iterator< output_iterator_tag, void, void, void, void >::reference [inherited]`

This type represents a reference-to-value\_type.

Definition at line 119 of file stl\_iterator\_base\_types.h.

**5.364.2.6** `typedef void std::iterator< output_iterator_tag, void, void, void, void >::value_type [inherited]`

The type "pointed to" by the iterator.

Definition at line 113 of file stl\_iterator\_base\_types.h.

### **5.364.3 Constructor & Destructor Documentation**

**5.364.3.1** `template<typename _Container > std::back_insert_iterator< _Container >::back_insert_iterator(_Container & __x) [inline, explicit]`

The only way to create this iterator is with a container.

Definition at line 406 of file stl\_iterator.h.

### **5.364.4 Member Function Documentation**

**5.364.4.1** `template<typename _Container > back_insert_iterator& std::back_insert_iterator< _Container >::operator*() [inline]`

Simply returns \*this.

Definition at line 437 of file stl\_iterator.h.

**5.364.4.2** `template<typename _Container > back_insert_iterator std::back_insert_iterator< _Container >::operator++(int) [inline]`

Simply returns \*this. (This iterator does not *move*.).

Definition at line 447 of file stl\_iterator.h.

**5.364.4.3** `template<typename _Container > back_insert_iterator&  
std::back_insert_iterator< _Container >::operator++ () [inline]`

Simply returns \*this. (This iterator does not *move*.)

Definition at line 442 of file stl\_iterator.h.

**5.364.4.4** `template<typename _Container > back_insert_iterator&  
std::back_insert_iterator< _Container >::operator= (typename  
_Container::const_reference __value) [inline]`

**Parameters:**

*value* An instance of whatever type `container_type::const_reference` is; presumably a reference-to-const T for `container<T>`.

**Returns:**

This iterator, for chained operations.

This kind of iterator doesn't really have a *position* in the container (you can think of the position as being permanently at the end, if you like). Assigning a value to the iterator will always append the value to the end of the container.

Definition at line 420 of file stl\_iterator.h.

The documentation for this class was generated from the following file:

- [stl\\_iterator.h](#)

## 5.365 `std::bad_alloc` Class Reference

Exception possibly thrown by `new`.

`bad_alloc` (or classes derived from it) is used to report allocation errors from the throwing forms of `new`. Inheritance diagram for `std::bad_alloc`:

### Public Member Functions

- virtual const char \* `what` () const throw ()

#### 5.365.1 Detailed Description

Exception possibly thrown by `new`.

`bad_alloc` (or classes derived from it) is used to report allocation errors from the throwing forms of `new`.

Definition at line 56 of file `new`.

#### 5.365.2 Member Function Documentation

##### 5.365.2.1 virtual const char\* `std::bad_alloc::what` () const throw () [virtual]

Returns a C-style character string describing the general cause of the current error.

Reimplemented from `std::exception`.

The documentation for this class was generated from the following file:

- `new`

## 5.366 `std::bad_cast` Class Reference

Thrown during incorrect typecasting.

If you attempt an invalid `dynamic_cast` expression, an instance of this class (or something derived from this class) is thrown. Inheritance diagram for `std::bad_cast`:

### Public Member Functions

- virtual const char \* [what](#) () const throw ()

#### 5.366.1 Detailed Description

Thrown during incorrect typecasting.

If you attempt an invalid `dynamic_cast` expression, an instance of this class (or something derived from this class) is thrown.

Definition at line 174 of file `typeinfo`.

#### 5.366.2 Member Function Documentation

##### 5.366.2.1 virtual const char\* `std::bad_cast::what` () const throw () [virtual]

Returns a C-style character string describing the general cause of the current error.

Reimplemented from [std::exception](#).

The documentation for this class was generated from the following file:

- [typeinfo](#)

## 5.367 std::bad\_exception Class Reference

Inheritance diagram for std::bad\_exception:

### Public Member Functions

- virtual const char \* [what](#) () const throw ()

#### 5.367.1 Detailed Description

If an exception is thrown which is not listed in a function's exception specification, one of these may be thrown.

Definition at line 74 of file exception.

#### 5.367.2 Member Function Documentation

##### 5.367.2.1 virtual const char\* std::bad\_exception::what () const throw () [virtual]

Returns a C-style character string describing the general cause of the current error.

Reimplemented from [std::exception](#).

The documentation for this class was generated from the following file:

- [exception](#)

## 5.368 `std::bad_function_call` Class Reference

Exception class thrown when class template function's `operator()` is called with an empty target. Inheritance diagram for `std::bad_function_call`:

### Public Member Functions

- virtual const char \* [what](#) () const throw ()

#### 5.368.1 Detailed Description

Exception class thrown when class template function's `operator()` is called with an empty target.

Definition at line 1405 of file `functional`.

#### 5.368.2 Member Function Documentation

##### 5.368.2.1 virtual const char\* `std::exception::what` () const throw () [virtual, inherited]

Returns a C-style character string describing the general cause of the current error.

Reimplemented in [std::bad\\_exception](#), [std::bad\\_alloc](#), [std::bad\\_cast](#), [std::bad\\_typeid](#), [std::future\\_error](#), [std::logic\\_error](#), [std::runtime\\_error](#), [std::bad\\_weak\\_ptr](#), and [std::ios\\_base::failure](#).

The documentation for this class was generated from the following file:

- [functional](#)

## 5.369 `std::bad_typeid` Class Reference

Thrown when a NULL pointer in a `typeid` expression is used. Inheritance diagram for `std::bad_typeid`:

### Public Member Functions

- virtual const char \* [what](#) () const throw ()

#### 5.369.1 Detailed Description

Thrown when a NULL pointer in a `typeid` expression is used.

Definition at line 191 of file `typeinfo`.

#### 5.369.2 Member Function Documentation

##### 5.369.2.1 virtual const char\* `std::bad_typeid::what` () const throw () [virtual]

Returns a C-style character string describing the general cause of the current error.

Reimplemented from [std::exception](#).

The documentation for this class was generated from the following file:

- [typeinfo](#)

## 5.370 std::bad\_weak\_ptr Class Reference

Exception possibly thrown by [shared\\_ptr](#). Inheritance diagram for std::bad\_weak\_ptr:

### Public Member Functions

- virtual char const \* [what](#) () const throw ()

#### 5.370.1 Detailed Description

Exception possibly thrown by [shared\\_ptr](#).

Definition at line 58 of file boost\_sp\_counted\_base.h.

#### 5.370.2 Member Function Documentation

##### 5.370.2.1 virtual char const\* std::bad\_weak\_ptr::what () const throw () [inline, virtual]

Returns a C-style character string describing the general cause of the current error.

Reimplemented from [std::exception](#).

Definition at line 62 of file boost\_sp\_counted\_base.h.

The documentation for this class was generated from the following file:

- [boost\\_sp\\_counted\\_base.h](#)

## 5.371 `std::basic_filebuf< _CharT, _Traits >` Class Template Reference

The actual work of input and output (for files).

This class associates both its input and output sequence with an external disk file, and maintains a joint file position for both sequences. Many of its semantics are described in terms of similar behavior in the Standard C Library's `FILE` streams. Inheritance diagram for `std::basic_filebuf< _CharT, _Traits >`:

### Public Types

- typedef `codecvt< char_type, char, __state_type >` **`__codecvt_type`**
- typedef `__basic_file< char >` **`__file_type`**
- typedef `basic_filebuf< char_type, traits_type >` **`__filebuf_type`**
- typedef `traits_type::state_type` **`__state_type`**
- typedef `basic_streambuf< char_type, traits_type >` **`__streambuf_type`**
- typedef `_CharT` **`char_type`**
- typedef `traits_type::int_type` **`int_type`**

### 5.371.1 Detailed Description

```
template<typename _CharT, typename _Traits> class std::basic_filebuf< _CharT, _Traits >
```

The actual work of input and output (for files).

This class associates both its input and output sequence with an external disk file, and maintains a joint file position for both sequences. Many of its semantics are described in terms of similar behavior in the Standard C Library's `FILE` streams.

Definition at line 67 of file `fstream`.

### 5.371.2 Member Typedef Documentation

```
5.371.2.1 template<typename _CharT, typename _Traits> typedef
basic_streambuf<char_type, traits_type> std::basic_filebuf<
_CharT, _Traits >::__streambuf_type
```

This is a non-standard type.

Reimplemented from [std::basic\\_streambuf<\\_CharT, \\_Traits>](#).

Definition at line 77 of file `fstream`.

**5.371.2.2** `template<typename _CharT, typename _Traits> typedef _CharT  
std::basic_filebuf<_CharT, _Traits>::char_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic\\_streambuf<\\_CharT, \\_Traits>](#).

Reimplemented in [\\_\\_gnu\\_cxx::stdio\\_filebuf<\\_CharT, \\_Traits>](#).

Definition at line 71 of file `fstream`.

**5.371.2.3** `template<typename _CharT, typename _Traits> typedef  
traits_type::int_type std::basic_filebuf<_CharT, _Traits>::int_type`

This is a non-standard type.

Reimplemented from [std::basic\\_streambuf<\\_CharT, \\_Traits>](#).

Reimplemented in [\\_\\_gnu\\_cxx::stdio\\_filebuf<\\_CharT, \\_Traits>](#).

Definition at line 73 of file `fstream`.

**5.371.2.4** `template<typename _CharT, typename _Traits> typedef  
traits_type::off_type std::basic_filebuf<_CharT, _Traits>::off_type`

This is a non-standard type.

Reimplemented from [std::basic\\_streambuf<\\_CharT, \\_Traits>](#).

Reimplemented in [\\_\\_gnu\\_cxx::stdio\\_filebuf<\\_CharT, \\_Traits>](#).

Definition at line 75 of file `fstream`.

**5.371.2.5** `template<typename _CharT, typename _Traits> typedef  
traits_type::pos_type std::basic_filebuf<_CharT, _Traits  
>::pos_type`

This is a non-standard type.

Reimplemented from [std::basic\\_streambuf<\\_CharT, \\_Traits>](#).

Reimplemented in [\\_\\_gnu\\_cxx::enc\\_filebuf<\\_CharT>](#), and [\\_\\_gnu\\_cxx::stdio\\_filebuf<\\_CharT, \\_Traits>](#).

Definition at line 74 of file fstream.

**5.371.2.6** `template<typename _CharT, typename _Traits> typedef _Traits  
std::basic_filebuf< _CharT, _Traits >::traits_type`

This is a non-standard type.

Reimplemented from `std::basic_streambuf< _CharT, _Traits >`.

Reimplemented in `__gnu_cxx::enc_filebuf< _CharT >`, and `__gnu_cxx::stdio_filebuf< _CharT, _Traits >`.

Definition at line 72 of file fstream.

### 5.371.3 Constructor & Destructor Documentation

**5.371.3.1** `template<typename _CharT, typename _Traits > std::basic_filebuf<  
_CharT, _Traits >::basic_filebuf () [inline]`

Does not open any files. The default constructor initializes the parent class using its own default ctor.

Definition at line 79 of file fstream.tcc.

References `std::basic_streambuf< _CharT, _Traits >::_M_buf_locale`.

**5.371.3.2** `template<typename _CharT, typename _Traits> virtual  
std::basic_filebuf< _CharT, _Traits >::~basic_filebuf () [inline,  
virtual]`

The destructor closes the file first.

Definition at line 214 of file fstream.

### 5.371.4 Member Function Documentation

**5.371.4.1** `template<typename _CharT, typename _Traits> void  
std::basic_filebuf< _CharT, _Traits >::_M_create_pback ()  
[inline, protected]`

Initializes pback buffers, and moves normal buffers to safety. Assumptions: `_M_in_cur` has already been moved back

Definition at line 172 of file fstream.

Referenced by `std::basic_filebuf< _CharT, _Traits >::pbackfail()`.

**5.371.4.2** `template<typename _CharT, typename _Traits> void  
std::basic_filebuf< _CharT, _Traits >::_M_destroy_pback () throw ()  
[inline, protected]`

Deactivates pback buffer contents, and restores normal buffer. Assumptions: The pback buffer has only moved forward.

Definition at line 189 of file fstream.

Referenced by std::basic\_filebuf< \_CharT, \_Traits >::seekoff(), std::basic\_filebuf< \_CharT, \_Traits >::seekpos(), std::basic\_filebuf< \_CharT, \_Traits >::underflow(), and std::basic\_filebuf< \_CharT, \_Traits >::xsgetn().

**5.371.4.3** `template<typename _CharT, typename _Traits> void  
std::basic_filebuf< _CharT, _Traits >::_M_set_buffer (streamsize  
__off) [inline, protected]`

This function sets the pointers of the internal buffer, both get and put areas. Typically:

`__off == egptr() - eback()` upon underflow/uflow (**read** mode); `__off == 0` upon overflow (**write** mode); `__off == -1` upon open, setbuf, seekoff/pos (**uncommitted** mode).

NB: `egptr() - pbase() == _M_buf_size - 1`, since `_M_buf_size` reflects the actual allocated memory and the last cell is reserved for the overflow char of a full put area.

Definition at line 387 of file fstream.

Referenced by std::basic\_filebuf< \_CharT, \_Traits >::imbue(), std::basic\_filebuf< \_CharT, \_Traits >::open(), std::basic\_filebuf< \_CharT, \_Traits >::overflow(), `_gnu_cxx::stdio_filebuf< _CharT, _Traits >::stdio_filebuf()`, std::basic\_filebuf< \_CharT, \_Traits >::underflow(), std::basic\_filebuf< \_CharT, \_Traits >::xsgetn(), and std::basic\_filebuf< \_CharT, \_Traits >::xsputn().

**5.371.4.4** `template<typename _CharT, typename _Traits> basic_filebuf<  
_CharT, _Traits >::_filebuf_type * std::basic_filebuf< _CharT,  
_Traits >::close () [inline]`

Closes the currently associated file.

**Returns:**

`this` on success, NULL on failure

If no file is currently open, this function immediately fails.

If a *put buffer area* exists, `overflow(eof)` is called to flush all the characters. The file is then closed.

If any operations fail, this function also fails.

Definition at line 128 of file `fstream.tcc`.

References `std::basic_filebuf<_CharT, _Traits>::is_open()`.

**5.371.4.8** `template<typename _CharT, typename _Traits> void  
std::basic_streambuf< _CharT, _Traits >::gbump (int __n)  
[inline, protected, inherited]`

Moving the read position.

**Parameters:**

*n* The delta by which to move.

This just advances the read position without returning any data.

Definition at line 476 of file `streambuf`.

Referenced by `std::basic_filebuf< _CharT, _Traits >::pbackfail()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos()`, and `std::basic_filebuf< _CharT, _Traits >::xsgetn()`.

**5.371.4.9** `template<typename _CharT, typename _Traits> locale  
std::basic_streambuf< _CharT, _Traits >::getloc () const  
[inline, inherited]`

Locale access.

**Returns:**

The current [locale](#) in effect.

If `pubimbue(loc)` has been called, then the most recent `loc` is returned. Otherwise the global [locale](#) in effect at the time of construction is returned.

Definition at line 222 of file streambuf.

```
5.371.4.10 template<typename _CharT, typename _Traits> char_type*
std::basic_streambuf< _CharT, _Traits >::gptr () const
[inline, protected, inherited]
```

Locale access.

**Returns:**

The current [locale](#) in effect.

If `pubimbue(loc)` has been called, then the most recent `loc` is returned. Otherwise the global [locale](#) in effect at the time of construction is returned.

Definition at line 463 of file streambuf.

Referenced by `std::basic_filebuf< _CharT, _Traits >::imbue()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow()`, `std::basic_filebuf< _CharT, _Traits >::pbackfail()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff()`, `std::basic_filebuf< _CharT, _Traits >::seekoff()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos()`, `std::basic_filebuf< _CharT, _Traits >::showmanyc()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow()`, `std::basic_filebuf< _CharT, _Traits >::underflow()`, and `std::basic_filebuf< _CharT, _Traits >::xsgetn()`.

```
5.371.4.11 template<typename _CharT , typename _Traits > void
std::basic_filebuf< _CharT, _Traits >::imbue (const locale &)
[inline, protected, virtual]
```

Changes translations.

**Parameters:**

*loc* A new [locale](#).

Translations done during I/O which depend on the current [locale](#) are changed by this call. The standard adds, *Between invocations of this function a class derived from `streambuf` can safely cache results of calls to [locale](#) functions and to members of facets so obtained.*

**Note:**

Base class version does nothing.

Reimplemented from `std::basic_streambuf< _CharT, _Traits >`.

Definition at line 855 of file fstream.tcc.

References std::basic\_filebuf< \_CharT, \_Traits >::\_M\_ext\_buf, std::basic\_filebuf< \_CharT, \_Traits >::\_M\_ext\_next, std::basic\_filebuf< \_CharT, \_Traits >::\_M\_mode, std::basic\_filebuf< \_CharT, \_Traits >::\_M\_reading, std::basic\_filebuf< \_CharT, \_Traits >::\_M\_set\_buffer(), std::ios\_base::cur, std::basic\_streambuf< \_CharT, \_Traits >::eback(), std::basic\_streambuf< \_CharT, \_Traits >::gptr(), std::basic\_filebuf< \_CharT, \_Traits >::is\_open(), and std::basic\_filebuf< \_CharT, \_Traits >::seekoff().

#### 5.371.4.12 `template<typename _CharT, typename _Traits> streamsize std::basic_streambuf< _CharT, _Traits >::in_avail ()` [`inline`, `inherited`]

Looking ahead into the stream.

##### Returns:

The number of characters available.

If a read position is available, returns the number of characters available for reading before the buffer must be refilled. Otherwise returns the derived `showmanyc()`.

Definition at line 262 of file streambuf.

#### 5.371.4.13 `template<typename _CharT, typename _Traits> bool std::basic_filebuf< _CharT, _Traits >::is_open () const throw ()` [`inline`]

Returns true if the external file is open.

Definition at line 222 of file fstream.

Referenced by std::basic\_filebuf< \_CharT, \_Traits >::close(), std::basic\_filebuf< \_CharT, \_Traits >::imbue(), std::basic\_filebuf< \_CharT, \_Traits >::open(), std::basic\_filebuf< \_CharT, \_Traits >::seekoff(), std::basic\_filebuf< \_CharT, \_Traits >::seekpos(), std::basic\_filebuf< \_CharT, \_Traits >::setbuf(), std::basic\_filebuf< \_CharT, \_Traits >::showmanyc(), and `__gnu_cxx::stdio_filebuf< _CharT, _Traits >::stdio_filebuf()`.

#### 5.371.4.14 `template<typename _CharT, typename _Traits> __filebuf_type* std::basic_filebuf< _CharT, _Traits >::open (const std::string & __s, ios_base::openmode __mode)` [`inline`]

Opens an external file.

##### Parameters:

`s` The name of the file.

*mode* The open mode flags.

**Returns:**

`this` on success, NULL on failure

Definition at line 275 of file `fstream`.

Referenced by `std::basic_filebuf< char_type, traits_type >::open()`.

**5.371.4.15** `template<typename _CharT, typename _Traits > basic_filebuf< _CharT, _Traits >::__filebuf_type * std::basic_filebuf< _CharT, _Traits >::open (const char * __s, ios_base::openmode __mode) [inline]`

Opens an external file.

**Parameters:**

*s* The name of the file.

*mode* The open mode flags.

**Returns:**

`this` on success, NULL on failure

If a file is already open, this function immediately fails. Otherwise it tries to open the file named *s* using the flags given in *mode*.

Table 92, adapted here, gives the relation between openmode combinations and the equivalent `fopen()` flags. (NB: lines `app`, `in|out|app`, `in|app`, `binary|app`, `binary|in|out|app`, and `binary|in|app` per DR 596)

| <code>ios_base</code> Flag combination | stdio equivalent | binary | in | out | trunc | app |
|----------------------------------------|------------------|--------|----|-----|-------|-----|
| <code>r</code>                         | <code>r</code>   |        |    |     |       |     |

**5.371.4.16** `template<typename _CharT, typename _Traits > basic_filebuf< _CharT, _Traits >::int_type std::basic_filebuf< _CharT, _Traits >::overflow(int_type = _Traits::eof()) [inline, protected, virtual]`

Consumes data from the buffer; writes to the controlled sequence.

**Parameters:**

*c* An additional character to consume.

**Returns:**

eof() to indicate failure, something else (usually *c*, or not\_eof())

Informally, this function is called when the output buffer is full (or does not exist, as buffering need not actually be done). If a buffer exists, it is *consumed*, with *some effect* on the controlled sequence. (Typically, the buffer is written out to the sequence verbatim.) In either case, the character *c* is also written out, if *c* is not eof().

For a formal definition of this function, see a good text such as Langer & Kreft, or [27.5.2.4.5]/3-7.

A functioning output streambuf can be created by overriding only this function (no buffer area will be used).

**Note:**

Base class version does nothing, returns eof().

Reimplemented from [std::basic\\_streambuf< \\_CharT, \\_Traits >](#).

Definition at line 408 of file fstream.tcc.

References std::basic\_filebuf< \_CharT, \_Traits >::\_M\_buf\_size, std::basic\_filebuf< \_CharT, \_Traits >::\_M\_mode, std::basic\_filebuf< \_CharT, \_Traits >::\_M\_reading, std::basic\_filebuf< \_CharT, \_Traits >::\_M\_set\_buffer(), std::ios\_base::out, std::basic\_streambuf< \_CharT, \_Traits >::pbase(), std::basic\_streambuf< \_CharT, \_Traits >::pbump(), and std::basic\_streambuf< \_CharT, \_Traits >::pptr().

Referenced by std::basic\_filebuf< \_CharT, \_Traits >::sync().

**5.371.4.17** `template<typename _CharT, typename _Traits > basic_filebuf< _CharT, _Traits >::int_type std::basic_filebuf< _CharT, _Traits >::pbackfail(int_type = _Traits::eof()) [inline, protected, virtual]`

Tries to back up the input sequence.

**Parameters:**

*c* The character to be inserted back into the sequence.

**Returns:**

eof() on failure, *some other value* on success

**Postcondition:**

The constraints of [gptr\(\)](#), [eback\(\)](#), and [pptr\(\)](#) are the same as for [underflow\(\)](#).

**Note:**

Base class version does nothing, returns eof().

Reimplemented from [std::basic\\_streambuf<\\_CharT, \\_Traits>](#).

std::basic_streambuf<_CharT, _Traits>::setg(char_type *  
__gbeg, char_type * __gnext, char_type * __gend) [inline,  
protected, inherited]`

Setting the three read area pointers.

**Parameters:**

*gbeg* A pointer.

*gnext* A pointer.

*gend* A pointer.

**Postcondition:**

*gbeg* == `eback()`, *gnext* == `gptr()`, and *gend* == `egptr()`

Definition at line 487 of file `streambuf`.

**5.371.4.31** `template<typename _CharT, typename _Traits> void  
std::basic_streambuf<_CharT, _Traits>::setp(char_type * __pbeg,  
char_type * __pend) [inline, protected, inherited]`

Setting the three write area pointers.

**Parameters:**

*pbeg* A pointer.

*pend* A pointer.

**Postcondition:**

$pbeg == pbase()$ ,  $pbeg == pptr()$ , and  $pend == epptr()$

Definition at line 533 of file streambuf.

**5.371.4.32** `template<typename _CharT, typename _Traits> int_type  
std::basic_streambuf< _CharT, _Traits >::sgetc () [inline,  
inherited]`

Getting the next character.

**Returns:**

The next character, or eof.

If the input read position is available, returns that character, otherwise calls and returns `underflow()`. Does not move the read position after fetching the character.

Definition at line 316 of file streambuf.

Referenced by `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, and `std::basic_istream< _CharT, _Traits >::sentry::sentry()`.

**5.371.4.33** `template<typename _CharT, typename _Traits> streamsize  
std::basic_streambuf< _CharT, _Traits >::sgetn (char_type * __s,  
streamsize __n) [inline, inherited]`

Entry point for `xsggetn`.

**Parameters:**

*s* A buffer area.

*n* A count.

Returns `xsggetn(s,n)`. The effect is to fill `s[0]` through `s[n-1]` with characters from the input sequence, if possible.

Definition at line 335 of file streambuf.

**5.371.4.34** `template<typename _CharT , typename _Traits > streamsize  
std::basic_filebuf< _CharT, _Traits >::showmanyc () [inline,  
protected, virtual]`

Investigating the data available.

**Returns:**

An estimate of the number of characters available in the input sequence, or -1.

If it returns a positive value, then successive calls to `underflow()` will not return `traits::eof()` until at least that number of characters have been supplied. If `showmanyc()` returns -1, then calls to `underflow()` or `uflow()` will fail. [27.5.2.4.3]/1

**Note:**

Base class version does nothing, returns zero.

The standard adds that *the intention is not only that the calls [to `underflow` or `uflow`] will not return `eof()` but that they will return immediately.*

The standard adds that *the morphemes of `showmanyc` are **es-how-many-see**, not **show-manic**.*

Reimplemented from `std::basic_streambuf<_CharT, _Traits>`.

Definition at line 178 of file `fstream.tcc`.

References `std::basic_filebuf<_CharT, _Traits>::_M_mode`, `std::ios_base::binary`, `std::basic_streambuf<_CharT, _Traits>::egptr()`, `std::basic_streambuf<_CharT, _Traits>::gptr()`, `std::ios_base::in`, and `std::basic_filebuf<_CharT, _Traits>::is_open()`.

#### 5.371.4.35 `template<typename _CharT, typename _Traits> int_type std::basic_streambuf<_CharT, _Traits>::snextc()` [`inline`, `inherited`]

Getting the next character.

**Returns:**

The next character, or `eof`.

Calls `sbumpc()`, and if that function returns `traits::eof()`, so does this function. Otherwise, `sgetc()`.

Definition at line 276 of file `streambuf`.

Referenced by `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, and `std::basic_istream<_CharT, _Traits>::sentry::sentry()`.

**5.371.4.36** `template<typename _CharT, typename _Traits> int_type  
std::basic_streambuf< _CharT, _Traits >::sputbackc (char_type  
__c) [inline, inherited]`

Pushing characters back into the input stream.

**Parameters:**

*c* The character to push back.

**Returns:**

The previous character, if possible.

Similar to [sungetc\(\)](#), but *c* is pushed onto the stream instead of *the previous character*. If successful, the next character fetched from the input stream will be *c*.

Definition at line 350 of file streambuf.

Referenced by `std::basic_istream< _CharT, _Traits >::putback()`.

**5.371.4.37** `template<typename _CharT, typename _Traits> int_type  
std::basic_streambuf< _CharT, _Traits >::sputc (char_type __c)  
[inline, inherited]`

Entry point for all single-character output functions.

**Parameters:**

*c* A character to output.

**Returns:**

*c*, if possible.

One of two public output functions.

If a write position is available for the output sequence (i.e., the buffer is not full), stores *c* in that position, increments the position, and returns `traits::to_int_type(c)`. If a write position is not available, returns `overflow(c)`.

Definition at line 402 of file streambuf.

Referenced by `std::basic_istream< _CharT, _Traits >::get()`, and `std::ostreambuf_iterator< _CharT, _Traits >::operator=()`.

**5.371.4.38** `template<typename _CharT, typename _Traits> streamsize  
std::basic_streambuf< _CharT, _Traits >::sputn (const char_type *  
_s, streamsize _n) [inline, inherited]`

Entry point for all single-character output functions.

**Parameters:**

*s* A buffer read area.

*n* A count.

One of two public output functions.

Returns `xsputn(s,n)`. The effect is to write `s[0]` through `s[n-1]` to the output sequence, if possible.

Definition at line 428 of file `streambuf`.

**5.371.4.39** `template<typename _CharT, typename _Traits> void  
std::basic_streambuf< _CharT, _Traits >::stoss() [inline,  
inherited]`

Tosses a character. Advances the read pointer, ignoring the character that would have been read.

See <http://gcc.gnu.org/ml/libstdc++/2002-05/msg00168.html>

Definition at line 761 of file `streambuf`.

**5.371.4.40** `template<typename _CharT, typename _Traits> int_type  
std::basic_streambuf< _CharT, _Traits >::sungetc () [inline,  
inherited]`

Moving backwards in the input stream.

**Returns:**

The previous character, if possible.

If a putback position is available, this function decrements the input pointer and returns that character. Otherwise, calls and returns `pbackfail()`. The effect is to *unget* the last character *gotten*.

Definition at line 375 of file `streambuf`.

Referenced by `std::basic_istream< _CharT, _Traits >::ungetc()`.

**5.371.4.41** `template<typename _CharT, typename _Traits> int  
std::basic_filebuf<_CharT, _Traits>::sync() [inline,  
protected, virtual]`

Synchronizes the buffer arrays with the controlled sequences.

**Returns:**

-1 on failure.

Each derived class provides its own appropriate behavior, including the definition of *failure*.

**Note:**

Base class version does nothing, returns zero.

Reimplemented from [std::basic\\_streambuf<\\_CharT, \\_Traits>](#).

Definition at line 838 of file `fstream.tcc`.

References `std::basic_filebuf<_CharT, _Traits>::overflow()`, `std::basic_streambuf<_CharT, _Traits>::pbase()`, and `std::basic_streambuf<_CharT, _Traits>::pptr()`.

**5.371.4.42** `template<typename _CharT, typename _Traits> virtual int_type  
std::basic_streambuf<_CharT, _Traits>::uflow() [inline,  
protected, virtual, inherited]`

Fetches more data from the controlled sequence.

**Returns:**

The first character from the *pending sequence*.

Informally, this function does the same thing as `underflow()`, and in fact is required to call that function. It also returns the new character, like `underflow()` does. However, this function also moves the read position forward by one.

Reimplemented in [\\_\\_gnu\\_cxx::stdio\\_sync\\_filebuf<\\_CharT, \\_Traits>](#).

Definition at line 678 of file `streambuf`.

**5.371.4.43** `template<typename _CharT, typename _Traits> basic_filebuf<  
_CharT, _Traits>::int_type std::basic_filebuf<_CharT, _Traits  
>::underflow() [inline, protected, virtual]`

Fetches more data from the controlled sequence.

**Returns:**

The first character from the *pending sequence*.

Informally, this function is called when the input buffer is exhausted (or does not exist, as buffering need not actually be done). If a buffer exists, it is *refilled*. In either case, the next available character is returned, or `traits::eof()` to indicate a null pending sequence.

For a formal definition of the pending sequence, see a good text such as Langer & Kreft, or [27.5.2.4.3]/7-14.

A functioning input streambuf can be created by overriding only this function (no buffer area will be used). For an example, see <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch25.html>

**Note:**

Base class version does nothing, returns `eof()`.

Reimplemented from `std::basic_streambuf< _CharT, _Traits >`.

Definition at line 204 of file `fstream.tcc`.

References `std::basic_filebuf< _CharT, _Traits >::_M_buf_size`, `std::basic_filebuf< _CharT, _Traits >::_M_destroy_pback()`, `std::basic_filebuf< _CharT, _Traits >::_M_ext_buf`, `std::basic_filebuf< _CharT, _Traits >::_M_ext_buf_size`, `std::basic_filebuf< _CharT, _Traits >::_M_ext_next`, `std::basic_filebuf< _CharT, _Traits >::_M_mode`, `std::basic_filebuf< _CharT, _Traits >::_M_reading`, `std::basic_filebuf< _CharT, _Traits >::_M_set_buffer()`, `std::basic_streambuf< _CharT, _Traits >::eback()`, `std::basic_streambuf< _CharT, _Traits >::egptr()`, `std::basic_streambuf< _CharT, _Traits >::gptr()`, `std::__codecvt_abstract_base< _InternT, _ExternT, _StateT >::in()`, `std::ios_base::in`, and `std::min()`.

Referenced by `std::basic_filebuf< _CharT, _Traits >::pbackfail()`.

#### 5.371.4.44 `template<typename _CharT, typename _Traits> streamsize std::basic_filebuf< _CharT, _Traits >::xsgetn(char_type * __s, streamsize __n) [inline, protected, virtual]`

Multiple character extraction.

**Parameters:**

- s* A buffer area.
- n* Maximum number of characters to assign.

**Returns:**

The number of characters assigned.

Fills  $s[0]$  through  $s[n-1]$  with characters from the input sequence, as if by `sbumpc()`. Stops when either  $n$  characters have been copied, or when `traits::eof()` would be copied.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Reimplemented from `std::basic_streambuf<_CharT, _Traits>`.

Definition at line 527 of file `fstream.tcc`.

References `std::basic_filebuf<_CharT, _Traits>::_M_buf_size`, `std::basic_filebuf<_CharT, _Traits>::_M_destroy_pback()`, `std::basic_filebuf<_CharT, _Traits>::_M_mode`, `std::basic_filebuf<_CharT, _Traits>::_M_pback_init`, `std::basic_filebuf<_CharT, _Traits>::_M_reading`, `std::basic_filebuf<_CharT, _Traits>::_M_set_buffer()`, `std::basic_streambuf<_CharT, _Traits>::eback()`, `std::basic_streambuf<_CharT, _Traits>::egptr()`, `std::basic_streambuf<_CharT, _Traits>::gbump()`, `std::basic_streambuf<_CharT, _Traits>::gptr()`, `std::ios_base::in`, and `std::basic_streambuf<char_type, traits_type>::xsgetn()`.

**5.371.4.45** `template<typename _CharT, typename _Traits> streamsize  
std::basic_filebuf<_CharT, _Traits>::xsputn(const char_type *  
__s, streamsize __n) [inline, protected, virtual]`

Multiple character insertion.

**Parameters:**

- $s$  A buffer area.
- $n$  Maximum number of characters to write.

**Returns:**

The number of characters written.

Writes  $s[0]$  through  $s[n-1]$  to the output sequence, as if by `sputc()`. Stops when either  $n$  characters have been copied, or when `sputc()` would return `traits::eof()`.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Reimplemented from `std::basic_streambuf<_CharT, _Traits>`.

Definition at line 610 of file `fstream.tcc`.

References `std::basic_filebuf<_CharT, _Traits>::_M_buf_size`, `std::basic_filebuf<_CharT, _Traits>::_M_mode`, `std::basic_filebuf<_CharT, _Traits>::_M_reading`, `std::basic_filebuf<_CharT, _Traits>::_M_set_buffer()`, `std::basic_streambuf<_CharT, _Traits>::epptr()`, `std::min()`, `std::ios_base::out`, and `std::basic_streambuf<_`

`CharT, _Traits >::pbase()`, `std::basic_streambuf<_CharT, _Traits >::pptr()`, and `std::basic_streambuf<char_type, traits_type >::xsputn()`.

### 5.371.5 Member Data Documentation

#### 5.371.5.1 `template<typename _CharT, typename _Traits> char_type* std::basic_filebuf<_CharT, _Traits >::_M_buf` [protected]

Pointer to the beginning of internal buffer.

Definition at line 109 of file `fstream`.

Referenced by `std::basic_filebuf<_CharT, _Traits >::setbuf()`.

#### 5.371.5.2 `template<typename _CharT, typename _Traits> locale std::basic_streambuf<_CharT, _Traits >::_M_buf_locale` [protected, inherited]

Current `locale` setting.

Definition at line 188 of file `streambuf`.

Referenced by `std::basic_filebuf<_CharT, _Traits >::basic_filebuf()`.

#### 5.371.5.3 `template<typename _CharT, typename _Traits> size_t std::basic_filebuf<_CharT, _Traits >::_M_buf_size` [protected]

Actual size of internal buffer. This number is equal to the size of the put area + 1 position, reserved for the overflow char of a full area.

Definition at line 116 of file `fstream`.

Referenced by `std::basic_filebuf<_CharT, _Traits >::overflow()`, `std::basic_filebuf<_CharT, _Traits >::setbuf()`, `__gnu_cxx::stdio_filebuf<_CharT, _Traits >::stdio_filebuf()`, `std::basic_filebuf<_CharT, _Traits >::underflow()`, `std::basic_filebuf<_CharT, _Traits >::xsgetn()`, and `std::basic_filebuf<_CharT, _Traits >::xsputn()`.

#### 5.371.5.4 `template<typename _CharT, typename _Traits> char* std::basic_filebuf<_CharT, _Traits >::_M_ext_buf` [protected]

Buffer for external characters. Used for input when `codecvt::always_noconv() == false`. When valid, this corresponds to `eback()`.

Definition at line 151 of file `fstream`.

Referenced by `std::basic_filebuf<_CharT, _Traits >::imbue()`, `std::basic_filebuf<_CharT, _Traits >::seekoff()`, and `std::basic_filebuf<_CharT, _Traits >::underflow()`.

**5.371.5.5** `template<typename _CharT, typename _Traits> streamsize  
std::basic_filebuf< _CharT, _Traits >::_M_ext_buf_size  
[protected]`

Size of buffer held by `_M_ext_buf`.

Definition at line 156 of file `fstream`.

Referenced by `std::basic_filebuf< _CharT, _Traits >::underflow()`.

**5.371.5.6** `template<typename _CharT, typename _Traits> const  
char* std::basic_filebuf< _CharT, _Traits >::_M_ext_next  
[protected]`

Pointers into the buffer held by `_M_ext_buf` that delimit a subsequence of bytes that have been read but not yet converted. When valid, `_M_ext_next` corresponds to [egptr\(\)](#).

Definition at line 163 of file `fstream`.

Referenced by `std::basic_filebuf< _CharT, _Traits >::imbue()`, `std::basic_filebuf< _CharT, _Traits >::seekoff()`, and `std::basic_filebuf< _CharT, _Traits >::underflow()`.

**5.371.5.7** `template<typename _CharT, typename _Traits> char_type*  
std::basic_streambuf< _CharT, _Traits >::_M_in_beg  
[protected, inherited]`

This is based on `_IO_FILE`, just reordered to be more consistent, and is intended to be the most minimal abstraction for an internal buffer.

- `get == input == read`
- `put == output == write`

Definition at line 180 of file `streambuf`.

**5.371.5.8** `template<typename _CharT, typename _Traits> char_type*  
std::basic_streambuf< _CharT, _Traits >::_M_in_cur  
[protected, inherited]`

Locale access.

**Returns:**

The current [locale](#) in effect.

If `pubimbue(loc)` has been called, then the most recent `loc` is returned. Otherwise the global [locale](#) in effect at the time of construction is returned.

Definition at line 181 of file streambuf.

**5.371.5.9** `template<typename _CharT, typename _Traits> char_type*  
std::basic_streambuf< _CharT, _Traits >::_M_in_end  
[protected, inherited]`

Locale access.

**Returns:**

The current [locale](#) in effect.

If `pubimbue(loc)` has been called, then the most recent `loc` is returned. Otherwise the global [locale](#) in effect at the time of construction is returned.

Definition at line 182 of file streambuf.

**5.371.5.10** `template<typename _CharT, typename _Traits>  
ios_base::openmode std::basic_filebuf< _CharT, _Traits  
>::_M_mode [protected]`

Place to stash in || out || in | out settings for current filebuf.

Definition at line 94 of file fstream.

Referenced by `std::basic_filebuf< _CharT, _Traits >::imbue()`, `std::basic_filebuf< _CharT, _Traits >::open()`, `std::basic_filebuf< _CharT, _Traits >::overflow()`, `std::basic_filebuf< _CharT, _Traits >::pbackfail()`, `std::basic_filebuf< _CharT, _Traits >::showmanyc()`, `__gnu_cxx::stdio_filebuf< _CharT, _Traits >::stdio_filebuf()`, `std::basic_filebuf< _CharT, _Traits >::underflow()`, `std::basic_filebuf< _CharT, _Traits >::xsgetn()`, and `std::basic_filebuf< _CharT, _Traits >::xsputn()`.

**5.371.5.11** `template<typename _CharT, typename _Traits> char_type*  
std::basic_streambuf< _CharT, _Traits >::_M_out_beg  
[protected, inherited]`

Locale access.

**Returns:**

The current [locale](#) in effect.

If `pubimbue(loc)` has been called, then the most recent `loc` is returned. Otherwise the global [locale](#) in effect at the time of construction is returned.

Definition at line 183 of file streambuf.

**5.371.5.12** `template<typename _CharT, typename _Traits> char_type*  
std::basic_streambuf< _CharT, _Traits >::_M_out_cur  
[protected, inherited]`

Locale access.

**Returns:**

The current [locale](#) in effect.

If `pubimbue(loc)` has been called, then the most recent `loc` is returned. Otherwise the global [locale](#) in effect at the time of construction is returned.

Definition at line 184 of file `streambuf`.

**5.371.5.13** `template<typename _CharT, typename _Traits> char_type*  
std::basic_streambuf< _CharT, _Traits >::_M_out_end  
[protected, inherited]`

Locale access.

**Returns:**

The current [locale](#) in effect.

If `pubimbue(loc)` has been called, then the most recent `loc` is returned. Otherwise the global [locale](#) in effect at the time of construction is returned.

Definition at line 185 of file `streambuf`.

**5.371.5.14** `template<typename _CharT, typename _Traits> char_type  
std::basic_filebuf< _CharT, _Traits >::_M_pback [protected]`

Necessary bits for putback buffer management.

**Note:**

pbacks of over one character are not currently supported.

Definition at line 137 of file `fstream`.

**5.371.5.15** `template<typename _CharT, typename _Traits> char_type*  
std::basic_filebuf< _CharT, _Traits >::_M_pback_cur_save  
[protected]`

Necessary bits for putback buffer management.

**Note:**

pbacks of over one character are not currently supported.

Definition at line 138 of file fstream.

**5.371.5.16** `template<typename _CharT, typename _Traits> char_type*  
std::basic_filebuf< _CharT, _Traits >::_M_pback_end_save  
[protected]`

Necessary bits for putback buffer management.

**Note:**

pbacks of over one character are not currently supported.

Definition at line 139 of file fstream.

**5.371.5.17** `template<typename _CharT, typename _Traits> bool  
std::basic_filebuf< _CharT, _Traits >::_M_pback_init  
[protected]`

Necessary bits for putback buffer management.

**Note:**

pbacks of over one character are not currently supported.

Definition at line 140 of file fstream.

Referenced by `std::basic_filebuf< _CharT, _Traits >::pbackfail()`, and `std::basic_filebuf< _CharT, _Traits >::xsgetn()`.

**5.371.5.18** `template<typename _CharT, typename _Traits> bool  
std::basic_filebuf< _CharT, _Traits >::_M_reading  
[protected]`

`_M_reading == false && _M_writing == false` for **uncommitted** mode; `_M_reading == true` for **read** mode; `_M_writing == true` for **write** mode;

NB: `_M_reading == true && _M_writing == true` is unused.

Definition at line 128 of file fstream.

Referenced by `std::basic_filebuf< _CharT, _Traits >::imbue()`, `std::basic_filebuf< _CharT, _Traits >::open()`, `std::basic_filebuf< _CharT, _Traits >::overflow()`,

## 5.372 `std::basic_fstream< _CharT, _Traits >` Class Template Reference

Controlling input and output for files.

This class supports reading from and writing to named files, using the inherited functions from `std::basic_istream`. To control the associated sequence, an instance of `std::basic_filebuf` is used, which this page refers to as `sb`. Inheritance diagram for `std::basic_fstream< _CharT, _Traits >`:

### Public Types

### Unformatted Output Functions

All the unformatted output functions have some common behavior. Each starts by constructing a temporary object of type [std::basic\\_ostream::sentry](#). This has several effects, concluding with the setting of a status flag; see the [sentry](#) documentation for more.

If the [sentry](#) status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an [exception](#) is thrown during insertion, [ios\\_base::badbit](#) will be turned on in the stream's error state. If [badbit](#) is on in the stream's exceptions mask, the [exception](#) will be rethrown without completing its actions.

- [\\_\\_ostream\\_type](#) & [write](#) (const [char\\_type](#) \*\_\_s, [streamsize](#) \_\_n)

### Unformatted Input Functions

All the unformatted input functions have some common behavior. Each starts by constructing a temporary object of type [std::basic\\_istream::sentry](#) with the second argument ([noskipws](#)) [set](#) to true. This has several effects, concluding with the setting of a status flag; see the [sentry](#) documentation for more.

If the [sentry](#) status is good, the function tries to extract whatever data is appropriate for the type of the argument.

The number of characters extracted is stored for later retrieval by [gcount](#)() .

If an [exception](#) is thrown during extraction, [ios\\_base::badbit](#) will be turned on in the stream's error state without causing an [ios\\_base::failure](#) to be thrown. The original [exception](#) will then be rethrown.

- [\\_\\_istream\\_type](#) & [get](#) ([\\_\\_streambuf\\_type](#) &\_\_sb)
- [\\_\\_istream\\_type](#) & [get](#) ([\\_\\_streambuf\\_type](#) &\_\_sb, [char\\_type](#) \_\_delim)
- [\\_\\_istream\\_type](#) & [get](#) ([char\\_type](#) \*\_\_s, [streamsize](#) \_\_n)
- [\\_\\_istream\\_type](#) & [get](#) ([char\\_type](#) \*\_\_s, [streamsize](#) \_\_n, [char\\_type](#) \_\_delim)
- [\\_\\_istream\\_type](#) & [get](#) ([char\\_type](#) &\_\_c)
- [int\\_type](#) [get](#) ()
- [\\_\\_istream\\_type](#) & [getline](#) ([char\\_type](#) \*\_\_s, [streamsize](#) \_\_n)
- [\\_\\_istream\\_type](#) & [getline](#) ([char\\_type](#) \*\_\_s, [streamsize](#) \_\_n, [char\\_type](#) \_\_delim)
- [\\_\\_istream\\_type](#) & [ignore](#) ([streamsize](#) \_\_n, [int\\_type](#) \_\_delim)
- [\\_\\_istream\\_type](#) & [ignore](#) ([streamsize](#) \_\_n)

- `__istream_type & ignore ()`
- `int_type peek ()`
- `__istream_type & putback (char_type __c)`
- `__istream_type & read (char_type *__s, streamsize __n)`
- `streamsize readsome (char_type *__s, streamsize __n)`
- `__istream_type & seekg (off_type, ios_base::seekdir)`
- `__istream_type & seekg (pos_type)`
- `int sync ()`
- `pos_type tellg ()`
- `__istream_type & unget ()`

### Arithmetic Inserters

All the `operator<<` functions (aka formatted output functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_ostream::sentry`. This can have several effects, concluding with the setting of a status flag; see the `sentry` documentation for more.

If the `sentry` status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an *exception* is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state without causing an `ios_base::failure` to be thrown. The original *exception* will then be rethrown.

- `__ostream_type & operator<< (__streambuf_type *__sb)`
- `__ostream_type & operator<< (const void *__p)`
- `__ostream_type & operator<< (long double __f)`
- `__ostream_type & operator<< (float __f)`
- `__ostream_type & operator<< (double __f)`
- `__ostream_type & operator<< (unsigned long long __n)`
- `__ostream_type & operator<< (long long __n)`
- `__ostream_type & operator<< (unsigned int __n)`
- `__ostream_type & operator<< (int __n)`
- `__ostream_type & operator<< (unsigned short __n)`
- `__ostream_type & operator<< (short __n)`
- `__ostream_type & operator<< (bool __n)`
- `__ostream_type & operator<< (unsigned long __n)`
- `__ostream_type & operator<< (long __n)`
  
- `__ostream_type & operator<< (ios_base &(*__pf)(ios_base &))`
- `__ostream_type & operator<< (__ios_type &(*__pf)(__ios_type &))`
- `__ostream_type & operator<< (__ostream_type &(*__pf)(__ostream_type &))`

### Arithmetic Extractors

All the `operator>>` functions (aka formatted input functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (`noskipws`) set to false. This has several

effects, concluding with the setting of a status flag; see the [sentry documentation](#) for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

If an *exception* is thrown during extraction, [ios\\_base::badbit](#) will be turned on in the stream's error state without causing an [ios\\_base::failure](#) to be thrown. The original *exception* will then be rethrown.

- [\\_\\_istream\\_type](#) & operator>> ([\\_\\_streambuf\\_type](#) \* \_\_sb)
- [\\_\\_istream\\_type](#) & operator>> (void \*&\_\_p)
- [\\_\\_istream\\_type](#) & operator>> (long double &\_\_f)
- [\\_\\_istream\\_type](#) & operator>> (double &\_\_f)
- [\\_\\_istream\\_type](#) & operator>> (float &\_\_f)
- [\\_\\_istream\\_type](#) & operator>> (unsigned long long &\_\_n)
- [\\_\\_istream\\_type](#) & operator>> (long long &\_\_n)
- [\\_\\_istream\\_type](#) & operator>> (unsigned long &\_\_n)
- [\\_\\_istream\\_type](#) & operator>> (long &\_\_n)
- [\\_\\_istream\\_type](#) & operator>> (unsigned int &\_\_n)
- [\\_\\_istream\\_type](#) & operator>> (int &\_\_n)
- [\\_\\_istream\\_type](#) & operator>> (unsigned short &\_\_n)
- [\\_\\_istream\\_type](#) & operator>> (short &\_\_n)
- [\\_\\_istream\\_type](#) & operator>> (bool &\_\_n)
  
- [\\_\\_istream\\_type](#) & operator>> ([ios\\_base](#) &(\*\_\_pf)([ios\\_base](#) &))
- [\\_\\_istream\\_type](#) & operator>> ([\\_\\_ios\\_type](#) &(\*\_\_pf)([\\_\\_ios\\_type](#) &))
- [\\_\\_istream\\_type](#) & operator>> ([\\_\\_istream\\_type](#) &(\*\_\_pf)([\\_\\_istream\\_type](#) &))

### 5.372.1 Detailed Description

```
template<typename _CharT, typename _Traits> class std::basic_fstream< _CharT, _Traits >
```

Controlling input and output for files.

This class supports reading from and writing to named files, using the inherited functions from `std::basic_ostream`. To control the associated sequence, an instance of `std::basic_filebuf` is used, which this page refers to as `s.b.`

Definition at line 756 of file `fstream`.

## 5.372.2 Member Typedef Documentation

**5.372.2.1** `template<typename _CharT, typename _Traits> typedef ctype<_CharT> std::basic_ostream<_CharT, _Traits>::_ctype_type [inherited]`

These are non-standard types.

Reimplemented from [std::basic\\_ios<\\_CharT, \\_Traits>](#).

Definition at line 71 of file `ostream`.

**5.372.2.2** `template<typename _CharT, typename _Traits> typedef ctype<_CharT> std::basic_istream<_CharT, _Traits>::_ctype_type [inherited]`

These are non-standard types.

Reimplemented from [std::basic\\_ios<\\_CharT, \\_Traits>](#).

Definition at line 71 of file `istream`.

**5.372.2.3** `template<typename _CharT, typename _Traits> typedef num_get<_CharT, istreambuf_iterator<_CharT, _Traits>> std::basic_istream<_CharT, _Traits>::_num_get_type [inherited]`

These are non-standard types.

Reimplemented from [std::basic\\_ios<\\_CharT, \\_Traits>](#).

Definition at line 70 of file `istream`.

**5.372.2.4** `template<typename _CharT, typename _Traits> typedef num_put<_CharT, ostreambuf_iterator<_CharT, _Traits>> std::basic_ostream<_CharT, _Traits>::_num_put_type [inherited]`

The quick-and-easy status check. This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

Reimplemented from [std::basic\\_ios<\\_CharT, \\_Traits>](#).

Definition at line 70 of file `ostream`.

**5.372.2.5** `template<typename _CharT, typename _Traits> typedef num_put<_CharT, ostreambuf_iterator<_CharT, _Traits>> std::basic_ios<_CharT, _Traits>::_num_put_type` **[inherited]**

The quick-and-easy status check. This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

Reimplemented in [std::basic\\_ostream<\\_CharT, \\_Traits>](#), [std::basic\\_ostream<char, \\_Traits>](#), and [std::basic\\_ostream<char>](#).

Definition at line 84 of file `basic_ios.h`.

**5.372.2.6** `template<typename _CharT, typename _Traits> typedef _CharT std::basic_fstream<_CharT, _Traits>::char_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic\\_iostream<\\_CharT, \\_Traits>](#).

Definition at line 760 of file `fstream`.

**5.372.2.7** `typedef void(* std::ios_base::event_callback)(event, ios_base &, int)` **[inherited]**

The type of an event callback function.

**Parameters:**

*event* One of the members of the event enum.

*ios\_base* Reference to the `ios_base` object.

*int* The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several `ios_base` and `basic_ios` functions, specifically `imbue()`, `copyfmt()`, and `~ios()`.

Definition at line 444 of file `ios_base.h`.

**5.372.2.8** `typedef _Ios_Fmtflags std::ios_base::fmtflags` **[inherited]**

This is a bitmask type. `_Ios_Fmtflags` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `fmtflags` are:

- `boolalpha`
- `dec`
- `fixed`
- `hex`
- `internal`
- `left`
- `oct`
- `right`
- `scientific`
- `showbase`
- `showpoint`
- `showpos`
- `skipws`
- `unitbuf`
- `uppercase`
- `adjustfield`
- `basefield`
- `floatfield`

Definition at line 263 of file `ios_base.h`.

**5.372.2.9** `template<typename _CharT , typename _Traits > typedef traits_type::int_type std::basic_fstream< _CharT, _Traits >::int_type`

These are non-standard types.

Reimplemented from [std::basic\\_iostream< \\_CharT, \\_Traits >](#).

Definition at line 762 of file `fstream`.

**5.372.2.10 typedef `_Ios_Iostate` `std::ios_base::iostate` [inherited]**

This is a bitmask type. `_Ios_Iostate` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `iostate` are:

- `badbit`
- `eofbit`
- `failbit`
- `goodbit`

Definition at line 338 of file `ios_base.h`.

**5.372.2.11 template<typename `_CharT`, typename `_Traits`> typedef `traits_type::off_type` `std::basic_fstream<_CharT, _Traits>::off_type`**

These are non-standard types.

Reimplemented from [std::basic\\_iostream<\\_CharT, \\_Traits>](#).

Definition at line 764 of file `fstream`.

**5.372.2.12 typedef `_Ios_Openmode` `std::ios_base::openmode` [inherited]**

This is a bitmask type. `_Ios_Openmode` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `openmode` are:

- `app`
- `ate`
- `binary`
- `in`
- `out`
- `trunc`

Definition at line 369 of file `ios_base.h`.

**5.372.2.13** `template<typename _CharT, typename _Traits> typedef traits_type::pos_type std::basic_fstream<_CharT, _Traits>::pos_type`

These are non-standard types.

Reimplemented from [std::basic\\_iostream<\\_CharT, \\_Traits>](#).

Definition at line 763 of file `fstream`.

**5.372.2.14** `typedef _Ios_Seekdir std::ios_base::seekdir [inherited]`

This is an enumerated type. `_Ios_Seekdir` is implementation-defined. Defined values of type `seekdir` are:

- `beg`
- `cur`, equivalent to `SEEK_CUR` in the C standard library.
- `end`, equivalent to `SEEK_END` in the C standard library.

Definition at line 401 of file `ios_base.h`.

**5.372.2.15** `template<typename _CharT, typename _Traits> typedef _Traits std::basic_fstream<_CharT, _Traits>::traits_type`

These are non-standard types.

Reimplemented from [std::basic\\_iostream<\\_CharT, \\_Traits>](#).

Definition at line 761 of file `fstream`.

## 5.372.3 Member Enumeration Documentation

**5.372.3.1** `enum std::ios_base::event [inherited]`

The [set](#) of events that may be passed to an event callback. `erase_event` is used during `~ios()` and `copyfmt()`. `imbue_event` is used during [imbue\(\)](#). `copyfmt_event` is used during `copyfmt()`.

Definition at line 427 of file `ios_base.h`.

## 5.372.4 Constructor & Destructor Documentation

**5.372.4.1** `template<typename _CharT , typename _Traits >  
std::basic_fstream< _CharT, _Traits >::basic_fstream ()  
[inline]`

Default constructor. Initializes `sb` using its default constructor, and passes `&sb` to the base class initializer. Does not open any files (you haven't given it a filename to open).

Definition at line 783 of file `fstream`.

**5.372.4.2** `template<typename _CharT , typename _Traits >  
std::basic_fstream< _CharT, _Traits >::basic_fstream (const char *  
__s, ios_base::openmode __mode = ios_base::in | ios_base::out)  
[inline, explicit]`

Create an input/output file stream.

### Parameters:

`s` Null terminated string specifying the filename.

`mode` Open file in specified mode (see [std::ios\\_base](#)).

Tip: When using `std::string` to hold the filename, you must use `.c_str()` before passing it to this constructor.

Definition at line 796 of file `fstream`.

**5.372.4.3** `template<typename _CharT , typename _Traits >  
std::basic_fstream< _CharT, _Traits >::basic_fstream  
(const std::string & __s, ios_base::openmode __mode =  
ios_base::in | ios_base::out) [inline, explicit]`

Create an input/output file stream.

### Parameters:

`s` Null terminated string specifying the filename.

`mode` Open file in specified mode (see [std::ios\\_base](#)).

Definition at line 811 of file `fstream`.

**5.372.4.4** `template<typename _CharT, typename _Traits >  
std::basic_fstream< _CharT, _Traits >::~~basic_fstream ()  
[inline]`

The destructor does nothing. The file is closed by the filebuf object, not the formatting stream.

Definition at line 826 of file fstream.

## 5.372.5 Member Function Documentation

**5.372.5.1** `const locale& std::ios_base::_M_getloc () const [inline, inherited]`

Locale access.

### Returns:

A reference to the current [locale](#).

Like `getloc` above, but returns a reference instead of generating a copy.

Definition at line 705 of file `ios_base.h`.

Referenced by `std::money_get< _CharT, _InIter >::do_get()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::time_get< _CharT, _InIter >::do_get_date()`, `std::time_get< _CharT, _InIter >::do_get_monthname()`, `std::time_get< _CharT, _InIter >::do_get_time()`, `std::time_get< _CharT, _InIter >::do_get_weekday()`, `std::time_get< _CharT, _InIter >::do_get_year()`, `std::time_put< _CharT, _OutIter >::do_put()`, `std::num_put< _CharT, _OutIter >::do_put()`, and `std::time_put< _CharT, _OutIter >::put()`.

**5.372.5.2** `template<typename _CharT, typename _Traits> void  
std::basic_ostream< _CharT, _Traits >::_M_write (const char_type  
* __s, streamsize __n) [inline, inherited]`

Simple insertion.

### Parameters:

*c* The character to insert.

### Returns:

\*this

Tries to insert *c*.

**Note:**

This function is not overloaded on signed char and unsigned char.

Definition at line 287 of file ostream.

Referenced by `std::basic_ostream<_CharT, _Traits>::write()`.

**5.372.5.3** `template<typename _CharT, typename _Traits> bool std::basic_ios<_CharT, _Traits>::bad () const` `[inline, inherited]`

Fast error checking.

**Returns:**

True if the badbit is [set](#).

Note that other iostate flags may also be [set](#).

Definition at line 201 of file basic\_ios.h.

**5.372.5.4** `template<typename _CharT , typename _Traits > void std::basic_ios<_CharT, _Traits >::clear (iostate __state = goodbit)` `[inline, inherited]`

[Re]sets the error state.

**Parameters:**

*state* The new state flag(s) to [set](#).

See [std::ios\\_base::iostate](#) for the possible bit values. Most users will not need to pass an argument.

Definition at line 40 of file basic\_ios.tcc.

Referenced by `std::basic_ios<_CharT, _Traits>::rdbuf()`.

**5.372.5.5** `template<typename _CharT , typename _Traits > void std::basic_fstream<_CharT, _Traits >::close ()` `[inline]`

Close the file. Calls [std::basic\\_filebuf::close\(\)](#). If that function fails, [failbit](#) is [set](#) in the stream's error state.

Definition at line 906 of file fstream.

**5.372.5.6** `template<typename _CharT, typename _Traits> basic_ios<_CharT, _Traits> & std::basic_ios<_CharT, _Traits>::copyfmt(const basic_ios<_CharT, _Traits> & __rhs) [inline, inherited]`

Copies fields of `__rhs` into this.

**Parameters:**

`__rhs` The source values for the copies.

**Returns:**

Reference to this object.

All fields of `__rhs` are copied into this object except that `rdbuf()` and `rdstate()` remain unchanged. All values in the `pword` and `iword` arrays are copied. Before copying, each callback is invoked with `erase_event`. After copying, each (new) callback is invoked with `copyfmt_event`. The final step is to copy `exceptions()`.

Definition at line 62 of file `basic_ios.tcc`.

References `std::basic_ios<_CharT, _Traits>::exceptions()`, `std::basic_ios<_CharT, _Traits>::fill()`, `std::ios_base::flags()`, `std::ios_base::getloc()`, `std::ios_base::precision()`, `std::basic_ios<_CharT, _Traits>::tie()`, and `std::ios_base::width()`.

**5.372.5.7** `template<typename _CharT, typename _Traits> bool std::basic_ios<_CharT, _Traits>::eof() const [inline, inherited]`

Fast error checking.

**Returns:**

True if the eofbit is `set`.

Note that other iostate flags may also be `set`.

Definition at line 180 of file `basic_ios.h`.

Referenced by `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::basic_istream<_CharT, _Traits>::peek()`, `std::basic_istream<_CharT, _Traits>::putback()`, and `std::basic_istream<_CharT, _Traits>::unget()`.

**5.372.5.8** `template<typename _CharT, typename _Traits> void std::basic_ios<_CharT, _Traits>::exceptions(iostate __except) [inline, inherited]`

Throwing exceptions on errors.

**Parameters:**

*except* The new exceptions mask.

By default, error flags are [set](#) silently. You can [set](#) an exceptions mask for each stream; if a bit in the mask becomes [set](#) in the error flags, then an [exception](#) of type `std::ios_base::failure` is thrown.

If the error flag is already [set](#) when the exceptions mask is added, the [exception](#) is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>

int main()
{
 std::set_terminate (__gnu_cxx::__verbose_terminate_handler);

 std::ifstream f ("/etc/motd");

 std::cerr << "Setting badbit\n";
 f.setstate (std::ios_base::badbit);

 std::cerr << "Setting exception mask\n";
 f.exceptions (std::ios_base::badbit);
}
```

Definition at line 247 of file `basic_ios.h`.

#### 5.372.5.9 `template<typename _CharT, typename _Traits> iostate std::basic_ios< _CharT, _Traits >::exceptions () const` [`inline`, `inherited`]

Throwing exceptions on errors.

**Returns:**

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of [exceptions\(iostate\)](#) for the meaning of the return value.

Definition at line 212 of file `basic_ios.h`.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`.

#### 5.372.5.10 `template<typename _CharT, typename _Traits> bool std::basic_ios< _CharT, _Traits >::fail () const` [`inline`, `inherited`]

Fast error checking.

**Returns:**

True if either the badbit or the failbit is [set](#).

Checking the badbit in [fail\(\)](#) is historical practice. Note that other iostate flags may also be [set](#).

Definition at line 191 of file `basic_ios.h`.

Referenced by `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_ostream<_CharT, _Traits>::seekp()`, `std::basic_istream<_CharT, _Traits>::tellg()`, `std::basic_ostream<_CharT, _Traits>::tellp()`, and `std::regex_traits<_Ch_type>::value()`.

#### 5.372.5.11 `template<typename _CharT, typename _Traits> char_type std::basic_ios<_CharT, _Traits>::fill(char_type __ch) [inline, inherited]`

Sets a new *empty* character.

**Parameters:**

*ch* The new character.

**Returns:**

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via `setw`), Q characters are actually used, and Q<P. It defaults to a space ( ' ') in the current [locale](#).

Definition at line 380 of file `basic_ios.h`.

#### 5.372.5.12 `template<typename _CharT, typename _Traits> char_type std::basic_ios<_CharT, _Traits>::fill() const [inline, inherited]`

Retrieves the *empty* character.

**Returns:**

The current fill character.

It defaults to a space ( ' ') in the current [locale](#).

Definition at line 360 of file `basic_ios.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`.

**5.372.5.13** `fmtflags std::ios_base::flags (fmtflags __fmtfl) [inline, inherited]`

Setting new format flags all at once.

**Parameters:**

*fmtfl* The new flags to [set](#).

**Returns:**

The previous format control flags.

This function overwrites all the format flags with *fmtfl*.

Definition at line 561 of file `ios_base.h`.

**5.372.5.14** `fmtflags std::ios_base::flags () const [inline, inherited]`

Access to format flags.

**Returns:**

The format control flags for both input and output.

Definition at line 550 of file `ios_base.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::num_put<_CharT, _OutIter>::do_put()`, `std::basic_ostream<_CharT, _Traits>::operator<<()`, `std::operator<<()`, and `std::operator>>()`.

**5.372.5.15** `template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::flush () [inline, inherited]`

Synchronizing the stream buffer.

**Returns:**

\*this

If `rdbuf ()` is a null pointer, changes nothing.

Otherwise, calls `rdbuf ()->pubsync ()`, and if that returns -1, sets `badbit`.

Definition at line 211 of file `ostream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

Referenced by `std::flush()`.

**5.372.5.16** `template<typename _CharT, typename _Traits> streamsize  
std::basic_istream<_CharT, _Traits>::gcount() const [inline,  
inherited]`

Character counting.

**Returns:**

The number of characters extracted by the previous unformatted input function dispatched for this stream.

Definition at line 249 of file `istream`.

**5.372.5.17** `template<typename _CharT, typename _Traits> __istream_type&  
std::basic_istream<_CharT, _Traits>::get(__streambuf_type &  
__sb) [inline, inherited]`

Extraction into another streambuf.

**Parameters:**

*sb* A streambuf in which to store data.

**Returns:**

\*this

Returns `get(sb, widen('\n'))`.

Definition at line 366 of file `istream`.

**5.372.5.18** `template<typename _CharT, typename _Traits> basic_istream<  
_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::get(  
__streambuf_type & __sb, char_type __delim) [inline,  
inherited]`

Extraction into another streambuf.

**Parameters:**

*sb* A streambuf in which to store data.

*delim* A "stop" character.

**Returns:**

\*this

Characters are extracted and inserted into *sb* until one of the following happens:

- the input sequence reaches EOF
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted)
- the next character equals *delim* (in this case, the character is not extracted)
- an [exception](#) occurs (and in this case is caught)

If no characters are stored, failbit is [set](#) in the stream's error state.

Definition at line 356 of file istream.tcc.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_ios<_CharT, _Traits>::setstate()`, `std::basic_streambuf<_CharT, _Traits>::sgetc()`, `std::basic_streambuf<_CharT, _Traits>::snextc()`, and `std::basic_streambuf<_CharT, _Traits>::sputc()`.

**5.372.5.19** `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream<_CharT, _Traits>::get(char_type * __s, streamsize __n) [inline, inherited]`

Simple multiple-character extraction.

**Parameters:**

*s* Pointer to an [array](#).

*n* Maximum number of characters to store in *s*.

**Returns:**

\*this

Returns `get(s,n,widen('\n'))`.

Definition at line 333 of file istream.

**5.372.5.20** `template<typename _CharT, typename _Traits > basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get(char_type * __s, streamsize __n, char_type __delim) [inline, inherited]`

Simple multiple-character extraction.

**Parameters:**

- s* Pointer to an [array](#).
- n* Maximum number of characters to store in *s*.
- delim* A "stop" character.

**Returns:**

\*this

Characters are extracted and stored into *s* until one of the following happens:

- *n*-1 characters are stored
- the input sequence reaches EOF
- the next character equals *delim*, in which case the character is not extracted

If no characters are stored, failbit is [set](#) in the stream's error state.

In any case, a null character is stored into the next location in the [array](#).

**Note:**

This function is not overloaded on signed char and unsigned char.

Definition at line 309 of file istream.tcc.

References `std::basic_istream< _CharT, _Traits >::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::eof()`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, `std::basic_ios< _CharT, _Traits >::setstate()`, `std::basic_streambuf< _CharT, _Traits >::sgetc()`, and `std::basic_streambuf< _CharT, _Traits >::snextc()`.

**5.372.5.21** `template<typename _CharT, typename _Traits > basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get(char_type & __c) [inline, inherited]`

Simple extraction.

**Parameters:**

*c* The character in which to store data.

**Returns:**

\*this

Tries to extract a character and store it in *c*. If none are available, sets failbit and returns `traits::eof()`.

**Note:**

This function is not overloaded on signed char and unsigned char.

Definition at line 272 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.372.5.22** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits>::int_type std::basic_istream<_CharT, _Traits>::get(void) [inline, inherited]`

Simple extraction.

**Returns:**

A character, or `eof()`.

Tries to extract a character. If none are available, sets failbit and returns `traits::eof()`.

Definition at line 236 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.372.5.23** `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream<_CharT, _Traits>::getline(char_type * __s, streamsize __n) [inline, inherited]`

String extraction.

**Parameters:**

*s* A character [array](#) in which to store the data.

*n* Maximum number of characters to extract.

**Returns:**

\*this

Returns `getline(s,n,widen('\n'))`.

Definition at line 406 of file `istream`.

Referenced by `std::basic_istream<char>::getline()`.

**5.372.5.24** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::getline(char_type * __s, streamsize __n, char_type __delim) [inline, inherited]`

String extraction.

**Parameters:**

*s* A character [array](#) in which to store the data.

*n* Maximum number of characters to extract.

*delim* A "stop" character.

**Returns:**

\*this

Extracts and stores characters into *s* until one of the following happens. Note that these criteria are required to be tested in the order listed here, to allow an input line to exactly fill the *s* [array](#) without setting failbit.

1. the input sequence reaches end-of-file, in which case eofbit is [set](#) in the stream error state
2. the next character equals `delim`, in which case the character is extracted (and therefore counted in `gcount()`) but not stored
3. *n*-1 characters are stored, in which case failbit is [set](#) in the stream error state

If no characters are extracted, failbit is [set](#). (An empty line of input should therefore not cause failbit to be [set](#).)

In any case, a null character is stored in the next location in the [array](#).

Definition at line 400 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_streambuf<_CharT, _Traits>::sbumpc()`, `std::basic_ios<_CharT, _Traits>::setstate()`, `std::basic_streambuf<_CharT, _Traits>::sgetc()`, and `std::basic_streambuf<_CharT, _Traits>::snextc()`.

#### 5.372.5.25 locale `std::ios_base::getloc() const` [`inline`, `inherited`]

Locale access.

##### Returns:

A copy of the current [locale](#).

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ [locale](#).

Definition at line 694 of file `ios_base.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::money_put<_CharT, _OutIter>::do_put()`, `std::basic_ios<_CharT, _Traits>::imbue()`, `std::operator>>()`, and `std::ws()`.

#### 5.372.5.26 `template<typename _CharT, typename _Traits> bool std::basic_ios<_CharT, _Traits>::good() const` [`inline`, `inherited`]

Fast error checking.

##### Returns:

True if no error flags are [set](#).

A wrapper around `rdstate`.

Definition at line 170 of file `basic_ios.h`.

#### 5.372.5.27 `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> &std::basic_istream<_CharT, _Traits>::ignore(streamsize __n, int_type __delim)` [`inline`, `inherited`]

Extraction into another streambuf.

##### Parameters:

*sb* A streambuf in which to store data.

**Returns:**

`*this`

Returns `get(sb, widen('\n'))`.

Definition at line 555 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_streambuf<_CharT, _Traits>::sbumpc()`, `std::basic_ios<_CharT, _Traits>::setstate()`, `std::basic_streambuf<_CharT, _Traits>::sgetc()`, and `std::basic_streambuf<_CharT, _Traits>::snextc()`.

#### 5.372.5.28 `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::ignore(streamsize __n) [inline, inherited]`

Extraction into another streambuf.

**Parameters:**

*sb* A streambuf in which to store data.

**Returns:**

`*this`

Returns `get(sb, widen('\n'))`.

Definition at line 493 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_ios<_CharT, _Traits>::setstate()`, `std::basic_streambuf<_CharT, _Traits>::sgetc()`, and `std::basic_streambuf<_CharT, _Traits>::snextc()`.

#### 5.372.5.29 `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::ignore(void) [inline, inherited]`

Discarding characters.

**Parameters:**

*n* Number of characters to discard.

*delim* A "stop" character.

**Returns:**

\*this

Extracts characters and throws them away until one of the following happens:

- if  $n \neq \text{std::numeric\_limits}<\text{int}>::\text{max}()$ ,  $n$  characters are extracted
- the input sequence reaches end-of-file
- the next character equals *delim* (in this case, the character is extracted); note that this condition will never occur if *delim* equals `traits::eof()`.

NB: Provide three overloads, instead of the single function (with defaults) mandated by the Standard: this leads to a better performing implementation, while still conforming to the Standard.

Definition at line 460 of file istream.tcc.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_streambuf<_CharT, _Traits>::sbumpc()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.372.5.30** `template<typename _CharT, typename _Traits> locale  
std::basic_ios<_CharT, _Traits>::imbue (const locale & __loc)  
[inline, inherited]`

Moves to a new [locale](#).

**Parameters:**

*loc* The new [locale](#).

**Returns:**

The previous [locale](#).

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localizati>

Reimplemented from [std::ios\\_base](#).

Definition at line 113 of file basic\_ios.tcc.

References `std::ios_base::getloc()`, and `std::basic_ios<_CharT, _Traits>::rdbuf()`.

Referenced by `std::operator<<()`.

**5.372.5.31** `template<typename _CharT, typename _Traits> void  
std::basic_ios<_CharT, _Traits>::init (basic_streambuf<_CharT,  
_Traits> * __sb) [inline, protected, inherited]`

All setup is performed here. This is called from the public constructor. It is not virtual and cannot be redefined.

Definition at line 125 of file `basic_ios.tcc`.

References `std::ios_base::badbit`, and `std::ios_base::goodbit`.

**5.372.5.32** `template<typename _CharT, typename _Traits> bool  
std::basic_fstream<_CharT, _Traits>::is_open () [inline]`

Wrapper to test for an open file.

**Returns:**

`rdbuf()->is_open()`

Definition at line 845 of file `fstream`.

**5.372.5.33** `long& std::ios_base::iword (int __ix) [inline, inherited]`

Access to integer [array](#).

**Parameters:**

`__ix` Index into the [array](#).

**Returns:**

A reference to an integer associated with the index.

The `iword` function provides access to an [array](#) of integers that can be used for any purpose. The [array](#) grows as required to hold the supplied index. All integers in the [array](#) are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the [array](#) can grow dynamically, it is not safe to hold onto the reference.

Definition at line 740 of file `ios_base.h`.

**5.372.5.34** `template<typename _CharT, typename _Traits> char  
std::basic_ios< _CharT, _Traits >::narrow (char_type __c, char  
__dfault) const [inline, inherited]`

Squeezes characters.

**Parameters:**

*c* The character to narrow.

*dfault* The character to narrow.

**Returns:**

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

```
std::use_facet<ctype<char_type> > (getloc()).narrow(c,dfault)
```

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localizati>

Definition at line 420 of file `basic_ios.h`.

**5.372.5.35** `template<typename _CharT , typename _Traits > void  
std::basic_fstream< _CharT, _Traits >::open (const std::string &  
__s, ios_base::openmode __mode = ios_base::in | ios_base::out)  
[inline]`

Opens an external file.

**Parameters:**

*s* The name of the file.

*mode* The open mode flags.

Calls `std::basic_filebuf::open(s, mode)`. If that function fails, `failbit` is `set` in the stream's error state.

Definition at line 887 of file `fstream`.

**5.372.5.36** `template<typename _CharT , typename _Traits > void  
std::basic_fstream< _CharT, _Traits >::open (const char * __s,  
ios_base::openmode __mode = ios_base::in | ios_base::out)  
[inline]`

Opens an external file.

**Parameters:**

- s* The name of the file.
- mode* The open mode flags.

Calls `std::basic_filebuf::open(s, mode)`. If that function fails, `failbit` is `set` in the stream's error state.

Tip: When using `std::string` to hold the filename, you must use `.c_str()` before passing it to this constructor.

Definition at line 866 of file `fstream`.

**5.372.5.37** `template<typename _CharT, typename _Traits> std::basic_ios<_CharT, _Traits>::operator void * () const` [`inline`, `inherited`]

The quick-and-easy status check. This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

Definition at line 111 of file `basic_ios.h`.

**5.372.5.38** `template<typename _CharT, typename _Traits> bool std::basic_ios<_CharT, _Traits>::operator! () const` [`inline`, `inherited`]

The quick-and-easy status check. This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

Definition at line 115 of file `basic_ios.h`.

**5.372.5.39** `template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::operator<< (_streambuf_type * __sb)` [`inline`, `inherited`]

Extracting from another streambuf.

**Parameters:**

- sb* A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a `sentry` object and has the same error handling behavior.

If *sb* is `NULL`, the stream will `set` `failbit` in its error state.

Characters are extracted from *sb* and inserted into *\*this* until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted), or
- an [exception](#) occurs while getting a character from *sb*, which sets failbit in the error state

If the function inserts no characters, failbit is [set](#).

Definition at line 120 of file ostream.tcc.

References `std::ios_base::badbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.372.5.40** `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream<_CharT, _Traits>::operator<< (const void * __p) [inline, inherited]`

Extracting from another streambuf.

**Parameters:**

*sb* A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a [sentry](#) object and has the same error handling behavior.

If *sb* is NULL, the stream will [set](#) failbit in its error state.

Characters are extracted from *sb* and inserted into *\*this* until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted), or
- an [exception](#) occurs while getting a character from *sb*, which sets failbit in the error state

Extracting from another streambuf.

**Parameters:**

*sb* A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a [sentry](#) object and has the same error handling behavior.

If *sb* is NULL, the stream will [set](#) failbit in its error state.

Characters are extracted from *sb* and inserted into *\*this* until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted), or
- an [exception](#) occurs while getting a character from *sb*, which sets failbit in the error state

If the function inserts no characters, failbit is [set](#).

Definition at line 92 of file ostream.tcc.

References `std::ios_base::basefield`, `std::ios_base::flags()`, `std::ios_base::hex`, and `std::ios_base::oct`.

**5.372.5.50** `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (bool __n) [inline, inherited]`

Extracting from another streambuf.

**Parameters:**

*sb* A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a [sentry](#) object and has the same error handling behavior.

If *sb* is NULL, the stream will [set](#) failbit in its error state.

Characters are extracted from *sb* and inserted into *\*this* until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted), or

- an [exception](#) occurs while getting a character from *sb*, which sets failbit in the error state

If the function inserts no characters, failbit is [set](#).

Definition at line 173 of file ostream.

**5.372.5.51** `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream<_CharT, _Traits>::operator<< (unsigned long __n) [inline, inherited]`

Extracting from another streambuf.

**Parameters:**

*sb* A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a [sentry](#) object and has the same error handling behavior.

If *sb* is NULL, the stream will [set](#) failbit in its error state.

Characters are extracted from *sb* and inserted into *\*this* until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted), or
- an [exception](#) occurs while getting a character from *sb*, which sets failbit in the error state

If the function inserts no characters, failbit is [set](#).

Definition at line 169 of file ostream.

**5.372.5.52** `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream<_CharT, _Traits>::operator<< (long __n) [inline, inherited]`

Basic arithmetic inserters.

**Parameters:**

*A* variable of builtin type.

**Returns:**

\*this if successful

These functions use the stream's current [locale](#) (specifically, the [num\\_get](#) facet) to perform numeric formatting.

Definition at line 165 of file ostream.

**5.372.5.53** `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (ios_base &(*)(ios_base &) __pf) [inline, inherited]`

Interface for manipulators. Manipulators such as [std::endl](#) and [std::hex](#) use these functions in constructs like "std::cout << std::endl". For more information, see the [iomanip](#) header.

Definition at line 127 of file ostream.

**5.372.5.54** `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (__ios_type &(*)(__ios_type &) __pf) [inline, inherited]`

**5.372.5.69** `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream<_CharT, _Traits >::operator>> (bool & __n) [inline, inherited]`

Basic arithmetic extractors.

**Parameters:**

`A` variable of builtin type.

**Returns:**

`*this` if successful

These functions use the stream's current [locale](#) (specifically, the `num_get` facet) to parse the input data.

Definition at line 167 of file `istream`.

**5.372.5.70** `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream<_CharT, _Traits>::operator>> (ios_base &(*)(ios_base &) __pf) [inline, inherited]`

Interface for manipulators. Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `iomanip` header.

Definition at line 131 of file `istream`.

**5.372.5.71** `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream<_CharT, _Traits>::operator>> (__ios_type &(*)(__ios_type &) __pf) [inline, inherited]`

Interface for manipulators. Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `iomanip` header.

Definition at line 124 of file `istream`.

**5.372.5.72** `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream<_CharT, _Traits>::operator>> (__istream_type &(*)(__istream_type &) __pf) [inline, inherited]`

Interface for manipulators. Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `iomanip` header.

Definition at line 120 of file `istream`.

**5.372.5.73** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits>::int_type std::basic_istream<_CharT, _Traits>::peek(void) [inline, inherited]`

Looking ahead in the stream.

**Returns:**

The next character, or `eof()`.

If, after constructing the `sentry` object, `good()` is false, returns `traits::eof()`. Otherwise reads but does not extract the next input character.

Definition at line 620 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.372.5.74** `streamsize std::ios_base::precision(streamsize __prec) [inline, inherited]`

Changing flags.

**Parameters:**

*prec* The new precision value.

**Returns:**

The previous value of `precision()`.

Definition at line 629 of file `ios_base.h`.

**5.372.5.75** `streamsize std::ios_base::precision() const [inline, inherited]`

Flags access.

**Returns:**

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Definition at line 620 of file `ios_base.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, and `std::operator<<()`.

**5.372.5.76** `template<typename _CharT, typename _Traits > basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::put (char_type __c) [inline, inherited]`

Simple insertion.

**Parameters:**

*c* The character to insert.

**Returns:**

\*this

Tries to insert *c*.

**Note:**

This function is not overloaded on signed char and unsigned char.

Definition at line 149 of file ostream.tcc.

References `std::ios_base::badbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

Referenced by `std::endl()`, and `std::ends()`.

**5.372.5.77** `template<typename _CharT, typename _Traits > basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::putback (char_type __c) [inline, inherited]`

Unextracting a single character.

**Parameters:**

*c* The character to push back into the input stream.

**Returns:**

\*this

If `rdbuf()` is not null, calls `rdbuf()->sputbackc(c)`.

If `rdbuf()` is null or if `sputbackc()` fails, sets `badbit` in the error state.

**Note:**

Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

Definition at line 711 of file istream.tcc.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_ios<_CharT, _Traits>::setstate()`, and `std::basic_streambuf<_CharT, _Traits>::sputbackc()`.

Referenced by `std::operator>>()`.

#### 5.372.5.78 `void*& std::ios_base::pword(int __ix) [inline, inherited]`

Access to void pointer [array](#).

##### Parameters:

`__ix` Index into the [array](#).

##### Returns:

A reference to a `void*` associated with the index.

The `pword` function provides access to an [array](#) of pointers that can be used for any purpose. The [array](#) grows as required to hold the supplied index. All pointers in the [array](#) are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the [array](#) can grow dynamically, it is not safe to hold onto the reference.

Definition at line 761 of file `ios_base.h`.

#### 5.372.5.79 `template<typename _CharT, typename _Traits> basic_streambuf<_CharT, _Traits> * std::basic_ios<_CharT, _Traits>::rdbuf(basic_streambuf<_CharT, _Traits> * __sb) [inline, inherited]`

Changing the underlying buffer.

##### Parameters:

`sb` The new stream buffer.

##### Returns:

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream foo; // or some other derived type
std::streambuf* p =;

foo.ios::rdbuf(p); // ios == basic_ios<char>
```

Definition at line 52 of file `basic_ios.tcc`.

References `std::basic_ios<_CharT, _Traits>::clear()`.

#### 5.372.5.80 `template<typename _CharT, typename _Traits> __filebuf_type* std::basic_fstream<_CharT, _Traits>::rdbuf() const` [`inline`]

Accessing the underlying buffer.

##### Returns:

The current `basic_filebuf` buffer.

This hides both signatures of `std::basic_ios::rdbuf()`.

Reimplemented from `std::basic_ios<_CharT, _Traits>`.

Definition at line 837 of file `fstream`.

#### 5.372.5.81 `template<typename _CharT, typename _Traits> iostate std::basic_ios<_CharT, _Traits>::rdstate() const` [`inline`, `inherited`]

Returns the error state of the stream buffer.

##### Returns:

A bit pattern (well, isn't everything?)

See `std::ios_base::iostate` for the possible bit values. Most users will call one of the interpreting wrappers, e.g., `good()`.

Definition at line 127 of file `basic_ios.h`.

#### 5.372.5.82 `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::read(char_type* __s, streamsize __n)` [`inline`, `inherited`]

Extraction without delimiters.

**Parameters:**

- s* A character [array](#).
- n* Maximum number of characters to store.

**Returns:**

\*this

If the stream state is [good\(\)](#), extracts characters and stores them into *s* until one of the following happens:

- *n* characters are stored
- the input sequence reaches end-of-file, in which case the error state is [set](#) to `failbit|eofbit`.

**Note:**

This function is not overloaded on signed char and unsigned char.

Definition at line 650 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.372.5.83** `template<typename _CharT, typename _Traits> streamsize  
std::basic_istream<_CharT, _Traits>::readsome(char_type * __s,  
streamsize __n) [inline, inherited]`

Extraction until the buffer is exhausted, but no more.

**Parameters:**

- s* A character [array](#).
- n* Maximum number of characters to store.

**Returns:**

The number of characters extracted.

Extracts characters and stores them into *s* depending on the number of characters remaining in the `streambuf`'s buffer, `rdbuf()->in_avail()`, called *A* here:

- if *A* == -1, sets `eofbit` and extracts no characters
- if *A* == 0, extracts no characters

- if  $A > 0$ , extracts  $\min(A, n)$

The goal is to empty the current buffer, and to not request any more from the external input sequence controlled by the `streambuf`.

Definition at line 679 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::min()`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

#### 5.372.5.84 `void std::ios_base::register_callback (event_callback __fn, int __index) [inherited]`

Add the callback `__fn` with parameter `__index`.

##### Parameters:

`__fn` The function to add.

`__index` The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

#### 5.372.5.85 `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::seekg (off_type __off, ios_base::seekdir __dir) [inline, inherited]`

Changing the current read position.

##### Parameters:

`off` A file offset object.

`dir` The direction in which to seek.

##### Returns:

`*this`

If `fail()` is not true, calls `rdbuf()->pubseekoff(off, dir)`. If that function fails, sets `failbit`.

##### Note:

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 870 of file istream.tcc.

References `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits >::fail()`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::ios_base::in`, `std::basic_ios<_CharT, _Traits >::rdbuf()`, and `std::basic_ios<_CharT, _Traits >::setstate()`.

**5.372.5.86** `template<typename _CharT, typename _Traits > basic_istream<_CharT, _Traits > & std::basic_istream<_CharT, _Traits >::seekg(pos_type __pos) [inline, inherited]`

Changing the current read position.

**Parameters:**

*pos* A file position object.

**Returns:**

\*this

If `fail()` is not true, calls `rdbuf() ->pubseekpos(pos)`. If that function fails, sets failbit.

**Note:**

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 837 of file istream.tcc.

References `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits >::fail()`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::ios_base::in`, `std::basic_ios<_CharT, _Traits >::rdbuf()`, and `std::basic_ios<_CharT, _Traits >::setstate()`.

**5.372.5.87** `template<typename _CharT, typename _Traits > basic_ostream<_CharT, _Traits > & std::basic_ostream<_CharT, _Traits >::seekp(off_type __off, ios_base::seekdir __dir) [inline, inherited]`

Changing the current write position.

**Parameters:**

*off* A file offset object.

*dir* The direction in which to seek.

**Returns:**

\*this

## 5.372 `std::basic_fstream<_CharT, _Traits>` Class Template Reference 1731

If `fail()` is not true, calls `rdbuf()->pubseekoff(off, dir)`. If that function fails, sets failbit.

Definition at line 290 of file `ostream.tcc`.

References `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::ios_base::out`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

### 5.372.5.88 `template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::seekp(pos_type __pos)` [`inline`, `inherited`]

Changing the current write position.

#### Parameters:

*pos* A file position object.

#### Returns:

\*this

If `fail()` is not true, calls `rdbuf()->pubseekpos(pos)`. If that function fails, sets failbit.

Definition at line 258 of file `ostream.tcc`.

References `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::ios_base::out`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

### 5.372.5.89 `fmtflags std::ios_base::setf(fmtflags __fmtfl, fmtflags __mask)` [`inline`, `inherited`]

Setting new format flags.

#### Parameters:

*fmtfl* Additional flags to `set`.

*mask* The flags mask for *fmtfl*.

#### Returns:

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* & *mask*. An example mask is `ios_base::adjustfield`.

Definition at line 594 of file `ios_base.h`.

### 5.372.5.90 `fmtflags std::ios_base::setf (fmtflags __fmtfl) [inline, inherited]`

Setting new format flags.

#### Parameters:

*fmtfl* Additional flags to [set](#).

#### Returns:

The previous format control flags.

This function sets additional flags in format control. Flags that were previously [set](#) remain [set](#).

Definition at line 577 of file `ios_base.h`.

Referenced by `std::boolalpha()`, `std::dec()`, `std::fixed()`, `std::hex()`, `std::internal()`, `std::left()`, `std::oct()`, `std::right()`, `std::scientific()`, `std::showbase()`, `std::showpoint()`, `std::showpos()`, `std::skipws()`, `std::unitbuf()`, and `std::uppercase()`.

### 5.372.5.91 `template<typename _CharT, typename _Traits> void std::basic_ios< _CharT, _Traits >::setstate (iostate __state) [inline, inherited]`

Sets additional flags in the error state.

#### Parameters:

*state* The additional state flag(s) to [set](#).

See [std::ios\\_base::iostate](#) for the possible bit values.

Definition at line 147 of file `basic_ios.h`.

Referenced by `std::basic_ostream< _CharT, _Traits >::flush()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::operator>>()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_ostream< _CharT, _Traits >::put()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::readsome()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_istream< _CharT, _Traits >::sync()`, `std::basic_istream< _CharT, _Traits >::unget()`, and `std::ws()`.

**5.372.5.92** `template<typename _CharT, typename _Traits> int  
std::basic_istream<_CharT, _Traits>::sync(void) [inline,  
inherited]`

Synchronizing the stream buffer.

**Returns:**

0 on success, -1 on failure

If `rdbuf()` is a null pointer, returns -1.

Otherwise, calls `rdbuf()->pubsync()`, and if that returns -1, sets `badbit` and returns -1.

Otherwise, returns 0.

**Note:**

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 777 of file `istream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::goodbit`, `std::basic_streambuf<_CharT, _Traits>::pubsync()`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.372.5.93** `static bool std::ios_base::sync_with_stdio(bool __sync = true)  
[static, inherited]`

Interaction with the standard C I/O objects.

**Parameters:**

*sync* Whether to synchronize or not.

**Returns:**

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., `stdout`) and the standard C++ objects (e.g., `cout`). User-declared streams are unaffected. See <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch28s02.html>

**5.372.5.94** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits>::pos_type std::basic_istream<_CharT, _Traits>::tellg(void) [inline, inherited]`

Getting the current read position.

**Returns:**

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0, cur, in)`.

**Note:**

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 813 of file `istream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::cur`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::ios_base::in`, and `std::basic_ios<_CharT, _Traits>::rdbuf()`.

**5.372.5.95** `template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits>::pos_type std::basic_ostream<_CharT, _Traits>::tellp() [inline, inherited]`

Getting the current write position.

**Returns:**

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0, cur, out)`.

Definition at line 237 of file `ostream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::cur`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::ios_base::out`, and `std::basic_ios<_CharT, _Traits>::rdbuf()`.

**5.372.5.96** `template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits>* std::basic_ios<_CharT, _Traits>::tie(basic_ostream<_CharT, _Traits> * __tistr) [inline, inherited]`

Ties this stream to an output stream.

**Parameters:**

*tiestr* The output stream.

**Returns:**

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see `tie()` for more.

Definition at line 297 of file `basic_ios.h`.

**5.372.5.97** `template<typename _CharT, typename _Traits>`  
`basic_ostream<_CharT, _Traits>* std::basic_ios<_CharT, _Traits`  
`>::tie() const [inline, inherited]`

Fetches the current *tied* stream.

**Returns:**

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Definition at line 285 of file `basic_ios.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`.

**5.372.5.98** `template<typename _CharT, typename _Traits> basic_istream<`  
`_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::unget`  
`(void) [inline, inherited]`

Unextracting the previous character.

**Returns:**

`*this`

If `rdbuf()` is not null, calls `rdbuf()->sungetc(c)`.

If `rdbuf()` is null or if `sungetc()` fails, sets `badbit` in the error state.

**Note:**

Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

Definition at line 744 of file istream.tcc.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_ios<_CharT, _Traits>::setstate()`, and `std::basic_streambuf<_CharT, _Traits>::sungetc()`.

**5.372.5.99** `void std::ios_base::unsetf (fmtflags __mask) [inline, inherited]`

Clearing format flags.

**Parameters:**

*mask* The flags to unset.

This function clears *mask* in the format flags.

Definition at line 609 of file ios\_base.h.

Referenced by `std::noboolalpha()`, `std::noshowbase()`, `std::noshowpoint()`, `std::noshowpos()`, `std::noskipws()`, `std::nounitbuf()`, and `std::nouppercase()`.

**5.372.5.100** `template<typename _CharT, typename _Traits> char_type std::basic_ios<_CharT, _Traits>::widen (char __c) const [inline, inherited]`

Widens characters.

**Parameters:**

*c* The character to widen.

**Returns:**

The widened character.

Maps a character of `char` to a character of `char_type`.

Returns the result of

```
std::use_facet<ctype<char_type>> (getLoc()).widen(c)
```

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localizati>

Definition at line 439 of file basic\_ios.h.

Referenced by `std::endl()`, `std::getline()`, and `std::operator>>()`.

**5.372.5.101** `streamsize std::ios_base::width (streamsize __wide) [inline, inherited]`

Changing flags.

**Parameters:**

*wide* The new width value.

**Returns:**

The previous value of `width()`.

Definition at line 652 of file `ios_base.h`.

**5.372.5.102** `streamsize std::ios_base::width () const [inline, inherited]`

Flags access.

**Returns:**

The minimum field width to generate on output operations.

*Minimum field width* refers to the number of characters.

Definition at line 643 of file `ios_base.h`.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`, `std::num_put< _CharT, _OutIter >::do_put()`, and `std::operator<>>()`.

**5.372.5.103** `template<typename _CharT, typename _Traits > basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::write (const char_type * __s, streamsize __n) [inline, inherited]`

Character string insertion.

**Parameters:**

*s* The `array` to insert.

*n* Maximum number of characters to insert.

**Returns:**

`*this`

Characters are copied from *s* and inserted into the stream until one of the following happens:

- *n* characters are inserted
- inserting into the output sequence fails (in this case, `badbit` will be [set](#) in the stream's error state)

**Note:**

This function is not overloaded on signed char and unsigned char.

Definition at line 183 of file `ostream.tcc`.

References `std::basic_ostream< _CharT, _Traits >::_M_write()`, and `std::ios_base::badbit`.

**5.372.5.104 static int std::ios\_base::xalloc () throw () [static, inherited]**

Access to unique indices.

**Returns:**

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the `iword` and `pword` functions. The expectation is that an application calls `xalloc` in order to obtain an index in the `iword` and `pword` arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. `xalloc` is guaranteed to return an index that is safe to use in the `iword` and `pword` arrays.

**5.372.6 Member Data Documentation****5.372.6.1 template<typename \_CharT, typename \_Traits> streamsize std::basic\_istream< \_CharT, \_Traits >::\_M\_gcount [protected, inherited]**

The number of characters extracted in the previous unformatted function; see [gcount\(\)](#).

Definition at line 79 of file `istream`.

Referenced by `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`,

Referenced by `std::basic_filebuf<_CharT, _Traits>::pbackfail()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekoff()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekpos()`, `std::basic_filebuf<_CharT, _Traits>::showmanyc()`, `std::basic_istream<_CharT, _Traits>::tellg()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::underflow()`, `std::basic_filebuf<_CharT, _Traits>::underflow()`, and `std::basic_filebuf<_CharT, _Traits>::xsgetn()`.

### 5.372.6.20 `const fmtflags std::ios_base::internal` [static, inherited]

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.

Definition at line 280 of file `ios_base.h`.

### 5.372.6.21 `const fmtflags std::ios_base::left` [static, inherited]

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.)

Definition at line 284 of file `ios_base.h`.

Referenced by `std::num_put<_CharT, _Outputter>::do_put()`.

### 5.372.6.22 `const fmtflags std::ios_base::oct` [static, inherited]

Converts integer input or generates integer output in octal base.

Definition at line 287 of file `ios_base.h`.

Referenced by `std::basic_ostream<_CharT, _Traits>::operator<<()`.

### 5.372.6.23 `const openmode std::ios_base::out` [static, inherited]

Open for output. Default for `ofstream` and `fstream`.

Definition at line 386 of file `ios_base.h`.

Referenced by `std::basic_stringbuf<_CharT, _Traits, _Alloc>::overflow()`, `std::basic_filebuf<_CharT, _Traits>::overflow()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekoff()`, `std::basic_ostream<_CharT, _Traits>::seekp()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekpos()`, `std::basic_ostream<_CharT, _Traits>::tellp()`, and `std::basic_filebuf<_CharT, _Traits>::xsputn()`.

**5.372.6.24 const fmtflags std::ios\_base::right [static, inherited]**

Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.).

Definition at line 291 of file ios\_base.h.

**5.372.6.25 const fmtflags std::ios\_base::scientific [static, inherited]**

Generates floating-point output in scientific notation.

Definition at line 294 of file ios\_base.h.

**5.372.6.26 const fmtflags std::ios\_base::showbase [static, inherited]**

Generates a prefix indicating the numeric base of generated integer output.

Definition at line 298 of file ios\_base.h.

**5.372.6.27 const fmtflags std::ios\_base::showpoint [static, inherited]**

Generates a decimal-point character unconditionally in generated floating-point output.

Definition at line 302 of file ios\_base.h.

**5.372.6.28 const fmtflags std::ios\_base::showpos [static, inherited]**

Generates a + sign in non-negative generated numeric output.

Definition at line 305 of file ios\_base.h.

**5.372.6.29 const fmtflags std::ios\_base::skipws [static, inherited]**

Skips leading white space before certain input operations.

Definition at line 308 of file ios\_base.h.

**5.372.6.30 const openmode std::ios\_base::trunc [static, inherited]**

Open for input. Default for `ofstream`.

Definition at line 389 of file ios\_base.h.

**5.372.6.31 const fmtflags std::ios\_base::unitbuf [static, inherited]**

Flushes output after each output operation.

Definition at line 311 of file ios\_base.h.

**5.372.6.32 const fmtflags std::ios\_base::uppercase [static, inherited]**

Replaces certain lowercase letters with their uppercase equivalents in generated output.

Definition at line 315 of file ios\_base.h.

Referenced by std::num\_put< \_CharT, \_OutIter >::do\_put().

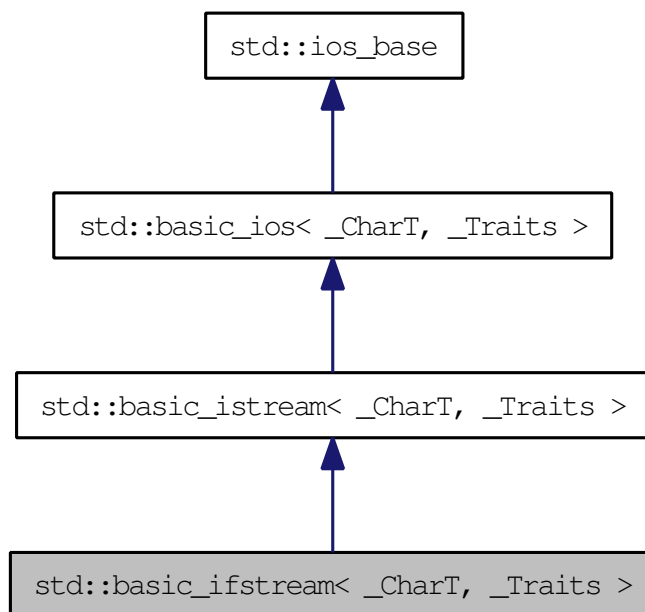

The documentation for this class was generated from the following file:

## 5.373 `std::basic_ifstream< _CharT, _Traits >` Class Template Reference

Controlling input for files.

This class supports reading from named files, using the inherited functions from [std::basic\\_istream](#). To control the associated sequence, an instance of [std::basic\\_filebuf](#) is used, which this page refers to as `sb`. Inheritance diagram for `std::basic_ifstream< _CharT, _Traits >`:

### Public Types

- typedef `ctype< _CharT > __ctype_type`
- typedef `basic_filebuf< char_type, traits_type > __filebuf_type`
- typedef `basic_ios< _CharT, _Traits > __ios_type`
- typedef `basic_istream< char_type, traits_type > __istream_type`
- typedef `num_get< _CharT, istreambuf_iterator< _CharT, _Traits > > __num_get_type`
- typedef `basic_streambuf< _CharT, _Traits > __streambuf_type`
- typedef `_CharT char_type`
- enum `event { erase_event, imbue_event, copyfmt_event }`
- typedef `void(* event_callback)(event, ios_base &, int)`

### Unformatted Input Functions

All the unformatted input functions have some common behavior. Each starts by constructing a temporary object of type [std::basic\\_istream::sentry](#) with the second argument (*noskipws*) set to true. This has several effects, concluding with the setting of a status flag; see the [sentry](#) documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

The number of characters extracted is stored for later retrieval by [gcount\(\)](#).

If an *exception* is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state without causing an `ios_base::failure` to be thrown. The original *exception* will then be rethrown.

- `__istream_type & get (__streambuf_type &__sb)`
- `__istream_type & get (__streambuf_type &__sb, char_type __delim)`
- `__istream_type & get (char_type *__s, streamsize __n)`
- `__istream_type & get (char_type *__s, streamsize __n, char_type __delim)`
- `__istream_type & get (char_type &__c)`
- `int_type get ()`
- `__istream_type & getline (char_type *__s, streamsize __n)`
- `__istream_type & getline (char_type *__s, streamsize __n, char_type __delim)`
- `__istream_type & ignore (streamsize __n, int_type __delim)`
- `__istream_type & ignore (streamsize __n)`
- `__istream_type & ignore ()`
- `int_type peek ()`
- `__istream_type & putback (char_type __c)`
- `__istream_type & read (char_type *__s, streamsize __n)`
- `streamsize readsome (char_type *__s, streamsize __n)`
- `__istream_type & seekg (off_type, ios_base::seekdir)`
- `__istream_type & seekg (pos_type)`
- `int sync ()`
- `pos_type tellg ()`
- `__istream_type & unget ()`

### Arithmetic Extractors

All the `operator>>` functions (aka formatted input functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (`noskipws`) set to false. This has several effects, concluding with the setting of a status flag; see the [sentry](#) documentation for more.

If the `sentry` status is good, the function tries to extract whatever data is appropriate for the type of the argument.

If an *exception* is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state without causing an `ios_base::failure` to be thrown. The original *exception* will then be rethrown.

- `__istream_type & operator>> (__streambuf_type *__sb)`
- `__istream_type & operator>> (void *&__p)`
- `__istream_type & operator>> (long double &__f)`
- `__istream_type & operator>> (double &__f)`
- `__istream_type & operator>> (float &__f)`
- `__istream_type & operator>> (unsigned long long &__n)`
- `__istream_type & operator>> (long long &__n)`
- `__istream_type & operator>> (unsigned long &__n)`

- `__istream_type & operator>>` (long &\_\_n)
- `__istream_type & operator>>` (unsigned int &\_\_n)
- `__istream_type & operator>>` (int &\_\_n)
- `__istream_type & operator>>` (unsigned short &\_\_n)
- `__istream_type & operator>>` (short &\_\_n)
- `__istream_type & operator>>` (bool &\_\_n)
  
- `__istream_type & operator>>` (`ios_base &(*__pf)(ios_base &)`)
- `__istream_type & operator>>` (`__ios_type &(*__pf)(__ios_type &)`)
- `__istream_type & operator>>` (`__istream_type &(*__pf)(__istream_type &)`)

### 5.373.1 Detailed Description

`template<typename _CharT, typename _Traits> class std::basic_ifstream<_CharT, _Traits >`

Controlling input for files.

This class supports reading from named files, using the inherited functions from `std::basic_istream`. To control the associated sequence, an instance of `std::basic_filebuf` is used, which this page refers to as `sb`.

Definition at line 415 of file `fstream`.

### 5.373.2 Member Typedef Documentation

**5.373.2.1** `template<typename _CharT, typename _Traits> typedef ctype<_CharT> std::basic_istream<_CharT, _Traits >::__ctype_type [inherited]`

These are non-standard types.

Reimplemented from `std::basic_ios<_CharT, _Traits >`.

Definition at line 71 of file `istream`.

**5.373.2.2** `template<typename _CharT, typename _Traits> typedef num_get<_CharT, istreambuf_iterator<_CharT, _Traits >> std::basic_istream<_CharT, _Traits >::__num_get_type [inherited]`

These are non-standard types.

Reimplemented from `std::basic_ios<_CharT, _Traits >`.

Definition at line 70 of file `istream`.

**5.373.2.3** `template<typename _CharT, typename _Traits> typedef num_put<_CharT, ostreambuf_iterator<_CharT, _Traits> > std::basic_ios<_CharT, _Traits>::_num_put_type` **[inherited]**

The quick-and-easy status check. This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

Reimplemented in `std::basic_ostream<_CharT, _Traits>`, `std::basic_ostream<char, _Traits>`, and `std::basic_ostream<char>`.

Definition at line 84 of file `basic_ios.h`.

**5.373.2.4** `template<typename _CharT, typename _Traits> typedef _CharT std::basic_ifstream<_CharT, _Traits>::char_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from `std::basic_istream<_CharT, _Traits>`.

Definition at line 419 of file `fstream`.

**5.373.2.5** `typedef void(* std::ios_base::event_callback)(event, ios_base &, int)` **[inherited]**

The type of an event callback function.

#### Parameters:

*event* One of the members of the event enum.

*ios\_base* Reference to the `ios_base` object.

*int* The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several `ios_base` and `basic_ios` functions, specifically `imbue()`, `copyfmt()`, and `~ios()`.

Definition at line 444 of file `ios_base.h`.

**5.373.2.6** `typedef _Ios_Fmtflags std::ios_base::fmtflags` **[inherited]**

This is a bitmask type. `_Ios_Fmtflags` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `fmtflags` are:

- boolalpha
- dec
- fixed
- hex
- internal
- left
- oct
- right
- scientific
- showbase
- showpoint
- showpos
- skipws
- unitbuf
- uppercase
- adjustfield
- basefield
- floatfield

Definition at line 263 of file ios\_base.h.

**5.373.2.7** `template<typename _CharT , typename _Traits > typedef traits_type::int_type std::basic_ifstream< _CharT, _Traits >::int_type`

These are non-standard types.

Reimplemented from [std::basic\\_istream< \\_CharT, \\_Traits >](#).

Definition at line 421 of file fstream.

**5.373.2.8** `typedef _Ios_Iostate std::ios_base::iostate` [inherited]

This is a bitmask type. `_Ios_Iostate` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `iostate` are:

- `badbit`
- `eofbit`
- `failbit`
- `goodbit`

Definition at line 338 of file `ios_base.h`.

**5.373.2.9** `template<typename _CharT, typename _Traits> typedef traits_type::off_type std::basic_ifstream<_CharT, _Traits>::off_type`

These are non-standard types.

Reimplemented from [std::basic\\_istream<\\_CharT, \\_Traits>](#).

Definition at line 423 of file `fstream`.

**5.373.2.10** `typedef _Ios_Openmode std::ios_base::openmode` [inherited]

This is a bitmask type. `_Ios_Openmode` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `openmode` are:

- `app`
- `ate`
- `binary`
- `in`
- `out`
- `trunc`

Definition at line 369 of file `ios_base.h`.

**5.373.2.11** `template<typename _CharT , typename _Traits > typedef traits_type::pos_type std::basic_ifstream< _CharT, _Traits >::pos_type`

These are non-standard types.

Reimplemented from [std::basic\\_istream< \\_CharT, \\_Traits >](#).

Definition at line 422 of file `fstream`.

**5.373.2.12** `typedef _Ios_Seekdir std::ios_base::seekdir [inherited]`

This is an enumerated type. `_Ios_Seekdir` is implementation-defined. Defined values of type `seekdir` are:

- `beg`
- `cur`, equivalent to `SEEK_CUR` in the C standard library.
- `end`, equivalent to `SEEK_END` in the C standard library.

Definition at line 401 of file `ios_base.h`.

**5.373.2.13** `template<typename _CharT , typename _Traits > typedef _Traits std::basic_ifstream< _CharT, _Traits >::traits_type`

These are non-standard types.

Reimplemented from [std::basic\\_istream< \\_CharT, \\_Traits >](#).

Definition at line 420 of file `fstream`.

### 5.373.3 Member Enumeration Documentation

**5.373.3.1** `enum std::ios_base::event [inherited]`

The [set](#) of events that may be passed to an event callback. `erase_event` is used during `~ios()` and `copyfmt()`. `imbue_event` is used during [imbue\(\)](#). `copyfmt_event` is used during `copyfmt()`.

Definition at line 427 of file `ios_base.h`.

### 5.373.4 Constructor & Destructor Documentation

**5.373.4.1** `template<typename _CharT, typename _Traits >  
std::basic_ifstream<_CharT, _Traits >::basic_ifstream ()  
[inline]`

Default constructor. Initializes `sb` using its default constructor, and passes `&sb` to the base class initializer. Does not open any files (you haven't given it a filename to open).

Definition at line 441 of file `fstream`.

**5.373.4.2** `template<typename _CharT, typename _Traits >  
std::basic_ifstream<_CharT, _Traits >::basic_ifstream (const char *  
__s, ios_base::openmode __mode = ios_base::in) [inline,  
explicit]`

Create an input file stream.

**Parameters:**

`s` Null terminated string specifying the filename.

`mode` Open file in specified mode (see `std::ios_base`).

`ios_base::in` is automatically included in `mode`.

Tip: When using `std::string` to hold the filename, you must use `.c_str()` before passing it to this constructor.

Definition at line 455 of file `fstream`.

**5.373.4.3** `template<typename _CharT, typename _Traits >  
std::basic_ifstream<_CharT, _Traits >::basic_ifstream (const  
std::string & __s, ios_base::openmode __mode = ios_base::in)  
[inline, explicit]`

Create an input file stream.

**Parameters:**

`s` `std::string` specifying the filename.

`mode` Open file in specified mode (see `std::ios_base`).

`ios_base::in` is automatically included in `mode`.

Definition at line 471 of file `fstream`.

**5.373.4.4** `template<typename _CharT, typename _Traits >  
std::basic_ifstream< _CharT, _Traits >::~~basic_ifstream ()  
[inline]`

The destructor does nothing. The file is closed by the filebuf object, not the formatting stream.

Definition at line 486 of file fstream.

## 5.373.5 Member Function Documentation

**5.373.5.1** `const locale& std::ios_base::_M_getloc () const [inline, inherited]`

Locale access.

### Returns:

A reference to the current [locale](#).

Like `getloc` above, but returns a reference instead of generating a copy.

Definition at line 705 of file ios\_base.h.

Referenced by `std::money_get< _CharT, _InIter >::do_get()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::time_get< _CharT, _InIter >::do_get_date()`, `std::time_get< _CharT, _InIter >::do_get_monthname()`, `std::time_get< _CharT, _InIter >::do_get_time()`, `std::time_get< _CharT, _InIter >::do_get_weekday()`, `std::time_get< _CharT, _InIter >::do_get_year()`, `std::time_put< _CharT, _OutIter >::do_put()`, `std::num_put< _CharT, _OutIter >::do_put()`, and `std::time_put< _CharT, _OutIter >::put()`.

**5.373.5.2** `template<typename _CharT, typename _Traits> bool std::basic_ios< _CharT, _Traits >::bad () const [inline, inherited]`

Fast error checking.

### Returns:

True if the badbit is [set](#).

Note that other iostate flags may also be [set](#).

Definition at line 201 of file basic\_ios.h.

**5.373.5.3** `template<typename _CharT, typename _Traits> void  
std::basic_ios<_CharT, _Traits>::clear(iostate __state = goodbit)  
[inline, inherited]`

[Re]sets the error state.

**Parameters:**

*state* The new state flag(s) to [set](#).

See [std::ios\\_base::iostate](#) for the possible bit values. Most users will not need to pass an argument.

Definition at line 40 of file `basic_ios.tcc`.

Referenced by `std::basic_ios<_CharT, _Traits>::rdbuf()`.

**5.373.5.4** `template<typename _CharT, typename _Traits> void  
std::basic_ifstream<_CharT, _Traits>::close() [inline]`

Close the file. Calls [std::basic\\_filebuf::close\(\)](#). If that function fails, `failbit` is [set](#) in the stream's error state.

Definition at line 564 of file `fstream`.

**5.373.5.5** `template<typename _CharT, typename _Traits> basic_ios<  
_CharT, _Traits> & std::basic_ios<_CharT, _Traits>::copyfmt  
(const basic_ios<_CharT, _Traits> & __rhs) [inline,  
inherited]`

Copies fields of `__rhs` into this.

**Parameters:**

*\_\_rhs* The source values for the copies.

**Returns:**

Reference to this object.

All fields of `__rhs` are copied into this object except that [rdbuf\(\)](#) and [rdstate\(\)](#) remain unchanged. All values in the `pword` and `iword` arrays are copied. Before copying, each callback is invoked with `erase_event`. After copying, each (new) callback is invoked with `copyfmt_event`. The final step is to copy [exceptions\(\)](#).

Definition at line 62 of file `basic_ios.tcc`.

References `std::basic_ios<_CharT, _Traits>::exceptions()`, `std::basic_ios<_CharT, _Traits>::fill()`, `std::ios_base::flags()`, `std::ios_base::getloc()`, `std::ios_base::precision()`, `std::basic_ios<_CharT, _Traits>::tie()`, and `std::ios_base::width()`.

### 5.373.5.6 `template<typename _CharT, typename _Traits> bool std::basic_istream<_CharT, _Traits >::eof() const` [**inline**, **inherited**]

Fast error checking.

#### Returns:

True if the eofbit is [set](#).

Note that other iostate flags may also be [set](#).

Definition at line 180 of file `basic_ios.h`.

Referenced by `std::basic_istream<_CharT, _Traits >::get()`, `std::basic_istream<_CharT, _Traits >::getline()`, `std::basic_istream<_CharT, _Traits >::ignore()`, `std::basic_istream<_CharT, _Traits >::peek()`, `std::basic_istream<_CharT, _Traits >::putback()`, and `std::basic_istream<_CharT, _Traits >::unget()`.

### 5.373.5.7 `template<typename _CharT, typename _Traits> void std::basic_istream<_CharT, _Traits >::exceptions(iostate __except)` [**inline**, **inherited**]

Throwing exceptions on errors.

#### Parameters:

*except* The new exceptions mask.

By default, error flags are [set](#) silently. You can [set](#) an exceptions mask for each stream; if a bit in the mask becomes [set](#) in the error flags, then an [exception](#) of type `std::ios_base::failure` is thrown.

If the error flag is already [set](#) when the exceptions mask is added, the [exception](#) is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>

int main()
{
 std::set_terminate (__gnu_cxx::__verbose_terminate_handler);

 std::ifstream f ("/etc/motd");

 std::cerr << "Setting badbit\n";
 f.setstate (std::ios_base::badbit);

 std::cerr << "Setting exception mask\n";
 f.exceptions (std::ios_base::badbit);
}
```

Definition at line 247 of file `basic_ios.h`.

**5.373.5.8** `template<typename _CharT, typename _Traits> iostate  
std::basic_ios< _CharT, _Traits >::exceptions () const [inline,  
inherited]`

Throwing exceptions on errors.

**Returns:**

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of [exceptions\(iostate\)](#) for the meaning of the return value.

Definition at line 212 of file basic\_ios.h.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`.

**5.373.5.9** `template<typename _CharT, typename _Traits> bool std::basic_ios<  
_CharT, _Traits >::fail () const [inline, inherited]`

Fast error checking.

**Returns:**

True if either the badbit or the failbit is [set](#).

Checking the badbit in [fail\(\)](#) is historical practice. Note that other iostate flags may also be [set](#).

Definition at line 191 of file basic\_ios.h.

Referenced by `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_istream< _CharT, _Traits >::tellg()`, `std::basic_ostream< _CharT, _Traits >::tellp()`, and `std::regex_traits< _Ch_type >::value()`.

**5.373.5.10** `template<typename _CharT, typename _Traits> char_type  
std::basic_ios< _CharT, _Traits >::fill (char_type __ch)  
[inline, inherited]`

Sets a new *empty* character.

**Parameters:**

*ch* The new character.

**Returns:**

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via `setw`), Q characters are actually used, and Q<P. It defaults to a space ( ' ') in the current [locale](#).

Definition at line 380 of file `basic_ios.h`.

**5.373.5.11** `template<typename _CharT, typename _Traits> char_type  
std::basic_ios< _CharT, _Traits >::fill () const [inline,  
inherited]`

Retrieves the *empty* character.

**Returns:**

The current fill character.

It defaults to a space ( ' ') in the current [locale](#).

Definition at line 360 of file `basic_ios.h`.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`.

**5.373.5.12** `fmtflags std::ios_base::flags (fmtflags __fmtfl) [inline,  
inherited]`

Setting new format flags all at once.

**Parameters:**

*fmtfl* The new flags to [set](#).

**Returns:**

The previous format control flags.

This function overwrites all the format flags with *fmtfl*.

Definition at line 561 of file `ios_base.h`.

**5.373.5.13** `fmtflags std::ios_base::flags () const [inline, inherited]`

Access to format flags.

**Returns:**

The format control flags for both input and output.

## 5.373 `std::basic_ifstream<_CharT, _Traits>` Class Template Reference 1763

Definition at line 550 of file `ios_base.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::num_put<_CharT, _OutIter>::do_put()`, `std::basic_ostream<_CharT, _Traits>::operator<<()`, `std::operator<<()`, and `std::operator>>()`.

**5.373.5.14** `template<typename _CharT, typename _Traits> streamsize  
std::basic_istream<_CharT, _Traits>::gcount() const [inline,  
inherited]`

Character counting.

### Returns:

The number of characters extracted by the previous unformatted input function dispatched for this stream.

Definition at line 249 of file `istream`.

**5.373.5.15** `template<typename _CharT, typename _Traits> __istream_type&  
std::basic_istream<_CharT, _Traits>::get(__streambuf_type &  
__sb) [inline, inherited]`

Extraction into another streambuf.

### Parameters:

*sb* A streambuf in which to store data.

### Returns:

\*this

Returns `get(sb, widen('\n'))`.

Definition at line 366 of file `istream`.

**5.373.5.16** `template<typename _CharT, typename _Traits> basic_istream<  
_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::get  
(__streambuf_type & __sb, char_type __delim) [inline,  
inherited]`

Extraction into another streambuf.

### Parameters:

*sb* A streambuf in which to store data.

*delim* A "stop" character.

**Returns:**

\*this

Characters are extracted and inserted into *sb* until one of the following happens:

- the input sequence reaches EOF
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted)
- the next character equals *delim* (in this case, the character is not extracted)
- an [exception](#) occurs (and in this case is caught)

If no characters are stored, failbit is [set](#) in the stream's error state.

Definition at line 356 of file istream.tcc.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_ios<_CharT, _Traits>::setstate()`, `std::basic_streambuf<_CharT, _Traits>::sgetc()`, `std::basic_streambuf<_CharT, _Traits>::snextc()`, and `std::basic_streambuf<_CharT, _Traits>::sputc()`.

**5.373.5.17** `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream<_CharT, _Traits>::get(char_type * __s, streamsize __n) [inline, inherited]`

Simple multiple-character extraction.

**Parameters:**

*s* Pointer to an [array](#).

*n* Maximum number of characters to store in *s*.

**Returns:**

\*this

Returns `get(s,n,widen('\n'))`.

Definition at line 333 of file istream.

**5.373.5.18** `template<typename _CharT, typename _Traits> basic_ifstream<_CharT, _Traits> & std::basic_ifstream<_CharT, _Traits>::get(char_type * __s, streamsize __n, char_type __delim) [inline, inherited]`

Simple multiple-character extraction.

**Parameters:**

- s* Pointer to an [array](#).
- n* Maximum number of characters to store in *s*.
- delim* A "stop" character.

**Returns:**

\*this

Characters are extracted and stored into *s* until one of the following happens:

- *n*-1 characters are stored
- the input sequence reaches EOF
- the next character equals *delim*, in which case the character is not extracted

If no characters are stored, failbit is [set](#) in the stream's error state.

In any case, a null character is stored into the next location in the [array](#).

**Note:**

This function is not overloaded on signed char and unsigned char.

Definition at line 309 of file istream.tcc.

References `std::basic_ifstream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_ios<_CharT, _Traits>::setstate()`, `std::basic_streambuf<_CharT, _Traits>::sgetc()`, and `std::basic_streambuf<_CharT, _Traits>::snextc()`.

**5.373.5.19** `template<typename _CharT, typename _Traits> basic_ifstream<_CharT, _Traits> & std::basic_ifstream<_CharT, _Traits>::get(char_type & __c) [inline, inherited]`

Simple extraction.

**Parameters:**

*c* The character in which to store data.

**Returns:**

\*this

Tries to extract a character and store it in *c*. If none are available, sets failbit and returns `traits::eof()`.

**Note:**

This function is not overloaded on signed char and unsigned char.

Definition at line 272 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.373.5.20** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits>::int_type std::basic_istream<_CharT, _Traits>::get(void) [inline, inherited]`

Simple extraction.

**Returns:**

A character, or `eof()`.

Tries to extract a character. If none are available, sets failbit and returns `traits::eof()`.

Definition at line 236 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.373.5.21** `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream<_CharT, _Traits>::getline(char_type * __s, streamsize __n) [inline, inherited]`

String extraction.

**Parameters:**

*s* A character [array](#) in which to store the data.

*n* Maximum number of characters to extract.

**Returns:**

\*this

Returns `getline(s,n,widen('\n'))`.

Definition at line 406 of file `istream`.

Referenced by `std::basic_ifstream< char >::getline()`.

**5.373.5.22** `template<typename _CharT , typename _Traits > basic_ifstream< _CharT, _Traits > & std::basic_ifstream< _CharT, _Traits >::getline (char_type * __s, streamsize __n, char_type __delim) [inline, inherited]`

String extraction.

**Parameters:**

*s* A character [array](#) in which to store the data.

*n* Maximum number of characters to extract.

*delim* A "stop" character.

**Returns:**

\*this

Extracts and stores characters into *s* until one of the following happens. Note that these criteria are required to be tested in the order listed here, to allow an input line to exactly fill the *s* [array](#) without setting failbit.

1. the input sequence reaches end-of-file, in which case eofbit is [set](#) in the stream error state
2. the next character equals `delim`, in which case the character is extracted (and therefore counted in `gcount()`) but not stored
3. *n*-1 characters are stored, in which case failbit is [set](#) in the stream error state

If no characters are extracted, failbit is [set](#). (An empty line of input should therefore not cause failbit to be [set](#).)

In any case, a null character is stored in the next location in the [array](#).

Definition at line 400 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_streambuf<_CharT, _Traits>::sbumpc()`, `std::basic_ios<_CharT, _Traits>::setstate()`, `std::basic_streambuf<_CharT, _Traits>::sgetc()`, and `std::basic_streambuf<_CharT, _Traits>::snextc()`.

#### 5.373.5.23 locale `std::ios_base::getloc() const` [`inline`, `inherited`]

Locale access.

##### Returns:

A copy of the current [locale](#).

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ [locale](#).

Definition at line 694 of file `ios_base.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::money_put<_CharT, _OutIter>::do_put()`, `std::basic_ios<_CharT, _Traits>::imbue()`, `std::operator>>()`, and `std::ws()`.

#### 5.373.5.24 `template<typename _CharT, typename _Traits> bool std::basic_ios<_CharT, _Traits>::good() const` [`inline`, `inherited`]

Fast error checking.

##### Returns:

True if no error flags are [set](#).

A wrapper around `rdstate`.

Definition at line 170 of file `basic_ios.h`.

#### 5.373.5.25 `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> &std::basic_istream<_CharT, _Traits>::ignore(streamsize __n, int_type __delim)` [`inline`, `inherited`]

Extraction into another streambuf.

##### Parameters:

*sb* A streambuf in which to store data.

**Returns:**

\*this

Returns `get(sb,widen('\n'))`.

Definition at line 555 of file `istream.tcc`.

References `std::basic_ifstream< _CharT, _Traits >::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::eof()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, `std::basic_streambuf< _CharT, _Traits >::sbumpc()`, `std::basic_ios< _CharT, _Traits >::setstate()`, `std::basic_streambuf< _CharT, _Traits >::sgetc()`, and `std::basic_streambuf< _CharT, _Traits >::snextc()`.

#### 5.373.5.26 `template<typename _CharT, typename _Traits > basic_ifstream< _CharT, _Traits > & std::basic_ifstream< _CharT, _Traits >::ignore (streamsize __n) [inline, inherited]`

Extraction into another streambuf.

**Parameters:**

*sb* A streambuf in which to store data.

**Returns:**

\*this

Returns `get(sb,widen('\n'))`.

Definition at line 493 of file `istream.tcc`.

References `std::basic_ifstream< _CharT, _Traits >::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::eof()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, `std::basic_ios< _CharT, _Traits >::setstate()`, `std::basic_streambuf< _CharT, _Traits >::sgetc()`, and `std::basic_streambuf< _CharT, _Traits >::snextc()`.

#### 5.373.5.27 `template<typename _CharT, typename _Traits > basic_ifstream< _CharT, _Traits > & std::basic_ifstream< _CharT, _Traits >::ignore (void) [inline, inherited]`

Discarding characters.

**Parameters:**

*n* Number of characters to discard.

*delim* A "stop" character.

**Returns:**

\*this

Extracts characters and throws them away until one of the following happens:

- if  $n \neq \text{std::numeric\_limits}<\text{int}>::\text{max}()$ ,  $n$  characters are extracted
- the input sequence reaches end-of-file
- the next character equals *delim* (in this case, the character is extracted); note that this condition will never occur if *delim* equals `traits::eof()`.

NB: Provide three overloads, instead of the single function (with defaults) mandated by the Standard: this leads to a better performing implementation, while still conforming to the Standard.

Definition at line 460 of file istream.tcc.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_streambuf<_CharT, _Traits>::sbumpc()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.373.5.28** `template<typename _CharT, typename _Traits> locale  
std::basic_ios<_CharT, _Traits>::imbue (const locale & __loc)  
[inline, inherited]`

Moves to a new [locale](#).

**Parameters:**

*loc* The new [locale](#).

**Returns:**

The previous [locale](#).

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localizati>

Reimplemented from [std::ios\\_base](#).

Definition at line 113 of file basic\_ios.tcc.

References `std::ios_base::getloc()`, and `std::basic_ios<_CharT, _Traits>::rdbuf()`.

Referenced by `std::operator<<()`.

**5.373.5.29** `template<typename _CharT, typename _Traits> void  
std::basic_ios<_CharT, _Traits >::init (basic_streambuf<_CharT,  
_Traits > * __sb) [inline, protected, inherited]`

All setup is performed here. This is called from the public constructor. It is not virtual and cannot be redefined.

Definition at line 125 of file basic\_ios.tcc.

References `std::ios_base::badbit`, and `std::ios_base::goodbit`.

**5.373.5.30** `template<typename _CharT, typename _Traits > bool  
std::basic_ifstream<_CharT, _Traits >::is_open () [inline]`

Wrapper to test for an open file.

**Returns:**

`rdbuf() -> is_open()`

Definition at line 505 of file fstream.

**5.373.5.31** `long& std::ios_base::iword (int __ix) [inline, inherited]`

Access to integer [array](#).

**Parameters:**

`__ix` Index into the [array](#).

**Returns:**

A reference to an integer associated with the index.

The `iword` function provides access to an [array](#) of integers that can be used for any purpose. The [array](#) grows as required to hold the supplied index. All integers in the [array](#) are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the [array](#) can grow dynamically, it is not safe to hold onto the reference.

Definition at line 740 of file ios\_base.h.

**5.373.5.32** `template<typename _CharT, typename _Traits> char  
std::basic_ios< _CharT, _Traits >::narrow (char_type __c, char  
__dfault) const [inline, inherited]`

Squeezes characters.

**Parameters:**

*c* The character to narrow.

*dfault* The character to narrow.

**Returns:**

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

```
std::use_facet<ctype<char_type> >(getloc()).narrow(c,dfault)
```

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localizati>

Definition at line 420 of file `basic_ios.h`.

**5.373.5.33** `template<typename _CharT , typename _Traits > void  
std::basic_ifstream< _CharT, _Traits >::open (const std::string &  
__s, ios_base::openmode __mode = ios_base::in) [inline]`

Opens an external file.

**Parameters:**

*s* The name of the file.

*mode* The open mode flags.

Calls `std::basic_filebuf::open(s,mode|in)`. If that function fails, `failbit` is `set` in the stream's error state.

Definition at line 546 of file `fstream`.

**5.373.5.34** `template<typename _CharT , typename _Traits > void  
std::basic_ifstream< _CharT, _Traits >::open (const char * __s,  
ios_base::openmode __mode = ios_base::in) [inline]`

Opens an external file.

**Parameters:**

- s* The name of the file.
- mode* The open mode flags.

Calls `std::basic_filebuf::open(s,mode|in)`. If that function fails, `failbit` is `set` in the stream's error state.

Tip: When using `std::string` to hold the filename, you must use `.c_str()` before passing it to this constructor.

Definition at line 526 of file `fstream`.

**5.373.5.35** `template<typename _CharT, typename _Traits> std::basic_ios<_CharT, _Traits>::operator void * () const` [`inline`, `inherited`]

The quick-and-easy status check. This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

Definition at line 111 of file `basic_ios.h`.

**5.373.5.36** `template<typename _CharT, typename _Traits> bool std::basic_ios<_CharT, _Traits>::operator! () const` [`inline`, `inherited`]

The quick-and-easy status check. This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

Definition at line 115 of file `basic_ios.h`.

**5.373.5.37** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::operator>> (_streambuf_type * __sb)` [`inline`, `inherited`]

Extracting into another streambuf.

**Parameters:**

- sb* A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a [sentry](#) object and has the same error handling behavior.

If *sb* is `NULL`, the stream will `set` `failbit` in its error state.

Characters are extracted from this stream and inserted into the *sb* streambuf until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted), or
- an [exception](#) occurs (and in this case is caught)

If the function inserts no characters, failbit is [set](#).

Definition at line 204 of file istream.tcc.

References `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_istream<_CharT, _Traits>::rdbuf()`, and `std::basic_istream<_CharT, _Traits>::setstate()`.

**5.373.5.38** `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream<_CharT, _Traits>::operator>> (void *& __p) [inline, inherited]`

Extracting into another streambuf.

**Parameters:**

*sb* A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a [sentry](#) object and has the same error handling behavior.

If *sb* is NULL, the stream will [set](#) failbit in its error state.

Characters are extracted from this stream and inserted into the *sb* streambuf until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted), or
- an [exception](#) occurs (and in this case is caught)

If the function inserts no characters, failbit is [set](#).

Definition at line 215 of file istream.

**5.373.5.39** `template<typename _CharT, typename _Traits> __istream_type& std::basic_ifstream<_CharT, _Traits >::operator>> (long double & __f) [inline, inherited]`

Extracting into another streambuf.

**Parameters:**

*sb* A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a [sentry](#) object and has the same error handling behavior.

If *sb* is NULL, the stream will [set](#) failbit in its error state.

Characters are extracted from this stream and inserted into the *sb* streambuf until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted), or
- an [exception](#) occurs (and in this case is caught)

Extracting into another streambuf.

**Parameters:**

*sb* A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a [sentry](#) object and has the same error handling behavior.

If *sb* is NULL, the stream will [set](#) failbit in its error state.

Characters are extracted from this stream and inserted into the *sb* streambuf until one of the following occurs:

- the input stream reaches end-of-file,

## 5.373 `std::basic_istream<_CharT, _Traits>` Class Template Reference 1779

- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted), or
- an [exception](#) occurs (and in this case is caught)

If the function inserts no characters, failbit is [set](#).

Definition at line 185 of file `istream`.

**5.373.5.46** `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream<_CharT, _Traits>::operator>> (unsigned int &_n) [inline, inherited]`

Extracting into another streambuf.

### Parameters:

*sb* A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a [sentry](#) object and has the same error handling behavior.

If *sb* is NULL, the stream will [set](#) failbit in its error state.

Characters are extracted from this stream and inserted into the *sb* streambuf until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted), or
- an [exception](#) occurs (and in this case is caught)

If the function inserts no characters, failbit is [set](#).

Definition at line 181 of file `istream`.

**5.373.5.47** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::operator>> (int &_n) [inline, inherited]`

Extracting into another streambuf.

### Parameters:

*sb* A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a [sentry](#) object and has the same error handling behavior.

If *sb* is NULL, the stream will [set](#) failbit in its error state.

Characters are extracted from this stream and inserted into the *sb* streambuf until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted), or
- an [exception](#) occurs (and in this case is caught)

If the function inserts no characters, failbit is [set](#).

Definition at line 159 of file istream.tcc.

References `std::ios_base::badbit`, `std::ios_base::failbit`, `std::num_get<_CharT, _InIter>::get()`, `std::ios_base::goodbit`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.373.5.48** `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream<_CharT, _Traits>::operator>> (unsigned short & __n) [inline, inherited]`

Extracting into another streambuf.

**Parameters:**

*sb* A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a [sentry](#) object and has the same error handling behavior.

If *sb* is NULL, the stream will [set](#) failbit in its error state.

Characters are extracted from this stream and inserted into the *sb* streambuf until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted), or
- an [exception](#) occurs (and in this case is caught)

If the function inserts no characters, failbit is [set](#).

**5.373.5.50** `template<typename _CharT, typename _Traits> __istream_type& std::basic_ifstream<_CharT, _Traits >::operator>> (bool & __n) [inline, inherited]`

Basic arithmetic extractors.

**Parameters:**

*A* variable of builtin type.

**Returns:**

*\*this* if successful

These functions use the stream's current [locale](#) (specifically, the [num\\_get](#) facet) to parse the input data.

Definition at line 167 of file istream.

**5.373.5.51** `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::operator>> (ios_base &(*)(ios_base &) __pf) [inline, inherited]`

Interface for manipulators. Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `iomanip` header.

Definition at line 131 of file `istream`.

**5.373.5.52** `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::operator>> (__ios_type &(*)(__ios_type &) __pf) [inline, inherited]`

Interface for manipulators. Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `iomanip` header.

Definition at line 124 of file `istream`.

**5.373.5.53** `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::operator>> (__istream_type &(*)(__istream_type &) __pf) [inline, inherited]`

Interface for manipulators. Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `iomanip` header.

Definition at line 120 of file `istream`.

**5.373.5.54** `template<typename _CharT, typename _Traits > basic_istream< _CharT, _Traits >::int_type std::basic_istream< _CharT, _Traits >::peek(void) [inline, inherited]`

Looking ahead in the stream.

#### Returns:

The next character, or `eof()`.

If, after constructing the `sentry` object, `good()` is false, returns `traits::eof()`. Otherwise reads but does not extract the next input character.

Definition at line 620 of file `istream.tcc`.

## 5.373 std::basic\_ifstream<\_CharT, \_Traits> Class Template Reference 1783

References std::basic\_istream<\_CharT, \_Traits>::M\_gcount, std::ios\_base::badbit, std::basic\_ios<\_CharT, \_Traits>::eof(), std::ios\_base::eofbit, std::ios\_base::goodbit, std::basic\_ios<\_CharT, \_Traits>::rdbuf(), and std::basic\_ios<\_CharT, \_Traits>::setstate().

### 5.373.5.55 streamsize std::ios\_base::precision (streamsize \_\_prec) [inline, inherited]

Changing flags.

#### Parameters:

*prec* The new precision value.

#### Returns:

The previous value of [precision\(\)](#).

Definition at line 629 of file ios\_base.h.

### 5.373.5.56 streamsize std::ios\_base::precision () const [inline, inherited]

Flags access.

#### Returns:

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Definition at line 620 of file ios\_base.h.

Referenced by std::basic\_ios<\_CharT, \_Traits>::copyfmt(), and std::operator<<().

### 5.373.5.57 template<typename \_CharT, typename \_Traits> basic\_istream<\_CharT, \_Traits> & std::basic\_istream<\_CharT, \_Traits>::putback (char\_type \_\_c) [inline, inherited]

Unextracting a single character.

#### Parameters:

*c* The character to push back into the input stream.

#### Returns:

\*this

If `rdbuf()` is not null, calls `rdbuf() -> sputbackc(c)`.

If `rdbuf()` is null or if `sputbackc()` fails, sets `badbit` in the error state.

**Note:**

Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

Definition at line 711 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_ios<_CharT, _Traits>::setstate()`, and `std::basic_streambuf<_CharT, _Traits>::sputbackc()`.

Referenced by `std::operator>>()`.

### 5.373.5.58 `void*& std::ios_base::pword(int __ix)` [`inline`, `inherited`]

Access to void pointer `array`.

**Parameters:**

`__ix` Index into the `array`.

**Returns:**

A reference to a `void*` associated with the index.

The `pword` function provides access to an `array` of pointers that can be used for any purpose. The `array` grows as required to hold the supplied index. All pointers in the `array` are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the `array` can grow dynamically, it is not safe to hold onto the reference.

Definition at line 761 of file `ios_base.h`.

### 5.373.5.59 `template<typename _CharT, typename _Traits> basic_streambuf<_CharT, _Traits> * std::basic_ios<_CharT, _Traits>::rdbuf(basic_streambuf<_CharT, _Traits> * __sb)` [`inline`, `inherited`]

Changing the underlying buffer.

**Parameters:**

`sb` The new stream buffer.

**Returns:**

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream foo; // or some other derived type
std::streambuf* p =;

foo.ios::rdbuf(p); // ios == basic_ios<char>
```

Definition at line 52 of file `basic_ios.tcc`.

References `std::basic_ios<_CharT, _Traits>::clear()`.

#### 5.373.5.60 `template<typename _CharT, typename _Traits> __filebuf_type* std::basic_ifstream<_CharT, _Traits>::rdbuf() const [inline]`

Accessing the underlying buffer.

**Returns:**

The current `basic_filebuf` buffer.

This hides both signatures of `std::basic_ios::rdbuf()`.

Reimplemented from `std::basic_ios<_CharT, _Traits>`.

Definition at line 497 of file `fstream`.

#### 5.373.5.61 `template<typename _CharT, typename _Traits> iostate std::basic_ios<_CharT, _Traits>::rdstate() const [inline, inherited]`

Returns the error state of the stream buffer.

**Returns:**

A bit pattern (well, isn't everything?)

See `std::ios_base::iostate` for the possible bit values. Most users will call one of the interpreting wrappers, e.g., `good()`.

Definition at line 127 of file `basic_ios.h`.

**5.373.5.62** `template<typename _CharT, typename _Traits > basic_istream<_CharT, _Traits > & std::basic_istream<_CharT, _Traits >::read(char_type * __s, streamsize __n) [inline, inherited]`

Extraction without delimiters.

**Parameters:**

- s* A character [array](#).
- n* Maximum number of characters to store.

**Returns:**

\*this

If the stream state is [good\(\)](#), extracts characters and stores them into *s* until one of the following happens:

- n* characters are stored
- the input sequence reaches end-of-file, in which case the error state is [set](#) to `failbit|eofbit`.

**Note:**

This function is not overloaded on signed char and unsigned char.

Definition at line 650 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits >::_M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits >::rdbuf()`, and `std::basic_ios<_CharT, _Traits >::setstate()`.

**5.373.5.63** `template<typename _CharT, typename _Traits > streamsize std::basic_istream<_CharT, _Traits >::readsome(char_type * __s, streamsize __n) [inline, inherited]`

Extraction until the buffer is exhausted, but no more.

**Parameters:**

- s* A character [array](#).
- n* Maximum number of characters to store.

**Returns:**

The number of characters extracted.

## 5.373 std::basic\_ifstream<\_CharT, \_Traits> Class Template Reference 1787

Extracts characters and stores them into *s* depending on the number of characters remaining in the streambuf's buffer, `rdbuf() ->in_avail()`, called *A* here:

- if  $A == -1$ , sets eofbit and extracts no characters
- if  $A == 0$ , extracts no characters
- if  $A > 0$ , extracts  $\min(A, n)$

The goal is to empty the current buffer, and to not request any more from the external input sequence controlled by the streambuf.

Definition at line 679 of file istream.tcc.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::min()`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

### 5.373.5.64 void std::ios\_base::register\_callback (event\_callback \_\_fn, int \_\_index) [inherited]

Add the callback `__fn` with parameter `__index`.

#### Parameters:

- `__fn` The function to add.
- `__index` The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

### 5.373.5.65 template<typename \_CharT, typename \_Traits> basic\_istream<\_CharT, \_Traits> & std::basic\_istream<\_CharT, \_Traits>::seekg (off\_type \_\_off, ios\_base::seekdir \_\_dir) [inline, inherited]

Changing the current read position.

#### Parameters:

- `off` A file offset object.
- `dir` The direction in which to seek.

#### Returns:

\*this

If `fail()` is not true, calls `rdbuf() ->pubseekoff(off, dir)`. If that function fails, sets failbit.

**Note:**

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 870 of file `istream.tcc`.

References `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::ios_base::in`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.373.5.66** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::seekg(pos_type __pos) [inline, inherited]`

Changing the current read position.

**Parameters:**

*pos* A file position object.

**Returns:**

\*this

If `fail()` is not true, calls `rdbuf() ->pubseekpos(pos)`. If that function fails, sets failbit.

**Note:**

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 837 of file `istream.tcc`.

References `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::ios_base::in`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.373.5.67** `fmtflags std::ios_base::setf(fmtflags __fmtfl, fmtflags __mask) [inline, inherited]`

Setting new format flags.

**Parameters:**

*fmtfl* Additional flags to [set](#).  
*mask* The flags mask for *fmtfl*.

**Returns:**

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* & *mask*. An example mask is `ios_base::adjustfield`.

Definition at line 594 of file `ios_base.h`.

### 5.373.5.68 `fmtflags std::ios_base::setf (fmtflags __fmtfl) [inline, inherited]`

Setting new format flags.

**Parameters:**

*fmtfl* Additional flags to [set](#).

**Returns:**

The previous format control flags.

This function sets additional flags in format control. Flags that were previously [set](#) remain [set](#).

Definition at line 577 of file `ios_base.h`.

Referenced by `std::boolalpha()`, `std::dec()`, `std::fixed()`, `std::hex()`, `std::internal()`, `std::left()`, `std::oct()`, `std::right()`, `std::scientific()`, `std::showbase()`, `std::showpoint()`, `std::showpos()`, `std::skipws()`, `std::unitbuf()`, and `std::uppercase()`.

### 5.373.5.69 `template<typename _CharT, typename _Traits> void std::basic_ios<_CharT, _Traits >::setstate (iostate __state) [inline, inherited]`

Sets additional flags in the error state.

**Parameters:**

*state* The additional state flag(s) to [set](#).

See `std::ios_base::iostate` for the possible bit values.

Definition at line 147 of file basic\_ios.h.

Referenced by `std::basic_ostream<_CharT, _Traits>::flush()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::basic_ostream<_CharT, _Traits>::operator<<()`, `std::basic_istream<_CharT, _Traits>::operator>>()`, `std::operator>>()`, `std::basic_istream<_CharT, _Traits>::peek()`, `std::basic_ostream<_CharT, _Traits>::put()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_istream<_CharT, _Traits>::read()`, `std::basic_istream<_CharT, _Traits>::readsome()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_ostream<_CharT, _Traits>::seekp()`, `std::basic_istream<_CharT, _Traits>::sync()`, `std::basic_istream<_CharT, _Traits>::unget()`, and `std::ws()`.

**5.373.5.70** `template<typename _CharT, typename _Traits> int std::basic_istream<_CharT, _Traits>::sync(void) [inline, inherited]`

Synchronizing the stream buffer.

**Returns:**

0 on success, -1 on failure

If `rdbuf()` is a null pointer, returns -1.

Otherwise, calls `rdbuf()->pubsync()`, and if that returns -1, sets `badbit` and returns -1.

Otherwise, returns 0.

**Note:**

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 777 of file istream.tcc.

References `std::ios_base::badbit`, `std::ios_base::goodbit`, `std::basic_streambuf<_CharT, _Traits>::pubsync()`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.373.5.71** `static bool std::ios_base::sync_with_stdio(bool __sync = true) [static, inherited]`

Interaction with the standard C I/O objects.

**Parameters:**

*sync* Whether to synchronize or not.

**Returns:**

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., `stdout`) and the standard C++ objects (e.g., `cout`). User-declared streams are unaffected. See <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch28s02.html>

**5.373.5.72** `template<typename _CharT, typename _Traits> basic_ifstream<_CharT, _Traits>::pos_type std::basic_ifstream<_CharT, _Traits>::tellg(void) [inline, inherited]`

Getting the current read position.

**Returns:**

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0, cur, in)`.

**Note:**

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 813 of file `istream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::cur`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::ios_base::in`, and `std::basic_ios<_CharT, _Traits>::rdbuf()`.

**5.373.5.73** `template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits>* std::basic_ios<_CharT, _Traits>::tie(basic_ostream<_CharT, _Traits>* __tiestr) [inline, inherited]`

Ties this stream to an output stream.

**Parameters:**

*tiestr* The output stream.

**Returns:**

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see [tie\(\)](#) for more.

Definition at line 297 of file `basic_ios.h`.

**5.373.5.74** `template<typename _CharT, typename _Traits>  
basic_ostream<_CharT, _Traits>* std::basic_ios<_CharT, _Traits  
>::tie() const [inline, inherited]`

Fetches the current *tied* stream.

**Returns:**

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Definition at line 285 of file `basic_ios.h`.

Referenced by `std::basic_ios<_CharT, _Traits >::copyfmt()`.

**5.373.5.75** `template<typename _CharT, typename _Traits > basic_istream<  
_CharT, _Traits > & std::basic_istream<_CharT, _Traits >::unget  
(void) [inline, inherited]`

Unextracting the previous character.

**Returns:**

\*this

If `rdbuf()` is not null, calls `rdbuf() ->sungetc(c)`.

If `rdbuf()` is null or if `sungetc()` fails, sets `badbit` in the error state.

**Note:**

Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

Definition at line 744 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits >::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits >::eof()`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits >::rdbuf()`, `std::basic_ios<_CharT, _Traits >::setstate()`, and `std::basic_streambuf<_CharT, _Traits >::sungetc()`.

**5.373.5.76** `void std::ios_base::unseff (fmtflags __mask) [inline, inherited]`

Clearing format flags.

**Parameters:**

*mask* The flags to unset.

This function clears *mask* in the format flags.

Definition at line 609 of file `ios_base.h`.

Referenced by `std::noboolalpha()`, `std::noshowbase()`, `std::noshowpoint()`, `std::noshowpos()`, `std::noskipws()`, `std::nounitbuf()`, and `std::nouppercase()`.

**5.373.5.77** `template<typename _CharT, typename _Traits> char_type std::basic_ios<_CharT, _Traits>::widen (char __c) const [inline, inherited]`

Widens characters.

**Parameters:**

*c* The character to widen.

**Returns:**

The widened character.

Maps a character of `char` to a character of `char_type`.

Returns the result of

```
std::use_facet<ctype<char_type>> (getloc()).widen(c)
```

Additional 110n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

Definition at line 439 of file `basic_ios.h`.

Referenced by `std::endl()`, `std::getline()`, and `std::operator>>()`.

**5.373.5.78** `streamsize std::ios_base::width (streamsize __wide) [inline, inherited]`

Changing flags.

**Parameters:**

*wide* The new width value.

**Returns:**

The previous value of [width\(\)](#).

Definition at line 652 of file ios\_base.h.

**5.373.5.79** `streamsize std::ios_base::width () const` [**inline, inherited**]

Flags access.

**Returns:**

The minimum field width to generate on output operations.

*Minimum field width* refers to the number of characters.

Definition at line 643 of file ios\_base.h.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::num_put<_CharT, _OutIter>::do_put()`, and `std::operator>>()`.

**5.373.5.80** `static int std::ios_base::xalloc () throw ()` [**static, inherited**]

Access to unique indices.

**Returns:**

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the `iword` and `pword` functions. The expectation is that an application calls `xalloc` in order to obtain an index in the `iword` and `pword` arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. `xalloc` is guaranteed to return an index that is safe to use in the `iword` and `pword` arrays.

**5.373.6 Member Data Documentation****5.373.6.1** `template<typename _CharT, typename _Traits> streamsize std::basic_istream<_CharT, _Traits>::_M_gcount` [**protected, inherited**]

The number of characters extracted in the previous unformatted function; see [gcount\(\)](#).

## 5.373 `std::basic_ifstream<_CharT, _Traits>` Class Template Reference 1795

Open and seek to end immediately after opening.

Definition at line 375 of file `ios_base.h`.

Referenced by `std::basic_filebuf<_CharT, _Traits>::open()`.

### 5.373.6.5 `const iostate std::ios_base::badbit` [static, inherited]

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).

Definition at line 342 of file `ios_base.h`.

Referenced by `std::basic_ostream<_CharT, _Traits>::flush()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::basic_ios<_CharT, _Traits>::init()`, `std::operator<<()`, `std::basic_ostream<_CharT, _Traits>::operator<<()`, `std::operator>>()`, `std::basic_istream<_CharT, _Traits>::operator>>()`, `std::basic_istream<_CharT, _Traits>::peek()`, `std::basic_ostream<_CharT, _Traits>::put()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_istream<_CharT, _Traits>::read()`, `std::basic_istream<_CharT, _Traits>::readsome()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_ostream<_CharT, _Traits>::seekp()`, `std::basic_istream<_CharT, _Traits>::sync()`, `std::basic_istream<_CharT, _Traits`

>::tellg(), std::basic\_ostream< \_CharT, \_Traits >::tellp(), std::basic\_istream< \_CharT, \_Traits >::unget(), and std::basic\_ostream< \_CharT, \_Traits >::write().

#### 5.373.6.6 const fmtflags std::ios\_base::basefield [static, inherited]

A mask of dec|oct|hex. Useful for the 2-arg form of `setf`.

Definition at line 321 of file `ios_base.h`.

Referenced by `std::num_get< _CharT, _InIter >::do_get()`, and `std::basic_ostream< _CharT, _Traits >::operator<<()`.

#### 5.373.6.7 const seekdir std::ios\_base::beg [static, inherited]

Request a seek relative to the beginning of the stream.

Definition at line 404 of file `ios_base.h`.

Referenced by `std::basic_filebuf< _CharT, _Traits >::seekpos()`.

#### 5.373.6.8 const openmode std::ios\_base::binary [static, inherited]

Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch27s02.html>.

Definition at line 380 of file `ios_base.h`.

Referenced by `std::basic_filebuf< _CharT, _Traits >::showmanyc()`.

#### 5.373.6.9 const fmtflags std::ios\_base::boolalpha [static, inherited]

Insert/extract `bool` in alphabetic rather than numeric format.

Definition at line 266 of file `ios_base.h`.

Referenced by `std::num_get< _CharT, _InIter >::do_get()`, and `std::num_put< _CharT, _OutIter >::do_put()`.

#### 5.373.6.10 const seekdir std::ios\_base::cur [static, inherited]

Request a seek relative to the current position within the sequence.

Definition at line 407 of file `ios_base.h`.

Referenced by `std::basic_filebuf< _CharT, _Traits >::imbue()`, `std::basic_filebuf< _CharT, _Traits >::pbackfail()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc`

## 5.373 std::basic\_ifstream< \_CharT, \_Traits > Class Template Reference 1797

>::seekoff(), std::basic\_filebuf< \_CharT, \_Traits >::seekoff(), std::basic\_istream< \_CharT, \_Traits >::tellg(), and std::basic\_ostream< \_CharT, \_Traits >::tellp().

### 5.373.6.11 const fmtflags std::ios\_base::dec [static, inherited]

Converts integer input or generates integer output in [decimal](#) base.

Definition at line 269 of file ios\_base.h.

### 5.373.6.12 const seekdir std::ios\_base::end [static, inherited]

Request a seek relative to the current end of the sequence.

Definition at line 410 of file ios\_base.h.

Referenced by std::basic\_filebuf< \_CharT, \_Traits >::open(), and std::basic\_stringbuf< \_CharT, \_Traits, \_Alloc >::seekoff().

### 5.373.6.13 const iostate std::ios\_base::eofbit [static, inherited]

Indicates that an input operation reached the end of an input sequence.

Definition at line 345 of file ios\_base.h.

Referenced by std::num\_get< \_CharT, \_InIter >::do\_get(), std::time\_get< \_CharT, \_InIter >::do\_get\_date(), std::time\_get< \_CharT, \_InIter >::do\_get\_monthname(), std::time\_get< \_CharT, \_InIter >::do\_get\_time(), std::time\_get< \_CharT, \_InIter >::do\_get\_weekday(), std::time\_get< \_CharT, \_InIter >::do\_get\_year(), std::basic\_istream< \_CharT, \_Traits >::get(), std::basic\_istream< \_CharT, \_Traits >::getline(), std::basic\_istream< \_CharT, \_Traits >::ignore(), std::operator>>(), std::basic\_istream< \_CharT, \_Traits >::operator>>(), std::basic\_istream< \_CharT, \_Traits >::peek(), std::basic\_istream< \_CharT, \_Traits >::read(), std::basic\_istream< \_CharT, \_Traits >::readsome(), and std::ws().

### 5.373.6.14 const iostate std::ios\_base::failbit [static, inherited]

Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.

Definition at line 350 of file ios\_base.h.

Referenced by std::num\_get< \_CharT, \_InIter >::do\_get(), std::time\_get< \_CharT, \_InIter >::do\_get\_monthname(), std::time\_get< \_CharT, \_InIter >::do\_get\_weekday(), std::time\_get< \_CharT, \_InIter >::do\_get\_year(), std::basic\_istream< \_CharT, \_Traits >::get(), std::basic\_istream< \_CharT, \_Traits >::getline(), std::basic\_ostream< \_CharT, \_Traits >::operator<<(), std::basic\_istream< \_CharT, \_Traits

`>>::operator>>()`, `std::operator>>()`, `std::basic_istream<_CharT, _Traits>::read()`, `std::basic_istream<_CharT, _Traits>::seekg()`, and `std::basic_ostream<_CharT, _Traits>::seekp()`.

#### 5.373.6.15 `const fmtflags std::ios_base::fixed` [`static`, `inherited`]

Generate floating-point output in fixed-point notation.

Definition at line 272 of file `ios_base.h`.

#### 5.373.6.16 `const fmtflags std::ios_base::floatfield` [`static`, `inherited`]

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.

Definition at line 324 of file `ios_base.h`.

#### 5.373.6.17 `const iostate std::ios_base::goodbit` [`static`, `inherited`]

Indicates all is well.

Definition at line 353 of file `ios_base.h`.

Referenced by `std::num_get<_CharT, _InIter>::do_get()`, `std::time_get<_CharT, _InIter>::do_get_monthname()`, `std::time_get<_CharT, _InIter>::do_get_weekday()`, `std::time_get<_CharT, _InIter>::do_get_year()`, `std::basic_ostream<_CharT, _Traits>::flush()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::basic_ios<_CharT, _Traits>::init()`, `std::basic_ostream<_CharT, _Traits>::operator<<()`, `std::operator>>()`, `std::basic_istream<_CharT, _Traits>::operator>>()`, `std::basic_istream<_CharT, _Traits>::peek()`, `std::basic_ostream<_CharT, _Traits>::put()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_istream<_CharT, _Traits>::read()`, `std::basic_istream<_CharT, _Traits>::readsome()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_ostream<_CharT, _Traits>::seekp()`, `std::basic_istream<_CharT, _Traits>::sync()`, and `std::basic_istream<_CharT, _Traits>::unget()`.

#### 5.373.6.18 `const fmtflags std::ios_base::hex` [`static`, `inherited`]

Converts integer input or generates integer output in hexadecimal base.

Definition at line 275 of file `ios_base.h`.

Referenced by `std::num_get<_CharT, _InIter>::do_get()`, `std::num_put<_CharT, _OutIter>::do_put()`, and `std::basic_ostream<_CharT, _Traits>::operator<<()`.

**5.373.6.19** `const openmode std::ios_base::in` [`static`, `inherited`]

Open for input. Default for `ifstream` and `fstream`.

Definition at line 383 of file `ios_base.h`.

Referenced by `std::basic_filebuf<_CharT, _Traits>::pbackfail()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekoff()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekpos()`, `std::basic_filebuf<_CharT, _Traits>::showmanyc()`, `std::basic_istream<_CharT, _Traits>::tellg()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::underflow()`, `std::basic_filebuf<_CharT, _Traits>::underflow()`, and `std::basic_filebuf<_CharT, _Traits>::xsgetn()`.

**5.373.6.20** `const fmtflags std::ios_base::internal` [`static`, `inherited`]

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.

Definition at line 280 of file `ios_base.h`.

**5.373.6.21** `const fmtflags std::ios_base::left` [`static`, `inherited`]

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.)

Definition at line 284 of file `ios_base.h`.

Referenced by `std::num_put<_CharT, _Outputter>::do_put()`.

**5.373.6.22** `const fmtflags std::ios_base::oct` [`static`, `inherited`]

Converts integer input or generates integer output in octal base.

Definition at line 287 of file `ios_base.h`.

Referenced by `std::basic_ostream<_CharT, _Traits>::operator<<()`.

**5.373.6.23** `const openmode std::ios_base::out` [`static`, `inherited`]

Open for output. Default for `ofstream` and `fstream`.

Definition at line 386 of file `ios_base.h`.

Referenced by `std::basic_stringbuf<_CharT, _Traits, _Alloc>::overflow()`, `std::basic_filebuf<_CharT, _Traits>::overflow()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekoff()`, `std::basic_ostream<_CharT, _Traits>::seekp()`,

`std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos()`, `std::basic_ostream< _CharT, _Traits >::tellp()`, and `std::basic_filebuf< _CharT, _Traits >::xsputn()`.

#### **5.373.6.24 const fmtflags std::ios\_base::right [static, inherited]**

Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.)

Definition at line 291 of file `ios_base.h`.

#### **5.373.6.25 const fmtflags std::ios\_base::scientific [static, inherited]**

Generates floating-point output in scientific notation.

Definition at line 294 of file `ios_base.h`.

#### **5.373.6.26 const fmtflags std::ios\_base::showbase [static, inherited]**

Generates a prefix indicating the numeric base of generated integer output.

Definition at line 298 of file `ios_base.h`.

#### **5.373.6.27 const fmtflags std::ios\_base::showpoint [static, inherited]**

Generates a decimal-point character unconditionally in generated floating-point output.

Definition at line 302 of file `ios_base.h`.

#### **5.373.6.28 const fmtflags std::ios\_base::showpos [static, inherited]**

Generates a + sign in non-negative generated numeric output.

Definition at line 305 of file `ios_base.h`.

#### **5.373.6.29 const fmtflags std::ios\_base::skipws [static, inherited]**

Skips leading white space before certain input operations.

Definition at line 308 of file `ios_base.h`.

#### **5.373.6.30 const openmode std::ios\_base::trunc [static, inherited]**

Open for input. Default for `ofstream`.

Definition at line 389 of file `ios_base.h`.

## 5.373 std::basic\_ifstream<\_CharT, \_Traits > Class Template Reference 1801

### **5.373.6.31 const fmtflags std::ios\_base::unitbuf [static, inherited]**

Flushes output after each output operation.

Definition at line 311 of file ios\_base.h.

### **5.373.6.32 const fmtflags std::ios\_base::uppercase [static, inherited]**

Replaces certain lowercase letters with their uppercase equivalents in generated output.

Definition at line 315 of file ios\_base.h.

Referenced by std::num\_put<\_CharT, \_OutIter >::do\_put().

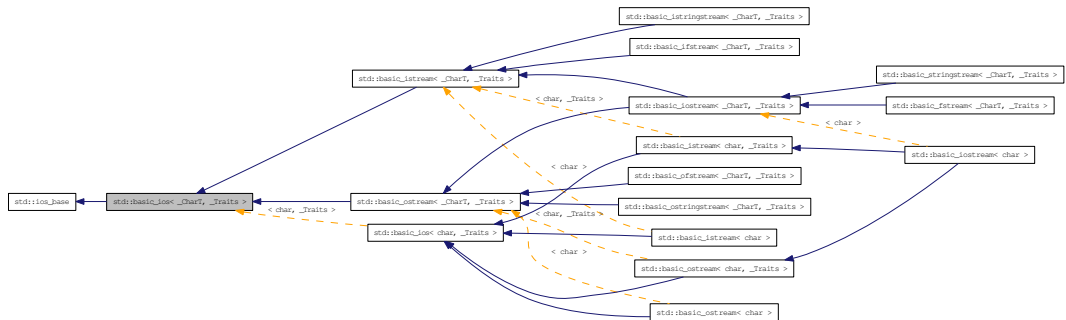

The documentation for this class was generated from the following file:

## 5.374 `std::basic_ios< _CharT, _Traits >` Class Template Reference

Virtual base class for all stream classes.

Most of the member functions called dispatched on stream objects (e.g., `std::cout.foo(bar);`) are consolidated in this class. Inheritance diagram for `std::basic_ios< _CharT, _Traits >`:

### Public Types

- enum `event` { `erase_event`, `imbue_event`, `copyfmt_event` }
- typedef `void(* event_callback)(event, ios_base &, int)`
- typedef `_Ios_Fmtflags` `fmtflags`
- typedef `int` `io_state`
- typedef `_Ios_Iostate` `iostate`
- typedef `int` `open_mode`
- typedef `_Ios_Openmode` `openmode`
- typedef `int` `seek_dir`
- typedef `_Ios_Seekdir` `seekdir`
- typedef `std::streamoff` `streamoff`
- typedef `std::streampos` `streampos`

### Public Member Functions

- `basic_ios` (`basic_streambuf< _CharT, _Traits > *__sb`)
- virtual `~basic_ios` ()

### 5.374.1 Detailed Description

```
template<typename _CharT, typename _Traits> class std::basic_ios< _CharT,
_Traits >
```

Virtual base class for all stream classes.

Most of the member functions called dispatched on stream objects (e.g., `std::cout.foo(bar);`) are consolidated in this class.

Definition at line 62 of file `basic_ios.h`.

### 5.374.2 Member Typedef Documentation

**5.374.2.1** `template<typename _CharT, typename _Traits> typedef ctype<_CharT> std::basic_ios< _CharT, _Traits >::__ctype_type`

These are non-standard types.

Reimplemented in [std::basic\\_istream< \\_CharT, \\_Traits >](#), [std::basic\\_ostream< \\_CharT, \\_Traits >](#), [std::basic\\_istream< char, \\_Traits >](#), [std::basic\\_istream< char >](#), [std::basic\\_ostream< char, \\_Traits >](#), and [std::basic\\_ostream< char >](#).

Definition at line 82 of file `basic_ios.h`.

**5.374.2.2** `template<typename _CharT, typename _Traits> typedef num_get<_CharT, istreambuf_iterator<_CharT, _Traits> > std::basic_ios< _CharT, _Traits >::__num_get_type`

These are non-standard types.

Reimplemented in [std::basic\\_istream< \\_CharT, \\_Traits >](#), [std::basic\\_istream< char, \\_Traits >](#), and [std::basic\\_istream< char >](#).

Definition at line 86 of file `basic_ios.h`.

**5.374.2.3** `template<typename _CharT, typename _Traits> typedef num_put<_CharT, ostreambuf_iterator<_CharT, _Traits> > std::basic_ios< _CharT, _Traits >::__num_put_type`

The quick-and-easy status check. This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

Reimplemented in [std::basic\\_ostream< \\_CharT, \\_Traits >](#), [std::basic\\_ostream< char, \\_Traits >](#), and [std::basic\\_ostream< char >](#).

Definition at line 84 of file `basic_ios.h`.

#### 5.374.2.4 `template<typename _CharT, typename _Traits> typedef _CharT std::basic_ios<_CharT, _Traits >::char_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented in `std::basic_ifstream<_CharT, _Traits >`, `std::basic_ofstream<_CharT, _Traits >`, `std::basic_fstream<_CharT, _Traits >`, `std::basic_istream<_CharT, _Traits >`, `std::basic_iostream<_CharT, _Traits >`, `std::basic_ostream<_CharT, _Traits >`, `std::basic_istreamstream<_CharT, _Traits, _Alloc >`, `std::basic_ostreamstream<_CharT, _Traits, _Alloc >`, `std::basic_stringstream<_CharT, _Traits, _Alloc >`, `std::basic_istream<char, _Traits >`, `std::basic_istream<char >`, `std::basic_iostream<char >`, `std::basic_ostream<char, _Traits >`, and `std::basic_ostream<char >`.

Definition at line 71 of file `basic_ios.h`.

#### 5.374.2.5 `typedef void(* std::ios_base::event_callback)(event, ios_base &, int) [inherited]`

The type of an event callback function.

##### Parameters:

- event* One of the members of the event enum.
- ios\_base* Reference to the `ios_base` object.
- int* The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several `ios_base` and `basic_ios` functions, specifically `imbue()`, `copyfmt()`, and `~ios()`.

Definition at line 444 of file `ios_base.h`.

#### 5.374.2.6 `typedef _Ios_Fmtflags std::ios_base::fmtflags [inherited]`

This is a bitmask type. `_Ios_Fmtflags` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `fmtflags` are:

- `boolalpha`
- `dec`
- `fixed`
- `hex`

- `internal`
- `left`
- `oct`
- `right`
- `scientific`
- `showbase`
- `showpoint`
- `showpos`
- `skipws`
- `unitbuf`
- `uppercase`
- `adjustfield`
- `basefield`
- `floatfield`

Definition at line 263 of file `ios_base.h`.

#### 5.374.2.7 `template<typename _CharT, typename _Traits> typedef _Traits::int_type std::basic_ios<_CharT, _Traits>::int_type`

These are non-standard types.

Reimplemented in `std::basic_ifstream<_CharT, _Traits>`, `std::basic_ofstream<_CharT, _Traits>`, `std::basic_fstream<_CharT, _Traits>`, `std::basic_istream<_CharT, _Traits>`, `std::basic_iostream<_CharT, _Traits>`, `std::basic_ostream<_CharT, _Traits>`, `std::basic_istream<_CharT, _Traits, _Alloc>`, `std::basic_ostringstream<_CharT, _Traits, _Alloc>`, `std::basic_stringstream<_CharT, _Traits, _Alloc>`, `std::basic_istream<char, _Traits>`, `std::basic_istream<char>`, `std::basic_iostream<char>`, `std::basic_ostream<char, _Traits>`, and `std::basic_ostream<char>`.

Definition at line 72 of file `basic_ios.h`.

---

**5.374.2.8 `typedef _Ios_Iostate std::ios_base::iostate` [inherited]**

This is a bitmask type. `_Ios_Iostate` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `iostate` are:

- `badbit`
- `eofbit`
- `failbit`
- `goodbit`

Definition at line 338 of file `ios_base.h`.

**5.374.2.9 `template<typename _CharT, typename _Traits> typedef _Traits::off_type std::basic_ios<_CharT, _Traits>::off_type`**

These are non-standard types.

Reimplemented in `std::basic_ifstream<_CharT, _Traits>`, `std::basic_ofstream<_CharT, _Traits>`, `std::basic_fstream<_CharT, _Traits>`, `std::basic_istream<_CharT, _Traits>`, `std::basic_iostream<_CharT, _Traits>`, `std::basic_ostream<_CharT, _Traits>`, `std::basic_istreamstream<_CharT, _Traits, _Alloc>`, `std::basic_ostreamstream<_CharT, _Traits, _Alloc>`, `std::basic_stringstream<_CharT, _Traits, _Alloc>`, `std::basic_istream<char, _Traits>`, `std::basic_istream<char>`, `std::basic_iostream<char>`, `std::basic_ostream<char, _Traits>`, and `std::basic_ostream<char>`.

Definition at line 74 of file `basic_ios.h`.

**5.374.2.10 `typedef _Ios_Openmode std::ios_base::openmode` [inherited]**

This is a bitmask type. `_Ios_Openmode` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `openmode` are:

- `app`
- `ate`
- `binary`
- `in`
- `out`

- trunc

Definition at line 369 of file ios\_base.h.

#### 5.374.2.11 `template<typename _CharT, typename _Traits> typedef _Traits::pos_type std::basic_ios< _CharT, _Traits >::pos_type`

These are non-standard types.

Reimplemented in `std::basic_ifstream< _CharT, _Traits >`, `std::basic_ofstream< _CharT, _Traits >`, `std::basic_fstream< _CharT, _Traits >`, `std::basic_istream< _CharT, _Traits >`, `std::basic_iostream< _CharT, _Traits >`, `std::basic_ostream< _CharT, _Traits >`, `std::basic_istreamstream< _CharT, _Traits, _Alloc >`, `std::basic_ostringstream< _CharT, _Traits, _Alloc >`, `std::basic_stringstream< _CharT, _Traits, _Alloc >`, `std::basic_istream< char, _Traits >`, `std::basic_istream< char >`, `std::basic_iostream< char >`, `std::basic_ostream< char, _Traits >`, and `std::basic_ostream< char >`.

Definition at line 73 of file basic\_ios.h.

#### 5.374.2.12 `typedef _Ios_Seekdir std::ios_base::seekdir [inherited]`

This is an enumerated type. `_Ios_Seekdir` is implementation-defined. Defined values of type `seekdir` are:

- beg
- cur, equivalent to `SEEK_CUR` in the C standard library.
- end, equivalent to `SEEK_END` in the C standard library.

Definition at line 401 of file ios\_base.h.

#### 5.374.2.13 `template<typename _CharT, typename _Traits> typedef _Traits std::basic_ios< _CharT, _Traits >::traits_type`

These are non-standard types.

Reimplemented in `std::basic_ifstream< _CharT, _Traits >`, `std::basic_ofstream< _CharT, _Traits >`, `std::basic_fstream< _CharT, _Traits >`, `std::basic_istream< _CharT, _Traits >`, `std::basic_iostream< _CharT, _Traits >`, `std::basic_ostream< _CharT, _Traits >`, `std::basic_istreamstream< _CharT, _Traits, _Alloc >`, `std::basic_ostringstream< _CharT, _Traits, _Alloc >`, `std::basic_stringstream< _CharT, _Traits, _Alloc >`, `std::basic_istream< char, _Traits >`, `std::basic_istream< char >`, `std::basic_iostream< char >`, `std::basic_ostream< char, _Traits >`, and `std::basic_ostream< char >`.

Definition at line 75 of file basic\_ios.h.

### 5.374.3 Member Enumeration Documentation

#### 5.374.3.1 enum std::ios\_base::event [inherited]

The [set](#) of events that may be passed to an event callback. `erase_event` is used during `~ios()` and `copyfmt()`. `imbue_event` is used during `imbue()`. `copyfmt_event` is used during `copyfmt()`.

Definition at line 427 of file ios\_base.h.

### 5.374.4 Constructor & Destructor Documentation

#### 5.374.4.1 template<typename \_CharT, typename \_Traits> std::basic\_ios<\_CharT, \_Traits>::basic\_ios (basic\_streambuf<\_CharT, \_Traits> \* \_\_sb) [inline, explicit]

Constructor performs initialization. The parameter is passed by derived streams.

Definition at line 260 of file basic\_ios.h.

#### 5.374.4.2 template<typename \_CharT, typename \_Traits> virtual std::basic\_ios<\_CharT, \_Traits>::~~basic\_ios () [inline, virtual]

Empty. The destructor does nothing. More specifically, it does not destroy the streambuf held by `rdbuf()`.

Definition at line 272 of file basic\_ios.h.

#### 5.374.4.3 template<typename \_CharT, typename \_Traits> std::basic\_ios<\_CharT, \_Traits>::basic\_ios () [inline, protected]

Empty. The default constructor does nothing and is not normally accessible to users.

Definition at line 450 of file basic\_ios.h.

### 5.374.5 Member Function Documentation

#### 5.374.5.1 const locale& std::ios\_base::\_M\_getloc () const [inline, inherited]

Locale access.

**Returns:**

A reference to the current [locale](#).

Like `getloc` above, but returns a reference instead of generating a copy.

Definition at line 705 of file `ios_base.h`.

Referenced by `std::money_get<_CharT, _InIter >::do_get()`, `std::num_get<_CharT, _InIter >::do_get()`, `std::time_get<_CharT, _InIter >::do_get_date()`, `std::time_get<_CharT, _InIter >::do_get_monthname()`, `std::time_get<_CharT, _InIter >::do_get_time()`, `std::time_get<_CharT, _InIter >::do_get_weekday()`, `std::time_get<_CharT, _InIter >::do_get_year()`, `std::time_put<_CharT, _OutIter >::do_put()`, `std::num_put<_CharT, _OutIter >::do_put()`, and `std::time_put<_CharT, _OutIter >::put()`.

#### 5.374.5.2 `template<typename _CharT, typename _Traits> bool std::basic_ios<_CharT, _Traits >::bad () const [inline]`

Fast error checking.

**Returns:**

True if the badbit is [set](#).

Note that other iostate flags may also be [set](#).

Definition at line 201 of file `basic_ios.h`.

#### 5.374.5.3 `template<typename _CharT , typename _Traits > void std::basic_ios<_CharT, _Traits >::clear (iostate __state = goodbit) [inline]`

[Re]sets the error state.

**Parameters:**

*state* The new state flag(s) to [set](#).

See [std::ios\\_base::iostate](#) for the possible bit values. Most users will not need to pass an argument.

Definition at line 40 of file `basic_ios.tcc`.

Referenced by `std::basic_ios<_CharT, _Traits >::rdbuf()`.

**5.374.5.4** `template<typename _CharT, typename _Traits> basic_ios<_CharT, _Traits> & std::basic_ios<_CharT, _Traits>::copyfmt(const basic_ios<_CharT, _Traits> & __rhs) [inline]`

Copies fields of `__rhs` into this.

**Parameters:**

`__rhs` The source values for the copies.

**Returns:**

Reference to this object.

All fields of `__rhs` are copied into this object except that `rdbuf()` and `rdstate()` remain unchanged. All values in the `pword` and `iword` arrays are copied. Before copying, each callback is invoked with `erase_event`. After copying, each (new) callback is invoked with `copyfmt_event`. The final step is to copy `exceptions()`.

Definition at line 62 of file `basic_ios.tcc`.

References `std::basic_ios<_CharT, _Traits>::exceptions()`, `std::basic_ios<_CharT, _Traits>::fill()`, `std::ios_base::flags()`, `std::ios_base::getloc()`, `std::ios_base::precision()`, `std::basic_ios<_CharT, _Traits>::tie()`, and `std::ios_base::width()`.

**5.374.5.5** `template<typename _CharT, typename _Traits> bool std::basic_ios<_CharT, _Traits>::eof() const [inline]`

Fast error checking.

**Returns:**

True if the eofbit is `set`.

Note that other iostate flags may also be `set`.

Definition at line 180 of file `basic_ios.h`.

Referenced by `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::basic_istream<_CharT, _Traits>::peek()`, `std::basic_istream<_CharT, _Traits>::putback()`, and `std::basic_istream<_CharT, _Traits>::unget()`.

**5.374.5.6** `template<typename _CharT, typename _Traits> void std::basic_ios<_CharT, _Traits>::exceptions(iostate __except) [inline]`

Throwing exceptions on errors.

**Parameters:**

*except* The new exceptions mask.

By default, error flags are [set](#) silently. You can [set](#) an exceptions mask for each stream; if a bit in the mask becomes [set](#) in the error flags, then an [exception](#) of type `std::ios_base::failure` is thrown.

If the error flag is already [set](#) when the exceptions mask is added, the [exception](#) is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>

int main()
{
 std::set_terminate (__gnu_cxx::__verbose_terminate_handler);

 std::ifstream f ("/etc/motd");

 std::cerr << "Setting badbit\n";
 f.setstate (std::ios_base::badbit);

 std::cerr << "Setting exception mask\n";
 f.exceptions (std::ios_base::badbit);
}
```

Definition at line 247 of file `basic_ios.h`.

**5.374.5.7** `template<typename _CharT, typename _Traits> iostate  
std::basic_ios<_CharT, _Traits >::exceptions () const [inline]`

Throwing exceptions on errors.

**Returns:**

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of [exceptions\(iostate\)](#) for the meaning of the return value.

Definition at line 212 of file `basic_ios.h`.

Referenced by `std::basic_ios<_CharT, _Traits >::copyfmt()`.

**5.374.5.8** `template<typename _CharT, typename _Traits> bool std::basic_ios<  
_CharT, _Traits >::fail () const [inline]`

Fast error checking.

**Returns:**

True if either the badbit or the failbit is [set](#).

Checking the badbit in [fail\(\)](#) is historical practice. Note that other iostate flags may also be [set](#).

Definition at line 191 of file basic\_ios.h.

Referenced by std::basic\_istream<\_CharT, \_Traits>::seekg(), std::basic\_ostream<\_CharT, \_Traits>::seekp(), std::basic\_istream<\_CharT, \_Traits>::tellg(), std::basic\_ostream<\_CharT, \_Traits>::tellp(), and std::regex\_traits<\_Ch\_type>::value().

**5.374.5.9** `template<typename _CharT, typename _Traits> char_type  
std::basic_ios<_CharT, _Traits>::fill(char_type __ch) [inline]`

Sets a new *empty* character.

**Parameters:**

*ch* The new character.

**Returns:**

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via [setw](#)), Q characters are actually used, and Q<P. It defaults to a space ( ' ') in the current [locale](#).

Definition at line 380 of file basic\_ios.h.

**5.374.5.10** `template<typename _CharT, typename _Traits> char_type  
std::basic_ios<_CharT, _Traits>::fill() const [inline]`

Retrieves the *empty* character.

**Returns:**

The current fill character.

It defaults to a space ( ' ') in the current [locale](#).

Definition at line 360 of file basic\_ios.h.

Referenced by std::basic\_ios<\_CharT, \_Traits>::copyfmt().

### 5.374.5.11 `fmtflags std::ios_base::flags (fmtflags __fmtfl) [inline, inherited]`

Setting new format flags all at once.

#### Parameters:

*fmtfl* The new flags to [set](#).

#### Returns:

The previous format control flags.

This function overwrites all the format flags with *fmtfl*.

Definition at line 561 of file `ios_base.h`.

### 5.374.5.12 `fmtflags std::ios_base::flags () const [inline, inherited]`

Access to format flags.

#### Returns:

The format control flags for both input and output.

Definition at line 550 of file `ios_base.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::num_put<_CharT, _OutIter>::do_put()`, `std::basic_ostream<_CharT, _Traits>::operator<<()`, `std::operator<<()`, and `std::operator>>()`.

### 5.374.5.13 `locale std::ios_base::getloc () const [inline, inherited]`

Locale access.

#### Returns:

A copy of the current [locale](#).

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ [locale](#).

Definition at line 694 of file `ios_base.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::money_put<_CharT, _OutIter>::do_put()`, `std::basic_ios<_CharT, _Traits>::imbue()`, `std::operator>>()`, and `std::ws()`.

**5.374.5.14** `template<typename _CharT, typename _Traits> bool  
std::basic_ios<_CharT, _Traits>::good() const [inline]`

Fast error checking.

**Returns:**

True if no error flags are [set](#).

A wrapper around `rdstate`.

Definition at line 170 of file `basic_ios.h`.

**5.374.5.15** `template<typename _CharT, typename _Traits> locale  
std::basic_ios<_CharT, _Traits>::imbue(const locale & __loc)  
[inline]`

Moves to a new [locale](#).

**Parameters:**

*loc* The new [locale](#).

**Returns:**

The previous [locale](#).

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional 110n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

Reimplemented from `std::ios_base`.

Definition at line 113 of file `basic_ios.tcc`.

References `std::ios_base::getloc()`, and `std::basic_ios<_CharT, _Traits>::rdbuf()`.

Referenced by `std::operator<<()`.

**5.374.5.16** `template<typename _CharT, typename _Traits> void  
std::basic_ios<_CharT, _Traits>::init(basic_streambuf<_CharT,  
_Traits> * __sb) [inline, protected]`

All setup is performed here. This is called from the public constructor. It is not virtual and cannot be redefined.

Definition at line 125 of file `basic_ios.tcc`.

References `std::ios_base::badbit`, and `std::ios_base::goodbit`.

**5.374.5.17** `long& std::ios_base::iword (int __ix) [inline, inherited]`

Access to integer `array`.

**Parameters:**

`__ix` Index into the `array`.

**Returns:**

A reference to an integer associated with the index.

The `iword` function provides access to an `array` of integers that can be used for any purpose. The `array` grows as required to hold the supplied index. All integers in the `array` are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the `array` can grow dynamically, it is not safe to hold onto the reference.

Definition at line 740 of file `ios_base.h`.

**5.374.5.18** `template<typename _CharT, typename _Traits> char std::basic_ios< _CharT, _Traits >::narrow (char_type __c, char __dfault) const [inline]`

Squeezes characters.

**Parameters:**

`c` The character to narrow.

`dfault` The character to narrow.

**Returns:**

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

```
std::use_facet<ctype<char_type> > (getloc()).narrow(c,dfault)
```

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localizati>

Definition at line 420 of file `basic_ios.h`.

**5.374.5.19** `template<typename _CharT, typename _Traits> std::basic_ios<_CharT, _Traits >::operator void * () const` [`inline`]

The quick-and-easy status check. This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

Definition at line 111 of file `basic_ios.h`.

**5.374.5.20** `template<typename _CharT, typename _Traits> bool std::basic_ios<_CharT, _Traits >::operator! () const` [`inline`]

The quick-and-easy status check. This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

Definition at line 115 of file `basic_ios.h`.

**5.374.5.21** `streamsize std::ios_base::precision (streamsize __prec)` [`inline`, `inherited`]

Changing flags.

**Parameters:**

*prec* The new precision value.

**Returns:**

The previous value of `precision()`.

Definition at line 629 of file `ios_base.h`.

**5.374.5.22** `streamsize std::ios_base::precision () const` [`inline`, `inherited`]

Flags access.

**Returns:**

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Definition at line 620 of file `ios_base.h`.

Referenced by `std::basic_ios<_CharT, _Traits >::copyfmt()`, and `std::operator<<()`.

**5.374.5.23** `void*& std::ios_base::pword (int __ix) [inline, inherited]`

Access to void pointer [array](#).

**Parameters:**

`__ix` Index into the [array](#).

**Returns:**

A reference to a `void*` associated with the index.

The `pword` function provides access to an [array](#) of pointers that can be used for any purpose. The [array](#) grows as required to hold the supplied index. All pointers in the [array](#) are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the [array](#) can grow dynamically, it is not safe to hold onto the reference.

Definition at line 761 of file `ios_base.h`.

**5.374.5.24** `template<typename _CharT, typename _Traits> basic_streambuf<_CharT, _Traits > * std::basic_ios<_CharT, _Traits >::rdbuf (basic_streambuf<_CharT, _Traits > * __sb) [inline]`

Changing the underlying buffer.

**Parameters:**

`sb` The new stream buffer.

**Returns:**

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream foo; // or some other derived type
std::streambuf* p =;

foo.ios::rdbuf(p); // ios == basic_ios<char>
```

Definition at line 52 of file `basic_ios.tcc`.

References `std::basic_ios<_CharT, _Traits >::clear()`.

**5.374.5.25** `template<typename _CharT, typename _Traits>  
basic_streambuf<_CharT, _Traits>* std::basic_ios<_CharT,  
_Traits>::rdbuf() const [inline]`

Accessing the underlying buffer.

**Returns:**

The current stream buffer.

This does not change the state of the stream.

Reimplemented in [std::basic\\_ifstream<\\_CharT, \\_Traits>](#), [std::basic\\_ofstream<\\_CharT, \\_Traits>](#), [std::basic\\_fstream<\\_CharT, \\_Traits>](#), [std::basic\\_istream<\\_CharT, \\_Traits, \\_Alloc>](#), [std::basic\\_ostringstream<\\_CharT, \\_Traits, \\_Alloc>](#), and [std::basic\\_stringstream<\\_CharT, \\_Traits, \\_Alloc>](#).

Definition at line 311 of file `basic_ios.h`.

Referenced by [std::basic\\_ostream<\\_CharT, \\_Traits>::flush\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::get\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::getline\(\)](#), [std::getline\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::ignore\(\)](#), [std::basic\\_ios<\\_CharT, \\_Traits>::imbue\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::operator<<\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::operator>>\(\)](#), [std::operator>>\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::peek\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::put\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::putback\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::read\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::readsome\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::seekg\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::seekp\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::sync\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::tellg\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::tellp\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::unget\(\)](#), and [std::ws\(\)](#).

**5.374.5.26** `template<typename _CharT, typename _Traits> iostate  
std::basic_ios<_CharT, _Traits>::rdstate() const [inline]`

Returns the error state of the stream buffer.

**Returns:**

A bit pattern (well, isn't everything?)

See [std::ios\\_base::iostate](#) for the possible bit values. Most users will call one of the interpreting wrappers, e.g., [good\(\)](#).

Definition at line 127 of file `basic_ios.h`.

**5.374.5.27** `void std::ios_base::register_callback (event_callback __fn, int __index) [inherited]`

Add the callback `__fn` with parameter `__index`.

**Parameters:**

`__fn` The function to add.

`__index` The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

**5.374.5.28** `fmtflags std::ios_base::setf (fmtflags __fmtfl, fmtflags __mask) [inline, inherited]`

Setting new format flags.

**Parameters:**

`fmtfl` Additional flags to [set](#).

`mask` The flags mask for `fmtfl`.

**Returns:**

The previous format control flags.

This function clears `mask` in the format flags, then sets `fmtfl` & `mask`. An example mask is `ios_base::adjustfield`.

Definition at line 594 of file `ios_base.h`.

**5.374.5.29** `fmtflags std::ios_base::setf (fmtflags __fmtfl) [inline, inherited]`

Setting new format flags.

**Parameters:**

`fmtfl` Additional flags to [set](#).

**Returns:**

The previous format control flags.

This function sets additional flags in format control. Flags that were previously [set](#) remain [set](#).

Definition at line 577 of file `ios_base.h`.

Referenced by `std::boolalpha()`, `std::dec()`, `std::fixed()`, `std::hex()`, `std::internal()`, `std::left()`, `std::oct()`, `std::right()`, `std::scientific()`, `std::showbase()`, `std::showpoint()`, `std::showpos()`, `std::skipws()`, `std::unitbuf()`, and `std::uppercase()`.

**5.374.5.30** `template<typename _CharT, typename _Traits> void  
std::basic_ios<_CharT, _Traits>::setstate(iostate __state)  
[inline]`

Sets additional flags in the error state.

**Parameters:**

*state* The additional state flag(s) to [set](#).

See [std::ios\\_base::iostate](#) for the possible bit values.

Definition at line 147 of file `basic_ios.h`.

Referenced by `std::basic_ostream<_CharT, _Traits>::flush()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::basic_ostream<_CharT, _Traits>::operator<<()`, `std::basic_istream<_CharT, _Traits>::operator>>()`, `std::operator>>()`, `std::basic_istream<_CharT, _Traits>::peek()`, `std::basic_ostream<_CharT, _Traits>::put()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_istream<_CharT, _Traits>::read()`, `std::basic_istream<_CharT, _Traits>::readsome()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_ostream<_CharT, _Traits>::seekp()`, `std::basic_istream<_CharT, _Traits>::sync()`, `std::basic_istream<_CharT, _Traits>::unset()`, and `std::ws()`.

**5.374.5.31** `static bool std::ios_base::sync_with_stdio(bool __sync = true)  
[static, inherited]`

Interaction with the standard C I/O objects.

**Parameters:**

*sync* Whether to synchronize or not.

**Returns:**

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., `stdout`) and the standard C++ objects (e.g., `cout`). User-declared streams are unaffected. See <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch28s02.html>

**5.374.5.32** `template<typename _CharT, typename _Traits>  
basic_ostream<_CharT, _Traits>* std::basic_ios<_CharT, _Traits  
>::tie (basic_ostream<_CharT, _Traits > * __tistr) [inline]`

Ties this stream to an output stream.

**Parameters:**

*tistr* The output stream.

**Returns:**

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see [tie\(\)](#) for more.

Definition at line 297 of file `basic_ios.h`.

**5.374.5.33** `template<typename _CharT, typename _Traits>  
basic_ostream<_CharT, _Traits>* std::basic_ios<_CharT, _Traits  
>::tie () const [inline]`

Fetches the current *tied* stream.

**Returns:**

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Definition at line 285 of file `basic_ios.h`.

Referenced by `std::basic_ios<_CharT, _Traits >::copyfmt()`.

**5.374.5.34** `void std::ios_base::unsetf (fmtflags __mask) [inline,  
inherited]`

Clearing format flags.

**Parameters:**

*mask* The flags to unset.

This function clears *mask* in the format flags.

Definition at line 609 of file ios\_base.h.

Referenced by std::noboolalpha(), std::noshowbase(), std::noshowpoint(), std::noshowpos(), std::noskipws(), std::nounitbuf(), and std::nouppercase().

**5.374.5.35** `template<typename _CharT, typename _Traits> char_type  
std::basic_ios<_CharT, _Traits>::widen (char __c) const  
[inline]`

Widens characters.

**Parameters:**

*c* The character to widen.

**Returns:**

The widened character.

Maps a character of `char` to a character of `char_type`.

Returns the result of

```
std::use_facet<ctype<char_type> >(getloc()).widen(c)
```

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

Definition at line 439 of file basic\_ios.h.

Referenced by std::endl(), std::getline(), and std::operator>>().

**5.374.5.36** `streamsize std::ios_base::width (streamsize __wide) [inline,  
inherited]`

Changing flags.

**Parameters:**

*wide* The new width value.

**Returns:**

The previous value of `width()`.

Definition at line 652 of file ios\_base.h.

**5.374.5.37 streamsize std::ios\_base::width () const [inline, inherited]**

Flags access.

**Returns:**

The minimum field width to generate on output operations.

*Minimum field width* refers to the number of characters.

Definition at line 643 of file ios\_base.h.

Referenced by std::basic\_ios<\_CharT, \_Traits >::copyfmt(), std::num\_put<\_CharT, \_OutIter >::do\_put(), and std::operator>>().

**5.374.5.38 static int std::ios\_base::xalloc () throw () [static, inherited]**

Access to unique indices.

**Returns:**

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the `iword` and `pword` functions. The expectation is that an application calls `xalloc` in order to obtain an index in the `iword` and `pword` arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. `xalloc` is guaranteed to return an index that is safe to use in the `iword` and `pword` arrays.

## 5.374.6 Member Data Documentation

**5.374.6.1 const fmtflags std::ios\_base::adjustfield [static, inherited]**

A mask of left|right|internal. Useful for the 2-arg form of `setf`.

Definition at line 318 of file ios\_base.h.

Referenced by std::num\_put<\_CharT, \_OutIter >::do\_put().

**5.374.6.2 const openmode std::ios\_base::app [static, inherited]**

Seek to end before each write.

Definition at line 372 of file ios\_base.h.

**5.374.6.3 `const openmode std::ios_base::ate` [static, inherited]**

Open and seek to end immediately after opening.

Definition at line 375 of file `ios_base.h`.

Referenced by `std::basic_filebuf<_CharT, _Traits>::open()`.

**5.374.6.4 `const iostate std::ios_base::badbit` [static, inherited]**

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).

Definition at line 342 of file `ios_base.h`.

Referenced by `std::basic_ostream<_CharT, _Traits>::flush()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::basic_ios<_CharT, _Traits>::init()`, `std::operator<<()`, `std::basic_ostream<_CharT, _Traits>::operator<<()`, `std::operator>>()`, `std::basic_istream<_CharT, _Traits>::operator>>()`, `std::basic_istream<_CharT, _Traits>::peek()`, `std::basic_ostream<_CharT, _Traits>::put()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_istream<_CharT, _Traits>::read()`, `std::basic_istream<_CharT, _Traits>::readsome()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_ostream<_CharT, _Traits>::seekp()`, `std::basic_istream<_CharT, _Traits>::sync()`, `std::basic_istream<_CharT, _Traits>::tellg()`, `std::basic_ostream<_CharT, _Traits>::tellp()`, `std::basic_istream<_CharT, _Traits>::unset()`, and `std::basic_ostream<_CharT, _Traits>::write()`.

**5.374.6.5 `const fmtflags std::ios_base::basefield` [static, inherited]**

A mask of `dec|oct|hex`. Useful for the 2-arg form of `setf`.

Definition at line 321 of file `ios_base.h`.

Referenced by `std::num_get<_CharT, InIter>::do_get()`, and `std::basic_ostream<_CharT, _Traits>::operator<<()`.

**5.374.6.6 `const seekdir std::ios_base::beg` [static, inherited]**

Request a seek relative to the beginning of the stream.

Definition at line 404 of file `ios_base.h`.

Referenced by `std::basic_filebuf<_CharT, _Traits>::seekpos()`.

**5.374.6.7 const openmode std::ios\_base::binary [static, inherited]**

Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch27s02.html>.

Definition at line 380 of file ios\_base.h.

Referenced by std::basic\_filebuf< \_CharT, \_Traits >::showmanyc().

**5.374.6.8 const fmtflags std::ios\_base::boolalpha [static, inherited]**

Insert/extract `bool` in alphabetic rather than numeric format.

Definition at line 266 of file ios\_base.h.

Referenced by std::num\_get< \_CharT, \_InIter >::do\_get(), and std::num\_put< \_CharT, \_OutIter >::do\_put().

**5.374.6.9 const seekdir std::ios\_base::cur [static, inherited]**

Request a seek relative to the current position within the sequence.

Definition at line 407 of file ios\_base.h.

Referenced by std::basic\_filebuf< \_CharT, \_Traits >::imbue(), std::basic\_filebuf< \_CharT, \_Traits >::pbackfail(), std::basic\_stringbuf< \_CharT, \_Traits, \_Alloc >::seekoff(), std::basic\_filebuf< \_CharT, \_Traits >::seekoff(), std::basic\_istream< \_CharT, \_Traits >::tellg(), and std::basic\_ostream< \_CharT, \_Traits >::tellp().

**5.374.6.10 const fmtflags std::ios\_base::dec [static, inherited]**

Converts integer input or generates integer output in [decimal](#) base.

Definition at line 269 of file ios\_base.h.

**5.374.6.11 const seekdir std::ios\_base::end [static, inherited]**

Request a seek relative to the current end of the sequence.

Definition at line 410 of file ios\_base.h.

Referenced by std::basic\_filebuf< \_CharT, \_Traits >::open(), and std::basic\_stringbuf< \_CharT, \_Traits, \_Alloc >::seekoff().

**5.374.6.12 const iostate std::ios\_base::eofbit [static, inherited]**

Indicates that an input operation reached the end of an input sequence.

Definition at line 345 of file ios\_base.h.

Referenced by std::num\_get< \_CharT, \_InIter >::do\_get(), std::time\_get< \_CharT, \_InIter >::do\_get\_date(), std::time\_get< \_CharT, \_InIter >::do\_get\_monthname(), std::time\_get< \_CharT, \_InIter >::do\_get\_time(), std::time\_get< \_CharT, \_InIter >::do\_get\_weekday(), std::time\_get< \_CharT, \_InIter >::do\_get\_year(), std::basic\_istream< \_CharT, \_Traits >::get(), std::basic\_istream< \_CharT, \_Traits >::getline(), std::basic\_istream< \_CharT, \_Traits >::ignore(), std::operator>>(), std::basic\_istream< \_CharT, \_Traits >::operator>>(), std::basic\_istream< \_CharT, \_Traits >::peek(), std::basic\_istream< \_CharT, \_Traits >::read(), std::basic\_istream< \_CharT, \_Traits >::readsome(), and std::ws().

**5.374.6.13 const iostate std::ios\_base::failbit [static, inherited]**

Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.

Definition at line 350 of file ios\_base.h.

Referenced by std::num\_get< \_CharT, \_InIter >::do\_get(), std::time\_get< \_CharT, \_InIter >::do\_get\_date(), std::time\_get< \_CharT, \_InIter >::do\_get\_monthname(), std::time\_get< \_CharT, \_InIter >::do\_get\_time(), std::time\_get< \_CharT, \_InIter >::do\_get\_weekday(), std::time\_get< \_CharT, \_InIter >::do\_get\_year(), std::basic\_istream< \_CharT, \_Traits >::get(), std::basic\_istream< \_CharT, \_Traits >::getline(), std::basic\_ostream< \_CharT, \_Traits >::operator<<(), std::basic\_istream< \_CharT, \_Traits >::operator>>(), std::operator>>(), std::basic\_istream< \_CharT, \_Traits >::read(), std::basic\_istream< \_CharT, \_Traits >::seekg(), and std::basic\_ostream< \_CharT, \_Traits >::seekp().

**5.374.6.14 const fmtflags std::ios\_base::fixed [static, inherited]**

Generate floating-point output in fixed-point notation.

Definition at line 272 of file ios\_base.h.

**5.374.6.15 const fmtflags std::ios\_base::floatfield [static, inherited]**

A mask of scientific|fixed. Useful for the 2-arg form of setf.

Definition at line 324 of file ios\_base.h.

**5.374.6.16 const iostate std::ios\_base::goodbit [static, inherited]**

Indicates all is well.

Definition at line 353 of file ios\_base.h.

Referenced by `std::num_get<_CharT, _InIter >::do_get()`, `std::time_get<_CharT, _InIter >::do_get_monthname()`, `std::time_get<_CharT, _InIter >::do_get_weekday()`, `std::time_get<_CharT, _InIter >::do_get_year()`, `std::basic_ostream<_CharT, _Traits >::flush()`, `std::basic_istream<_CharT, _Traits >::get()`, `std::basic_istream<_CharT, _Traits >::getline()`, `std::basic_istream<_CharT, _Traits >::ignore()`, `std::basic_ios<_CharT, _Traits >::init()`, `std::basic_ostream<_CharT, _Traits >::operator<<()`, `std::operator>>()`, `std::basic_istream<_CharT, _Traits >::operator>>()`, `std::basic_istream<_CharT, _Traits >::peek()`, `std::basic_ostream<_CharT, _Traits >::put()`, `std::basic_istream<_CharT, _Traits >::putback()`, `std::basic_istream<_CharT, _Traits >::read()`, `std::basic_istream<_CharT, _Traits >::readsome()`, `std::basic_istream<_CharT, _Traits >::seekg()`, `std::basic_ostream<_CharT, _Traits >::seekp()`, `std::basic_istream<_CharT, _Traits >::sync()`, and `std::basic_istream<_CharT, _Traits >::unget()`.

**5.374.6.17 const fmtflags std::ios\_base::hex [static, inherited]**

Converts integer input or generates integer output in hexadecimal base.

Definition at line 275 of file ios\_base.h.

Referenced by `std::num_get<_CharT, _InIter >::do_get()`, `std::num_put<_CharT, _OutIter >::do_put()`, and `std::basic_ostream<_CharT, _Traits >::operator<<()`.

**5.374.6.18 const openmode std::ios\_base::in [static, inherited]**

Open for input. Default for `ifstream` and `fstream`.

Definition at line 383 of file ios\_base.h.

Referenced by `std::basic_filebuf<_CharT, _Traits >::pbackfail()`, `std::basic_istream<_CharT, _Traits >::seekg()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc >::seekoff()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc >::seekpos()`, `std::basic_filebuf<_CharT, _Traits >::showmanyc()`, `std::basic_istream<_CharT, _Traits >::tellg()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc >::underflow()`, `std::basic_filebuf<_CharT, _Traits >::underflow()`, and `std::basic_filebuf<_CharT, _Traits >::xsgetn()`.

**5.374.6.19 const fmtflags std::ios\_base::internal [static, inherited]**

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.

Definition at line 280 of file ios\_base.h.

#### 5.374.6.20 const fmtflags std::ios\_base::left [static, inherited]

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.)

Definition at line 284 of file ios\_base.h.

Referenced by std::num\_put< \_CharT, \_OutIter >::do\_put().

#### 5.374.6.21 const fmtflags std::ios\_base::oct [static, inherited]

Converts integer input or generates integer output in octal base.

Definition at line 287 of file ios\_base.h.

Referenced by std::basic\_ostream< \_CharT, \_Traits >::operator<<().

#### 5.374.6.22 const openmode std::ios\_base::out [static, inherited]

Open for output. Default for ofstream and fstream.

Definition at line 386 of file ios\_base.h.

Referenced by std::basic\_stringbuf< \_CharT, \_Traits, \_Alloc >::overflow(), std::basic\_filebuf< \_CharT, \_Traits >::overflow(), std::basic\_stringbuf< \_CharT, \_Traits, \_Alloc >::seekoff(), std::basic\_ostream< \_CharT, \_Traits >::seekp(), std::basic\_stringbuf< \_CharT, \_Traits, \_Alloc >::seekpos(), std::basic\_ostream< \_CharT, \_Traits >::tellp(), and std::basic\_filebuf< \_CharT, \_Traits >::xsputn().

#### 5.374.6.23 const fmtflags std::ios\_base::right [static, inherited]

Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.)

Definition at line 291 of file ios\_base.h.

#### 5.374.6.24 const fmtflags std::ios\_base::scientific [static, inherited]

Generates floating-point output in scientific notation.

Definition at line 294 of file ios\_base.h.

**5.374.6.25 const fmtflags std::ios\_base::showbase [static, inherited]**

Generates a prefix indicating the numeric base of generated integer output.

Definition at line 298 of file ios\_base.h.

**5.374.6.26 const fmtflags std::ios\_base::showpoint [static, inherited]**

Generates a decimal-point character unconditionally in generated floating-point output.

Definition at line 302 of file ios\_base.h.

**5.374.6.27 const fmtflags std::ios\_base::showpos [static, inherited]**

Generates a + sign in non-negative generated numeric output.

Definition at line 305 of file ios\_base.h.

**5.374.6.28 const fmtflags std::ios\_base::skipws [static, inherited]**

Skips leading white space before certain input operations.

Definition at line 308 of file ios\_base.h.

**5.374.6.29 const openmode std::ios\_base::trunc [static, inherited]**

Open for input. Default for `ofstream`.

Definition at line 389 of file ios\_base.h.

**5.374.6.30 const fmtflags std::ios\_base::unitbuf [static, inherited]**

Flushes output after each output operation.

Definition at line 311 of file ios\_base.h.

**5.374.6.31 const fmtflags std::ios\_base::uppercase [static, inherited]**

Replaces certain lowercase letters with their uppercase equivalents in generated output.

Definition at line 315 of file ios\_base.h.

Referenced by `std::num_put<_CharT, _OutIter >::do_put()`.

The documentation for this class was generated from the following files:

### Unformatted Output Functions

All the unformatted output functions have some common behavior. Each starts by constructing a temporary object of type `std::basic_ostream::sentry`. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an *exception* is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state. If `badbit` is on in the stream's exceptions mask, the *exception* will be rethrown without completing its actions.

- `void _M_write (const char_type *__s, streamsize __n)`
- `__ostream_type & put (char_type __c)`
- `__ostream_type & write (const char_type *__s, streamsize __n)`

### Unformatted Input Functions

All the unformatted input functions have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (`noskipws`) *set* to true. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

The number of characters extracted is stored for later retrieval by `gcount()`.

If an *exception* is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state without causing an `ios_base::failure` to be thrown. The original *exception* will then be rethrown.

### Arithmetic Inserters

All the `operator<<` functions (aka formatted output functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_ostream::sentry`. This can have several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an *exception* is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state without causing an `ios_base::failure` to be thrown. The original *exception* will then be rethrown.

- `__ostream_type & operator<< (__streambuf_type *__sb)`
- `__ostream_type & operator<< (const void *__p)`
- `__ostream_type & operator<< (long double __f)`
- `__ostream_type & operator<< (float __f)`

- `__ostream_type & operator<< (long __n)`

- `__ostream_type & operator<< (ios_base &(*_pf)(ios_base &))`
- `__ostream_type & operator<< (__ios_type &(*_pf)(__ios_type &))`
- `__ostream_type & operator<< (__ostream_type &(*_pf)(__ostream_type &))`

### Arithmetic Extractors

All the `operator>>` functions (aka formatted input functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (noskipws) set to false. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

If an *exception* is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state without causing an `ios_base::failure` to be thrown. The original *exception* will then be rethrown.

- `__istream_type & operator>> (__streambuf_type *__sb)`
- `__istream_type & operator>> (void *&__p)`
- `__istream_type & operator>> (long double &__f)`
- `__istream_type & operator>> (double &__f)`

### 5.375.1 Detailed Description

```
template<typename _CharT, typename _Traits> class std::basic_istream< _CharT, _Traits >
```

Merging istream and ostream capabilities.

This class multiply inherits from the input and output stream classes simply to provide a single interface.

Definition at line 769 of file istream.

### 5.375.2 Member Typedef Documentation

```
5.375.2.1 template<typename _CharT, typename _Traits> typedef
ctype<_CharT> std::basic_ostream< _CharT, _Traits
>::_ctype_type [inherited]
```

These are non-standard types.

Reimplemented from [std::basic\\_ios<\\_CharT, \\_Traits>](#).

Definition at line 71 of file ostream.

```
5.375.2.2 template<typename _CharT, typename _Traits> typedef
ctype<_CharT> std::basic_istream< _CharT, _Traits
>::_ctype_type [inherited]
```

These are non-standard types.

Reimplemented from [std::basic\\_ios<\\_CharT, \\_Traits>](#).

Definition at line 71 of file istream.

```
5.375.2.3 template<typename _CharT, typename _Traits> typedef
num_get<_CharT, istreambuf_iterator<_CharT, _Traits>
> std::basic_istream< _CharT, _Traits >::_num_get_type
[inherited]
```

These are non-standard types.

Reimplemented from [std::basic\\_ios<\\_CharT, \\_Traits>](#).

Definition at line 70 of file istream.

**5.375.2.4** `template<typename _CharT, typename _Traits> typedef num_put<_CharT, ostreambuf_iterator<_CharT, _Traits> > std::basic_ostream<_CharT, _Traits >::__num_put_type`  
**[inherited]**

The quick-and-easy status check. This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

Reimplemented from [std::basic\\_ios<\\_CharT, \\_Traits >](#).

Definition at line 70 of file `ostream`.

**5.375.2.5** `template<typename _CharT, typename _Traits> typedef num_put<_CharT, ostreambuf_iterator<_CharT, _Traits> > std::basic_ios<_CharT, _Traits >::__num_put_type`  
**[inherited]**

The quick-and-easy status check. This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

Reimplemented in [std::basic\\_ostream<\\_CharT, \\_Traits >](#), [std::basic\\_ostream<char, \\_Traits >](#), and [std::basic\\_ostream<char >](#).

Definition at line 84 of file `basic_ios.h`.

**5.375.2.6** `template<typename _CharT, typename _Traits> typedef _CharT std::basic_iostream<_CharT, _Traits >::char_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic\\_istream<\\_CharT, \\_Traits >](#).

Reimplemented in [std::basic\\_fstream<\\_CharT, \\_Traits >](#), and [std::basic\\_stringstream<\\_CharT, \\_Traits, \\_Alloc >](#).

Definition at line 777 of file `istream`.

**5.375.2.7** `typedef void(* std::ios_base::event_callback)(event, ios_base &, int)`  
**[inherited]**

The type of an event callback function.

**Parameters:**

*event* One of the members of the event enum.

*ios\_base* Reference to the `ios_base` object.

*int* The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several [ios\\_base](#) and [basic\\_ios](#) functions, specifically [imbue\(\)](#), [copyfmt\(\)](#), and [~ios\(\)](#).

Definition at line 444 of file [ios\\_base.h](#).

### **5.375.2.8 typedef \_Ios\_Fmtflags std::ios\_base::fmtflags [inherited]**

This is a bitmask type. *\_Ios\_Fmtflags* is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `fmtflags` are:

- `boolalpha`
- `dec`
- `fixed`
- `hex`
- `internal`
- `left`
- `oct`
- `right`
- `scientific`
- `showbase`
- `showpoint`
- `showpos`
- `skipws`
- `unitbuf`
- `uppercase`
- `adjustfield`
- `basefield`
- `floatfield`

Definition at line 263 of file [ios\\_base.h](#).

**5.375.2.9** `template<typename _CharT, typename _Traits> typedef  
_Traits::int_type std::basic_istream< _CharT, _Traits >::int_type`

These are non-standard types.

Reimplemented from [std::basic\\_istream< \\_CharT, \\_Traits >](#).

Reimplemented in [std::basic\\_fstream< \\_CharT, \\_Traits >](#), and [std::basic\\_stringstream< \\_CharT, \\_Traits, \\_Alloc >](#).

Definition at line 778 of file `istream`.

**5.375.2.10** `typedef _Ios_Iostate std::ios_base::iostate [inherited]`

This is a bitmask type. `_Ios_Iostate` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `iostate` are:

- `badbit`
- `eofbit`
- `failbit`
- `goodbit`

Definition at line 338 of file `ios_base.h`.

**5.375.2.11** `template<typename _CharT, typename _Traits> typedef  
_Traits::off_type std::basic_istream< _CharT, _Traits >::off_type`

These are non-standard types.

Reimplemented from [std::basic\\_istream< \\_CharT, \\_Traits >](#).

Reimplemented in [std::basic\\_fstream< \\_CharT, \\_Traits >](#), and [std::basic\\_stringstream< \\_CharT, \\_Traits, \\_Alloc >](#).

Definition at line 780 of file `istream`.

**5.375.2.12** `typedef _Ios_Openmode std::ios_base::openmode [inherited]`

This is a bitmask type. `_Ios_Openmode` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `openmode` are:

- `app`

- `ate`
- `binary`
- `in`
- `out`
- `trunc`

Definition at line 369 of file `ios_base.h`.

**5.375.2.13** `template<typename _CharT, typename _Traits> typedef`  
`_Traits::pos_type std::basic_iostream< _CharT, _Traits`  
`>::pos_type`

These are non-standard types.

Reimplemented from `std::basic_istream< _CharT, _Traits >`.

Reimplemented in `std::basic_fstream< _CharT, _Traits >`, and `std::basic_stringstream< _CharT, _Traits, _Alloc >`.

Definition at line 779 of file `istream`.

**5.375.2.14** `typedef _Ios_Seekdir std::ios_base::seekdir [inherited]`

This is an enumerated type. `_Ios_Seekdir` is implementation-defined. Defined values of type `seekdir` are:

- `beg`
- `cur`, equivalent to `SEEK_CUR` in the C standard library.
- `end`, equivalent to `SEEK_END` in the C standard library.

Definition at line 401 of file `ios_base.h`.

**5.375.2.15** `template<typename _CharT, typename _Traits> typedef _Traits`  
`std::basic_iostream< _CharT, _Traits >::traits_type`

These are non-standard types.

Reimplemented from `std::basic_istream< _CharT, _Traits >`.

Reimplemented in `std::basic_fstream< _CharT, _Traits >`, and `std::basic_stringstream< _CharT, _Traits, _Alloc >`.

Definition at line 781 of file `istream`.

### 5.375.3 Member Enumeration Documentation

#### 5.375.3.1 enum `std::ios_base::event` `[inherited]`

The [set](#) of events that may be passed to an event callback. `erase_event` is used during `~ios()` and `copyfmt()`. `imbue_event` is used during [imbue\(\)](#). `copyfmt_event` is used during `copyfmt()`.

Definition at line 427 of file `ios_base.h`.

### 5.375.4 Constructor & Destructor Documentation

#### 5.375.4.1 `template<typename _CharT, typename _Traits> std::basic_ostream<_CharT, _Traits>::basic_ostream (basic_streambuf<_CharT, _Traits> * __sb) [inline, explicit]`

Constructor does nothing. Both of the parent classes are initialized with the same `streambuf` pointer passed to this constructor.

Definition at line 794 of file `istream`.

#### 5.375.4.2 `template<typename _CharT, typename _Traits> virtual std::basic_ostream<_CharT, _Traits>::~~basic_ostream () [inline, virtual]`

Destructor does nothing.

Definition at line 801 of file `istream`.

### 5.375.5 Member Function Documentation

#### 5.375.5.1 `const locale& std::ios_base::_M_getloc () const [inline, inherited]`

Locale access.

#### Returns:

A reference to the current [locale](#).

Like `getloc` above, but returns a reference instead of generating a copy.

Definition at line 705 of file `ios_base.h`.

Referenced by `std::money_get<_CharT, _InIter>::do_get()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::time_get<_CharT, _InIter>::do_get_date()`, `std::time_get<`

\_CharT, \_InIter >::do\_get\_monthname(), std::time\_get< \_CharT, \_InIter >::do\_get\_time(), std::time\_get< \_CharT, \_InIter >::do\_get\_weekday(), std::time\_get< \_CharT, \_InIter >::do\_get\_year(), std::time\_put< \_CharT, \_OutIter >::do\_put(), std::num\_put< \_CharT, \_OutIter >::do\_put(), and std::time\_put< \_CharT, \_OutIter >::put().

**5.375.5.2** `template<typename _CharT, typename _Traits> void  
std::basic_ostream< _CharT, _Traits >::_M_write (const char_type  
* __s, streamsize __n) [inline, inherited]`

Simple insertion.

**Parameters:**

*c* The character to insert.

**Returns:**

\*this

Tries to insert *c*.

**Note:**

This function is not overloaded on signed char and unsigned char.

Definition at line 287 of file ostream.

Referenced by std::basic\_ostream< \_CharT, \_Traits >::write().

**5.375.5.3** `template<typename _CharT, typename _Traits> bool std::basic_ios<  
_CharT, _Traits >::bad () const [inline, inherited]`

Fast error checking.

**Returns:**

True if the badbit is [set](#).

Note that other iostate flags may also be [set](#).

Definition at line 201 of file basic\_ios.h.

**5.375.5.4** `template<typename _CharT, typename _Traits > void  
std::basic_ios< _CharT, _Traits >::clear (iostate __state = goodbit)  
[inline, inherited]`

[Re]sets the error state.

**Parameters:**

*state* The new state flag(s) to [set](#).

See [std::ios\\_base::iostate](#) for the possible bit values. Most users will not need to pass an argument.

Definition at line 40 of file `basic_ios.tcc`.

Referenced by `std::basic_ios<_CharT, _Traits>::rdbuf()`.

**5.375.5.5** `template<typename _CharT, typename _Traits> basic_ios<_CharT, _Traits> & std::basic_ios<_CharT, _Traits>::copyfmt(const basic_ios<_CharT, _Traits> & __rhs) [inline, inherited]`

Copies fields of `__rhs` into this.

**Parameters:**

*\_\_rhs* The source values for the copies.

**Returns:**

Reference to this object.

All fields of `__rhs` are copied into this object except that `rdbuf()` and `rdstate()` remain unchanged. All values in the `pword` and `iword` arrays are copied. Before copying, each callback is invoked with `erase_event`. After copying, each (new) callback is invoked with `copyfmt_event`. The final step is to copy [exceptions\(\)](#).

Definition at line 62 of file `basic_ios.tcc`.

References `std::basic_ios<_CharT, _Traits>::exceptions()`, `std::basic_ios<_CharT, _Traits>::fill()`, `std::ios_base::flags()`, `std::ios_base::getloc()`, `std::ios_base::precision()`, `std::basic_ios<_CharT, _Traits>::tie()`, and `std::ios_base::width()`.

**5.375.5.6** `template<typename _CharT, typename _Traits> bool std::basic_ios<_CharT, _Traits>::eof() const [inline, inherited]`

Fast error checking.

**Returns:**

True if the eofbit is [set](#).

Note that other `iostate` flags may also be [set](#).

Definition at line 180 of file `basic_ios.h`.

## 5.375 std::basic\_istream<\_CharT, \_Traits> Class Template Reference 1849

Referenced by `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::basic_istream<_CharT, _Traits>::peek()`, `std::basic_istream<_CharT, _Traits>::putback()`, and `std::basic_istream<_CharT, _Traits>::unget()`.

### 5.375.5.7 `template<typename _CharT, typename _Traits> void std::basic_ios<_CharT, _Traits>::exceptions (iostate __except) [inline, inherited]`

Throwing exceptions on errors.

#### Parameters:

*except* The new exceptions mask.

By default, error flags are [set](#) silently. You can [set](#) an exceptions mask for each stream; if a bit in the mask becomes [set](#) in the error flags, then an [exception](#) of type `std::ios_base::failure` is thrown.

If the error flag is already [set](#) when the exceptions mask is added, the [exception](#) is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>

int main()
{
 std::set_terminate (__gnu_cxx::__verbose_terminate_handler);

 std::ifstream f ("/etc/motd");

 std::cerr << "Setting badbit\n";
 f.setstate (std::ios_base::badbit);

 std::cerr << "Setting exception mask\n";
 f.exceptions (std::ios_base::badbit);
}
```

Definition at line 247 of file `basic_ios.h`.

### 5.375.5.8 `template<typename _CharT, typename _Traits> iostate std::basic_ios<_CharT, _Traits>::exceptions () const [inline, inherited]`

Throwing exceptions on errors.

#### Returns:

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of [exceptions\(iostate\)](#) for the meaning of the return value.

Definition at line 212 of file `basic_ios.h`.

Referenced by `std::basic_ios<_CharT, _Traits >::copyfmt()`.

#### 5.375.5.9 `template<typename _CharT, typename _Traits> bool std::basic_ios<_CharT, _Traits >::fail () const [inline, inherited]`

Fast error checking.

##### Returns:

True if either the badbit or the failbit is [set](#).

Checking the badbit in [fail\(\)](#) is historical practice. Note that other iostate flags may also be [set](#).

Definition at line 191 of file `basic_ios.h`.

Referenced by `std::basic_istream<_CharT, _Traits >::seekg()`, `std::basic_ostream<_CharT, _Traits >::seekp()`, `std::basic_istream<_CharT, _Traits >::tellg()`, `std::basic_ostream<_CharT, _Traits >::tellp()`, and `std::regex_traits<_Ch_type >::value()`.

#### 5.375.5.10 `template<typename _CharT, typename _Traits> char_type std::basic_ios<_CharT, _Traits >::fill (char_type __ch) [inline, inherited]`

Sets a new *empty* character.

##### Parameters:

*ch* The new character.

##### Returns:

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via `setw`), Q characters are actually used, and Q<P. It defaults to a space ( ' ') in the current [locale](#).

Definition at line 380 of file `basic_ios.h`.

### 5.375.5.11 `template<typename _CharT, typename _Traits> char_type std::basic_ios<_CharT, _Traits>::fill() const` [`inline`, `inherited`]

Retrieves the *empty* character.

#### Returns:

The current fill character.

It defaults to a space ( ' ') in the current [locale](#).

Definition at line 360 of file `basic_ios.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`.

### 5.375.5.12 `fmtflags std::ios_base::flags(fmtflags __fmtfl)` [`inline`, `inherited`]

Setting new format flags all at once.

#### Parameters:

*fmtfl* The new flags to [set](#).

#### Returns:

The previous format control flags.

This function overwrites all the format flags with *fmtfl*.

Definition at line 561 of file `ios_base.h`.

### 5.375.5.13 `fmtflags std::ios_base::flags() const` [`inline`, `inherited`]

Access to format flags.

#### Returns:

The format control flags for both input and output.

Definition at line 550 of file `ios_base.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::num_put<_CharT, _OutIter>::do_put()`, `std::basic_ostream<_CharT, _Traits>::operator<<()`, `std::operator<<()`, and `std::operator>>()`.

**5.375.5.14** `template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::flush() [inline, inherited]`

Synchronizing the stream buffer.

**Returns:**

\*this

If `rdbuf()` is a null pointer, changes nothing.

Otherwise, calls `rdbuf() ->pubsync()`, and if that returns -1, sets badbit.

Definition at line 211 of file ostream.tcc.

References `std::ios_base::badbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

Referenced by `std::flush()`.

**5.375.5.15** `template<typename _CharT, typename _Traits> streamsize std::basic_istream<_CharT, _Traits>::gcount() const [inline, inherited]`

Character counting.

**Returns:**

The number of characters extracted by the previous unformatted input function dispatched for this stream.

Definition at line 249 of file istream.

**5.375.5.16** `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream<_CharT, _Traits>::get(__streambuf_type & __sb) [inline, inherited]`

Extraction into another streambuf.

**Parameters:**

*sb* A streambuf in which to store data.

**Returns:**

\*this

Returns `get(sb, widen('\n'))`.

Definition at line 366 of file istream.

**5.375.5.17** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::get(_streambuf_type & __sb, char_type __delim) [inline, inherited]`

Extraction into another streambuf.

**Parameters:**

*sb* A streambuf in which to store data.

*delim* A "stop" character.

**Returns:**

\*this

Characters are extracted and inserted into *sb* until one of the following happens:

- the input sequence reaches EOF
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted)
- the next character equals *delim* (in this case, the character is not extracted)
- an [exception](#) occurs (and in this case is caught)

If no characters are stored, failbit is [set](#) in the stream's error state.

Definition at line 356 of file istream.tcc.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_ios<_CharT, _Traits>::setstate()`, `std::basic_streambuf<_CharT, _Traits>::sgetc()`, `std::basic_streambuf<_CharT, _Traits>::snextc()`, and `std::basic_streambuf<_CharT, _Traits>::putc()`.

**5.375.5.18** `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream<_CharT, _Traits>::get(char_type * __s, streamsize __n) [inline, inherited]`

Simple multiple-character extraction.

**Parameters:**

*s* Pointer to an [array](#).

*n* Maximum number of characters to store in *s*.

**Returns:**

\*this

Returns `get(s,n,widen('\n'))`.

Definition at line 333 of file istream.

**5.375.5.19** `template<typename _CharT, typename _Traits > basic_istream<_CharT, _Traits > & std::basic_istream<_CharT, _Traits >::get(char_type * __s, streamsize __n, char_type __delim) [inline, inherited]`

Simple multiple-character extraction.

**Parameters:**

*s* Pointer to an [array](#).

*n* Maximum number of characters to store in *s*.

*delim* A "stop" character.

**Returns:**

\*this

Characters are extracted and stored into *s* until one of the following happens:

- *n*-1 characters are stored
- the input sequence reaches EOF
- the next character equals *delim*, in which case the character is not extracted

If no characters are stored, failbit is [set](#) in the stream's error state.

In any case, a null character is stored into the next location in the [array](#).

**Note:**

This function is not overloaded on signed char and unsigned char.

Definition at line 309 of file istream.tcc.

References `std::basic_istream<_CharT, _Traits >::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits >::eof()`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits >::rdbuf()`, `std::basic_ios<_CharT, _Traits >::setstate()`, `std::basic_streambuf<_CharT, _Traits >::sgetc()`, and `std::basic_streambuf<_CharT, _Traits >::snextc()`.

**5.375.5.20** `template<typename _CharT, typename _Traits > basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (char_type & __c) [inline, inherited]`

Simple extraction.

**Parameters:**

*c* The character in which to store data.

**Returns:**

\*this

Tries to extract a character and store it in *c*. If none are available, sets failbit and returns traits::eof().

**Note:**

This function is not overloaded on signed char and unsigned char.

Definition at line 272 of file istream.tcc.

References std::basic\_istream< \_CharT, \_Traits >::\_M\_gcount, std::ios\_base::badbit, std::ios\_base::eofbit, std::ios\_base::failbit, std::ios\_base::goodbit, std::basic\_ios< \_CharT, \_Traits >::rdbuf(), and std::basic\_ios< \_CharT, \_Traits >::setstate().

**5.375.5.21** `template<typename _CharT, typename _Traits > basic_istream< _CharT, _Traits >::int_type std::basic_istream< _CharT, _Traits >::get (void) [inline, inherited]`

Simple extraction.

**Returns:**

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().

Definition at line 236 of file istream.tcc.

References std::basic\_istream< \_CharT, \_Traits >::\_M\_gcount, std::ios\_base::badbit, std::basic\_ios< \_CharT, \_Traits >::eof(), std::ios\_base::eofbit, std::ios\_base::failbit, std::ios\_base::goodbit, std::basic\_ios< \_CharT, \_Traits >::rdbuf(), and std::basic\_ios< \_CharT, \_Traits >::setstate().

**5.375.5.22** `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::getline (char_type * __s, streamsize __n) [inline, inherited]`

String extraction.

**Parameters:**

- s* A character [array](#) in which to store the data.
- n* Maximum number of characters to extract.

**Returns:**

\*this

Returns `getline(s,n,widen('\n'))`.

Definition at line 406 of file `istream`.

Referenced by `std::basic_istream< char >::getline()`.

**5.375.5.23** `template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::getline (char_type * __s, streamsize __n, char_type __delim) [inline, inherited]`

String extraction.

**Parameters:**

- s* A character [array](#) in which to store the data.
- n* Maximum number of characters to extract.
- delim* A "stop" character.

**Returns:**

\*this

Extracts and stores characters into *s* until one of the following happens. Note that these criteria are required to be tested in the order listed here, to allow an input line to exactly fill the *s* [array](#) without setting failbit.

1. the input sequence reaches end-of-file, in which case eofbit is [set](#) in the stream error state
2. the next character equals *delim*, in which case the character is extracted (and therefore counted in `gcount()`) but not stored

3.  $n-1$  characters are stored, in which case failbit is [set](#) in the stream error state

If no characters are extracted, failbit is [set](#). (An empty line of input should therefore not cause failbit to be [set](#).)

In any case, a null character is stored in the next location in the [array](#).

Definition at line 400 of file istream.tcc.

#### 5.375.5.24 locale std::ios\_base::getloc() const [inline, inherited]

Locale access.

##### Returns:

A copy of the current [locale](#).

If imbue(*loc*) has previously been called, then this function returns *loc*. Otherwise, it returns a copy of `std::locale()`, the global C++ [locale](#).

Definition at line 694 of file ios\_base.h.

Referenced by std::basic\_ios<\_CharT, \_Traits>::copyfmt(), std::money\_put<\_CharT, \_OutIter>::do\_put(), std::basic\_ios<\_CharT, \_Traits>::imbue(), std::operator>>(), and std::ws().

#### 5.375.5.25 template<typename \_CharT, typename \_Traits> bool std::basic\_ios<\_CharT, \_Traits>::good() const [inline, inherited]

Fast error checking.

##### Returns:

True if no error flags are [set](#).

A wrapper around rdstate.

Definition at line 170 of file basic\_ios.h.

**5.375.5.26** `template<typename _CharT, typename _Traits > basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (streamsize __n, int_type __delim) [inline, inherited]`

Extraction into another streambuf.

**Parameters:**

*sb* A streambuf in which to store data.

**Returns:**

\*this

Returns `get(sb,widen('\n'))`.

Definition at line 555 of file istream.tcc.

References `std::basic_istream< _CharT, _Traits >::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::eof()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, `std::basic_streambuf< _CharT, _Traits >::sbumpc()`, `std::basic_ios< _CharT, _Traits >::setstate()`, `std::basic_streambuf< _CharT, _Traits >::sgetc()`, and `std::basic_streambuf< _CharT, _Traits >::snextc()`.

**5.375.5.27** `template<typename _CharT, typename _Traits > basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (streamsize __n) [inline, inherited]`

Extraction into another streambuf.

**Parameters:**

*sb* A streambuf in which to store data.

**Returns:**

\*this

Returns `get(sb,widen('\n'))`.

Definition at line 493 of file istream.tcc.

References `std::basic_istream< _CharT, _Traits >::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::eof()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, `std::basic_ios< _CharT, _Traits >::setstate()`, `std::basic_streambuf< _CharT, _Traits >::sgetc()`, and `std::basic_streambuf< _CharT, _Traits >::snextc()`.

**5.375.5.28** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::ignore(void) [inline, inherited]`

Discarding characters.

**Parameters:**

*n* Number of characters to discard.

*delim* A "stop" character.

**Returns:**

\*this

Extracts characters and throws them away until one of the following happens:

- if  $n \neq \text{std::numeric\_limits}<\text{int}>::\text{max}()$ ,  $n$  characters are extracted
- the input sequence reaches end-of-file
- the next character equals *delim* (in this case, the character is extracted); note that this condition will never occur if *delim* equals `traits::eof()`.

NB: Provide three overloads, instead of the single function (with defaults) mandated by the Standard: this leads to a better performing implementation, while still conforming to the Standard.

Definition at line 460 of file istream.tcc.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_streambuf<_CharT, _Traits>::sbumpc()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.375.5.29** `template<typename _CharT, typename _Traits> locale std::basic_ios<_CharT, _Traits>::imbue(const locale & __loc) [inline, inherited]`

Moves to a new [locale](#).

**Parameters:**

*loc* The new [locale](#).

**Returns:**

The previous [locale](#).

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localizati>

Reimplemented from [std::ios\\_base](#).

Definition at line 113 of file `basic_ios.tcc`.

References `std::ios_base::getloc()`, and `std::basic_ios<_CharT, _Traits>::rdbuf()`.

Referenced by `std::operator<<()`.

**5.375.5.30** `template<typename _CharT, typename _Traits> void  
std::basic_ios<_CharT, _Traits>::init(basic_streambuf<_CharT,  
_Traits> * __sb) [inline, protected, inherited]`

All setup is performed here. This is called from the public constructor. It is not virtual and cannot be redefined.

Definition at line 125 of file `basic_ios.tcc`.

References `std::ios_base::badbit`, and `std::ios_base::goodbit`.

**5.375.5.31** `long& std::ios_base::iword(int __ix) [inline, inherited]`

Access to integer [array](#).

**Parameters:**

`__ix` Index into the [array](#).

**Returns:**

A reference to an integer associated with the index.

The `iword` function provides access to an [array](#) of integers that can be used for any purpose. The [array](#) grows as required to hold the supplied index. All integers in the [array](#) are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the [array](#) can grow dynamically, it is not safe to hold onto the reference.

Definition at line 740 of file `ios_base.h`.

**5.375.5.32** `template<typename _CharT, typename _Traits> char  
std::basic_ios<_CharT, _Traits>::narrow(char_type __c, char  
__dfault) const [inline, inherited]`

Squeezes characters.

**Parameters:**

*c* The character to narrow.

*dfault* The character to narrow.

**Returns:**

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).narrow(c, dfault)
```

Additional 110n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

Definition at line 420 of file `basic_ios.h`.

**5.375.5.33** `template<typename _CharT, typename _Traits> std::basic_ios<  
_CharT, _Traits>::operator void * () const [inline,  
inherited]`

The quick-and-easy status check. This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

Definition at line 111 of file `basic_ios.h`.

**5.375.5.34** `template<typename _CharT, typename _Traits> bool  
std::basic_ios<_CharT, _Traits>::operator! () const [inline,  
inherited]`

The quick-and-easy status check. This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

Definition at line 115 of file `basic_ios.h`.

**5.375.5.35** `template<typename _CharT, typename _Traits > basic_ostream<_CharT, _Traits > & std::basic_ostream<_CharT, _Traits >::operator<< (_streambuf_type * __sb) [inline, inherited]`

Extracting from another streambuf.

**Parameters:**

*sb* A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a [sentry](#) object and has the same error handling behavior.

If *sb* is NULL, the stream will [set](#) failbit in its error state.

Characters are extracted from *sb* and inserted into \*this until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted), or
- an [exception](#) occurs while getting a character from *sb*, which sets failbit in the error state

If the function inserts no characters, failbit is [set](#).

Definition at line 120 of file ostream.tcc.

**5.375.5.68** `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::operator>> (__istream_type &(*)(__istream_type &) __pf) [inline, inherited]`

Interface for manipulators. Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `iomanip` header.

Definition at line 120 of file istream.

**5.375.5.69** `template<typename _CharT, typename _Traits > basic_istream< _CharT, _Traits >::int_type std::basic_istream< _CharT, _Traits >::peek(void) [inline, inherited]`

Looking ahead in the stream.

**Returns:**

The next character, or `eof()`.

If, after constructing the `sentry` object, `good()` is false, returns `traits::eof()`. Otherwise reads but does not extract the next input character.

Definition at line 620 of file istream.tcc.

References `std::basic_istream< _CharT, _Traits >::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::eof()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

**5.375.5.70** `streamsize std::ios_base::precision (streamsize __prec) [inline, inherited]`

Changing flags.

**Parameters:**

*prec* The new precision value.

**Returns:**

The previous value of `precision()`.

Definition at line 629 of file ios\_base.h.

**5.375.5.71** streamsize std::ios\_base::precision () const [inline, inherited]

Flags access.

**Returns:**

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Definition at line 620 of file ios\_base.h.

Referenced by std::basic\_ios<\_CharT, \_Traits>::copyfmt(), and std::operator<<().

**5.375.5.72** template<typename \_CharT, typename \_Traits> basic\_ostream<\_CharT, \_Traits> & std::basic\_ostream<\_CharT, \_Traits>::put(char\_type \_\_c) [inline, inherited]

Simple insertion.

**Parameters:**

*c* The character to insert.

**Returns:**

\*this

Tries to insert *c*.

**Note:**

This function is not overloaded on signed char and unsigned char.

Definition at line 149 of file ostream.tcc.

References std::ios\_base::badbit, std::ios\_base::goodbit, std::basic\_ios<\_CharT, \_Traits>::rdbuf(), and std::basic\_ios<\_CharT, \_Traits>::setstate().

Referenced by std::endl(), and std::ends().

**5.375.5.73** template<typename \_CharT, typename \_Traits> basic\_istream<\_CharT, \_Traits> & std::basic\_istream<\_CharT, \_Traits>::putback(char\_type \_\_c) [inline, inherited]

Unextracting a single character.

**Parameters:**

*c* The character to push back into the input stream.

**Returns:**

\*this

If `rdbuf()` is not null, calls `rdbuf()->sputbackc(c)`.

If `rdbuf()` is null or if `sputbackc()` fails, sets `badbit` in the error state.

**Note:**

Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

Definition at line 711 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_ios<_CharT, _Traits>::setstate()`, and `std::basic_streambuf<_CharT, _Traits>::sputbackc()`.

Referenced by `std::operator>>()`.

**5.375.5.74 void\*& std::ios\_base::pword(int \_\_ix) [inline, inherited]**

Access to void pointer `array`.

**Parameters:**

`__ix` Index into the `array`.

**Returns:**

A reference to a `void*` associated with the index.

The `pword` function provides access to an `array` of pointers that can be used for any purpose. The `array` grows as required to hold the supplied index. All pointers in the `array` are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the `array` can grow dynamically, it is not safe to hold onto the reference.

Definition at line 761 of file `ios_base.h`.

**5.375.5.75** `template<typename _CharT, typename _Traits> basic_streambuf<_CharT, _Traits> * std::basic_ios<_CharT, _Traits>::rdbuf(basic_streambuf<_CharT, _Traits> * __sb) [inline, inherited]`

Changing the underlying buffer.

**Parameters:**

*sb* The new stream buffer.

**Returns:**

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream foo; // or some other derived type
std::streambuf* p =;

foo.ios::rdbuf(p); // ios == basic_ios<char>
```

Definition at line 52 of file `basic_ios.tcc`.

References `std::basic_ios<_CharT, _Traits>::clear()`.

**5.375.5.76** `template<typename _CharT, typename _Traits> basic_streambuf<_CharT, _Traits>* std::basic_ios<_CharT, _Traits>::rdbuf() const [inline, inherited]`

Accessing the underlying buffer.

**Returns:**

The current stream buffer.

This does not change the state of the stream.

Reimplemented in `std::basic_ifstream<_CharT, _Traits>`, `std::basic_ofstream<_CharT, _Traits>`, `std::basic_fstream<_CharT, _Traits>`, `std::basic_istreamstream<_CharT, _Traits, _Alloc>`, `std::basic_ostringstream<_CharT, _Traits, _Alloc>`, and `std::basic_stringstream<_CharT, _Traits, _Alloc>`.

Definition at line 311 of file `basic_ios.h`.

Referenced by `std::basic_ostream<_CharT, _Traits>::flush()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::basic_ios<_CharT, _Traits>::imbue()`, `std::basic_ostream<_CharT, _Traits>::operator<<()`, `std::basic_istream<_CharT, _Traits>::operator>>()`, `std::operator>>()`, `std::basic_istream<_CharT, _Traits>::peek()`, `std::basic_ostream<_CharT, _Traits>::put()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_istream<_CharT, _Traits>::read()`, `std::basic_istream<_CharT, _Traits>::readsome()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_ostream<_CharT, _Traits>::seekp()`, `std::basic_istream<_CharT, _Traits>::sync()`, `std::basic_istream<_CharT, _Traits>::tellg()`, `std::basic_ostream<_CharT, _Traits>::tellp()`, `std::basic_istream<_CharT, _Traits>::unget()`, and `std::ws()`.

**5.375.5.77** `template<typename _CharT, typename _Traits> iostate  
std::basic_ios<_CharT, _Traits>::rdstate () const [inline,  
inherited]`

Returns the error state of the stream buffer.

**Returns:**

A bit pattern (well, isn't everything?)

See `std::ios_base::iostate` for the possible bit values. Most users will call one of the interpreting wrappers, e.g., `good()`.

Definition at line 127 of file `basic_ios.h`.

**5.375.5.78** `template<typename _CharT, typename _Traits> basic_istream<  
_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::read  
(char_type * __s, streamsize __n) [inline, inherited]`

Extraction without delimiters.

**Parameters:**

*s* A character [array](#).

*n* Maximum number of characters to store.

**Returns:**

\*this

If the stream state is `good()`, extracts characters and stores them into *s* until one of the following happens:

- *n* characters are stored

- the input sequence reaches end-of-file, in which case the error state is `set` to `failbit|eofbit`.

**Note:**

This function is not overloaded on signed char and unsigned char.

Definition at line 650 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_istream<_CharT, _Traits>::rdbuf()`, and `std::basic_istream<_CharT, _Traits>::setstate()`.

**5.375.5.79** `template<typename _CharT, typename _Traits> streamsize`  
`std::basic_istream<_CharT, _Traits>::readsome(char_type * __s,`  
`streamsize __n) [inline, inherited]`

Extraction until the buffer is exhausted, but no more.

**Parameters:**

- s* A character `array`.
- n* Maximum number of characters to store.

**Returns:**

The number of characters extracted.

Extracts characters and stores them into *s* depending on the number of characters remaining in the streambuf's buffer, `rdbuf() -> in_avail()`, called *A* here:

- if *A* == -1, sets `eofbit` and extracts no characters
- if *A* == 0, extracts no characters
- if *A* > 0, extracts `min(A, n)`

The goal is to empty the current buffer, and to not request any more from the external input sequence controlled by the streambuf.

Definition at line 679 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::min()`, `std::basic_istream<_CharT, _Traits>::rdbuf()`, and `std::basic_istream<_CharT, _Traits>::setstate()`.

**5.375.5.80** `void std::ios_base::register_callback (event_callback __fn, int __index) [inherited]`

Add the callback `__fn` with parameter `__index`.

**Parameters:**

`__fn` The function to add.

`__index` The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

**5.375.5.81** `template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::seekg (off_type __off, ios_base::seekdir __dir) [inline, inherited]`

Changing the current read position.

**Parameters:**

`off` A file offset object.

`dir` The direction in which to seek.

**Returns:**

`*this`

If `fail()` is not true, calls `rdbuf() -> pubseekoff(off, dir)`. If that function fails, sets failbit.

**Note:**

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 870 of file `istream.tcc`.

References `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::fail()`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::ios_base::in`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

**5.375.5.82** `template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::seekg (pos_type __pos) [inline, inherited]`

Changing the current read position.

**Parameters:**

*pos* A file position object.

**Returns:**

\*this

If `fail()` is not true, calls `rdbuf()->pubseekpos(pos)`. If that function fails, sets failbit.

**Note:**

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 837 of file `istream.tcc`.

References `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::ios_base::in`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.375.5.83** `template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::seekp(off_type __off, ios_base::seekdir __dir)` [`inline`, `inherited`]

Changing the current write position.

**Parameters:**

*off* A file offset object.

*dir* The direction in which to seek.

**Returns:**

\*this

If `fail()` is not true, calls `rdbuf()->pubseekoff(off, dir)`. If that function fails, sets failbit.

Definition at line 290 of file `ostream.tcc`.

References `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::ios_base::out`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.375.5.84** `template<typename _CharT, typename _Traits > basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::seekp (pos_type __pos) [inline, inherited]`

Changing the current write position.

**Parameters:**

*pos* A file position object.

**Returns:**

\*this

If `fail()` is not true, calls `rdbuf() ->pubseekpos(pos)`. If that function fails, sets failbit.

Definition at line 258 of file ostream.tcc.

References `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::fail()`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::ios_base::out`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

**5.375.5.85** `fmtflags std::ios_base::setf (fmtflags __fmtfl, fmtflags __mask) [inline, inherited]`

Setting new format flags.

**Parameters:**

*fmtfl* Additional flags to `set`.

*mask* The flags mask for *fmtfl*.

**Returns:**

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* & *mask*. An example mask is `ios_base::adjustfield`.

Definition at line 594 of file ios\_base.h.

**5.375.5.86** `fmtflags std::ios_base::setf (fmtflags __fmtfl) [inline, inherited]`

Setting new format flags.

**Parameters:**

*fmtfl* Additional flags to [set](#).

**Returns:**

The previous format control flags.

This function sets additional flags in format control. Flags that were previously [set](#) remain [set](#).

Definition at line 577 of file ios\_base.h.

Referenced by [std::boolalpha\(\)](#), [std::dec\(\)](#), [std::fixed\(\)](#), [std::hex\(\)](#), [std::internal\(\)](#), [std::left\(\)](#), [std::oct\(\)](#), [std::right\(\)](#), [std::scientific\(\)](#), [std::showbase\(\)](#), [std::showpoint\(\)](#), [std::showpos\(\)](#), [std::skipws\(\)](#), [std::unitbuf\(\)](#), and [std::uppercase\(\)](#).

**5.375.5.87** `template<typename _CharT, typename _Traits> void  
std::basic_ios< _CharT, _Traits >::setstate (iostate __state)  
[inline, inherited]`

Sets additional flags in the error state.

**Parameters:**

*state* The additional state flag(s) to [set](#).

See [std::ios\\_base::iostate](#) for the possible bit values.

Definition at line 147 of file basic\_ios.h.

Referenced by [std::basic\\_ostream< \\_CharT, \\_Traits >::flush\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::get\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::getline\(\)](#), [std::getline\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::ignore\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::operator<<\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::operator>>\(\)](#), [std::operator>>\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::peek\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::put\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::putback\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::read\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::readsome\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::seekg\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::seekp\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::sync\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::unget\(\)](#), and [std::ws\(\)](#).

**5.375.5.88** `template<typename _CharT, typename _Traits > int  
std::basic_istream< _CharT, _Traits >::sync (void) [inline,  
inherited]`

Synchronizing the stream buffer.

**Returns:**

0 on success, -1 on failure

If `rdbuf()` is a null pointer, returns -1.

Otherwise, calls `rdbuf() ->pubsync()`, and if that returns -1, sets `badbit` and returns -1.

Otherwise, returns 0.

**Note:**

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 777 of file `istream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::goodbit`, `std::basic_streambuf<_CharT, _Traits>::pubsync()`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

### 5.375.5.89 `static bool std::ios_base::sync_with_stdio (bool __sync = true) [static, inherited]`

Interaction with the standard C I/O objects.

**Parameters:**

*sync* Whether to synchronize or not.

**Returns:**

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., `stdout`) and the standard C++ objects (e.g., `cout`). User-declared streams are unaffected. See <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch28s02.html>

### 5.375.5.90 `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits>::pos_type std::basic_istream<_CharT, _Traits>::tellg (void) [inline, inherited]`

Getting the current read position.

**Returns:**

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0, cur, in)`.

**Note:**

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 813 of file `istream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::cur`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::ios_base::in`, and `std::basic_ios<_CharT, _Traits>::rdbuf()`.

**5.375.5.91** `template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits>::pos_type std::basic_ostream<_CharT, _Traits>::tellp() [inline, inherited]`

Getting the current write position.

**Returns:**

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0, cur, out)`.

Definition at line 237 of file `ostream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::cur`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::ios_base::out`, and `std::basic_ios<_CharT, _Traits>::rdbuf()`.

**5.375.5.92** `template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits>* std::basic_ios<_CharT, _Traits>::tie(basic_ostream<_CharT, _Traits> * __tiestr) [inline, inherited]`

Ties this stream to an output stream.

**Parameters:**

*tiestr* The output stream.

**Returns:**

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see [tie\(\)](#) for more.

Definition at line 297 of file `basic_ios.h`.

**5.375.5.93** `template<typename _CharT, typename _Traits>  
basic_ostream<_CharT, _Traits>* std::basic_ios<_CharT, _Traits  
>::tie() const [inline, inherited]`

Fetches the current *tied* stream.

**Returns:**

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Definition at line 285 of file `basic_ios.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`.

**5.375.5.94** `template<typename _CharT, typename _Traits> basic_istream<  
_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::unget  
(void) [inline, inherited]`

Unextracting the previous character.

**Returns:**

\*this

If `rdbuf()` is not null, calls `rdbuf()->sungetc(c)`.

If `rdbuf()` is null or if `sungetc()` fails, sets `badbit` in the error state.

**Note:**

Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

Definition at line 744 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_ios<_CharT, _Traits>::setstate()`, and `std::basic_streambuf<_CharT, _Traits>::sungetc()`.

**5.375.5.95** void std::ios\_base::unsetf (fmtflags *\_\_mask*) [**inline**,  
**inherited**]

Clearing format flags.

**Parameters:**

*mask* The flags to unset.

This function clears *mask* in the format flags.

Definition at line 609 of file ios\_base.h.

Referenced by std::noboolalpha(), std::noshowbase(), std::noshowpoint(), std::noshowpos(), std::noskipws(), std::nounitbuf(), and std::nouppercase().

**5.375.5.96** template<typename \_CharT, typename \_Traits> char\_type  
std::basic\_ios<\_CharT, \_Traits>::widen (char *\_\_c*) const  
[**inline**, **inherited**]

Widens characters.

**Parameters:**

*c* The character to widen.

**Returns:**

The widened character.

Maps a character of `char` to a character of `char_type`.

Returns the result of

```
std::use_facet<ctype<char_type>> (getloc()).widen(c)
```

Additional notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

Definition at line 439 of file basic\_ios.h.

Referenced by std::endl(), std::getline(), and std::operator>>().

**5.375.5.97** streamsize std::ios\_base::width (streamsize *\_\_wide*) [**inline**,  
**inherited**]

Changing flags.

**Parameters:**

*wide* The new width value.

**Returns:**

The previous value of [width\(\)](#).

Definition at line 652 of file ios\_base.h.

**5.375.5.98** `streamsize std::ios_base::width () const [inline, inherited]`

Flags access.

**Returns:**

The minimum field width to generate on output operations.

*Minimum field width* refers to the number of characters.

Definition at line 643 of file ios\_base.h.

Referenced by `std::basic_ios<_CharT, _Traits >::copyfmt()`, `std::num_put<_CharT, _OutIter >::do_put()`, and `std::operator>>()`.

**5.375.5.99** `template<typename _CharT, typename _Traits > basic_ostream<_CharT, _Traits > & std::basic_ostream<_CharT, _Traits >::write (const char_type * __s, streamsize __n) [inline, inherited]`

Character string insertion.

**Parameters:**

*s* The [array](#) to insert.

*n* Maximum number of characters to insert.

**Returns:**

\*this

Characters are copied from *s* and inserted into the stream until one of the following happens:

- *n* characters are inserted
- inserting into the output sequence fails (in this case, `badbit` will be [set](#) in the stream's error state)

**Note:**

This function is not overloaded on signed char and unsigned char.

## 5.375 `std::basic_ostream<_CharT, _Traits>` Class Template Reference 1895

Definition at line 183 of file `ostream.tcc`.

References `std::basic_ostream<_CharT, _Traits>::_M_write()`, and `std::ios_base::badbit`.

### 5.375.5.100 `static int std::ios_base::xalloc () throw () [static, inherited]`

Access to unique indices.

#### Returns:

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the `iword` and `pword` functions. The expectation is that an application calls `xalloc` in order to obtain an index in the `iword` and `pword` arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. `xalloc` is guaranteed to return an index that is safe to use in the `iword` and `pword` arrays.

## 5.375.6 Member Data Documentation

### 5.375.6.1 `template<typename _CharT, typename _Traits> streamsize std::basic_istream<_CharT, _Traits>::_M_gcount [protected, inherited]`

The number of characters extracted in the previous unformatted function; see [gcount\(\)](#).

Definition at line 79 of file `istream`.

Referenced by `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::basic_istream<_CharT, _Traits>::peek()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_istream<_CharT, _Traits>::read()`, `std::basic_istream<_CharT, _Traits>::readsome()`, and `std::basic_istream<_CharT, _Traits>::unget()`.

### 5.375.6.2 `const fmtflags std::ios_base::adjustfield [static, inherited]`

A mask of `left|right|internal`. Useful for the 2-arg form of `setf`.

Definition at line 318 of file `ios_base.h`.

Referenced by `std::num_put<_CharT, _OutIter>::do_put()`.

**5.375.6.3 const openmode std::ios\_base::app [static, inherited]**

Seek to end before each write.

Definition at line 372 of file ios\_base.h.

**5.375.6.4 const openmode std::ios\_base::ate [static, inherited]**

Open and seek to end immediately after opening.

Definition at line 375 of file ios\_base.h.

Referenced by std::basic\_filebuf< \_CharT, \_Traits >::open().

**5.375.6.5 const iostate std::ios\_base::badbit [static, inherited]**

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).

Definition at line 342 of file ios\_base.h.

Referenced by std::basic\_ostream< \_CharT, \_Traits >::flush(), std::basic\_istream< \_CharT, \_Traits >::get(), std::basic\_istream< \_CharT, \_Traits >::getline(), std::basic\_istream< \_CharT, \_Traits >::ignore(), std::basic\_ios< \_CharT, \_Traits >::init(), std::operator<<(), std::basic\_ostream< \_CharT, \_Traits >::operator<<(), std::operator>>(), std::basic\_istream< \_CharT, \_Traits >::operator>>(), std::basic\_istream< \_CharT, \_Traits >::peek(), std::basic\_ostream< \_CharT, \_Traits >::put(), std::basic\_istream< \_CharT, \_Traits >::putback(), std::basic\_istream< \_CharT, \_Traits >::read(), std::basic\_istream< \_CharT, \_Traits >::readsome(), std::basic\_istream< \_CharT, \_Traits >::seekg(), std::basic\_ostream< \_CharT, \_Traits >::seekp(), std::basic\_istream< \_CharT, \_Traits >::sync(), std::basic\_istream< \_CharT, \_Traits >::tellg(), std::basic\_ostream< \_CharT, \_Traits >::tellp(), std::basic\_istream< \_CharT, \_Traits >::unget(), and std::basic\_ostream< \_CharT, \_Traits >::write().

**5.375.6.6 const fmtflags std::ios\_base::basefield [static, inherited]**

A mask of dec|oct|hex. Useful for the 2-arg form of `setf`.

Definition at line 321 of file ios\_base.h.

Referenced by std::num\_get< \_CharT, \_InIter >::do\_get(), and std::basic\_ostream< \_CharT, \_Traits >::operator<<().

**5.375.6.7 const seekdir std::ios\_base::beg [static, inherited]**

Request a seek relative to the beginning of the stream.

Definition at line 404 of file ios\_base.h.

Referenced by std::basic\_filebuf< \_CharT, \_Traits >::seekpos().

#### **5.375.6.8 const openmode std::ios\_base::binary [static, inherited]**

Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch27s02.html>.

Definition at line 380 of file ios\_base.h.

Referenced by std::basic\_filebuf< \_CharT, \_Traits >::showmanyc().

#### **5.375.6.9 const fmtflags std::ios\_base::boolalpha [static, inherited]**

Insert/extract `bool` in alphabetic rather than numeric format.

Definition at line 266 of file ios\_base.h.

Referenced by std::num\_get< \_CharT, \_InIter >::do\_get(), and std::num\_put< \_CharT, \_OutIter >::do\_put().

#### **5.375.6.10 const seekdir std::ios\_base::cur [static, inherited]**

Request a seek relative to the current position within the sequence.

Definition at line 407 of file ios\_base.h.

Referenced by std::basic\_filebuf< \_CharT, \_Traits >::imbue(), std::basic\_filebuf< \_CharT, \_Traits >::pbackfail(), std::basic\_stringbuf< \_CharT, \_Traits, \_Alloc >::seekoff(), std::basic\_filebuf< \_CharT, \_Traits >::seekoff(), std::basic\_istream< \_CharT, \_Traits >::tellg(), and std::basic\_ostream< \_CharT, \_Traits >::tellp().

#### **5.375.6.11 const fmtflags std::ios\_base::dec [static, inherited]**

Converts integer input or generates integer output in `decimal` base.

Definition at line 269 of file ios\_base.h.

#### **5.375.6.12 const seekdir std::ios\_base::end [static, inherited]**

Request a seek relative to the current end of the sequence.

Definition at line 410 of file ios\_base.h.

Referenced by `std::basic_filebuf< _CharT, _Traits >::open()`, and `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff()`.

#### 5.375.6.13 `const iostate std::ios_base::eofbit` [`static`, `inherited`]

Indicates that an input operation reached the end of an input sequence.

Definition at line 345 of file `ios_base.h`.

Referenced by `std::num_get< _CharT, _InIter >::do_get()`, `std::time_get< _CharT, _InIter >::do_get_date()`, `std::time_get< _CharT, _InIter >::do_get_monthname()`, `std::time_get< _CharT, _InIter >::do_get_time()`, `std::time_get< _CharT, _InIter >::do_get_weekday()`, `std::time_get< _CharT, _InIter >::do_get_year()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::operator>>()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::readsome()`, and `std::ws()`.

#### 5.375.6.14 `const iostate std::ios_base::failbit` [`static`, `inherited`]

Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.

Definition at line 350 of file `ios_base.h`.

Referenced by `std::num_get< _CharT, _InIter >::do_get()`, `std::time_get< _CharT, _InIter >::do_get_monthname()`, `std::time_get< _CharT, _InIter >::do_get_weekday()`, `std::time_get< _CharT, _InIter >::do_get_year()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::operator>>()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::seekg()`, and `std::basic_ostream< _CharT, _Traits >::seekp()`.

#### 5.375.6.15 `const fmtflags std::ios_base::fixed` [`static`, `inherited`]

Generate floating-point output in fixed-point notation.

Definition at line 272 of file `ios_base.h`.

#### 5.375.6.16 `const fmtflags std::ios_base::floatfield` [`static`, `inherited`]

A mask of `scientific|fixed`. Useful for the 2-arg form of `setf`.

Definition at line 324 of file `ios_base.h`.

**5.375.6.17 `const ios_base::goodbit` [static, inherited]**

Indicates all is well.

Definition at line 353 of file `ios_base.h`.

Referenced by `std::num_get<_CharT, _InIter>::do_get()`, `std::time_get<_CharT, _InIter>::do_get_monthname()`, `std::time_get<_CharT, _InIter>::do_get_weekday()`, `std::time_get<_CharT, _InIter>::do_get_year()`, `std::basic_ostream<_CharT, _Traits>::flush()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::basic_ios<_CharT, _Traits>::init()`, `std::basic_ostream<_CharT, _Traits>::operator<<()`, `std::operator>>()`, `std::basic_istream<_CharT, _Traits>::operator>>()`, `std::basic_istream<_CharT, _Traits>::peek()`, `std::basic_ostream<_CharT, _Traits>::put()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_istream<_CharT, _Traits>::read()`, `std::basic_istream<_CharT, _Traits>::readsome()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_ostream<_CharT, _Traits>::seekp()`, `std::basic_istream<_CharT, _Traits>::sync()`, and `std::basic_istream<_CharT, _Traits>::unget()`.

**5.375.6.18 `const fmtflags std::ios_base::hex` [static, inherited]**

Converts integer input or generates integer output in hexadecimal base.

Definition at line 275 of file `ios_base.h`.

Referenced by `std::num_get<_CharT, _InIter>::do_get()`, `std::num_put<_CharT, _OutIter>::do_put()`, and `std::basic_ostream<_CharT, _Traits>::operator<<()`.

**5.375.6.19 `const ios_base::in` [static, inherited]**

Open for input. Default for `ifstream` and `fstream`.

Definition at line 383 of file `ios_base.h`.

Referenced by `std::basic_filebuf<_CharT, _Traits>::pbackfail()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekoff()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekpos()`, `std::basic_filebuf<_CharT, _Traits>::showmanyc()`, `std::basic_istream<_CharT, _Traits>::tellg()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::underflow()`, `std::basic_filebuf<_CharT, _Traits>::underflow()`, and `std::basic_filebuf<_CharT, _Traits>::xsgetn()`.

**5.375.6.20 `const fmtflags std::ios_base::internal` [static, inherited]**

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.

Definition at line 280 of file `ios_base.h`.

#### **5.375.6.21 `const fmtflags std::ios_base::left` [static, inherited]**

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.)

Definition at line 284 of file `ios_base.h`.

Referenced by `std::num_put<_CharT, _OutIter >::do_put()`.

#### **5.375.6.22 `const fmtflags std::ios_base::oct` [static, inherited]**

Converts integer input or generates integer output in octal base.

Definition at line 287 of file `ios_base.h`.

Referenced by `std::basic_ostream<_CharT, _Traits >::operator<<()`.

#### **5.375.6.23 `const openmode std::ios_base::out` [static, inherited]**

Open for output. Default for `ofstream` and `fstream`.

Definition at line 386 of file `ios_base.h`.

Referenced by `std::basic_stringbuf<_CharT, _Traits, _Alloc >::overflow()`, `std::basic_filebuf<_CharT, _Traits >::overflow()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc >::seekoff()`, `std::basic_ostream<_CharT, _Traits >::seekp()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc >::seekpos()`, `std::basic_ostream<_CharT, _Traits >::tellp()`, and `std::basic_filebuf<_CharT, _Traits >::xspn()`.

#### **5.375.6.24 `const fmtflags std::ios_base::right` [static, inherited]**

Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.)

Definition at line 291 of file `ios_base.h`.

#### **5.375.6.25 `const fmtflags std::ios_base::scientific` [static, inherited]**

Generates floating-point output in scientific notation.

Definition at line 294 of file `ios_base.h`.

---

**5.375.6.26 const fmtflags std::ios\_base::showbase [static, inherited]**

Generates a prefix indicating the numeric base of generated integer output.

Definition at line 298 of file ios\_base.h.

**5.375.6.27 const fmtflags std::ios\_base::showpoint [static, inherited]**

Generates a decimal-point character unconditionally in generated floating-point output.

Definition at line 302 of file ios\_base.h.

**5.375.6.28 const fmtflags std::ios\_base::showpos [static, inherited]**

Generates a + sign in non-negative generated numeric output.

Definition at line 305 of file ios\_base.h.

**5.375.6.29 const fmtflags std::ios\_base::skipws [static, inherited]**

Skips leading white space before certain input operations.

Definition at line 308 of file ios\_base.h.

**5.375.6.30 const openmode std::ios\_base::trunc [static, inherited]**

Open for input. Default for `ofstream`.

Definition at line 389 of file ios\_base.h.

**5.375.6.31 const fmtflags std::ios\_base::unitbuf [static, inherited]**

Flushes output after each output operation.

Definition at line 311 of file ios\_base.h.

**5.375.6.32 const fmtflags std::ios\_base::uppercase [static, inherited]**

Replaces certain lowercase letters with their uppercase equivalents in generated output.

Definition at line 315 of file ios\_base.h.

Referenced by `std::num_put<_CharT, _OutIter >::do_put()`.

### Unformatted Input Functions

All the unformatted input functions have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (`noskipws`) set to true. This has several effects, concluding with the setting of a status flag; see the `sentry` documentation for more.

If the `sentry` status is good, the function tries to extract whatever data is appropriate for the type of the argument.

The number of characters extracted is stored for later retrieval by `gcount()`.

If an `exception` is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state without causing an `ios_base::failure` to be thrown. The original `exception` will then be rethrown.

### Arithmetic Extractors

All the `operator>>` functions (aka formatted input functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (`noskipws`) set to false. This has several effects, concluding with the setting of a status flag; see the [sentry](#) documentation for more.

If the [sentry](#) status is good, the function tries to extract whatever data is appropriate for the type of the argument.

If an [exception](#) is thrown during extraction, [ios\\_base::badbit](#) will be turned on in the stream's error state without causing an [ios\\_base::failure](#) to be thrown. The original [exception](#) will then be rethrown.

### 5.376.1 Detailed Description

```
template<typename _CharT, typename _Traits> class std::basic_istream<_CharT, _Traits >
```

Controlling input.

This is the base class for all input streams. It provides text formatting of all builtin types, and communicates with any class derived from [basic\\_streambuf](#) to do the actual input.

Definition at line 55 of file `istream`.

### 5.376.2 Member Typedef Documentation

```
5.376.2.1 template<typename _CharT, typename _Traits> typedef
ctype<_CharT> std::basic_istream<_CharT, _Traits
>::__ctype_type
```

These are non-standard types.

Reimplemented from [std::basic\\_ios<\\_CharT, \\_Traits>](#).

Definition at line 71 of file `istream`.

```
5.376.2.2 template<typename _CharT, typename _Traits> typedef
num_get<_CharT, istreambuf_iterator<_CharT, _Traits> >
std::basic_istream<_CharT, _Traits >::__num_get_type
```

These are non-standard types.

Reimplemented from [std::basic\\_ios<\\_CharT, \\_Traits>](#).

Definition at line 70 of file `istream`.

```
5.376.2.3 template<typename _CharT, typename _Traits> typedef
num_put<_CharT, ostreambuf_iterator<_CharT, _Traits>
> std::basic_ios<_CharT, _Traits >::__num_put_type
[inherited]
```

The quick-and-easy status check. This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

Reimplemented in [std::basic\\_ostream<\\_CharT, \\_Traits>](#), [std::basic\\_ostream<char, \\_Traits>](#), and [std::basic\\_ostream<char>](#).

Definition at line 84 of file `basic_ios.h`.

#### 5.376.2.4 `template<typename _CharT, typename _Traits> typedef _CharT std::basic_istream< _CharT, _Traits >::char_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from `std::basic_ios< _CharT, _Traits >`.

Reimplemented in `std::basic_ifstream< _CharT, _Traits >`, `std::basic_ofstream< _CharT, _Traits >`, `std::basic_iostream< _CharT, _Traits >`, `std::basic_istream< _CharT, _Traits, _Alloc >`, `std::basic_ostream< _CharT, _Traits, _Alloc >`, and `std::basic_iostream< char >`.

Definition at line 59 of file `istream`.

#### 5.376.2.5 `typedef void(* std::ios_base::event_callback)(event, ios_base &, int) [inherited]`

The type of an event callback function.

##### Parameters:

*event* One of the members of the event enum.

*ios\_base* Reference to the `ios_base` object.

*int* The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several `ios_base` and `basic_ios` functions, specifically `imbue()`, `copyfmt()`, and `~ios()`.

Definition at line 444 of file `ios_base.h`.

#### 5.376.2.6 `typedef _Ios_Fmtflags std::ios_base::fmtflags [inherited]`

This is a bitmask type. `_Ios_Fmtflags` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `fmtflags` are:

- `boolalpha`
- `dec`
- `fixed`
- `hex`
- `internal`

- `left`
- `oct`
- `right`
- `scientific`
- `showbase`
- `showpoint`
- `showpos`
- `skipws`
- `unitbuf`
- `uppercase`
- `adjustfield`
- `basefield`
- `floatfield`

Definition at line 263 of file `ios_base.h`.

#### 5.376.2.7 `template<typename _CharT, typename _Traits> typedef` `_Traits::int_type std::basic_istream<_CharT, _Traits>::int_type`

These are non-standard types.

Reimplemented from `std::basic_ios<_CharT, _Traits>`.

Reimplemented in `std::basic_ifstream<_CharT, _Traits>`, `std::basic_ofstream<_CharT, _Traits>`, `std::basic_iostream<_CharT, _Traits>`, `std::basic_istream<_CharT, _Traits, _Alloc>`, `std::basic_ostream<_CharT, _Traits, _Alloc>`, and `std::basic_iostream<char>`.

Definition at line 60 of file `istream`.

#### 5.376.2.8 `typedef _Ios_Iostate std::ios_base::iostate` [inherited]

This is a bitmask type. `_Ios_Iostate` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `iostate` are:

- `badbit`

- eofbit
- failbit
- goodbit

Definition at line 338 of file ios\_base.h.

#### 5.376.2.9 `template<typename _CharT, typename _Traits> typedef _Traits::off_type std::basic_istream< _CharT, _Traits >::off_type`

These are non-standard types.

Reimplemented from [std::basic\\_ios< \\_CharT, \\_Traits >](#).

Reimplemented in [std::basic\\_ifstream< \\_CharT, \\_Traits >](#), [std::basic\\_ofstream< \\_CharT, \\_Traits >](#), [std::basic\\_iostream< \\_CharT, \\_Traits >](#), [std::basic\\_istream< \\_CharT, \\_Traits, \\_Alloc >](#), [std::basic\\_ostringstream< \\_CharT, \\_Traits, \\_Alloc >](#), and [std::basic\\_ostream< char >](#).

Definition at line 62 of file istream.

#### 5.376.2.10 `typedef _Ios_Openmode std::ios_base::openmode [inherited]`

This is a bitmask type. `_Ios_Openmode` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `openmode` are:

- app
- ate
- binary
- in
- out
- trunc

Definition at line 369 of file ios\_base.h.

#### 5.376.2.11 `template<typename _CharT, typename _Traits> typedef _Traits::pos_type std::basic_istream< _CharT, _Traits >::pos_type`

These are non-standard types.

Reimplemented from [std::basic\\_ios< \\_CharT, \\_Traits >](#).

## 5.376 std::basic\_istream< \_CharT, \_Traits > Class Template Reference 1913

Reimplemented in [std::basic\\_ifstream< \\_CharT, \\_Traits >](#), [std::basic\\_ofstream< \\_CharT, \\_Traits >](#), [std::basic\\_iostream< \\_CharT, \\_Traits >](#), [std::basic\\_istringstream< \\_CharT, \\_Traits, \\_Alloc >](#), [std::basic\\_stringstream< \\_CharT, \\_Traits, \\_Alloc >](#), and [std::basic\\_istream< char >](#).

Definition at line 61 of file `istream`.

### 5.376.2.12 typedef \_Ios\_Seekdir std::ios\_base::seekdir [inherited]

This is an enumerated type. `_Ios_Seekdir` is implementation-defined. Defined values of type `seekdir` are:

- `beg`
- `cur`, equivalent to `SEEK_CUR` in the C standard library.
- `end`, equivalent to `SEEK_END` in the C standard library.

Definition at line 401 of file `ios_base.h`.

### 5.376.2.13 template<typename \_CharT, typename \_Traits> typedef \_Traits std::basic\_istream< \_CharT, \_Traits >::traits\_type

These are non-standard types.

Reimplemented from [std::basic\\_ios< \\_CharT, \\_Traits >](#).

Reimplemented in [std::basic\\_ifstream< \\_CharT, \\_Traits >](#), [std::basic\\_ofstream< \\_CharT, \\_Traits >](#), [std::basic\\_iostream< \\_CharT, \\_Traits >](#), [std::basic\\_istringstream< \\_CharT, \\_Traits, \\_Alloc >](#), [std::basic\\_stringstream< \\_CharT, \\_Traits, \\_Alloc >](#), and [std::basic\\_istream< char >](#).

Definition at line 63 of file `istream`.

## 5.376.3 Member Enumeration Documentation

### 5.376.3.1 enum std::ios\_base::event [inherited]

The [set](#) of events that may be passed to an event callback. `erase_event` is used during `~ios()` and `copyfmt()`. `imbue_event` is used during [imbue\(\)](#). `copyfmt_event` is used during `copyfmt()`.

Definition at line 427 of file `ios_base.h`.

## 5.376.4 Constructor & Destructor Documentation

**5.376.4.1** `template<typename _CharT, typename _Traits> std::basic_istream<_CharT, _Traits >::basic_istream (__streambuf_type * __sb)`  
**[inline, explicit]**

Base constructor. This ctor is almost never called by the user directly, rather from derived classes' initialization lists, which pass a pointer to their own stream buffer.

Definition at line 91 of file istream.

**5.376.4.2** `template<typename _CharT, typename _Traits> virtual std::basic_istream<_CharT, _Traits >::~~basic_istream ()`  
**[inline, virtual]**

Base destructor. This does very little apart from providing a virtual base dtor.

Definition at line 101 of file istream.

## 5.376.5 Member Function Documentation

**5.376.5.1** `const locale& std::ios_base::M_getloc () const` **[inline, inherited]**

Locale access.

### Returns:

A reference to the current [locale](#).

Like `getloc` above, but returns a reference instead of generating a copy.

Definition at line 705 of file `ios_base.h`.

Referenced by `std::money_get<_CharT, _InIter >::do_get()`, `std::num_get<_CharT, _InIter >::do_get()`, `std::time_get<_CharT, _InIter >::do_get_date()`, `std::time_get<_CharT, _InIter >::do_get_monthname()`, `std::time_get<_CharT, _InIter >::do_get_time()`, `std::time_get<_CharT, _InIter >::do_get_weekday()`, `std::time_get<_CharT, _InIter >::do_get_year()`, `std::time_put<_CharT, _OutIter >::do_put()`, `std::num_put<_CharT, _OutIter >::do_put()`, and `std::time_put<_CharT, _OutIter >::put()`.

**5.376.5.2** `template<typename _CharT, typename _Traits> bool std::basic_ios<_CharT, _Traits >::bad () const` **[inline, inherited]**

Fast error checking.

**Returns:**

True if the badbit is [set](#).

Note that other iostate flags may also be [set](#).

Definition at line 201 of file basic\_ios.h.

**5.376.5.3** `template<typename _CharT , typename _Traits > void  
std::basic_ios< _CharT, _Traits >::clear (iostate __state = goodbit)  
[inline, inherited]`

[Re]sets the error state.

**Parameters:**

*state* The new state flag(s) to [set](#).

See [std::ios\\_base::iostate](#) for the possible bit values. Most users will not need to pass an argument.

Definition at line 40 of file basic\_ios.tcc.

Referenced by [std::basic\\_ios< \\_CharT, \\_Traits >::rdbuf\(\)](#).

**5.376.5.4** `template<typename _CharT , typename _Traits > basic_ios<  
_CharT, _Traits > & std::basic_ios< _CharT, _Traits >::copyfmt  
(const basic_ios< _CharT, _Traits > & __rhs) [inline,  
inherited]`

Copies fields of `__rhs` into this.

**Parameters:**

`__rhs` The source values for the copies.

**Returns:**

Reference to this object.

All fields of `__rhs` are copied into this object except that [rdbuf\(\)](#) and [rdstate\(\)](#) remain unchanged. All values in the `pword` and `iword` arrays are copied. Before copying, each callback is invoked with `erase_event`. After copying, each (new) callback is invoked with `copyfmt_event`. The final step is to copy [exceptions\(\)](#).

Definition at line 62 of file basic\_ios.tcc.

References [std::basic\\_ios< \\_CharT, \\_Traits >::exceptions\(\)](#), [std::basic\\_ios< \\_CharT, \\_Traits >::fill\(\)](#), [std::ios\\_base::flags\(\)](#), [std::ios\\_base::getloc\(\)](#), [std::ios\\_base::precision\(\)](#), [std::basic\\_ios< \\_CharT, \\_Traits >::tie\(\)](#), and [std::ios\\_base::width\(\)](#).

### 5.376.5.5 `template<typename _CharT, typename _Traits> bool std::basic_istream<_CharT, _Traits >::eof() const` [`inline`, `inherited`]

Fast error checking.

#### Returns:

True if the eofbit is `set`.

Note that other iostate flags may also be `set`.

Definition at line 180 of file `basic_ios.h`.

Referenced by `std::basic_istream<_CharT, _Traits >::get()`, `std::basic_istream<_CharT, _Traits >::getline()`, `std::basic_istream<_CharT, _Traits >::ignore()`, `std::basic_istream<_CharT, _Traits >::peek()`, `std::basic_istream<_CharT, _Traits >::putback()`, and `std::basic_istream<_CharT, _Traits >::unget()`.

### 5.376.5.6 `template<typename _CharT, typename _Traits> void std::basic_istream<_CharT, _Traits >::exceptions(iostate __except)` [`inline`, `inherited`]

Throwing exceptions on errors.

#### Parameters:

*except* The new exceptions mask.

By default, error flags are `set` silently. You can `set` an exceptions mask for each stream; if a bit in the mask becomes `set` in the error flags, then an `exception` of type `std::ios_base::failure` is thrown.

If the error flag is already `set` when the exceptions mask is added, the `exception` is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>

int main()
{
 std::set_terminate (__gnu_cxx::__verbose_terminate_handler);

 std::ifstream f ("/etc/motd");

 std::cerr << "Setting badbit\n";
 f.setstate (std::ios_base::badbit);

 std::cerr << "Setting exception mask\n";
 f.exceptions (std::ios_base::badbit);
}
```

Definition at line 247 of file `basic_ios.h`.

**5.376.5.7** `template<typename _CharT, typename _Traits> iostate  
std::basic_ios< _CharT, _Traits >::exceptions () const [inline,  
inherited]`

Throwing exceptions on errors.

**Returns:**

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of [exceptions\(iostate\)](#) for the meaning of the return value.

Definition at line 212 of file basic\_ios.h.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`.

**5.376.5.8** `template<typename _CharT, typename _Traits> bool std::basic_ios<  
_CharT, _Traits >::fail () const [inline, inherited]`

Fast error checking.

**Returns:**

True if either the badbit or the failbit is [set](#).

Checking the badbit in [fail\(\)](#) is historical practice. Note that other iostate flags may also be [set](#).

Definition at line 191 of file basic\_ios.h.

Referenced by `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_istream< _CharT, _Traits >::tellg()`, `std::basic_ostream< _CharT, _Traits >::tellp()`, and `std::regex_traits< _Ch_type >::value()`.

**5.376.5.9** `template<typename _CharT, typename _Traits> char_type  
std::basic_ios< _CharT, _Traits >::fill (char_type __ch) [inline,  
inherited]`

Sets a new *empty* character.

**Parameters:**

*ch* The new character.

**Returns:**

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via `setw`), Q characters are actually used, and Q<P. It defaults to a space ( ' ') in the current [locale](#).

Definition at line 380 of file `basic_ios.h`.

**5.376.5.10** `template<typename _CharT, typename _Traits> char_type  
std::basic_ios< _CharT, _Traits >::fill () const [inline,  
inherited]`

Retrieves the *empty* character.

**Returns:**

The current fill character.

It defaults to a space ( ' ') in the current [locale](#).

Definition at line 360 of file `basic_ios.h`.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`.

**5.376.5.11** `fmtflags std::ios_base::flags (fmtflags __fmtfl) [inline,  
inherited]`

Setting new format flags all at once.

**Parameters:**

*fmtfl* The new flags to [set](#).

**Returns:**

The previous format control flags.

This function overwrites all the format flags with *fmtfl*.

Definition at line 561 of file `ios_base.h`.

**5.376.5.12** `fmtflags std::ios_base::flags () const [inline, inherited]`

Access to format flags.

**Returns:**

The format control flags for both input and output.

## 5.376 std::basic\_istream< \_CharT, \_Traits > Class Template Reference 1919

Definition at line 550 of file ios\_base.h.

Referenced by std::basic\_ios< \_CharT, \_Traits >::copyfmt(), std::num\_get< \_CharT, \_InIter >::do\_get(), std::num\_put< \_CharT, \_OutIter >::do\_put(), std::basic\_ostream< \_CharT, \_Traits >::operator<<(), std::operator<<(), and std::operator>>().

### 5.376.5.13 template<typename \_CharT, typename \_Traits> streamsize std::basic\_istream< \_CharT, \_Traits >::gcount () const [inline]

Character counting.

#### Returns:

The number of characters extracted by the previous unformatted input function dispatched for this stream.

Definition at line 249 of file istream.

### 5.376.5.14 template<typename \_CharT, typename \_Traits> \_\_istream\_type& std::basic\_istream< \_CharT, \_Traits >::get (\_\_streambuf\_type & \_\_sb) [inline]

Extraction into another streambuf.

#### Parameters:

*sb* A streambuf in which to store data.

#### Returns:

\*this

Returns get(sb,widen('\n')).

Definition at line 366 of file istream.

### 5.376.5.15 template<typename \_CharT , typename \_Traits > basic\_istream< \_CharT, \_Traits > & std::basic\_istream< \_CharT, \_Traits >::get (\_\_streambuf\_type & \_\_sb, char\_type \_\_delim) [inline]

Extraction into another streambuf.

#### Parameters:

*sb* A streambuf in which to store data.

*delim* A "stop" character.

**Returns:**

\*this

Characters are extracted and inserted into *sb* until one of the following happens:

- the input sequence reaches EOF
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted)
- the next character equals *delim* (in this case, the character is not extracted)
- an [exception](#) occurs (and in this case is caught)

If no characters are stored, failbit is [set](#) in the stream's error state.

Definition at line 356 of file istream.tcc.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_ios<_CharT, _Traits>::setstate()`, `std::basic_streambuf<_CharT, _Traits>::sgetc()`, `std::basic_streambuf<_CharT, _Traits>::snextc()`, and `std::basic_streambuf<_CharT, _Traits>::sputc()`.

**5.376.5.16** `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream<_CharT, _Traits>::get(char_type * __s, streamsize __n) [inline]`

Simple multiple-character extraction.

**Parameters:**

*s* Pointer to an [array](#).

*n* Maximum number of characters to store in *s*.

**Returns:**

\*this

Returns `get(s,n,widen('\n'))`.

Definition at line 333 of file istream.

---

**5.376.5.17** `template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (char_type * __s, streamsize __n, char_type __delim) [inline]`

Simple multiple-character extraction.

**Parameters:**

- s* Pointer to an [array](#).
- n* Maximum number of characters to store in *s*.
- delim* A "stop" character.

**Returns:**

\*this

Characters are extracted and stored into *s* until one of the following happens:

- *n*-1 characters are stored
- the input sequence reaches EOF
- the next character equals *delim*, in which case the character is not extracted

If no characters are stored, failbit is [set](#) in the stream's error state.

In any case, a null character is stored into the next location in the [array](#).

**Note:**

This function is not overloaded on signed char and unsigned char.

Definition at line 309 of file istream.tcc.

References `std::basic_istream< _CharT, _Traits >::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::eof()`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, `std::basic_ios< _CharT, _Traits >::setstate()`, `std::basic_streambuf< _CharT, _Traits >::sgetc()`, and `std::basic_streambuf< _CharT, _Traits >::snextc()`.

**5.376.5.18** `template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (char_type & __c) [inline]`

Simple extraction.

**Parameters:**

*c* The character in which to store data.

**Returns:**

\*this

Tries to extract a character and store it in *c*. If none are available, sets failbit and returns `traits::eof()`.

**Note:**

This function is not overloaded on signed char and unsigned char.

Definition at line 272 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.376.5.19** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits>::int_type std::basic_istream<_CharT, _Traits>::get(void) [inline]`

Simple extraction.

**Returns:**

A character, or `eof()`.

Tries to extract a character. If none are available, sets failbit and returns `traits::eof()`.

Definition at line 236 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.376.5.20** `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream<_CharT, _Traits>::getline(char_type * __s, streamsize __n) [inline]`

String extraction.

**Parameters:**

*s* A character [array](#) in which to store the data.

*n* Maximum number of characters to extract.

**Returns:**

\*this

Returns `getline(s,n,widen('\n'))`.

Definition at line 406 of file istream.

Referenced by `std::basic_istream< char >::getline()`.

**5.376.5.21** `template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::getline(char_type * __s, streamsize __n, char_type __delim) [inline]`

String extraction.

**Parameters:**

*s* A character [array](#) in which to store the data.

*n* Maximum number of characters to extract.

*delim* A "stop" character.

**Returns:**

\*this

Extracts and stores characters into *s* until one of the following happens. Note that these criteria are required to be tested in the order listed here, to allow an input line to exactly fill the *s* [array](#) without setting failbit.

1. the input sequence reaches end-of-file, in which case eofbit is [set](#) in the stream error state
2. the next character equals `delim`, in which case the character is extracted (and therefore counted in `gcount()`) but not stored
3. *n*-1 characters are stored, in which case failbit is [set](#) in the stream error state

If no characters are extracted, failbit is [set](#). (An empty line of input should therefore not cause failbit to be [set](#).)

In any case, a null character is stored in the next location in the [array](#).

Definition at line 400 of file istream.tcc.

#### 5.376.5.22 locale `std::ios_base::getloc() const` [`inline`, `inherited`]

Locale access.

##### Returns:

A copy of the current [locale](#).

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ [locale](#).

Definition at line 694 of file `ios_base.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::money_put<_CharT, _OutIter>::do_put()`, `std::basic_ios<_CharT, _Traits>::imbue()`, `std::operator>>()`, and `std::ws()`.

#### 5.376.5.23 `template<typename _CharT, typename _Traits> bool std::basic_ios<_CharT, _Traits>::good() const` [`inline`, `inherited`]

Fast error checking.

##### Returns:

True if no error flags are [set](#).

A wrapper around `rdstate`.

Definition at line 170 of file `basic_ios.h`.

#### 5.376.5.24 `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> &std::basic_istream<_CharT, _Traits>::ignore(streamsize __n, int_type __delim)` [`inline`]

Extraction into another streambuf.

##### Parameters:

*sb* A streambuf in which to store data.

**Returns:**

`*this`

Returns `get(sb,widen('\n'))`.

Definition at line 555 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_streambuf<_CharT, _Traits>::sbumpc()`, `std::basic_ios<_CharT, _Traits>::setstate()`, `std::basic_streambuf<_CharT, _Traits>::sgetc()`, and `std::basic_streambuf<_CharT, _Traits>::snextc()`.

#### 5.376.5.25 `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::ignore(streamsize __n) [inline]`

Extraction into another streambuf.

**Parameters:**

*sb* A streambuf in which to store data.

**Returns:**

`*this`

Returns `get(sb,widen('\n'))`.

Definition at line 493 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_ios<_CharT, _Traits>::setstate()`, `std::basic_streambuf<_CharT, _Traits>::sgetc()`, and `std::basic_streambuf<_CharT, _Traits>::snextc()`.

#### 5.376.5.26 `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::ignore(void) [inline]`

Discarding characters.

**Parameters:**

*n* Number of characters to discard.

*delim* A "stop" character.

**Returns:**

\*this

Extracts characters and throws them away until one of the following happens:

- if  $n \neq \text{std::numeric\_limits}<\text{int}>::\text{max}()$ ,  $n$  characters are extracted
- the input sequence reaches end-of-file
- the next character equals *delim* (in this case, the character is extracted); note that this condition will never occur if *delim* equals `traits::eof()`.

NB: Provide three overloads, instead of the single function (with defaults) mandated by the Standard: this leads to a better performing implementation, while still conforming to the Standard.

Definition at line 460 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_streambuf<_CharT, _Traits>::sbumpc()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.376.5.27** `template<typename _CharT, typename _Traits> locale  
std::basic_ios<_CharT, _Traits>::imbue(const locale & __loc)  
[inline, inherited]`

Moves to a new [locale](#).

**Parameters:**

*loc* The new [locale](#).

**Returns:**

The previous [locale](#).

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localizati>

Reimplemented from [std::ios\\_base](#).

Definition at line 113 of file `basic_ios.tcc`.

References `std::ios_base::getloc()`, and `std::basic_ios<_CharT, _Traits>::rdbuf()`.

Referenced by `std::operator<<()`.

**5.376.5.28** `template<typename _CharT, typename _Traits> void  
std::basic_ios< _CharT, _Traits >::init (basic_streambuf< _CharT,  
_Traits > * __sb) [inline, protected, inherited]`

All setup is performed here. This is called from the public constructor. It is not virtual and cannot be redefined.

Definition at line 125 of file basic\_ios.tcc.

References `std::ios_base::badbit`, and `std::ios_base::goodbit`.

**5.376.5.29** `long& std::ios_base::iword (int __ix) [inline, inherited]`

Access to integer [array](#).

**Parameters:**

`__ix` Index into the [array](#).

**Returns:**

A reference to an integer associated with the index.

The `iword` function provides access to an [array](#) of integers that can be used for any purpose. The [array](#) grows as required to hold the supplied index. All integers in the [array](#) are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the [array](#) can grow dynamically, it is not safe to hold onto the reference.

Definition at line 740 of file `ios_base.h`.

**5.376.5.30** `template<typename _CharT, typename _Traits> char  
std::basic_ios< _CharT, _Traits >::narrow (char_type __c, char  
__dfault) const [inline, inherited]`

Squeezes characters.

**Parameters:**

`c` The character to narrow.

`dfault` The character to narrow.

**Returns:**

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

```
std::use_facet<ctype<char_type> > (getloc()).narrow(c, default)
```

**5.376.5.46** `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream<_CharT, _Traits>::operator>> (bool & __n) [inline]`

Basic arithmetic extractors.

**Parameters:**

*A* variable of builtin type.

**Returns:**

`*this` if successful

These functions use the stream's current [locale](#) (specifically, the `num_get` facet) to parse the input data.

Definition at line 167 of file istream.

**5.376.5.47** `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream<_CharT, _Traits>::operator>> (ios_base &(*)(ios_base &) __pf) [inline]`

Interface for manipulators. Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see

the `iomanip` header.

Definition at line 131 of file `istream`.

**5.376.5.48** `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream<_CharT, _Traits>::operator>> (__ios_type &(*)(__ios_type &) __pf) [inline]`

Interface for manipulators. Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `iomanip` header.

Definition at line 124 of file `istream`.

**5.376.5.49** `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream<_CharT, _Traits>::operator>> (__istream_type &(*)(__istream_type &) __pf) [inline]`

Interface for manipulators. Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `iomanip` header.

Definition at line 120 of file `istream`.

**5.376.5.50** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits>::int_type std::basic_istream<_CharT, _Traits>::peek(void) [inline]`

Looking ahead in the stream.

#### Returns:

The next character, or `eof()`.

If, after constructing the `sentry` object, `good()` is false, returns `traits::eof()`. Otherwise reads but does not extract the next input character.

Definition at line 620 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.376.5.51** `streamsize std::ios_base::precision (streamsize __prec) [inline, inherited]`

Changing flags.

**Parameters:**

*prec* The new precision value.

**Returns:**

The previous value of `precision()`.

Definition at line 629 of file `ios_base.h`.

**5.376.5.52** `streamsize std::ios_base::precision () const [inline, inherited]`

Flags access.

**Returns:**

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Definition at line 620 of file `ios_base.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, and `std::operator<<()`.

**5.376.5.53** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::putback (char_type __c) [inline]`

Unextracting a single character.

**Parameters:**

*c* The character to push back into the input stream.

**Returns:**

\*this

If `rdbuf()` is not null, calls `rdbuf()->sputbackc(c)`.

If `rdbuf()` is null or if `sputbackc()` fails, sets `badbit` in the error state.

**Note:**

Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

Definition at line 711 of file `istream.tcc`.

References `std::basic_istream< _CharT, _Traits >::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::eof()`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, `std::basic_ios< _CharT, _Traits >::setstate()`, and `std::basic_streambuf< _CharT, _Traits >::sputbackc()`.

Referenced by `std::operator>>()`.

**5.376.5.54 void\*& std::ios\_base::pword (int \_\_ix) [inline, inherited]**

Access to void pointer `array`.

**Parameters:**

`__ix` Index into the `array`.

**Returns:**

A reference to a `void*` associated with the index.

The `pword` function provides access to an `array` of pointers that can be used for any purpose. The `array` grows as required to hold the supplied index. All pointers in the `array` are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the `array` can grow dynamically, it is not safe to hold onto the reference.

Definition at line 761 of file `ios_base.h`.

**5.376.5.55 template<typename \_CharT, typename \_Traits> basic\_streambuf< \_CharT, \_Traits > \* std::basic\_ios< \_CharT, \_Traits >::rdbuf (basic\_streambuf< \_CharT, \_Traits > \* \_\_sb) [inline, inherited]**

Changing the underlying buffer.

**Parameters:**

`sb` The new stream buffer.

**Returns:**

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream foo; // or some other derived type
std::streambuf* p =;

foo.ios::rdbuf(p); // ios == basic_ios<char>
```

Definition at line 52 of file `basic_ios.tcc`.

References `std::basic_ios<_CharT, _Traits>::clear()`.

#### 5.376.5.56 `template<typename _CharT, typename _Traits>` `basic_streambuf<_CharT, _Traits>* std::basic_ios<_CharT,` `_Traits>::rdbuf() const` [`inline`, `inherited`]

Accessing the underlying buffer.

#### Returns:

The current stream buffer.

This does not change the state of the stream.

Reimplemented in `std::basic_ifstream<_CharT, _Traits>`, `std::basic_ofstream<_CharT, _Traits>`, `std::basic_fstream<_CharT, _Traits>`, `std::basic_istreamstream<_CharT, _Traits, _Alloc>`, `std::basic_ostringstream<_CharT, _Traits, _Alloc>`, and `std::basic_stringstream<_CharT, _Traits, _Alloc>`.

Definition at line 311 of file `basic_ios.h`.

Referenced by `std::basic_ostream<_CharT, _Traits>::flush()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::basic_ios<_CharT, _Traits>::imbue()`, `std::basic_ostream<_CharT, _Traits>::operator<<()`, `std::basic_istream<_CharT, _Traits>::operator>>()`, `std::operator>>()`, `std::basic_istream<_CharT, _Traits>::peek()`, `std::basic_ostream<_CharT, _Traits>::put()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_istream<_CharT, _Traits>::read()`, `std::basic_istream<_CharT, _Traits>::readsome()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_ostream<_CharT, _Traits>::seekp()`, `std::basic_istream<_CharT, _Traits>::sync()`, `std::basic_istream<_CharT, _Traits>::tellg()`, `std::basic_ostream<_CharT, _Traits>::tellp()`, `std::basic_istream<_CharT, _Traits>::unget()`, and `std::ws()`.

**5.376.5.57** `template<typename _CharT, typename _Traits> istate  
std::basic_ios< _CharT, _Traits >::rdstate () const [inline,  
inherited]`

Returns the error state of the stream buffer.

**Returns:**

A bit pattern (well, isn't everything?)

See [std::ios\\_base::iostate](#) for the possible bit values. Most users will call one of the interpreting wrappers, e.g., [good\(\)](#).

Definition at line 127 of file `basic_ios.h`.

**5.376.5.58** `template<typename _CharT , typename _Traits > basic_istream<  
_CharT, _Traits > & std::basic_istream< _CharT, _Traits >::read  
(char_type * __s, streamsize __n) [inline]`

Extraction without delimiters.

**Parameters:**

*s* A character [array](#).

*n* Maximum number of characters to store.

**Returns:**

\*this

If the stream state is [good\(\)](#), extracts characters and stores them into *s* until one of the following happens:

- *n* characters are stored
- the input sequence reaches end-of-file, in which case the error state is [set](#) to `failbit|eofbit`.

**Note:**

This function is not overloaded on signed char and unsigned char.

Definition at line 650 of file `istream.tcc`.

References [std::basic\\_istream< \\_CharT, \\_Traits >::\\_M\\_gcount](#), [std::ios\\_base::badbit](#), [std::ios\\_base::eofbit](#), [std::ios\\_base::failbit](#), [std::ios\\_base::goodbit](#), [std::basic\\_ios< \\_CharT, \\_Traits >::rdbuf\(\)](#), and [std::basic\\_ios< \\_CharT, \\_Traits >::setstate\(\)](#).

**5.376.5.59** `template<typename _CharT, typename _Traits> streamsize  
std::basic_istream<_CharT, _Traits>::readsome(char_type * __s,  
streamsize __n) [inline]`

Extraction until the buffer is exhausted, but no more.

**Parameters:**

- `s` A character [array](#).
- `n` Maximum number of characters to store.

**Returns:**

The number of characters extracted.

Extracts characters and stores them into `s` depending on the number of characters remaining in the streambuf's buffer, `rdbuf()->in_avail()`, called `A` here:

- if `A == -1`, sets eofbit and extracts no characters
- if `A == 0`, extracts no characters
- if `A > 0`, extracts `min(A, n)`

The goal is to empty the current buffer, and to not request any more from the external input sequence controlled by the streambuf.

Definition at line 679 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::min()`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.376.5.60** `void std::ios_base::register_callback(event_callback __fn, int  
__index) [inherited]`

Add the callback `__fn` with parameter `__index`.

**Parameters:**

- `__fn` The function to add.
- `__index` The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

**5.376.5.61** `template<typename _CharT, typename _Traits > basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::seekg (off_type __off, ios_base::seekdir __dir) [inline]`

Changing the current read position.

**Parameters:**

*off* A file offset object.  
*dir* The direction in which to seek.

**Returns:**

\*this

If `fail()` is not true, calls `rdbuf() ->pubseekoff(off, dir)`. If that function fails, sets failbit.

**Note:**

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 870 of file istream.tcc.

References `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::fail()`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::ios_base::in`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

**5.376.5.62** `template<typename _CharT, typename _Traits > basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::seekg (pos_type __pos) [inline]`

Changing the current read position.

**Parameters:**

*pos* A file position object.

**Returns:**

\*this

If `fail()` is not true, calls `rdbuf() ->pubseekpos(pos)`. If that function fails, sets failbit.

**Note:**

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 837 of file istream.tcc.

References `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits >::fail()`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::ios_base::in`, `std::basic_ios<_CharT, _Traits >::rdbuf()`, and `std::basic_ios<_CharT, _Traits >::setstate()`.

#### 5.376.5.63 `fmtflags std::ios_base::setf (fmtflags __fmtfl, fmtflags __mask)` [inline, inherited]

Setting new format flags.

##### Parameters:

- fmtfl* Additional flags to `set`.
- mask* The flags mask for *fmtfl*.

##### Returns:

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* & *mask*. An example mask is `ios_base::adjustfield`.

Definition at line 594 of file ios\_base.h.

#### 5.376.5.64 `fmtflags std::ios_base::setf (fmtflags __fmtfl)` [inline, inherited]

Setting new format flags.

##### Parameters:

- fmtfl* Additional flags to `set`.

##### Returns:

The previous format control flags.

This function sets additional flags in format control. Flags that were previously `set` remain `set`.

Definition at line 577 of file ios\_base.h.

Referenced by `std::boolalpha()`, `std::dec()`, `std::fixed()`, `std::hex()`, `std::internal()`, `std::left()`, `std::oct()`, `std::right()`, `std::scientific()`, `std::showbase()`, `std::showpoint()`, `std::showpos()`, `std::skipws()`, `std::unitbuf()`, and `std::uppercase()`.

**5.376.5.65** `template<typename _CharT, typename _Traits> void  
std::basic_ios< _CharT, _Traits >::setstate (iostate __state)  
[inline, inherited]`

Sets additional flags in the error state.

**Parameters:**

*state* The additional state flag(s) to [set](#).

See [std::ios\\_base::iostate](#) for the possible bit values.

Definition at line 147 of file `basic_ios.h`.

Referenced by `std::basic_ostream< _CharT, _Traits >::flush()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::operator>>()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_ostream< _CharT, _Traits >::put()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::readsome()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_istream< _CharT, _Traits >::sync()`, `std::basic_istream< _CharT, _Traits >::unget()`, and `std::ws()`.

**5.376.5.66** `template<typename _CharT , typename _Traits > int  
std::basic_istream< _CharT, _Traits >::sync (void) [inline]`

Synchronizing the stream buffer.

**Returns:**

0 on success, -1 on failure

If `rdbuf ()` is a null pointer, returns -1.

Otherwise, calls `rdbuf ()->pubsync ()`, and if that returns -1, sets `badbit` and returns -1.

Otherwise, returns 0.

**Note:**

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to [gcount \(\)](#).

Definition at line 777 of file `istream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::goodbit`, `std::basic_streambuf< _CharT, _Traits >::pubsync()`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

#### 5.376.5.67 `static bool std::ios_base::sync_with_stdio (bool __sync = true)` [`static`, `inherited`]

Interaction with the standard C I/O objects.

##### Parameters:

*sync* Whether to synchronize or not.

##### Returns:

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., `stdout`) and the standard C++ objects (e.g., `cout`). User-declared streams are unaffected. See

<http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch28s02.html>

#### 5.376.5.68 `template<typename _CharT, typename _Traits > basic_istream< _CharT, _Traits >::pos_type std::basic_istream< _CharT, _Traits >::tellg (void)` [`inline`]

Getting the current read position.

##### Returns:

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0, cur, in)`.

##### Note:

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 813 of file `istream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::cur`, `std::basic_ios< _CharT, _Traits >::fail()`, `std::ios_base::in`, and `std::basic_ios< _CharT, _Traits >::rdbuf()`.

**5.376.5.69** `template<typename _CharT, typename _Traits>  
 basic_ostream<_CharT, _Traits>* std::basic_ios<_CharT, _Traits  
 >::tie (basic_ostream<_CharT, _Traits > * __tiestr) [inline,  
 inherited]`

Ties this stream to an output stream.

**Parameters:**

*tiestr* The output stream.

**Returns:**

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see `tie()` for more.

Definition at line 297 of file `basic_ios.h`.

**5.376.5.70** `template<typename _CharT, typename _Traits>  
 basic_ostream<_CharT, _Traits>* std::basic_ios<_CharT, _Traits  
 >::tie () const [inline, inherited]`

Fetches the current *tied* stream.

**Returns:**

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Definition at line 285 of file `basic_ios.h`.

Referenced by `std::basic_ios<_CharT, _Traits >::copyfmt()`.

**5.376.5.71** `template<typename _CharT, typename _Traits > basic_istream<  
 _CharT, _Traits > & std::basic_istream<_CharT, _Traits >::unget  
 (void) [inline]`

Unextracting the previous character.

**Returns:**

`*this`

If `rdbuf()` is not null, calls `rdbuf()->sungetc(c)`.

If `rdbuf()` is null or if `sungetc()` fails, sets badbit in the error state.

**Note:**

Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

Definition at line 744 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_ios<_CharT, _Traits>::setstate()`, and `std::basic_streambuf<_CharT, _Traits>::sungetc()`.

**5.376.5.72** `void std::ios_base::unsetf(fmtflags __mask) [inline, inherited]`

Clearing format flags.

**Parameters:**

*mask* The flags to unset.

This function clears *mask* in the format flags.

Definition at line 609 of file `ios_base.h`.

Referenced by `std::noboolalpha()`, `std::noshowbase()`, `std::noshowpoint()`, `std::noshowpos()`, `std::noskipws()`, `std::nounitbuf()`, and `std::nouppercase()`.

**5.376.5.73** `template<typename _CharT, typename _Traits> char_type std::basic_ios<_CharT, _Traits>::widen(char __c) const [inline, inherited]`

Widens characters.

**Parameters:**

*c* The character to widen.

**Returns:**

The widened character.

Maps a character of `char` to a character of `char_type`.

Returns the result of

```
std::use_facet<ctype<char_type>> (getloc()).widen(c)
```

## 5.376 std::basic\_istream< \_CharT, \_Traits > Class Template Reference 1949

Additional information notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

Definition at line 439 of file basic\_ios.h.

Referenced by std::endl(), std::getline(), and std::operator>>().

### 5.376.5.74 streamsize std::ios\_base::width (streamsize \_\_wide) [inline, inherited]

Changing flags.

#### Parameters:

*wide* The new width value.

#### Returns:

The previous value of `width()`.

Definition at line 652 of file ios\_base.h.

### 5.376.5.75 streamsize std::ios\_base::width () const [inline, inherited]

Flags access.

#### Returns:

The minimum field width to generate on output operations.

*Minimum field width* refers to the number of characters.

Definition at line 643 of file ios\_base.h.

Referenced by std::basic\_ios< \_CharT, \_Traits >::copyfmt(), std::num\_put< \_CharT, \_OutIter >::do\_put(), and std::operator>>().

### 5.376.5.76 static int std::ios\_base::xalloc () throw () [static, inherited]

Access to unique indices.

#### Returns:

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the `iword` and `pword` functions. The expectation is that an application calls `xalloc` in order to obtain an index in the `iword` and `pword` arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. `xalloc` is guaranteed to return an index that is safe to use in the `iword` and `pword` arrays.

## 5.376.6 Member Data Documentation

### 5.376.6.1 `template<typename _CharT, typename _Traits> streamsize std::basic_istream< _CharT, _Traits >::_M_gcount` [protected]

The number of characters extracted in the previous unformatted function; see [gcount\(\)](#).

Definition at line 79 of file `istream`.

Referenced by `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::readsome()`, and `std::basic_istream< _CharT, _Traits >::unget()`.

### 5.376.6.2 `const fmtflags std::ios_base::adjustfield` [static, inherited]

A mask of `left|right|internal`. Useful for the 2-arg form of `setf`.

Definition at line 318 of file `ios_base.h`.

Referenced by `std::num_put< _CharT, _OutIter >::do_put()`.

### 5.376.6.3 `const openmode std::ios_base::app` [static, inherited]

Seek to end before each write.

Definition at line 372 of file `ios_base.h`.

### 5.376.6.4 `const openmode std::ios_base::ate` [static, inherited]

Open and seek to end immediately after opening.

Definition at line 375 of file `ios_base.h`.

Referenced by `std::basic_filebuf< _CharT, _Traits >::open()`.

### 5.376.6.5 `const iostate std::ios_base::badbit` [static, inherited]

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).

## 5.376 std::basic\_istream< \_CharT, \_Traits > Class Template Reference 1951

Definition at line 342 of file ios\_base.h.

Referenced by std::basic\_ostream< \_CharT, \_Traits >::flush(), std::basic\_istream< \_CharT, \_Traits >::get(), std::basic\_istream< \_CharT, \_Traits >::getline(), std::basic\_istream< \_CharT, \_Traits >::ignore(), std::basic\_ios< \_CharT, \_Traits >::init(), std::operator<<(), std::basic\_ostream< \_CharT, \_Traits >::operator<<(), std::operator>>(), std::basic\_istream< \_CharT, \_Traits >::operator>>(), std::basic\_istream< \_CharT, \_Traits >::peek(), std::basic\_ostream< \_CharT, \_Traits >::put(), std::basic\_istream< \_CharT, \_Traits >::putback(), std::basic\_istream< \_CharT, \_Traits >::read(), std::basic\_istream< \_CharT, \_Traits >::readsome(), std::basic\_istream< \_CharT, \_Traits >::seekg(), std::basic\_ostream< \_CharT, \_Traits >::seekp(), std::basic\_istream< \_CharT, \_Traits >::sync(), std::basic\_istream< \_CharT, \_Traits >::tellg(), std::basic\_ostream< \_CharT, \_Traits >::tellp(), std::basic\_istream< \_CharT, \_Traits >::unget(), and std::basic\_ostream< \_CharT, \_Traits >::write().

### 5.376.6.6 const fmtflags std::ios\_base::basefield [static, inherited]

A mask of dec|oct|hex. Useful for the 2-arg form of setf.

Definition at line 321 of file ios\_base.h.

Referenced by std::num\_get< \_CharT, \_InIter >::do\_get(), and std::basic\_ostream< \_CharT, \_Traits >::operator<<().

### 5.376.6.7 const seekdir std::ios\_base::beg [static, inherited]

Request a seek relative to the beginning of the stream.

Definition at line 404 of file ios\_base.h.

Referenced by std::basic\_filebuf< \_CharT, \_Traits >::seekpos().

### 5.376.6.8 const openmode std::ios\_base::binary [static, inherited]

Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch27s02.html>.

Definition at line 380 of file ios\_base.h.

Referenced by std::basic\_filebuf< \_CharT, \_Traits >::showmanyc().

### 5.376.6.9 const fmtflags std::ios\_base::boolalpha [static, inherited]

Insert/extract bool in alphabetic rather than numeric format.

Definition at line 266 of file ios\_base.h.

Referenced by `std::num_get< _CharT, _InIter >::do_get()`, and `std::num_put< _CharT, _OutIter >::do_put()`.

#### **5.376.6.10 const seekdir std::ios\_base::cur [static, inherited]**

Request a seek relative to the current position within the sequence.

Definition at line 407 of file `ios_base.h`.

Referenced by `std::basic_filebuf< _CharT, _Traits >::imbue()`, `std::basic_filebuf< _CharT, _Traits >::pbackfail()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff()`, `std::basic_filebuf< _CharT, _Traits >::seekoff()`, `std::basic_istream< _CharT, _Traits >::tellg()`, and `std::basic_ostream< _CharT, _Traits >::tellp()`.

#### **5.376.6.11 const fmtflags std::ios\_base::dec [static, inherited]**

Converts integer input or generates integer output in [decimal](#) base.

Definition at line 269 of file `ios_base.h`.

#### **5.376.6.12 const seekdir std::ios\_base::end [static, inherited]**

Request a seek relative to the current end of the sequence.

Definition at line 410 of file `ios_base.h`.

Referenced by `std::basic_filebuf< _CharT, _Traits >::open()`, and `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff()`.

#### **5.376.6.13 const iostate std::ios\_base::eofbit [static, inherited]**

Indicates that an input operation reached the end of an input sequence.

Definition at line 345 of file `ios_base.h`.

Referenced by `std::num_get< _CharT, _InIter >::do_get()`, `std::time_get< _CharT, _InIter >::do_get_date()`, `std::time_get< _CharT, _InIter >::do_get_monthname()`, `std::time_get< _CharT, _InIter >::do_get_time()`, `std::time_get< _CharT, _InIter >::do_get_weekday()`, `std::time_get< _CharT, _InIter >::do_get_year()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::operator>>()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::readsome()`, and `std::ws()`.

**5.376.6.14 const iostate std::ios\_base::failbit [static, inherited]**

Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.

Definition at line 350 of file ios\_base.h.

Referenced by std::num\_get< \_CharT, \_InIter >::do\_get(), std::time\_get< \_CharT, \_InIter >::do\_get\_monthname(), std::time\_get< \_CharT, \_InIter >::do\_get\_weekday(), std::time\_get< \_CharT, \_InIter >::do\_get\_year(), std::basic\_istream< \_CharT, \_Traits >::get(), std::basic\_istream< \_CharT, \_Traits >::getline(), std::basic\_ostream< \_CharT, \_Traits >::operator<<(), std::basic\_istream< \_CharT, \_Traits >::operator>>(), std::operator>>(), std::basic\_istream< \_CharT, \_Traits >::read(), std::basic\_istream< \_CharT, \_Traits >::seekg(), and std::basic\_ostream< \_CharT, \_Traits >::seekp().

**5.376.6.15 const fmtflags std::ios\_base::fixed [static, inherited]**

Generate floating-point output in fixed-point notation.

Definition at line 272 of file ios\_base.h.

**5.376.6.16 const fmtflags std::ios\_base::floatfield [static, inherited]**

A mask of scientific|fixed. Useful for the 2-arg form of setf.

Definition at line 324 of file ios\_base.h.

**5.376.6.17 const iostate std::ios\_base::goodbit [static, inherited]**

Indicates all is well.

Definition at line 353 of file ios\_base.h.

Referenced by std::num\_get< \_CharT, \_InIter >::do\_get(), std::time\_get< \_CharT, \_InIter >::do\_get\_monthname(), std::time\_get< \_CharT, \_InIter >::do\_get\_weekday(), std::time\_get< \_CharT, \_InIter >::do\_get\_year(), std::basic\_ostream< \_CharT, \_Traits >::flush(), std::basic\_istream< \_CharT, \_Traits >::get(), std::basic\_istream< \_CharT, \_Traits >::getline(), std::basic\_istream< \_CharT, \_Traits >::ignore(), std::basic\_ios< \_CharT, \_Traits >::init(), std::basic\_ostream< \_CharT, \_Traits >::operator<<(), std::operator>>(), std::basic\_istream< \_CharT, \_Traits >::operator>>(), std::basic\_istream< \_CharT, \_Traits >::peek(), std::basic\_ostream< \_CharT, \_Traits >::put(), std::basic\_istream< \_CharT, \_Traits >::putback(), std::basic\_istream< \_CharT, \_Traits >::read(), std::basic\_istream< \_CharT, \_Traits >::readsome(), std::basic\_istream< \_CharT, \_Traits >::seekg(), std::basic\_ostream< \_CharT, \_Traits >::seekp(), std::basic\_istream< \_CharT, \_Traits >::sync(), and std::basic\_istream< \_CharT, \_Traits >::unget().

**5.376.6.18 const fmtflags std::ios\_base::hex [static, inherited]**

Converts integer input or generates integer output in hexadecimal base.

Definition at line 275 of file ios\_base.h.

Referenced by std::num\_get< \_CharT, \_InIter >::do\_get(), std::num\_put< \_CharT, \_OutIter >::do\_put(), and std::basic\_ostream< \_CharT, \_Traits >::operator<<().

**5.376.6.19 const openmode std::ios\_base::in [static, inherited]**

Open for input. Default for `ifstream` and `fstream`.

Definition at line 383 of file ios\_base.h.

Referenced by std::basic\_filebuf< \_CharT, \_Traits >::pbackfail(), std::basic\_istream< \_CharT, \_Traits >::seekg(), std::basic\_stringbuf< \_CharT, \_Traits, \_Alloc >::seekoff(), std::basic\_stringbuf< \_CharT, \_Traits, \_Alloc >::seekpos(), std::basic\_filebuf< \_CharT, \_Traits >::showmanyc(), std::basic\_istream< \_CharT, \_Traits >::tellg(), std::basic\_stringbuf< \_CharT, \_Traits, \_Alloc >::underflow(), std::basic\_filebuf< \_CharT, \_Traits >::underflow(), and std::basic\_filebuf< \_CharT, \_Traits >::xsgetn().

**5.376.6.20 const fmtflags std::ios\_base::internal [static, inherited]**

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.

Definition at line 280 of file ios\_base.h.

**5.376.6.21 const fmtflags std::ios\_base::left [static, inherited]**

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.)

Definition at line 284 of file ios\_base.h.

Referenced by std::num\_put< \_CharT, \_OutIter >::do\_put().

**5.376.6.22 const fmtflags std::ios\_base::oct [static, inherited]**

Converts integer input or generates integer output in octal base.

Definition at line 287 of file ios\_base.h.

Referenced by std::basic\_ostream< \_CharT, \_Traits >::operator<<().

**5.376.6.23 const openmode std::ios\_base::out [static, inherited]**

Open for output. Default for `ofstream` and `fstream`.

## 5.377 `std::basic_istream< _CharT, _Traits >::sentry` Class Reference

Performs setup work for input streams.

### Public Types

- typedef `__istream_type::__ctype_type` `__ctype_type`
- typedef `_Traits::int_type` `__int_type`
- typedef `basic_istream< _CharT, _Traits >` `__istream_type`
- typedef `basic_streambuf< _CharT, _Traits >` `__streambuf_type`
- typedef `_Traits` `traits_type`

### Public Member Functions

- `sentry` (`basic_istream< _CharT, _Traits > &__is`, `bool __noskipws=false`)
- `operator bool` () const

#### 5.377.1 Detailed Description

```
template<typename _CharT, typename _Traits> class std::basic_istream< _-
CharT, _Traits >::sentry
```

Performs setup work for input streams. Objects of this class are created before all of the standard extractors are run. It is responsible for *exception-safe prefix and suffix operations*, although only prefix actions are currently required by the standard.

Definition at line 633 of file `istream`.

#### 5.377.2 Member Typedef Documentation

```
5.377.2.1 template<typename _CharT, typename _Traits> typedef _Traits
std::basic_istream< _CharT, _Traits >::sentry::traits_type
```

Easy access to dependant types.

Definition at line 640 of file `istream`.

### 5.377.3 Constructor & Destructor Documentation

**5.377.3.1** `template<typename _CharT, typename _Traits> std::basic_istream<_CharT, _Traits >::sentry::sentry (basic_istream< _CharT, _Traits > & __is, bool __noskipws = false) [inline, explicit]`

The constructor performs all the work.

**Parameters:**

*is* The input stream to guard.

*noskipws* Whether to consume whitespace or not.

If the stream state is good (*is.good()* is true), then the following actions are performed, otherwise the `sentry` state is false (*not okay*) and failbit is `set` in the stream state.

The sentry's preparatory actions are:

1. if the stream is tied to an output stream, `is.tie()->flush()` is called to synchronize the output sequence
2. if *noskipws* is false, and `ios_base::skipws` is `set` in `is.flags()`, the `sentry` extracts and discards whitespace characters from the stream. The currently imbued `locale` is used to determine whether each character is whitespace.

If the stream state is still good, then the `sentry` state becomes true (*okay*).

Definition at line 47 of file `istream.tcc`.

References `std::__ctype_abstract_base< _CharT >::is()`, `std::basic_streambuf< _CharT, _Traits >::sgetc()`, `std::skipws()`, and `std::basic_streambuf< _CharT, _Traits >::snextc()`.

### 5.377.4 Member Function Documentation

**5.377.4.1** `template<typename _CharT, typename _Traits> std::basic_istream<_CharT, _Traits >::sentry::operator bool () const [inline, explicit]`

Quick status checking.

**Returns:**

The `sentry` state.

For ease of use, sentries may be converted to booleans. The return value is that of the `sentry` state (`true == okay`).

Definition at line 681 of file istream.

## 5.378 `std::basic_istreamstream< _CharT, _Traits, _Alloc >` Class Template Reference

Controlling input for `std::string`.

This class supports reading from objects of type `std::basic_string`, using the inherited functions from `std::basic_istream`. To control the associated sequence, an instance of `std::basic_stringbuf` is used, which this page refers to as `sb`. Inheritance diagram for `std::basic_istreamstream< _CharT, _Traits, _Alloc >`:

### Public Types

### Unformatted Input Functions

All the unformatted input functions have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (`noskipws`) *set* to true. This has several effects, concluding with the setting of a status flag; see the *sentry* documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

The number of characters extracted is stored for later retrieval by `gcount()`.

If an *exception* is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state without causing an `ios_base::failure` to be thrown. The original *exception* will then be rethrown.

- `pos_type tellg ()`
- `__istream_type & unget ()`

### Arithmetic Extractors

All the `operator>>` functions (aka formatted input functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (noskipws) set to false. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

If an *exception* is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state without causing an `ios_base::failure` to be thrown. The original *exception* will then be rethrown.

### 5.378.1 Detailed Description

```
template<typename _CharT, typename _Traits, typename _Alloc> class
std::basic_istringstream<_CharT, _Traits, _Alloc >
```

Controlling input for `std::string`.

This class supports reading from objects of type `std::basic_string`, using the inherited functions from `std::basic_istream`. To control the associated sequence, an instance of `std::basic_stringbuf` is used, which this page refers to as `sb`.

Definition at line 256 of file `sstream`.

### 5.378.2 Member Typedef Documentation

**5.378.2.1** `template<typename _CharT, typename _Traits> typedef
ctype<_CharT> std::basic_istream<_CharT, _Traits
>::__ctype_type [inherited]`

These are non-standard types.

Reimplemented from `std::basic_ios<_CharT, _Traits >`.

Definition at line 71 of file `istream`.

**5.378.2.2** `template<typename _CharT, typename _Traits> typedef
num_get<_CharT, istreambuf_iterator<_CharT, _Traits>
> std::basic_istream<_CharT, _Traits >::__num_get_type
[inherited]`

These are non-standard types.

Reimplemented from `std::basic_ios<_CharT, _Traits >`.

Definition at line 70 of file `istream`.

## 5.378 `std::basic_istringstream<_CharT, _Traits, _Alloc >` Class Template Reference 1967

---

**5.378.2.3** `template<typename _CharT, typename _Traits> typedef num_put<_CharT, ostreambuf_iterator<_CharT, _Traits> > std::basic_ios<_CharT, _Traits >::_num_put_type [inherited]`

The quick-and-easy status check. This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

Reimplemented in `std::basic_ostream<_CharT, _Traits >`, `std::basic_ostream<char, _Traits >`, and `std::basic_ostream<char >`.

Definition at line 84 of file `basic_ios.h`.

**5.378.2.4** `template<typename _CharT, typename _Traits, typename _Alloc> typedef _CharT std::basic_istringstream<_CharT, _Traits, _Alloc >::char_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from `std::basic_istream<_CharT, _Traits >`.

Definition at line 260 of file `sstream`.

**5.378.2.5** `typedef void(* std::ios_base::event_callback)(event, ios_base &, int) [inherited]`

The type of an event callback function.

### Parameters:

*event* One of the members of the event enum.

*ios\_base* Reference to the `ios_base` object.

*int* The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several `ios_base` and `basic_ios` functions, specifically `imbue()`, `copyfmt()`, and `~ios()`.

Definition at line 444 of file `ios_base.h`.

**5.378.2.6** `typedef _Ios_Fmtflags std::ios_base::fmtflags [inherited]`

This is a bitmask type. `_Ios_Fmtflags` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `fmtflags` are:

- boolalpha
- dec
- fixed
- hex
- internal
- left
- oct
- right
- scientific
- showbase
- showpoint
- showpos
- skipws
- unitbuf
- uppercase
- adjustfield
- basefield
- floatfield

Definition at line 263 of file ios\_base.h.

**5.378.2.7** `template<typename _CharT, typename _Traits, typename _Alloc>  
typedef traits_type::int_type std::basic_istringstream< _CharT,  
_Traits, _Alloc >::int_type`

These are non-standard types.

Reimplemented from [std::basic\\_istream< \\_CharT, \\_Traits >](#).

Definition at line 265 of file sstream.

## 5.378 `std::basic_istream<_CharT, _Traits, _Alloc >` Class Template Reference 1969

---

### 5.378.2.8 `typedef _Ios_Iostate std::ios_base::iostate` [inherited]

This is a bitmask type. `_Ios_Iostate` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `iostate` are:

- `badbit`
- `eofbit`
- `failbit`
- `goodbit`

Definition at line 338 of file `ios_base.h`.

### 5.378.2.9 `template<typename _CharT, typename _Traits, typename _Alloc> typedef traits_type::off_type std::basic_istream<_CharT, _Traits, _Alloc >::off_type`

These are non-standard types.

Reimplemented from [std::basic\\_istream<\\_CharT, \\_Traits >](#).

Definition at line 267 of file `sstream`.

### 5.378.2.10 `typedef _Ios_Openmode std::ios_base::openmode` [inherited]

This is a bitmask type. `_Ios_Openmode` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `openmode` are:

- `app`
- `ate`
- `binary`
- `in`
- `out`
- `trunc`

Definition at line 369 of file `ios_base.h`.

**5.378.2.11** `template<typename _CharT, typename _Traits, typename _Alloc>  
typedef traits_type::pos_type std::basic_istream< _CharT,  
_Traits, _Alloc >::pos_type`

These are non-standard types.

Reimplemented from [std::basic\\_istream< \\_CharT, \\_Traits >](#).

Definition at line 266 of file `sstream`.

**5.378.2.12** `typedef _Ios_Seekdir std::ios_base::seekdir [inherited]`

This is an enumerated type. `_Ios_Seekdir` is implementation-defined. Defined values of type `seekdir` are:

- `beg`
- `cur`, equivalent to `SEEK_CUR` in the C standard library.
- `end`, equivalent to `SEEK_END` in the C standard library.

Definition at line 401 of file `ios_base.h`.

**5.378.2.13** `template<typename _CharT, typename _Traits, typename _Alloc>  
typedef _Traits std::basic_istream< _CharT, _Traits, _Alloc  
>::traits_type`

These are non-standard types.

Reimplemented from [std::basic\\_istream< \\_CharT, \\_Traits >](#).

Definition at line 261 of file `sstream`.

### 5.378.3 Member Enumeration Documentation

**5.378.3.1** `enum std::ios_base::event [inherited]`

The [set](#) of events that may be passed to an event callback. `erase_event` is used during `~ios()` and `copyfmt()`. `imbue_event` is used during [imbue\(\)](#). `copyfmt_event` is used during `copyfmt()`.

Definition at line 427 of file `ios_base.h`.

## 5.378.4 Constructor & Destructor Documentation

**5.378.4.1** `template<typename _CharT, typename _Traits, typename  
_Alloc> std::basic_istream<_CharT, _Traits, _Alloc  
>::basic_istream (ios_base::openmode __mode = ios_base::in)  
[inline, explicit]`

Default constructor starts with an empty string buffer.

### Parameters:

*mode* Whether the buffer can read, or write, or both.

`ios_base::in` is automatically included in *mode*.

Initializes `sb` using `mode|in`, and passes `&sb` to the base class initializer. Does not allocate any buffer.

That's a lie. We initialize the base class with `NULL`, because the string class does its own memory management.

Definition at line 292 of file `sstream`.

**5.378.4.2** `template<typename _CharT, typename _Traits, typename  
_Alloc> std::basic_istream<_CharT, _Traits, _Alloc  
>::basic_istream (const __string_type & __str,  
ios_base::openmode __mode = ios_base::in) [inline,  
explicit]`

Starts with an existing string buffer.

### Parameters:

*str* A string to copy as a starting buffer.

*mode* Whether the buffer can read, or write, or both.

`ios_base::in` is automatically included in *mode*.

Initializes `sb` using `str` and `mode|in`, and passes `&sb` to the base class initializer.

That's a lie. We initialize the base class with `NULL`, because the string class does its own memory management.

Definition at line 310 of file `sstream`.

**5.378.4.3** `template<typename _CharT, typename _Traits, typename _Alloc> std::basic_istream< _CharT, _Traits, _Alloc >::~~basic_istream () [inline]`

The destructor does nothing. The buffer is deallocated by the stringbuf object, not the formatting stream.

Definition at line 321 of file sstream.

## 5.378.5 Member Function Documentation

**5.378.5.1** `const locale& std::ios_base::_M_getloc () const [inline, inherited]`

Locale access.

### Returns:

A reference to the current [locale](#).

Like `getloc` above, but returns a reference instead of generating a copy.

Definition at line 705 of file ios\_base.h.

Referenced by `std::money_get< _CharT, _InIter >::do_get()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::time_get< _CharT, _InIter >::do_get_date()`, `std::time_get< _CharT, _InIter >::do_get_monthname()`, `std::time_get< _CharT, _InIter >::do_get_time()`, `std::time_get< _CharT, _InIter >::do_get_weekday()`, `std::time_get< _CharT, _InIter >::do_get_year()`, `std::time_put< _CharT, _OutIter >::do_put()`, `std::num_put< _CharT, _OutIter >::do_put()`, and `std::time_put< _CharT, _OutIter >::put()`.

**5.378.5.2** `template<typename _CharT, typename _Traits> bool std::basic_ios< _CharT, _Traits >::bad () const [inline, inherited]`

Fast error checking.

### Returns:

True if the badbit is [set](#).

Note that other iostate flags may also be [set](#).

Definition at line 201 of file basic\_ios.h.

**5.378 std::basic\_istream< \_CharT, \_Traits, \_Alloc > Class Template Reference** **1973**

---

**5.378.5.3** `template<typename _CharT, typename _Traits > void  
std::basic_ios< _CharT, _Traits >::clear (iostate __state = goodbit)  
[inline, inherited]`

[Re]sets the error state.

**Parameters:**

*state* The new state flag(s) to [set](#).

See [std::ios\\_base::iostate](#) for the possible bit values. Most users will not need to pass an argument.

Definition at line 40 of file `basic_ios.tcc`.

Referenced by `std::basic_ios< _CharT, _Traits >::rdbuf()`.

**5.378.5.4** `template<typename _CharT, typename _Traits > basic_ios<  
_CharT, _Traits > & std::basic_ios< _CharT, _Traits >::copyfmt  
(const basic_ios< _CharT, _Traits > & __rhs) [inline,  
inherited]`

Copies fields of `__rhs` into this.

**Parameters:**

*\_\_rhs* The source values for the copies.

**Returns:**

Reference to this object.

All fields of `__rhs` are copied into this object except that `rdbuf()` and `rdstate()` remain unchanged. All values in the `pword` and `iword` arrays are copied. Before copying, each callback is invoked with `erase_event`. After copying, each (new) callback is invoked with `copyfmt_event`. The final step is to copy [exceptions\(\)](#).

Definition at line 62 of file `basic_ios.tcc`.

References `std::basic_ios< _CharT, _Traits >::exceptions()`, `std::basic_ios< _CharT, _Traits >::fill()`, `std::ios_base::flags()`, `std::ios_base::getloc()`, `std::ios_base::precision()`, `std::basic_ios< _CharT, _Traits >::tie()`, and `std::ios_base::width()`.

**5.378.5.5** `template<typename _CharT, typename _Traits> bool std::basic_ios<  
_CharT, _Traits >::eof () const [inline, inherited]`

Fast error checking.

**Returns:**

True if the eofbit is [set](#).

Note that other iostate flags may also be [set](#).

Definition at line 180 of file `basic_ios.h`.

Referenced by `std::basic_istream<_CharT, _Traits >::get()`, `std::basic_istream<_CharT, _Traits >::getline()`, `std::basic_istream<_CharT, _Traits >::ignore()`, `std::basic_istream<_CharT, _Traits >::peek()`, `std::basic_istream<_CharT, _Traits >::putback()`, and `std::basic_istream<_CharT, _Traits >::unget()`.

#### 5.378.5.6 `template<typename _CharT, typename _Traits> void std::basic_ios<_CharT, _Traits >::exceptions (iostate __except) [inline, inherited]`

Throwing exceptions on errors.

**Parameters:**

*except* The new exceptions mask.

By default, error flags are [set](#) silently. You can [set](#) an exceptions mask for each stream; if a bit in the mask becomes [set](#) in the error flags, then an [exception](#) of type `std::ios_base::failure` is thrown.

If the error flag is already [set](#) when the exceptions mask is added, the [exception](#) is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>

int main()
{
 std::set_terminate (__gnu_cxx::__verbose_terminate_handler);

 std::ifstream f ("/etc/motd");

 std::cerr << "Setting badbit\n";
 f.setstate (std::ios_base::badbit);

 std::cerr << "Setting exception mask\n";
 f.exceptions (std::ios_base::badbit);
}
```

Definition at line 247 of file `basic_ios.h`.

**5.378 std::basic\_istream< \_CharT, \_Traits, \_Alloc > Class Template Reference** **1975**

---

**5.378.5.7** `template<typename _CharT, typename _Traits> iostate  
std::basic_ios< _CharT, _Traits >::exceptions () const [inline,  
inherited]`

Throwing exceptions on errors.

**Returns:**

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of [exceptions\(iostate\)](#) for the meaning of the return value.

Definition at line 212 of file basic\_ios.h.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`.

**5.378.5.8** `template<typename _CharT, typename _Traits> bool std::basic_ios<  
_CharT, _Traits >::fail () const [inline, inherited]`

Fast error checking.

**Returns:**

True if either the badbit or the failbit is [set](#).

Checking the badbit in [fail\(\)](#) is historical practice. Note that other iostate flags may also be [set](#).

Definition at line 191 of file basic\_ios.h.

Referenced by `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_istream< _CharT, _Traits >::tellg()`, `std::basic_ostream< _CharT, _Traits >::tellp()`, and `std::regex_traits< _Ch_type >::value()`.

**5.378.5.9** `template<typename _CharT, typename _Traits> char_type  
std::basic_ios< _CharT, _Traits >::fill (char_type __ch) [inline,  
inherited]`

Sets a new *empty* character.

**Parameters:**

*ch* The new character.

**Returns:**

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via `setw`), Q characters are actually used, and Q<P. It defaults to a space ( ' ') in the current [locale](#).

Definition at line 380 of file `basic_ios.h`.

**5.378.5.10** `template<typename _CharT, typename _Traits> char_type  
std::basic_ios< _CharT, _Traits >::fill () const [inline,  
inherited]`

Retrieves the *empty* character.

**Returns:**

The current fill character.

It defaults to a space ( ' ') in the current [locale](#).

Definition at line 360 of file `basic_ios.h`.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`.

**5.378.5.11** `fmtflags std::ios_base::flags (fmtflags __fmtfl) [inline,  
inherited]`

Setting new format flags all at once.

**Parameters:**

*fmtfl* The new flags to [set](#).

**Returns:**

The previous format control flags.

This function overwrites all the format flags with *fmtfl*.

Definition at line 561 of file `ios_base.h`.

**5.378.5.12** `fmtflags std::ios_base::flags () const [inline, inherited]`

Access to format flags.

**Returns:**

The format control flags for both input and output.

## 5.378 `std::basic_istringstream<_CharT, _Traits, _Alloc>` Class Template Reference 1977

---

Definition at line 550 of file `ios_base.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::num_put<_CharT, _OutIter>::do_put()`, `std::basic_ostream<_CharT, _Traits>::operator<<()`, `std::operator<<()`, and `std::operator>>()`.

### 5.378.5.13 `template<typename _CharT, typename _Traits> streamsize std::basic_istream<_CharT, _Traits>::gcount() const` [`inline`, `inherited`]

Character counting.

#### Returns:

The number of characters extracted by the previous unformatted input function dispatched for this stream.

Definition at line 249 of file `istream`.

### 5.378.5.14 `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream<_CharT, _Traits>::get(__streambuf_type & __sb)` [`inline`, `inherited`]

Extraction into another streambuf.

#### Parameters:

*sb* A streambuf in which to store data.

#### Returns:

`*this`

Returns `get(sb, widen('\n'))`.

Definition at line 366 of file `istream`.

### 5.378.5.15 `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::get(__streambuf_type & __sb, char_type __delim)` [`inline`, `inherited`]

Extraction into another streambuf.

#### Parameters:

*sb* A streambuf in which to store data.

*delim* A "stop" character.

**Returns:**

\*this

Characters are extracted and inserted into *sb* until one of the following happens:

- the input sequence reaches EOF
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted)
- the next character equals *delim* (in this case, the character is not extracted)
- an [exception](#) occurs (and in this case is caught)

If no characters are stored, failbit is [set](#) in the stream's error state.

Definition at line 356 of file istream.tcc.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_ios<_CharT, _Traits>::setstate()`, `std::basic_streambuf<_CharT, _Traits>::sgetc()`, `std::basic_streambuf<_CharT, _Traits>::snextc()`, and `std::basic_streambuf<_CharT, _Traits>::sputc()`.

**5.378.5.16** `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream<_CharT, _Traits>::get(char_type * __s, streamsize __n) [inline, inherited]`

Simple multiple-character extraction.

**Parameters:**

*s* Pointer to an [array](#).

*n* Maximum number of characters to store in *s*.

**Returns:**

\*this

Returns `get(s,n,widen('\n'))`.

Definition at line 333 of file istream.

**5.378 std::basic\_istream< \_CharT, \_Traits, \_Alloc > Class Template Reference** **1979**

---

**5.378.5.17** `template<typename _CharT, typename _Traits > basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get(char_type * __s, streamsize __n, char_type __delim) [inline, inherited]`

Simple multiple-character extraction.

**Parameters:**

- s* Pointer to an [array](#).
- n* Maximum number of characters to store in *s*.
- delim* A "stop" character.

**Returns:**

\*this

Characters are extracted and stored into *s* until one of the following happens:

- *n*-1 characters are stored
- the input sequence reaches EOF
- the next character equals *delim*, in which case the character is not extracted

If no characters are stored, failbit is [set](#) in the stream's error state.

In any case, a null character is stored into the next location in the [array](#).

**Note:**

This function is not overloaded on signed char and unsigned char.

Definition at line 309 of file istream.tcc.

References `std::basic_istream< _CharT, _Traits >::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::eof()`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, `std::basic_ios< _CharT, _Traits >::setstate()`, `std::basic_streambuf< _CharT, _Traits >::sgetc()`, and `std::basic_streambuf< _CharT, _Traits >::snextc()`.

**5.378.5.18** `template<typename _CharT, typename _Traits > basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get(char_type & __c) [inline, inherited]`

Simple extraction.

**Parameters:**

*c* The character in which to store data.

**Returns:**

\*this

Tries to extract a character and store it in *c*. If none are available, sets failbit and returns `traits::eof()`.

**Note:**

This function is not overloaded on signed char and unsigned char.

Definition at line 272 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.378.5.19** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits>::int_type std::basic_istream<_CharT, _Traits>::get(void) [inline, inherited]`

Simple extraction.

**Returns:**

A character, or `eof()`.

Tries to extract a character. If none are available, sets failbit and returns `traits::eof()`.

Definition at line 236 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.378.5.20** `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream<_CharT, _Traits>::getline(char_type * __s, streamsize __n) [inline, inherited]`

String extraction.

**Parameters:**

*s* A character [array](#) in which to store the data.

## 5.378 `std::basic_istream<_CharT, _Traits, _Alloc >` Class Template Reference

1981

*n* Maximum number of characters to extract.

### Returns:

\*this

Returns `getline(s,n,widen('\n'))`.

Definition at line 406 of file `istream`.

Referenced by `std::basic_istream<char >::getline()`.

```
5.378.5.21 template<typename _CharT , typename _Traits > basic_istream<
 _CharT, _Traits > & std::basic_istream< _CharT, _Traits
 >::getline (char_type * __s, streamsize __n, char_type __delim)
 [inline, inherited]
```

String extraction.

### Parameters:

*s* A character [array](#) in which to store the data.

*n* Maximum number of characters to extract.

*delim* A "stop" character.

### Returns:

\*this

Extracts and stores characters into *s* until one of the following happens. Note that these criteria are required to be tested in the order listed here, to allow an input line to exactly fill the *s* [array](#) without setting failbit.

1. the input sequence reaches end-of-file, in which case eofbit is [set](#) in the stream error state
2. the next character equals `delim`, in which case the character is extracted (and therefore counted in `gcount()`) but not stored
3. *n*-1 characters are stored, in which case failbit is [set](#) in the stream error state

If no characters are extracted, failbit is [set](#). (An empty line of input should therefore not cause failbit to be [set](#).)

In any case, a null character is stored in the next location in the [array](#).

Definition at line 400 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_streambuf<_CharT, _Traits>::sbumpc()`, `std::basic_ios<_CharT, _Traits>::setstate()`, `std::basic_streambuf<_CharT, _Traits>::sgetc()`, and `std::basic_streambuf<_CharT, _Traits>::snextc()`.

#### 5.378.5.22 locale `std::ios_base::getloc() const` [`inline`, `inherited`]

Locale access.

##### Returns:

A copy of the current [locale](#).

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ [locale](#).

Definition at line 694 of file `ios_base.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::money_put<_CharT, _OutIter>::do_put()`, `std::basic_ios<_CharT, _Traits>::imbue()`, `std::operator>>()`, and `std::ws()`.

#### 5.378.5.23 `template<typename _CharT, typename _Traits> bool std::basic_ios<_CharT, _Traits>::good() const` [`inline`, `inherited`]

Fast error checking.

##### Returns:

True if no error flags are [set](#).

A wrapper around `rdstate`.

Definition at line 170 of file `basic_ios.h`.

#### 5.378.5.24 `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> &std::basic_istream<_CharT, _Traits>::ignore(streamsize __n, int_type __delim)` [`inline`, `inherited`]

Extraction into another streambuf.

##### Parameters:

*sb* A streambuf in which to store data.

## 5.378 `std::basic_istream<_CharT, _Traits, _Alloc >` Class Template Reference

1983

### Returns:

`*this`

Returns `get(sb, widen('\n'))`.

Definition at line 555 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits >::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits >::eof()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits >::rdbuf()`, `std::basic_streambuf<_CharT, _Traits >::sbumpc()`, `std::basic_ios<_CharT, _Traits >::setstate()`, `std::basic_streambuf<_CharT, _Traits >::sgetc()`, and `std::basic_streambuf<_CharT, _Traits >::snextc()`.

### 5.378.5.25 `template<typename _CharT, typename _Traits > basic_istream<_CharT, _Traits > & std::basic_istream<_CharT, _Traits >::ignore(streamsize __n) [inline, inherited]`

Extraction into another streambuf.

### Parameters:

*sb* A streambuf in which to store data.

### Returns:

`*this`

Returns `get(sb, widen('\n'))`.

Definition at line 493 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits >::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits >::eof()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits >::rdbuf()`, `std::basic_ios<_CharT, _Traits >::setstate()`, `std::basic_streambuf<_CharT, _Traits >::sgetc()`, and `std::basic_streambuf<_CharT, _Traits >::snextc()`.

### 5.378.5.26 `template<typename _CharT, typename _Traits > basic_istream<_CharT, _Traits > & std::basic_istream<_CharT, _Traits >::ignore(void) [inline, inherited]`

Discarding characters.

### Parameters:

*n* Number of characters to discard.

*delim* A "stop" character.

**Returns:**

\*this

Extracts characters and throws them away until one of the following happens:

- if  $n \neq \text{std::numeric\_limits}<\text{int}>::\text{max}()$ ,  $n$  characters are extracted
- the input sequence reaches end-of-file
- the next character equals *delim* (in this case, the character is extracted); note that this condition will never occur if *delim* equals `traits::eof()`.

NB: Provide three overloads, instead of the single function (with defaults) mandated by the Standard: this leads to a better performing implementation, while still conforming to the Standard.

Definition at line 460 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_streambuf<_CharT, _Traits>::sbumpc()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.378.5.27** `template<typename _CharT, typename _Traits> locale  
std::basic_ios<_CharT, _Traits>::imbue(const locale & __loc)  
[inline, inherited]`

Moves to a new [locale](#).

**Parameters:**

*loc* The new [locale](#).

**Returns:**

The previous [locale](#).

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localizati>

Reimplemented from [std::ios\\_base](#).

Definition at line 113 of file `basic_ios.tcc`.

References `std::ios_base::getloc()`, and `std::basic_ios<_CharT, _Traits>::rdbuf()`.

Referenced by `std::operator<<()`.

**5.378 std::basic\_istream< \_CharT, \_Traits, \_Alloc > Class Template Reference** **1985**

---

**5.378.5.28** `template<typename _CharT, typename _Traits> void  
std::basic_ios< _CharT, _Traits >::init (basic_streambuf< _CharT,  
_Traits > * __sb) [inline, protected, inherited]`

All setup is performed here. This is called from the public constructor. It is not virtual and cannot be redefined.

Definition at line 125 of file basic\_ios.tcc.

References `std::ios_base::badbit`, and `std::ios_base::goodbit`.

**5.378.5.29** `long& std::ios_base::iword (int __ix) [inline, inherited]`

Access to integer [array](#).

**Parameters:**

`__ix` Index into the [array](#).

**Returns:**

A reference to an integer associated with the index.

The `iword` function provides access to an [array](#) of integers that can be used for any purpose. The [array](#) grows as required to hold the supplied index. All integers in the [array](#) are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the [array](#) can grow dynamically, it is not safe to hold onto the reference.

Definition at line 740 of file `ios_base.h`.

**5.378.5.30** `template<typename _CharT, typename _Traits> char  
std::basic_ios< _CharT, _Traits >::narrow (char_type __c, char  
__dfault) const [inline, inherited]`

Squeezes characters.

**Parameters:**

`c` The character to narrow.

`dfault` The character to narrow.

**Returns:**

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

```
std::use_facet<ctype<char_type> > (getloc()).narrow(c, default)
```

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localizati>

Definition at line 420 of file `basic_ios.h`.

**5.378.5.31** `template<typename _CharT, typename _Traits> std::basic_ios<_CharT, _Traits >::operator void * () const` [`inline`, `inherited`]

The quick-and-easy status check. This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

Definition at line 111 of file `basic_ios.h`.

**5.378.5.32** `template<typename _CharT, typename _Traits> bool std::basic_ios<_CharT, _Traits >::operator! () const` [`inline`, `inherited`]

The quick-and-easy status check. This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

Definition at line 115 of file `basic_ios.h`.

**5.378.5.33** `template<typename _CharT, typename _Traits > basic_istream<_CharT, _Traits > & std::basic_istream<_CharT, _Traits >::operator>> (_streambuf_type * __sb)` [`inline`, `inherited`]

Extracting into another streambuf.

#### Parameters:

*sb* A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a `sentry` object and has the same error handling behavior.

If *sb* is NULL, the stream will `set` failbit in its error state.

Characters are extracted from this stream and inserted into the *sb* streambuf until one of the following occurs:

- the input stream reaches end-of-file,

## 5.378 `std::basic_istream<_CharT, _Traits, _Alloc >` Class Template Reference 1987

- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted), or
- an [exception](#) occurs (and in this case is caught)

If the function inserts no characters, failbit is [set](#).

Definition at line 204 of file `istream.tcc`.

References `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits >::rdbuf()`, and `std::basic_ios<_CharT, _Traits >::setstate()`.

### 5.378.5.34 `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream<_CharT, _Traits >::operator>> (void *& _p)` [`inline`, `inherited`]

Extracting into another streambuf.

#### Parameters:

*sb* A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a [sentry](#) object and has the same error handling behavior.

If *sb* is NULL, the stream will [set](#) failbit in its error state.

Characters are extracted from this stream and inserted into the *sb* streambuf until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted), or
- an [exception](#) occurs (and in this case is caught)

If the function inserts no characters, failbit is [set](#).

Definition at line 215 of file `istream`.

### 5.378.5.35 `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream<_CharT, _Traits >::operator>> (long double & _f)` [`inline`, `inherited`]

Extracting into another streambuf.

**Parameters:**

*sb* A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a [sentry](#) object and has the same error handling behavior.

If *sb* is NULL, the stream will [set](#) failbit in its error state.

Characters are extracted from this stream and inserted into the *sb* streambuf until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted), or
- an [exception](#) occurs (and in this case is caught)

If the function inserts no characters, failbit is [set](#).

Definition at line 211 of file istream.

**5.378.5.36** `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::operator>> (double & __f) [inline, inherited]`

Extracting into another streambuf.

**Parameters:**

*sb* A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a [sentry](#) object and has the same error handling behavior.

If *sb* is NULL, the stream will [set](#) failbit in its error state.

Characters are extracted from this stream and inserted into the *sb* streambuf until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted), or
- an [exception](#) occurs (and in this case is caught)

If the function inserts no characters, failbit is [set](#).

**5.378.5.46** `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream<_CharT, _Traits>::operator>> (bool & __n) [inline, inherited]`

Basic arithmetic extractors.

**Parameters:**

*A* variable of builtin type.

**Returns:**

`*this` if successful

These functions use the stream's current [locale](#) (specifically, the `num_get` facet) to parse the input data.

Definition at line 167 of file istream.

**5.378.5.47** `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream<_CharT, _Traits>::operator>> (ios_base &(*)(ios_base &) __pf) [inline, inherited]`

Interface for manipulators. Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see

## 5.378 `std::basic_istringstream<_CharT, _Traits, _Alloc >` Class Template Reference 1995

---

the `iomanip` header.

Definition at line 131 of file `istream`.

**5.378.5.48** `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream<_CharT, _Traits >::operator>> (__ios_type &(*)(__ios_type &) _pf) [inline, inherited]`

Interface for manipulators. Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `iomanip` header.

Definition at line 124 of file `istream`.

**5.378.5.49** `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream<_CharT, _Traits >::operator>> (__istream_type &(*)(__istream_type &) _pf) [inline, inherited]`

Interface for manipulators. Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `iomanip` header.

Definition at line 120 of file `istream`.

**5.378.5.50** `template<typename _CharT, typename _Traits > basic_istream<_CharT, _Traits >::int_type std::basic_istream<_CharT, _Traits >::peek(void) [inline, inherited]`

Looking ahead in the stream.

### Returns:

The next character, or `eof()`.

If, after constructing the `sentry` object, `good()` is false, returns `traits::eof()`. Otherwise reads but does not extract the next input character.

Definition at line 620 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits >::M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits >::eof()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits >::rdbuf()`, and `std::basic_ios<_CharT, _Traits >::setstate()`.

**5.378.5.51** `streamsize std::ios_base::precision (streamsize __prec) [inline, inherited]`

Changing flags.

**Parameters:**

*prec* The new precision value.

**Returns:**

The previous value of `precision()`.

Definition at line 629 of file `ios_base.h`.

**5.378.5.52** `streamsize std::ios_base::precision () const [inline, inherited]`

Flags access.

**Returns:**

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Definition at line 620 of file `ios_base.h`.

Referenced by `std::basic_ios<_CharT, _Traits >::copyfmt()`, and `std::operator<<()`.

**5.378.5.53** `template<typename _CharT, typename _Traits > basic_istream<_CharT, _Traits > & std::basic_istream<_CharT, _Traits >::putback (char_type __c) [inline, inherited]`

Unextracting a single character.

**Parameters:**

*c* The character to push back into the input stream.

**Returns:**

`*this`

If `rdbuf ()` is not null, calls `rdbuf ()->sputbackc (c)`.

If `rdbuf ()` is null or if `sputbackc ()` fails, sets `badbit` in the error state.

## 5.378 `std::basic_istream<_CharT, _Traits, _Alloc >` Class Template Reference 1997

---

### Note:

Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

Definition at line 711 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits >::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits >::eof()`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits >::rdbuf()`, `std::basic_ios<_CharT, _Traits >::setstate()`, and `std::basic_streambuf<_CharT, _Traits >::sputbackc()`.

Referenced by `std::operator>>()`.

### 5.378.5.54 `void*& std::ios_base::pword(int __ix)` [`inline`, `inherited`]

Access to void pointer `array`.

#### Parameters:

`__ix` Index into the `array`.

#### Returns:

A reference to a `void*` associated with the index.

The `pword` function provides access to an `array` of pointers that can be used for any purpose. The `array` grows as required to hold the supplied index. All pointers in the `array` are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the `array` can grow dynamically, it is not safe to hold onto the reference.

Definition at line 761 of file `ios_base.h`.

### 5.378.5.55 `template<typename _CharT, typename _Traits> basic_streambuf<_CharT, _Traits > * std::basic_ios<_CharT, _Traits >::rdbuf(basic_streambuf<_CharT, _Traits > * __sb)` [`inline`, `inherited`]

Changing the underlying buffer.

#### Parameters:

`sb` The new stream buffer.

#### Returns:

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream foo; // or some other derived type
std::streambuf* p =;

foo.ios::rdbuf(p); // ios == basic_ios<char>
```

Definition at line 52 of file `basic_ios.tcc`.

References `std::basic_ios<_CharT, _Traits >::clear()`.

**5.378.5.56** `template<typename _CharT, typename _Traits, typename _Alloc>`  
`__stringbuf_type* std::basic_istream<_CharT, _Traits,`  
`_Alloc >::rdbuf() const [inline]`

Accessing the underlying buffer.

**Returns:**

The current `basic_stringbuf` buffer.

This hides both signatures of `std::basic_ios::rdbuf()`.

Reimplemented from `std::basic_ios<_CharT, _Traits >`.

Definition at line 332 of file `sstream`.

**5.378.5.57** `template<typename _CharT, typename _Traits> iostate`  
`std::basic_ios<_CharT, _Traits >::rdstate() const [inline,`  
`inherited]`

Returns the error state of the stream buffer.

**Returns:**

A bit pattern (well, isn't everything?)

See `std::ios_base::iostate` for the possible bit values. Most users will call one of the interpreting wrappers, e.g., `good()`.

Definition at line 127 of file `basic_ios.h`.

**5.378 std::basic\_istream< \_CharT, \_Traits, \_Alloc > Class Template Reference** **1999**

---

**5.378.5.58** `template<typename _CharT, typename _Traits > basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::read (char_type * __s, streamsize __n) [inline, inherited]`

Extraction without delimiters.

**Parameters:**

- s* A character [array](#).
- n* Maximum number of characters to store.

**Returns:**

\*this

If the stream state is `good()`, extracts characters and stores them into *s* until one of the following happens:

- *n* characters are stored
- the input sequence reaches end-of-file, in which case the error state is `set` to `failbit|eofbit`.

**Note:**

This function is not overloaded on signed char and unsigned char.

Definition at line 650 of file istream.tcc.

References `std::basic_istream< _CharT, _Traits >::_M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

**5.378.5.59** `template<typename _CharT, typename _Traits > streamsize std::basic_istream< _CharT, _Traits >::readsome (char_type * __s, streamsize __n) [inline, inherited]`

Extraction until the buffer is exhausted, but no more.

**Parameters:**

- s* A character [array](#).
- n* Maximum number of characters to store.

**Returns:**

The number of characters extracted.

Extracts characters and stores them into *s* depending on the number of characters remaining in the streambuf's buffer, `rdbuf()->in_avail()`, called *A* here:

- if  $A == -1$ , sets eofbit and extracts no characters
- if  $A == 0$ , extracts no characters
- if  $A > 0$ , extracts  $\min(A, n)$

The goal is to empty the current buffer, and to not request any more from the external input sequence controlled by the streambuf.

Definition at line 679 of file istream.tcc.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::min()`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

#### 5.378.5.60 `void std::ios_base::register_callback(event_callback __fn, int __index) [inherited]`

Add the callback `__fn` with parameter `__index`.

##### Parameters:

- `__fn` The function to add.
- `__index` The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

#### 5.378.5.61 `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::seekg(off_type __off, ios_base::seekdir __dir) [inline, inherited]`

Changing the current read position.

##### Parameters:

- `off` A file offset object.
- `dir` The direction in which to seek.

##### Returns:

`*this`

## 5.378 `std::basic_istream<_CharT, _Traits, _Alloc>` Class Template Reference 2001

If `fail()` is not true, calls `rdbuf() ->pubseekoff(off, dir)`. If that function fails, sets failbit.

### Note:

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 870 of file `istream.tcc`.

References `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::ios_base::in`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

### 5.378.5.62 `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> &std::basic_istream<_CharT, _Traits>::seekg(pos_type __pos)` [`inline, inherited`]

Changing the current read position.

### Parameters:

*pos* A file position object.

### Returns:

\*this

If `fail()` is not true, calls `rdbuf() ->pubseekpos(pos)`. If that function fails, sets failbit.

### Note:

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 837 of file `istream.tcc`.

References `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::ios_base::in`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

### 5.378.5.63 `fmtflags std::ios_base::setf(fmtflags __fmtfl, fmtflags __mask)` [`inline, inherited`]

Setting new format flags.

**Parameters:**

*fmtfl* Additional flags to [set](#).  
*mask* The flags mask for *fmtfl*.

**Returns:**

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* & *mask*. An example mask is `ios_base::adjustfield`.

Definition at line 594 of file `ios_base.h`.

#### 5.378.5.64 `fmtflags std::ios_base::setf (fmtflags __fmtfl) [inline, inherited]`

Setting new format flags.

**Parameters:**

*fmtfl* Additional flags to [set](#).

**Returns:**

The previous format control flags.

This function sets additional flags in format control. Flags that were previously [set](#) remain [set](#).

Definition at line 577 of file `ios_base.h`.

Referenced by `std::boolalpha()`, `std::dec()`, `std::fixed()`, `std::hex()`, `std::internal()`, `std::left()`, `std::oct()`, `std::right()`, `std::scientific()`, `std::showbase()`, `std::showpoint()`, `std::showpos()`, `std::skipws()`, `std::unitbuf()`, and `std::uppercase()`.

#### 5.378.5.65 `template<typename _CharT, typename _Traits> void std::basic_ios< _CharT, _Traits >::setstate (iostate __state) [inline, inherited]`

Sets additional flags in the error state.

**Parameters:**

*state* The additional state flag(s) to [set](#).

See `std::ios_base::iostate` for the possible bit values.

## 5.378 `std::basic_istringstream<_CharT, _Traits, _Alloc>` Class Template Reference

2003

Definition at line 147 of file `basic_ios.h`.

Referenced by `std::basic_ostream<_CharT, _Traits>::flush()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::basic_ostream<_CharT, _Traits>::operator<<()`, `std::basic_istream<_CharT, _Traits>::operator>>()`, `std::operator>>()`, `std::basic_istream<_CharT, _Traits>::peek()`, `std::basic_ostream<_CharT, _Traits>::put()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_istream<_CharT, _Traits>::read()`, `std::basic_istream<_CharT, _Traits>::readsome()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_ostream<_CharT, _Traits>::seekp()`, `std::basic_istream<_CharT, _Traits>::sync()`, `std::basic_istream<_CharT, _Traits>::unset()`, and `std::ws()`.

**5.378.5.66** `template<typename _CharT, typename _Traits, typename _Alloc> void std::basic_istringstream<_CharT, _Traits, _Alloc>::str(const __string_type & __s) [inline]`

Setting a new buffer.

### Parameters:

`s` The string to use as a new sequence.

Calls `rdbuf() -> str(s)`.

Definition at line 350 of file `sstream`.

**5.378.5.67** `template<typename _CharT, typename _Traits, typename _Alloc> __string_type std::basic_istringstream<_CharT, _Traits, _Alloc>::str() const [inline]`

Copying out the string buffer.

### Returns:

`rdbuf() -> str()`

Definition at line 340 of file `sstream`.

**5.378.5.68** `template<typename _CharT, typename _Traits> int std::basic_istream<_CharT, _Traits>::sync(void) [inline, inherited]`

Synchronizing the stream buffer.

**Returns:**

0 on success, -1 on failure

If `rdbuf()` is a null pointer, returns -1.

Otherwise, calls `rdbuf() ->pubsync()`, and if that returns -1, sets `badbit` and returns -1.

Otherwise, returns 0.

**Note:**

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 777 of file `istream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::goodbit`, `std::basic_streambuf<_CharT, _Traits>::pubsync()`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

### 5.378.5.69 `static bool std::ios_base::sync_with_stdio (bool __sync = true) [static, inherited]`

Interaction with the standard C I/O objects.

**Parameters:**

*sync* Whether to synchronize or not.

**Returns:**

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., `stdout`) and the standard C++ objects (e.g., `cout`). User-declared streams are unaffected. See <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch28s02.html>

### 5.378.5.70 `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits>::pos_type std::basic_istream<_CharT, _Traits>::tellg (void) [inline, inherited]`

Getting the current read position.

## 5.378 `std::basic_istream<_CharT, _Traits, _Alloc >` Class Template Reference

2005

### Returns:

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0, cur, in)`.

### Note:

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 813 of file `istream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::cur`, `std::basic_ios<_CharT, _Traits >::fail()`, `std::ios_base::in`, and `std::basic_ios<_CharT, _Traits >::rdbuf()`.

**5.378.5.71** `template<typename _CharT, typename _Traits>  
basic_ostream<_CharT, _Traits>* std::basic_ios<_CharT, _Traits  
>::tie(basic_ostream<_CharT, _Traits > * __tistr) [inline,  
inherited]`

Ties this stream to an output stream.

### Parameters:

*tistr* The output stream.

### Returns:

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see `tie()` for more.

Definition at line 297 of file `basic_ios.h`.

**5.378.5.72** `template<typename _CharT, typename _Traits>  
basic_ostream<_CharT, _Traits>* std::basic_ios<_CharT, _Traits  
>::tie() const [inline, inherited]`

Fetches the current *tied* stream.

### Returns:

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Definition at line 285 of file basic\_ios.h.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`.

**5.378.5.73** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::unget(void) [inline, inherited]`

Unextracting the previous character.

**Returns:**

`*this`

If `rdbuf()` is not null, calls `rdbuf()->sungetc(c)`.

If `rdbuf()` is null or if `sungetc()` fails, sets `badbit` in the error state.

**Note:**

Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

Definition at line 744 of file istream.tcc.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_ios<_CharT, _Traits>::setstate()`, and `std::basic_streambuf<_CharT, _Traits>::sungetc()`.

**5.378.5.74** `void std::ios_base::unsetf(fmtflags __mask) [inline, inherited]`

Clearing format flags.

**Parameters:**

*mask* The flags to unset.

This function clears *mask* in the format flags.

Definition at line 609 of file ios\_base.h.

Referenced by `std::noboolalpha()`, `std::noshowbase()`, `std::noshowpoint()`, `std::noshowpos()`, `std::noskipws()`, `std::nounitbuf()`, and `std::nouppercase()`.

**5.378 std::basic\_istream<\_CharT, \_Traits, \_Alloc > Class Template Reference** 2007

---

**5.378.5.75** `template<typename _CharT, typename _Traits> char_type  
std::basic_ios<_CharT, _Traits >::widen (char __c) const  
[inline, inherited]`

Widens characters.

**Parameters:**

*c* The character to widen.

**Returns:**

The widened character.

Maps a character of `char` to a character of `char_type`.

Returns the result of

```
std::use_facet<ctype<char_type> >(getloc()).widen(c)
```

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

Definition at line 439 of file `basic_ios.h`.

Referenced by `std::endl()`, `std::getline()`, and `std::operator>>()`.

**5.378.5.76** `streamsize std::ios_base::width (streamsize __wide) [inline,  
inherited]`

Changing flags.

**Parameters:**

*wide* The new width value.

**Returns:**

The previous value of `width()`.

Definition at line 652 of file `ios_base.h`.

**5.378.5.77** `streamsize std::ios_base::width () const [inline, inherited]`

Flags access.

**Returns:**

The minimum field width to generate on output operations.

*Minimum field width* refers to the number of characters.

Definition at line 643 of file `ios_base.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::num_put<_CharT, _OutIter>::do_put()`, and `std::operator<>>()`.

#### 5.378.5.78 `static int std::ios_base::xalloc () throw () [static, inherited]`

Access to unique indices.

##### Returns:

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the `iword` and `pword` functions. The expectation is that an application calls `xalloc` in order to obtain an index in the `iword` and `pword` arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. `xalloc` is guaranteed to return an index that is safe to use in the `iword` and `pword` arrays.

### 5.378.6 Member Data Documentation

#### 5.378.6.1 `template<typename _CharT, typename _Traits> streamsize std::basic_istream<_CharT, _Traits>::_M_gcount [protected, inherited]`

The number of characters extracted in the previous unformatted function; see `gcount()`.

Definition at line 79 of file `istream`.

Referenced by `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::basic_istream<_CharT, _Traits>::peek()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_istream<_CharT, _Traits>::read()`, `std::basic_istream<_CharT, _Traits>::readsome()`, and `std::basic_istream<_CharT, _Traits>::unget()`.

#### 5.378.6.2 `const fmtflags std::ios_base::adjustfield [static, inherited]`

A mask of `left|right|internal`. Useful for the 2-arg form of `setf`.

Definition at line 318 of file `ios_base.h`.

Referenced by `std::num_put<_CharT, _OutIter>::do_put()`.

## 5.378 `std::basic_istringstream<_CharT, _Traits, _Alloc>` Class Template Reference 2009

---

### 5.378.6.3 `const openmode std::ios_base::app` [static, inherited]

Seek to end before each write.

Definition at line 372 of file `ios_base.h`.

### 5.378.6.4 `const openmode std::ios_base::ate` [static, inherited]

Open and seek to end immediately after opening.

Definition at line 375 of file `ios_base.h`.

Referenced by `std::basic_filebuf<_CharT, _Traits>::open()`.

### 5.378.6.5 `const iostate std::ios_base::badbit` [static, inherited]

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).

Definition at line 342 of file `ios_base.h`.

Referenced by `std::basic_ostream<_CharT, _Traits>::flush()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::basic_ios<_CharT, _Traits>::init()`, `std::operator<<()`, `std::basic_ostream<_CharT, _Traits>::operator<<()`, `std::operator>>()`, `std::basic_istream<_CharT, _Traits>::operator>>()`, `std::basic_istream<_CharT, _Traits>::peek()`, `std::basic_ostream<_CharT, _Traits>::put()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_istream<_CharT, _Traits>::read()`, `std::basic_istream<_CharT, _Traits>::readsome()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_ostream<_CharT, _Traits>::seekp()`, `std::basic_istream<_CharT, _Traits>::sync()`, `std::basic_istream<_CharT, _Traits>::tellg()`, `std::basic_ostream<_CharT, _Traits>::tellp()`, `std::basic_istream<_CharT, _Traits>::unget()`, and `std::basic_ostream<_CharT, _Traits>::write()`.

### 5.378.6.6 `const fmtflags std::ios_base::basefield` [static, inherited]

A mask of `dec|oct|hex`. Useful for the 2-arg form of `setf`.

Definition at line 321 of file `ios_base.h`.

Referenced by `std::num_get<_CharT, InIter>::do_get()`, and `std::basic_ostream<_CharT, _Traits>::operator<<()`.

### 5.378.6.7 `const seekdir std::ios_base::beg` [static, inherited]

Request a seek relative to the beginning of the stream.

Definition at line 404 of file ios\_base.h.

Referenced by `std::basic_filebuf< _CharT, _Traits >::seekpos()`.

#### **5.378.6.8 const openmode std::ios\_base::binary [static, inherited]**

Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch27s02.html>.

Definition at line 380 of file ios\_base.h.

Referenced by `std::basic_filebuf< _CharT, _Traits >::showmanyc()`.

#### **5.378.6.9 const fmtflags std::ios\_base::boolalpha [static, inherited]**

Insert/extract `bool` in alphabetic rather than numeric format.

Definition at line 266 of file ios\_base.h.

Referenced by `std::num_get< _CharT, _InIter >::do_get()`, and `std::num_put< _CharT, _OutIter >::do_put()`.

#### **5.378.6.10 const seekdir std::ios\_base::cur [static, inherited]**

Request a seek relative to the current position within the sequence.

Definition at line 407 of file ios\_base.h.

Referenced by `std::basic_filebuf< _CharT, _Traits >::imbue()`, `std::basic_filebuf< _CharT, _Traits >::pbackfail()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff()`, `std::basic_filebuf< _CharT, _Traits >::seekoff()`, `std::basic_istream< _CharT, _Traits >::tellg()`, and `std::basic_ostream< _CharT, _Traits >::tellp()`.

#### **5.378.6.11 const fmtflags std::ios\_base::dec [static, inherited]**

Converts integer input or generates integer output in [decimal](#) base.

Definition at line 269 of file ios\_base.h.

#### **5.378.6.12 const seekdir std::ios\_base::end [static, inherited]**

Request a seek relative to the current end of the sequence.

Definition at line 410 of file ios\_base.h.

## 5.378 `std::basic_istream<_CharT, _Traits, _Alloc>` Class Template Reference 2011

Referenced by `std::basic_filebuf<_CharT, _Traits>::open()`, and `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekoff()`.

### 5.378.6.13 `const ios_base::eofbit` [static, inherited]

Indicates that an input operation reached the end of an input sequence.

Definition at line 345 of file `ios_base.h`.

Referenced by `std::num_get<_CharT, _InIter>::do_get()`, `std::time_get<_CharT, _InIter>::do_get_date()`, `std::time_get<_CharT, _InIter>::do_get_monthname()`, `std::time_get<_CharT, _InIter>::do_get_time()`, `std::time_get<_CharT, _InIter>::do_get_weekday()`, `std::time_get<_CharT, _InIter>::do_get_year()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::operator>>()`, `std::basic_istream<_CharT, _Traits>::operator>>()`, `std::basic_istream<_CharT, _Traits>::peek()`, `std::basic_istream<_CharT, _Traits>::read()`, `std::basic_istream<_CharT, _Traits>::readsome()`, and `std::ws()`.

### 5.378.6.14 `const ios_base::failbit` [static, inherited]

Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.

Definition at line 350 of file `ios_base.h`.

Referenced by `std::num_get<_CharT, _InIter>::do_get()`, `std::time_get<_CharT, _InIter>::do_get_monthname()`, `std::time_get<_CharT, _InIter>::do_get_weekday()`, `std::time_get<_CharT, _InIter>::do_get_year()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::basic_ostream<_CharT, _Traits>::operator<<()`, `std::basic_istream<_CharT, _Traits>::operator>>()`, `std::operator>>()`, `std::basic_istream<_CharT, _Traits>::read()`, `std::basic_istream<_CharT, _Traits>::seekg()`, and `std::basic_ostream<_CharT, _Traits>::seekp()`.

### 5.378.6.15 `const fmtflags std::ios_base::fixed` [static, inherited]

Generate floating-point output in fixed-point notation.

Definition at line 272 of file `ios_base.h`.

### 5.378.6.16 `const fmtflags std::ios_base::floatfield` [static, inherited]

A mask of `scientific|fixed`. Useful for the 2-arg form of `setf`.

Definition at line 324 of file `ios_base.h`.

**5.378.6.17 const iostate std::ios\_base::goodbit [static, inherited]**

Indicates all is well.

Definition at line 353 of file ios\_base.h.

Referenced by `std::num_get<_CharT, _InIter >::do_get()`, `std::time_get<_CharT, _InIter >::do_get_monthname()`, `std::time_get<_CharT, _InIter >::do_get_weekday()`, `std::time_get<_CharT, _InIter >::do_get_year()`, `std::basic_ostream<_CharT, _Traits >::flush()`, `std::basic_istream<_CharT, _Traits >::get()`, `std::basic_istream<_CharT, _Traits >::getline()`, `std::basic_istream<_CharT, _Traits >::ignore()`, `std::basic_ios<_CharT, _Traits >::init()`, `std::basic_ostream<_CharT, _Traits >::operator<<()`, `std::operator>>()`, `std::basic_istream<_CharT, _Traits >::operator>>()`, `std::basic_istream<_CharT, _Traits >::peek()`, `std::basic_ostream<_CharT, _Traits >::put()`, `std::basic_istream<_CharT, _Traits >::putback()`, `std::basic_istream<_CharT, _Traits >::read()`, `std::basic_istream<_CharT, _Traits >::readsome()`, `std::basic_istream<_CharT, _Traits >::seekg()`, `std::basic_ostream<_CharT, _Traits >::seekp()`, `std::basic_istream<_CharT, _Traits >::sync()`, and `std::basic_istream<_CharT, _Traits >::unget()`.

**5.378.6.18 const fmtflags std::ios\_base::hex [static, inherited]**

Converts integer input or generates integer output in hexadecimal base.

Definition at line 275 of file ios\_base.h.

Referenced by `std::num_get<_CharT, _InIter >::do_get()`, `std::num_put<_CharT, _OutIter >::do_put()`, and `std::basic_ostream<_CharT, _Traits >::operator<<()`.

**5.378.6.19 const openmode std::ios\_base::in [static, inherited]**

Open for input. Default for `ifstream` and `fstream`.

Definition at line 383 of file ios\_base.h.

Referenced by `std::basic_filebuf<_CharT, _Traits >::pbackfail()`, `std::basic_istream<_CharT, _Traits >::seekg()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc >::seekoff()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc >::seekpos()`, `std::basic_filebuf<_CharT, _Traits >::showmanyc()`, `std::basic_istream<_CharT, _Traits >::tellg()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc >::underflow()`, `std::basic_filebuf<_CharT, _Traits >::underflow()`, and `std::basic_filebuf<_CharT, _Traits >::xsgetn()`.

**5.378.6.20 const fmtflags std::ios\_base::internal [static, inherited]**

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.

## 5.378 `std::basic_istream< _CharT, _Traits, _Alloc >` Class Template Reference 2013

---

Definition at line 280 of file `ios_base.h`.

### 5.378.6.21 `const fmtflags std::ios_base::left` [static, inherited]

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.)

Definition at line 284 of file `ios_base.h`.

Referenced by `std::num_put< _CharT, _OutIter >::do_put()`.

### 5.378.6.22 `const fmtflags std::ios_base::oct` [static, inherited]

Converts integer input or generates integer output in octal base.

Definition at line 287 of file `ios_base.h`.

Referenced by `std::basic_ostream< _CharT, _Traits >::operator<<()`.

### 5.378.6.23 `const openmode std::ios_base::out` [static, inherited]

Open for output. Default for `ofstream` and `fstream`.

Definition at line 386 of file `ios_base.h`.

Referenced by `std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow()`, `std::basic_filebuf< _CharT, _Traits >::overflow()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos()`, `std::basic_ostream< _CharT, _Traits >::tellp()`, and `std::basic_filebuf< _CharT, _Traits >::xsputn()`.

### 5.378.6.24 `const fmtflags std::ios_base::right` [static, inherited]

Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.)

Definition at line 291 of file `ios_base.h`.

### 5.378.6.25 `const fmtflags std::ios_base::scientific` [static, inherited]

Generates floating-point output in scientific notation.

Definition at line 294 of file `ios_base.h`.

**5.378.6.26 const fmtflags std::ios\_base::showbase [static, inherited]**

Generates a prefix indicating the numeric base of generated integer output.

Definition at line 298 of file ios\_base.h.

**5.378.6.27 const fmtflags std::ios\_base::showpoint [static, inherited]**

Generates a decimal-point character unconditionally in generated floating-point output.

Definition at line 302 of file ios\_base.h.

**5.378.6.28 const fmtflags std::ios\_base::showpos [static, inherited]**

Generates a + sign in non-negative generated numeric output.

Definition at line 305 of file ios\_base.h.

**5.378.6.29 const fmtflags std::ios\_base::skipws [static, inherited]**

Skips leading white space before certain input operations.

Definition at line 308 of file ios\_base.h.

**5.378.6.30 const openmode std::ios\_base::trunc [static, inherited]**

Open for input. Default for `ofstream`.

Definition at line 389 of file ios\_base.h.

**5.378.6.31 const fmtflags std::ios\_base::unitbuf [static, inherited]**

Flushes output after each output operation.

Definition at line 311 of file ios\_base.h.

**5.378.6.32 const fmtflags std::ios\_base::uppercase [static, inherited]**

Replaces certain lowercase letters with their uppercase equivalents in generated output.

Definition at line 315 of file ios\_base.h.

Referenced by `std::num_put<_CharT, _OutIter >::do_put()`.

## 5.379 `std::basic_ofstream< _CharT, _Traits >` Class Template Reference

Controlling output for files.

This class supports reading from named files, using the inherited functions from `std::basic_ostream`. To control the associated sequence, an instance of `std::basic_filebuf` is used, which this page refers to as `sb`. Inheritance diagram for `std::basic_ofstream< _CharT, _Traits >`:

### Public Types

- typedef `ctype< _CharT > __ctype_type`

### Unformatted Output Functions

All the unformatted output functions have some common behavior. Each starts by constructing a temporary object of type `std::basic_ostream::sentry`. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an *exception* is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state. If `badbit` is on in the stream's exceptions mask, the *exception* will be rethrown without completing its actions.

- void `_M_write` (const char\_type \*\_\_s, streamsize \_\_n)
- `__ostream_type` & `put` (char\_type \_\_c)
- `__ostream_type` & `write` (const char\_type \*\_\_s, streamsize \_\_n)

### Arithmetic Inserters

All the `operator<<` functions (aka formatted output functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_ofstream::sentry`. This can have several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an *exception* is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state without causing an `ios_base::failure` to be thrown. The original *exception* will then be rethrown.

- `__ostream_type & operator<< (__streambuf_type *__sb)`
- `__ostream_type & operator<< (const void *__p)`
- `__ostream_type & operator<< (long double __f)`
- `__ostream_type & operator<< (float __f)`
- `__ostream_type & operator<< (double __f)`
- `__ostream_type & operator<< (unsigned long long __n)`
- `__ostream_type & operator<< (long long __n)`
- `__ostream_type & operator<< (unsigned int __n)`
- `__ostream_type & operator<< (int __n)`
- `__ostream_type & operator<< (unsigned short __n)`
- `__ostream_type & operator<< (short __n)`
- `__ostream_type & operator<< (bool __n)`
- `__ostream_type & operator<< (unsigned long __n)`
- `__ostream_type & operator<< (long __n)`
  
- `__ostream_type & operator<< (ios_base &(*__pf)(ios_base &))`
- `__ostream_type & operator<< (__ios_type &(*__pf)(__ios_type &))`
- `__ostream_type & operator<< (__ostream_type &(*__pf)(__ostream_type &))`

### 5.379.1 Detailed Description

`template<typename _CharT, typename _Traits> class std::basic_ofstream<_CharT, _Traits>`

Controlling output for files.

This class supports reading from named files, using the inherited functions from `std::basic_ostream`. To control the associated sequence, an instance of `std::basic_filebuf` is used, which this page refers to as `sb`.

Definition at line 583 of file `fstream`.

## 5.379.2 Member Typedef Documentation

**5.379.2.1** `template<typename _CharT, typename _Traits> typedef ctype<_CharT> std::basic_ostream< _CharT, _Traits >::_ctype_type [inherited]`

These are non-standard types.

Reimplemented from [std::basic\\_ios< \\_CharT, \\_Traits >](#).

Definition at line 71 of file ostream.

**5.379.2.2** `template<typename _CharT, typename _Traits> typedef num_get<_CharT, istreambuf_iterator<_CharT, _Traits> > std::basic_ios< _CharT, _Traits >::_num_get_type [inherited]`

These are non-standard types.

Reimplemented in [std::basic\\_istream< \\_CharT, \\_Traits >](#), [std::basic\\_istream< char, \\_Traits >](#), and [std::basic\\_istream< char >](#).

Definition at line 86 of file basic\_ios.h.

**5.379.2.3** `template<typename _CharT, typename _Traits> typedef num_put<_CharT, ostreambuf_iterator<_CharT, _Traits> > std::basic_ostream< _CharT, _Traits >::_num_put_type [inherited]`

The quick-and-easy status check. This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

Reimplemented from [std::basic\\_ios< \\_CharT, \\_Traits >](#).

Definition at line 70 of file ostream.

**5.379.2.4** `template<typename _CharT, typename _Traits > typedef _CharT std::basic_ofstream< _CharT, _Traits >::char_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic\\_ostream< \\_CharT, \\_Traits >](#).

Definition at line 587 of file fstream.

**5.379.2.5** `typedef void(* std::ios_base::event_callback)(event, ios_base &, int)`  
`[inherited]`

The type of an event callback function.

**Parameters:**

*event* One of the members of the event enum.

*ios\_base* Reference to the `ios_base` object.

*int* The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several `ios_base` and `basic_ios` functions, specifically `imbue()`, `copyfmt()`, and `~ios()`.

Definition at line 444 of file `ios_base.h`.

**5.379.2.6** `typedef _Ios_Fmtflags std::ios_base::fmtflags` `[inherited]`

This is a bitmask type. `_Ios_Fmtflags` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `fmtflags` are:

- `boolalpha`
- `dec`
- `fixed`
- `hex`
- `internal`
- `left`
- `oct`
- `right`
- `scientific`
- `showbase`
- `showpoint`
- `showpos`
- `skipws`
- `unitbuf`

- uppercase
- adjustfield
- basefield
- floatfield

Definition at line 263 of file ios\_base.h.

**5.379.2.7** `template<typename _CharT , typename _Traits > typedef traits_type::int_type std::basic_ofstream< _CharT, _Traits >::int_type`

These are non-standard types.

Reimplemented from [std::basic\\_ostream< \\_CharT, \\_Traits >](#).

Definition at line 589 of file fstream.

**5.379.2.8** `typedef _Ios_Iostate std::ios_base::iostate [inherited]`

This is a bitmask type. `_Ios_Iostate` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `iostate` are:

- badbit
- eofbit
- failbit
- goodbit

Definition at line 338 of file ios\_base.h.

**5.379.2.9** `template<typename _CharT , typename _Traits > typedef traits_type::off_type std::basic_ofstream< _CharT, _Traits >::off_type`

These are non-standard types.

Reimplemented from [std::basic\\_ostream< \\_CharT, \\_Traits >](#).

Definition at line 591 of file fstream.

**5.379.2.10** `typedef _Ios_Openmode std::ios_base::openmode` [inherited]

This is a bitmask type. `_Ios_Openmode` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `openmode` are:

- `app`
- `ate`
- `binary`
- `in`
- `out`
- `trunc`

Definition at line 369 of file `ios_base.h`.

**5.379.2.11** `template<typename _CharT, typename _Traits> typedef traits_type::pos_type std::basic_ofstream<_CharT, _Traits>::pos_type`

These are non-standard types.

Reimplemented from [std::basic\\_ostream<\\_CharT, \\_Traits>](#).

Definition at line 590 of file `fstream`.

**5.379.2.12** `typedef _Ios_Seekdir std::ios_base::seekdir` [inherited]

This is an enumerated type. `_Ios_Seekdir` is implementation-defined. Defined values of type `seekdir` are:

- `beg`
- `cur`, equivalent to `SEEK_CUR` in the C standard library.
- `end`, equivalent to `SEEK_END` in the C standard library.

Definition at line 401 of file `ios_base.h`.

**5.379.2.13** `template<typename _CharT, typename _Traits > typedef _Traits  
std::basic_ofstream< _CharT, _Traits >::traits_type`

These are non-standard types.

Reimplemented from [std::basic\\_ostream< \\_CharT, \\_Traits >](#).

Definition at line 588 of file `fstream`.

### 5.379.3 Member Enumeration Documentation

**5.379.3.1** `enum std::ios_base::event [inherited]`

The [set](#) of events that may be passed to an event callback. `erase_event` is used during `~ios()` and `copyfmt()`. `imbue_event` is used during [imbue\(\)](#). `copyfmt_event` is used during `copyfmt()`.

Definition at line 427 of file `ios_base.h`.

### 5.379.4 Constructor & Destructor Documentation

**5.379.4.1** `template<typename _CharT, typename _Traits >  
std::basic_ofstream< _CharT, _Traits >::basic_ofstream ()  
[inline]`

Default constructor. Initializes `sb` using its default constructor, and passes `&sb` to the base class initializer. Does not open any files (you haven't given it a filename to open).

Definition at line 609 of file `fstream`.

**5.379.4.2** `template<typename _CharT, typename _Traits >  
std::basic_ofstream< _CharT, _Traits >::basic_ofstream (const char  
* __s, ios_base::openmode __mode = ios_base::out|ios_base::trunc)  
[inline, explicit]`

Create an output file stream.

#### Parameters:

*s* Null terminated string specifying the filename.

*mode* Open file in specified mode (see [std::ios\\_base](#)).

`ios_base::out|ios_base::trunc` is automatically included in *mode*.

Tip: When using `std::string` to hold the filename, you must use `.c_str()` before passing it to this constructor.

Definition at line 624 of file `fstream`.

```
5.379.4.3 template<typename _CharT , typename _Traits >
std::basic_ofstream< _CharT, _Traits >::basic_ofstream
(const std::string & __s, ios_base::openmode __mode =
ios_base::out|ios_base::trunc) [inline, explicit]
```

Create an output file stream.

**Parameters:**

*s* `std::string` specifying the filename.

*mode* Open file in specified mode (see [std::ios\\_base](#)).

`ios_base::out|ios_base::trunc` is automatically included in *mode*.

Definition at line 642 of file `fstream`.

```
5.379.4.4 template<typename _CharT , typename _Traits >
std::basic_ofstream< _CharT, _Traits >::~~basic_ofstream ()
[inline]
```

The destructor does nothing. The file is closed by the `filebuf` object, not the formatting stream.

Definition at line 657 of file `fstream`.

## 5.379.5 Member Function Documentation

```
5.379.5.1 const locale& std::ios_base::_M_getloc () const [inline,
inherited]
```

Locale access.

**Returns:**

A reference to the current [locale](#).

Like `getloc` above, but returns a reference instead of generating a copy.

Definition at line 705 of file `ios_base.h`.

Referenced by `std::money_get<_CharT, _InIter>::do_get()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::time_get<_CharT, _InIter>::do_get_date()`, `std::time_get<_CharT, _InIter>::do_get_monthname()`, `std::time_get<_CharT, _InIter>::do_get_time()`, `std::time_get<_CharT, _InIter>::do_get_weekday()`, `std::time_get<_CharT, _InIter>::do_get_year()`, `std::time_put<_CharT, _OutIter>::do_put()`, `std::num_put<_CharT, _OutIter>::do_put()`, and `std::time_put<_CharT, _OutIter>::put()`.

**5.379.5.2** `template<typename _CharT, typename _Traits> void  
std::basic_ostream< _CharT, _Traits >::_M_write (const char_type  
* __s, streamsize __n) [inline, inherited]`

Simple insertion.

**Parameters:**

*c* The character to insert.

**Returns:**

\*this

Tries to insert *c*.

**Note:**

This function is not overloaded on signed char and unsigned char.

Definition at line 287 of file ostream.

Referenced by `std::basic_ostream< _CharT, _Traits >::write()`.

**5.379.5.3** `template<typename _CharT, typename _Traits> bool std::basic_ios<  
_CharT, _Traits >::bad () const [inline, inherited]`

Fast error checking.

**Returns:**

True if the badbit is [set](#).

Note that other iostate flags may also be [set](#).

Definition at line 201 of file basic\_ios.h.

**5.379.5.4** `template<typename _CharT , typename _Traits > void  
std::basic_ios< _CharT, _Traits >::clear (iostate __state = goodbit)  
[inline, inherited]`

[Re]sets the error state.

**Parameters:**

*state* The new state flag(s) to [set](#).

## 5.379 `std::basic_ofstream<_CharT, _Traits>` Class Template Reference 2029

See `std::ios_base::iostate` for the possible bit values. Most users will not need to pass an argument.

Definition at line 40 of file `basic_ios.tcc`.

Referenced by `std::basic_ios<_CharT, _Traits>::rdbuf()`.

### 5.379.5.5 `template<typename _CharT, typename _Traits> void std::basic_ofstream<_CharT, _Traits>::close()` [inline]

Close the file. Calls `std::basic_filebuf::close()`. If that function fails, `failbit` is `set` in the stream's error state.

Definition at line 737 of file `fstream`.

### 5.379.5.6 `template<typename _CharT, typename _Traits> basic_ios<_CharT, _Traits> & std::basic_ios<_CharT, _Traits>::copyfmt(const basic_ios<_CharT, _Traits> & __rhs)` [inline, inherited]

Copies fields of `__rhs` into this.

#### Parameters:

`__rhs` The source values for the copies.

#### Returns:

Reference to this object.

All fields of `__rhs` are copied into this object except that `rdbuf()` and `rdstate()` remain unchanged. All values in the `pwd` and `iword` arrays are copied. Before copying, each callback is invoked with `erase_event`. After copying, each (new) callback is invoked with `copyfmt_event`. The final step is to copy `exceptions()`.

Definition at line 62 of file `basic_ios.tcc`.

References `std::basic_ios<_CharT, _Traits>::exceptions()`, `std::basic_ios<_CharT, _Traits>::fill()`, `std::ios_base::flags()`, `std::ios_base::getloc()`, `std::ios_base::precision()`, `std::basic_ios<_CharT, _Traits>::tie()`, and `std::ios_base::width()`.

### 5.379.5.7 `template<typename _CharT, typename _Traits> bool std::basic_ios<_CharT, _Traits>::eof() const` [inline, inherited]

Fast error checking.

#### Returns:

True if the `eofbit` is `set`.

Note that other iostate flags may also be [set](#).

Definition at line 180 of file `basic_ios.h`.

Referenced by `std::basic_istream<_CharT, _Traits >::get()`, `std::basic_istream<_CharT, _Traits >::getline()`, `std::basic_istream<_CharT, _Traits >::ignore()`, `std::basic_istream<_CharT, _Traits >::peek()`, `std::basic_istream<_CharT, _Traits >::putback()`, and `std::basic_istream<_CharT, _Traits >::unget()`.

**5.379.5.8** `template<typename _CharT, typename _Traits> void std::basic_ios<_CharT, _Traits >::exceptions (iostate __except) [inline, inherited]`

Throwing exceptions on errors.

**Parameters:**

*except* The new exceptions mask.

By default, error flags are [set](#) silently. You can [set](#) an exceptions mask for each stream; if a bit in the mask becomes [set](#) in the error flags, then an [exception](#) of type `std::ios_base::failure` is thrown.

If the error flag is already [set](#) when the exceptions mask is added, the [exception](#) is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>

int main()
{
 std::set_terminate (__gnu_cxx::__verbose_terminate_handler);

 std::ifstream f ("/etc/motd");

 std::cerr << "Setting badbit\n";
 f.setstate (std::ios_base::badbit);

 std::cerr << "Setting exception mask\n";
 f.exceptions (std::ios_base::badbit);
}
```

Definition at line 247 of file `basic_ios.h`.

**5.379.5.9** `template<typename _CharT, typename _Traits> iostate std::basic_ios<_CharT, _Traits >::exceptions () const [inline, inherited]`

Throwing exceptions on errors.

**Returns:**

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of [exceptions\(iostate\)](#) for the meaning of the return value.

Definition at line 212 of file basic\_ios.h.

Referenced by std::basic\_ios< \_CharT, \_Traits >::copyfmt().

**5.379.5.10** `template<typename _CharT, typename _Traits> bool  
std::basic_ios< _CharT, _Traits >::fail () const [inline,  
inherited]`

Fast error checking.

**Returns:**

True if either the badbit or the failbit is [set](#).

Checking the badbit in [fail\(\)](#) is historical practice. Note that other iostate flags may also be [set](#).

Definition at line 191 of file basic\_ios.h.

Referenced by std::basic\_istream< \_CharT, \_Traits >::seekg(), std::basic\_ostream< \_CharT, \_Traits >::seekp(), std::basic\_istream< \_CharT, \_Traits >::tellg(), std::basic\_ostream< \_CharT, \_Traits >::tellp(), and std::regex\_traits< \_Ch\_type >::value().

**5.379.5.11** `template<typename _CharT, typename _Traits> char_type  
std::basic_ios< _CharT, _Traits >::fill (char_type __ch)  
[inline, inherited]`

Sets a new *empty* character.

**Parameters:**

*ch* The new character.

**Returns:**

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via setw), Q characters are actually used, and Q<P. It defaults to a space ( ' ') in the current [locale](#).

Definition at line 380 of file basic\_ios.h.

**5.379.5.12** `template<typename _CharT, typename _Traits> char_type  
std::basic_ios< _CharT, _Traits >::fill () const [inline,  
inherited]`

Retrieves the *empty* character.

**Returns:**

The current fill character.

It defaults to a space ( ' ') in the current [locale](#).

Definition at line 360 of file `basic_ios.h`.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`.

**5.379.5.13** `fmtflags std::ios_base::flags (fmtflags __fmtfl) [inline,  
inherited]`

Setting new format flags all at once.

**Parameters:**

*fmtfl* The new flags to [set](#).

**Returns:**

The previous format control flags.

This function overwrites all the format flags with *fmtfl*.

Definition at line 561 of file `ios_base.h`.

**5.379.5.14** `fmtflags std::ios_base::flags () const [inline, inherited]`

Access to format flags.

**Returns:**

The format control flags for both input and output.

Definition at line 550 of file `ios_base.h`.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::num_put< _CharT, _OutIter >::do_put()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::operator<<()`, and `std::operator>>()`.

**5.379.5.15** `template<typename _CharT, typename _Traits> basic_ofstream<_CharT, _Traits> & std::basic_ofstream<_CharT, _Traits>::flush() [inline, inherited]`

Synchronizing the stream buffer.

**Returns:**

\*this

If `rdbuf()` is a null pointer, changes nothing.

Otherwise, calls `rdbuf() ->pubsync()`, and if that returns -1, sets `badbit`.

Definition at line 211 of file `ostream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

Referenced by `std::flush()`.

**5.379.5.16** `locale std::ios_base::getloc() const [inline, inherited]`

Locale access.

**Returns:**

A copy of the current `locale`.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ `locale`.

Definition at line 694 of file `ios_base.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::money_put<_CharT, _OutIter>::do_put()`, `std::basic_ios<_CharT, _Traits>::imbue()`, `std::operator>>()`, and `std::ws()`.

**5.379.5.17** `template<typename _CharT, typename _Traits> bool std::basic_ios<_CharT, _Traits>::good() const [inline, inherited]`

Fast error checking.

**Returns:**

True if no error flags are `set`.

A wrapper around `rdstate`.

Definition at line 170 of file `basic_ios.h`.

**5.379.5.18** `template<typename _CharT , typename _Traits > locale  
std::basic_ios< _CharT, _Traits >::imbue (const locale & __loc)  
[inline, inherited]`

Moves to a new [locale](#).

**Parameters:**

*loc* The new [locale](#).

**Returns:**

The previous [locale](#).

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localizati>

Reimplemented from [std::ios\\_base](#).

Definition at line 113 of file `basic_ios.tcc`.

References `std::ios_base::getloc()`, and `std::basic_ios< _CharT, _Traits >::rdbuf()`.

Referenced by `std::operator<<()`.

**5.379.5.19** `template<typename _CharT, typename _Traits> void  
std::basic_ios< _CharT, _Traits >::init (basic_streambuf< _CharT,  
_Traits > * __sb) [inline, protected, inherited]`

All setup is performed here. This is called from the public constructor. It is not virtual and cannot be redefined.

Definition at line 125 of file `basic_ios.tcc`.

References `std::ios_base::badbit`, and `std::ios_base::goodbit`.

**5.379.5.20** `template<typename _CharT , typename _Traits > bool  
std::basic_ofstream< _CharT, _Traits >::is_open () [inline]`

Wrapper to test for an open file.

**Returns:**

`rdbuf() -> is_open()`

Definition at line 676 of file `fstream`.

**5.379.5.21 long& std::ios\_base::iword(int \_\_ix) [inline, inherited]**

Access to integer [array](#).

**Parameters:**

*\_\_ix* Index into the [array](#).

**Returns:**

A reference to an integer associated with the index.

The `iword` function provides access to an [array](#) of integers that can be used for any purpose. The [array](#) grows as required to hold the supplied index. All integers in the [array](#) are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the [array](#) can grow dynamically, it is not safe to hold onto the reference.

Definition at line 740 of file `ios_base.h`.

**5.379.5.22 template<typename \_CharT, typename \_Traits> char std::basic\_ios<\_CharT, \_Traits>::narrow(char\_type \_\_c, char \_\_dfault) const [inline, inherited]**

Squeezes characters.

**Parameters:**

*c* The character to narrow.

*dfault* The character to narrow.

**Returns:**

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).narrow(c, dfault)
```

Additional notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

Definition at line 420 of file `basic_ios.h`.

**5.379.5.23** `template<typename _CharT , typename _Traits > void  
std::basic_ofstream< _CharT, _Traits >::open (const std::string &  
__s, ios_base::openmode __mode = ios_base::out | ios_base::trunc)  
[inline]`

Opens an external file.

**Parameters:**

*s* The name of the file.

*mode* The open mode flags.

Calls `std::basic_filebuf::open(s,mode|out|trunc)`. If that function fails, `failbit` is `set` in the stream's error state.

Definition at line 718 of file `fstream`.

**5.379.5.24** `template<typename _CharT , typename _Traits > void  
std::basic_ofstream< _CharT, _Traits >::open (const char * __s,  
ios_base::openmode __mode = ios_base::out | ios_base::trunc)  
[inline]`

Opens an external file.

**Parameters:**

*s* The name of the file.

*mode* The open mode flags.

Calls `std::basic_filebuf::open(s,mode|out|trunc)`. If that function fails, `failbit` is `set` in the stream's error state.

Tip: When using `std::string` to hold the filename, you must use `.c_str()` before passing it to this constructor.

Definition at line 697 of file `fstream`.

**5.379.5.25** `template<typename _CharT, typename _Traits> std::basic_ios<  
_CharT, _Traits >::operator void * () const [inline,  
inherited]`

The quick-and-easy status check. This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`

Definition at line 111 of file `basic_ios.h`.

**5.379.5.26** `template<typename _CharT, typename _Traits> bool  
std::basic_ios<_CharT, _Traits>::operator!() const [inline,  
inherited]`

The quick-and-easy status check. This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

Definition at line 115 of file `basic_ios.h`.

**5.379.5.27** `template<typename _CharT, typename _Traits> basic_ostream<  
_CharT, _Traits> & std::basic_ostream<_CharT, _Traits  
>::operator<<(_streambuf_type * __sb) [inline,  
inherited]`

Extracting from another streambuf.

**Parameters:**

*sb* A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a [sentry](#) object and has the same error handling behavior.

If *sb* is NULL, the stream will [set](#) failbit in its error state.

Characters are extracted from *sb* and inserted into `*this` until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted), or
- an [exception](#) occurs while getting a character from *sb*, which sets failbit in the error state

If the function inserts no characters, failbit is [set](#).

Definition at line 120 of file `ostream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.379.5.28** `template<typename _CharT, typename _Traits> __ostream_type&  
std::basic_ostream<_CharT, _Traits>::operator<<(const void *  
__p) [inline, inherited]`

Extracting from another streambuf.

**Parameters:**

*sb* A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a [sentry](#) object and has the same error handling behavior.

If *sb* is NULL, the stream will [set](#) failbit in its error state.

Characters are extracted from *sb* and inserted into `*this` until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted), or
- an [exception](#) occurs while getting a character from *sb*, which sets failbit in the error state

If the function inserts no characters, failbit is [set](#).

Definition at line 225 of file ostream.

**5.379.5.29** `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream<_CharT, _Traits>::operator<< (long double __f) [inline, inherited]`

Extracting from another streambuf.

**Parameters:**

*sb* A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a [sentry](#) object and has the same error handling behavior.

If *sb* is NULL, the stream will [set](#) failbit in its error state.

Characters are extracted from *sb* and inserted into `*this` until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted), or
- an [exception](#) occurs while getting a character from *sb*, which sets failbit in the error state

If the function inserts no characters, failbit is [set](#).

Definition at line 221 of file ostream.

```
5.379.5.30 template<typename _CharT, typename _Traits> __ostream_type&
std::basic_ofstream<_CharT, _Traits >::operator<< (float __f)
[inline, inherited]
```

Extracting from another streambuf.

**Parameters:**

*sb* A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a [sentry](#) object and has the same error handling behavior.

If *sb* is NULL, the stream will [set](#) failbit in its error state.

Characters are extracted from *sb* and inserted into `*this` until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted), or
- an [exception](#) occurs while getting a character from *sb*, which sets failbit in the error state

If the function inserts no characters, failbit is [set](#).

Definition at line 213 of file ostream.

```
5.379.5.31 template<typename _CharT, typename _Traits> __ostream_type&
std::basic_ofstream<_CharT, _Traits >::operator<< (double __f)
[inline, inherited]
```

Extracting from another streambuf.

**Parameters:**

*sb* A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a [sentry](#) object and has the same error handling behavior.

If *sb* is NULL, the stream will [set](#) failbit in its error state.

Characters are extracted from *sb* and inserted into *\*this* until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted), or
- an [exception](#) occurs while getting a character from *sb*, which sets failbit in the error state

If the function inserts no characters, failbit is [set](#).

Definition at line 209 of file ostream.

**5.379.5.32** `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (unsigned long long __n) [inline, inherited]`

Extracting from another streambuf.

**Parameters:**

*sb* A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a [sentry](#) object and has the same error handling behavior.

If *sb* is NULL, the stream will [set](#) failbit in its error state.

Characters are extracted from *sb* and inserted into *\*this* until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted), or
- an [exception](#) occurs while getting a character from *sb*, which sets failbit in the error state

If the function inserts no characters, failbit is [set](#).

Definition at line 204 of file ostream.

**5.379.5.33** `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ofstream<_CharT, _Traits>::operator<< (long long __n) [inline, inherited]`

Extracting from another streambuf.

**Parameters:**

*sb* A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a [sentry](#) object and has the same error handling behavior.

If *sb* is NULL, the stream will [set](#) failbit in its error state.

Characters are extracted from *sb* and inserted into `*this` until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted), or
- an [exception](#) occurs while getting a character from *sb*, which sets failbit in the error state

If the function inserts no characters, failbit is [set](#).

- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted), or
- an [exception](#) occurs while getting a character from *sb*, which sets failbit in the error state

If the function inserts no characters, failbit is [set](#).

Definition at line 169 of file ostream.

**5.379.5.40** `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ofstream<_CharT, _Traits>::operator<< (long __n) [inline, inherited]`

Basic arithmetic inserters.

**Parameters:**

*A* variable of builtin type.

**Returns:**

`*this` if successful

These functions use the stream's current [locale](#) (specifically, the [num\\_get](#) facet) to perform numeric formatting.

Definition at line 165 of file ostream.

**5.379.5.41** `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ofstream<_CharT, _Traits>::operator<< (ios_base &)(__pf) [inline, inherited]`

Interface for manipulators. Manipulators such as [std::endl](#) and [std::hex](#) use these functions in constructs like `"std::cout << std::endl"`. For more information, see the `iomanip` header.

Definition at line 127 of file ostream.

**5.379.5.42** `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (_ios_type &*)(_ios_type &) _pf) [inline, inherited]`

Interface for manipulators. Manipulators such as `std::endl` and `std::hex` use these functions in constructs like "std::cout << std::endl". For more information, see the `iomanip` header.

Definition at line 117 of file `ostream`.

**5.379.5.43** `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (__ostream_type &*)(__ostream_type &) _pf) [inline, inherited]`

Interface for manipulators. Manipulators such as `std::endl` and `std::hex` use these functions in constructs like "std::cout << std::endl". For more information, see the `iomanip` header.

Definition at line 108 of file `ostream`.

**5.379.5.44** `streamsize std::ios_base::precision (streamsize __prec) [inline, inherited]`

Changing flags.

**Parameters:**

*prec* The new precision value.

**Returns:**

The previous value of `precision()`.

Definition at line 629 of file `ios_base.h`.

**5.379.5.45** `streamsize std::ios_base::precision () const [inline, inherited]`

Flags access.

**Returns:**

The precision to generate on certain output operations.

Be careful if you try to give a definition of `precision` here; see DR 189.

## 5.379 std::basic\_ofstream<\_CharT, \_Traits> Class Template Reference 2047

Definition at line 620 of file ios\_base.h.

Referenced by std::basic\_ios<\_CharT, \_Traits>::copyfmt(), and std::operator<<().

**5.379.5.46** `template<typename _CharT, typename _Traits> basic_ofstream<_CharT, _Traits> & std::basic_ofstream<_CharT, _Traits>::put(char_type __c) [inline, inherited]`

Simple insertion.

### Parameters:

*c* The character to insert.

### Returns:

\*this

Tries to insert *c*.

### Note:

This function is not overloaded on signed char and unsigned char.

Definition at line 149 of file ostream.tcc.

References std::ios\_base::badbit, std::ios\_base::goodbit, std::basic\_ios<\_CharT, \_Traits>::rdbuf(), and std::basic\_ios<\_CharT, \_Traits>::setstate().

Referenced by std::endl(), and std::ends().

**5.379.5.47** `void*& std::ios_base::pword(int __ix) [inline, inherited]`

Access to void pointer [array](#).

### Parameters:

*\_\_ix* Index into the [array](#).

### Returns:

A reference to a void\* associated with the index.

The pword function provides access to an [array](#) of pointers that can be used for any purpose. The [array](#) grows as required to hold the supplied index. All pointers in the [array](#) are initialized to 0.

The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the [array](#) can grow dynamically, it is not safe to hold onto the reference.

Definition at line 761 of file ios\_base.h.

**5.379.5.48** `template<typename _CharT, typename _Traits> basic_streambuf<_CharT, _Traits > * std::basic_ios<_CharT, _Traits >::rdbuf (basic_streambuf<_CharT, _Traits > * __sb) [inline, inherited]`

Changing the underlying buffer.

**Parameters:**

*sb* The new stream buffer.

**Returns:**

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream foo; // or some other derived type
std::streambuf* p =;

foo.ios::rdbuf(p); // ios == basic_ios<char>
```

Definition at line 52 of file basic\_ios.tcc.

References `std::basic_ios<_CharT, _Traits >::clear()`.

**5.379.5.49** `template<typename _CharT, typename _Traits > __filebuf_type* std::basic_ofstream<_CharT, _Traits >::rdbuf () const [inline]`

Accessing the underlying buffer.

**Returns:**

The current `basic_filebuf` buffer.

This hides both signatures of `std::basic_ios::rdbuf()`.

Reimplemented from `std::basic_ios<_CharT, _Traits >`.

Definition at line 668 of file fstream.

**5.379.5.50** `template<typename _CharT, typename _Traits> iostate  
std::basic_ios<_CharT, _Traits>::rdstate () const [inline,  
inherited]`

Returns the error state of the stream buffer.

**Returns:**

A bit pattern (well, isn't everything?)

See `std::ios_base::iostate` for the possible bit values. Most users will call one of the interpreting wrappers, e.g., `good()`.

Definition at line 127 of file `basic_ios.h`.

**5.379.5.51** `void std::ios_base::register_callback (event_callback __fn, int  
__index) [inherited]`

Add the callback `__fn` with parameter `__index`.

**Parameters:**

`__fn` The function to add.

`__index` The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

**5.379.5.52** `template<typename _CharT, typename _Traits> basic_ostream<  
_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::seekp  
(off_type __off, ios_base::seekdir __dir) [inline, inherited]`

Changing the current write position.

**Parameters:**

`off` A file offset object.

`dir` The direction in which to seek.

**Returns:**

`*this`

If `fail()` is not true, calls `rdbuf()->pubseekoff(off, dir)`. If that function fails, sets failbit.

Definition at line 290 of file ostream.tcc.

References `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits >::fail()`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::ios_base::out`, `std::basic_ios<_CharT, _Traits >::rdbuf()`, and `std::basic_ios<_CharT, _Traits >::setstate()`.

**5.379.5.53** `template<typename _CharT, typename _Traits > basic_ostream<_CharT, _Traits > & std::basic_ostream<_CharT, _Traits >::seekp(pos_type __pos) [inline, inherited]`

Changing the current write position.

**Parameters:**

*pos* A file position object.

**Returns:**

\*this

If `fail()` is not true, calls `rdbuf() ->pubseekpos(pos)`. If that function fails, sets failbit.

Definition at line 258 of file ostream.tcc.

References `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits >::fail()`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::ios_base::out`, `std::basic_ios<_CharT, _Traits >::rdbuf()`, and `std::basic_ios<_CharT, _Traits >::setstate()`.

**5.379.5.54** `fmtflags std::ios_base::setf(fmtflags __fmtfl, fmtflags __mask) [inline, inherited]`

Setting new format flags.

**Parameters:**

*fmtfl* Additional flags to `set`.

*mask* The flags mask for *fmtfl*.

**Returns:**

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* & *mask*. An example mask is `ios_base::adjustfield`.

Definition at line 594 of file ios\_base.h.

**5.379.5.55** `fmtflags std::ios_base::setf (fmtflags __fmtfl) [inline, inherited]`

Setting new format flags.

**Parameters:**

*fmtfl* Additional flags to [set](#).

**Returns:**

The previous format control flags.

This function sets additional flags in format control. Flags that were previously [set](#) remain [set](#).

Definition at line 577 of file ios\_base.h.

Referenced by `std::boolalpha()`, `std::dec()`, `std::fixed()`, `std::hex()`, `std::internal()`, `std::left()`, `std::oct()`, `std::right()`, `std::scientific()`, `std::showbase()`, `std::showpoint()`, `std::showpos()`, `std::skipws()`, `std::unitbuf()`, and `std::uppercase()`.

**5.379.5.56** `template<typename _CharT, typename _Traits> void std::basic_ios< _CharT, _Traits >::setstate (iostate __state) [inline, inherited]`

Sets additional flags in the error state.

**Parameters:**

*state* The additional state flag(s) to [set](#).

See [std::ios\\_base::iostate](#) for the possible bit values.

Definition at line 147 of file basic\_ios.h.

Referenced by `std::basic_ostream< _CharT, _Traits >::flush()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::operator>>()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_ostream< _CharT, _Traits >::put()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::readsome()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_istream< _CharT, _Traits >::sync()`, `std::basic_istream< _CharT, _Traits >::unget()`, and `std::ws()`.

**5.379.5.57** `static bool std::ios_base::sync_with_stdio (bool __sync = true) [static, inherited]`

Interaction with the standard C I/O objects.

**Parameters:**

*sync* Whether to synchronize or not.

**Returns:**

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., `stdout`) and the standard C++ objects (e.g., `cout`). User-declared streams are unaffected. See <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch28s02.html>

**5.379.5.58** `template<typename _CharT, typename _Traits > basic_ostream< _CharT, _Traits >::pos_type std::basic_ostream< _CharT, _Traits >::tellp () [inline, inherited]`

Getting the current write position.

**Returns:**

A file position object.

If `fail ()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf ()->pubseekoff (0, cur, out)`.

Definition at line 237 of file `ostream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::cur`, `std::basic_ios< _CharT, _Traits >::fail()`, `std::ios_base::out`, and `std::basic_ios< _CharT, _Traits >::rdbuf()`.

**5.379.5.59** `template<typename _CharT, typename _Traits> basic_ostream< _CharT, _Traits>* std::basic_ios< _CharT, _Traits >::tie (basic_ostream< _CharT, _Traits > * __tiestr) [inline, inherited]`

Ties this stream to an output stream.

**Parameters:**

*tiestr* The output stream.

**Returns:**

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see `tie()` for more.

Definition at line 297 of file `basic_ios.h`.

**5.379.5.60** `template<typename _CharT, typename _Traits>`  
`basic_ofstream<_CharT, _Traits>* std::basic_ios<_CharT, _Traits`  
`>::tie() const [inline, inherited]`

Fetches the current *tied* stream.

**Returns:**

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Definition at line 285 of file `basic_ios.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`.

**5.379.5.61** `void std::ios_base::unsetf(fmtflags __mask) [inline,`  
`inherited]`

Clearing format flags.

**Parameters:**

*mask* The flags to unset.

This function clears *mask* in the format flags.

Definition at line 609 of file `ios_base.h`.

Referenced by `std::noboolalpha()`, `std::noshowbase()`, `std::noshowpoint()`, `std::noshowpos()`, `std::noskipws()`, `std::nounitbuf()`, and `std::nouppercase()`.

**5.379.5.62** `template<typename _CharT, typename _Traits> char_type`  
`std::basic_ios<_CharT, _Traits>::widen(char __c) const`  
`[inline, inherited]`

Widens characters.

**Parameters:**

*c* The character to widen.

**Returns:**

The widened character.

Maps a character of `char` to a character of `char_type`.

Returns the result of

```
std::use_facet<ctype<char_type> >(getloc()).widen(c)
```

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localizati>

Definition at line 439 of file `basic_ios.h`.

Referenced by `std::endl()`, `std::getline()`, and `std::operator>>()`.

### 5.379.5.63 streamsize `std::ios_base::width (streamsize __wide) [inline, inherited]`

Changing flags.

**Parameters:**

*wide* The new width value.

**Returns:**

The previous value of `width()`.

Definition at line 652 of file `ios_base.h`.

### 5.379.5.64 streamsize `std::ios_base::width () const [inline, inherited]`

Flags access.

**Returns:**

The minimum field width to generate on output operations.

*Minimum field width* refers to the number of characters.

Definition at line 643 of file `ios_base.h`.

Referenced by `std::basic_ios<_CharT, _Traits >::copyfmt()`, `std::num_put<_CharT, _OutIter >::do_put()`, and `std::operator>>()`.

**5.379.5.65** `template<typename _CharT, typename _Traits > basic_ofstream< _CharT, _Traits > & std::basic_ofstream< _CharT, _Traits >::write (const char_type * __s, streamsize __n) [inline, inherited]`

Character string insertion.

**Parameters:**

- s* The [array](#) to insert.
- n* Maximum number of characters to insert.

**Returns:**

\*this

Characters are copied from *s* and inserted into the stream until one of the following happens:

- *n* characters are inserted
- inserting into the output sequence fails (in this case, badbit will be [set](#) in the stream's error state)

**Note:**

This function is not overloaded on signed char and unsigned char.

Definition at line 183 of file ostream.tcc.

References `std::basic_ofstream< _CharT, _Traits >::_M_write()`, and `std::ios_base::badbit`.

**5.379.5.66** `static int std::ios_base::xalloc () throw () [static, inherited]`

Access to unique indices.

**Returns:**

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the `iword` and `pword` functions. The expectation is that an application calls `xalloc` in order to obtain an index in the `iword` and `pword` arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. `xalloc` is guaranteed to return an index that is safe to use in the `iword` and `pword` arrays.

## 5.379.6 Member Data Documentation

### 5.379.6.1 `const fmtflags std::ios_base::adjustfield` [static, inherited]

A mask of left|right|internal. Useful for the 2-arg form of `setf`.

Definition at line 318 of file `ios_base.h`.

Referenced by `std::num_put<_CharT, _OutIter >::do_put()`.

### 5.379.6.2 `const openmode std::ios_base::app` [static, inherited]

Seek to end before each write.

Definition at line 372 of file `ios_base.h`.

### 5.379.6.3 `const openmode std::ios_base::ate` [static, inherited]

Open and seek to end immediately after opening.

Definition at line 375 of file `ios_base.h`.

Referenced by `std::basic_filebuf<_CharT, _Traits >::open()`.

### 5.379.6.4 `const iostate std::ios_base::badbit` [static, inherited]

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).

Definition at line 342 of file `ios_base.h`.

Referenced by `std::basic_ostream<_CharT, _Traits >::flush()`, `std::basic_istream<_CharT, _Traits >::get()`, `std::basic_istream<_CharT, _Traits >::getline()`, `std::basic_istream<_CharT, _Traits >::ignore()`, `std::basic_ios<_CharT, _Traits >::init()`, `std::operator<<()`, `std::basic_ostream<_CharT, _Traits >::operator<<()`, `std::operator>>()`, `std::basic_istream<_CharT, _Traits >::operator>>()`, `std::basic_istream<_CharT, _Traits >::peek()`, `std::basic_ostream<_CharT, _Traits >::put()`, `std::basic_istream<_CharT, _Traits >::putback()`, `std::basic_istream<_CharT, _Traits >::read()`, `std::basic_istream<_CharT, _Traits >::readsome()`, `std::basic_istream<_CharT, _Traits >::seekg()`, `std::basic_ostream<_CharT, _Traits >::seekp()`, `std::basic_istream<_CharT, _Traits >::sync()`, `std::basic_istream<_CharT, _Traits >::tellg()`, `std::basic_ostream<_CharT, _Traits >::tellp()`, `std::basic_istream<_CharT, _Traits >::unget()`, and `std::basic_ostream<_CharT, _Traits >::write()`.

**5.379.6.5 const fmtflags std::ios\_base::basefield [static, inherited]**

A mask of dec|oct|hex. Useful for the 2-arg form of `setf`.

Definition at line 321 of file `ios_base.h`.

Referenced by `std::num_get< _CharT, _InIter >::do_get()`, and `std::basic_ostream< _CharT, _Traits >::operator<<()`.

**5.379.6.6 const seekdir std::ios\_base::beg [static, inherited]**

Request a seek relative to the beginning of the stream.

Definition at line 404 of file `ios_base.h`.

Referenced by `std::basic_filebuf< _CharT, _Traits >::seekpos()`.

**5.379.6.7 const openmode std::ios\_base::binary [static, inherited]**

Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch27s02.html>.

Definition at line 380 of file `ios_base.h`.

Referenced by `std::basic_filebuf< _CharT, _Traits >::showmanyc()`.

**5.379.6.8 const fmtflags std::ios\_base::boolalpha [static, inherited]**

Insert/extract `bool` in alphabetic rather than numeric format.

Definition at line 266 of file `ios_base.h`.

Referenced by `std::num_get< _CharT, _InIter >::do_get()`, and `std::num_put< _CharT, _OutIter >::do_put()`.

**5.379.6.9 const seekdir std::ios\_base::cur [static, inherited]**

Request a seek relative to the current position within the sequence.

Definition at line 407 of file `ios_base.h`.

Referenced by `std::basic_filebuf< _CharT, _Traits >::imbue()`, `std::basic_filebuf< _CharT, _Traits >::pbackfail()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff()`, `std::basic_filebuf< _CharT, _Traits >::seekoff()`, `std::basic_istream< _CharT, _Traits >::tellg()`, and `std::basic_ostream< _CharT, _Traits >::tellp()`.

**5.379.6.10 const fmtflags std::ios\_base::dec [static, inherited]**

Converts integer input or generates integer output in [decimal](#) base.

Definition at line 269 of file ios\_base.h.

**5.379.6.11 const seekdir std::ios\_base::end [static, inherited]**

Request a seek relative to the current end of the sequence.

Definition at line 410 of file ios\_base.h.

Referenced by `std::basic_filebuf<_CharT, _Traits >::open()`, and `std::basic_stringbuf<_CharT, _Traits, _Alloc >::seekoff()`.

**5.379.6.12 const iostate std::ios\_base::eofbit [static, inherited]**

Indicates that an input operation reached the end of an input sequence.

Definition at line 345 of file ios\_base.h.

Referenced by `std::num_get<_CharT, _InIter >::do_get()`, `std::time_get<_CharT, _InIter >::do_get_date()`, `std::time_get<_CharT, _InIter >::do_get_monthname()`, `std::time_get<_CharT, _InIter >::do_get_time()`, `std::time_get<_CharT, _InIter >::do_get_weekday()`, `std::time_get<_CharT, _InIter >::do_get_year()`, `std::basic_istream<_CharT, _Traits >::get()`, `std::basic_istream<_CharT, _Traits >::getline()`, `std::basic_istream<_CharT, _Traits >::ignore()`, `std::operator>>()`, `std::basic_istream<_CharT, _Traits >::operator>>()`, `std::basic_istream<_CharT, _Traits >::peek()`, `std::basic_istream<_CharT, _Traits >::read()`, `std::basic_istream<_CharT, _Traits >::readsome()`, and `std::ws()`.

**5.379.6.13 const iostate std::ios\_base::failbit [static, inherited]**

Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.

Definition at line 350 of file ios\_base.h.

Referenced by `std::num_get<_CharT, _InIter >::do_get()`, `std::time_get<_CharT, _InIter >::do_get_monthname()`, `std::time_get<_CharT, _InIter >::do_get_weekday()`, `std::time_get<_CharT, _InIter >::do_get_year()`, `std::basic_istream<_CharT, _Traits >::get()`, `std::basic_istream<_CharT, _Traits >::getline()`, `std::basic_ostream<_CharT, _Traits >::operator<<()`, `std::basic_istream<_CharT, _Traits >::operator>>()`, `std::operator>>()`, `std::basic_istream<_CharT, _Traits >::read()`, `std::basic_istream<_CharT, _Traits >::seekg()`, and `std::basic_ostream<_CharT, _Traits >::seekp()`.

**5.379.6.14** `const fmtflags std::ios_base::fixed` [static, inherited]

Generate floating-point output in fixed-point notation.

Definition at line 272 of file `ios_base.h`.

**5.379.6.15** `const fmtflags std::ios_base::floatfield` [static, inherited]

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.

Definition at line 324 of file `ios_base.h`.

**5.379.6.16** `const iostate std::ios_base::goodbit` [static, inherited]

Indicates all is well.

Definition at line 353 of file `ios_base.h`.

Referenced by `std::num_get<_CharT, _InIter>::do_get()`, `std::time_get<_CharT, _InIter>::do_get_monthname()`, `std::time_get<_CharT, _InIter>::do_get_weekday()`, `std::time_get<_CharT, _InIter>::do_get_year()`, `std::basic_ofstream<_CharT, _Traits>::flush()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::basic_ios<_CharT, _Traits>::init()`, `std::basic_ofstream<_CharT, _Traits>::operator<<()`, `std::operator>>()`, `std::basic_istream<_CharT, _Traits>::operator>>()`, `std::basic_istream<_CharT, _Traits>::peek()`, `std::basic_ofstream<_CharT, _Traits>::put()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_istream<_CharT, _Traits>::read()`, `std::basic_istream<_CharT, _Traits>::readsome()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_ofstream<_CharT, _Traits>::seekp()`, `std::basic_istream<_CharT, _Traits>::sync()`, and `std::basic_istream<_CharT, _Traits>::unset()`.

**5.379.6.17** `const fmtflags std::ios_base::hex` [static, inherited]

Converts integer input or generates integer output in hexadecimal base.

Definition at line 275 of file `ios_base.h`.

Referenced by `std::num_get<_CharT, _InIter>::do_get()`, `std::num_put<_CharT, _OutIter>::do_put()`, and `std::basic_ofstream<_CharT, _Traits>::operator<<()`.

**5.379.6.18** `const openmode std::ios_base::in` [static, inherited]

Open for input. Default for `ifstream` and `fstream`.

Definition at line 383 of file `ios_base.h`.

Referenced by `std::basic_filebuf< _CharT, _Traits >::pbackfail()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos()`, `std::basic_filebuf< _CharT, _Traits >::showmanyc()`, `std::basic_istream< _CharT, _Traits >::tellg()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow()`, `std::basic_filebuf< _CharT, _Traits >::underflow()`, and `std::basic_filebuf< _CharT, _Traits >::xsgetn()`.

#### 5.379.6.19 `const fmtflags std::ios_base::internal` [`static`, `inherited`]

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.

Definition at line 280 of file `ios_base.h`.

#### 5.379.6.20 `const fmtflags std::ios_base::left` [`static`, `inherited`]

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.)

Definition at line 284 of file `ios_base.h`.

Referenced by `std::num_put< _CharT, _OutIter >::do_put()`.

#### 5.379.6.21 `const fmtflags std::ios_base::oct` [`static`, `inherited`]

Converts integer input or generates integer output in octal base.

Definition at line 287 of file `ios_base.h`.

Referenced by `std::basic_ostream< _CharT, _Traits >::operator<<()`.

#### 5.379.6.22 `const openmode std::ios_base::out` [`static`, `inherited`]

Open for output. Default for `ofstream` and `fstream`.

Definition at line 386 of file `ios_base.h`.

Referenced by `std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow()`, `std::basic_filebuf< _CharT, _Traits >::overflow()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos()`, `std::basic_ostream< _CharT, _Traits >::tellp()`, and `std::basic_filebuf< _CharT, _Traits >::xsputn()`.

**5.379.6.23 const fmtflags std::ios\_base::right [static, inherited]**

Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.).

Definition at line 291 of file ios\_base.h.

**5.379.6.24 const fmtflags std::ios\_base::scientific [static, inherited]**

Generates floating-point output in scientific notation.

Definition at line 294 of file ios\_base.h.

**5.379.6.25 const fmtflags std::ios\_base::showbase [static, inherited]**

Generates a prefix indicating the numeric base of generated integer output.

Definition at line 298 of file ios\_base.h.

**5.379.6.26 const fmtflags std::ios\_base::showpoint [static, inherited]**

Generates a decimal-point character unconditionally in generated floating-point output.

Definition at line 302 of file ios\_base.h.

**5.379.6.27 const fmtflags std::ios\_base::showpos [static, inherited]**

Generates a + sign in non-negative generated numeric output.

Definition at line 305 of file ios\_base.h.

**5.379.6.28 const fmtflags std::ios\_base::skipws [static, inherited]**

Skips leading white space before certain input operations.

Definition at line 308 of file ios\_base.h.

**5.379.6.29 const openmode std::ios\_base::trunc [static, inherited]**

Open for input. Default for `ofstream`.

Definition at line 389 of file ios\_base.h.

**5.379.6.30** `const fmtflags std::ios_base::unitbuf` [`static, inherited`]

Flushes output after each output operation.

Definition at line 311 of file `ios_base.h`.

**5.379.6.31** `const fmtflags std::ios_base::uppercase` [`static, inherited`]

Replaces certain lowercase letters with their uppercase equivalents in generated output.

Definition at line 315 of file `ios_base.h`.

Referenced by `std::num_put<_CharT, _OutIter>::do_put()`.

The documentation for this class was generated from the following file:

### Unformatted Output Functions

All the unformatted output functions have some common behavior. Each starts by constructing a temporary object of type `std::basic_ostream::sentry`. This has several effects, concluding with the setting of a status flag; see the [sentry](#) documentation for more.

If the [sentry](#) status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an [exception](#) is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state. If `badbit` is on in the stream's exceptions mask, the [exception](#) will be rethrown without completing its actions.

- `void _M_write (const char_type *_s, streamsize __n)`
- `__ostream_type & put (char_type __c)`
- `__ostream_type & write (const char_type *_s, streamsize __n)`

### Arithmetic Inserters

All the `operator<<` functions (aka formatted output functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_ostream::sentry`. This can have several effects, concluding with the setting of a status flag; see the [sentry](#) documentation for more.

If the [sentry](#) status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an [exception](#) is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state without causing an `ios_base::failure` to be thrown. The original [exception](#) will then be rethrown.

### 5.380.1 Detailed Description

`template<typename _CharT, typename _Traits> class std::basic_ostream<_CharT, _Traits >`

Controlling output.

This is the base class for all output streams. It provides text formatting of all builtin types, and communicates with any class derived from `basic_streambuf` to do the actual output.

Definition at line 55 of file `ostream`.

### 5.380.2 Member Typedef Documentation

**5.380.2.1** `template<typename _CharT, typename _Traits> typedef ctype<_CharT> std::basic_ostream<_CharT, _Traits >::__ctype_type`

These are non-standard types.

Reimplemented from `std::basic_ios<_CharT, _Traits >`.

Definition at line 71 of file `ostream`.

**5.380.2.2** `template<typename _CharT, typename _Traits> typedef num_get<_CharT, istreambuf_iterator<_CharT, _Traits> > std::basic_ios<_CharT, _Traits >::__num_get_type [inherited]`

These are non-standard types.

Reimplemented in `std::basic_istream<_CharT, _Traits >`, `std::basic_istream<char, _Traits >`, and `std::basic_istream<char >`.

Definition at line 86 of file `basic_ios.h`.

**5.380.2.3** `template<typename _CharT, typename _Traits> typedef num_put<_CharT, ostreambuf_iterator<_CharT, _Traits> > std::basic_ostream<_CharT, _Traits>::_num_put_type`

The quick-and-easy status check. This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

Reimplemented from [std::basic\\_ios<\\_CharT, \\_Traits>](#).

Definition at line 70 of file `ostream`.

**5.380.2.4** `template<typename _CharT, typename _Traits> typedef _CharT std::basic_ostream<_CharT, _Traits>::char_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic\\_ios<\\_CharT, \\_Traits>](#).

Reimplemented in [std::basic\\_ofstream<\\_CharT, \\_Traits>](#), [std::basic\\_fstream<\\_CharT, \\_Traits>](#), [std::basic\\_iostream<\\_CharT, \\_Traits>](#), [std::basic\\_ostringstream<\\_CharT, \\_Traits, \\_Alloc>](#), [std::basic\\_stringstream<\\_CharT, \\_Traits, \\_Alloc>](#), and [std::basic\\_istream<char>](#).

Definition at line 59 of file `ostream`.

**5.380.2.5** `typedef void(* std::ios_base::event_callback)(event, ios_base &, int) [inherited]`

The type of an event callback function.

**Parameters:**

*event* One of the members of the event enum.

*ios\_base* Reference to the `ios_base` object.

*int* The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several `ios_base` and `basic_ios` functions, specifically `imbue()`, `copyfmt()`, and `~ios()`.

Definition at line 444 of file `ios_base.h`.

**5.380.2.6** `typedef _Ios_Fmtflags std::ios_base::fmtflags [inherited]`

This is a bitmask type. `_Ios_Fmtflags` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen.

Defined objects of type `fmtflags` are:

- `boolalpha`
- `dec`
- `fixed`
- `hex`
- `internal`
- `left`
- `oct`
- `right`
- `scientific`
- `showbase`
- `showpoint`
- `showpos`
- `skipws`
- `unitbuf`
- `uppercase`
- `adjustfield`
- `basefield`
- `floatfield`

Definition at line 263 of file `ios_base.h`.

#### **5.380.2.7 `template<typename _CharT, typename _Traits> typedef` `_Traits::int_type std::basic_ostream< _CharT, _Traits >::int_type`**

These are non-standard types.

Reimplemented from `std::basic_ios< _CharT, _Traits >`.

Reimplemented in `std::basic_ofstream< _CharT, _Traits >`, `std::basic_fstream< _CharT, _Traits >`, `std::basic_iostream< _CharT, _Traits >`, `std::basic_ostringstream< _CharT, _Traits, _Alloc >`, `std::basic_stringstream< _CharT, _Traits, _Alloc >`, and `std::basic_istream< char >`.

Definition at line 60 of file `ostream`.

**5.380.2.8** `typedef _Ios_Iostate std::ios_base::iostate` [inherited]

This is a bitmask type. `_Ios_Iostate` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `iostate` are:

- `badbit`
- `eofbit`
- `failbit`
- `goodbit`

Definition at line 338 of file `ios_base.h`.

**5.380.2.9** `template<typename _CharT, typename _Traits> typedef _Traits::off_type std::basic_ostream<_CharT, _Traits>::off_type`

These are non-standard types.

Reimplemented from `std::basic_ios<_CharT, _Traits>`.

Reimplemented in `std::basic_ofstream<_CharT, _Traits>`, `std::basic_fstream<_CharT, _Traits>`, `std::basic_iostream<_CharT, _Traits>`, `std::basic_ostringstream<_CharT, _Traits, _Alloc>`, `std::basic_stringstream<_CharT, _Traits, _Alloc>`, and `std::basic_istream<char>`.

Definition at line 62 of file `ostream`.

**5.380.2.10** `typedef _Ios_Openmode std::ios_base::openmode` [inherited]

This is a bitmask type. `_Ios_Openmode` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `openmode` are:

- `app`
- `ate`
- `binary`
- `in`
- `out`
- `trunc`

Definition at line 369 of file `ios_base.h`.

### 5.380.2.11 `template<typename _CharT, typename _Traits> typedef _Traits::pos_type std::basic_ostream< _CharT, _Traits >::pos_type`

These are non-standard types.

Reimplemented from `std::basic_ios< _CharT, _Traits >`.

Reimplemented in `std::basic_ofstream< _CharT, _Traits >`, `std::basic_fstream< _CharT, _Traits >`, `std::basic_iostream< _CharT, _Traits >`, `std::basic_ostringstream< _CharT, _Traits, _Alloc >`, `std::basic_stringstream< _CharT, _Traits, _Alloc >`, and `std::basic_istream< char >`.

Definition at line 61 of file `ostream`.

### 5.380.2.12 `typedef _Ios_Seekdir std::ios_base::seekdir [inherited]`

This is an enumerated type. `_Ios_Seekdir` is implementation-defined. Defined values of type `seekdir` are:

- `beg`
- `cur`, equivalent to `SEEK_CUR` in the C standard library.
- `end`, equivalent to `SEEK_END` in the C standard library.

Definition at line 401 of file `ios_base.h`.

### 5.380.2.13 `template<typename _CharT, typename _Traits> typedef _Traits std::basic_ostream< _CharT, _Traits >::traits_type`

These are non-standard types.

Reimplemented from `std::basic_ios< _CharT, _Traits >`.

Reimplemented in `std::basic_ofstream< _CharT, _Traits >`, `std::basic_fstream< _CharT, _Traits >`, `std::basic_iostream< _CharT, _Traits >`, `std::basic_ostringstream< _CharT, _Traits, _Alloc >`, `std::basic_stringstream< _CharT, _Traits, _Alloc >`, and `std::basic_istream< char >`.

Definition at line 63 of file `ostream`.

## 5.380.3 Member Enumeration Documentation

### 5.380.3.1 `enum std::ios_base::event [inherited]`

The `set` of events that may be passed to an event callback. `erase_event` is used during `~ios()` and `copyfmt()`. `imbue_event` is used during `imbue()`. `copyfmt_event` is used during `copyfmt()`.

Definition at line 427 of file `ios_base.h`.

## 5.380.4 Constructor & Destructor Documentation

**5.380.4.1** `template<typename _CharT, typename _Traits>  
std::basic_ostream<_CharT, _Traits >::basic_ostream  
(__streambuf_type * __sb) [inline, explicit]`

Base constructor. This ctor is almost never called by the user directly, rather from derived classes' initialization lists, which pass a pointer to their own stream buffer.

Definition at line 82 of file `ostream`.

**5.380.4.2** `template<typename _CharT, typename _Traits> virtual  
std::basic_ostream<_CharT, _Traits >::~~basic_ostream ()  
[inline, virtual]`

Base destructor. This does very little apart from providing a virtual base dtor.

Definition at line 91 of file `ostream`.

## 5.380.5 Member Function Documentation

**5.380.5.1** `const locale& std::ios_base::_M_getloc () const [inline,  
inherited]`

Locale access.

### Returns:

A reference to the current [locale](#).

Like `getloc` above, but returns a reference instead of generating a copy.

Definition at line 705 of file `ios_base.h`.

Referenced by `std::money_get<_CharT, _InIter >::do_get()`, `std::num_get<_CharT, _InIter >::do_get()`, `std::time_get<_CharT, _InIter >::do_get_date()`, `std::time_get<_CharT, _InIter >::do_get_monthname()`, `std::time_get<_CharT, _InIter >::do_get_time()`, `std::time_get<_CharT, _InIter >::do_get_weekday()`, `std::time_get<_CharT, _InIter >::do_get_year()`, `std::time_put<_CharT, _OutIter >::do_put()`, `std::num_put<_CharT, _OutIter >::do_put()`, and `std::time_put<_CharT, _OutIter >::put()`.

**5.380.5.2** `template<typename _CharT, typename _Traits> void  
std::basic_ostream< _CharT, _Traits >::_M_write (const char_type  
* __s, streamsize __n) [inline]`

Simple insertion.

**Parameters:**

*c* The character to insert.

**Returns:**

\*this

Tries to insert *c*.

**Note:**

This function is not overloaded on signed char and unsigned char.

Definition at line 287 of file ostream.

Referenced by `std::basic_ostream< _CharT, _Traits >::write()`.

**5.380.5.3** `template<typename _CharT, typename _Traits> bool std::basic_ios<  
_CharT, _Traits >::bad () const [inline, inherited]`

Fast error checking.

**Returns:**

True if the badbit is [set](#).

Note that other iostate flags may also be [set](#).

Definition at line 201 of file basic\_ios.h.

**5.380.5.4** `template<typename _CharT , typename _Traits > void  
std::basic_ios< _CharT, _Traits >::clear (iostate __state = goodbit)  
[inline, inherited]`

[Re]sets the error state.

**Parameters:**

*state* The new state flag(s) to [set](#).

## 5.380 `std::basic_ostream<_CharT, _Traits>` Class Template Reference 2075

See `std::ios_base::iostate` for the possible bit values. Most users will not need to pass an argument.

Definition at line 40 of file `basic_ios.tcc`.

Referenced by `std::basic_ios<_CharT, _Traits>::rdbuf()`.

**5.380.5.5** `template<typename _CharT, typename _Traits> basic_ios<_CharT, _Traits> & std::basic_ios<_CharT, _Traits>::copyfmt(const basic_ios<_CharT, _Traits> & __rhs) [inline, inherited]`

Copies fields of `__rhs` into this.

### Parameters:

`__rhs` The source values for the copies.

### Returns:

Reference to this object.

All fields of `__rhs` are copied into this object except that `rdbuf()` and `rdstate()` remain unchanged. All values in the `pword` and `iword` arrays are copied. Before copying, each callback is invoked with `erase_event`. After copying, each (new) callback is invoked with `copyfmt_event`. The final step is to copy `exceptions()`.

Definition at line 62 of file `basic_ios.tcc`.

References `std::basic_ios<_CharT, _Traits>::exceptions()`, `std::basic_ios<_CharT, _Traits>::fill()`, `std::ios_base::flags()`, `std::ios_base::getloc()`, `std::ios_base::precision()`, `std::basic_ios<_CharT, _Traits>::tie()`, and `std::ios_base::width()`.

**5.380.5.6** `template<typename _CharT, typename _Traits> bool std::basic_ios<_CharT, _Traits>::eof() const [inline, inherited]`

Fast error checking.

### Returns:

True if the eofbit is `set`.

Note that other `iostate` flags may also be `set`.

Definition at line 180 of file `basic_ios.h`.

Referenced by `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::basic_istream<_CharT, _Traits>::peek()`, `std::basic_istream<_CharT, _Traits>::putback()`, and `std::basic_istream<_CharT, _Traits>::unget()`.

**5.380.5.7** `template<typename _CharT, typename _Traits> void std::basic_ios<_CharT, _Traits >::exceptions (iostate __except) [inline, inherited]`

Throwing exceptions on errors.

**Parameters:**

*except* The new exceptions mask.

By default, error flags are [set](#) silently. You can [set](#) an exceptions mask for each stream; if a bit in the mask becomes [set](#) in the error flags, then an [exception](#) of type `std::ios_base::failure` is thrown.

If the error flag is already [set](#) when the exceptions mask is added, the [exception](#) is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>

int main()
{
 std::set_terminate (__gnu_cxx::__verbose_terminate_handler);

 std::ifstream f ("/etc/motd");

 std::cerr << "Setting badbit\n";
 f.setstate (std::ios_base::badbit);

 std::cerr << "Setting exception mask\n";
 f.exceptions (std::ios_base::badbit);
}
```

Definition at line 247 of file `basic_ios.h`.

**5.380.5.8** `template<typename _CharT, typename _Traits> iostate std::basic_ios<_CharT, _Traits >::exceptions () const [inline, inherited]`

Throwing exceptions on errors.

**Returns:**

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of [exceptions\(iostate\)](#) for the meaning of the return value.

Definition at line 212 of file `basic_ios.h`.

Referenced by `std::basic_ios<_CharT, _Traits >::copyfmt()`.

**5.380.5.9** `template<typename _CharT, typename _Traits> bool std::basic_ios<_CharT, _Traits >::fail() const [inline, inherited]`

Fast error checking.

**Returns:**

True if either the badbit or the failbit is [set](#).

Checking the badbit in [fail\(\)](#) is historical practice. Note that other iostate flags may also be [set](#).

Definition at line 191 of file basic\_ios.h.

Referenced by `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_istream< _CharT, _Traits >::tellg()`, `std::basic_ostream< _CharT, _Traits >::tellp()`, and `std::regex_traits< _Ch_type >::value()`.

**5.380.5.10** `template<typename _CharT, typename _Traits> char_type std::basic_ios< _CharT, _Traits >::fill(char_type __ch) [inline, inherited]`

Sets a new *empty* character.

**Parameters:**

*ch* The new character.

**Returns:**

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via `setw`), Q characters are actually used, and Q<P. It defaults to a space (' ') in the current [locale](#).

Definition at line 380 of file basic\_ios.h.

**5.380.5.11** `template<typename _CharT, typename _Traits> char_type std::basic_ios< _CharT, _Traits >::fill() const [inline, inherited]`

Retrieves the *empty* character.

**Returns:**

The current fill character.

It defaults to a space ( ' ') in the current [locale](#).

Definition at line 360 of file `basic_ios.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`.

#### 5.380.5.12 `fmtflags std::ios_base::flags (fmtflags __fmtfl) [inline, inherited]`

Setting new format flags all at once.

##### Parameters:

*fmtfl* The new flags to [set](#).

##### Returns:

The previous format control flags.

This function overwrites all the format flags with *fmtfl*.

Definition at line 561 of file `ios_base.h`.

#### 5.380.5.13 `fmtflags std::ios_base::flags () const [inline, inherited]`

Access to format flags.

##### Returns:

The format control flags for both input and output.

Definition at line 550 of file `ios_base.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::num_put<_CharT, _OutIter>::do_put()`, `std::basic_ostream<_CharT, _Traits>::operator<<()`, `std::operator<<()`, and `std::operator>>()`.

#### 5.380.5.14 `template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::flush () [inline]`

Synchronizing the stream buffer.

##### Returns:

\*this

## 5.380 `std::basic_ostream<_CharT, _Traits>` Class Template Reference 2079

If `rdbuf()` is a null pointer, changes nothing.

Otherwise, calls `rdbuf() ->pubsync()`, and if that returns -1, sets `badbit`.

Definition at line 211 of file `ostream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

Referenced by `std::flush()`.

### 5.380.5.15 `std::ios_base::getloc() const` [`inline`, `inherited`]

Locale access.

#### Returns:

A copy of the current [locale](#).

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ [locale](#).

Definition at line 694 of file `ios_base.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::money_put<_CharT, _OutIter>::do_put()`, `std::basic_ios<_CharT, _Traits>::imbue()`, `std::operator>>()`, and `std::ws()`.

### 5.380.5.16 `template<typename _CharT, typename _Traits> bool std::basic_ios<_CharT, _Traits>::good() const` [`inline`, `inherited`]

Fast error checking.

#### Returns:

True if no error flags are [set](#).

A wrapper around `rdstate`.

Definition at line 170 of file `basic_ios.h`.

### 5.380.5.17 `template<typename _CharT, typename _Traits> locale std::basic_ios<_CharT, _Traits>::imbue(const locale & __loc)` [`inline`, `inherited`]

Moves to a new [locale](#).

**Parameters:**

*loc* The new [locale](#).

**Returns:**

The previous [locale](#).

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localizati>

Reimplemented from [std::ios\\_base](#).

Definition at line 113 of file `basic_ios.tcc`.

References `std::ios_base::getloc()`, and `std::basic_ios<_CharT, _Traits>::rdbuf()`.

Referenced by `std::operator<<()`.

**5.380.5.18** `template<typename _CharT, typename _Traits> void  
std::basic_ios<_CharT, _Traits>::init (basic_streambuf<_CharT,  
_Traits> * __sb) [inline, protected, inherited]`

All setup is performed here. This is called from the public constructor. It is not virtual and cannot be redefined.

Definition at line 125 of file `basic_ios.tcc`.

References `std::ios_base::badbit`, and `std::ios_base::goodbit`.

**5.380.5.19** `long& std::ios_base::iword (int __ix) [inline, inherited]`

Access to integer [array](#).

**Parameters:**

*\_\_ix* Index into the [array](#).

**Returns:**

A reference to an integer associated with the index.

The `iword` function provides access to an [array](#) of integers that can be used for any purpose. The [array](#) grows as required to hold the supplied index. All integers in the [array](#) are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the [array](#) can grow dynamically, it is not safe to hold onto the reference.

## 5.380 `std::basic_ostream<_CharT, _Traits>` Class Template Reference 2081

Definition at line 740 of file `ios_base.h`.

**5.380.5.20** `template<typename _CharT, typename _Traits> char  
std::basic_ios<_CharT, _Traits>::narrow(char_type __c, char  
__dfault) const [inline, inherited]`

Squeezes characters.

### Parameters:

*c* The character to narrow.

*dfault* The character to narrow.

### Returns:

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).narrow(c, dfault)
```

Additional `l10n` notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

Definition at line 420 of file `basic_ios.h`.

**5.380.5.21** `template<typename _CharT, typename _Traits> std::basic_ios<  
_CharT, _Traits>::operator void * () const [inline,  
inherited]`

The quick-and-easy status check. This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`

Definition at line 111 of file `basic_ios.h`.

**5.380.5.22** `template<typename _CharT, typename _Traits> bool  
std::basic_ios<_CharT, _Traits>::operator! () const [inline,  
inherited]`

The quick-and-easy status check. This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`

Definition at line 115 of file `basic_ios.h`.

**5.380.5.23** `template<typename _CharT, typename _Traits > basic_ostream<_CharT, _Traits > & std::basic_ostream<_CharT, _Traits >::operator<< (_streambuf_type * __sb) [inline]`

Extracting from another streambuf.

**Parameters:**

*sb* A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a [sentry](#) object and has the same error handling behavior.

If *sb* is NULL, the stream will [set](#) failbit in its error state.

Characters are extracted from *sb* and inserted into *\*this* until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted), or
- an [exception](#) occurs while getting a character from *sb*, which sets failbit in the error state

If the function inserts no characters, failbit is [set](#).

Definition at line 120 of file ostream.tcc.

References `std::ios_base::badbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits >::rdbuf()`, and `std::basic_ios<_CharT, _Traits >::setstate()`.

**5.380.5.24** `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream<_CharT, _Traits >::operator<< (const void * __p) [inline]`

Extracting from another streambuf.

**Parameters:**

*sb* A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a [sentry](#) object and has the same error handling behavior.

If *sb* is NULL, the stream will [set](#) failbit in its error state.

Characters are extracted from *sb* and inserted into *\*this* until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted), or
- an [exception](#) occurs while getting a character from *sb*, which sets failbit in the error state

If the function inserts no characters, failbit is [set](#).

Definition at line 225 of file ostream.

**5.380.5.25** `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream<_CharT, _Traits>::operator<< (long double __f) [inline]`

Extracting from another streambuf.

**Parameters:**

*sb* A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a [sentry](#) object and has the same error handling behavior.

If *sb* is NULL, the stream will [set](#) failbit in its error state.

Characters are extracted from *sb* and inserted into *\*this* until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted), or
- an [exception](#) occurs while getting a character from *sb*, which sets failbit in the error state

If the function inserts no characters, failbit is [set](#).

Definition at line 221 of file ostream.

**5.380.5.26** `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream<_CharT, _Traits>::operator<< (float __f) [inline]`

Extracting from another streambuf.

**Parameters:**

*sb* A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a [sentry](#) object and has the same error handling behavior.

If *sb* is NULL, the stream will [set](#) failbit in its error state.

Characters are extracted from *sb* and inserted into `*this` until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted), or
- an [exception](#) occurs while getting a character from *sb*, which sets failbit in the error state

If the function inserts no characters, failbit is [set](#).

Definition at line 213 of file ostream.

```
5.380.5.27 template<typename _CharT, typename _Traits> __ostream_type&
std::basic_ostream< _CharT, _Traits >::operator<< (double __f)
[inline]
```

Extracting from another streambuf.

**Parameters:**

*sb* A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a [sentry](#) object and has the same error handling behavior.

If *sb* is NULL, the stream will [set](#) failbit in its error state.

Characters are extracted from *sb* and inserted into `*this` until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted), or
- an [exception](#) occurs while getting a character from *sb*, which sets failbit in the error state

If the function inserts no characters, failbit is [set](#).

Definition at line 209 of file ostream.

**5.380.5.28** `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream<_CharT, _Traits >::operator<< (unsigned long long __n) [inline]`

Extracting from another streambuf.

**Parameters:**

*sb* A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a [sentry](#) object and has the same error handling behavior.

If *sb* is NULL, the stream will [set](#) failbit in its error state.

Characters are extracted from *sb* and inserted into `*this` until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted), or
- an [exception](#) occurs while getting a character from *sb*, which sets failbit in the error state

If the function inserts no characters, failbit is [set](#).

Definition at line 204 of file ostream.

**5.380.5.29** `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream<_CharT, _Traits >::operator<< (long long __n) [inline]`

Extracting from another streambuf.

**Parameters:**

*sb* A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a [sentry](#) object and has the same error handling behavior.

If *sb* is NULL, the stream will [set](#) failbit in its error state.

Characters are extracted from *sb* and inserted into *\*this* until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted), or
- an [exception](#) occurs while getting a character from *sb*, which sets failbit in the error state

If the function inserts no characters, failbit is [set](#).

Definition at line 200 of file ostream.

**5.380.5.30** `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (unsigned int __n) [inline]`

Extracting from another streambuf.

**Parameters:**

*sb* A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a [sentry](#) object and has the same error handling behavior.

If *sb* is NULL, the stream will [set](#) failbit in its error state.

Characters are extracted from *sb* and inserted into *\*this* until one of the following occurs:

- the input stream reaches end-of-file,

If the function inserts no characters, failbit is [set](#).

Definition at line 173 of file ostream.

**5.380.5.35** `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream<_CharT, _Traits>::operator<< (unsigned long __n) [inline]`

Extracting from another streambuf.

**Parameters:**

*sb* A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a [sentry](#) object and has the same error handling behavior.

If *sb* is NULL, the stream will [set](#) failbit in its error state.

Characters are extracted from *sb* and inserted into `*this` until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted), or
- an [exception](#) occurs while getting a character from *sb*, which sets failbit in the error state

If the function inserts no characters, failbit is [set](#).

Definition at line 169 of file ostream.

**5.380.5.36** `template<typename _CharT, typename _Traits> __ostream_type&  
std::basic_ostream< _CharT, _Traits >::operator<< (long __n)  
[inline]`

Basic arithmetic inserters.

**Parameters:**

*A* variable of builtin type.

**Returns:**

\*this if successful

These functions use the stream's current [locale](#) (specifically, the [num\\_get](#) facet) to perform numeric formatting.

Definition at line 165 of file ostream.

**5.380.5.37** `template<typename _CharT, typename _Traits> __ostream_type&  
std::basic_ostream< _CharT, _Traits >::operator<< (ios_base  
&(*)(ios_base &) __pf) [inline]`

Interface for manipulators. Manipulators such as [std::endl](#) and [std::hex](#) use these functions in constructs like "std::cout << std::endl". For more information, see the [iomanip](#) header.

Definition at line 127 of file ostream.

**5.380.5.38** `template<typename _CharT, typename _Traits> __ostream_type&  
std::basic_ostream< _CharT, _Traits >::operator<< (__ios_type  
&(*)(__ios_type &) __pf) [inline]`

Interface for manipulators. Manipulators such as [std::endl](#) and [std::hex](#) use these functions in constructs like "std::cout << std::endl". For more information, see the [iomanip](#) header.

Definition at line 117 of file ostream.

**5.380.5.39** `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream<_CharT, _Traits >::operator<< (__ostream_type &*)(__ostream_type &) _pf) [inline]`

Interface for manipulators. Manipulators such as `std::endl` and `std::hex` use these functions in constructs like `"std::cout << std::endl"`. For more information, see the `iomanip` header.

Definition at line 108 of file `ostream`.

**5.380.5.40** `streamsize std::ios_base::precision (streamsize __prec) [inline, inherited]`

Changing flags.

**Parameters:**

*prec* The new precision value.

**Returns:**

The previous value of `precision()`.

Definition at line 629 of file `ios_base.h`.

**5.380.5.41** `streamsize std::ios_base::precision () const [inline, inherited]`

Flags access.

**Returns:**

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Definition at line 620 of file `ios_base.h`.

Referenced by `std::basic_ios<_CharT, _Traits >::copyfmt()`, and `std::operator<<()`.

**5.380.5.42** `template<typename _CharT, typename _Traits > basic_ostream<_CharT, _Traits > & std::basic_ostream<_CharT, _Traits >::put (char_type __c) [inline]`

Simple insertion.

**Parameters:**

*c* The character to insert.

**Returns:**

\*this

Tries to insert *c*.

**Note:**

This function is not overloaded on signed char and unsigned char.

Definition at line 149 of file ostream.tcc.

References `std::ios_base::badbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits >::rdbuf()`, and `std::basic_ios<_CharT, _Traits >::setstate()`.

Referenced by `std::endl()`, and `std::ends()`.

**5.380.5.43 void\*& std::ios\_base::pword (int \_\_ix) [inline, inherited]**

Access to void pointer [array](#).

**Parameters:**

*\_\_ix* Index into the [array](#).

**Returns:**

A reference to a void\* associated with the index.

The `pword` function provides access to an [array](#) of pointers that can be used for any purpose. The [array](#) grows as required to hold the supplied index. All pointers in the [array](#) are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the [array](#) can grow dynamically, it is not safe to hold onto the reference.

Definition at line 761 of file ios\_base.h.

**5.380.5.44 template<typename \_CharT, typename \_Traits> basic\_streambuf<\_CharT, \_Traits > \* std::basic\_ios<\_CharT, \_Traits >::rdbuf (basic\_streambuf<\_CharT, \_Traits > \* \_\_sb) [inline, inherited]**

Changing the underlying buffer.

**Parameters:**

*sb* The new stream buffer.

**Returns:**

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream foo; // or some other derived type
std::streambuf* p =;

foo.ios::rdbuf(p); // ios == basic_ios<char>
```

Definition at line 52 of file `basic_ios.tcc`.

References `std::basic_ios<_CharT, _Traits>::clear()`.

#### 5.380.5.45 `template<typename _CharT, typename _Traits>` `basic_streambuf<_CharT, _Traits>* std::basic_ios<_CharT,` `_Traits>::rdbuf() const` [`inline`, `inherited`]

Accessing the underlying buffer.

**Returns:**

The current stream buffer.

This does not change the state of the stream.

Reimplemented in `std::basic_ifstream<_CharT, _Traits>`, `std::basic_ofstream<_CharT, _Traits>`, `std::basic_fstream<_CharT, _Traits>`, `std::basic_istringstream<_CharT, _Traits, _Alloc>`, `std::basic_ostringstream<_CharT, _Traits, _Alloc>`, and `std::basic_stringstream<_CharT, _Traits, _Alloc>`.

Definition at line 311 of file `basic_ios.h`.

Referenced by `std::basic_ostream<_CharT, _Traits>::flush()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::basic_ios<_CharT, _Traits>::imbue()`, `std::basic_ostream<_CharT, _Traits>::operator<<()`, `std::basic_istream<_CharT, _Traits>::operator>>()`, `std::operator>>()`, `std::basic_istream<_CharT, _Traits>::peek()`, `std::basic_ostream<_CharT, _Traits>::put()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_istream<_CharT,`

`_Traits >::read()`, `std::basic_istream< _CharT, _Traits >::readsome()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_istream< _CharT, _Traits >::sync()`, `std::basic_istream< _CharT, _Traits >::tellg()`, `std::basic_ostream< _CharT, _Traits >::tellp()`, `std::basic_istream< _CharT, _Traits >::unget()`, and `std::ws()`.

**5.380.5.46** `template<typename _CharT, typename _Traits> iostate  
std::basic_ios< _CharT, _Traits >::rdstate () const [inline,  
inherited]`

Returns the error state of the stream buffer.

**Returns:**

A bit pattern (well, isn't everything?)

See [std::ios\\_base::iostate](#) for the possible bit values. Most users will call one of the interpreting wrappers, e.g., [good\(\)](#).

Definition at line 127 of file `basic_ios.h`.

**5.380.5.47** `void std::ios_base::register_callback (event_callback __fn, int  
__index) [inherited]`

Add the callback `__fn` with parameter `__index`.

**Parameters:**

`__fn` The function to add.

`__index` The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

**5.380.5.48** `template<typename _CharT , typename _Traits > basic_ostream<  
_CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::seekp  
(off_type __off, ios_base::seekdir __dir) [inline]`

Changing the current write position.

**Parameters:**

`off` A file offset object.

`dir` The direction in which to seek.

**Returns:**

`*this`

If `fail()` is not true, calls `rdbuf()->pubseekoff(off, dir)`. If that function fails, sets failbit.

Definition at line 290 of file `ostream.tcc`.

References `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::ios_base::out`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

#### 5.380.5.49 `template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::seekp(pos_type __pos) [inline]`

Changing the current write position.

**Parameters:**

*pos* A file position object.

**Returns:**

`*this`

If `fail()` is not true, calls `rdbuf()->pubseekpos(pos)`. If that function fails, sets failbit.

Definition at line 258 of file `ostream.tcc`.

References `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::ios_base::out`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

#### 5.380.5.50 `fmtflags std::ios_base::setf(fmtflags __fmtfl, fmtflags __mask) [inline, inherited]`

Setting new format flags.

**Parameters:**

*fmtfl* Additional flags to `set`.

*mask* The flags mask for *fmtfl*.

**Returns:**

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* & *mask*. An example mask is `ios_base::adjustfield`.

Definition at line 594 of file `ios_base.h`.

#### 5.380.5.51 `fmtflags` `std::ios_base::setf (fmtflags __fmtfl) [inline, inherited]`

Setting new format flags.

##### Parameters:

*fmtfl* Additional flags to `set`.

##### Returns:

The previous format control flags.

This function sets additional flags in format control. Flags that were previously `set` remain `set`.

Definition at line 577 of file `ios_base.h`.

Referenced by `std::boolalpha()`, `std::dec()`, `std::fixed()`, `std::hex()`, `std::internal()`, `std::left()`, `std::oct()`, `std::right()`, `std::scientific()`, `std::showbase()`, `std::showpoint()`, `std::showpos()`, `std::skipws()`, `std::unitbuf()`, and `std::uppercase()`.

#### 5.380.5.52 `template<typename _CharT, typename _Traits> void std::basic_ios<_CharT, _Traits >::setstate (iostate __state) [inline, inherited]`

Sets additional flags in the error state.

##### Parameters:

*state* The additional state flag(s) to `set`.

See `std::ios_base::iostate` for the possible bit values.

Definition at line 147 of file `basic_ios.h`.

Referenced by `std::basic_ostream<_CharT, _Traits >::flush()`, `std::basic_istream<_CharT, _Traits >::get()`, `std::basic_istream<_CharT, _Traits >::getline()`, `std::getline()`, `std::basic_istream<_CharT, _Traits >::ignore()`, `std::basic_ostream<_CharT, _Traits >::operator<<()`, `std::basic_istream<_CharT, _Traits >::operator>>()`, `std::operator>>()`, `std::basic_istream<_CharT, _Traits >::peek()`, `std::basic_ostream<_CharT, _Traits >::put()`, `std::basic_istream<_CharT, _Traits >::putback()`, `std::basic_istream<_CharT, _Traits >::read()`, `std::basic_istream<`

## 5.380 std::basic\_ostream< \_CharT, \_Traits > Class Template Reference 2097

`_CharT, _Traits >::readsome()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_istream< _CharT, _Traits >::sync()`, `std::basic_istream< _CharT, _Traits >::unget()`, and `std::ws()`.

### 5.380.553 static bool std::ios\_base::sync\_with\_stdio (bool \_\_sync = true) [static, inherited]

Interaction with the standard C I/O objects.

#### Parameters:

*sync* Whether to synchronize or not.

#### Returns:

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., `stdout`) and the standard C++ objects (e.g., `cout`). User-declared streams are unaffected. See <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch28s02.html>

### 5.380.554 template<typename \_CharT, typename \_Traits > basic\_ostream< \_CharT, \_Traits >::pos\_type std::basic\_ostream< \_CharT, \_Traits >::tellp () [inline]

Getting the current write position.

#### Returns:

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0, cur, out)`.

Definition at line 237 of file `ostream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::cur`, `std::basic_ios< _CharT, _Traits >::fail()`, `std::ios_base::out`, and `std::basic_ios< _CharT, _Traits >::rdbuf()`.

### 5.380.555 template<typename \_CharT, typename \_Traits> basic\_ostream< \_CharT, \_Traits >\* std::basic\_ios< \_CharT, \_Traits >::tie (basic\_ostream< \_CharT, \_Traits > \* \_\_tistr) [inline, inherited]

Ties this stream to an output stream.

**Parameters:**

*tiestr* The output stream.

**Returns:**

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see [tie\(\)](#) for more.

Definition at line 297 of file `basic_ios.h`.

```
5.380.5.56 template<typename _CharT, typename _Traits>
basic_ostream<_CharT, _Traits>* std::basic_ios<_CharT, _Traits
>::tie () const [inline, inherited]
```

Fetches the current *tied* stream.

**Returns:**

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Definition at line 285 of file `basic_ios.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`.

```
5.380.5.57 void std::ios_base::unsetf (fmtflags __mask) [inline,
inherited]
```

Clearing format flags.

**Parameters:**

*mask* The flags to unset.

This function clears *mask* in the format flags.

Definition at line 609 of file `ios_base.h`.

Referenced by `std::noboolalpha()`, `std::noshowbase()`, `std::noshowpoint()`, `std::noshowpos()`, `std::noskipws()`, `std::nounitbuf()`, and `std::nouppercase()`.

**5.380.5.58** `template<typename _CharT, typename _Traits> char_type  
std::basic_ios<_CharT, _Traits>::widen(char __c) const  
[inline, inherited]`

Widens characters.

**Parameters:**

*c* The character to widen.

**Returns:**

The widened character.

Maps a character of `char` to a character of `char_type`.

Returns the result of

```
std::use_facet<ctype<char_type>>(getloc()).widen(c)
```

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

Definition at line 439 of file `basic_ios.h`.

Referenced by `std::endl()`, `std::getline()`, and `std::operator>>()`.

**5.380.5.59** `streamsize std::ios_base::width(streamsize __wide) [inline,  
inherited]`

Changing flags.

**Parameters:**

*wide* The new width value.

**Returns:**

The previous value of `width()`.

Definition at line 652 of file `ios_base.h`.

**5.380.5.60** `streamsize std::ios_base::width() const [inline, inherited]`

Flags access.

**Returns:**

The minimum field width to generate on output operations.

*Minimum field width* refers to the number of characters.

Definition at line 643 of file ios\_base.h.

Referenced by `std::basic_ios<_CharT, _Traits >::copyfmt()`, `std::num_put<_CharT, _OutIter >::do_put()`, and `std::operator>>()`.

**5.380.5.61** `template<typename _CharT, typename _Traits > basic_ostream<_CharT, _Traits > & std::basic_ostream<_CharT, _Traits >::write(const char_type * __s, streamsize __n) [inline]`

Character string insertion.

**Parameters:**

- s* The [array](#) to insert.
- n* Maximum number of characters to insert.

**Returns:**

\*this

Characters are copied from *s* and inserted into the stream until one of the following happens:

- *n* characters are inserted
- inserting into the output sequence fails (in this case, `badbit` will be [set](#) in the stream's error state)

**Note:**

This function is not overloaded on signed char and unsigned char.

Definition at line 183 of file ostream.tcc.

References `std::basic_ostream<_CharT, _Traits >::_M_write()`, and `std::ios_base::badbit`.

**5.380.5.62** `static int std::ios_base::xalloc () throw () [static, inherited]`

Access to unique indices.

**Returns:**

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the `iword` and `pword` functions. The expectation is that an application calls `xalloc` in order to obtain an index in the `iword` and `pword` arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. `xalloc` is guaranteed to return an index that is safe to use in the `iword` and `pword` arrays.

## **5.380.6 Member Data Documentation**

### **5.380.6.1 const fmtflags std::ios\_base::adjustfield [static, inherited]**

A mask of `left|right|internal`. Useful for the 2-arg form of `setf`.

Definition at line 318 of file `ios_base.h`.

Referenced by `std::num_put< _CharT, _OutIter >::do_put()`.

### **5.380.6.2 const openmode std::ios\_base::app [static, inherited]**

Seek to end before each write.

Definition at line 372 of file `ios_base.h`.

### **5.380.6.3 const openmode std::ios\_base::ate [static, inherited]**

Open and seek to end immediately after opening.

Definition at line 375 of file `ios_base.h`.

Referenced by `std::basic_filebuf< _CharT, _Traits >::open()`.

### **5.380.6.4 const iostate std::ios\_base::badbit [static, inherited]**

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).

Definition at line 342 of file `ios_base.h`.

Referenced by `std::basic_ostream< _CharT, _Traits >::flush()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_ios< _CharT, _Traits >::init()`, `std::operator<<()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::operator>>()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_ostream< _CharT, _Traits >::put()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT,`

`_Traits >::read()`, `std::basic_istream< _CharT, _Traits >::readsome()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_istream< _CharT, _Traits >::sync()`, `std::basic_istream< _CharT, _Traits >::tellg()`, `std::basic_ostream< _CharT, _Traits >::tellp()`, `std::basic_istream< _CharT, _Traits >::unget()`, and `std::basic_ostream< _CharT, _Traits >::write()`.

#### 5.380.6.5 `const fmtflags std::ios_base::basefield` [`static`, `inherited`]

A mask of `dec|oct|hex`. Useful for the 2-arg form of `setf`.

Definition at line 321 of file `ios_base.h`.

Referenced by `std::num_get< _CharT, _InIter >::do_get()`, and `std::basic_ostream< _CharT, _Traits >::operator<<()`.

#### 5.380.6.6 `const seekdir std::ios_base::beg` [`static`, `inherited`]

Request a seek relative to the beginning of the stream.

Definition at line 404 of file `ios_base.h`.

Referenced by `std::basic_filebuf< _CharT, _Traits >::seekpos()`.

#### 5.380.6.7 `const openmode std::ios_base::binary` [`static`, `inherited`]

Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch27s02.html>.

Definition at line 380 of file `ios_base.h`.

Referenced by `std::basic_filebuf< _CharT, _Traits >::showmanyc()`.

#### 5.380.6.8 `const fmtflags std::ios_base::boolalpha` [`static`, `inherited`]

Insert/extract `bool` in alphabetic rather than numeric format.

Definition at line 266 of file `ios_base.h`.

Referenced by `std::num_get< _CharT, _InIter >::do_get()`, and `std::num_put< _CharT, _OutIter >::do_put()`.

#### 5.380.6.9 `const seekdir std::ios_base::cur` [`static`, `inherited`]

Request a seek relative to the current position within the sequence.

Definition at line 407 of file `ios_base.h`.

## 5.380 std::basic\_ostream< \_CharT, \_Traits > Class Template Reference 2103

Referenced by std::basic\_filebuf< \_CharT, \_Traits >::imbue(), std::basic\_filebuf< \_CharT, \_Traits >::pbackfail(), std::basic\_stringbuf< \_CharT, \_Traits, \_Alloc >::seekoff(), std::basic\_filebuf< \_CharT, \_Traits >::seekoff(), std::basic\_istream< \_CharT, \_Traits >::tellg(), and std::basic\_ostream< \_CharT, \_Traits >::tellp().

### 5.380.6.10 const fmtflags std::ios\_base::dec [static, inherited]

Converts integer input or generates integer output in [decimal](#) base.

Definition at line 269 of file ios\_base.h.

### 5.380.6.11 const seekdir std::ios\_base::end [static, inherited]

Request a seek relative to the current end of the sequence.

Definition at line 410 of file ios\_base.h.

Referenced by std::basic\_filebuf< \_CharT, \_Traits >::open(), and std::basic\_stringbuf< \_CharT, \_Traits, \_Alloc >::seekoff().

### 5.380.6.12 const iostate std::ios\_base::eofbit [static, inherited]

Indicates that an input operation reached the end of an input sequence.

Definition at line 345 of file ios\_base.h.

Referenced by std::num\_get< \_CharT, \_InIter >::do\_get(), std::time\_get< \_CharT, \_InIter >::do\_get\_date(), std::time\_get< \_CharT, \_InIter >::do\_get\_monthname(), std::time\_get< \_CharT, \_InIter >::do\_get\_time(), std::time\_get< \_CharT, \_InIter >::do\_get\_weekday(), std::time\_get< \_CharT, \_InIter >::do\_get\_year(), std::basic\_istream< \_CharT, \_Traits >::get(), std::basic\_istream< \_CharT, \_Traits >::getline(), std::basic\_istream< \_CharT, \_Traits >::ignore(), std::operator>>(), std::basic\_istream< \_CharT, \_Traits >::operator>>(), std::basic\_istream< \_CharT, \_Traits >::peek(), std::basic\_istream< \_CharT, \_Traits >::read(), std::basic\_istream< \_CharT, \_Traits >::readsome(), and std::ws().

### 5.380.6.13 const iostate std::ios\_base::failbit [static, inherited]

Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.

Definition at line 350 of file ios\_base.h.

Referenced by std::num\_get< \_CharT, \_InIter >::do\_get(), std::time\_get< \_CharT, \_InIter >::do\_get\_monthname(), std::time\_get< \_CharT, \_InIter >::do\_get\_weekday(), std::time\_get< \_CharT, \_InIter >::do\_get\_year(), std::basic\_istream< \_

CharT, \_Traits >::get(), std::basic\_istream< \_CharT, \_Traits >::getline(), std::basic\_ostream< \_CharT, \_Traits >::operator<<(), std::basic\_istream< \_CharT, \_Traits >::operator>>(), std::operator>>(), std::basic\_istream< \_CharT, \_Traits >::read(), std::basic\_istream< \_CharT, \_Traits >::seekg(), and std::basic\_ostream< \_CharT, \_Traits >::seekp().

#### 5.380.6.14 const fmtflags std::ios\_base::fixed [static, inherited]

Generate floating-point output in fixed-point notation.

Definition at line 272 of file ios\_base.h.

#### 5.380.6.15 const fmtflags std::ios\_base::floatfield [static, inherited]

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.

Definition at line 324 of file ios\_base.h.

#### 5.380.6.16 const iostate std::ios\_base::goodbit [static, inherited]

Indicates all is well.

Definition at line 353 of file ios\_base.h.

#### 5.380.6.17 const fmtflags std::ios\_base::hex [static, inherited]

Converts integer input or generates integer output in hexadecimal base.

Definition at line 275 of file ios\_base.h.

Referenced by std::num\_get< \_CharT, \_InIter >::do\_get(), std::num\_put< \_CharT, \_OutIter >::do\_put(), and std::basic\_ostream< \_CharT, \_Traits >::operator<<().

**5.380.6.18 `const openmode std::ios_base::in` [static, inherited]**

Open for input. Default for `ifstream` and `fstream`.

Definition at line 383 of file `ios_base.h`.

Referenced by `std::basic_filebuf<_CharT, _Traits>::pbackfail()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekoff()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekpos()`, `std::basic_filebuf<_CharT, _Traits>::showmanyc()`, `std::basic_istream<_CharT, _Traits>::tellg()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::underflow()`, `std::basic_filebuf<_CharT, _Traits>::underflow()`, and `std::basic_filebuf<_CharT, _Traits>::xsgetn()`.

**5.380.6.19 `const fmtflags std::ios_base::internal` [static, inherited]**

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.

Definition at line 280 of file `ios_base.h`.

**5.380.6.20 `const fmtflags std::ios_base::left` [static, inherited]**

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.)

Definition at line 284 of file `ios_base.h`.

Referenced by `std::num_put<_CharT, _Outputter>::do_put()`.

**5.380.6.21 `const fmtflags std::ios_base::oct` [static, inherited]**

Converts integer input or generates integer output in octal base.

Definition at line 287 of file `ios_base.h`.

Referenced by `std::basic_ostream<_CharT, _Traits>::operator<<()`.

**5.380.6.22 `const openmode std::ios_base::out` [static, inherited]**

Open for output. Default for `ofstream` and `fstream`.

Definition at line 386 of file `ios_base.h`.

Referenced by `std::basic_stringbuf<_CharT, _Traits, _Alloc>::overflow()`, `std::basic_filebuf<_CharT, _Traits>::overflow()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekoff()`, `std::basic_ostream<_CharT, _Traits>::seekp()`,

`std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos()`, `std::basic_ostream< _CharT, _Traits >::tellp()`, and `std::basic_filebuf< _CharT, _Traits >::xsputn()`.

**5.380.6.23 `const fmtflags std::ios_base::right` [static, inherited]**

Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.)

Definition at line 291 of file `ios_base.h`.

**5.380.6.24 `const fmtflags std::ios_base::scientific` [static, inherited]**

Generates floating-point output in scientific notation.

Definition at line 294 of file `ios_base.h`.

**5.380.6.25 `const fmtflags std::ios_base::showbase` [static, inherited]**

Generates a prefix indicating the numeric base of generated integer output.

Definition at line 298 of file `ios_base.h`.

**5.380.6.26 `const fmtflags std::ios_base::showpoint` [static, inherited]**

Generates a decimal-point character unconditionally in generated floating-point output.

Definition at line 302 of file `ios_base.h`.

**5.380.6.27 `const fmtflags std::ios_base::showpos` [static, inherited]**

Generates a + sign in non-negative generated numeric output.

Definition at line 305 of file `ios_base.h`.

**5.380.6.28 `const fmtflags std::ios_base::skipws` [static, inherited]**

Skips leading white space before certain input operations.

Definition at line 308 of file `ios_base.h`.

**5.380.6.29 `const openmode std::ios_base::trunc` [static, inherited]**

Open for input. Default for `ofstream`.

Definition at line 389 of file `ios_base.h`.

## **5.380 std::basic\_ostream<\_CharT, \_Traits > Class Template Reference 2107**

### **5.380.6.30 const fmtflags std::ios\_base::unitbuf [static, inherited]**

Flushes output after each output operation.

Definition at line 311 of file ios\_base.h.

### **5.380.6.31 const fmtflags std::ios\_base::uppercase [static, inherited]**

Replaces certain lowercase letters with their uppercase equivalents in generated output.

Definition at line 315 of file ios\_base.h.

Referenced by std::num\_put<\_CharT, \_OutIter >::do\_put().

The documentation for this class was generated from the following files:

- [ostream](#)
- [ostream.tcc](#)

## 5.381 `std::basic_ostream< _CharT, _Traits >::sentry` Class Reference

Performs setup work for output streams.

### Public Member Functions

- [sentry](#) ([basic\\_ostream](#)< `_CharT`, `_Traits` > &\_\_os)
- [~sentry](#) ()
- [operator bool](#) () const

### 5.381.1 Detailed Description

`template<typename _CharT, typename _Traits> class std::basic_ostream< _CharT, _Traits >::sentry`

Performs setup work for output streams. Objects of this class are created before all of the standard inserters are run. It is responsible for *exception-safe prefix and suffix operations*.

Definition at line 377 of file ostream.

### 5.381.2 Constructor & Destructor Documentation

**5.381.2.1** `template<typename _CharT, typename _Traits> std::basic_ostream< _CharT, _Traits >::sentry::sentry (basic_ostream< _CharT, _Traits > & __os) [inline, explicit]`

The constructor performs preparatory work.

#### Parameters:

`os` The output stream to guard.

If the stream state is good (`os.good()` is true), then if the stream is tied to another output stream, `is.tie()->flush()` is called to synchronize the output sequences.

If the stream state is still good, then the [sentry](#) state becomes true (*okay*).

Definition at line 47 of file ostream.tcc.

**5.381.2.2** `template<typename _CharT, typename _Traits>`  
`std::basic_ostream<_CharT, _Traits>::sentry::~sentry ()`  
`[inline]`

Possibly flushes the stream. If `ios_base::unitbuf` is set in `os.flags()`, and `std::uncaught_exception()` is true, the `sentry` destructor calls `flush()` on the output stream.

Definition at line 405 of file `ostream`.

References `std::uncaught_exception()`, and `std::unitbuf()`.

### 5.381.3 Member Function Documentation

**5.381.3.1** `template<typename _CharT, typename _Traits>`  
`std::basic_ostream<_CharT, _Traits>::sentry::operator bool ()`  
`const [inline, explicit]`

Quick status checking.

**Returns:**

The `sentry` state.

For ease of use, sentries may be converted to booleans. The return value is that of the `sentry` state (`true == okay`).

Definition at line 426 of file `ostream`.

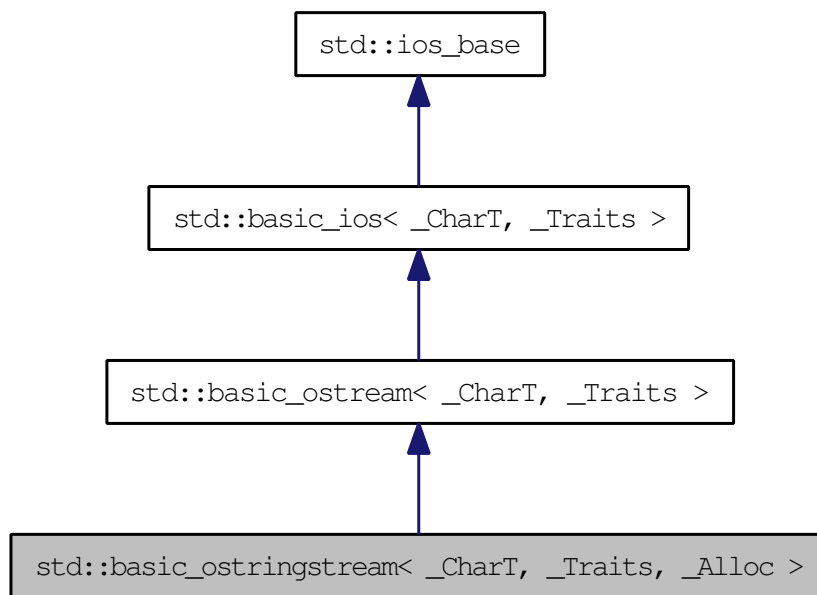

The documentation for this class was generated from the following files:

- `ostream`
- `ostream.tcc`

## 5.382 `std::basic_ostringstream< _CharT, _Traits, _Alloc >` Class Template Reference

Controlling output for `std::string`.

This class supports writing to objects of type `std::basic_string`, using the inherited functions from `std::basic_ostream`. To control the associated sequence, an instance of `std::basic_stringbuf` is used, which this page refers to as `sb`. Inheritance diagram for `std::basic_ostringstream< _CharT, _Traits, _Alloc >`:

### Public Types

- `streamsize width (streamsize __wide)`
- `streamsize width () const`

### Unformatted Output Functions

All the unformatted output functions have some common behavior. Each starts by constructing a temporary object of type `std::basic_ostream::sentry`. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an *exception* is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state. If `badbit` is on in the stream's exceptions mask, the *exception* will be rethrown without completing its actions.

- `void _M_write (const char_type * __s, streamsize __n)`
- `__ostream_type & put (char_type __c)`
- `__ostream_type & write (const char_type * __s, streamsize __n)`

### Arithmetic Inserters

All the `operator<<` functions (aka formatted output functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_ostream::sentry`. This can have several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an *exception* is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state without causing an `ios_base::failure` to be thrown. The original *exception* will then be rethrown.

- `__ostream_type & operator<< (__streambuf_type * __sb)`
- `__ostream_type & operator<< (const void * __p)`
- `__ostream_type & operator<< (long double __f)`
- `__ostream_type & operator<< (float __f)`
- `__ostream_type & operator<< (double __f)`
- `__ostream_type & operator<< (unsigned long long __n)`

### 5.382.1 Detailed Description

`template<typename _CharT, typename _Traits, typename _Alloc> class std::basic_ostringstream<_CharT, _Traits, _Alloc>`

Controlling output for `std::string`.

This class supports writing to objects of type `std::basic_string`, using the inherited functions from `std::basic_ostream`. To control the associated sequence, an instance of `std::basic_stringbuf` is used, which this page refers to as `sb`.

Definition at line 366 of file `sstream`.

## 5.382.2 Member Typedef Documentation

**5.382.2.1** `template<typename _CharT, typename _Traits> typedef  
ctype<_CharT> std::basic_ostream< _CharT, _Traits  
>::_ctype_type [inherited]`

These are non-standard types.

Reimplemented from [std::basic\\_ios< \\_CharT, \\_Traits >](#).

Definition at line 71 of file ostream.

**5.382.2.2** `template<typename _CharT, typename _Traits> typedef  
num_get<_CharT, istreambuf_iterator<_CharT, _Traits>  
> std::basic_ios< _CharT, _Traits >::_num_get_type  
[inherited]`

These are non-standard types.

Reimplemented in [std::basic\\_istream< \\_CharT, \\_Traits >](#), [std::basic\\_istream< char, \\_Traits >](#), and [std::basic\\_istream< char >](#).

Definition at line 86 of file basic\_ios.h.

**5.382.2.3** `template<typename _CharT, typename _Traits> typedef  
num_put<_CharT, ostreambuf_iterator<_CharT, _Traits>  
> std::basic_ostream< _CharT, _Traits >::_num_put_type  
[inherited]`

The quick-and-easy status check. This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

Reimplemented from [std::basic\\_ios< \\_CharT, \\_Traits >](#).

Definition at line 70 of file ostream.

**5.382.2.4** `template<typename _CharT, typename _Traits, typename _Alloc>  
typedef _CharT std::basic_ostringstream< _CharT, _Traits, _Alloc  
>::char_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic\\_ostream< \\_CharT, \\_Traits >](#).

Definition at line 370 of file sstream.

## 5.382 `std::basic_ostringstream<_CharT, _Traits, _Alloc>` Class Template Reference 2117

---

### 5.382.2.5 `typedef void(* std::ios_base::event_callback)(event, ios_base &, int)` [inherited]

The type of an event callback function.

#### Parameters:

*event* One of the members of the event enum.

*ios\_base* Reference to the `ios_base` object.

*int* The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several `ios_base` and `basic_ios` functions, specifically `imbue()`, `copyfmt()`, and `~ios()`.

Definition at line 444 of file `ios_base.h`.

### 5.382.2.6 `typedef _Ios_Fmtflags std::ios_base::fmtflags` [inherited]

This is a bitmask type. `_Ios_Fmtflags` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `fmtflags` are:

- `boolalpha`
- `dec`
- `fixed`
- `hex`
- `internal`
- `left`
- `oct`
- `right`
- `scientific`
- `showbase`
- `showpoint`
- `showpos`
- `skipws`
- `unitbuf`

- uppercase
- adjustfield
- basefield
- floatfield

Definition at line 263 of file ios\_base.h.

**5.382.2.7** `template<typename _CharT, typename _Traits, typename _Alloc>  
typedef traits_type::int_type std::basic_ostringstream< _CharT,  
_Traits, _Alloc >::int_type`

These are non-standard types.

Reimplemented from [std::basic\\_ostream< \\_CharT, \\_Traits >](#).

Definition at line 375 of file sstream.

**5.382.2.8** `typedef _Ios_Iostate std::ios_base::iostate [inherited]`

This is a bitmask type. `_Ios_Iostate` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `iostate` are:

- badbit
- eofbit
- failbit
- goodbit

Definition at line 338 of file ios\_base.h.

**5.382.2.9** `template<typename _CharT, typename _Traits, typename _Alloc>  
typedef traits_type::off_type std::basic_ostringstream< _CharT,  
_Traits, _Alloc >::off_type`

These are non-standard types.

Reimplemented from [std::basic\\_ostream< \\_CharT, \\_Traits >](#).

Definition at line 377 of file sstream.

**5.382 std::basic\_ostringstream<\_CharT, \_Traits, \_Alloc > Class Template Reference 2119**

---

**5.382.2.10 typedef \_Ios\_Openmode std::ios\_base::openmode [inherited]**

This is a bitmask type. *\_Ios\_Openmode* is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `openmode` are:

- `app`
- `ate`
- `binary`
- `in`
- `out`
- `trunc`

Definition at line 369 of file `ios_base.h`.

**5.382.2.11 template<typename \_CharT, typename \_Traits, typename \_Alloc> typedef traits\_type::pos\_type std::basic\_ostringstream<\_CharT, \_Traits, \_Alloc >::pos\_type**

These are non-standard types.

Reimplemented from [std::basic\\_ostream<\\_CharT, \\_Traits >](#).

Definition at line 376 of file `sstream`.

**5.382.2.12 typedef \_Ios\_Seekdir std::ios\_base::seekdir [inherited]**

This is an enumerated type. *\_Ios\_Seekdir* is implementation-defined. Defined values of type `seekdir` are:

- `beg`
- `cur`, equivalent to `SEEK_CUR` in the C standard library.
- `end`, equivalent to `SEEK_END` in the C standard library.

Definition at line 401 of file `ios_base.h`.

**5.382.2.13** `template<typename _CharT, typename _Traits, typename _Alloc>  
 typedef _Traits std::basic_ostringstream< _CharT, _Traits, _Alloc  
 >::traits_type`

These are non-standard types.

Reimplemented from `std::basic_ostream< _CharT, _Traits >`.

Definition at line 371 of file `sstream`.

### 5.382.3 Member Enumeration Documentation

**5.382.3.1** `enum std::ios_base::event [inherited]`

The [set](#) of events that may be passed to an event callback. `erase_event` is used during `~ios()` and `copyfmt()`. `imbue_event` is used during `imbue()`. `copyfmt_event` is used during `copyfmt()`.

Definition at line 427 of file `ios_base.h`.

### 5.382.4 Constructor & Destructor Documentation

**5.382.4.1** `template<typename _CharT, typename _Traits, typename  
 _Alloc> std::basic_ostringstream< _CharT, _Traits, _Alloc  
 >::basic_ostringstream (ios_base::openmode mode = ios_base::out)  
 [inline, explicit]`

Default constructor starts with an empty string buffer.

#### Parameters:

*mode* Whether the buffer can read, or write, or both.

`ios_base::out` is automatically included in *mode*.

Initializes `sb` using `mode|out`, and passes `&sb` to the base class initializer. Does not allocate any buffer.

That's a lie. We initialize the base class with `NULL`, because the string class does its own memory management.

Definition at line 402 of file `sstream`.

**5.382.4.2** `template<typename _CharT, typename _Traits, typename _Alloc> std::basic_ostringstream<_CharT, _Traits, _Alloc>::basic_ostringstream (const __string_type & __str, ios_base::openmode __mode = ios_base::out) [inline, explicit]`

Starts with an existing string buffer.

**Parameters:**

*str* A string to copy as a starting buffer.

*mode* Whether the buffer can read, or write, or both.

`ios_base::out` is automatically included in *mode*.

Initializes *sb* using *str* and `mode|out`, and passes `&sb` to the base class initializer.

That's a lie. We initialize the base class with `NULL`, because the string class does its own memory management.

Definition at line 420 of file `sstream`.

**5.382.4.3** `template<typename _CharT, typename _Traits, typename _Alloc> std::basic_ostringstream<_CharT, _Traits, _Alloc>::~~basic_ostringstream () [inline]`

The destructor does nothing. The buffer is deallocated by the `stringbuf` object, not the formatting stream.

Definition at line 431 of file `sstream`.

## 5.382.5 Member Function Documentation

**5.382.5.1** `const locale& std::ios_base::_M_getloc () const [inline, inherited]`

Locale access.

**Returns:**

A reference to the current [locale](#).

Like `getloc` above, but returns a reference instead of generating a copy.

Definition at line 705 of file `ios_base.h`.

Referenced by `std::money_get<_CharT, _InIter>::do_get()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::time_get<_CharT, _InIter>::do_get_date()`, `std::time_get<`

**5.382.5.2** `template<typename _CharT, typename _Traits> void std::basic_ostream< _CharT, _Traits >::_M_write (const char_type * __s, streamsize __n) [inline, inherited]`

Simple insertion.

**Parameters:**

*c* The character to insert.

**Returns:**

\*this

Tries to insert *c*.

**Note:**

This function is not overloaded on signed char and unsigned char.

Definition at line 287 of file ostream.

Referenced by `std::basic_ostream< _CharT, _Traits >::write()`.

**5.382.5.3** `template<typename _CharT, typename _Traits> bool std::basic_ios< _CharT, _Traits >::bad () const [inline, inherited]`

Fast error checking.

**Returns:**

True if the badbit is [set](#).

Note that other iostate flags may also be [set](#).

Definition at line 201 of file basic\_ios.h.

**5.382.5.4** `template<typename _CharT, typename _Traits > void std::basic_ios< _CharT, _Traits >::clear (iostate __state = goodbit) [inline, inherited]`

[Re]sets the error state.

## 5.382 `std::basic_ostringstream<_CharT, _Traits, _Alloc>` Class Template Reference

2123

### Parameters:

*state* The new state flag(s) to [set](#).

See [std::ios\\_base::iostate](#) for the possible bit values. Most users will not need to pass an argument.

Definition at line 40 of file `basic_ios.tcc`.

Referenced by `std::basic_ios<_CharT, _Traits>::rdbuf()`.

**5.382.5.5** `template<typename _CharT, typename _Traits> basic_ios<_CharT, _Traits> & std::basic_ios<_CharT, _Traits>::copyfmt(const basic_ios<_CharT, _Traits> & __rhs) [inline, inherited]`

Copies fields of `__rhs` into this.

### Parameters:

*\_\_rhs* The source values for the copies.

### Returns:

Reference to this object.

All fields of `__rhs` are copied into this object except that [rdbuf\(\)](#) and [rdstate\(\)](#) remain unchanged. All values in the `pword` and `iword` arrays are copied. Before copying, each callback is invoked with `erase_event`. After copying, each (new) callback is invoked with `copyfmt_event`. The final step is to copy [exceptions\(\)](#).

Definition at line 62 of file `basic_ios.tcc`.

References `std::basic_ios<_CharT, _Traits>::exceptions()`, `std::basic_ios<_CharT, _Traits>::fill()`, `std::ios_base::flags()`, `std::ios_base::getloc()`, `std::ios_base::precision()`, `std::basic_ios<_CharT, _Traits>::tie()`, and `std::ios_base::width()`.

**5.382.5.6** `template<typename _CharT, typename _Traits> bool std::basic_ios<_CharT, _Traits>::eof() const [inline, inherited]`

Fast error checking.

### Returns:

True if the eofbit is [set](#).

Note that other `iostate` flags may also be [set](#).

Definition at line 180 of file `basic_ios.h`.

Referenced by `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_istream< _CharT, _Traits >::putback()`, and `std::basic_istream< _CharT, _Traits >::unget()`.

#### 5.382.5.7 `template<typename _CharT, typename _Traits> void std::basic_ios< _CharT, _Traits >::exceptions (iostate __except) [inline, inherited]`

Throwing exceptions on errors.

##### Parameters:

*except* The new exceptions mask.

By default, error flags are [set](#) silently. You can [set](#) an exceptions mask for each stream; if a bit in the mask becomes [set](#) in the error flags, then an [exception](#) of type `std::ios_base::failure` is thrown.

If the error flag is already [set](#) when the exceptions mask is added, the [exception](#) is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>

int main()
{
 std::set_terminate (__gnu_cxx::__verbose_terminate_handler);

 std::ifstream f ("/etc/motd");

 std::cerr << "Setting badbit\n";
 f.setstate (std::ios_base::badbit);

 std::cerr << "Setting exception mask\n";
 f.exceptions (std::ios_base::badbit);
}
```

Definition at line 247 of file `basic_ios.h`.

#### 5.382.5.8 `template<typename _CharT, typename _Traits> iostate std::basic_ios< _CharT, _Traits >::exceptions () const [inline, inherited]`

Throwing exceptions on errors.

##### Returns:

The current exceptions mask.

## 5.382 `std::basic_ostringstream<_CharT, _Traits, _Alloc>` Class Template Reference 2125

---

This changes nothing in the stream. See the one-argument version of [exceptions\(iostate\)](#) for the meaning of the return value.

Definition at line 212 of file `basic_ios.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`.

### 5.382.5.9 `template<typename _CharT, typename _Traits> bool std::basic_ios<_CharT, _Traits>::fail() const` [`inline`, `inherited`]

Fast error checking.

#### Returns:

True if either the badbit or the failbit is [set](#).

Checking the badbit in [fail\(\)](#) is historical practice. Note that other iostate flags may also be [set](#).

Definition at line 191 of file `basic_ios.h`.

Referenced by `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_ostream<_CharT, _Traits>::seekp()`, `std::basic_istream<_CharT, _Traits>::tellg()`, `std::basic_ostream<_CharT, _Traits>::tellp()`, and `std::regex_traits<_Ch_type>::value()`.

### 5.382.5.10 `template<typename _CharT, typename _Traits> char_type std::basic_ios<_CharT, _Traits>::fill(char_type __ch)` [`inline`, `inherited`]

Sets a new *empty* character.

#### Parameters:

*ch* The new character.

#### Returns:

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via `setw`), Q characters are actually used, and Q<P. It defaults to a space ( ' ') in the current [locale](#).

Definition at line 380 of file `basic_ios.h`.

**5.382.5.11** `template<typename _CharT, typename _Traits> char_type  
std::basic_ios< _CharT, _Traits >::fill () const [inline,  
inherited]`

Retrieves the *empty* character.

**Returns:**

The current fill character.

It defaults to a space ( ' ') in the current [locale](#).

Definition at line 360 of file `basic_ios.h`.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`.

**5.382.5.12** `fmtflags std::ios_base::flags (fmtflags __fmtfl) [inline,  
inherited]`

Setting new format flags all at once.

**Parameters:**

*fmtfl* The new flags to [set](#).

**Returns:**

The previous format control flags.

This function overwrites all the format flags with *fmtfl*.

Definition at line 561 of file `ios_base.h`.

**5.382.5.13** `fmtflags std::ios_base::flags () const [inline, inherited]`

Access to format flags.

**Returns:**

The format control flags for both input and output.

Definition at line 550 of file `ios_base.h`.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::num_put< _CharT, _OutIter >::do_put()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::operator<<()`, and `std::operator>>()`.

**5.382 std::basic\_ostringstream< \_CharT, \_Traits, \_Alloc > Class Template Reference** 2127

---

**5.382.5.14** `template<typename _CharT, typename _Traits > basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::flush () [inline, inherited]`

Synchronizing the stream buffer.

**Returns:**

\*this

If `rdbuf ()` is a null pointer, changes nothing.

Otherwise, calls `rdbuf ()->pubsync ()`, and if that returns -1, sets `badbit`.

Definition at line 211 of file `ostream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

Referenced by `std::flush()`.

**5.382.5.15** `locale std::ios_base::getloc () const [inline, inherited]`

Locale access.

**Returns:**

A copy of the current [locale](#).

If `imbue (loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale ()`, the global C++ [locale](#).

Definition at line 694 of file `ios_base.h`.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`, `std::money_put< _CharT, _OutIter >::do_put()`, `std::basic_ios< _CharT, _Traits >::imbue()`, `std::operator>>()`, and `std::ws()`.

**5.382.5.16** `template<typename _CharT, typename _Traits> bool std::basic_ios< _CharT, _Traits >::good () const [inline, inherited]`

Fast error checking.

**Returns:**

True if no error flags are [set](#).

A wrapper around `rdstate`.

Definition at line 170 of file `basic_ios.h`.

**5.382.5.17** `template<typename _CharT, typename _Traits> locale  
std::basic_ios<_CharT, _Traits>::imbue (const locale & __loc)  
[inline, inherited]`

Moves to a new [locale](#).

**Parameters:**

*loc* The new [locale](#).

**Returns:**

The previous [locale](#).

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localizati>

Reimplemented from [std::ios\\_base](#).

Definition at line 113 of file `basic_ios.tcc`.

References `std::ios_base::getloc()`, and `std::basic_ios<_CharT, _Traits>::rdbuf()`.

Referenced by `std::operator<<()`.

**5.382.5.18** `template<typename _CharT, typename _Traits> void  
std::basic_ios<_CharT, _Traits>::init (basic_streambuf<_CharT,  
_Traits> * __sb) [inline, protected, inherited]`

All setup is performed here. This is called from the public constructor. It is not virtual and cannot be redefined.

Definition at line 125 of file `basic_ios.tcc`.

References `std::ios_base::badbit`, and `std::ios_base::goodbit`.

**5.382.5.19** `long& std::ios_base::iword (int __ix) [inline, inherited]`

Access to integer [array](#).

**Parameters:**

*\_\_ix* Index into the [array](#).

**Returns:**

A reference to an integer associated with the index.

## 5.382 `std::basic_ostringstream<_CharT, _Traits, _Alloc>` Class Template Reference 2129

---

The `iword` function provides access to an [array](#) of integers that can be used for any purpose. The [array](#) grows as required to hold the supplied index. All integers in the [array](#) are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the [array](#) can grow dynamically, it is not safe to hold onto the reference.

Definition at line 740 of file `ios_base.h`.

**5.382.5.20** `template<typename _CharT, typename _Traits> char  
std::basic_ios<_CharT, _Traits>::narrow(char_type __c, char  
__dfault) const [inline, inherited]`

Squeezes characters.

### Parameters:

`c` The character to narrow.

`dfault` The character to narrow.

### Returns:

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).narrow(c, dfault)
```

Additional notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

Definition at line 420 of file `basic_ios.h`.

**5.382.5.21** `template<typename _CharT, typename _Traits> std::basic_ios<  
_CharT, _Traits>::operator void * () const [inline,  
inherited]`

The quick-and-easy status check. This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`

Definition at line 111 of file `basic_ios.h`.

**5.382.5.22** `template<typename _CharT, typename _Traits> bool  
std::basic_ios< _CharT, _Traits >::operator! () const [inline,  
inherited]`

The quick-and-easy status check. This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

Definition at line 115 of file `basic_ios.h`.

**5.382.5.23** `template<typename _CharT, typename _Traits > basic_ostream<  
_CharT, _Traits > & std::basic_ostream< _CharT, _Traits  
>::operator<< (_streambuf_type * __sb) [inline,  
inherited]`

Extracting from another streambuf.

**Parameters:**

*sb* A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a [sentry](#) object and has the same error handling behavior.

If *sb* is NULL, the stream will [set](#) failbit in its error state.

Characters are extracted from *sb* and inserted into `*this` until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted), or
- an [exception](#) occurs while getting a character from *sb*, which sets failbit in the error state

If the function inserts no characters, failbit is [set](#).

Definition at line 120 of file `ostream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

### 5.382.5.34 `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream<_CharT, _Traits>::operator<< (bool __n) [inline, inherited]`

Extracting from another streambuf.

#### Parameters:

*sb* A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a [sentry](#) object and has the same error handling behavior.

If *sb* is NULL, the stream will [set](#) failbit in its error state.

Characters are extracted from *sb* and inserted into `*this` until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted), or
- an [exception](#) occurs while getting a character from *sb*, which sets failbit in the error state

If the function inserts no characters, failbit is [set](#).

Definition at line 173 of file `ostream`.

### 5.382.5.35 `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream<_CharT, _Traits>::operator<< (unsigned long __n) [inline, inherited]`

Extracting from another streambuf.

#### Parameters:

*sb* A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a [sentry](#) object and has the same error handling behavior.

If *sb* is NULL, the stream will [set](#) failbit in its error state.

Characters are extracted from *sb* and inserted into *\*this* until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted), or
- an [exception](#) occurs while getting a character from *sb*, which sets failbit in the error state

If the function inserts no characters, failbit is [set](#).

Definition at line 169 of file ostream.

**5.382.5.36** `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream<_CharT, _Traits >::operator<< (long __n) [inline, inherited]`

Basic arithmetic inserters.

**Parameters:**

*A* variable of builtin type.

**Returns:**

*\*this* if successful

These functions use the stream's current [locale](#) (specifically, the [num\\_get](#) facet) to perform numeric formatting.

Definition at line 165 of file ostream.

**5.382.5.37** `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream<_CharT, _Traits >::operator<< (ios_base &(*)(ios_base &) __pf) [inline, inherited]`

Interface for manipulators. Manipulators such as [std::endl](#) and [std::hex](#) use these functions in constructs like "std::cout << std::endl". For more information, see the [iomanip](#) header.

Definition at line 127 of file ostream.

---

**5.382.5.38** `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (__ios_type &(*)(__ios_type &) __pf) [inline, inherited]`

Interface for manipulators. Manipulators such as `std::endl` and `std::hex` use these functions in constructs like "std::cout << std::endl". For more information, see the `omanip` header.

Definition at line 117 of file `ostream`.

**5.382.5.39** `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (__ostream_type &(*)(__ostream_type &) __pf) [inline, inherited]`

Interface for manipulators. Manipulators such as `std::endl` and `std::hex` use these functions in constructs like "std::cout << std::endl". For more information, see the `omanip` header.

Definition at line 108 of file `ostream`.

**5.382.5.40** `streamsize std::ios_base::precision (streamsize __prec) [inline, inherited]`

Changing flags.

**Parameters:**

*prec* The new precision value.

**Returns:**

The previous value of `precision()`.

Definition at line 629 of file `ios_base.h`.

**5.382.5.41** `streamsize std::ios_base::precision () const [inline, inherited]`

Flags access.

**Returns:**

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Definition at line 620 of file ios\_base.h.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, and `std::operator<<()`.

**5.382.5.42** `template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::put(char_type __c) [inline, inherited]`

Simple insertion.

**Parameters:**

*c* The character to insert.

**Returns:**

\*this

Tries to insert *c*.

**Note:**

This function is not overloaded on signed char and unsigned char.

Definition at line 149 of file ostream.tcc.

References `std::ios_base::badbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

Referenced by `std::endl()`, and `std::ends()`.

**5.382.5.43** `void*& std::ios_base::pword(int __ix) [inline, inherited]`

Access to void pointer [array](#).

**Parameters:**

*\_\_ix* Index into the [array](#).

**Returns:**

A reference to a `void*` associated with the index.

The `pword` function provides access to an [array](#) of pointers that can be used for any purpose. The [array](#) grows as required to hold the supplied index. All pointers in the [array](#) are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the [array](#) can grow dynamically, it is not safe to hold onto the reference.

## 5.382 `std::basic_ostringstream<_CharT, _Traits, _Alloc>` Class Template Reference

2141

Definition at line 761 of file `ios_base.h`.

**5.382.5.44** `template<typename _CharT, typename _Traits> basic_streambuf<_CharT, _Traits> * std::basic_ios<_CharT, _Traits>::rdbuf(basic_streambuf<_CharT, _Traits> * __sb) [inline, inherited]`

Changing the underlying buffer.

### Parameters:

*sb* The new stream buffer.

### Returns:

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream foo; // or some other derived type
std::streambuf* p =;

foo.ios::rdbuf(p); // ios == basic_ios<char>
```

Definition at line 52 of file `basic_ios.tcc`.

References `std::basic_ios<_CharT, _Traits>::clear()`.

**5.382.5.45** `template<typename _CharT, typename _Traits, typename _Alloc> __stringbuf_type* std::basic_ostringstream<_CharT, _Traits, _Alloc>::rdbuf() const [inline]`

Accessing the underlying buffer.

### Returns:

The current `basic_stringbuf` buffer.

This hides both signatures of `std::basic_ios::rdbuf()`.

Reimplemented from `std::basic_ios<_CharT, _Traits>`.

Definition at line 442 of file `sstream`.

**5.382.5.46** `template<typename _CharT, typename _Traits> iostate  
std::basic_ios< _CharT, _Traits >::rdstate () const [inline,  
inherited]`

Returns the error state of the stream buffer.

**Returns:**

A bit pattern (well, isn't everything?)

See [std::ios\\_base::iostate](#) for the possible bit values. Most users will call one of the interpreting wrappers, e.g., [good\(\)](#).

Definition at line 127 of file `basic_ios.h`.

**5.382.5.47** `void std::ios_base::register_callback (event_callback __fn, int  
__index) [inherited]`

Add the callback `__fn` with parameter `__index`.

**Parameters:**

`__fn` The function to add.

`__index` The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

**5.382.5.48** `template<typename _CharT , typename _Traits > basic_ostream<  
_CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::seekp  
(off_type __off, ios_base::seekdir __dir) [inline, inherited]`

Changing the current write position.

**Parameters:**

`off` A file offset object.

`dir` The direction in which to seek.

**Returns:**

\*this

If `fail ()` is not true, calls `rdbuf ()->pubseekoff (off, dir)`. If that function fails, sets failbit.

## 5.382 `std::basic_ostringstream<_CharT, _Traits, _Alloc>` Class Template Reference 2143

---

Definition at line 290 of file `ostream.tcc`.

References `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::ios_base::out`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

### 5.382.5.49 `template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::seekp(pos_type __pos)` [`inline`, `inherited`]

Changing the current write position.

#### Parameters:

*pos* A file position object.

#### Returns:

\*this

If `fail()` is not true, calls `rdbuf()->pubseekpos(pos)`. If that function fails, sets failbit.

Definition at line 258 of file `ostream.tcc`.

References `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::ios_base::out`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

### 5.382.5.50 `fmtflags std::ios_base::setf(fmtflags __fmtfl, fmtflags __mask)` [`inline`, `inherited`]

Setting new format flags.

#### Parameters:

*fmtfl* Additional flags to `set`.

*mask* The flags mask for *fmtfl*.

#### Returns:

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* & *mask*. An example mask is `ios_base::adjustfield`.

Definition at line 594 of file `ios_base.h`.

**5.382.5.51** `fmtflags std::ios_base::setf (fmtflags __fmtfl) [inline, inherited]`

Setting new format flags.

**Parameters:**

*fmtfl* Additional flags to [set](#).

**Returns:**

The previous format control flags.

This function sets additional flags in format control. Flags that were previously [set](#) remain [set](#).

Definition at line 577 of file `ios_base.h`.

Referenced by `std::boolalpha()`, `std::dec()`, `std::fixed()`, `std::hex()`, `std::internal()`, `std::left()`, `std::oct()`, `std::right()`, `std::scientific()`, `std::showbase()`, `std::showpoint()`, `std::showpos()`, `std::skipws()`, `std::unitbuf()`, and `std::uppercase()`.

**5.382.5.52** `template<typename _CharT, typename _Traits> void std::basic_ios< _CharT, _Traits >::setstate (iostate __state) [inline, inherited]`

Sets additional flags in the error state.

**Parameters:**

*state* The additional state flag(s) to [set](#).

See [std::ios\\_base::iostate](#) for the possible bit values.

Definition at line 147 of file `basic_ios.h`.

Referenced by `std::basic_ostream< _CharT, _Traits >::flush()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::operator>>()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_ostream< _CharT, _Traits >::put()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::readsome()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_istream< _CharT, _Traits >::sync()`, `std::basic_istream< _CharT, _Traits >::unget()`, and `std::ws()`.

**5.382 std::basic\_ostringstream< \_CharT, \_Traits, \_Alloc > Class Template Reference** **2145**

---

**5.382.5.53** `template<typename _CharT, typename _Traits, typename _Alloc>  
void std::basic_ostringstream< _CharT, _Traits, _Alloc >::str  
(const __string_type & __s) [inline]`

Setting a new buffer.

**Parameters:**

*s* The string to use as a new sequence.

Calls `rdbuf () ->str (s)`.

Definition at line 460 of file `sstream`.

**5.382.5.54** `template<typename _CharT, typename _Traits, typename _Alloc>  
__string_type std::basic_ostringstream< _CharT, _Traits, _Alloc  
>::str () const [inline]`

Copying out the string buffer.

**Returns:**

`rdbuf () ->str ()`

Definition at line 450 of file `sstream`.

Referenced by `std::operator<<()`.

**5.382.5.55** `static bool std::ios_base::sync_with_stdio (bool __sync = true)  
[static, inherited]`

Interaction with the standard C I/O objects.

**Parameters:**

*sync* Whether to synchronize or not.

**Returns:**

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., `stdout`) and the standard C++ objects (e.g., `cout`). User-declared streams are unaffected. See <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch28s02.html>

**5.382.5.56** `template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits>::pos_type std::basic_ostream<_CharT, _Traits>::tellp() [inline, inherited]`

Getting the current write position.

**Returns:**

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0, cur, out)`.

Definition at line 237 of file `ostream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::cur`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::ios_base::out`, and `std::basic_ios<_CharT, _Traits>::rdbuf()`.

**5.382.5.57** `template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits>* std::basic_ios<_CharT, _Traits>::tie(basic_ostream<_CharT, _Traits> * __tiestr) [inline, inherited]`

Ties this stream to an output stream.

**Parameters:**

*tiestr* The output stream.

**Returns:**

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see `tie()` for more.

Definition at line 297 of file `basic_ios.h`.

**5.382.5.58** `template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits>* std::basic_ios<_CharT, _Traits>::tie() const [inline, inherited]`

Fetches the current *tied* stream.

**Returns:**

A pointer to the tied stream, or NULL if the stream is not tied.

## 5.382 `std::basic_ostringstream<_CharT, _Traits, _Alloc>` Class Template Reference 2147

---

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Definition at line 285 of file `basic_ios.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`.

### 5.382.5.59 `void std::ios_base::unsetf (fmtflags __mask) [inline, inherited]`

Clearing format flags.

#### Parameters:

*mask* The flags to unset.

This function clears *mask* in the format flags.

Definition at line 609 of file `ios_base.h`.

Referenced by `std::noboolalpha()`, `std::noshowbase()`, `std::noshowpoint()`, `std::noshowpos()`, `std::noskipws()`, `std::nounitbuf()`, and `std::nouppercase()`.

### 5.382.5.60 `template<typename _CharT, typename _Traits> char_type std::basic_ios<_CharT, _Traits>::widen (char __c) const [inline, inherited]`

Widens characters.

#### Parameters:

*c* The character to widen.

#### Returns:

The widened character.

Maps a character of `char` to a character of `char_type`.

Returns the result of

```
std::use_facet<ctype<char_type>> (getloc()).widen(c)
```

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

Definition at line 439 of file `basic_ios.h`.

Referenced by `std::endl()`, `std::getline()`, and `std::operator>>()`.

**5.382.5.61** `streamsize std::ios_base::width (streamsize __wide) [inline, inherited]`

Changing flags.

**Parameters:**

*wide* The new width value.

**Returns:**

The previous value of `width()`.

Definition at line 652 of file `ios_base.h`.

**5.382.5.62** `streamsize std::ios_base::width () const [inline, inherited]`

Flags access.

**Returns:**

The minimum field width to generate on output operations.

*Minimum field width* refers to the number of characters.

Definition at line 643 of file `ios_base.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::num_put<_CharT, _OutIter>::do_put()`, and `std::operator<>>()`.

**5.382.5.63** `template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::write (const char_type * __s, streamsize __n) [inline, inherited]`

Character string insertion.

**Parameters:**

*s* The [array](#) to insert.

*n* Maximum number of characters to insert.

**Returns:**

\*this

Characters are copied from *s* and inserted into the stream until one of the following happens:

## 5.382 `std::basic_ostringstream< _CharT, _Traits, _Alloc >` Class Template Reference 2149

---

- $n$  characters are inserted
- inserting into the output sequence fails (in this case, `badbit` will be [set](#) in the stream's error state)

### Note:

This function is not overloaded on signed char and unsigned char.

Definition at line 183 of file `ostream.tcc`.

References `std::basic_ostream< _CharT, _Traits >::_M_write()`, and `std::ios_base::badbit`.

### 5.382.5.64 `static int std::ios_base::xalloc () throw () [static, inherited]`

Access to unique indices.

### Returns:

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the `iword` and `pword` functions. The expectation is that an application calls `xalloc` in order to obtain an index in the `iword` and `pword` arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. `xalloc` is guaranteed to return an index that is safe to use in the `iword` and `pword` arrays.

## 5.382.6 Member Data Documentation

### 5.382.6.1 `const fmtflags std::ios_base::adjustfield [static, inherited]`

A mask of `left|right|internal`. Useful for the 2-arg form of `setf`.

Definition at line 318 of file `ios_base.h`.

Referenced by `std::num_put< _CharT, _OutIter >::do_put()`.

### 5.382.6.2 `const openmode std::ios_base::app [static, inherited]`

Seek to end before each write.

Definition at line 372 of file `ios_base.h`.

**5.382.6.3 const openmode std::ios\_base::ate [static, inherited]**

Open and seek to end immediately after opening.

Definition at line 375 of file ios\_base.h.

Referenced by std::basic\_filebuf< \_CharT, \_Traits >::open().

**5.382.6.4 const iostate std::ios\_base::badbit [static, inherited]**

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).

Definition at line 342 of file ios\_base.h.

Referenced by std::basic\_ostream< \_CharT, \_Traits >::flush(), std::basic\_istream< \_CharT, \_Traits >::get(), std::basic\_istream< \_CharT, \_Traits >::getline(), std::basic\_istream< \_CharT, \_Traits >::ignore(), std::basic\_ios< \_CharT, \_Traits >::init(), std::operator<<(), std::basic\_ostream< \_CharT, \_Traits >::operator<<(), std::operator>>(), std::basic\_istream< \_CharT, \_Traits >::operator>>(), std::basic\_istream< \_CharT, \_Traits >::peek(), std::basic\_ostream< \_CharT, \_Traits >::put(), std::basic\_istream< \_CharT, \_Traits >::putback(), std::basic\_istream< \_CharT, \_Traits >::read(), std::basic\_istream< \_CharT, \_Traits >::readsome(), std::basic\_istream< \_CharT, \_Traits >::seekg(), std::basic\_ostream< \_CharT, \_Traits >::seekp(), std::basic\_istream< \_CharT, \_Traits >::sync(), std::basic\_istream< \_CharT, \_Traits >::tellg(), std::basic\_ostream< \_CharT, \_Traits >::tellp(), std::basic\_istream< \_CharT, \_Traits >::unget(), and std::basic\_ostream< \_CharT, \_Traits >::write().

**5.382.6.5 const fmtflags std::ios\_base::basefield [static, inherited]**

A mask of dec|oct|hex. Useful for the 2-arg form of `setf`.

Definition at line 321 of file ios\_base.h.

Referenced by std::num\_get< \_CharT, \_InIter >::do\_get(), and std::basic\_ostream< \_CharT, \_Traits >::operator<<().

**5.382.6.6 const seekdir std::ios\_base::beg [static, inherited]**

Request a seek relative to the beginning of the stream.

Definition at line 404 of file ios\_base.h.

Referenced by std::basic\_filebuf< \_CharT, \_Traits >::seekpos().

## 5.382 `std::basic_ostringstream< _CharT, _Traits, _Alloc >` Class Template Reference 2151

---

### 5.382.6.7 `const openmode std::ios_base::binary` [static, inherited]

Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch27s02.html>.

Definition at line 380 of file `ios_base.h`.

Referenced by `std::basic_filebuf< _CharT, _Traits >::showmanyc()`.

### 5.382.6.8 `const fmtflags std::ios_base::boolalpha` [static, inherited]

Insert/extract `bool` in alphabetic rather than numeric format.

Definition at line 266 of file `ios_base.h`.

Referenced by `std::num_get< _CharT, _InIter >::do_get()`, and `std::num_put< _CharT, _OutIter >::do_put()`.

### 5.382.6.9 `const seekdir std::ios_base::cur` [static, inherited]

Request a seek relative to the current position within the sequence.

Definition at line 407 of file `ios_base.h`.

Referenced by `std::basic_filebuf< _CharT, _Traits >::imbue()`, `std::basic_filebuf< _CharT, _Traits >::pbackfail()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff()`, `std::basic_filebuf< _CharT, _Traits >::seekoff()`, `std::basic_istream< _CharT, _Traits >::tellg()`, and `std::basic_ostream< _CharT, _Traits >::tellp()`.

### 5.382.6.10 `const fmtflags std::ios_base::dec` [static, inherited]

Converts integer input or generates integer output in [decimal](#) base.

Definition at line 269 of file `ios_base.h`.

### 5.382.6.11 `const seekdir std::ios_base::end` [static, inherited]

Request a seek relative to the current end of the sequence.

Definition at line 410 of file `ios_base.h`.

Referenced by `std::basic_filebuf< _CharT, _Traits >::open()`, and `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff()`.

**5.382.6.12 const iostate std::ios\_base::eofbit [static, inherited]**

Indicates that an input operation reached the end of an input sequence.

Definition at line 345 of file ios\_base.h.

Referenced by `std::num_get<_CharT, _InIter>::do_get()`, `std::time_get<_CharT, _InIter>::do_get_date()`, `std::time_get<_CharT, _InIter>::do_get_monthname()`, `std::time_get<_CharT, _InIter>::do_get_time()`, `std::time_get<_CharT, _InIter>::do_get_weekday()`, `std::time_get<_CharT, _InIter>::do_get_year()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::operator>>()`, `std::basic_istream<_CharT, _Traits>::operator>>()`, `std::basic_istream<_CharT, _Traits>::peek()`, `std::basic_istream<_CharT, _Traits>::read()`, `std::basic_istream<_CharT, _Traits>::readsome()`, and `std::ws()`.

**5.382.6.13 const iostate std::ios\_base::failbit [static, inherited]**

Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.

Definition at line 350 of file ios\_base.h.

Referenced by `std::num_get<_CharT, _InIter>::do_get()`, `std::time_get<_CharT, _InIter>::do_get_monthname()`, `std::time_get<_CharT, _InIter>::do_get_weekday()`, `std::time_get<_CharT, _InIter>::do_get_year()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::basic_ostream<_CharT, _Traits>::operator<<()`, `std::basic_istream<_CharT, _Traits>::operator>>()`, `std::operator>>()`, `std::basic_istream<_CharT, _Traits>::read()`, `std::basic_istream<_CharT, _Traits>::seekg()`, and `std::basic_ostream<_CharT, _Traits>::seekp()`.

**5.382.6.14 const fmtflags std::ios\_base::fixed [static, inherited]**

Generate floating-point output in fixed-point notation.

Definition at line 272 of file ios\_base.h.

**5.382.6.15 const fmtflags std::ios\_base::floatfield [static, inherited]**

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.

Definition at line 324 of file ios\_base.h.

**5.382.6.16 const iostate std::ios\_base::goodbit [static, inherited]**

Indicates all is well.

Definition at line 353 of file ios\_base.h.

Referenced by std::num\_get< \_CharT, \_InIter >::do\_get(), std::time\_get< \_CharT, \_InIter >::do\_get\_monthname(), std::time\_get< \_CharT, \_InIter >::do\_get\_weekday(), std::time\_get< \_CharT, \_InIter >::do\_get\_year(), std::basic\_ostream< \_CharT, \_Traits >::flush(), std::basic\_istream< \_CharT, \_Traits >::get(), std::basic\_istream< \_CharT, \_Traits >::getline(), std::basic\_istream< \_CharT, \_Traits >::ignore(), std::basic\_ios< \_CharT, \_Traits >::init(), std::basic\_ostream< \_CharT, \_Traits >::operator<<(), std::operator>>(), std::basic\_istream< \_CharT, \_Traits >::operator>>(), std::basic\_istream< \_CharT, \_Traits >::peek(), std::basic\_ostream< \_CharT, \_Traits >::put(), std::basic\_istream< \_CharT, \_Traits >::putback(), std::basic\_istream< \_CharT, \_Traits >::read(), std::basic\_istream< \_CharT, \_Traits >::readsome(), std::basic\_istream< \_CharT, \_Traits >::seekg(), std::basic\_ostream< \_CharT, \_Traits >::seekp(), std::basic\_istream< \_CharT, \_Traits >::sync(), and std::basic\_istream< \_CharT, \_Traits >::unget().

**5.382.6.17 const fmtflags std::ios\_base::hex [static, inherited]**

Converts integer input or generates integer output in hexadecimal base.

Definition at line 275 of file ios\_base.h.

Referenced by std::num\_get< \_CharT, \_InIter >::do\_get(), std::num\_put< \_CharT, \_OutIter >::do\_put(), and std::basic\_ostream< \_CharT, \_Traits >::operator<<().

**5.382.6.18 const openmode std::ios\_base::in [static, inherited]**

Open for input. Default for ifstream and fstream.

Definition at line 383 of file ios\_base.h.

Referenced by std::basic\_filebuf< \_CharT, \_Traits >::pbackfail(), std::basic\_istream< \_CharT, \_Traits >::seekg(), std::basic\_stringbuf< \_CharT, \_Traits, \_Alloc >::seekoff(), std::basic\_stringbuf< \_CharT, \_Traits, \_Alloc >::seekpos(), std::basic\_filebuf< \_CharT, \_Traits >::showmanyc(), std::basic\_istream< \_CharT, \_Traits >::tellg(), std::basic\_stringbuf< \_CharT, \_Traits, \_Alloc >::underflow(), std::basic\_filebuf< \_CharT, \_Traits >::underflow(), and std::basic\_filebuf< \_CharT, \_Traits >::xsgetn().

**5.382.6.19 const fmtflags std::ios\_base::internal [static, inherited]**

Adds fill characters at a designated internal point in certain generated output, or identical to right if no such point is designated.

Definition at line 280 of file `ios_base.h`.

#### **5.382.6.20 `const fmtflags std::ios_base::left` [static, inherited]**

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.)

Definition at line 284 of file `ios_base.h`.

Referenced by `std::num_put<_CharT, _OutIter >::do_put()`.

#### **5.382.6.21 `const fmtflags std::ios_base::oct` [static, inherited]**

Converts integer input or generates integer output in octal base.

Definition at line 287 of file `ios_base.h`.

Referenced by `std::basic_ostream<_CharT, _Traits >::operator<<()`.

#### **5.382.6.22 `const openmode std::ios_base::out` [static, inherited]**

Open for output. Default for `ofstream` and `fstream`.

Definition at line 386 of file `ios_base.h`.

Referenced by `std::basic_stringbuf<_CharT, _Traits, _Alloc >::overflow()`, `std::basic_filebuf<_CharT, _Traits >::overflow()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc >::seekoff()`, `std::basic_ostream<_CharT, _Traits >::seekp()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc >::seekpos()`, `std::basic_ostream<_CharT, _Traits >::tellp()`, and `std::basic_filebuf<_CharT, _Traits >::xsputn()`.

#### **5.382.6.23 `const fmtflags std::ios_base::right` [static, inherited]**

Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.)

Definition at line 291 of file `ios_base.h`.

#### **5.382.6.24 `const fmtflags std::ios_base::scientific` [static, inherited]**

Generates floating-point output in scientific notation.

Definition at line 294 of file `ios_base.h`.

**5.382.6.25 const fmtflags std::ios\_base::showbase [static, inherited]**

Generates a prefix indicating the numeric base of generated integer output.

Definition at line 298 of file ios\_base.h.

**5.382.6.26 const fmtflags std::ios\_base::showpoint [static, inherited]**

Generates a decimal-point character unconditionally in generated floating-point output.

Definition at line 302 of file ios\_base.h.

**5.382.6.27 const fmtflags std::ios\_base::showpos [static, inherited]**

Generates a + sign in non-negative generated numeric output.

Definition at line 305 of file ios\_base.h.

**5.382.6.28 const fmtflags std::ios\_base::skipws [static, inherited]**

Skips leading white space before certain input operations.

Definition at line 308 of file ios\_base.h.

**5.382.6.29 const openmode std::ios\_base::trunc [static, inherited]**

Open for input. Default for `ofstream`.

Definition at line 389 of file ios\_base.h.

**5.382.6.30 const fmtflags std::ios\_base::unitbuf [static, inherited]**

Flushes output after each output operation.

Definition at line 311 of file ios\_base.h.

**5.382.6.31 const fmtflags std::ios\_base::uppercase [static, inherited]**

Replaces certain lowercase letters with their uppercase equivalents in generated output.

Definition at line 315 of file ios\_base.h.

### 5.383.1 Detailed Description

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>> class std::basic_regex<_Ch_type, _Rx_traits >
```

Objects of specializations of this class represent regular expressions constructed from sequences of character type `_Ch_type`.

Storage for the regular expression is allocated and deallocated as necessary by the member functions of this class.

Definition at line 711 of file `tr1_impl/regex`.

## 5.383.2 Constructor & Destructor Documentation

**5.383.2.1** `template<typename _Ch_type, typename _Rx_traits =  
regex_traits<_Ch_type>> std::basic_regex<_Ch_type, _Rx_traits  
>::basic_regex () [inline]`

Constructs a basic regular expression that does not match any character sequence.

Definition at line 752 of file tr1\_impl/regex.

**5.383.2.2** `template<typename _Ch_type, typename _Rx_traits =  
regex_traits<_Ch_type>> std::basic_regex<_Ch_type,  
_Rx_traits >::basic_regex (const _Ch_type * __p, flag_type __f =  
regex_constants::ECMAScript) [inline, explicit]`

Constructs a basic regular expression from the sequence [p, p + char\_traits<\_Ch\_type>::length(p)) interpreted according to the flags in f.

### Parameters:

*p* A pointer to the start of a C-style null-terminated string containing a regular expression.

*f* Flags indicating the syntax rules and options.

### Exceptions:

*regex\_error* if p is not a valid regular expression.

Definition at line 768 of file tr1\_impl/regex.

**5.383.2.3** `template<typename _Ch_type, typename _Rx_traits =  
regex_traits<_Ch_type>> std::basic_regex<_Ch_type, _Rx_traits  
>::basic_regex (const _Ch_type * __p, std::size_t __len, flag_type  
__f) [inline]`

Constructs a basic regular expression from the sequence [p, p + len) interpreted according to the flags in f.

### Parameters:

*p* A pointer to the start of a string containing a regular expression.

*len* The length of the string containing the regular expression.

*f* Flags indicating the syntax rules and options.

**Exceptions:**

*regex\_error* if *p* is not a valid regular expression.

Definition at line 784 of file `tr1_impl/regex`.

```
5.383.2.4 template<typename _Ch_type, typename _Rx_traits =
 regex_traits<_Ch_type>> std::basic_regex<_Ch_type, _Rx_traits
 >::basic_regex (const basic_regex<_Ch_type, _Rx_traits > & __rhs)
 [inline]
```

Copy-constructs a basic regular expression.

**Parameters:**

*rhs* A `regex` object.

Definition at line 793 of file `tr1_impl/regex`.

```
5.383.2.5 template<typename _Ch_type, typename _Rx_traits =
 regex_traits<_Ch_type>> template<typename _Ch_traits ,
 typename _Ch_alloc > std::basic_regex<_Ch_type, _Rx_traits
 >::basic_regex (const basic_string<_Ch_type, _Ch_traits,
 _Ch_alloc > & __s, flag_type __f = regex_constants::ECMAScript)
 [inline, explicit]
```

Constructs a basic regular expression from the string *s* interpreted according to the flags in *f*.

**Parameters:**

*s* A string containing a regular expression.

*f* Flags indicating the syntax rules and options.

**Exceptions:**

*regex\_error* if *s* is not a valid regular expression.

Definition at line 809 of file `tr1_impl/regex`.

**5.383.2.6** `template<typename _Ch_type, typename _Rx_traits =  
regex_traits<_Ch_type>> template<typename _InputIterator  
> std::basic_regex<_Ch_type, _Rx_traits >::basic_regex  
(_InputIterator __first, _InputIterator __last, flag_type __f =  
regex_constants::ECMAScript) [inline]`

Constructs a basic regular expression from the range [first, last) interpreted according to the flags in *f*.

**Parameters:**

- first* The start of a range containing a valid regular expression.
- last* The end of a range containing a valid regular expression.
- f* The format flags of the regular expression.

**Exceptions:**

- regex\_error* if [first, last) is not a valid regular expression.

Definition at line 828 of file tr1\_impl/regex.

**5.383.2.7** `template<typename _Ch_type, typename _Rx_traits =  
regex_traits<_Ch_type>> std::basic_regex<_Ch_type, _Rx_traits  
>::basic_regex (initializer_list<_Ch_type > __l, flag_type __f =  
regex_constants::ECMAScript) [inline]`

Constructs a basic regular expression from an initializer *list*.

**Parameters:**

- l* The initializer *list*.
- f* The format flags of the regular expression.

**Exceptions:**

- regex\_error* if *l* is not a valid regular expression.

Definition at line 842 of file tr1\_impl/regex.

**5.383.2.8** `template<typename _Ch_type, typename _Rx_traits =  
regex_traits<_Ch_type>> std::basic_regex<_Ch_type, _Rx_traits  
>::~~basic_regex () [inline]`

Destroys a basic regular expression.

Definition at line 851 of file tr1\_impl/regex.

### 5.383.3 Member Function Documentation

**5.383.3.1** `template<typename _Ch_type, typename _Rx_traits =  
regex_traits<_Ch_type>> basic_regex& std::basic_regex<  
_Ch_type, _Rx_traits >::assign (initializer_list<_Ch_type > __l,  
flag_type __f = regex_constants::ECMAScript) [inline]`

Assigns a new regular expression to a regex object.

**Parameters:**

*l* An initializer [list](#) representing a regular expression.  
*flags* Syntax option flags.

**Exceptions:**

[regex\\_error](#) if *l* does not contain a valid regular expression pattern interpreted according to `flags`. If [regex\\_error](#) is thrown, the object remains unchanged.

Definition at line 984 of file `tr1_impl/regex`.

References `std::basic_regex<_Ch_type, _Rx_traits >::assign()`.

Referenced by `std::basic_regex<_Ch_type, _Rx_traits >::assign()`.

**5.383.3.2** `template<typename _Ch_type, typename _Rx_traits =  
regex_traits<_Ch_type>> template<typename _InputIterator >  
basic_regex& std::basic_regex<_Ch_type, _Rx_traits >::assign  
(_InputIterator __first, _InputIterator __last, flag_type __flags =  
regex_constants::ECMAScript) [inline]`

Assigns a new regular expression to a regex object.

**Parameters:**

*first* The start of a range containing a valid regular expression.  
*last* The end of a range containing a valid regular expression.  
*flags* Syntax option flags.

**Exceptions:**

[regex\\_error](#) if *p* does not contain a valid regular expression pattern interpreted according to `flags`. If [regex\\_error](#) is thrown, the object remains unchanged.

Definition at line 968 of file `tr1_impl/regex`.

References `std::basic_regex<_Ch_type, _Rx_traits >::assign()`.

Referenced by `std::basic_regex<_Ch_type, _Rx_traits >::assign()`.

## 5.383 std::basic\_regex<\_Ch\_type, \_Rx\_traits > Class Template Reference 2163

**5.383.3.3** `template<typename _Ch_type, typename _Rx_traits =  
regex_traits<_Ch_type>> template<typename _Ch_type, traits, _Ch_type,  
_Rx_traits >::assign (const basic_string<_Ch_type, _Ch_type, traits,  
_Allocator > & __s, flag_type __f = regex_constants::ECMAScript)  
[inline]`

Assigns a new regular expression to a regex object from a string containing a regular expression pattern.

### Parameters:

- s* A string containing a regular expression pattern.
- flags* Syntax option flags.

### Exceptions:

- regex\_error* if *p* does not contain a valid regular expression pattern interpreted according to *flags*. If *regex\_error* is thrown, *\*this* remains unchanged.

Definition at line 945 of file `tr1_impl/regex`.

References `std::basic_regex<_Ch_type, _Rx_traits >::swap()`.

**5.383.3.4** `template<typename _Ch_type, typename _Rx_traits =  
regex_traits<_Ch_type>> basic_regex& std::basic_regex<  
_Ch_type, _Rx_traits >::assign (const _Ch_type * __p, std::size_t  
__len, flag_type __flags) [inline]`

Assigns a new regular expression to a regex object from a C-style string containing a regular expression pattern.

### Parameters:

- p* A pointer to a C-style string containing a regular expression pattern.
- len* The length of the regular expression pattern string.
- flags* Syntax option flags.

### Exceptions:

- regex\_error* if *p* does not contain a valid regular expression pattern interpreted according to *flags*. If *regex\_error* is thrown, *\*this* remains unchanged.

Definition at line 929 of file `tr1_impl/regex`.

References `std::basic_regex<_Ch_type, _Rx_traits >::assign()`.

Referenced by `std::basic_regex<_Ch_type, _Rx_traits >::assign()`.

**5.383.3.5** `template<typename _Ch_type, typename _Rx_traits =  
 regex_traits<_Ch_type>> basic_regex& std::basic_regex<  
 _Ch_type, _Rx_traits >::assign (const _Ch_type * __p, flag_type  
 __flags = regex_constants::ECMAScript) [inline]`

Assigns a new regular expression to a regex object from a C-style null-terminated string containing a regular expression pattern.

**Parameters:**

- p* A pointer to a C-style null-terminated string containing a regular expression pattern.
- flags* Syntax option flags.

**Exceptions:**

- regex\_error* if *p* does not contain a valid regular expression pattern interpreted according to *flags*. If *regex\_error* is thrown, \*this remains unchanged.

Definition at line 911 of file `tr1_impl/regex`.

References `std::basic_regex<_Ch_type, _Rx_traits >::assign()`.

Referenced by `std::basic_regex<_Ch_type, _Rx_traits >::assign()`.

**5.383.3.6** `template<typename _Ch_type, typename _Rx_traits =  
 regex_traits<_Ch_type>> basic_regex& std::basic_regex<  
 _Ch_type, _Rx_traits >::assign (const basic_regex<_Ch_type,  
 _Rx_traits > & __that) [inline]`

the real assignment operator.

**Parameters:**

- that* Another regular expression object.

Definition at line 890 of file `tr1_impl/regex`.

References `std::basic_regex<_Ch_type, _Rx_traits >::swap()`.

Referenced by `std::basic_regex<_Ch_type, _Rx_traits >::operator=()`.

**5.383.3.7** `template<typename _Ch_type, typename _Rx_traits =  
 regex_traits<_Ch_type>> flag_type std::basic_regex<_Ch_type,  
 _Rx_traits >::flags () const [inline]`

Gets the flags used to construct the regular expression or in the last call to `assign()`.

## 5.383 std::basic\_regex<\_Ch\_type, \_Rx\_traits > Class Template Reference 2165

Definition at line 1003 of file tr1\_impl/regex.

Referenced by std::basic\_regex<\_Ch\_type, \_Rx\_traits >::operator=().

regex_traits<_Ch_type>> locale_type std::basic_regex<_Ch_type,  
_Rx_traits >::getloc () const [inline]`

Gets the [locale](#) currently imbued in the regular expression object.

Definition at line 1021 of file tr1\_impl/regex.

**5.383.3.9** `template<typename _Ch_type, typename _Rx_traits =  
regex_traits<_Ch_type>> locale_type std::basic_regex<_Ch_type,  
_Rx_traits >::imbue (locale_type __loc) [inline]`

Imbues the regular expression object with the given [locale](#).

### Parameters:

*loc* A [locale](#).

Definition at line 1013 of file tr1\_impl/regex.

**5.383.3.10** `template<typename _Ch_type, typename _Rx_traits =  
regex_traits<_Ch_type>> unsigned int std::basic_regex<  
_Ch_type, _Rx_traits >::mark_count () const [inline]`

Gets the number of marked subexpressions within the regular expression.

Definition at line 995 of file tr1\_impl/regex.

**5.383.3.11** `template<typename _Ch_type, typename _Rx_traits =  
regex_traits<_Ch_type>> template<typename _Ch_typeraits  
, typename _Allocator > basic_regex& std::basic_regex<  
_Ch_type, _Rx_traits >::operator= (const basic_string<_Ch_type,  
_Ch_typeraits, _Allocator > & __s) [inline]`

Replaces a regular expression with a new one constructed from a string.

### Parameters:

*A* a pointer to a string containing a regular expression.

Definition at line 880 of file tr1\_impl/regex.

References `std::basic_regex<_Ch_type, _Rx_traits >::assign()`, and `std::basic_regex<_Ch_type, _Rx_traits >::flags()`.

**5.383.3.12** `template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>> basic_regex& std::basic_regex<_Ch_type, _Rx_traits >::operator= (const _Ch_type * __p)`  
**[inline]**

Replaces a regular expression with a new one constructed from a C-style null-terminated string.

**Parameters:**

*A* pointer to the start of a null-terminated C-style string containing a regular expression.

Definition at line 869 of file `tr1_impl/regex`.

References `std::basic_regex<_Ch_type, _Rx_traits >::assign()`, and `std::basic_regex<_Ch_type, _Rx_traits >::flags()`.

**5.383.3.13** `template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>> basic_regex& std::basic_regex<_Ch_type, _Rx_traits >::operator= (const basic_regex<_Ch_type, _Rx_traits > & __rhs)` **[inline]**

Assigns one regular expression to another.

Definition at line 858 of file `tr1_impl/regex`.

References `std::basic_regex<_Ch_type, _Rx_traits >::assign()`.

**5.383.3.14** `template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>> void std::basic_regex<_Ch_type, _Rx_traits >::swap (basic_regex<_Ch_type, _Rx_traits > & __rhs)`  
**[inline]**

Swaps the contents of two regular expression objects.

**Parameters:**

*rhs* Another regular expression object.

Definition at line 1031 of file `tr1_impl/regex`.

Referenced by `std::basic_regex<_Ch_type, _Rx_traits >::assign()`, and `std::swap()`.

### 5.384.1 Detailed Description

`template<typename _CharT, typename _Traits> class std::basic_streambuf< _CharT, _Traits >`

The actual work of input and output (interface).

This is a base class. Derived stream buffers each control a [pair](#) of character sequences: one for input, and one for output. Section [27.5.1] of the standard describes the requirements and behavior of stream buffer classes. That section (three paragraphs) is reproduced here, for simplicity and accuracy.

1. Stream buffers can impose various constraints on the sequences they control. Some constraints are:
  - The controlled input sequence can be not readable.
  - The controlled output sequence can be not writable.
  - The controlled sequences can be associated with the contents of other representations for character sequences, such as external files.

- The controlled sequences can support operations *directly* to or from associated sequences.
  - The controlled sequences can impose limitations on how the program can read characters from a sequence, write characters to a sequence, put characters back into an input sequence, or alter the stream position.
2. Each sequence is characterized by three pointers which, if non-null, all point into the same `charT` [array](#) object. The [array](#) object represents, at any moment, a (sub)sequence of characters from the sequence. Operations performed on a sequence alter the values stored in these pointers, perform reads and writes directly to or from associated sequences, and alter *the stream position* and conversion state as needed to maintain this subsequence relationship. The three pointers are:
- the *beginning pointer*, or lowest element address in the [array](#) (called *xbeg* here);
  - the *next pointer*, or next element address that is a current candidate for reading or writing (called *xnext* here);
  - the *end pointer*, or first element address beyond the end of the [array](#) (called *xend* here).
3. The following semantic constraints shall always apply for any [set](#) of three pointers for a sequence, using the pointer names given immediately above:
- If *xnext* is not a null pointer, then *xbeg* and *xend* shall also be non-null pointers into the same `charT` [array](#), as described above; otherwise, *xbeg* and *xend* shall also be null.
  - If *xnext* is not a null pointer and  $xnext < xend$  for an output sequence, then a *write position* is available. In this case, *\*xnext* shall be assignable as the next element to write (to put, or to store a character value, into the sequence).
  - If *xnext* is not a null pointer and  $xbeg < xnext$  for an input sequence, then a *putback position* is available. In this case, *xnext[-1]* shall have a defined value and is the next (preceding) element to store a character that is put back into the input sequence.
  - If *xnext* is not a null pointer and  $xnext < xend$  for an input sequence, then a *read position* is available. In this case, *\*xnext* shall have a defined value and is the next element to read (to get, or to obtain a character value, from the sequence).

Definition at line 115 of file `streambuf`.

## 5.384.2 Member Typedef Documentation

**5.384.2.1** `template<typename _CharT, typename _Traits> typedef  
basic_streambuf<char_type, traits_type> std::basic_streambuf<  
_CharT, _Traits >::__streambuf_type`

This is a non-standard type.

Reimplemented in [std::basic\\_filebuf< \\_CharT, \\_Traits >](#), [std::basic\\_stringbuf< \\_CharT, \\_Traits, \\_Alloc >](#), [std::basic\\_filebuf< \\_CharT, encoding\\_char\\_traits< \\_CharT > >](#), and [std::basic\\_filebuf< char\\_type, traits\\_type >](#).

Definition at line 133 of file streambuf.

**5.384.2.2** `template<typename _CharT, typename _Traits> typedef _CharT  
std::basic_streambuf< _CharT, _Traits >::char_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented in [std::basic\\_filebuf< \\_CharT, \\_Traits >](#), [std::basic\\_stringbuf< \\_CharT, \\_Traits, \\_Alloc >](#), [\\_\\_gnu\\_cxx::stdio\\_filebuf< \\_CharT, \\_Traits >](#), [\\_\\_gnu\\_cxx::stdio\\_sync\\_filebuf< \\_CharT, \\_Traits >](#), [std::basic\\_filebuf< \\_CharT, encoding\\_char\\_traits< \\_CharT > >](#), and [std::basic\\_filebuf< char\\_type, traits\\_type >](#).

Definition at line 124 of file streambuf.

**5.384.2.3** `template<typename _CharT, typename _Traits> typedef  
traits_type::int_type std::basic_streambuf< _CharT, _Traits  
>::int_type`

This is a non-standard type.

Reimplemented in [std::basic\\_filebuf< \\_CharT, \\_Traits >](#), [std::basic\\_stringbuf< \\_CharT, \\_Traits, \\_Alloc >](#), [\\_\\_gnu\\_cxx::stdio\\_filebuf< \\_CharT, \\_Traits >](#), [\\_\\_gnu\\_cxx::stdio\\_sync\\_filebuf< \\_CharT, \\_Traits >](#), [std::basic\\_filebuf< \\_CharT, encoding\\_char\\_traits< \\_CharT > >](#), and [std::basic\\_filebuf< char\\_type, traits\\_type >](#).

Definition at line 126 of file streambuf.

**5.384.2.4** `template<typename _CharT, typename _Traits> typedef  
traits_type::off_type std::basic_streambuf< _CharT, _Traits  
>::off_type`

This is a non-standard type.

## 5.384 std::basic\_streambuf<\_CharT, \_Traits> Class Template Reference 2173

Reimplemented in [std::basic\\_filebuf<\\_CharT, \\_Traits>](#), [std::basic\\_stringbuf<\\_CharT, \\_Traits, \\_Alloc>](#), [\\_\\_gnu\\_cxx::stdio\\_filebuf<\\_CharT, \\_Traits>](#), [\\_\\_gnu\\_cxx::stdio\\_sync\\_filebuf<\\_CharT, \\_Traits>](#), [std::basic\\_filebuf<\\_CharT, encoding\\_char\\_traits<\\_CharT>>](#), and [std::basic\\_filebuf<char\\_type, traits\\_type>](#).

Definition at line 128 of file streambuf.

**5.384.2.5** `template<typename _CharT, typename _Traits> typedef traits_type::pos_type std::basic_streambuf<_CharT, _Traits>::pos_type`

This is a non-standard type.

Reimplemented in [std::basic\\_filebuf<\\_CharT, \\_Traits>](#), [std::basic\\_stringbuf<\\_CharT, \\_Traits, \\_Alloc>](#), [\\_\\_gnu\\_cxx::enc\\_filebuf<\\_CharT>](#), [\\_\\_gnu\\_cxx::stdio\\_filebuf<\\_CharT, \\_Traits>](#), [\\_\\_gnu\\_cxx::stdio\\_sync\\_filebuf<\\_CharT, \\_Traits>](#), [std::basic\\_filebuf<\\_CharT, encoding\\_char\\_traits<\\_CharT>>](#), and [std::basic\\_filebuf<char\\_type, traits\\_type>](#).

Definition at line 127 of file streambuf.

**5.384.2.6** `template<typename _CharT, typename _Traits> typedef _Traits std::basic_streambuf<_CharT, _Traits>::traits_type`

This is a non-standard type.

Reimplemented in [std::basic\\_filebuf<\\_CharT, \\_Traits>](#), [std::basic\\_stringbuf<\\_CharT, \\_Traits, \\_Alloc>](#), [\\_\\_gnu\\_cxx::enc\\_filebuf<\\_CharT>](#), [\\_\\_gnu\\_cxx::stdio\\_filebuf<\\_CharT, \\_Traits>](#), [\\_\\_gnu\\_cxx::stdio\\_sync\\_filebuf<\\_CharT, \\_Traits>](#), [std::basic\\_filebuf<\\_CharT, encoding\\_char\\_traits<\\_CharT>>](#), and [std::basic\\_filebuf<char\\_type, traits\\_type>](#).

Definition at line 125 of file streambuf.

## 5.384.3 Constructor & Destructor Documentation

**5.384.3.1** `template<typename _CharT, typename _Traits> virtual std::basic_streambuf<_CharT, _Traits>::~basic_streambuf () [inline, virtual]`

Destructor deallocates no buffer space.

Definition at line 193 of file streambuf.

**5.384.3.2** `template<typename _CharT, typename _Traits>  
std::basic_streambuf< _CharT, _Traits >::basic_streambuf ()  
[inline, protected]`

Base constructor. Only called from derived constructors, and sets up all the buffer data to zero, including the pointers described in the [basic\\_streambuf](#) class description. Note that, as a result,

- the class starts with no read nor write positions available,
- this is not an error

Definition at line 441 of file streambuf.

## 5.384.4 Member Function Documentation

**5.384.4.1** `template<typename _CharT, typename _Traits> char_type*  
std::basic_streambuf< _CharT, _Traits >::eback () const  
[inline, protected]`

Access to the get area. These functions are only available to other protected functions, including derived classes.

- [eback\(\)](#) returns the beginning pointer for the input sequence
- [gptr\(\)](#) returns the next pointer for the input sequence
- [egptr\(\)](#) returns the end pointer for the input sequence

Definition at line 460 of file streambuf.

Referenced by `std::basic_filebuf< _CharT, _Traits >::imbue()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow()`, `std::basic_filebuf< _CharT, _Traits >::pbackfail()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff()`, `std::basic_filebuf< _CharT, _Traits >::seekoff()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos()`, `std::basic_filebuf< _CharT, _Traits >::underflow()`, and `std::basic_filebuf< _CharT, _Traits >::xsgetn()`.

**5.384.4.2** `template<typename _CharT, typename _Traits> char_type*  
std::basic_streambuf< _CharT, _Traits >::egptr () const [inline,  
protected]`

Locale access.

### Returns:

The current [locale](#) in effect.

## 5.384 `std::basic_streambuf<_CharT, _Traits>` Class Template Reference 2175

If `pubimbue(loc)` has been called, then the most recent `loc` is returned. Otherwise the global `locale` in effect at the time of construction is returned.

Definition at line 466 of file `streambuf`.

Referenced by `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekoff()`, `std::basic_filebuf<_CharT, _Traits>::seekoff()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekpos()`, `std::basic_filebuf<_CharT, _Traits>::showmanyc()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::underflow()`, `std::basic_filebuf<_CharT, _Traits>::underflow()`, and `std::basic_filebuf<_CharT, _Traits>::xsgetn()`.

### 5.384.4.3 `template<typename _CharT, typename _Traits> char_type* std::basic_streambuf<_CharT, _Traits>::eptr() const` [`inline`, `protected`]

Locale access.

#### Returns:

The current `locale` in effect.

If `pubimbue(loc)` has been called, then the most recent `loc` is returned. Otherwise the global `locale` in effect at the time of construction is returned.

Definition at line 513 of file `streambuf`.

Referenced by `std::basic_stringbuf<_CharT, _Traits, _Alloc>::overflow()`, `std::basic_streambuf<_CharT, _Traits>::xsputn()`, and `std::basic_filebuf<_CharT, _Traits>::xsputn()`.

### 5.384.4.4 `template<typename _CharT, typename _Traits> void std::basic_streambuf<_CharT, _Traits>::gbump(int __n)` [`inline`, `protected`]

Moving the read position.

#### Parameters:

*n* The delta by which to move.

This just advances the read position without returning any data.

Definition at line 476 of file `streambuf`.

Referenced by `std::basic_filebuf<_CharT, _Traits>::pbackfail()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekoff()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekpos()`, and `std::basic_filebuf<_CharT, _Traits>::xsgetn()`.

**5.384.4.5** `template<typename _CharT, typename _Traits> locale  
std::basic_streambuf< _CharT, _Traits >::getloc () const  
[inline]`

Locale access.

**Returns:**

The current [locale](#) in effect.

If `pubimbue(loc)` has been called, then the most recent `loc` is returned. Otherwise the global [locale](#) in effect at the time of construction is returned.

Definition at line 222 of file `streambuf`.

**5.384.4.6** `template<typename _CharT, typename _Traits> char_type*  
std::basic_streambuf< _CharT, _Traits >::gptr () const [inline,  
protected]`

Locale access.

**Returns:**

The current [locale](#) in effect.

If `pubimbue(loc)` has been called, then the most recent `loc` is returned. Otherwise the global [locale](#) in effect at the time of construction is returned.

Definition at line 463 of file `streambuf`.

Referenced by `std::basic_filebuf< _CharT, _Traits >::imbue()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow()`, `std::basic_filebuf< _CharT, _Traits >::pbackfail()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff()`, `std::basic_filebuf< _CharT, _Traits >::seekoff()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos()`, `std::basic_filebuf< _CharT, _Traits >::showmanyc()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow()`, `std::basic_filebuf< _CharT, _Traits >::underflow()`, and `std::basic_filebuf< _CharT, _Traits >::xsgetn()`.

**5.384.4.7** `template<typename _CharT, typename _Traits> virtual void  
std::basic_streambuf< _CharT, _Traits >::imbue (const locale &)  
[inline, protected, virtual]`

Changes translations.

**Parameters:**

*loc* A new [locale](#).

## 5.384 std::basic\_streambuf<\_CharT, \_Traits> Class Template Reference 2177

Translations done during I/O which depend on the current [locale](#) are changed by this call. The standard adds, *Between invocations of this function a class derived from streambuf can safely cache results of calls to locale functions and to members of facets so obtained.*

### **Note:**

Base class version does nothing.

Reimplemented in [std::basic\\_filebuf<\\_CharT, \\_Traits>](#), [std::basic\\_filebuf<\\_CharT, encoding\\_char\\_traits<\\_CharT>>](#), and [std::basic\\_filebuf<char\\_type, traits\\_type>](#).

Definition at line 554 of file streambuf.

**5.384.4.8** `template<typename _CharT, typename _Traits> streamsize  
std::basic_streambuf<_CharT, _Traits>::in_avail() [inline]`

Looking ahead into the stream.

### **Returns:**

The number of characters available.

If a read position is available, returns the number of characters available for reading before the buffer must be refilled. Otherwise returns the derived [showmanyc\(\)](#).

Definition at line 262 of file streambuf.

**5.384.4.9** `template<typename _CharT, typename _Traits> virtual int_type  
std::basic_streambuf<_CharT, _Traits>::overflow(int_type =  
traits_type::eof()) [inline, protected, virtual]`

Consumes data from the buffer; writes to the controlled sequence.

### **Parameters:**

*c* An additional character to consume.

### **Returns:**

`eof()` to indicate failure, something else (usually *c*, or `not_eof()`)

Informally, this function is called when the output buffer is full (or does not exist, as buffering need not actually be done). If a buffer exists, it is *consumed*, with *some effect* on the controlled sequence. (Typically, the buffer is written out to the sequence verbatim.) In either case, the character *c* is also written out, if *c* is not `eof()`.

For a formal definition of this function, see a good text such as Langer & Kreft, or [27.5.2.4.5]/3-7.

A functioning output streambuf can be created by overriding only this function (no buffer area will be used).

**Note:**

Base class version does nothing, returns eof().

Reimplemented in `std::basic_filebuf<_CharT, _Traits >`, `std::basic_stringbuf<_CharT, _Traits, _Alloc >`, `__gnu_cxx::stdio_sync_filebuf<_CharT, _Traits >`, `std::basic_filebuf<_CharT, encoding_char_traits<_CharT > >`, and `std::basic_filebuf<char_type, traits_type >`.

Definition at line 746 of file streambuf.

Referenced by `std::basic_streambuf<_CharT, _Traits >::xsputn()`.

**5.384.4.10** `template<typename _CharT, typename _Traits> virtual int_type  
std::basic_streambuf<_CharT, _Traits >::pbackfail (int_type =  
traits_type::eof()) [inline, protected, virtual]`

Tries to back up the input sequence.

**Parameters:**

*c* The character to be inserted back into the sequence.

**Returns:**

eof() on failure, *some other value* on success

**Postcondition:**

The constraints of `gptr()`, `eback()`, and `pptr()` are the same as for `underflow()`.

**Note:**

Base class version does nothing, returns eof().

Reimplemented in `std::basic_filebuf<_CharT, _Traits >`, `std::basic_stringbuf<_CharT, _Traits, _Alloc >`, `__gnu_cxx::stdio_sync_filebuf<_CharT, _Traits >`, `std::basic_filebuf<_CharT, encoding_char_traits<_CharT > >`, and `std::basic_filebuf<char_type, traits_type >`.

Definition at line 702 of file streambuf.

**5.384.4.11** `template<typename _CharT, typename _Traits> char_type*  
std::basic_streambuf< _CharT, _Traits >::pbase () const  
[inline, protected]`

Access to the put area. These functions are only available to other protected functions, including derived classes.

- [pbase\(\)](#) returns the beginning pointer for the output sequence
- [pptr\(\)](#) returns the next pointer for the output sequence
- [epptr\(\)](#) returns the end pointer for the output sequence

Definition at line 507 of file streambuf.

Referenced by `std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow()`, `std::basic_filebuf< _CharT, _Traits >::overflow()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos()`, `std::basic_filebuf< _CharT, _Traits >::sync()`, and `std::basic_filebuf< _CharT, _Traits >::xsputn()`.

**5.384.4.12** `template<typename _CharT, typename _Traits> void  
std::basic_streambuf< _CharT, _Traits >::pbump (int __n)  
[inline, protected]`

Moving the write position.

**Parameters:**

- n* The delta by which to move.

This just advances the write position without returning any data.

Definition at line 523 of file streambuf.

Referenced by `std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow()`, `std::basic_filebuf< _CharT, _Traits >::overflow()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos()`, and `std::basic_streambuf< _CharT, _Traits >::xsputn()`.

**5.384.4.13** `template<typename _CharT, typename _Traits> char_type*  
std::basic_streambuf< _CharT, _Traits >::pptr () const  
[inline, protected]`

Locale access.

**Returns:**

The current [locale](#) in effect.

If `pubimbue(loc)` has been called, then the most recent `loc` is returned. Otherwise the global [locale](#) in effect at the time of construction is returned.

Definition at line 510 of file `streambuf`.

Referenced by `std::basic_stringbuf<_CharT, _Traits, _Alloc>::overflow()`, `std::basic_filebuf<_CharT, _Traits>::overflow()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekoff()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekpos()`, `std::basic_filebuf<_CharT, _Traits>::sync()`, `std::basic_streambuf<_CharT, _Traits>::xsputn()`, and `std::basic_filebuf<_CharT, _Traits>::xsputn()`.

**5.384.4.14** `template<typename _CharT, typename _Traits> locale  
std::basic_streambuf<_CharT, _Traits>::pubimbue (const locale  
& __loc) [inline]`

Entry point for `imbue()`.

**Parameters:**

*loc* The new [locale](#).

**Returns:**

The previous [locale](#).

Calls the derived `imbue(loc)`.

Definition at line 205 of file `streambuf`.

**5.384.4.15** `template<typename _CharT, typename _Traits> pos_type  
std::basic_streambuf<_CharT, _Traits>::pubseekoff (off_type  
__off, ios_base::seekdir __way, ios_base::openmode __mode =  
ios_base::in | ios_base::out) [inline]`

Locale access.

**Returns:**

The current [locale](#) in effect.

If `pubimbue(loc)` has been called, then the most recent `loc` is returned. Otherwise the global [locale](#) in effect at the time of construction is returned.

Definition at line 239 of file `streambuf`.

**5.384.4.16** `template<typename _CharT, typename _Traits> pos_type  
std::basic_streambuf< _CharT, _Traits >::pubseekpos (pos_type  
__sp, ios_base::openmode __mode = ios_base::in | ios_base::out)  
[inline]`

Locale access.

**Returns:**

The current [locale](#) in effect.

If `pubimbue(loc)` has been called, then the most recent `loc` is returned. Otherwise the global [locale](#) in effect at the time of construction is returned.

Definition at line 244 of file `streambuf`.

**5.384.4.17** `template<typename _CharT, typename _Traits>  
__streambuf_type* std::basic_streambuf< _CharT, _Traits  
>::pubsetbuf (char_type * __s, streamsize __n) [inline]`

Entry points for derived buffer functions. The public versions of `pubfoo` dispatch to the protected derived `foo` member functions, passing the arguments (if any) and returning the result unchanged.

Definition at line 235 of file `streambuf`.

**5.384.4.18** `template<typename _CharT, typename _Traits> int  
std::basic_streambuf< _CharT, _Traits >::pubsync () [inline]`

Locale access.

**Returns:**

The current [locale](#) in effect.

If `pubimbue(loc)` has been called, then the most recent `loc` is returned. Otherwise the global [locale](#) in effect at the time of construction is returned.

Definition at line 249 of file `streambuf`.

Referenced by `std::basic_istream< _CharT, _Traits >::sync()`.

**5.384.4.19** `template<typename _CharT, typename _Traits> int_type  
std::basic_streambuf< _CharT, _Traits >::sbumpc () [inline]`

Getting the next character.

**Returns:**

The next character, or eof.

If the input read position is available, returns that character and increments the read pointer, otherwise calls and returns `uflow()`.

Definition at line 294 of file `streambuf`.

Referenced by `std::basic_istream<_CharT, _Traits>::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, and `std::istreambuf_iterator<_CharT, _Traits>::operator++()`.

**5.384.4.20** `template<typename _CharT, typename _Traits> virtual pos_type std::basic_streambuf<_CharT, _Traits>::seekoff(off_type, ios_base::seekdir, ios_base::openmode = ios_base::in | ios_base::out) [inline, protected, virtual]`

Alters the stream positions. Each derived class provides its own appropriate behavior.

**Note:**

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Reimplemented in `std::basic_filebuf<_CharT, _Traits>`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>`, `std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>`, and `std::basic_filebuf<char_type, traits_type>`.

Definition at line 580 of file `streambuf`.

**5.384.4.21** `template<typename _CharT, typename _Traits> virtual pos_type std::basic_streambuf<_CharT, _Traits>::seekpos(pos_type, ios_base::openmode = ios_base::in | ios_base::out) [inline, protected, virtual]`

Alters the stream positions. Each derived class provides its own appropriate behavior.

**Note:**

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Reimplemented in `std::basic_filebuf<_CharT, _Traits>`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>`, `std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>`, and `std::basic_filebuf<char_type, traits_type>`.

Definition at line 592 of file `streambuf`.

**5.384.4.22** `template<typename _CharT, typename _Traits> virtual  
basic_streambuf<char_type,_Traits>* std::basic_streambuf<  
_CharT, _Traits >::setbuf(char_type *, streamsize) [inline,  
protected, virtual]`

Manipulates the buffer. Each derived class provides its own appropriate behavior. See the next-to-last paragraph of <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch25s02.html> for more on this function.

**Note:**

Base class version does nothing, returns `this`.

Reimplemented in `std::basic_filebuf< _CharT, _Traits >`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >`, `std::basic_filebuf< _CharT, encoding_char_traits< _CharT >>`, and `std::basic_filebuf< char_type, traits_type >`.

Definition at line 569 of file `streambuf`.

**5.384.4.23** `template<typename _CharT, typename _Traits> void  
std::basic_streambuf< _CharT, _Traits >::setg(char_type *  
__gbeg, char_type * __gnext, char_type * __gend) [inline,  
protected]`

Setting the three read area pointers.

**Parameters:**

*gbeg* A pointer.

*gnext* A pointer.

*gend* A pointer.

**Postcondition:**

*gbeg* == `eback()`, *gnext* == `gptr()`, and *gend* == `egptr()`

Definition at line 487 of file `streambuf`.

**5.384.4.24** `template<typename _CharT, typename _Traits> void  
std::basic_streambuf< _CharT, _Traits >::setp(char_type * __pbeg,  
char_type * __pend) [inline, protected]`

Setting the three write area pointers.

**Parameters:**

*pbeg* A pointer.

*pend* A pointer.

**Postcondition:**

*pbeg* == `pbase()`, *pbeg* == `pptr()`, and *pend* == `epptr()`

Definition at line 533 of file `streambuf`.

**5.384.4.25** `template<typename _CharT, typename _Traits> int_type  
std::basic_streambuf< _CharT, _Traits >::sgetc () [inline]`

Getting the next character.

**Returns:**

The next character, or eof.

If the input read position is available, returns that character, otherwise calls and returns `underflow()`. Does not move the read position after fetching the character.

Definition at line 316 of file `streambuf`.

Referenced by `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, and `std::basic_istream< _CharT, _Traits >::sentry::sentry()`.

**5.384.4.26** `template<typename _CharT, typename _Traits> streamsize  
std::basic_streambuf< _CharT, _Traits >::sgetn (char_type * __s,  
streamsize __n) [inline]`

Entry point for `xsgetn`.

**Parameters:**

*s* A buffer area.

*n* A count.

Returns `xsgetn(s,n)`. The effect is to fill `s[0]` through `s[n-1]` with characters from the input sequence, if possible.

Definition at line 335 of file `streambuf`.

**5.384.4.27** `template<typename _CharT, typename _Traits> virtual streamsize  
std::basic_streambuf< _CharT, _Traits >::showmanyc ()  
[inline, protected, virtual]`

Investigating the data available.

**Returns:**

An estimate of the number of characters available in the input sequence, or -1.

*If it returns a positive value, then successive calls to `underflow()` will not return `traits::eof()` until at least that number of characters have been supplied. If `showmanyc()` returns -1, then calls to `underflow()` or `uflow()` will fail.* [27.5.2.4.3]/1

**Note:**

Base class version does nothing, returns zero.

The standard adds that *the intention is not only that the calls [to `underflow` or `uflow`] will not return `eof()` but that they will return immediately.*

The standard adds that *the morphemes of `showmanyc` are **es-how-many-see**, not **show-manic**.*

Reimplemented in `std::basic_filebuf< _CharT, _Traits >`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >`, `std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >`, and `std::basic_filebuf< char_type, traits_type >`.

Definition at line 627 of file `streambuf`.

**5.384.4.28** `template<typename _CharT, typename _Traits> int_type  
std::basic_streambuf< _CharT, _Traits >::snextc () [inline]`

Getting the next character.

**Returns:**

The next character, or eof.

Calls `sputc()`, and if that function returns `traits::eof()`, so does this function. Otherwise, `sgetc()`.

Definition at line 276 of file `streambuf`.

Referenced by `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, and `std::basic_istream< _CharT, _Traits >::sentry::sentry()`.

**5.384.4.29** `template<typename _CharT, typename _Traits> int_type  
std::basic_streambuf< _CharT, _Traits >::sputbackc (char_type  
__c) [inline]`

Pushing characters back into the input stream.

**Parameters:**

*c* The character to push back.

**Returns:**

The previous character, if possible.

Similar to [sungetc\(\)](#), but *c* is pushed onto the stream instead of *the previous character*. If successful, the next character fetched from the input stream will be *c*.

Definition at line 350 of file streambuf.

Referenced by `std::basic_istream< _CharT, _Traits >::putback()`.

**5.384.4.30** `template<typename _CharT, typename _Traits> int_type  
std::basic_streambuf< _CharT, _Traits >::sputc (char_type __c)  
[inline]`

Entry point for all single-character output functions.

**Parameters:**

*c* A character to output.

**Returns:**

*c*, if possible.

One of two public output functions.

If a write position is available for the output sequence (i.e., the buffer is not full), stores *c* in that position, increments the position, and returns `traits::to_int_type(c)`. If a write position is not available, returns `overflow(c)`.

Definition at line 402 of file streambuf.

Referenced by `std::basic_istream< _CharT, _Traits >::get()`, and `std::ostreambuf_iterator< _CharT, _Traits >::operator=()`.

## 5.384 std::basic\_streambuf< \_CharT, \_Traits > Class Template Reference 2187

**5.384.4.31** `template<typename _CharT, typename _Traits> streamsize  
std::basic_streambuf< _CharT, _Traits >::sputn (const char_type *  
__s, streamsize __n) [inline]`

Entry point for all single-character output functions.

### **Parameters:**

*s* A buffer read area.

*n* A count.

One of two public output functions.

Returns `xspun(s,n)`. The effect is to write `s[0]` through `s[n-1]` to the output sequence, if possible.

Definition at line 428 of file `streambuf`.

**5.384.4.32** `template<typename _CharT, typename _Traits> void  
std::basic_streambuf< _CharT, _Traits >::stossc () [inline]`

Tosses a character. Advances the read pointer, ignoring the character that would have been read.

See <http://gcc.gnu.org/ml/libstdc++/2002-05/msg00168.html>

Definition at line 761 of file `streambuf`.

**5.384.4.33** `template<typename _CharT, typename _Traits> int_type  
std::basic_streambuf< _CharT, _Traits >::sungetc () [inline]`

Moving backwards in the input stream.

### **Returns:**

The previous character, if possible.

If a putback position is available, this function decrements the input pointer and returns that character. Otherwise, calls and returns `pbackfail()`. The effect is to *unget* the last character *gotten*.

Definition at line 375 of file `streambuf`.

Referenced by `std::basic_istream< _CharT, _Traits >::ungetc()`.

**5.384.4.34** `template<typename _CharT, typename _Traits> virtual int  
std::basic_streambuf< _CharT, _Traits >::sync (void) [inline,  
protected, virtual]`

Synchronizes the buffer arrays with the controlled sequences.

**Returns:**

-1 on failure.

Each derived class provides its own appropriate behavior, including the definition of *failure*.

**Note:**

Base class version does nothing, returns zero.

Reimplemented in `std::basic_filebuf< _CharT, _Traits >`, `__gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >`, `std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >`, and `std::basic_filebuf< char_type, traits_type >`.

Definition at line 605 of file streambuf.

**5.384.4.35** `template<typename _CharT, typename _Traits> virtual int_type  
std::basic_streambuf< _CharT, _Traits >::uflow () [inline,  
protected, virtual]`

Fetches more data from the controlled sequence.

**Returns:**

The first character from the *pending sequence*.

Informally, this function does the same thing as `underflow()`, and in fact is required to call that function. It also returns the new character, like `underflow()` does. However, this function also moves the read position forward by one.

Reimplemented in `__gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >`.

Definition at line 678 of file streambuf.

**5.384.4.36** `template<typename _CharT, typename _Traits> virtual  
int_type std::basic_streambuf< _CharT, _Traits >::underflow ()  
[inline, protected, virtual]`

Fetches more data from the controlled sequence.

## 5.384 `std::basic_streambuf<_CharT, _Traits>` Class Template Reference 2189

### Returns:

The first character from the *pending sequence*.

Informally, this function is called when the input buffer is exhausted (or does not exist, as buffering need not actually be done). If a buffer exists, it is *refilled*. In either case, the next available character is returned, or `traits::eof()` to indicate a null pending sequence.

For a formal definition of the pending sequence, see a good text such as Langer & Kreft, or [27.5.2.4.3]/7-14.

A functioning input `streambuf` can be created by overriding only this function (no buffer area will be used). For an example, see <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch25.html>

### Note:

Base class version does nothing, returns `eof()`.

Reimplemented in `std::basic_filebuf<_CharT, _Traits>`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>`, `__gnu_cxx::stdio_sync_filebuf<_CharT, _Traits>`, `std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>`, and `std::basic_filebuf<char_type, traits_type>`.

Definition at line 665 of file `streambuf`.

```
5.384.4.37 template<typename _CharT , typename _Traits > streamsize
std::basic_streambuf< _CharT, _Traits >::xsggetn (char_type * __s,
streamsize __n) [inline, protected, virtual]
```

Multiple character extraction.

### Parameters:

*s* A buffer area.

*n* Maximum number of characters to assign.

### Returns:

The number of characters assigned.

Fills `s[0]` through `s[n-1]` with characters from the input sequence, as if by `sbumpc()`. Stops when either *n* characters have been copied, or when `traits::eof()` would be copied.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Reimplemented in `std::basic_filebuf<_CharT, _Traits>`, `__gnu_cxx::stdio_sync_filebuf<_CharT, _Traits>`, `std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>`, and `std::basic_filebuf<char_type, traits_type>`.

Definition at line 45 of file `streambuf.tcc`.

References `std::min()`.

**5.384.4.38** `template<typename _CharT, typename _Traits> streamsize  
std::basic_streambuf<_CharT, _Traits>::xsputn(const char_type  
* __s, streamsize __n) [inline, protected, virtual]`

Multiple character insertion.

**Parameters:**

- s* A buffer area.
- n* Maximum number of characters to write.

**Returns:**

The number of characters written.

Writes `s[0]` through `s[n-1]` to the output sequence, as if by `sputc()`. Stops when either `n` characters have been copied, or when `sputc()` would return `traits::eof()`.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Reimplemented in `std::basic_filebuf<_CharT, _Traits>`, `__gnu_cxx::stdio_sync_filebuf<_CharT, _Traits>`, `std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>`, and `std::basic_filebuf<char_type, traits_type>`.

Definition at line 79 of file `streambuf.tcc`.

References `std::basic_streambuf<_CharT, _Traits>::eptr()`, `std::min()`, `std::basic_streambuf<_CharT, _Traits>::overflow()`, `std::basic_streambuf<_CharT, _Traits>::pbump()`, and `std::basic_streambuf<_CharT, _Traits>::pptr()`.

## 5.384.5 Member Data Documentation

**5.384.5.1** `template<typename _CharT, typename _Traits> locale  
std::basic_streambuf<_CharT, _Traits>::_M_buf_locale  
[protected]`

Current `locale` setting.

Definition at line 188 of file `streambuf`.

## 5.384 std::basic\_streambuf< \_CharT, \_Traits > Class Template Reference 2191

Referenced by std::basic\_filebuf< \_CharT, \_Traits >::basic\_filebuf().

### **5.384.5.2** `template<typename _CharT, typename _Traits> char_type* std::basic_streambuf< _CharT, _Traits >::_M_in_beg [protected]`

This is based on `_IO_FILE`, just reordered to be more consistent, and is intended to be the most minimal abstraction for an internal buffer.

- `get` == input == read
- `put` == output == write

Definition at line 180 of file `streambuf`.

### **5.384.5.3** `template<typename _CharT, typename _Traits> char_type* std::basic_streambuf< _CharT, _Traits >::_M_in_cur [protected]`

Locale access.

#### **Returns:**

The current [locale](#) in effect.

If `pubimbue(loc)` has been called, then the most recent `loc` is returned. Otherwise the global [locale](#) in effect at the time of construction is returned.

Definition at line 181 of file `streambuf`.

### **5.384.5.4** `template<typename _CharT, typename _Traits> char_type* std::basic_streambuf< _CharT, _Traits >::_M_in_end [protected]`

Locale access.

#### **Returns:**

The current [locale](#) in effect.

If `pubimbue(loc)` has been called, then the most recent `loc` is returned. Otherwise the global [locale](#) in effect at the time of construction is returned.

Definition at line 182 of file `streambuf`.

**5.384.5.5** `template<typename _CharT, typename _Traits> char_type*  
std::basic_streambuf< _CharT, _Traits >::_M_out_beg  
[protected]`

Locale access.

**Returns:**

The current [locale](#) in effect.

If `pubimbue(loc)` has been called, then the most recent `loc` is returned. Otherwise the global [locale](#) in effect at the time of construction is returned.

Definition at line 183 of file `streambuf`.

**5.384.5.6** `template<typename _CharT, typename _Traits> char_type*  
std::basic_streambuf< _CharT, _Traits >::_M_out_cur  
[protected]`

Locale access.

**Returns:**

The current [locale](#) in effect.

If `pubimbue(loc)` has been called, then the most recent `loc` is returned. Otherwise the global [locale](#) in effect at the time of construction is returned.

Definition at line 184 of file `streambuf`.

**5.384.5.7** `template<typename _CharT, typename _Traits> char_type*  
std::basic_streambuf< _CharT, _Traits >::_M_out_end  
[protected]`

Locale access.

**Returns:**

The current [locale](#) in effect.

If `pubimbue(loc)` has been called, then the most recent `loc` is returned. Otherwise the global [locale](#) in effect at the time of construction is returned.

Definition at line 185 of file `streambuf`.

### 5.385.1 Detailed Description

`template<typename _CharT, typename _Traits, typename _Alloc> class std::basic_string<_CharT, _Traits, _Alloc>`

Managing sequences of characters and character-like objects. Meets the requirements of a `container`, a `reversible container`, and a `sequence`. Of the `optional sequence requirements`, only `push_back`, `at`, and `array` access are supported.

#### Todo

Doc me! See doc/doxygen/TODO and <http://gcc.gnu.org/ml/libstdc++/2002-02/msg00003.html> for more.

Documentation? What's that? Nathan Myers <[ncm@cantrip.org](mailto:ncm@cantrip.org)>.

A string looks like this:

```
[basic_string<char_type>]
_M_dataplus
_M_p ----->
 [_Rep]
 _M_length
 _M_capacity
 _M_refcount
 unnamed array of char_type
```

Where the `_M_p` points to the first character in the string, and you cast it to a pointer-to-`_Rep` and subtract 1 to get a pointer to the header.

This approach has the enormous advantage that a string object requires only one allocation. All the ugliness is confined within a single [pair](#) of inline functions, which each compile to a single *add* instruction: `_Rep::_M_data()`, and `string::_M_rep()`; and the allocation function which gets a block of raw bytes and with room enough and constructs a `_Rep` object at the front.

The reason you want `_M_data` pointing to the character [array](#) and not the `_Rep` is so that the debugger can see the string contents. (Probably we should add a non-inline member to get the `_Rep` for the debugger to use, so users can check the actual string length.)

Note that the `_Rep` object is a POD so that you can have a static *empty string* `_Rep` object already *constructed* before static constructors have run. The reference-count encoding is chosen so that a 0 indicates one reference, so you never try to destroy the empty-string `_Rep` object.

All but the last paragraph is considered pretty conventional for a C++ string implementation.

Definition at line 104 of file `basic_string.h`.

## 5.385.2 Constructor & Destructor Documentation

**5.385.2.1** `template<typename _CharT, typename _Traits, typename _Alloc>  
std::basic_string< _CharT, _Traits, _Alloc >::basic_string ()  
[inline]`

Default constructor creates an empty string.

Definition at line 422 of file `basic_string.h`.

**5.385.2.2** `template<typename _CharT , typename _Traits , typename _Alloc>  
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (const  
_Alloc & __a) [inline, explicit]`

Construct an empty string using [allocator](#) *a*.

Reimplemented in `__gnu_debug::basic_string< _CharT, _Traits, _Allocator >`.

Definition at line 178 of file `basic_string.tcc`.

## 5.385 std::basic\_string<\_CharT, \_Traits, \_Alloc > Class Template Reference 2199

**5.385.2.3** `template<typename _CharT, typename _Traits, typename _Alloc>  
std::basic_string<_CharT, _Traits, _Alloc >::basic_string (const  
basic_string<_CharT, _Traits, _Alloc > & __str) [inline]`

Construct string with copy of value of *str*.

### Parameters:

*str* Source string.

Definition at line 170 of file basic\_string.tcc.

**5.385.2.4** `template<typename _CharT, typename _Traits, typename _Alloc>  
std::basic_string<_CharT, _Traits, _Alloc >::basic_string (const  
basic_string<_CharT, _Traits, _Alloc > & __str, size_type __pos,  
size_type __n = npos) [inline]`

Construct string as copy of a substring.

### Parameters:

*str* Source string.

*pos* Index of first character to copy from.

*n* Number of characters to copy (default remainder).

Definition at line 184 of file basic\_string.tcc.

**5.385.2.5** `template<typename _CharT, typename _Traits, typename _Alloc>  
std::basic_string<_CharT, _Traits, _Alloc >::basic_string (const  
basic_string<_CharT, _Traits, _Alloc > & __str, size_type __pos,  
size_type __n, const _Alloc & __a) [inline]`

Construct string as copy of a substring.

### Parameters:

*str* Source string.

*pos* Index of first character to copy from.

*n* Number of characters to copy.

*a* Allocator to use.

Definition at line 194 of file basic\_string.tcc.

**5.385.2.6** `template<typename _CharT, typename _Traits, typename _Alloc>  
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (const  
_CharT * __s, size_type __n, const _Alloc & __a = _Alloc ())  
[inline]`

Construct string initialized by a character [array](#).

**Parameters:**

- s* Source character [array](#).
- n* Number of characters to copy.
- a* Allocator to use (default is default [allocator](#)).

NB: *s* must have at least *n* characters, `'\0'` has no special meaning.

Definition at line 206 of file `basic_string.tcc`.

**5.385.2.7** `template<typename _CharT, typename _Traits, typename _Alloc>  
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (const  
_CharT * __s, const _Alloc & __a = _Alloc ()) [inline]`

Construct string as copy of a C string.

**Parameters:**

- s* Source C string.
- a* Allocator to use (default is default [allocator](#)).

Reimplemented in `__gnu_debug::basic_string< _CharT, _Traits, _Allocator >`.

Definition at line 213 of file `basic_string.tcc`.

**5.385.2.8** `template<typename _CharT, typename _Traits, typename _Alloc>  
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (size_type  
__n, _CharT __c, const _Alloc & __a = _Alloc ()) [inline]`

Construct string as multiple characters.

**Parameters:**

- n* Number of characters.
- c* Character to use.
- a* Allocator to use (default is default [allocator](#)).

Definition at line 220 of file `basic_string.tcc`.

## 5.385 std::basic\_string<\_CharT, \_Traits, \_Alloc> Class Template Reference 201

**5.385.2.9** `template<typename _CharT, typename _Traits, typename _Alloc>  
std::basic_string<_CharT, _Traits, _Alloc>::basic_string  
(basic_string<_CharT, _Traits, _Alloc> && _str) [inline]`

Move construct string.

### Parameters:

*str* Source string.

The newly-created string contains the exact contents of *str*. *str* is a valid, but unspecified string.

Definition at line 492 of file basic\_string.h.

**5.385.2.10** `template<typename _CharT, typename _Traits, typename _Alloc>  
std::basic_string<_CharT, _Traits, _Alloc>::basic_string  
(initializer_list<_CharT> __l, const _Alloc & __a = _Alloc())  
[inline]`

Construct string from an initializer [list](#).

### Parameters:

*l* `std::initializer_list` of characters.

*a* Allocator to use (default is default [allocator](#)).

Reimplemented in `__gnu_debug::basic_string<_CharT, _Traits, _Allocator>`.

Definition at line 235 of file basic\_string.tcc.

**5.385.2.11** `template<typename _CharT, typename _Traits, typename  
_Alloc> template<typename _InputIterator> std::basic_string<  
_CharT, _Traits, _Alloc>::basic_string(_InputIterator __beg,  
_InputIterator __end, const _Alloc & __a = _Alloc())  
[inline]`

Construct string as copy of a range.

### Parameters:

*beg* Start of range.

*end* End of range.

*a* Allocator to use (default is default [allocator](#)).

Reimplemented in `__gnu_debug::basic_string<_CharT, _Traits, _Allocator>`.

Definition at line 228 of file basic\_string.tcc.

**5.385.2.12** `template<typename _CharT, typename _Traits, typename _Alloc>  
std::basic_string< _CharT, _Traits, _Alloc >::~~basic_string ()  
[inline]`

Destroy the string instance.

Reimplemented in [\\_\\_gnu\\_debug::basic\\_string< \\_CharT, \\_Traits, \\_Allocator >](#).

Definition at line 523 of file `basic_string.h`.

### 5.385.3 Member Function Documentation

**5.385.3.1** `template<typename _CharT, typename _Traits, typename _Alloc>  
template<class _InputIterator > basic_string& std::basic_string<  
_CharT, _Traits, _Alloc >::append (_InputIterator __first,  
_InputIterator __last) [inline]`

Append a range of characters.

**Parameters:**

*first* Iterator referencing the first character to append.

*last* Iterator marking the end of the range.

**Returns:**

Reference to this string.

Appends characters in the range [first,last) to this string.

Reimplemented in [\\_\\_gnu\\_debug::basic\\_string< \\_CharT, \\_Traits, \\_Allocator >](#).

Definition at line 991 of file `basic_string.h`.

**5.385.3.2** `template<typename _CharT, typename _Traits, typename _Alloc>  
basic_string& std::basic_string< _CharT, _Traits, _Alloc >::append  
(initializer_list< _CharT > __l) [inline]`

Append an [initializer\\_list](#) of characters.

**Parameters:**

*l* The [initializer\\_list](#) of characters to append.

**Returns:**

Reference to this string.

### 5.385 std::basic\_string<\_CharT, \_Traits, \_Alloc > Class Template Reference

Definition at line 977 of file basic\_string.h.

Referenced by std::basic\_string<char >::append().

```
5.385.3.3 template<typename _CharT, typename _Traits, typename _Alloc
> basic_string< _CharT, _Traits, _Alloc > & std::basic_string<
_CharT, _Traits, _Alloc >::append (size_type __n, _CharT __c)
[inline]
```

Append multiple characters.

#### **Parameters:**

*n* The number of characters to append.

*c* The character to use.

#### **Returns:**

Reference to this string.

Appends *n* copies of *c* to this string.

Definition at line 281 of file basic\_string.tcc.

References std::basic\_string<\_CharT, \_Traits, \_Alloc >::capacity(), std::basic\_string<\_CharT, \_Traits, \_Alloc >::reserve(), and std::basic\_string<\_CharT, \_Traits, \_Alloc >::size().

```
5.385.3.4 template<typename _CharT, typename _Traits, typename _Alloc>
basic_string& std::basic_string< _CharT, _Traits, _Alloc >::append
(const _CharT * __s) [inline]
```

Append a C string.

#### **Parameters:**

*s* The C string to append.

#### **Returns:**

Reference to this string.

Reimplemented in [\\_\\_gnu\\_debug::basic\\_string<\\_CharT, \\_Traits, \\_Allocator >](#).

Definition at line 953 of file basic\_string.h.

```
5.385.3.5 template<typename _CharT, typename _Traits, typename _Alloc
> basic_string< _CharT, _Traits, _Alloc > & std::basic_string<
 _CharT, _Traits, _Alloc >::append (const _CharT * __s, size_type
 __n) [inline]
```

Append a C substring.

**Parameters:**

- s* The C string to append.
- n* The number of characters to append.

**Returns:**

Reference to this string.

Definition at line 298 of file basic\_string.tcc.

References `std::basic_string< _CharT, _Traits, _Alloc >::capacity()`, `std::basic_string< _CharT, _Traits, _Alloc >::reserve()`, and `std::basic_string< _CharT, _Traits, _Alloc >::size()`.

```
5.385.3.6 template<typename _CharT, typename _Traits, typename _Alloc
> basic_string< _CharT, _Traits, _Alloc > & std::basic_string<
 _CharT, _Traits, _Alloc >::append (const basic_string< _CharT,
 _Traits, _Alloc > & __str, size_type __pos, size_type __n)
 [inline]
```

Append a substring.

**Parameters:**

- str* The string to append.
- pos* Index of the first character of *str* to append.
- n* The number of characters to append.

**Returns:**

Reference to this string.

**Exceptions:**

[\*std::out\\_of\\_range\*](#) if *pos* is not a valid index.

This function appends *n* characters from *str* starting at *pos* to this string. If *n* is larger than the number of available characters in *str*, the remainder of *str* is appended.

## 5.385 std::basic\_string<\_CharT, \_Traits, \_Alloc > Class Template Reference

Definition at line 342 of file basic\_string.tcc.

References `std::basic_string<_CharT, _Traits, _Alloc >::capacity()`, `std::basic_string<_CharT, _Traits, _Alloc >::reserve()`, and `std::basic_string<_CharT, _Traits, _Alloc >::size()`.

**5.385.3.7** `template<typename _CharT, typename _Traits, typename _Alloc  
> basic_string<_CharT, _Traits, _Alloc > & std::basic_string<  
_CharT, _Traits, _Alloc >::append (const basic_string<_CharT,  
_Traits, _Alloc > & __str) [inline]`

Append a string to this string.

### Parameters:

*str* The string to append.

### Returns:

Reference to this string.

Definition at line 325 of file basic\_string.tcc.

References `std::basic_string<_CharT, _Traits, _Alloc >::capacity()`, `std::basic_string<_CharT, _Traits, _Alloc >::reserve()`, and `std::basic_string<_CharT, _Traits, _Alloc >::size()`.

Referenced by `std::collate<_CharT >::do_transform()`, `std::operator+()`, `std::operator>>()`, and `std::basic_string<_CharT, _Traits, _Alloc >::resize()`.

**5.385.3.8** `template<typename _CharT, typename _Traits, typename _Alloc>  
basic_string& std::basic_string<_CharT, _Traits, _Alloc >::assign  
(initializer_list<_CharT > __l) [inline]`

Set value to an [initializer\\_list](#) of characters.

### Parameters:

*l* The [initializer\\_list](#) of characters to assign.

### Returns:

Reference to this string.

Reimplemented in [\\_\\_gnu\\_debug::basic\\_string<\\_CharT, \\_Traits, \\_Allocator >](#).

Definition at line 1113 of file basic\_string.h.

Referenced by `std::basic_string<char >::assign()`.

**5.385.3.9** `template<typename _CharT, typename _Traits, typename _Alloc>  
 basic_string& std::basic_string<  
 _CharT, _Traits, _Alloc >::assign (_InputIterator __first,  
 _InputIterator __last) [inline]`

Set value to a range of characters.

**Parameters:**

*first* Iterator referencing the first character to append.

*last* Iterator marking the end of the range.

**Returns:**

Reference to this string.

Sets value of string to characters in the range [first,last).

Reimplemented in [\\_\\_gnu\\_debug::basic\\_string< \\_CharT, \\_Traits, \\_Allocator >](#).

Definition at line 1103 of file basic\_string.h.

**5.385.3.10** `template<typename _CharT, typename _Traits, typename _Alloc>  
 basic_string& std::basic_string< _CharT, _Traits, _Alloc >::assign  
 (size_type __n, _CharT __c) [inline]`

Set value to multiple characters.

**Parameters:**

*n* Length of the resulting string.

*c* The character to use.

**Returns:**

Reference to this string.

This function sets the value of this string to *n* copies of character *c*.

Definition at line 1090 of file basic\_string.h.

**5.385.3.11** `template<typename _CharT, typename _Traits, typename _Alloc>  
 basic_string& std::basic_string< _CharT, _Traits, _Alloc >::assign  
 (const _CharT * __s) [inline]`

Set value to contents of a C string.

## 5.385 std::basic\_string<\_CharT, \_Traits, \_Alloc > Class Template Reference

### Parameters:

*s* The C string to use.

### Returns:

Reference to this string.

This function sets the value of this string to the value of *s*. The data is copied, so there is no dependence on *s* once the function returns.

Reimplemented in [\\_\\_gnu\\_debug::basic\\_string<\\_CharT, \\_Traits, \\_Allocator >](#).

Definition at line 1074 of file `basic_string.h`.

```
5.385.3.12 template<typename _CharT, typename _Traits, typename _Alloc
> basic_string<_CharT, _Traits, _Alloc > & std::basic_string<
 _CharT, _Traits, _Alloc >::assign (const _CharT * __s, size_type
 __n) [inline]
```

Set value to a C substring.

### Parameters:

*s* The C string to use.

*n* Number of characters to use.

### Returns:

Reference to this string.

This function sets the value of this string to the first *n* characters of *s*. If *n* is larger than the number of available characters in *s*, the remainder of *s* is used.

Definition at line 259 of file `basic_string.tcc`.

References `std::basic_string<_CharT, _Traits, _Alloc >::size()`.

```
5.385.3.13 template<typename _CharT, typename _Traits, typename _Alloc>
 basic_string& std::basic_string<_CharT, _Traits, _Alloc >::assign
 (const basic_string<_CharT, _Traits, _Alloc > & __str, size_type
 __pos, size_type __n) [inline]
```

Set value to a substring of a string.

### Parameters:

*str* The string to use.

*pos* Index of the first character of *str*.

*n* Number of characters to use.

**Returns:**

Reference to this string.

**Exceptions:**

[\*std::out\\_of\\_range\*](#) if *pos* is not a valid index.

This function sets this string to the substring of *str* consisting of *n* characters at *pos*. If *n* is larger than the number of available characters in *str*, the remainder of *str* is used.

Definition at line 1046 of file `basic_string.h`.

Referenced by `std::basic_string< char >::assign()`.

**5.385.3.14** `template<typename _CharT, typename _Traits, typename _Alloc>  
basic_string& std::basic_string< _CharT, _Traits, _Alloc >::assign  
(basic_string< _CharT, _Traits, _Alloc > && __str) [inline]`

Set value to contents of another string.

**Parameters:**

*str* Source string to use.

**Returns:**

Reference to this string.

This function sets this string to the exact contents of *str*. *str* is a valid, but unspecified string.

Definition at line 1026 of file `basic_string.h`.

**5.385.3.15** `template<typename _CharT, typename _Traits, typename _Alloc  
> basic_string< _CharT, _Traits, _Alloc > & std::basic_string<  
_CharT, _Traits, _Alloc >::assign (const basic_string< _CharT,  
_Traits, _Alloc > & __str) [inline]`

Set value to contents of another string.

**Parameters:**

*str* Source string to use.

## 5.385 std::basic\_string<\_CharT, \_Traits, \_Alloc > Class Template Reference 2209

### Returns:

Reference to this string.

Definition at line 243 of file basic\_string.tcc.

References std::basic\_string<\_CharT, \_Traits, \_Alloc >::get\_allocator().

Referenced by std::basic\_stringbuf<\_CharT, \_Traits, \_Alloc >::overflow(), and std::basic\_stringbuf<\_CharT, \_Traits, \_Alloc >::str().

**5.385.3.16** `template<typename _CharT, typename _Traits, typename _Alloc>  
reference std::basic_string<_CharT, _Traits, _Alloc >::at  
(size_type __n) [inline]`

Provides access to the data contained in the string.

### Parameters:

*n* The index of the character to access.

### Returns:

Read/write reference to the character.

### Exceptions:

*std::out\_of\_range* If *n* is an invalid index.

This function provides for safer data access. The parameter is first checked that it is in the range of the string. The function throws *out\_of\_range* if the check fails. Success results in unsharing the string.

Definition at line 865 of file basic\_string.h.

**5.385.3.17** `template<typename _CharT, typename _Traits, typename _Alloc>  
const_reference std::basic_string<_CharT, _Traits, _Alloc >::at  
(size_type __n) const [inline]`

Provides access to the data contained in the string.

### Parameters:

*n* The index of the character to access.

### Returns:

Read-only (const) reference to the character.

**Exceptions:**

*std::out\_of\_range* If *n* is an invalid index.

This function provides for safer data access. The parameter is first checked that it is in the range of the string. The function throws [out\\_of\\_range](#) if the check fails.

Definition at line 846 of file `basic_string.h`.

**5.385.3.18** `template<typename _CharT, typename _Traits, typename _Alloc>  
const_iterator std::basic_string< _CharT, _Traits, _Alloc >::begin  
( ) const [inline]`

Returns a read-only (constant) [iterator](#) that points to the first character in the string.

Reimplemented in [\\_\\_gnu\\_debug::basic\\_string< \\_CharT, \\_Traits, \\_Allocator >](#).

Definition at line 601 of file `basic_string.h`.

**5.385.3.19** `template<typename _CharT, typename _Traits, typename _Alloc>  
iterator std::basic_string< _CharT, _Traits, _Alloc >::begin ( )  
[inline]`

Returns a read/write [iterator](#) that points to the first character in the string. Unshares the string.

Reimplemented in [\\_\\_gnu\\_debug::basic\\_string< \\_CharT, \\_Traits, \\_Allocator >](#).

Definition at line 590 of file `basic_string.h`.

Referenced by `std::regex_match()`, `std::regex_replace()`, and `std::regex_search()`.

**5.385.3.20** `template<typename _CharT, typename _Traits, typename _Alloc>  
const _CharT* std::basic_string< _CharT, _Traits, _Alloc >::c_str  
( ) const [inline]`

Return const pointer to null-terminated contents. This is a handle to internal data. Do not modify or dire things may happen.

Reimplemented in [\\_\\_gnu\\_debug::basic\\_string< \\_CharT, \\_Traits, \\_Allocator >](#).

Definition at line 1722 of file `basic_string.h`.

Referenced by `std::collate< _CharT >::do_compare()`, `std::money_get< _CharT, _-InIter >::do_get()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::collate< _CharT >::do_transform()`, and `std::basic_filebuf< char_type, traits_type >::open()`.

## 5.385 std::basic\_string< \_CharT, \_Traits, \_Alloc > Class Template Reference 2211

**5.385.3.21** `template<typename _CharT, typename _Traits, typename _Alloc>  
size_type std::basic_string< _CharT, _Traits, _Alloc >::capacity ()  
const [inline]`

Returns the total number of characters that the string can hold before needing to allocate more memory.

Definition at line 758 of file basic\_string.h.

Referenced by `std::basic_string< _CharT, _Traits, _Alloc >::append()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow()`, and `std::basic_string< _CharT, _Traits, _Alloc >::reserve()`.

**5.385.3.22** `template<typename _CharT, typename _Traits, typename _Alloc>  
const_iterator std::basic_string< _CharT, _Traits, _Alloc >::cbegin  
() const [inline]`

Returns a read-only (constant) [iterator](#) that points to the first character in the string.

Definition at line 665 of file basic\_string.h.

**5.385.3.23** `template<typename _CharT, typename _Traits, typename _Alloc>  
const_iterator std::basic_string< _CharT, _Traits, _Alloc >::cend ()  
const [inline]`

Returns a read-only (constant) [iterator](#) that points one past the last character in the string.

Definition at line 673 of file basic\_string.h.

**5.385.3.24** `template<typename _CharT, typename _Traits, typename _Alloc>  
void std::basic_string< _CharT, _Traits, _Alloc >::clear ()  
[inline]`

Erases the string, making it empty.

Reimplemented in [\\_\\_gnu\\_debug::basic\\_string< \\_CharT, \\_Traits, \\_Allocator >](#).

Definition at line 785 of file basic\_string.h.

Referenced by `std::basic_stringbuf< _CharT, _Traits, _Alloc >::setbuf()`.

**5.385.3.25** `template<typename _CharT, typename _Traits, typename _Alloc  
> int std::basic_string< _CharT, _Traits, _Alloc >::compare  
(size_type __pos, size_type __n1, const _CharT * __s, size_type  
__n2) const [inline]`

Compare substring against a character [array](#).

**Parameters:**

- pos1* Index of first character of substring.
- n1* Number of characters in substring.
- s* character [array](#) to compare against.
- n2* Number of characters of *s*.

**Returns:**

Integer < 0, 0, or > 0.

Form the substring of this string from the *n1* characters starting at *pos1*. Form a string from the first *n2* characters of *s*. Returns an integer < 0 if this substring is ordered before the string from *s*, 0 if their values are equivalent, or > 0 if this substring is ordered after the string from *s*. Determines the effective length *r1en* of the strings to compare as the smallest of the length of the substring and *n2*. The function then compares the two strings by calling `traits::compare(substring.data(),s,r1en)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

NB: *s* must have at least *n2* characters, `'\0'` has no special meaning.

Definition at line 980 of file `basic_string.tcc`.

References `std::min()`.

**5.385.3.26** `template<typename _CharT, typename _Traits, typename _Alloc  
> int std::basic_string< _CharT, _Traits, _Alloc >::compare  
(size_type __pos, size_type __n1, const _CharT * __s) const  
[inline]`

Compare substring to a C string.

**Parameters:**

- pos* Index of first character of substring.
- n1* Number of characters in substring.
- s* C string to compare against.

**Returns:**

Integer < 0, 0, or > 0.

## 5.385 `std::basic_string<_CharT, _Traits, _Alloc >` Class Template Reference 2213

Form the substring of this string from the *nl* characters starting at *pos*. Returns an integer  $< 0$  if the substring is ordered before *s*,  $0$  if their values are equivalent, or  $> 0$  if the substring is ordered after *s*. Determines the effective length *rlen* of the strings to compare as the smallest of the length of the substring and the length of a string constructed from *s*. The function then compares the two string by calling `traits::compare(substring.data(),s,rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

Definition at line 964 of file `basic_string.tcc`.

References `std::min()`.

**5.385.3.27** `template<typename _CharT, typename _Traits, typename _Alloc > int std::basic_string<_CharT, _Traits, _Alloc >::compare (const _CharT * __s) const [inline]`

Compare to a C string.

### Parameters:

*s* C string to compare against.

### Returns:

Integer  $< 0$ ,  $0$ , or  $> 0$ .

Returns an integer  $< 0$  if this string is ordered before *s*,  $0$  if their values are equivalent, or  $> 0$  if this string is ordered after *s*. Determines the effective length *rlen* of the strings to compare as the smallest of `size()` and the length of a string constructed from *s*. The function then compares the two strings by calling `traits::compare(data(),s,rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

Reimplemented in `__gnu_debug::basic_string<_CharT, _Traits, _Allocator >`.

Definition at line 949 of file `basic_string.tcc`.

References `std::basic_string<_CharT, _Traits, _Alloc >::compare()`, `std::basic_string<_CharT, _Traits, _Alloc >::length()`, `std::min()`, and `std::basic_string<_CharT, _Traits, _Alloc >::size()`.

**5.385.3.28** `template<typename _CharT, typename _Traits, typename _Alloc > int std::basic_string<_CharT, _Traits, _Alloc >::compare (size_type __pos1, size_type __n1, const basic_string<_CharT, _Traits, _Alloc > & __str, size_type __pos2, size_type __n2) const [inline]`

Compare substring to a substring.

**Parameters:**

*pos1* Index of first character of substring.  
*n1* Number of characters in substring.  
*str* String to compare against.  
*pos2* Index of first character of substring of str.  
*n2* Number of characters in substring of str.

**Returns:**

Integer < 0, 0, or > 0.

Form the substring of this string from the *n1* characters starting at *pos1*. Form the substring of *str* from the *n2* characters starting at *pos2*. Returns an integer < 0 if this substring is ordered before the substring of *str*, 0 if their values are equivalent, or > 0 if this substring is ordered after the substring of *str*. Determines the effective length *rlen* of the strings to compare as the smallest of the lengths of the substrings. The function then compares the two strings by calling `traits::compare(substring.data(),str.substr(pos2,n2).data(),rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

Definition at line 931 of file `basic_string.tcc`.

 > int std::basic_string<_CharT, _Traits, _Alloc >::compare  
 (size_type __pos, size_type __n, const basic_string<_CharT,  
 _Traits, _Alloc > & __str) const [inline]`

Compare substring to a string.

**Parameters:**

*pos* Index of first character of substring.  
*n* Number of characters in substring.  
*str* String to compare against.

**Returns:**

Integer < 0, 0, or > 0.

Form the substring of this string from the *n* characters starting at *pos*. Returns an integer < 0 if the substring is ordered before *str*, 0 if their values are equivalent, or > 0 if the substring is ordered after *str*. Determines the effective length *rlen* of the strings to

## 5.385 std::basic\_string< \_CharT, \_Traits, \_Alloc > Class Template Reference

compare as the smallest of the length of the substring and *str.size()*. The function then compares the two strings by calling `traits::compare(substring.data(),str.data(),rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

Definition at line 916 of file `basic_string.tcc`.

References `std::basic_string< _CharT, _Traits, _Alloc >::compare()`, `std::basic_string< _CharT, _Traits, _Alloc >::data()`, `std::min()`, and `std::basic_string< _CharT, _Traits, _Alloc >::size()`.

**5.385.3.30** `template<typename _CharT, typename _Traits, typename _Alloc>  
int std::basic_string< _CharT, _Traits, _Alloc >::compare (const  
basic_string< _CharT, _Traits, _Alloc > & __str) const [inline]`

Compare to a string.

### Parameters:

*str* String to compare against.

### Returns:

Integer < 0, 0, or > 0.

Returns an integer < 0 if this string is ordered before *str*, 0 if their values are equivalent, or > 0 if this string is ordered after *str*. Determines the effective length *rlen* of the strings to compare as the smallest of `size()` and `str.size()`. The function then compares the two strings by calling `traits::compare(data(), str.data(),rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

Definition at line 2129 of file `basic_string.h`.

_Alloc > basic_string< _CharT, _Traits, _Alloc >::size_type  
std::basic_string< _CharT, _Traits, _Alloc >::copy (_CharT * __s,  
size_type __n, size_type __pos = 0) const [inline]`

Copy substring into C string.

### Parameters:

*s* C string to copy value into.

*n* Number of characters to copy.

*pos* Index of first character to copy.

**Returns:**

Number of characters actually copied

**Exceptions:**

[\*std::out\\_of\\_range\*](#) If *pos* > *size()*.

Copies up to *n* characters starting at *pos* into the C string *s*. If *pos* is greater than *size()*, [\*out\\_of\\_range\*](#) is thrown.

Definition at line 723 of file `basic_string.tcc`.

**5.385.3.32** `template<typename _CharT, typename _Traits, typename _Alloc>  
const_reverse_iterator std::basic_string< _CharT, _Traits, _Alloc  
>::crbegin () const [inline]`

Returns a read-only (constant) reverse [iterator](#) that points to the last character in the string. Iteration is done in reverse element order.

Definition at line 682 of file `basic_string.h`.

**5.385.3.33** `template<typename _CharT, typename _Traits, typename _Alloc>  
const_reverse_iterator std::basic_string< _CharT, _Traits, _Alloc  
>::crend () const [inline]`

Returns a read-only (constant) reverse [iterator](#) that points to one before the first character in the string. Iteration is done in reverse element order.

Definition at line 691 of file `basic_string.h`.

**5.385.3.34** `template<typename _CharT, typename _Traits, typename _Alloc>  
const _CharT* std::basic_string< _CharT, _Traits, _Alloc >::data  
() const [inline]`

Return const pointer to contents. This is a handle to internal data. Do not modify or dire things may happen.

Reimplemented in [\\_\\_gnu\\_debug::basic\\_string< \\_CharT, \\_Traits, \\_Allocator >](#).

_Alloc > basic_string< _CharT, _Traits, _Alloc >::iterator  
std::basic_string< _CharT, _Traits, _Alloc >::erase (iterator __first,  
iterator __last) [inline]`

Remove a range of characters.

**Parameters:**

*first* Iterator referencing the first character to remove.

*last* Iterator referencing the end of the range.

**Returns:**

Iterator referencing location of first after removal.

Removes the characters in the range [first,last) from this string. The value of the string doesn't change if an error is thrown.

Definition at line 391 of file basic\_string.tcc.

**5.385.3.39** `template<typename _CharT, typename _Traits, typename _Alloc>  
iterator std::basic_string< _CharT, _Traits, _Alloc >::erase  
(iterator __position) [inline]`

Remove one character.

**Parameters:**

*position* Iterator referencing the character to remove.

**Returns:**

[iterator](#) referencing same location after removal.

Removes the character at *position* from this string. The value of the string doesn't change if an error is thrown.

Definition at line 1319 of file basic\_string.h.

**5.385.3.40** `template<typename _CharT, typename _Traits, typename _Alloc>  
basic_string& std::basic_string< _CharT, _Traits, _Alloc >::erase  
(size_type __pos = 0, size_type __n = npos) [inline]`

Remove characters.

**Parameters:**

*pos* Index of first character to remove (default 0).

*n* Number of characters to remove (default remainder).

**Returns:**

Reference to this string.

## 5.385 std::basic\_string<\_CharT, \_Traits, \_Alloc > Class Template Reference

### Exceptions:

*std::out\_of\_range* If *pos* is beyond the end of this string.

Removes *n* characters from this string starting at *pos*. The length of the string is reduced by *n*. If there are < *n* characters to remove, the remainder of the string is truncated. If *p* is beyond end of string, *out\_of\_range* is thrown. The value of the string doesn't change if an error is thrown.

Find position of a character.

### Parameters:

*c* Character to locate.

*pos* Index of character to search from (default 0).

### Returns:

Index of first occurrence.

Starting from *pos*, searches forward for *c* within this string. If found, returns the index where it was found. If not found, returns *npos*.

Definition at line 760 of file `basic_string.tcc`.

References `std::basic_string<_CharT, _Traits, _Alloc >::find()`, and `std::basic_string<_CharT, _Traits, _Alloc >::size()`.

**5.385.3.42** `template<typename _CharT, typename _Traits, typename _Alloc> size_type std::basic_string<_CharT, _Traits, _Alloc >::find (const _CharT * __s, size_type __pos = 0) const [inline]`

Find position of a C string.

### Parameters:

*s* C string to locate.

*pos* Index of character to search from (default 0).

**Returns:**

Index of start of first occurrence.

Starting from *pos*, searches forward for the value of *s* within this string. If found, returns the index where it begins. If not found, returns *npos*.

Definition at line 1781 of file `basic_string.h`.

```
5.385.3.43 template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::find (const
basic_string< _CharT, _Traits, _Alloc > & __str, size_type __pos =
0) const [inline]
```

Find position of a string.

**Parameters:**

*str* String to locate.

*pos* Index of character to search from (default 0).

**Returns:**

Index of start of first occurrence.

Starting from *pos*, searches forward for value of *str* within this string. If found, returns the index where it begins. If not found, returns *npos*.

Definition at line 1767 of file `basic_string.h`.

Referenced by `std::basic_string< char >::find()`.

 _Alloc > basic_string<_CharT, _Traits, _Alloc >::size_type
 std::basic_string<_CharT, _Traits, _Alloc >::find_first_not_of
 (_CharT __c, size_type __pos = 0) const [inline]
```

Find position of a different character.

#### **Parameters:**

*c* Character to avoid.

*pos* Index of character to search from (default 0).

#### **Returns:**

Index of first occurrence.

Starting from *pos*, searches forward for a character other than *c* within this string. If found, returns the index where it was found. If not found, returns *npos*.

Definition at line 864 of file basic\_string.tcc.

References std::basic\_string<\_CharT, \_Traits, \_Alloc >::size().

```
5.385.3.46 template<typename _CharT, typename _Traits, typename
 _Alloc> size_type std::basic_string<_CharT, _Traits, _Alloc
 >::find_first_not_of (const _CharT * __s, size_type __pos = 0) const
 [inline]
```

Find position of a character not in C string.

#### **Parameters:**

*s* C string containing characters to avoid.

*pos* Index of character to search from (default 0).

#### **Returns:**

Index of first occurrence.

Starting from *pos*, searches forward for a character not contained in *s* within this string. If found, returns the index where it was found. If not found, returns *npos*.

Definition at line 2020 of file `basic_string.h`.

```
5.385.3.47 template<typename _CharT, typename _Traits, typename
 _Alloc > basic_string< _CharT, _Traits, _Alloc >::size_type
 std::basic_string< _CharT, _Traits, _Alloc >::find_first_not_of
 (const _CharT * __s, size_type __pos, size_type __n) const
 [inline]
```

Find position of a character not in C substring.

**Parameters:**

- s* C string containing characters to avoid.
- pos* Index of character to search from.
- n* Number of characters from *s* to consider.

**Returns:**

Index of first occurrence.

Starting from *pos*, searches forward for a character not contained in the first *n* characters of *s* within this string. If found, returns the index where it was found. If not found, returns *npos*.

Definition at line 852 of file `basic_string.tcc`.

References `std::basic_string< _CharT, _Traits, _Alloc >::size()`.

iterator std::basic_string<_CharT, _Traits, _Alloc >::insert  
(iterator __p, _CharT __c) [inline]`

Insert one character.

### Parameters:

- p* Iterator referencing position in string to insert at.
- c* The character to insert.

### Returns:

Iterator referencing newly inserted char.

### Exceptions:

*std::length\_error* If new length exceeds `max_size()`.

Inserts character *c* at position referenced by *p*. If adding character causes the length to exceed `max_size()`, `length_error` is thrown. If *p* is beyond end of string, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1279 of file `basic_string.h`.

**5.385.3.63** `template<typename _CharT, typename _Traits, typename _Alloc>  
basic_string& std::basic_string<_CharT, _Traits, _Alloc >::insert  
(size_type __pos, size_type __n, _CharT __c) [inline]`

Insert multiple characters.

### Parameters:

- pos* Index in string to insert at.
- n* Number of characters to insert
- c* The character to insert.

### Returns:

Reference to this string.

### Exceptions:

*std::length\_error* If new length exceeds `max_size()`.

*std::out\_of\_range* If *pos* is beyond the end of this string.

Inserts *n* copies of character *c* starting at index *pos*. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. If *pos* > `length()`, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1262 of file `basic_string.h`.

**5.385.3.64** `template<typename _CharT, typename _Traits, typename _Alloc>  
basic_string& std::basic_string<_CharT, _Traits, _Alloc >::insert  
(size_type __pos, const _CharT * __s) [inline]`

Insert a C string.

**Parameters:**

*pos* Iterator referencing location in string to insert at.

*s* The C string to insert.

**Returns:**

Reference to this string.

**Exceptions:**

*std::length\_error* If new length exceeds `max_size()`.

*std::out\_of\_range* If *pos* is beyond the end of this string.

Inserts the first *n* characters of *s* starting at *pos*. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. If *pos* is beyond `end()`, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1239 of file `basic_string.h`.

**5.385.3.65** `template<typename _CharT, typename _Traits, typename _Alloc  
> basic_string<_CharT, _Traits, _Alloc > & std::basic_string<  
_CharT, _Traits, _Alloc >::insert (size_type __pos, const _CharT *  
__s, size_type __n) [inline]`

Insert a C substring.

**Parameters:**

*pos* Iterator referencing location in string to insert at.

*s* The C string to insert.

### 5.385 `std::basic_string<_CharT, _Traits, _Alloc>` Class Template Reference 2231

*n* The number of characters to insert.

#### Returns:

Reference to this string.

#### Exceptions:

**`std::length_error`** If new length exceeds `max_size()`.

**`std::out_of_range`** If *pos* is beyond the end of this string.

Inserts the first *n* characters of *s* starting at *pos*. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. If *pos* is beyond `end()`, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 360 of file `basic_string.tcc`.

```
5.385.3.66 template<typename _CharT, typename _Traits, typename _Alloc>
basic_string& std::basic_string<_CharT, _Traits, _Alloc>::insert
(size_type __pos1, const basic_string<_CharT, _Traits, _Alloc> &
__str, size_type __pos2, size_type __n) [inline]
```

Insert a substring.

#### Parameters:

*pos1* Iterator referencing location in string to insert at.

*str* The string to insert.

*pos2* Start of characters in *str* to insert.

*n* Number of characters to insert.

#### Returns:

Reference to this string.

#### Exceptions:

**`std::length_error`** If new length exceeds `max_size()`.

**`std::out_of_range`** If *pos1* > `size()` or *pos2* > *str.size()*.

Starting at *pos1*, insert *n* character of *str* beginning with *pos2*. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. If *pos1* is beyond the end of this string or *pos2* is beyond the end of *str*, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1198 of file `basic_string.h`.

Referenced by `std::basic_string<char>::insert()`.

```
5.385.3.67 template<typename _CharT, typename _Traits, typename _Alloc>
basic_string& std::basic_string<_CharT, _Traits, _Alloc >::insert
(size_type __pos1, const basic_string<_CharT, _Traits, _Alloc > &
__str) [inline]
```

Insert value of a string.

**Parameters:**

*pos1* Iterator referencing location in string to insert at.

*str* The string to insert.

**Returns:**

Reference to this string.

**Exceptions:**

[\*std::length\\_error\*](#) If new length exceeds `max_size()`.

Inserts value of *str* starting at *pos1*. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1176 of file `basic_string.h`.

Referenced by `std::basic_string< char >::insert()`.

```
5.385.3.68 template<typename _CharT, typename _Traits, typename _Alloc>
void std::basic_string<_CharT, _Traits, _Alloc >::insert(iterator
__p, initializer_list<_CharT > __l) [inline]
```

Insert an `initializer_list` of characters.

**Parameters:**

*p* Iterator referencing location in string to insert at.

*l* The `initializer_list` of characters to insert.

**Exceptions:**

[\*std::length\\_error\*](#) If new length exceeds `max_size()`.

Definition at line 1157 of file `basic_string.h`.

## 5.385 std::basic\_string<\_CharT, \_Traits, \_Alloc > Class Template Reference

**5.385.3.69** `template<typename _CharT, typename _Traits, typename _Alloc>  
template<class _InputIterator > void std::basic_string<_CharT,  
_Traits, _Alloc >::insert (iterator __p, _InputIterator __beg,  
_InputIterator __end) [inline]`

Insert a range of characters.

### Parameters:

*p* Iterator referencing location in string to insert at.

*beg* Start of range.

*end* End of range.

### Exceptions:

*std::length\_error* If new length exceeds `max_size()`.

Inserts characters in range [beg,end). If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1146 of file `basic_string.h`.

**5.385.3.70** `template<typename _CharT, typename _Traits, typename _Alloc>  
void std::basic_string<_CharT, _Traits, _Alloc >::insert (iterator  
__p, size_type __n, _CharT __c) [inline]`

Insert multiple characters.

### Parameters:

*p* Iterator referencing location in string to insert at.

*n* Number of characters to insert

*c* The character to insert.

### Exceptions:

*std::length\_error* If new length exceeds `max_size()`.

Inserts *n* copies of character *c* starting at the position referenced by iterator *p*. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1130 of file `basic_string.h`.

**5.385.3.71** `template<typename _CharT, typename _Traits, typename _Alloc>  
size_type std::basic_string< _CharT, _Traits, _Alloc >::length ()  
const [inline]`

Returns the number of characters in the string, not including any null-termination.

Definition at line 706 of file `basic_string.h`.

Referenced by `std::basic_string< _CharT, _Traits, _Alloc >::compare()`, `std::collate< _CharT >::do_compare()`, `std::collate< _CharT >::do_transform()`, `std::match_results< _Bi_iter >::length()`, and `std::regex_traits< _Ch_type >::length()`.

**5.385.3.72** `template<typename _CharT, typename _Traits, typename _Alloc>  
size_type std::basic_string< _CharT, _Traits, _Alloc >::max_size ()  
const [inline]`

Returns the `size()` of the largest possible string.

Definition at line 711 of file `basic_string.h`.

Referenced by `std::getline()`, `std::operator>>()`, and `std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow()`.

**5.385.3.73** `template<typename _CharT, typename _Traits, typename _Alloc>  
basic_string& std::basic_string< _CharT, _Traits, _Alloc  
>::operator+=( initializer_list< _CharT > __l) [inline]`

Append an `initializer_list` of characters.

**Parameters:**

*l* The `initializer_list` of characters to be appended.

**Returns:**

Reference to this string.

Reimplemented in `__gnu_debug::basic_string< _CharT, _Traits, _Allocator >`.

Definition at line 911 of file `basic_string.h`.

**5.385.3.74** `template<typename _CharT, typename _Traits, typename _Alloc>  
basic_string& std::basic_string< _CharT, _Traits, _Alloc  
>::operator+= (_CharT __c) [inline]`

Append a character.

## 5.385 std::basic\_string<\_CharT, \_Traits, \_Alloc > Class Template Reference

### Parameters:

*c* The character to append.

### Returns:

Reference to this string.

Reimplemented in [\\_\\_gnu\\_debug::basic\\_string<\\_CharT, \\_Traits, \\_Allocator >](#).

Definition at line 898 of file `basic_string.h`.

```
5.385.3.75 template<typename _CharT, typename _Traits, typename _Alloc>
basic_string& std::basic_string<_CharT, _Traits, _Alloc
>::operator+=(const _CharT * __s) [inline]
```

Append a C string.

### Parameters:

*s* The C string to append.

### Returns:

Reference to this string.

Reimplemented in [\\_\\_gnu\\_debug::basic\\_string<\\_CharT, \\_Traits, \\_Allocator >](#).

Definition at line 889 of file `basic_string.h`.

```
5.385.3.76 template<typename _CharT, typename _Traits, typename _Alloc>
basic_string& std::basic_string<_CharT, _Traits, _Alloc
>::operator+=(const basic_string<_CharT, _Traits, _Alloc > &
__str) [inline]
```

Append a string to this string.

### Parameters:

*str* The string to append.

### Returns:

Reference to this string.

Definition at line 880 of file `basic_string.h`.

**5.385.3.77** `template<typename _CharT, typename _Traits, typename _Alloc>  
basic_string& std::basic_string< _CharT, _Traits, _Alloc  
>::operator= (initializer_list< _CharT > __l) [inline]`

Set value to string constructed from initializer [list](#).

**Parameters:**

*l* [std::initializer\\_list](#).

Reimplemented in [\\_\\_gnu\\_debug::basic\\_string< \\_CharT, \\_Traits, \\_Allocator >](#).

Definition at line 577 of file `basic_string.h`.

**5.385.3.78** `template<typename _CharT, typename _Traits, typename _Alloc>  
basic_string& std::basic_string< _CharT, _Traits, _Alloc  
>::operator= (basic_string< _CharT, _Traits, _Alloc > && __str)  
[inline]`

Move assign the value of *str* to this string.

**Parameters:**

*str* Source string.

The contents of *str* are moved into this string (without copying). *str* is a valid, but unspecified string.

Definition at line 565 of file `basic_string.h`.

**5.385.3.79** `template<typename _CharT, typename _Traits, typename _Alloc>  
basic_string& std::basic_string< _CharT, _Traits, _Alloc  
>::operator= (_CharT __c) [inline]`

Set value to string of length 1.

**Parameters:**

*c* Source character.

Assigning to a character makes this string length 1 and `(*this)[0] == c`.

Reimplemented in [\\_\\_gnu\\_debug::basic\\_string< \\_CharT, \\_Traits, \\_Allocator >](#).

Definition at line 550 of file `basic_string.h`.

## 5.385 std::basic\_string<\_CharT, \_Traits, \_Alloc > Class Template Reference2237

**5.385.3.80** `template<typename _CharT, typename _Traits, typename _Alloc>  
basic_string& std::basic_string<_CharT, _Traits, _Alloc  
>::operator=(const _CharT * __s) [inline]`

Copy contents of *s* into this string.

### Parameters:

*s* Source null-terminated string.

Reimplemented in [\\_\\_gnu\\_debug::basic\\_string<\\_CharT, \\_Traits, \\_Allocator >](#).

Definition at line 539 of file `basic_string.h`.

**5.385.3.81** `template<typename _CharT, typename _Traits, typename _Alloc>  
basic_string& std::basic_string<_CharT, _Traits, _Alloc  
>::operator=(const basic_string<_CharT, _Traits, _Alloc > &  
__str) [inline]`

Assign the value of *str* to this string.

### Parameters:

*str* Source string.

Definition at line 531 of file `basic_string.h`.

**5.385.3.82** `template<typename _CharT, typename _Traits, typename _Alloc>  
reference std::basic_string<_CharT, _Traits, _Alloc >::operator[]  
(size_type __pos) [inline]`

Subscript access to the data contained in the string.

### Parameters:

*pos* The index of the character to access.

### Returns:

Read/write reference to the character.

This operator allows for easy, array-style, data access. Note that data access with this operator is unchecked and [out\\_of\\_range](#) lookups are not defined. (For checked lookups see [at\(\)](#).) Unshares the string.

Definition at line 825 of file `basic_string.h`.

```
5.385.3.83 template<typename _CharT, typename _Traits, typename _Alloc>
const_reference std::basic_string< _CharT, _Traits, _Alloc
>::operator[] (size_type __pos) const [inline]
```

Subscript access to the data contained in the string.

**Parameters:**

*pos* The index of the character to access.

**Returns:**

Read-only (constant) reference to the character.

This operator allows for easy, array-style, data access. Note that data access with this operator is unchecked and [out\\_of\\_range](#) lookups are not defined. (For checked lookups see [at\(\)](#).)

Definition at line 808 of file `basic_string.h`.

```
5.385.3.84 template<typename _CharT, typename _Traits, typename _Alloc>
void std::basic_string< _CharT, _Traits, _Alloc >::push_back
(_CharT __c) [inline]
```

Append a single character.

**Parameters:**

*c* Character to append.

Reimplemented in [\\_\\_gnu\\_debug::basic\\_string< \\_CharT, \\_Traits, \\_Allocator >](#).

Definition at line 999 of file `basic_string.h`.

Referenced by `std::collate< _CharT >::do_transform()`, `std::operator>>()`, and `std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow()`.

```
5.385.3.85 template<typename _CharT, typename _Traits, typename _Alloc>
const_reverse_iterator std::basic_string< _CharT, _Traits, _Alloc
>::rbegin () const [inline]
```

Returns a read-only (constant) reverse [iterator](#) that points to the last character in the string. Iteration is done in reverse element order.

Reimplemented in [\\_\\_gnu\\_debug::basic\\_string< \\_CharT, \\_Traits, \\_Allocator >](#).

Definition at line 638 of file `basic_string.h`.

## 5.385 std::basic\_string<\_CharT, \_Traits, \_Alloc > Class Template Reference

**5.385.3.86** `template<typename _CharT, typename _Traits, typename _Alloc>  
reverse_iterator std::basic_string<_CharT, _Traits, _Alloc  
>::rbegin() [inline]`

Returns a read/write reverse [iterator](#) that points to the last character in the string. Iteration is done in reverse element order. Unshares the string.

Reimplemented in [\\_\\_gnu\\_debug::basic\\_string<\\_CharT, \\_Traits, \\_Allocator >](#).

Definition at line 629 of file `basic_string.h`.

**5.385.3.87** `template<typename _CharT, typename _Traits, typename _Alloc>  
const_reverse_iterator std::basic_string<_CharT, _Traits, _Alloc  
>::rend() const [inline]`

Returns a read-only (constant) reverse [iterator](#) that points to one before the first character in the string. Iteration is done in reverse element order.

Reimplemented in [\\_\\_gnu\\_debug::basic\\_string<\\_CharT, \\_Traits, \\_Allocator >](#).

Definition at line 656 of file `basic_string.h`.

**5.385.3.88** `template<typename _CharT, typename _Traits, typename _Alloc>  
reverse_iterator std::basic_string<_CharT, _Traits, _Alloc >::rend  
() [inline]`

Returns a read/write reverse [iterator](#) that points to one before the first character in the string. Iteration is done in reverse element order. Unshares the string.

Reimplemented in [\\_\\_gnu\\_debug::basic\\_string<\\_CharT, \\_Traits, \\_Allocator >](#).

Definition at line 647 of file `basic_string.h`.

**5.385.3.89** `template<typename _CharT, typename _Traits, typename _Alloc>  
basic_string& std::basic_string<_CharT, _Traits, _Alloc >::replace  
(iterator __i1, iterator __i2, initializer_list<_CharT > __l)  
[inline]`

Replace range of characters with [initializer\\_list](#).

### Parameters:

*i1* Iterator referencing start of range to replace.

*i2* Iterator referencing end of range to replace.

*l* The [initializer\\_list](#) of characters to insert.

**Returns:**

Reference to this string.

**Exceptions:**

*std::length\_error* If new length exceeds `max_size()`.

Removes the characters in the range `[i1,i2)`. In place, characters in the range `[k1,k2)` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1615 of file `basic_string.h`.

Referenced by `std::basic_string< char >::replace()`.

**5.385.3.90** `template<typename _CharT, typename _Traits, typename _Alloc>  
template<class _InputIterator > basic_string& std::basic_string<  
_CharT, _Traits, _Alloc >::replace (iterator __i1, iterator __i2,  
_InputIterator __k1, _InputIterator __k2) [inline]`

Replace range of characters with range.

**Parameters:**

*i1* Iterator referencing start of range to replace.

*i2* Iterator referencing end of range to replace.

*k1* Iterator referencing start of range to insert.

*k2* Iterator referencing end of range to insert.

**Returns:**

Reference to this string.

**Exceptions:**

*std::length\_error* If new length exceeds `max_size()`.

Removes the characters in the range `[i1,i2)`. In place, characters in the range `[k1,k2)` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1547 of file `basic_string.h`.

## 5.385 std::basic\_string<\_CharT, \_Traits, \_Alloc > Class Template Reference 2241

**5.385.3.91** `template<typename _CharT, typename _Traits, typename _Alloc>  
basic_string& std::basic_string<_CharT, _Traits, _Alloc >::replace  
(iterator __i1, iterator __i2, size_type __n, _CharT __c)  
[inline]`

Replace range of characters with multiple characters.

### Parameters:

- i1* Iterator referencing start of range to replace.
- i2* Iterator referencing end of range to replace.
- n* Number of characters to insert.
- c* Character to insert.

### Returns:

Reference to this string.

### Exceptions:

*std::length\_error* If new length exceeds `max_size()`.

Removes the characters in the range [*i1*,*i2*). In place, *n* copies of *c* are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1524 of file `basic_string.h`.

**5.385.3.92** `template<typename _CharT, typename _Traits, typename _Alloc>  
basic_string& std::basic_string<_CharT, _Traits, _Alloc >::replace  
(iterator __i1, iterator __i2, const _CharT* __s) [inline]`

Replace range of characters with C string.

### Parameters:

- i1* Iterator referencing start of range to replace.
- i2* Iterator referencing end of range to replace.
- s* C string value to insert.

### Returns:

Reference to this string.

### Exceptions:

*std::length\_error* If new length exceeds `max_size()`.

Removes the characters in the range [i1,i2). In place, the characters of *s* are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1503 of file `basic_string.h`.

```
5.385.3.93 template<typename _CharT, typename _Traits, typename _Alloc>
basic_string& std::basic_string<_CharT, _Traits, _Alloc >::replace
(iterator __i1, iterator __i2, const _CharT * __s, size_type __n)
[inline]
```

Replace range of characters with C substring.

**Parameters:**

- i1* Iterator referencing start of range to replace.
- i2* Iterator referencing end of range to replace.
- s* C string value to insert.
- n* Number of characters from *s* to insert.

**Returns:**

Reference to this string.

**Exceptions:**

`std::length_error` If new length exceeds `max_size()`.

Removes the characters in the range [i1,i2). In place, the first *n* characters of *s* are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1482 of file `basic_string.h`.

```
5.385.3.94 template<typename _CharT, typename _Traits, typename _Alloc>
basic_string& std::basic_string<_CharT, _Traits, _Alloc >::replace
(iterator __i1, iterator __i2, const basic_string<_CharT, _Traits,
_Alloc > & __str) [inline]
```

Replace range of characters with string.

**Parameters:**

- i1* Iterator referencing start of range to replace.
- i2* Iterator referencing end of range to replace.
- str* String value to insert.

## 5.385 `std::basic_string<_CharT, _Traits, _Alloc >` Class Template Reference 2243

### Returns:

Reference to this string.

### Exceptions:

*std::length\_error* If new length exceeds `max_size()`.

Removes the characters in the range `[i1,i2)`. In place, the value of `str` is inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1464 of file `basic_string.h`.

Referenced by `std::basic_string<char >::replace()`.

```
5.385.3.95 template<typename _CharT, typename _Traits, typename _Alloc>
basic_string& std::basic_string<_CharT, _Traits, _Alloc >::replace
(size_type __pos, size_type __n1, size_type __n2, _CharT __c)
[inline]
```

Replace characters with multiple characters.

### Parameters:

*pos* Index of first character to replace.

*n1* Number of characters to be replaced.

*n2* Number of characters to insert.

*c* Character to insert.

### Returns:

Reference to this string.

### Exceptions:

*std::out\_of\_range* If `pos > size()`.

*std::length\_error* If new length exceeds `max_size()`.

Removes the characters in the range `[pos,pos + n1)` from this string. In place, `n2` copies of `c` are inserted. If `pos` is beyond end of string, `out_of_range` is thrown. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1446 of file `basic_string.h`.

```
5.385.3.96 template<typename _CharT, typename _Traits, typename _Alloc>
basic_string& std::basic_string<_CharT, _Traits, _Alloc >::replace
(size_type __pos, size_type __n1, const _CharT * __s) [inline]
```

Replace characters with value of a C string.

**Parameters:**

*pos* Index of first character to replace.  
*n1* Number of characters to be replaced.  
*s* C string to insert.

**Returns:**

Reference to this string.

**Exceptions:**

[\*std::out\\_of\\_range\*](#) If *pos* > *size()*.  
[\*std::length\\_error\*](#) If new length exceeds *max\_size()*.

Removes the characters in the range [*pos*,*pos* + *n1*) from this string. In place, the first *n* characters of *s* are inserted. If *pos* is beyond end of string, [\*out\\_of\\_range\*](#) is thrown. If the length of result exceeds [\*max\\_size\(\)\*](#), [\*length\\_error\*](#) is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1423 of file *basic\_string.h*.

```
5.385.3.97 template<typename _CharT, typename _Traits , typename _Alloc
> basic_string<_CharT, _Traits, _Alloc > & std::basic_string<
_CharT, _Traits, _Alloc >::replace (size_type __pos, size_type __n1,
const _CharT * __s, size_type __n2) [inline]
```

Replace characters with value of a C substring.

**Parameters:**

*pos* Index of first character to replace.  
*n1* Number of characters to be replaced.  
*s* C string to insert.  
*n2* Number of characters from *s* to use.

**Returns:**

Reference to this string.

## 5.385 `std::basic_string<_CharT, _Traits, _Alloc >` Class Template Reference 2245

### Exceptions:

*std::out\_of\_range* If `pos1 > size()`.

*std::length\_error* If new length exceeds `max_size()`.

Removes the characters in the range `[pos, pos + n1)` from this string. In place, the first `n2` characters of `s` are inserted, or all of `s` if `n2` is too large. If `pos` is beyond end of string, *out\_of\_range* is thrown. If the length of result exceeds `max_size()`, *length\_error* is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 414 of file `basic_string.tcc`.

```
5.385.3.98 template<typename _CharT, typename _Traits, typename _Alloc>
basic_string& std::basic_string<_CharT, _Traits, _Alloc >::replace
(size_type __pos1, size_type __n1, const basic_string<_CharT,
_Traits, _Alloc > & __str, size_type __pos2, size_type __n2)
[inline]
```

Replace characters with value from another string.

### Parameters:

*pos1* Index of first character to replace.

*n1* Number of characters to be replaced.

*str* String to insert.

*pos2* Index of first character of `str` to use.

*n2* Number of characters from `str` to use.

### Returns:

Reference to this string.

### Exceptions:

*std::out\_of\_range* If `pos1 > size()` or `pos2 > str.size()`.

*std::length\_error* If new length exceeds `max_size()`.

Removes the characters in the range `[pos1, pos1 + n)` from this string. In place, the value of `str` is inserted. If `pos` is beyond end of string, *out\_of\_range* is thrown. If the length of the result exceeds `max_size()`, *length\_error* is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1380 of file `basic_string.h`.

Referenced by `std::basic_string<char >::replace()`.

**5.385.3.99** `template<typename _CharT, typename _Traits, typename _Alloc>  
basic_string& std::basic_string<_CharT, _Traits, _Alloc >::replace  
(size_type __pos, size_type __n, const basic_string<_CharT,  
_Traits, _Alloc > & __str) [inline]`

Replace characters with value from another string.

**Parameters:**

*pos* Index of first character to replace.  
*n* Number of characters to be replaced.  
*str* String to insert.

**Returns:**

Reference to this string.

**Exceptions:**

[\*std::out\\_of\\_range\*](#) If *pos* is beyond the end of this string.  
[\*std::length\\_error\*](#) If new length exceeds `max_size()`.

Removes the characters in the range [*pos*,*pos*+*n*) from this string. In place, the value of *str* is inserted. If *pos* is beyond end of string, [\*out\\_of\\_range\*](#) is thrown. If the length of the result exceeds `max_size()`, [\*length\\_error\*](#) is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1358 of file `basic_string.h`.

Referenced by `std::basic_string< char >::replace()`.

**5.385.3.100** `template<typename _CharT, typename _Traits, typename _Alloc  
> void std::basic_string<_CharT, _Traits, _Alloc >::reserve  
(size_type __res_arg = 0) [inline]`

Attempt to preallocate enough memory for specified number of characters.

**Parameters:**

*res\_arg* Number of characters required.

**Exceptions:**

[\*std::length\\_error\*](#) If *res\_arg* exceeds `max_size()`.

This function attempts to reserve enough memory for the string to hold the specified number of characters. If the number requested is more than `max_size()`, [\*length\\_error\*](#) is thrown.

## 5.385 std::basic\_string<\_CharT, \_Traits, \_Alloc > Class Template Reference2247

The advantage of this function is that if optimal code is a necessity and the user can determine the string length that will be required, the user can reserve the memory in advance, and thus prevent a possible reallocation of memory and copying of string data.

Definition at line 502 of file basic\_string.tcc.

References `std::basic_string<_CharT, _Traits, _Alloc >::capacity()`, `std::basic_string<_CharT, _Traits, _Alloc >::get_allocator()`, and `std::basic_string<_CharT, _Traits, _Alloc >::size()`.

**5.385.3.101** `template<typename _CharT, typename _Traits, typename _Alloc>  
void std::basic_string<_CharT, _Traits, _Alloc >::resize  
(size_type __n) [inline]`

Resizes the string to the specified number of characters.

### Parameters:

*n* Number of characters the string should contain.

This function will resize the string to the specified length. If the new size is smaller than the string's current size the string is truncated, otherwise the string is extended and new characters are default-constructed. For basic types such as char, this means setting them to 0.

Definition at line 738 of file basic\_string.h.

Referenced by `std::basic_string<char >::resize()`.

**5.385.3.102** `template<typename _CharT, typename _Traits, typename _Alloc  
> void std::basic_string<_CharT, _Traits, _Alloc >::resize  
(size_type __n, _CharT __c) [inline]`

Resizes the string to the specified number of characters.

### Parameters:

*n* Number of characters the string should contain.

*c* Character to fill any new elements.

This function will resize the string to the specified number of characters. If the number is smaller than the string's current size the string is truncated, otherwise the string is extended and new elements are `set` to *c*.

Definition at line 640 of file basic\_string.tcc.

References `std::basic_string<_CharT, _Traits, _Alloc>::append()`, `std::basic_string<_CharT, _Traits, _Alloc>::erase()`, and `std::basic_string<_CharT, _Traits, _Alloc>::size()`.

Referenced by `std::money_get<_CharT, _InIter>::do_get()`.

**5.385.3.103** `template<typename _CharT, typename _Traits, typename _Alloc> basic_string<_CharT, _Traits, _Alloc>::size_type std::basic_string<_CharT, _Traits, _Alloc>::rfind(_CharT __c, size_type __pos = npos) const [inline]`

Find last position of a character.

**Parameters:**

*c* Character to locate.

*pos* Index of character to search back from (default end).

**Returns:**

Index of last occurrence.

Starting from *pos*, searches backward for *c* within this string. If found, returns the index where it was found. If not found, returns `npos`.

Definition at line 799 of file basic\_string.tcc.

References `std::basic_string<_CharT, _Traits, _Alloc>::size()`.

**5.385.3.104** `template<typename _CharT, typename _Traits, typename _Alloc> size_type std::basic_string<_CharT, _Traits, _Alloc>::rfind(const _CharT * __s, size_type __pos = npos) const [inline]`

Find last position of a C string.

**Parameters:**

*s* C string to locate.

*pos* Index of character to start search at (default end).

**Returns:**

Index of start of last occurrence.

Starting from *pos*, searches backward for the value of *s* within this string. If found, returns the index where it begins. If not found, returns `npos`.

Definition at line 1839 of file basic\_string.h.

## 5.385 std::basic\_string< \_CharT, \_Traits, \_Alloc > Class Template Reference 2249

**5.385.3.105** `template<typename _CharT, typename _Traits, typename _Alloc > basic_string< _CharT, _Traits, _Alloc >::size_type  
std::basic_string< _CharT, _Traits, _Alloc >::rfind (const _CharT  
* __s, size_type __pos, size_type __n) const [inline]`

Find last position of a C substring.

### Parameters:

*s* C string to locate.

*pos* Index of character to search back from.

*n* Number of characters from *s* to search for.

### Returns:

Index of start of last occurrence.

Starting from *pos*, searches backward for the first *n* characters in *s* within this string. If found, returns the index where it begins. If not found, returns *npos*.

Definition at line 778 of file `basic_string.tcc`.

References `std::min()`, and `std::basic_string< _CharT, _Traits, _Alloc >::size()`.

**5.385.3.106** `template<typename _CharT, typename _Traits, typename _Alloc>  
size_type std::basic_string< _CharT, _Traits, _Alloc >::rfind  
(const basic_string< _CharT, _Traits, _Alloc > & __str, size_type  
__pos = npow) const [inline]`

Find last position of a string.

### Parameters:

*str* String to locate.

*pos* Index of character to search back from (default end).

### Returns:

Index of start of last occurrence.

Starting from *pos*, searches backward for value of *str* within this string. If found, returns the index where it begins. If not found, returns *npos*.

basic_string std::basic_string< _CharT, _Traits, _Alloc >::substr  
(size_type __pos = 0, size_type __n = npos) const [inline]`

Get a substring.

**Parameters:**

*pos* Index of first character (default 0).

*n* Number of characters in substring (default remainder).

**Returns:**

The new string.

## 5.385 std::basic\_string<\_CharT, \_Traits, \_Alloc> Class Template Reference 2251

### Exceptions:

[\*std::out\\_of\\_range\*](#) If `pos > size()`.

Construct and return a new string using the *n* characters starting at *pos*. If the string is too short, use the remainder of the characters. If *pos* is beyond the end of the string, [\*out\\_of\\_range\*](#) is thrown.

Definition at line 2111 of file `basic_string.h`.

**5.385.3.110** `template<typename _CharT, typename _Traits, typename _Alloc> void std::basic_string<_CharT, _Traits, _Alloc>::swap(basic_string<_CharT, _Traits, _Alloc> & __s) [inline]`

Swap contents with another string.

### Parameters:

*s* String to swap with.

Exchanges the contents of this string with that of *s* in constant time.

Definition at line 519 of file `basic_string.tcc`.

References `std::basic_string<_CharT, _Traits, _Alloc>::get_allocator()`.

Referenced by `std::basic_stringbuf<_CharT, _Traits, _Alloc>::overflow()`, and `std::swap()`.

### 5.386.1 Detailed Description

`template<typename _CharT, typename _Traits, typename _Alloc> class std::basic_stringbuf<_CharT, _Traits, _Alloc>`

The actual work of input and output (for `std::string`).

This class associates either or both of its input and output sequences with a sequence of characters, which can be initialized from, or made available as, a `std::basic_string`. (Paraphrased from [27.7.1]/1.). For this class, open modes (of type `ios_base::openmode`) have `in` `set` if the input sequence can be read, and `out` `set` if the output sequence can be written.

Definition at line 58 of file `sstream`.

### 5.386.2 Member Typedef Documentation

**5.386.2.1** `template<typename _CharT, typename _Traits, typename _Alloc> typedef basic_streambuf<char_type, traits_type> std::basic_stringbuf<_CharT, _Traits, _Alloc>::__streambuf_type`

This is a non-standard type.

Reimplemented from `std::basic_streambuf<_CharT, _Traits>`.

Definition at line 71 of file `sstream`.

**5.386.2.2** `template<typename _CharT, typename _Traits, typename _Alloc> typedef _CharT std::basic_stringbuf<_CharT, _Traits, _Alloc>::__char_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from `std::basic_streambuf<_CharT, _Traits>`.

Definition at line 62 of file `sstream`.

**5.386.2.3** `template<typename _CharT, typename _Traits, typename _Alloc>  
typedef traits_type::int_type std::basic_stringbuf< _CharT, _Traits,  
_Alloc >::int_type`

This is a non-standard type.

Reimplemented from [std::basic\\_streambuf< \\_CharT, \\_Traits >](#).

Definition at line 67 of file sstream.

**5.386.2.4** `template<typename _CharT, typename _Traits, typename _Alloc>  
typedef traits_type::off_type std::basic_stringbuf< _CharT, _Traits,  
_Alloc >::off_type`

This is a non-standard type.

Reimplemented from [std::basic\\_streambuf< \\_CharT, \\_Traits >](#).

Definition at line 69 of file sstream.

**5.386.2.5** `template<typename _CharT, typename _Traits, typename _Alloc>  
typedef traits_type::pos_type std::basic_stringbuf< _CharT, _Traits,  
_Alloc >::pos_type`

This is a non-standard type.

Reimplemented from [std::basic\\_streambuf< \\_CharT, \\_Traits >](#).

Definition at line 68 of file sstream.

**5.386.2.6** `template<typename _CharT, typename _Traits, typename _Alloc>  
typedef _Traits std::basic_stringbuf< _CharT, _Traits, _Alloc  
>::traits_type`

This is a non-standard type.

Reimplemented from [std::basic\\_streambuf< \\_CharT, \\_Traits >](#).

Definition at line 63 of file sstream.

### 5.386.3 Constructor & Destructor Documentation

**5.386.3.1** `template<typename _CharT, typename _Traits, typename _Alloc>  
std::basic_stringbuf< _CharT, _Traits, _Alloc >::basic_stringbuf  
(ios_base::openmode __mode = ios_base::in | ios_base::out)  
[inline, explicit]`

Starts with an empty string buffer.

**Parameters:**

*mode* Whether the buffer can read, or write, or both.

The default constructor initializes the parent class using its own default ctor.

Definition at line 92 of file sstream.

**5.386.3.2** `template<typename _CharT, typename _Traits, typename _Alloc>  
std::basic_stringbuf< _CharT, _Traits, _Alloc >::basic_stringbuf  
(const __string_type & __str, ios_base::openmode __mode =  
ios_base::in | ios_base::out) [inline, explicit]`

Starts with an existing string buffer.

**Parameters:**

*str* A string to copy as a starting buffer.

*mode* Whether the buffer can read, or write, or both.

This constructor initializes the parent class using its own default ctor.

Definition at line 105 of file sstream.

### 5.386.4 Member Function Documentation

**5.386.4.1** `template<typename _CharT, typename _Traits> char_type*  
std::basic_streambuf< _CharT, _Traits >::eback () const  
[inline, protected, inherited]`

Access to the get area. These functions are only available to other protected functions, including derived classes.

- [eback\(\)](#) returns the beginning pointer for the input sequence
- [gptr\(\)](#) returns the next pointer for the input sequence

- [egptr\(\)](#) returns the end pointer for the input sequence

Definition at line 460 of file streambuf.

Referenced by `std::basic_filebuf< _CharT, _Traits >::imbue()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow()`, `std::basic_filebuf< _CharT, _Traits >::pbackfail()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff()`, `std::basic_filebuf< _CharT, _Traits >::seekoff()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos()`, `std::basic_filebuf< _CharT, _Traits >::underflow()`, and `std::basic_filebuf< _CharT, _Traits >::xsgetn()`.

**5.386.4.2** `template<typename _CharT, typename _Traits> char_type*  
std::basic_streambuf< _CharT, _Traits >::egptr () const [inline,  
protected, inherited]`

Locale access.

**Returns:**

The current [locale](#) in effect.

If `pubimbue(loc)` has been called, then the most recent `loc` is returned. Otherwise the global [locale](#) in effect at the time of construction is returned.

Definition at line 466 of file streambuf.

Referenced by `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff()`, `std::basic_filebuf< _CharT, _Traits >::seekoff()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos()`, `std::basic_filebuf< _CharT, _Traits >::showmanyc()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow()`, `std::basic_filebuf< _CharT, _Traits >::underflow()`, and `std::basic_filebuf< _CharT, _Traits >::xsgetn()`.

**5.386.4.3** `template<typename _CharT, typename _Traits> char_type*  
std::basic_streambuf< _CharT, _Traits >::epptr () const  
[inline, protected, inherited]`

Locale access.

**Returns:**

The current [locale](#) in effect.

If `pubimbue(loc)` has been called, then the most recent `loc` is returned. Otherwise the global [locale](#) in effect at the time of construction is returned.

Definition at line 513 of file streambuf.

## 5.386 std::basic\_stringbuf< \_CharT, \_Traits, \_Alloc > Class Template Reference

Referenced by `std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow()`, `std::basic_streambuf< _CharT, _Traits >::xsputn()`, and `std::basic_filebuf< _CharT, _Traits >::xsputn()`.

**5.386.4.4** `template<typename _CharT, typename _Traits> void  
std::basic_streambuf< _CharT, _Traits >::gbump (int __n)  
[inline, protected, inherited]`

Moving the read position.

### Parameters:

*n* The delta by which to move.

This just advances the read position without returning any data.

Definition at line 476 of file `streambuf`.

Referenced by `std::basic_filebuf< _CharT, _Traits >::pbackfail()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos()`, and `std::basic_filebuf< _CharT, _Traits >::xsgetn()`.

**5.386.4.5** `template<typename _CharT, typename _Traits> locale  
std::basic_streambuf< _CharT, _Traits >::getloc () const  
[inline, inherited]`

Locale access.

### Returns:

The current [locale](#) in effect.

If `pubimbue(loc)` has been called, then the most recent `loc` is returned. Otherwise the global [locale](#) in effect at the time of construction is returned.

Definition at line 222 of file `streambuf`.

**5.386.4.6** `template<typename _CharT, typename _Traits> char_type*  
std::basic_streambuf< _CharT, _Traits >::gptr () const [inline,  
protected, inherited]`

Locale access.

### Returns:

The current [locale](#) in effect.

If `pubimbue(loc)` has been called, then the most recent `loc` is returned. Otherwise the global `locale` in effect at the time of construction is returned.

Definition at line 463 of file `streambuf`.

Referenced by `std::basic_filebuf<_CharT, _Traits >::imbue()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc >::overflow()`, `std::basic_filebuf<_CharT, _Traits >::pbackfail()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc >::seekoff()`, `std::basic_filebuf<_CharT, _Traits >::seekoff()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc >::seekpos()`, `std::basic_filebuf<_CharT, _Traits >::showmanyc()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc >::underflow()`, `std::basic_filebuf<_CharT, _Traits >::underflow()`, and `std::basic_filebuf<_CharT, _Traits >::xsgetn()`.

**5.386.4.7** `template<typename _CharT, typename _Traits> virtual void  
std::basic_streambuf<_CharT, _Traits >::imbue (const locale &  
[inline, protected, virtual, inherited]`

Changes translations.

**Parameters:**

*loc* A new `locale`.

Translations done during I/O which depend on the current `locale` are changed by this call. The standard adds, *Between invocations of this function a class derived from `streambuf` can safely cache results of calls to `locale` functions and to members of facets so obtained.*

**Note:**

Base class version does nothing.

Reimplemented in `std::basic_filebuf<_CharT, _Traits >`, `std::basic_filebuf<_CharT, encoding_char_traits<_CharT > >`, and `std::basic_filebuf<char_type, traits_type >`.

Definition at line 554 of file `streambuf`.

**5.386.4.8** `template<typename _CharT, typename _Traits> streamsize  
std::basic_streambuf<_CharT, _Traits >::in_avail () [inline,  
inherited]`

Looking ahead into the stream.

**Returns:**

The number of characters available.

## 5.386 std::basic\_stringbuf< \_CharT, \_Traits, \_Alloc > Class Template Reference

If a read position is available, returns the number of characters available for reading before the buffer must be refilled. Otherwise returns the derived `showmanyc()`.

Definition at line 262 of file `streambuf`.

```
5.386.4.9 template<class _CharT, class _Traits, class _Alloc >
 basic_stringbuf< _CharT, _Traits, _Alloc >::int_type
 std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow (int_type
 = traits_type::eof()) [inline, protected, virtual]
```

Consumes data from the buffer; writes to the controlled sequence.

### Parameters:

*c* An additional character to consume.

### Returns:

`eof()` to indicate failure, something else (usually *c*, or `not_eof()`)

Informally, this function is called when the output buffer is full (or does not exist, as buffering need not actually be done). If a buffer exists, it is *consumed*, with *some effect* on the controlled sequence. (Typically, the buffer is written out to the sequence verbatim.) In either case, the character *c* is also written out, if *c* is not `eof()`.

For a formal definition of this function, see a good text such as Langer & Kreft, or [27.5.2.4.5]/3-7.

A functioning output `streambuf` can be created by overriding only this function (no buffer area will be used).

### Note:

Base class version does nothing, returns `eof()`.

Reimplemented from `std::basic_streambuf< _CharT, _Traits >`.

Definition at line 80 of file `sstream.tcc`.

References `std::basic_stringbuf< _CharT, _Traits, _Alloc >::_M_mode`, `std::basic_string< _CharT, _Traits, _Alloc >::assign()`, `std::basic_string< _CharT, _Traits, _Alloc >::capacity()`, `std::basic_string< _CharT, _Traits, _Alloc >::data()`, `std::basic_stringbuf< _CharT, _Traits >::eback()`, `std::basic_streambuf< _CharT, _Traits >::eptr()`, `std::basic_streambuf< _CharT, _Traits >::gptr()`, `std::max()`, `std::basic_string< _CharT, _Traits, _Alloc >::max_size()`, `std::min()`, `std::ios_base::out`, `std::basic_streambuf< _CharT, _Traits >::pbase()`, `std::basic_streambuf< _CharT, _Traits >::pbump()`, `std::basic_streambuf< _CharT, _Traits >::pptr()`, `std::basic_string< _CharT, _Traits, _Alloc >::push_back()`, `std::basic_string< _CharT, _Traits, _Alloc >::reserve()`, and `std::basic_string< _CharT, _Traits, _Alloc >::swap()`.

```

5.386.4.10 template<class _CharT, class _Traits, class _Alloc >
 basic_stringbuf< _CharT, _Traits, _Alloc >::int_type
 std::basic_stringbuf< _CharT, _Traits, _Alloc >::pbackfail
 (int_type = traits_type::eof()) [inline, protected,
 virtual]

```

Tries to back up the input sequence.

**Parameters:**

*c* The character to be inserted back into the sequence.

**Returns:**

eof() on failure, *some other value* on success

**Postcondition:**

The constraints of `gptr()`, `eback()`, and `pptr()` are the same as for `underflow()`.

**Note:**

Base class version does nothing, returns eof().

Reimplemented from `std::basic_streambuf< _CharT, _Traits >`.

Definition at line 46 of file `sstream.tcc`.

```

5.386.4.11 template<typename _CharT, typename _Traits> char_type*
 std::basic_streambuf< _CharT, _Traits >::pbase() const
 [inline, protected, inherited]

```

Access to the put area. These functions are only available to other protected functions, including derived classes.

- `pbase()` returns the beginning pointer for the output sequence
- `pptr()` returns the next pointer for the output sequence
- `epptr()` returns the end pointer for the output sequence

Definition at line 507 of file `streambuf`.

Referenced by `std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow()`, `std::basic_filebuf< _CharT, _Traits >::overflow()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos()`, `std::basic_filebuf< _CharT, _Traits >::sync()`, and `std::basic_filebuf< _CharT, _Traits >::xsputn()`.

## 5.386 std::basic\_stringbuf< \_CharT, \_Traits, \_Alloc > Class Template Reference

**5.386.4.12** `template<typename _CharT, typename _Traits> void  
std::basic_streambuf< _CharT, _Traits >::pbump (int __n)  
[inline, protected, inherited]`

Moving the write position.

### Parameters:

*n* The delta by which to move.

This just advances the write position without returning any data.

Definition at line 523 of file streambuf.

Referenced by `std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow()`, `std::basic_filebuf< _CharT, _Traits >::overflow()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos()`, and `std::basic_streambuf< _CharT, _Traits >::xsputn()`.

**5.386.4.13** `template<typename _CharT, typename _Traits> char_type*  
std::basic_streambuf< _CharT, _Traits >::pptr () const  
[inline, protected, inherited]`

Locale access.

### Returns:

The current [locale](#) in effect.

If `pubimbue(loc)` has been called, then the most recent `loc` is returned. Otherwise the global [locale](#) in effect at the time of construction is returned.

Definition at line 510 of file streambuf.

Referenced by `std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow()`, `std::basic_filebuf< _CharT, _Traits >::overflow()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos()`, `std::basic_filebuf< _CharT, _Traits >::sync()`, `std::basic_streambuf< _CharT, _Traits >::xsputn()`, and `std::basic_filebuf< _CharT, _Traits >::xsputn()`.

**5.386.4.14** `template<typename _CharT, typename _Traits> locale  
std::basic_streambuf< _CharT, _Traits >::pubimbue (const locale  
& __loc) [inline, inherited]`

Entry point for [imbue\(\)](#).

### Parameters:

*loc* The new [locale](#).

**Returns:**

The previous [locale](#).

Calls the derived `imbue(loc)`.

Definition at line 205 of file `streambuf`.

**5.386.4.15** `template<typename _CharT, typename _Traits> pos_type  
std::basic_streambuf< _CharT, _Traits >::pubseekoff (off_type  
__off, ios_base::seekdir __way, ios_base::openmode __mode =  
ios_base::in | ios_base::out) [inline, inherited]`

Locale access.

**Returns:**

The current [locale](#) in effect.

If `pubimbue(loc)` has been called, then the most recent `loc` is returned. Otherwise the global [locale](#) in effect at the time of construction is returned.

Definition at line 239 of file `streambuf`.

**5.386.4.16** `template<typename _CharT, typename _Traits> pos_type  
std::basic_streambuf< _CharT, _Traits >::pubseekpos (pos_type  
__sp, ios_base::openmode __mode = ios_base::in | ios_base::out)  
[inline, inherited]`

Locale access.

**Returns:**

The current [locale](#) in effect.

If `pubimbue(loc)` has been called, then the most recent `loc` is returned. Otherwise the global [locale](#) in effect at the time of construction is returned.

Definition at line 244 of file `streambuf`.

**5.386.4.17** `template<typename _CharT, typename _Traits>  
__streambuf_type* std::basic_streambuf< _CharT, _Traits  
>::pubsetbuf (char_type * __s, streamsize __n) [inline,  
inherited]`

Entry points for derived buffer functions. The public versions of `pubfoo` dispatch to the protected derived `foo` member functions, passing the arguments (if any) and returning the result unchanged.

## 5.386 std::basic\_stringbuf< \_CharT, \_Traits, \_Alloc > Class Template Reference

Definition at line 235 of file streambuf.

**5.386.4.18** `template<typename _CharT, typename _Traits> int  
std::basic_stringbuf< _CharT, _Traits >::pubsync() [inline,  
inherited]`

Locale access.

### Returns:

The current [locale](#) in effect.

If `pubimbue(loc)` has been called, then the most recent `loc` is returned. Otherwise the global [locale](#) in effect at the time of construction is returned.

Definition at line 249 of file streambuf.

Referenced by `std::basic_istream< _CharT, _Traits >::sync()`.

**5.386.4.19** `template<typename _CharT, typename _Traits> int_type  
std::basic_stringbuf< _CharT, _Traits >::sbumpc() [inline,  
inherited]`

Getting the next character.

### Returns:

The next character, or eof.

If the input read position is available, returns that character and increments the read pointer, otherwise calls and returns `uflow()`.

Definition at line 294 of file streambuf.

Referenced by `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, and `std::istreambuf_iterator< _CharT, _Traits >::operator++()`.

**5.386.4.20** `template<class _CharT, class _Traits, class _Alloc >  
basic_stringbuf< _CharT, _Traits, _Alloc >::pos_type  
std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff  
(off_type, ios_base::seekdir, ios_base::openmode =  
ios_base::in | ios_base::out) [inline, protected,  
virtual]`

Alters the stream positions. Each derived class provides its own appropriate behavior.

**Note:**

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Reimplemented from [std::basic\\_streambuf<\\_CharT, \\_Traits>](#).

Definition at line 149 of file `sstream.tcc`.

References `std::basic_stringbuf<_CharT, _Traits, _Alloc>::_M_mode`, `std::ios_base::cur`, `std::basic_streambuf<_CharT, _Traits>::eback()`, `std::basic_streambuf<_CharT, _Traits>::egptr()`, `std::ios_base::end`, `std::basic_streambuf<_CharT, _Traits>::gbump()`, `std::basic_streambuf<_CharT, _Traits>::gptr()`, `std::ios_base::in`, `std::ios_base::out`, `std::basic_streambuf<_CharT, _Traits>::pbase()`, `std::basic_streambuf<_CharT, _Traits>::pbump()`, and `std::basic_streambuf<_CharT, _Traits>::pptr()`.

```
5.386.4.21 template<class _CharT, class _Traits, class _Alloc >
 basic_stringbuf<_CharT, _Traits, _Alloc >::pos_type
 std::basic_stringbuf<_CharT, _Traits, _Alloc >::seekpos (pos_type,
 ios_base::openmode = ios_base::in | ios_base::out) [inline,
 protected, virtual]
```

Alters the stream positions. Each derived class provides its own appropriate behavior.

**Note:**

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Reimplemented from [std::basic\\_streambuf<\\_CharT, \\_Traits>](#).

Definition at line 196 of file `sstream.tcc`.

References `std::basic_stringbuf<_CharT, _Traits, _Alloc>::_M_mode`, `std::basic_streambuf<_CharT, _Traits>::eback()`, `std::basic_streambuf<_CharT, _Traits>::egptr()`, `std::basic_streambuf<_CharT, _Traits>::gbump()`, `std::basic_streambuf<_CharT, _Traits>::gptr()`, `std::ios_base::in`, `std::ios_base::out`, `std::basic_streambuf<_CharT, _Traits>::pbase()`, `std::basic_streambuf<_CharT, _Traits>::pbump()`, and `std::basic_streambuf<_CharT, _Traits>::pptr()`.

```
5.386.4.22 template<typename _CharT, typename _Traits, typename _Alloc>
 virtual __streambuf_type* std::basic_stringbuf<_CharT, _Traits,
 _Alloc >::setbuf (char_type * __s, streamsize __n) [inline,
 protected, virtual]
```

Manipulates the buffer.

## 5.386 `std::basic_stringbuf<_CharT, _Traits, _Alloc>` Class Template Reference

### Parameters:

- s* Pointer to a buffer area.
- n* Size of *s*.

### Returns:

`this`

If no buffer has already been created, and both *s* and *n* are non-zero, then *s* is used as a buffer; see <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch25s02.html> for more.

Reimplemented from `std::basic_streambuf<_CharT, _Traits>`.

Definition at line 196 of file `sstream`.

References `std::basic_string<_CharT, _Traits, _Alloc>::clear()`.

**5.386.4.23** `template<typename _CharT, typename _Traits> void  
std::basic_streambuf<_CharT, _Traits>::setg(char_type *  
__gbeg, char_type * __gnext, char_type * __gend) [inline,  
protected, inherited]`

Setting the three read area pointers.

### Parameters:

- gbeg* A pointer.
- gnext* A pointer.
- gend* A pointer.

### Postcondition:

`gbeg == eback()`, `gnext == gptr()`, and `gend == egptr()`

Definition at line 487 of file `streambuf`.

**5.386.4.24** `template<typename _CharT, typename _Traits> void  
std::basic_streambuf<_CharT, _Traits>::setp(char_type * __pbeg,  
char_type * __pend) [inline, protected, inherited]`

Setting the three write area pointers.

### Parameters:

- pbeg* A pointer.

*pend* A pointer.

**Postcondition:**

*pbeg* == `pbase()`, *pbeg* == `pptr()`, and *pend* == `epptr()`

Definition at line 533 of file `streambuf`.

**5.386.4.25** `template<typename _CharT, typename _Traits> int_type  
std::basic_streambuf< _CharT, _Traits >::sgetc() [inline,  
inherited]`

Getting the next character.

**Returns:**

The next character, or eof.

If the input read position is available, returns that character, otherwise calls and returns `underflow()`. Does not move the read position after fetching the character.

Definition at line 316 of file `streambuf`.

Referenced by `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, and `std::basic_istream< _CharT, _Traits >::sentry::sentry()`.

**5.386.4.26** `template<typename _CharT, typename _Traits> streamsize  
std::basic_streambuf< _CharT, _Traits >::xsgetn(char_type * __s,  
streamsize __n) [inline, inherited]`

Entry point for `xsgetn`.

**Parameters:**

*s* A buffer area.

*n* A count.

Returns `xsgetn(s,n)`. The effect is to fill `s[0]` through `s[n-1]` with characters from the input sequence, if possible.

Definition at line 335 of file `streambuf`.

**5.386.4.27** `template<typename _CharT, typename _Traits, typename _Alloc>  
virtual streamsize std::basic_stringbuf< _CharT, _Traits, _Alloc  
>::showmanyc() [inline, protected, virtual]`

Investigating the data available.

## 5.386 std::basic\_stringbuf<\_CharT, \_Traits, \_Alloc > Class Template Reference

### Returns:

An estimate of the number of characters available in the input sequence, or -1.

If it returns a positive value, then successive calls to `underflow()` will not return `traits::eof()` until at least that number of characters have been supplied. If `showmanyc()` returns -1, then calls to `underflow()` or `uflow()` will fail. [27.5.2.4.3]/1

### Note:

Base class version does nothing, returns zero.

The standard adds that *the intention is not only that the calls [to underflow or uflow] will not return eof() but that they will return immediately.*

The standard adds that *the morphemes of showmanyc are es-how-many-see, not show-manic.*

Reimplemented from `std::basic_streambuf<_CharT, _Traits >`.

Definition at line 164 of file `sstream`.

**5.386.4.28** `template<typename _CharT, typename _Traits> int_type  
std::basic_streambuf<_CharT, _Traits >::snextc() [inline,  
inherited]`

Getting the next character.

### Returns:

The next character, or eof.

Calls `sbumpc()`, and if that function returns `traits::eof()`, so does this function. Otherwise, `sgetc()`.

Definition at line 276 of file `streambuf`.

Referenced by `std::basic_istream<_CharT, _Traits >::get()`, `std::basic_istream<_CharT, _Traits >::getline()`, `std::basic_istream<_CharT, _Traits >::ignore()`, and `std::basic_istream<_CharT, _Traits >::sentry::sentry()`.

**5.386.4.29** `template<typename _CharT, typename _Traits> int_type  
std::basic_streambuf<_CharT, _Traits >::sputbackc(char_type  
__c) [inline, inherited]`

Pushing characters back into the input stream.

### Parameters:

`c` The character to push back.

**Returns:**

The previous character, if possible.

Similar to [sungetc\(\)](#), but *c* is pushed onto the stream instead of *the previous character*. If successful, the next character fetched from the input stream will be *c*.

Definition at line 350 of file streambuf.

Referenced by `std::basic_istream<_CharT, _Traits>::putback()`.

**5.386.4.30** `template<typename _CharT, typename _Traits> int_type  
std::basic_streambuf<_CharT, _Traits>::sputc(char_type __c)  
[inline, inherited]`

Entry point for all single-character output functions.

**Parameters:**

*c* A character to output.

**Returns:**

*c*, if possible.

One of two public output functions.

If a write position is available for the output sequence (i.e., the buffer is not full), stores *c* in that position, increments the position, and returns `traits::to_int_type(c)`. If a write position is not available, returns `overflow(c)`.

Definition at line 402 of file streambuf.

Referenced by `std::basic_istream<_CharT, _Traits>::get()`, and `std::ostreambuf_iterator<_CharT, _Traits>::operator=()`.

**5.386.4.31** `template<typename _CharT, typename _Traits> streamsize  
std::basic_streambuf<_CharT, _Traits>::sputn(const char_type *  
__s, streamsize __n) [inline, inherited]`

Entry point for all single-character output functions.

**Parameters:**

*s* A buffer read area.

*n* A count.

One of two public output functions.

### 5.386 std::basic\_stringbuf< \_CharT, \_Traits, \_Alloc > Class Template Reference

Returns `xspn(s,n)`. The effect is to write `s[0]` through `s[n-1]` to the output sequence, if possible.

Definition at line 428 of file `streambuf`.

**5.386.4.32** `template<typename _CharT, typename _Traits> void  
std::basic_streambuf< _CharT, _Traits >::stoss() [inline,  
inherited]`

Tosses a character. Advances the read pointer, ignoring the character that would have been read.

See <http://gcc.gnu.org/ml/libstdc++/2002-05/msg00168.html>

Definition at line 761 of file `streambuf`.

**5.386.4.33** `template<typename _CharT, typename _Traits, typename _Alloc>  
void std::basic_stringbuf< _CharT, _Traits, _Alloc >::str(const  
__string_type & __s) [inline]`

Setting a new buffer.

#### Parameters:

`s` The string to use as a new sequence.

Deallocates any previous stored sequence, then copies `s` to use as a new one.

Definition at line 144 of file `sstream`.

References `std::basic_string< _CharT, _Traits, _Alloc >::assign()`, `std::basic_string< _CharT, _Traits, _Alloc >::data()`, and `std::basic_string< _CharT, _Traits, _Alloc >::size()`.

**5.386.4.34** `template<typename _CharT, typename _Traits, typename _Alloc>  
__string_type std::basic_stringbuf< _CharT, _Traits, _Alloc >::str  
() const [inline]`

Copying out the string buffer.

#### Returns:

A copy of one of the underlying sequences.

*If the buffer is only created in input mode, the underlying character sequence is equal to the input sequence; otherwise, it is equal to the output sequence. [27.7.1.2]/1*

Definition at line 120 of file `sstream`.

**5.386.4.35** `template<typename _CharT, typename _Traits> int_type  
std::basic_streambuf< _CharT, _Traits >::sungetc () [inline,  
inherited]`

Moving backwards in the input stream.

**Returns:**

The previous character, if possible.

If a putback position is available, this function decrements the input pointer and returns that character. Otherwise, calls and returns [pbackfail\(\)](#). The effect is to *unget* the last character *gotten*.

Definition at line 375 of file streambuf.

Referenced by `std::basic_istream< _CharT, _Traits >::ungetc()`.

**5.386.4.36** `template<typename _CharT, typename _Traits> virtual int  
std::basic_streambuf< _CharT, _Traits >::sync (void) [inline,  
protected, virtual, inherited]`

Synchronizes the buffer arrays with the controlled sequences.

**Returns:**

-1 on failure.

Each derived class provides its own appropriate behavior, including the definition of *failure*.

**Note:**

Base class version does nothing, returns zero.

Reimplemented in `std::basic_filebuf< _CharT, _Traits >`, `__gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >`, `std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >`, and `std::basic_filebuf< char_type, traits_type >`.

Definition at line 605 of file streambuf.

**5.386.4.37** `template<typename _CharT, typename _Traits> virtual int_type  
std::basic_streambuf< _CharT, _Traits >::uflow () [inline,  
protected, virtual, inherited]`

Fetches more data from the controlled sequence.

## 5.386 std::basic\_stringbuf< \_CharT, \_Traits, \_Alloc > Class Template Reference

### Returns:

The first character from the *pending sequence*.

Informally, this function does the same thing as `underflow()`, and in fact is required to call that function. It also returns the new character, like `underflow()` does. However, this function also moves the read position forward by one.

Reimplemented in `__gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >`.

Definition at line 678 of file `streambuf`.

```
5.386.4.38 template<class _CharT , class _Traits , class _Alloc >
 basic_stringbuf< _CharT, _Traits, _Alloc >::int_type
 std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow ()
 [inline, protected, virtual]
```

Fetches more data from the controlled sequence.

### Returns:

The first character from the *pending sequence*.

Informally, this function is called when the input buffer is exhausted (or does not exist, as buffering need not actually be done). If a buffer exists, it is *refilled*. In either case, the next available character is returned, or `traits::eof()` to indicate a null pending sequence.

For a formal definition of the pending sequence, see a good text such as Langer & Kreft, or [27.5.2.4.3]/7-14.

A functioning input `streambuf` can be created by overriding only this function (no buffer area will be used). For an example, see <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch25.html>

### Note:

Base class version does nothing, returns `eof()`.

Reimplemented from `std::basic_streambuf< _CharT, _Traits >`.

Definition at line 131 of file `sstream.tcc`.

References `std::basic_stringbuf< _CharT, _Traits, _Alloc >::_M_mode`, `std::basic_streambuf< _CharT, _Traits >::egptr()`, `std::basic_streambuf< _CharT, _Traits >::gptr()`, and `std::ios_base::in`.

**5.386.4.39** `template<typename _CharT, typename _Traits > streamsize  
std::basic_streambuf< _CharT, _Traits >::xsgetn (char_type *  
__s, streamsize __n) [inline, protected, virtual,  
inherited]`

Multiple character extraction.

**Parameters:**

- s* A buffer area.
- n* Maximum number of characters to assign.

**Returns:**

The number of characters assigned.

Fills *s*[0] through *s*[*n*-1] with characters from the input sequence, as if by `sbumpc()`. Stops when either *n* characters have been copied, or when `traits::eof()` would be copied.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Reimplemented in `std::basic_filebuf< _CharT, _Traits >`, `__gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >`, `std::basic_filebuf< _CharT, encoding_char_traits< _CharT >>`, and `std::basic_filebuf< char_type, traits_type >`.

Definition at line 45 of file `streambuf.tcc`.

References `std::min()`.

**5.386.4.40** `template<typename _CharT, typename _Traits > streamsize  
std::basic_streambuf< _CharT, _Traits >::xspunct (const char_type  
* __s, streamsize __n) [inline, protected, virtual,  
inherited]`

Multiple character insertion.

**Parameters:**

- s* A buffer area.
- n* Maximum number of characters to write.

**Returns:**

The number of characters written.

Writes *s*[0] through *s*[*n*-1] to the output sequence, as if by `sputc()`. Stops when either *n* characters have been copied, or when `sputc()` would return `traits::eof()`.

## 5.386 `std::basic_stringbuf<_CharT, _Traits, _Alloc>` Class Template Reference

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Reimplemented in `std::basic_filebuf<_CharT, _Traits>`, `__gnu_cxx::stdio_sync_filebuf<_CharT, _Traits>`, `std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>`, and `std::basic_filebuf<char_type, traits_type>`.

Definition at line 79 of file `streambuf.tcc`.

References `std::basic_streambuf<_CharT, _Traits>::eptr()`, `std::min()`, `std::basic_streambuf<_CharT, _Traits>::overflow()`, `std::basic_streambuf<_CharT, _Traits>::pbump()`, and `std::basic_streambuf<_CharT, _Traits>::pptr()`.

### 5.386.5 Member Data Documentation

**5.386.5.1** `template<typename _CharT, typename _Traits> locale`  
`std::basic_streambuf<_CharT, _Traits>::_M_buf_locale`  
`[protected, inherited]`

Current `locale` setting.

Definition at line 188 of file `streambuf`.

Referenced by `std::basic_filebuf<_CharT, _Traits>::basic_filebuf()`.

**5.386.5.2** `template<typename _CharT, typename _Traits> char_type*`  
`std::basic_streambuf<_CharT, _Traits>::_M_in_beg`  
`[protected, inherited]`

This is based on `_IO_FILE`, just reordered to be more consistent, and is intended to be the most minimal abstraction for an internal buffer.

- `get == input == read`
- `put == output == write`

Definition at line 180 of file `streambuf`.

**5.386.5.3** `template<typename _CharT, typename _Traits> char_type*`  
`std::basic_streambuf<_CharT, _Traits>::_M_in_cur`  
`[protected, inherited]`

Locale access.

#### Returns:

The current `locale` in effect.

If `pubimbue(loc)` has been called, then the most recent `loc` is returned. Otherwise the global `locale` in effect at the time of construction is returned.

Definition at line 181 of file `streambuf`.

**5.386.5.4** `template<typename _CharT, typename _Traits> char_type*`  
`std::basic_streambuf< _CharT, _Traits >::_M_in_end`  
`[protected, inherited]`

Locale access.

**Returns:**

The current `locale` in effect.

If `pubimbue(loc)` has been called, then the most recent `loc` is returned. Otherwise the global `locale` in effect at the time of construction is returned.

Definition at line 182 of file `streambuf`.

**5.386.5.5** `template<typename _CharT, typename _Traits, typename _Alloc>`  
`ios_base::openmode std::basic_stringbuf< _CharT, _Traits, _Alloc`  
`>::_M_mode [protected]`

Place to stash in `|| out || in | out` settings for current `stringbuf`.

Definition at line 77 of file `sstream`.

Referenced by `std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos()`, and `std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow()`.

**5.386.5.6** `template<typename _CharT, typename _Traits> char_type*`  
`std::basic_streambuf< _CharT, _Traits >::_M_out_beg`  
`[protected, inherited]`

Locale access.

**Returns:**

The current `locale` in effect.

If `pubimbue(loc)` has been called, then the most recent `loc` is returned. Otherwise the global `locale` in effect at the time of construction is returned.

Definition at line 183 of file `streambuf`.

## 5.386 std::basic\_stringbuf< \_CharT, \_Traits, \_Alloc > Class Template Reference

**5.386.5.7** `template<typename _CharT, typename _Traits> char_type*  
std::basic_streambuf< _CharT, _Traits >::_M_out_cur  
[protected, inherited]`

Locale access.

### **Returns:**

The current [locale](#) in effect.

If `pubimbue(loc)` has been called, then the most recent `loc` is returned. Otherwise the global [locale](#) in effect at the time of construction is returned.

Definition at line 184 of file `streambuf`.

**5.386.5.8** `template<typename _CharT, typename _Traits> char_type*  
std::basic_streambuf< _CharT, _Traits >::_M_out_end  
[protected, inherited]`

Locale access.

### **Returns:**

The current [locale](#) in effect.

If `pubimbue(loc)` has been called, then the most recent `loc` is returned. Otherwise the global [locale](#) in effect at the time of construction is returned.

Definition at line 185 of file `streambuf`.

## 5.387 `std::basic_stringstream< _CharT, _Traits, _Alloc >` Class Template Reference

Controlling input and output for `std::string`.

This class supports reading from and writing to objects of type `std::basic_string`, using the inherited functions from `std::basic_istream`. To control the associated sequence, an instance of `std::basic_stringbuf` is used, which this page refers to as `sb`. Inheritance diagram for `std::basic_stringstream< _CharT, _Traits, _Alloc >`:

### Unformatted Output Functions

All the unformatted output functions have some common behavior. Each starts by constructing a temporary object of type `std::basic_ostream::sentry`. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an *exception* is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state. If `badbit` is on in the stream's exceptions mask, the *exception* will be rethrown without completing its actions.

- `void _M_write (const char_type *__s, streamsize __n)`
- `__ostream_type & put (char_type __c)`
- `__ostream_type & write (const char_type *__s, streamsize __n)`

### Unformatted Input Functions

All the unformatted input functions have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (`noskipws`) *set* to true. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

The number of characters extracted is stored for later retrieval by `gcount()`.

If an *exception* is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state without causing an `ios_base::failure` to be thrown. The original *exception* will then be rethrown.

- `__istream_type & get (__streambuf_type &__sb)`
- `__istream_type & get (__streambuf_type &__sb, char_type __delim)`
- `__istream_type & get (char_type *__s, streamsize __n)`
- `__istream_type & get (char_type *__s, streamsize __n, char_type __delim)`
- `__istream_type & get (char_type &__c)`

- `__istream_type & seekg (off_type, ios_base::seekdir)`
- `__istream_type & seekg (pos_type)`
- `int sync ()`
- `pos_type tellg ()`
- `__istream_type & unget ()`

### Arithmetic Inserters

All the `operator<<` functions (aka formatted output functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_ostream::sentry`. This can have several effects, concluding with the setting of a status flag; see the `sentry` documentation for more.

If the `sentry` status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an *exception* is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state without causing an `ios_base::failure` to be thrown. The original *exception* will then be rethrown.

- `__ostream_type & operator<< (__streambuf_type *__sb)`
- `__ostream_type & operator<< (const void *__p)`
- `__ostream_type & operator<< (long double __f)`
- `__ostream_type & operator<< (float __f)`
- `__ostream_type & operator<< (double __f)`
- `__ostream_type & operator<< (unsigned long long __n)`
- `__ostream_type & operator<< (long long __n)`
- `__ostream_type & operator<< (unsigned int __n)`
- `__ostream_type & operator<< (int __n)`
- `__ostream_type & operator<< (unsigned short __n)`
- `__ostream_type & operator<< (short __n)`
- `__ostream_type & operator<< (bool __n)`
- `__ostream_type & operator<< (unsigned long __n)`
- `__ostream_type & operator<< (long __n)`
- `__ostream_type & operator<< (ios_base &(*__pf)(ios_base &))`
- `__ostream_type & operator<< (__ios_type &(*__pf)(__ios_type &))`
- `__ostream_type & operator<< (__ostream_type &(*__pf)(__ostream_type &))`

### Arithmetic Extractors

All the `operator>>` functions (aka formatted input functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (`noskipws`) set to false. This has several effects, concluding with the setting of a status flag; see the `sentry` documentation for more.

If the `sentry` status is good, the function tries to extract whatever data is appropriate for the type of the argument.

If an *exception* is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state without causing an `ios_base::failure` to be thrown. The original *exception* will then be rethrown.

- `__istream_type & operator>> (__streambuf_type * __sb)`
- `__istream_type & operator>> (void *& __p)`
- `__istream_type & operator>> (long double & __f)`
- `__istream_type & operator>> (double & __f)`
- `__istream_type & operator>> (float & __f)`
- `__istream_type & operator>> (unsigned long long & __n)`
- `__istream_type & operator>> (long long & __n)`
- `__istream_type & operator>> (unsigned long & __n)`
- `__istream_type & operator>> (long & __n)`
- `__istream_type & operator>> (unsigned int & __n)`
- `__istream_type & operator>> (int & __n)`
- `__istream_type & operator>> (unsigned short & __n)`
- `__istream_type & operator>> (short & __n)`
- `__istream_type & operator>> (bool & __n)`
  
- `__istream_type & operator>> (ios_base & (*__pf)(ios_base &))`
- `__istream_type & operator>> (__ios_type & (*__pf)(__ios_type &))`
- `__istream_type & operator>> (__istream_type & (*__pf)(__istream_type &))`

### 5.387.1 Detailed Description

`template<typename _CharT, typename _Traits, typename _Alloc> class std::basic_stringstream<_CharT, _Traits, _Alloc>`

Controlling input and output for `std::string`.

This class supports reading from and writing to objects of type `std::basic_string`, using the inherited functions from `std::basic_istream`. To control the associated sequence, an instance of `std::basic_stringbuf` is used, which this page refers to as `sb`.

Definition at line 476 of file `sstream`.

## 5.387.2 Member Typedef Documentation

**5.387.2.1** `template<typename _CharT, typename _Traits> typedef  
ctype<_CharT> std::basic_ostream< _CharT, _Traits  
>::_ctype_type [inherited]`

These are non-standard types.

Reimplemented from [std::basic\\_ios< \\_CharT, \\_Traits >](#).

Definition at line 71 of file ostream.

**5.387.2.2** `template<typename _CharT, typename _Traits> typedef  
ctype<_CharT> std::basic_istream< _CharT, _Traits  
>::_ctype_type [inherited]`

These are non-standard types.

Reimplemented from [std::basic\\_ios< \\_CharT, \\_Traits >](#).

Definition at line 71 of file istream.

**5.387.2.3** `template<typename _CharT, typename _Traits> typedef  
num_get<_CharT, istreambuf_iterator<_CharT, _Traits>  
> std::basic_istream< _CharT, _Traits >::_num_get_type  
[inherited]`

These are non-standard types.

Reimplemented from [std::basic\\_ios< \\_CharT, \\_Traits >](#).

Definition at line 70 of file istream.

**5.387.2.4** `template<typename _CharT, typename _Traits> typedef  
num_put<_CharT, ostreambuf_iterator<_CharT, _Traits>  
> std::basic_ostream< _CharT, _Traits >::_num_put_type  
[inherited]`

The quick-and-easy status check. This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

Reimplemented from [std::basic\\_ios< \\_CharT, \\_Traits >](#).

Definition at line 70 of file ostream.

**5.387.2.5** `template<typename _CharT, typename _Traits> typedef num_put<_CharT, ostreambuf_iterator<_CharT, _Traits>> std::basic_ios<_CharT, _Traits>::_num_put_type [inherited]`

The quick-and-easy status check. This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

Reimplemented in `std::basic_ostream<_CharT, _Traits>`, `std::basic_ostream<char, _Traits>`, and `std::basic_ostream<char>`.

Definition at line 84 of file `basic_ios.h`.

**5.387.2.6** `template<typename _CharT, typename _Traits, typename _Alloc> typedef _CharT std::basic_stringstream<_CharT, _Traits, _Alloc>::char_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from `std::basic_iostream<_CharT, _Traits>`.

Definition at line 480 of file `sstream`.

**5.387.2.7** `typedef void(* std::ios_base::event_callback)(event, ios_base &, int) [inherited]`

The type of an event callback function.

**Parameters:**

*event* One of the members of the event enum.

*ios\_base* Reference to the `ios_base` object.

*int* The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several `ios_base` and `basic_ios` functions, specifically `imbue()`, `copyfmt()`, and `~ios()`.

Definition at line 444 of file `ios_base.h`.

**5.387.2.8** `typedef _Ios_Fmtflags std::ios_base::fmtflags [inherited]`

This is a bitmask type. `_Ios_Fmtflags` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `fmtflags` are:

- boolalpha
- dec
- fixed
- hex
- internal
- left
- oct
- right
- scientific
- showbase
- showpoint
- showpos
- skipws
- unitbuf
- uppercase
- adjustfield
- basefield
- floatfield

Definition at line 263 of file ios\_base.h.

**5.387.2.9** `template<typename _CharT , typename _Traits , typename _Alloc  
> typedef traits_type::int_type std::basic_stringstream< _CharT,  
_Traits, _Alloc >::int_type`

These are non-standard types.

Reimplemented from [std::basic\\_iostream< \\_CharT, \\_Traits >](#).

Definition at line 485 of file sstream.

**5.387.2.10 typedef \_Ios\_Iostate std::ios\_base::iostate [inherited]**

This is a bitmask type. *\_Ios\_Iostate* is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type *iostate* are:

- badbit
- eofbit
- failbit
- goodbit

Definition at line 338 of file *ios\_base.h*.

**5.387.2.11 template<typename \_CharT, typename \_Traits, typename \_Alloc > typedef traits\_type::off\_type std::basic\_stringstream<\_CharT, \_Traits, \_Alloc >::off\_type**

These are non-standard types.

Reimplemented from [std::basic\\_iostream<\\_CharT, \\_Traits >](#).

Definition at line 487 of file *sstream*.

**5.387.2.12 typedef \_Ios\_Openmode std::ios\_base::openmode [inherited]**

This is a bitmask type. *\_Ios\_Openmode* is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type *openmode* are:

- app
- ate
- binary
- in
- out
- trunc

Definition at line 369 of file *ios\_base.h*.

**5.387.2.13** `template<typename _CharT , typename _Traits , typename _Alloc  
> typedef traits_type::pos_type std::basic_stringstream< _CharT,  
_Traits, _Alloc >::pos_type`

These are non-standard types.

Reimplemented from [std::basic\\_istream< \\_CharT, \\_Traits >](#).

Definition at line 486 of file `sstream`.

**5.387.2.14** `typedef _Ios_Seekdir std::ios_base::seekdir [inherited]`

This is an enumerated type. `_Ios_Seekdir` is implementation-defined. Defined values of type `seekdir` are:

- `beg`
- `cur`, equivalent to `SEEK_CUR` in the C standard library.
- `end`, equivalent to `SEEK_END` in the C standard library.

Definition at line 401 of file `ios_base.h`.

**5.387.2.15** `template<typename _CharT , typename _Traits , typename _Alloc  
> typedef _Traits std::basic_stringstream< _CharT, _Traits, _Alloc  
>::traits_type`

These are non-standard types.

Reimplemented from [std::basic\\_istream< \\_CharT, \\_Traits >](#).

Definition at line 481 of file `sstream`.

### 5.387.3 Member Enumeration Documentation

**5.387.3.1** `enum std::ios_base::event [inherited]`

The [set](#) of events that may be passed to an event callback. `erase_event` is used during `~ios()` and `copyfmt()`. `imbue_event` is used during [imbue\(\)](#). `copyfmt_event` is used during `copyfmt()`.

Definition at line 427 of file `ios_base.h`.

## 5.387.4 Constructor & Destructor Documentation

**5.387.4.1** `template<typename _CharT, typename _Traits, typename _Alloc> std::basic_stringstream<_CharT, _Traits, _Alloc>::basic_stringstream (ios_base::openmode __m = ios_base::out | ios_base::in) [inline, explicit]`

Default constructor starts with an empty string buffer.

### Parameters:

*mode* Whether the buffer can read, or write, or both.

Initializes `sb` using `mode`, and passes `&sb` to the base class initializer. Does not allocate any buffer.

That's a lie. We initialize the base class with `NULL`, because the string class does its own memory management.

Definition at line 510 of file `sstream`.

**5.387.4.2** `template<typename _CharT, typename _Traits, typename _Alloc> std::basic_stringstream<_CharT, _Traits, _Alloc>::basic_stringstream (const __string_type & __str, ios_base::openmode __m = ios_base::out | ios_base::in) [inline, explicit]`

Starts with an existing string buffer.

### Parameters:

*str* A string to copy as a starting buffer.

*mode* Whether the buffer can read, or write, or both.

Initializes `sb` using `str` and `mode`, and passes `&sb` to the base class initializer.

That's a lie. We initialize the base class with `NULL`, because the string class does its own memory management.

Definition at line 526 of file `sstream`.

**5.387.4.3** `template<typename _CharT, typename _Traits, typename _Alloc> std::basic_stringstream<_CharT, _Traits, _Alloc>::~~basic_stringstream () [inline]`

The destructor does nothing. The buffer is deallocated by the `stringbuf` object, not the formatting stream.

Definition at line 537 of file `sstream`.

## 5.387.5 Member Function Documentation

### 5.387.5.1 `const locale& std::ios_base::_M_getloc () const` [`inline`, `inherited`]

Locale access.

#### Returns:

A reference to the current [locale](#).

Like `getloc` above, but returns a reference instead of generating a copy.

Definition at line 705 of file `ios_base.h`.

Referenced by `std::money_get<_CharT, _InIter >::do_get()`, `std::num_get<_CharT, _InIter >::do_get()`, `std::time_get<_CharT, _InIter >::do_get_date()`, `std::time_get<_CharT, _InIter >::do_get_monthname()`, `std::time_get<_CharT, _InIter >::do_get_time()`, `std::time_get<_CharT, _InIter >::do_get_weekday()`, `std::time_get<_CharT, _InIter >::do_get_year()`, `std::time_put<_CharT, _OutIter >::do_put()`, `std::num_put<_CharT, _OutIter >::do_put()`, and `std::time_put<_CharT, _OutIter >::put()`.

### 5.387.5.2 `template<typename _CharT, typename _Traits> void std::basic_ostream<_CharT, _Traits >::_M_write (const char_type * __s, streamsize __n)` [`inline`, `inherited`]

Simple insertion.

#### Parameters:

`c` The character to insert.

#### Returns:

`*this`

Tries to insert `c`.

#### Note:

This function is not overloaded on signed char and unsigned char.

Definition at line 287 of file `ostream`.

Referenced by `std::basic_ostream<_CharT, _Traits >::write()`.

### 5.387.5.3 `template<typename _CharT, typename _Traits> bool std::basic_ios<_CharT, _Traits >::bad () const` [`inline`, `inherited`]

Fast error checking.

## 5.387 `std::basic_stringstream<_CharT, _Traits, _Alloc>` Class Template Reference

2293

### Returns:

True if the badbit is [set](#).

Note that other iostate flags may also be [set](#).

Definition at line 201 of file `basic_ios.h`.

```
5.387.5.4 template<typename _CharT , typename _Traits > void
std::basic_ios<_CharT, _Traits >::clear (iostate __state = goodbit)
[inline, inherited]
```

[Re]sets the error state.

### Parameters:

*state* The new state flag(s) to [set](#).

See `std::ios_base::iostate` for the possible bit values. Most users will not need to pass an argument.

Definition at line 40 of file `basic_ios.tcc`.

Referenced by `std::basic_ios<_CharT, _Traits >::rdbuf()`.

```
5.387.5.5 template<typename _CharT , typename _Traits > basic_ios<
_CharT, _Traits > & std::basic_ios<_CharT, _Traits >::copyfmt
(const basic_ios<_CharT, _Traits > & __rhs) [inline,
inherited]
```

Copies fields of `__rhs` into this.

### Parameters:

*\_\_rhs* The source values for the copies.

### Returns:

Reference to this object.

All fields of `__rhs` are copied into this object except that `rdbuf()` and `rdstate()` remain unchanged. All values in the `pword` and `iword` arrays are copied. Before copying, each callback is invoked with `erase_event`. After copying, each (new) callback is invoked with `copyfmt_event`. The final step is to copy `exceptions()`.

Definition at line 62 of file `basic_ios.tcc`.

References `std::basic_ios<_CharT, _Traits >::exceptions()`, `std::basic_ios<_CharT, _Traits >::fill()`, `std::ios_base::flags()`, `std::ios_base::getloc()`, `std::ios_base::precision()`, `std::basic_ios<_CharT, _Traits >::tie()`, and `std::ios_base::width()`.

### 5.387.5.6 `template<typename _CharT, typename _Traits> bool std::basic_istream<_CharT, _Traits >::eof() const` [`inline`, `inherited`]

Fast error checking.

#### Returns:

True if the eofbit is `set`.

Note that other iostate flags may also be `set`.

Definition at line 180 of file `basic_ios.h`.

Referenced by `std::basic_istream<_CharT, _Traits >::get()`, `std::basic_istream<_CharT, _Traits >::getline()`, `std::basic_istream<_CharT, _Traits >::ignore()`, `std::basic_istream<_CharT, _Traits >::peek()`, `std::basic_istream<_CharT, _Traits >::putback()`, and `std::basic_istream<_CharT, _Traits >::unget()`.

### 5.387.5.7 `template<typename _CharT, typename _Traits> void std::basic_istream<_CharT, _Traits >::exceptions(iostate __except)` [`inline`, `inherited`]

Throwing exceptions on errors.

#### Parameters:

*except* The new exceptions mask.

By default, error flags are `set` silently. You can `set` an exceptions mask for each stream; if a bit in the mask becomes `set` in the error flags, then an `exception` of type `std::ios_base::failure` is thrown.

If the error flag is already `set` when the exceptions mask is added, the `exception` is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>

int main()
{
 std::set_terminate (__gnu_cxx::__verbose_terminate_handler);

 std::ifstream f ("/etc/motd");

 std::cerr << "Setting badbit\n";
 f.setstate (std::ios_base::badbit);

 std::cerr << "Setting exception mask\n";
 f.exceptions (std::ios_base::badbit);
}
```

Definition at line 247 of file `basic_ios.h`.

**5.387 std::basic\_stringstream<\_CharT, \_Traits, \_Alloc> Class Template Reference** 2295

---

**5.387.5.8** `template<typename _CharT, typename _Traits> iostate  
std::basic_ios<_CharT, _Traits>::exceptions() const [inline,  
inherited]`

Throwing exceptions on errors.

**Returns:**

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of [exceptions\(iostate\)](#) for the meaning of the return value.

Definition at line 212 of file `basic_ios.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`.

**5.387.5.9** `template<typename _CharT, typename _Traits> bool std::basic_ios<  
_CharT, _Traits>::fail() const [inline, inherited]`

Fast error checking.

**Returns:**

True if either the badbit or the failbit is [set](#).

Checking the badbit in [fail\(\)](#) is historical practice. Note that other iostate flags may also be [set](#).

Definition at line 191 of file `basic_ios.h`.

Referenced by `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_ostream<_CharT, _Traits>::seekp()`, `std::basic_istream<_CharT, _Traits>::tellg()`, `std::basic_ostream<_CharT, _Traits>::tellp()`, and `std::regex_traits<_Ch_type>::value()`.

**5.387.5.10** `template<typename _CharT, typename _Traits> char_type  
std::basic_ios<_CharT, _Traits>::fill(char_type __ch)  
[inline, inherited]`

Sets a new *empty* character.

**Parameters:**

*ch* The new character.

**Returns:**

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via `setw`), Q characters are actually used, and Q<P. It defaults to a space ( ' ') in the current [locale](#).

Definition at line 380 of file `basic_ios.h`.

**5.387.5.11** `template<typename _CharT, typename _Traits> char_type  
std::basic_ios< _CharT, _Traits >::fill () const [inline,  
inherited]`

Retrieves the *empty* character.

**Returns:**

The current fill character.

It defaults to a space ( ' ') in the current [locale](#).

Definition at line 360 of file `basic_ios.h`.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`.

**5.387.5.12** `fmtflags std::ios_base::flags (fmtflags __fmtfl) [inline,  
inherited]`

Setting new format flags all at once.

**Parameters:**

*fmtfl* The new flags to [set](#).

**Returns:**

The previous format control flags.

This function overwrites all the format flags with *fmtfl*.

Definition at line 561 of file `ios_base.h`.

**5.387.5.13** `fmtflags std::ios_base::flags () const [inline, inherited]`

Access to format flags.

**Returns:**

The format control flags for both input and output.

## 5.387 `std::basic_stringstream<_CharT, _Traits, _Alloc>` Class Template Reference

2297

Definition at line 550 of file `ios_base.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::num_put<_CharT, _OutIter>::do_put()`, `std::basic_ostream<_CharT, _Traits>::operator<<()`, `std::operator<<()`, and `std::operator>>()`.

### 5.387.5.14 `template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::flush() [inline, inherited]`

Synchronizing the stream buffer.

#### Returns:

\*this

If `rdbuf()` is a null pointer, changes nothing.

Otherwise, calls `rdbuf()->pubsync()`, and if that returns -1, sets `badbit`.

Definition at line 211 of file `ostream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

Referenced by `std::flush()`.

### 5.387.5.15 `template<typename _CharT, typename _Traits> streamsize std::basic_istream<_CharT, _Traits>::gcount() const [inline, inherited]`

Character counting.

#### Returns:

The number of characters extracted by the previous unformatted input function dispatched for this stream.

Definition at line 249 of file `istream`.

### 5.387.5.16 `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream<_CharT, _Traits>::get(__streambuf_type & __sb) [inline, inherited]`

Extraction into another streambuf.

**Parameters:**

*sb* A streambuf in which to store data.

**Returns:**

\*this

Returns `get(sb,widen('\n'))`.

Definition at line 366 of file istream.

**5.387.5.17** `template<typename _CharT, typename _Traits > basic_istream<_CharT, _Traits > & std::basic_istream<_CharT, _Traits >::get(_streambuf_type & __sb, char_type __delim) [inline, inherited]`

Extraction into another streambuf.

**Parameters:**

*sb* A streambuf in which to store data.

*delim* A "stop" character.

**Returns:**

\*this

Characters are extracted and inserted into *sb* until one of the following happens:

- the input sequence reaches EOF
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted)
- the next character equals *delim* (in this case, the character is not extracted)
- an [exception](#) occurs (and in this case is caught)

If no characters are stored, failbit is [set](#) in the stream's error state.

Definition at line 356 of file istream.tcc.

References `std::basic_istream<_CharT, _Traits >::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits >::eof()`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits >::rdbuf()`, `std::basic_ios<_CharT, _Traits >::setstate()`, `std::basic_streambuf<_CharT, _Traits >::sgetc()`, `std::basic_streambuf<_CharT, _Traits >::snextc()`, and `std::basic_streambuf<_CharT, _Traits >::sputc()`.

**5.387 std::basic\_stringstream<\_CharT, \_Traits, \_Alloc> Class Template Reference** 2299

---

**5.387.5.18** `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream<_CharT, _Traits>::get(char_type * __s, streamsize __n) [inline, inherited]`

Simple multiple-character extraction.

**Parameters:**

- s* Pointer to an [array](#).
- n* Maximum number of characters to store in *s*.

**Returns:**

\*this

Returns `get(s,n,widen('\n'))`.

Definition at line 333 of file istream.

**5.387.5.19** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::get(char_type * __s, streamsize __n, char_type __delim) [inline, inherited]`

Simple multiple-character extraction.

**Parameters:**

- s* Pointer to an [array](#).
- n* Maximum number of characters to store in *s*.
- delim* A "stop" character.

**Returns:**

\*this

Characters are extracted and stored into *s* until one of the following happens:

- *n*-1 characters are stored
- the input sequence reaches EOF
- the next character equals *delim*, in which case the character is not extracted

If no characters are stored, failbit is [set](#) in the stream's error state.

In any case, a null character is stored into the next location in the [array](#).

**Note:**

This function is not overloaded on signed char and unsigned char.

Definition at line 309 of file istream.tcc.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_ios<_CharT, _Traits>::setstate()`, `std::basic_streambuf<_CharT, _Traits>::sgetc()`, and `std::basic_streambuf<_CharT, _Traits>::snextc()`.

**5.387.5.20** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::get(char_type & __c) [inline, inherited]`

Simple extraction.

**Parameters:**

*c* The character in which to store data.

**Returns:**

\*this

Tries to extract a character and store it in *c*. If none are available, sets failbit and returns `traits::eof()`.

**Note:**

This function is not overloaded on signed char and unsigned char.

Definition at line 272 of file istream.tcc.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.387.5.21** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits>::int_type std::basic_istream<_CharT, _Traits>::get(void) [inline, inherited]`

Simple extraction.

**Returns:**

A character, or `eof()`.

## 5.387 `std::basic_stringstream<_CharT, _Traits, _Alloc>` Class Template Reference 2301

---

Tries to extract a character. If none are available, sets failbit and returns `traits::eof()`.

Definition at line 236 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.387.5.22** `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream<_CharT, _Traits>::getline(char_type * __s, streamsize __n) [inline, inherited]`

String extraction.

### Parameters:

*s* A character [array](#) in which to store the data.

*n* Maximum number of characters to extract.

### Returns:

`*this`

Returns `getline(s,n,widen('\n'))`.

Definition at line 406 of file `istream`.

Referenced by `std::basic_istream<char>::getline()`.

**5.387.5.23** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::getline(char_type * __s, streamsize __n, char_type __delim) [inline, inherited]`

String extraction.

### Parameters:

*s* A character [array](#) in which to store the data.

*n* Maximum number of characters to extract.

*delim* A "stop" character.

### Returns:

`*this`

Extracts and stores characters into *s* until one of the following happens. Note that these criteria are required to be tested in the order listed here, to allow an input line to exactly fill the *s* array without setting failbit.

1. the input sequence reaches end-of-file, in which case eofbit is [set](#) in the stream error state
2. the next character equals `delim`, in which case the character is extracted (and therefore counted in `gcount()`) but not stored
3. `n-1` characters are stored, in which case failbit is [set](#) in the stream error state

If no characters are extracted, failbit is [set](#). (An empty line of input should therefore not cause failbit to be [set](#).)

In any case, a null character is stored in the next location in the [array](#).

Definition at line 400 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_streambuf<_CharT, _Traits>::sbumpc()`, `std::basic_ios<_CharT, _Traits>::setstate()`, `std::basic_streambuf<_CharT, _Traits>::sgetc()`, and `std::basic_streambuf<_CharT, _Traits>::snextc()`.

#### 5.387.5.24 locale `std::ios_base::getloc() const` [[inline](#), [inherited](#)]

Locale access.

##### Returns:

A copy of the current [locale](#).

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ [locale](#).

Definition at line 694 of file `ios_base.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::money_put<_CharT, _OutIter>::do_put()`, `std::basic_ios<_CharT, _Traits>::imbue()`, `std::operator>>()`, and `std::ws()`.

#### 5.387.5.25 `template<typename _CharT, typename _Traits> bool std::basic_ios<_CharT, _Traits>::good() const` [[inline](#), [inherited](#)]

Fast error checking.

## 5.387 `std::basic_stringstream<_CharT, _Traits, _Alloc>` Class Template Reference

2303

### Returns:

True if no error flags are [set](#).

A wrapper around `rdstate`.

Definition at line 170 of file `basic_ios.h`.

**5.387.5.26** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::ignore(streamsize __n, int_type __delim) [inline, inherited]`

Extraction into another streambuf.

### Parameters:

*sb* A streambuf in which to store data.

### Returns:

\*this

Returns `get(sb, widen('\n'))`.

Definition at line 555 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_streambuf<_CharT, _Traits>::sbumpc()`, `std::basic_ios<_CharT, _Traits>::setstate()`, `std::basic_streambuf<_CharT, _Traits>::sgetc()`, and `std::basic_streambuf<_CharT, _Traits>::snextc()`.

**5.387.5.27** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::ignore(streamsize __n) [inline, inherited]`

Extraction into another streambuf.

### Parameters:

*sb* A streambuf in which to store data.

### Returns:

\*this

Returns `get(sb, widen('\n'))`.

Definition at line 493 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_ios<_CharT, _Traits>::setstate()`, `std::basic_streambuf<_CharT, _Traits>::sgetc()`, and `std::basic_streambuf<_CharT, _Traits>::snextc()`.

**5.387.5.28** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::ignore (void) [inline, inherited]`

Discarding characters.

**Parameters:**

*n* Number of characters to discard.

*delim* A "stop" character.

**Returns:**

\*this

Extracts characters and throws them away until one of the following happens:

- if  $n \neq \text{std::numeric\_limits}<\text{int}>::\text{max}()$ ,  $n$  characters are extracted
- the input sequence reaches end-of-file
- the next character equals *delim* (in this case, the character is extracted); note that this condition will never occur if *delim* equals `traits::eof()`.

NB: Provide three overloads, instead of the single function (with defaults) mandated by the Standard: this leads to a better performing implementation, while still conforming to the Standard.

Definition at line 460 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_streambuf<_CharT, _Traits>::sbumpc()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.387.5.29** `template<typename _CharT, typename _Traits> locale std::basic_ios<_CharT, _Traits>::imbue (const locale & __loc) [inline, inherited]`

Moves to a new [locale](#).

## 5.387 `std::basic_stringstream<_CharT, _Traits, _Alloc>` Class Template Reference

2305

### Parameters:

*loc* The new [locale](#).

### Returns:

The previous [locale](#).

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

Reimplemented from [std::ios\\_base](#).

Definition at line 113 of file `basic_ios.tcc`.

References `std::ios_base::getloc()`, and `std::basic_ios<_CharT, _Traits>::rdbuf()`.

Referenced by `std::operator<<()`.

**5.387.5.30** `template<typename _CharT, typename _Traits> void  
std::basic_ios<_CharT, _Traits>::init(basic_streambuf<_CharT,  
_Traits> * __sb) [inline, protected, inherited]`

All setup is performed here. This is called from the public constructor. It is not virtual and cannot be redefined.

Definition at line 125 of file `basic_ios.tcc`.

References `std::ios_base::badbit`, and `std::ios_base::goodbit`.

**5.387.5.31** `long& std::ios_base::iword(int __ix) [inline, inherited]`

Access to integer [array](#).

### Parameters:

*\_\_ix* Index into the [array](#).

### Returns:

A reference to an integer associated with the index.

The `iword` function provides access to an [array](#) of integers that can be used for any purpose. The [array](#) grows as required to hold the supplied index. All integers in the [array](#) are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the [array](#) can grow dynamically, it is not safe to hold onto the reference.

Definition at line 740 of file ios\_base.h.

**5.387.5.32** `template<typename _CharT, typename _Traits> char  
std::basic_ios< _CharT, _Traits >::narrow (char_type __c, char  
__dfault) const [inline, inherited]`

Squeezes characters.

**Parameters:**

*c* The character to narrow.

*dfault* The character to narrow.

**Returns:**

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

```
std::use_facet<ctype<char_type> > (getloc()) .narrow(c,dfault)
```

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localizati>

Definition at line 420 of file basic\_ios.h.

**5.387.5.33** `template<typename _CharT, typename _Traits> std::basic_ios<

Interface for manipulators. Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `io manip` header.

Definition at line 124 of file `istream`.

**5.387.5.68** `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream<_CharT, _Traits>::operator>> (__istream_type &*)(__istream_type &) __pf` [`inline`, `inherited`]

Interface for manipulators. Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `iomanip` header.

Definition at line 120 of file `istream`.

**5.387.5.69** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits>::int_type std::basic_istream<_CharT, _Traits>::peek(void)` [`inline`, `inherited`]

Looking ahead in the stream.

**Returns:**

The next character, or `eof()`.

If, after constructing the `sentry` object, `good()` is false, returns `traits::eof()`. Otherwise reads but does not extract the next input character.

Definition at line 620 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.387.5.70** `streamsize std::ios_base::precision (streamsize __prec)` [`inline`, `inherited`]

Changing flags.

**Parameters:**

*prec* The new precision value.

**Returns:**

The previous value of `precision()`.

Definition at line 629 of file `ios_base.h`.

**5.387.5.71** `streamsize std::ios_base::precision () const [inline, inherited]`

Flags access.

**Returns:**

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Definition at line 620 of file `ios_base.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, and `std::operator<<()`.

**5.387.5.72** `template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::put(char_type __c) [inline, inherited]`

Simple insertion.

**Parameters:**

*c* The character to insert.

**Returns:**

\*this

Tries to insert *c*.

**Note:**

This function is not overloaded on signed char and unsigned char.

Definition at line 149 of file `ostream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

Referenced by `std::endl()`, and `std::ends()`.

**5.387.5.73** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::putback(char_type __c) [inline, inherited]`

Unextracting a single character.

## 5.387 `std::basic_stringstream<_CharT, _Traits, _Alloc>` Class Template Reference

2327

### Parameters:

`c` The character to push back into the input stream.

### Returns:

`*this`

If `rdbuf()` is not null, calls `rdbuf()->sputbackc(c)`.

If `rdbuf()` is null or if `sputbackc()` fails, sets `badbit` in the error state.

### Note:

Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

Definition at line 711 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_ios<_CharT, _Traits>::setstate()`, and `std::basic_streambuf<_CharT, _Traits>::sputbackc()`.

Referenced by `std::operator>>()`.

### 5.387.5.74 `void*& std::ios_base::pword(int __ix)` [inline, inherited]

Access to void pointer `array`.

### Parameters:

`__ix` Index into the `array`.

### Returns:

A reference to a `void*` associated with the index.

The `pword` function provides access to an `array` of pointers that can be used for any purpose. The `array` grows as required to hold the supplied index. All pointers in the `array` are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the `array` can grow dynamically, it is not safe to hold onto the reference.

Definition at line 761 of file `ios_base.h`.

**5.387.5.75** `template<typename _CharT, typename _Traits> basic_streambuf<_CharT, _Traits> * std::basic_ios<_CharT, _Traits>::rdbuf(basic_streambuf<_CharT, _Traits> * __sb) [inline, inherited]`

Changing the underlying buffer.

**Parameters:**

*sb* The new stream buffer.

**Returns:**

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream foo; // or some other derived type
std::streambuf* p =;

foo.ios::rdbuf(p); // ios == basic_ios<char>
```

Definition at line 52 of file `basic_ios.tcc`.

References `std::basic_ios<_CharT, _Traits>::clear()`.

**5.387.5.76** `template<typename _CharT, typename _Traits, typename _Alloc> __stringbuf_type* std::basic_stringstream<_CharT, _Traits, _Alloc>::rdbuf() const [inline]`

Accessing the underlying buffer.

**Returns:**

The current `basic_stringbuf` buffer.

This hides both signatures of `std::basic_ios::rdbuf()`.

Reimplemented from `std::basic_ios<_CharT, _Traits>`.

Definition at line 548 of file `sstream`.

**5.387 std::basic\_stringstream<\_CharT, \_Traits, \_Alloc> Class Template Reference** 2329

---

**5.387.5.77** `template<typename _CharT, typename _Traits> istate  
std::basic_ios<_CharT, _Traits>::rdstate() const [inline,  
inherited]`

Returns the error state of the stream buffer.

**Returns:**

A bit pattern (well, isn't everything?)

See `std::ios_base::iostate` for the possible bit values. Most users will call one of the interpreting wrappers, e.g., `good()`.

Definition at line 127 of file `basic_ios.h`.

**5.387.5.78** `template<typename _CharT, typename _Traits> basic_istream<  
_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::read  
(char_type * __s, streamsize __n) [inline, inherited]`

Extraction without delimiters.

**Parameters:**

- s* A character [array](#).
- n* Maximum number of characters to store.

**Returns:**

\*this

If the stream state is `good()`, extracts characters and stores them into *s* until one of the following happens:

- *n* characters are stored
- the input sequence reaches end-of-file, in which case the error state is `set` to `failbit|eofbit`.

**Note:**

This function is not overloaded on signed char and unsigned char.

Definition at line 650 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.387.5.79** `template<typename _CharT, typename _Traits> streamsize  
std::basic_istream<_CharT, _Traits>::readsome(char_type * __s,  
streamsize __n) [inline, inherited]`

Extraction until the buffer is exhausted, but no more.

**Parameters:**

- s* A character [array](#).
- n* Maximum number of characters to store.

**Returns:**

The number of characters extracted.

Extracts characters and stores them into *s* depending on the number of characters remaining in the streambuf's buffer, `rdbuf()->in_avail()`, called *A* here:

- if  $A == -1$ , sets eofbit and extracts no characters
- if  $A == 0$ , extracts no characters
- if  $A > 0$ , extracts  $\min(A, n)$

The goal is to empty the current buffer, and to not request any more from the external input sequence controlled by the streambuf.

Definition at line 679 of file istream.tcc.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::min()`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.387.5.80** `void std::ios_base::register_callback(event_callback __fn, int  
__index) [inherited]`

Add the callback `__fn` with parameter `__index`.

**Parameters:**

- `__fn` The function to add.
- `__index` The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

## 5.387 `std::basic_stringstream<_CharT, _Traits, _Alloc>` Class Template

Reference

2331

**5.387.5.81** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::seekg(off_type __off, ios_base::seekdir __dir) [inline, inherited]`

Changing the current read position.

### Parameters:

*off* A file offset object.

*dir* The direction in which to seek.

### Returns:

\*this

If `fail()` is not true, calls `rdbuf()->pubseekoff(off, dir)`. If that function fails, sets failbit.

### Note:

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 870 of file `istream.tcc`.

References `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::ios_base::in`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.387.5.82** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::seekg(pos_type __pos) [inline, inherited]`

Changing the current read position.

### Parameters:

*pos* A file position object.

### Returns:

\*this

If `fail()` is not true, calls `rdbuf()->pubseekpos(pos)`. If that function fails, sets failbit.

### Note:

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 837 of file istream.tcc.

### 5.387.5.85 `fmtflags std::ios_base::setf(fmtflags __fmtfl, fmtflags __mask)` [inline, inherited]

Setting new format flags.

#### Parameters:

*fmtfl* Additional flags to [set](#).

*mask* The flags mask for *fmtfl*.

#### Returns:

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* & *mask*. An example mask is `ios_base::adjustfield`.

Definition at line 594 of file `ios_base.h`.

### 5.387.5.86 `fmtflags std::ios_base::setf(fmtflags __fmtfl)` [inline, inherited]

Setting new format flags.

#### Parameters:

*fmtfl* Additional flags to [set](#).

#### Returns:

The previous format control flags.

This function sets additional flags in format control. Flags that were previously [set](#) remain [set](#).

Definition at line 577 of file `ios_base.h`.

Referenced by `std::boolalpha()`, `std::dec()`, `std::fixed()`, `std::hex()`, `std::internal()`, `std::left()`, `std::oct()`, `std::right()`, `std::scientific()`, `std::showbase()`, `std::showpoint()`, `std::showpos()`, `std::skipws()`, `std::unitbuf()`, and `std::uppercase()`.

**5.387.5.87** `template<typename _CharT, typename _Traits> void  
std::basic_ios< _CharT, _Traits >::setstate (iostate __state)  
[inline, inherited]`

Sets additional flags in the error state.

**Parameters:**

*state* The additional state flag(s) to *set*.

See `std::ios_base::iostate` for the possible bit values.

Definition at line 147 of file `basic_ios.h`.

**5.387.5.88** `template<typename _CharT , typename _Traits , typename _Alloc  
> void std::basic_stringstream< _CharT, _Traits, _Alloc >::str  
(const __string_type & __s) [inline]`

Setting a new buffer.

**Parameters:**

*s* The string to use as a new sequence.

Calls `rdbuf ()->str (s)`.

Definition at line 566 of file `sstream`.

**5.387.5.89** `template<typename _CharT , typename _Traits , typename _Alloc  
> __string_type std::basic_stringstream< _CharT, _Traits, _Alloc  
>::str () const [inline]`

Copying out the string buffer.

**Returns:**

`rdbuf ()->str ()`

## 5.387 `std::basic_stringstream<_CharT, _Traits, _Alloc>` Class Template Reference

2335

Definition at line 556 of file `sstream`.

```
5.387.5.90 template<typename _CharT , typename _Traits > int
std::basic_istream< _CharT, _Traits >::sync (void) [inline,
inherited]
```

Synchronizing the stream buffer.

### Returns:

0 on success, -1 on failure

If `rdbuf()` is a null pointer, returns -1.

Otherwise, calls `rdbuf()->pubsync()`, and if that returns -1, sets `badbit` and returns -1.

Otherwise, returns 0.

### Note:

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 777 of file `istream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::goodbit`, `std::basic_streambuf<_CharT, _Traits>::pubsync()`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

```
5.387.5.91 static bool std::ios_base::sync_with_stdio (bool __sync = true)
[static, inherited]
```

Interaction with the standard C I/O objects.

### Parameters:

*sync* Whether to synchronize or not.

### Returns:

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., `stdout`) and the standard C++ objects (e.g., `cout`). User-declared streams are unaffected. See <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch28s02.html>

**5.387.5.92** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits>::pos_type std::basic_istream<_CharT, _Traits>::tellg(void) [inline, inherited]`

Getting the current read position.

**Returns:**

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0, cur, in)`.

**Note:**

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 813 of file `istream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::cur`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::ios_base::in`, and `std::basic_ios<_CharT, _Traits>::rdbuf()`.

**5.387.5.93** `template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits>::pos_type std::basic_ostream<_CharT, _Traits>::tellp() [inline, inherited]`

Getting the current write position.

**Returns:**

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0, cur, out)`.

Definition at line 237 of file `ostream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::cur`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::ios_base::out`, and `std::basic_ios<_CharT, _Traits>::rdbuf()`.

**5.387.5.94** `template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits>* std::basic_ios<_CharT, _Traits>::tie(basic_ostream<_CharT, _Traits> * __tistr) [inline, inherited]`

Ties this stream to an output stream.

## 5.387 `std::basic_stringstream<_CharT, _Traits, _Alloc>` Class Template Reference

2337

### Parameters:

*tiestr* The output stream.

### Returns:

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see [tie\(\)](#) for more.

Definition at line 297 of file `basic_ios.h`.

```
5.387.5.95 template<typename _CharT, typename _Traits>
basic_ostream<_CharT, _Traits>* std::basic_ios<_CharT, _Traits
>::tie() const [inline, inherited]
```

Fetches the current *tied* stream.

### Returns:

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Definition at line 285 of file `basic_ios.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`.

```
5.387.5.96 template<typename _CharT, typename _Traits> basic_istream<
_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::unget
(void) [inline, inherited]
```

Unextracting the previous character.

### Returns:

\*this

If `rdbuf()` is not null, calls `rdbuf()->sungetc(c)`.

If `rdbuf()` is null or if `sungetc()` fails, sets `badbit` in the error state.

### Note:

Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

Definition at line 744 of file istream.tcc.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_ios<_CharT, _Traits>::setstate()`, and `std::basic_streambuf<_CharT, _Traits>::sungetc()`.

**5.387.5.97** `void std::ios_base::unsetf (fmtflags __mask) [inline, inherited]`

Clearing format flags.

**Parameters:**

*mask* The flags to unset.

This function clears *mask* in the format flags.

Definition at line 609 of file ios\_base.h.

Referenced by `std::noboolalpha()`, `std::noshowbase()`, `std::noshowpoint()`, `std::noshowpos()`, `std::noskipws()`, `std::nounitbuf()`, and `std::nouppercase()`.

**5.387.5.98** `template<typename _CharT, typename _Traits> char_type std::basic_ios<_CharT, _Traits>::widen (char __c) const [inline, inherited]`

Widens characters.

**Parameters:**

*c* The character to widen.

**Returns:**

The widened character.

Maps a character of `char` to a character of `char_type`.

Returns the result of

```
std::use_facet<ctype<char_type>> (getloc()).widen(c)
```

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localizati>

Definition at line 439 of file basic\_ios.h.

---

**5.387.5.99** `streamsize std::ios_base::width (streamsize __wide) [inline, inherited]`

Changing flags.

**Parameters:**

*wide* The new width value.

**Returns:**

The previous value of `width()`.

Definition at line 652 of file `ios_base.h`.

**5.387.5.100** `streamsize std::ios_base::width () const [inline, inherited]`

Flags access.

**Returns:**

The minimum field width to generate on output operations.

*Minimum field width* refers to the number of characters.

Definition at line 643 of file `ios_base.h`.

Referenced by `std::basic_ios<_CharT, _Traits >::copyfmt()`, `std::num_put<_CharT, _OutIter >::do_put()`, and `std::operator<>>()`.

**5.387.5.101** `template<typename _CharT, typename _Traits > basic_ostream<_CharT, _Traits > & std::basic_ostream<_CharT, _Traits >::write (const char_type * __s, streamsize __n) [inline, inherited]`

Character string insertion.

**Parameters:**

*s* The `array` to insert.

*n* Maximum number of characters to insert.

**Returns:**

`*this`

Characters are copied from *s* and inserted into the stream until one of the following happens:

- *n* characters are inserted
- inserting into the output sequence fails (in this case, `badbit` will be [set](#) in the stream's error state)

**Note:**

This function is not overloaded on signed char and unsigned char.

Definition at line 183 of file `ostream.tcc`.

References `std::basic_ostream< _CharT, _Traits >::_M_write()`, and `std::ios_base::badbit`.

**5.387.5.102 static int std::ios\_base::xalloc () throw () [static, inherited]**

Access to unique indices.

**Returns:**

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the `iword` and `pword` functions. The expectation is that an application calls `xalloc` in order to obtain an index in the `iword` and `pword` arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. `xalloc` is guaranteed to return an index that is safe to use in the `iword` and `pword` arrays.

**5.387.6 Member Data Documentation****5.387.6.1 template<typename \_CharT, typename \_Traits> streamsize std::basic\_istream< \_CharT, \_Traits >::\_M\_gcount [protected, inherited]**

The number of characters extracted in the previous unformatted function; see [gcount\(\)](#).

Definition at line 79 of file `istream`.

Open and seek to end immediately after opening.

Definition at line 375 of file `ios_base.h`.

Referenced by `std::basic_filebuf<_CharT, _Traits>::open()`.

### 5.387.6.5 `const iostate std::ios_base::badbit` [static, inherited]

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).

Definition at line 342 of file `ios_base.h`.

Referenced by `std::basic_ostream<_CharT, _Traits>::flush()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::basic_ios<_CharT, _Traits>::init()`, `std::operator<<()`, `std::basic_ostream<_CharT, _Traits>::operator<<()`, `std::operator>>()`, `std::basic_istream<_CharT, _Traits>::operator>>()`, `std::basic_istream<_CharT, _Traits>::peek()`, `std::basic_ostream<_CharT, _Traits>::put()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_istream<_CharT, _Traits>::read()`, `std::basic_istream<_CharT, _Traits>::readsome()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_ostream<_CharT, _Traits>::seekp()`, `std::basic_istream<_CharT, _Traits>::sync()`, `std::basic_istream<_CharT, _Traits>::tellg()`, `std::basic_ostream<_CharT, _Traits>::tellp()`, `std::basic_istream<_CharT, _Traits>::unget()`, and `std::basic_ostream<_CharT, _Traits>::write()`.

**5.387.6.6 const fmtflags std::ios\_base::basefield [static, inherited]**

A mask of dec|oct|hex. Useful for the 2-arg form of `setf`.

Definition at line 321 of file `ios_base.h`.

Referenced by `std::num_get<_CharT, _InIter >::do_get()`, and `std::basic_ostream<_CharT, _Traits >::operator<<()`.

**5.387.6.7 const seekdir std::ios\_base::beg [static, inherited]**

Request a seek relative to the beginning of the stream.

Definition at line 404 of file `ios_base.h`.

Referenced by `std::basic_filebuf<_CharT, _Traits >::seekpos()`.

**5.387.6.8 const openmode std::ios\_base::binary [static, inherited]**

Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch27s02.html>.

Definition at line 380 of file `ios_base.h`.

Referenced by `std::basic_filebuf<_CharT, _Traits >::showmanyc()`.

**5.387.6.9 const fmtflags std::ios\_base::boolalpha [static, inherited]**

Insert/extract `bool` in alphabetic rather than numeric format.

Definition at line 266 of file `ios_base.h`.

Referenced by `std::num_get<_CharT, _InIter >::do_get()`, and `std::num_put<_CharT, _OutIter >::do_put()`.

**5.387.6.10 const seekdir std::ios\_base::cur [static, inherited]**

Request a seek relative to the current position within the sequence.

Definition at line 407 of file `ios_base.h`.

Referenced by `std::basic_filebuf<_CharT, _Traits >::imbue()`, `std::basic_filebuf<_CharT, _Traits >::pbackfail()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc >::seekoff()`, `std::basic_filebuf<_CharT, _Traits >::seekoff()`, `std::basic_istream<_CharT, _Traits >::tellg()`, and `std::basic_ostream<_CharT, _Traits >::tellp()`.

## 5.387 `std::basic_stringstream<_CharT, _Traits, _Alloc>` Class Template Reference

2343

### 5.387.6.11 `const fmtflags std::ios_base::dec` [static, inherited]

Converts integer input or generates integer output in [decimal](#) base.

Definition at line 269 of file `ios_base.h`.

### 5.387.6.12 `const seekdir std::ios_base::end` [static, inherited]

Request a seek relative to the current end of the sequence.

Definition at line 410 of file `ios_base.h`.

Referenced by `std::basic_filebuf<_CharT, _Traits>::open()`, and `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekoff()`.

### 5.387.6.13 `const iostate std::ios_base::eofbit` [static, inherited]

Indicates that an input operation reached the end of an input sequence.

Definition at line 345 of file `ios_base.h`.

Referenced by `std::num_get<_CharT, _InIter>::do_get()`, `std::time_get<_CharT, _InIter>::do_get_date()`, `std::time_get<_CharT, _InIter>::do_get_monthname()`, `std::time_get<_CharT, _InIter>::do_get_time()`, `std::time_get<_CharT, _InIter>::do_get_weekday()`, `std::time_get<_CharT, _InIter>::do_get_year()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::operator>>()`, `std::basic_istream<_CharT, _Traits>::operator>>()`, `std::basic_istream<_CharT, _Traits>::peek()`, `std::basic_istream<_CharT, _Traits>::read()`, `std::basic_istream<_CharT, _Traits>::readsome()`, and `std::ws()`.

### 5.387.6.14 `const iostate std::ios_base::failbit` [static, inherited]

Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.

Definition at line 350 of file `ios_base.h`.

Referenced by `std::num_get<_CharT, _InIter>::do_get()`, `std::time_get<_CharT, _InIter>::do_get_monthname()`, `std::time_get<_CharT, _InIter>::do_get_weekday()`, `std::time_get<_CharT, _InIter>::do_get_year()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::basic_ostream<_CharT, _Traits>::operator<<()`, `std::basic_istream<_CharT, _Traits>::operator>>()`, `std::operator>>()`, `std::basic_istream<_CharT, _Traits>::read()`, `std::basic_istream<_CharT, _Traits>::seekg()`, and `std::basic_ostream<_CharT, _Traits>::seekp()`.

**5.387.6.15 const fmtflags std::ios\_base::fixed [static, inherited]**

Generate floating-point output in fixed-point notation.

Definition at line 272 of file ios\_base.h.

**5.387.6.16 const fmtflags std::ios\_base::floatfield [static, inherited]**

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.

Definition at line 324 of file ios\_base.h.

**5.387.6.17 const iostate std::ios\_base::goodbit [static, inherited]**

Indicates all is well.

Definition at line 353 of file ios\_base.h.

Referenced by `std::num_get< _CharT, _InIter >::do_get()`, `std::time_get< _CharT, _InIter >::do_get_monthname()`, `std::time_get< _CharT, _InIter >::do_get_weekday()`, `std::time_get< _CharT, _InIter >::do_get_year()`, `std::basic_ostream< _CharT, _Traits >::flush()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_ios< _CharT, _Traits >::init()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::operator>>()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_ostream< _CharT, _Traits >::put()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::readsome()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_istream< _CharT, _Traits >::sync()`, and `std::basic_istream< _CharT, _Traits >::unget()`.

**5.387.6.18 const fmtflags std::ios\_base::hex [static, inherited]**

Converts integer input or generates integer output in hexadecimal base.

Definition at line 275 of file ios\_base.h.

Referenced by `std::num_get< _CharT, _InIter >::do_get()`, `std::num_put< _CharT, _OutIter >::do_put()`, and `std::basic_ostream< _CharT, _Traits >::operator<<()`.

**5.387.6.19 const openmode std::ios\_base::in [static, inherited]**

Open for input. Default for `ifstream` and `fstream`.

Definition at line 383 of file ios\_base.h.

## 5.387 `std::basic_stringstream<_CharT, _Traits, _Alloc>` Class Template Reference

2345

Referenced by `std::basic_filebuf<_CharT, _Traits>::pbackfail()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekoff()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekpos()`, `std::basic_filebuf<_CharT, _Traits>::showmanyc()`, `std::basic_istream<_CharT, _Traits>::tellg()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::underflow()`, `std::basic_filebuf<_CharT, _Traits>::underflow()`, and `std::basic_filebuf<_CharT, _Traits>::xsgetn()`.

### 5.387.6.20 `const fmtflags std::ios_base::internal` [static, inherited]

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.

Definition at line 280 of file `ios_base.h`.

### 5.387.6.21 `const fmtflags std::ios_base::left` [static, inherited]

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.)

Definition at line 284 of file `ios_base.h`.

Referenced by `std::num_put<_CharT, _Outputter>::do_put()`.

### 5.387.6.22 `const fmtflags std::ios_base::oct` [static, inherited]

Converts integer input or generates integer output in octal base.

Definition at line 287 of file `ios_base.h`.

Referenced by `std::basic_ostream<_CharT, _Traits>::operator<<()`.

### 5.387.6.23 `const openmode std::ios_base::out` [static, inherited]

Open for output. Default for `ofstream` and `fstream`.

Definition at line 386 of file `ios_base.h`.

Referenced by `std::basic_stringbuf<_CharT, _Traits, _Alloc>::overflow()`, `std::basic_filebuf<_CharT, _Traits>::overflow()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekoff()`, `std::basic_ostream<_CharT, _Traits>::seekp()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekpos()`, `std::basic_ostream<_CharT, _Traits>::tellp()`, and `std::basic_filebuf<_CharT, _Traits>::xsputn()`.

**5.387.6.24 const fmtflags std::ios\_base::right [static, inherited]**

Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.).

Definition at line 291 of file ios\_base.h.

**5.387.6.25 const fmtflags std::ios\_base::scientific [static, inherited]**

Generates floating-point output in scientific notation.

Definition at line 294 of file ios\_base.h.

**5.387.6.26 const fmtflags std::ios\_base::showbase [static, inherited]**

Generates a prefix indicating the numeric base of generated integer output.

Definition at line 298 of file ios\_base.h.

**5.387.6.27 const fmtflags std::ios\_base::showpoint [static, inherited]**

Generates a decimal-point character unconditionally in generated floating-point output.

Definition at line 302 of file ios\_base.h.

**5.387.6.28 const fmtflags std::ios\_base::showpos [static, inherited]**

Generates a + sign in non-negative generated numeric output.

Definition at line 305 of file ios\_base.h.

**5.387.6.29 const fmtflags std::ios\_base::skipws [static, inherited]**

Skips leading white space before certain input operations.

Definition at line 308 of file ios\_base.h.

**5.387.6.30 const openmode std::ios\_base::trunc [static, inherited]**

Open for input. Default for `ofstream`.

Definition at line 389 of file ios\_base.h.

**5.387 std::basic\_stringstream<\_CharT, \_Traits, \_Alloc > Class Template Reference** 2347

---

**5.387.6.31 const fmtflags std::ios\_base::unitbuf [static, inherited]**

Flushes output after each output operation.

Definition at line 311 of file ios\_base.h.

**5.387.6.32 const fmtflags std::ios\_base::uppercase [static, inherited]**

Replaces certain lowercase letters with their uppercase equivalents in generated output.

Definition at line 315 of file ios\_base.h.

Referenced by std::num\_put<\_CharT, \_OutIter >::do\_put().

The documentation for this class was generated from the following file:

- void [reset](#) ()

#### 5.388.1 Detailed Description

A Bernoulli random number distribution. Generates a sequence of true and false values with likelihood  $p$  that true will come up and  $(1 - p)$  that false will appear.

Definition at line 2868 of file random.h.

#### 5.388.2 Member Typedef Documentation

##### 5.388.2.1 typedef bool `std::bernoulli_distribution::result_type`

The type of the range of the distribution.

Definition at line 2872 of file random.h.

### 5.388.3 Constructor & Destructor Documentation

**5.388.3.1** `std::bernoulli_distribution::bernoulli_distribution (double __p = 0.5) [inline, explicit]`

Constructs a Bernoulli distribution with likelihood  $p$ .

**Parameters:**

$\text{__}p$  [IN] The likelihood of a true result being returned. Must be in the interval  $[0, 1]$ .

Definition at line 2901 of file random.h.

### 5.388.4 Member Function Documentation

**5.388.4.1** `result_type std::bernoulli_distribution::max () const [inline]`

Returns the least upper bound value of the distribution.

Definition at line 2951 of file random.h.

**5.388.4.2** `result_type std::bernoulli_distribution::min () const [inline]`

Returns the greatest lower bound value of the distribution.

Definition at line 2944 of file random.h.

**5.388.4.3** `template<typename _UniformRandomNumberGenerator > result_type std::bernoulli_distribution::operator() (_UniformRandomNumberGenerator & __urng) [inline]`

Returns the next value in the Bernoullian sequence.

Definition at line 2959 of file random.h.

References operator(), and param().

Referenced by operator().

**5.388.4.4** `double std::bernoulli_distribution::p () const [inline]`

Returns the  $p$  parameter of the distribution.

Definition at line 2922 of file random.h.

**5.388.4.5** `void std::bernoulli_distribution::param (const param_type & __param) [inline]`

Sets the parameter [set](#) of the distribution.

**Parameters:**

`__param` The new parameter [set](#) of the distribution.

Definition at line 2937 of file random.h.

**5.388.4.6** `param_type std::bernoulli_distribution::param () const [inline]`

Returns the parameter [set](#) of the distribution.

Definition at line 2929 of file random.h.

Referenced by `operator()()`, and `std::operator>>()`.

**5.388.4.7** `void std::bernoulli_distribution::reset () [inline]`

Resets the distribution state. Does nothing for a Bernoulli distribution.

Definition at line 2916 of file random.h.

The documentation for this class was generated from the following file:

- [random.h](#)

## 5.389 `std::bernoulli_distribution::param_type` Struct Reference

### Public Types

- typedef [bernoulli\\_distribution](#) `distribution_type`

### Public Member Functions

- `param_type` (double `__p=0.5`)
- double `p` () const

#### 5.389.1 Detailed Description

Parameter type.

Definition at line 2874 of file `random.h`.

The documentation for this struct was generated from the following file:

- [random.h](#)

## 5.390 `std::bidirectional_iterator_tag` Struct Reference

Bidirectional iterators support a superset of forward [iterator](#) operations. Inheritance diagram for `std::bidirectional_iterator_tag`:

### 5.390.1 Detailed Description

Bidirectional iterators support a superset of forward [iterator](#) operations.

Definition at line 89 of file `stl_iterator_base_types.h`.

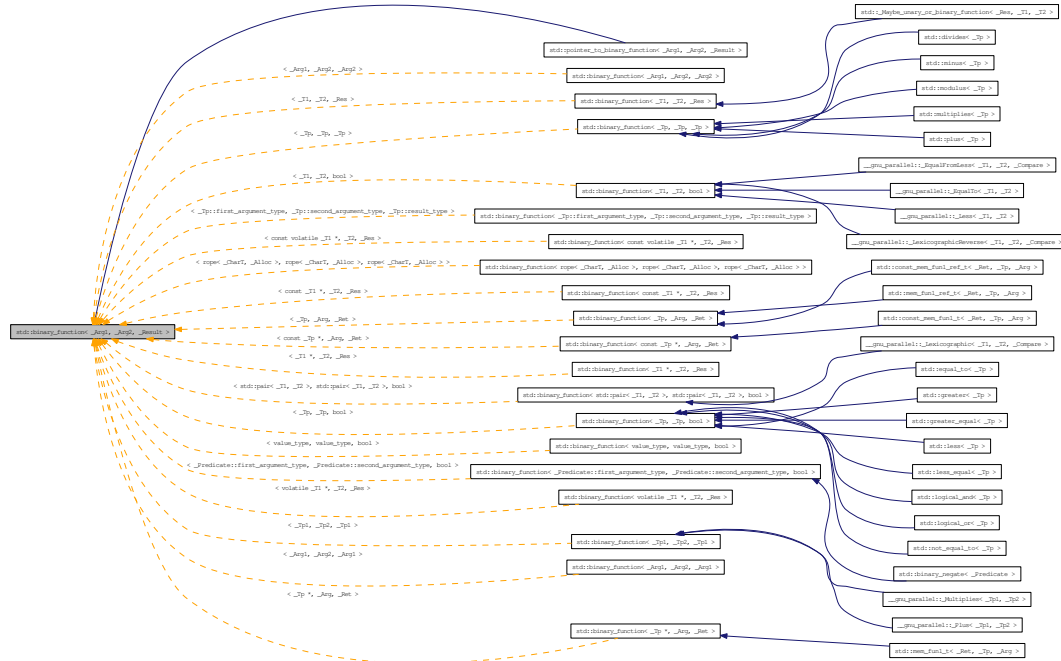

The documentation for this struct was generated from the following file:

- [stl\\_iterator\\_base\\_types.h](#)

## 5.391 std::binary\_function< \_Arg1, \_Arg2, \_Result > Struct Template Reference

Inheritance diagram for std::binary\_function< \_Arg1, \_Arg2, \_Result >:

### Public Types

- typedef \_Arg1 [first\\_argument\\_type](#)
- typedef \_Result [result\\_type](#)
- typedef \_Arg2 [second\\_argument\\_type](#)

### 5.391.1 Detailed Description

template<typename \_Arg1, typename \_Arg2, typename \_Result> struct std::binary\_function< \_Arg1, \_Arg2, \_Result >

This is one of the [functor base classes](#).

Definition at line 112 of file stl\_function.h.

## 5.391.2 Member Typedef Documentation

**5.391.2.1** `template<typename _Arg1, typename _Arg2, typename _Result>  
typedef _Arg1 std::binary_function< _Arg1, _Arg2, _Result  
>::first_argument_type`

the type of the first argument (no surprises here)

Definition at line 114 of file `stl_function.h`.

**5.391.2.2** `template<typename _Arg1, typename _Arg2, typename _Result>  
typedef _Result std::binary_function< _Arg1, _Arg2, _Result  
>::result_type`

type of the return type

Definition at line 118 of file `stl_function.h`.

**5.391.2.3** `template<typename _Arg1, typename _Arg2, typename _Result>  
typedef _Arg2 std::binary_function< _Arg1, _Arg2, _Result  
>::second_argument_type`

the type of the second argument

Definition at line 117 of file `stl_function.h`.

The documentation for this struct was generated from the following file:

- [stl\\_function.h](#)

## 5.392 std::binary\_negate< \_Predicate > Class Template Reference

One of the [negation functors](#). Inheritance diagram for std::binary\_negate< \_Predicate >:

### Public Types

### 5.395.1 Detailed Description

```
template<typename _IntType = int> class std::binomial_distribution< _IntType
>
```

A discrete binomial random number distribution. The formula for the binomial probability density function is  $p(i|t, p) = \binom{t}{i} p^i (1 - p)^{t-i}$  where  $t$  and  $p$  are the parameters of the distribution.

Definition at line 3023 of file random.h.

### 5.395.2 Member Typedef Documentation

**5.395.2.1** `template<typename _IntType = int> typedef _IntType  
std::binomial_distribution< _IntType >::result_type`

The type of the range of the distribution.

Definition at line 3030 of file random.h.

### 5.395.3 Member Function Documentation

**5.395.3.1** `template<typename _IntType = int> result_type  
std::binomial_distribution< _IntType >::max () const [inline]`

Returns the least upper bound value of the distribution.

Definition at line 3129 of file random.h.

Referenced by `std::binomial_distribution< _IntType >::operator()()`.

**5.395.3.2** `template<typename _IntType = int> result_type  
std::binomial_distribution< _IntType >::min () const [inline]`

Returns the greatest lower bound value of the distribution.

Definition at line 3122 of file random.h.

**5.395.3.3** `template<typename _IntType > template<typename  
_UniformRandomNumberGenerator > binomial_distribution<  
_IntType >::result_type std::binomial_distribution<_IntType  
>::operator() (_UniformRandomNumberGenerator & __urng, const  
param_type & __param) [inline]`

A rejection algorithm when  $t * p \geq 8$  and a simple waiting time method - the second in the referenced book - otherwise. NB: The former is available only if `_GLIBCXX_USE_C99_MATH_TR1` is defined.

## 5.395.4 Friends And Related Function Documentation

**5.395.4.1** `template<typename _IntType = int> template<typename _IntType1 ,  
typename _CharT , typename _Traits > std::basic_ostream<_CharT,  
_Traits>& operator<< (std::basic_ostream<_CharT, _Traits > &,  
const std::binomial_distribution<_IntType1 > &) [friend]`

Inserts a `binomial_distribution` random number distribution `__x` into the output stream `__os`.

### Parameters:

`__os` An output stream.

`__x` A `binomial_distribution` random number distribution.

### Returns:

The output stream with the state of `__x` inserted or in an error state.

**5.395.4.2** `template<typename _IntType = int> template<typename _IntType1 ,  
typename _CharT , typename _Traits > std::basic_istream<_CharT,  
_Traits>& operator>> (std::basic_istream<_CharT, _Traits > &,  
std::binomial_distribution<_IntType1 > &) [friend]`

Extracts a `binomial_distribution` random number distribution `__x` from the input stream `__is`.

### Parameters:

`__is` An input stream.

`__x` A `binomial_distribution` random number generator engine.

### Returns:

The input stream with `__x` extracted or in an error state.

### 5.397.1 Detailed Description

`template<size_t _Nb> class std::bitset<_Nb >`

The `bitset` class represents a *fixed-size* sequence of bits. (Note that `bitset` does *not* meet the formal requirements of a `container`. Mainly, it lacks iterators.)

The template argument, *Nb*, may be any non-negative number, specifying the number of bits (e.g., "0", "12", "1024\*1024").

In the general unoptimized case, storage is allocated in word-sized blocks. Let *B* be the number of bits in a word, then  $(Nb+(B-1))/B$  words will be used for storage. *B - NbB* bits are unused. (They are the high-order bits in the highest word.) It is a class invariant that those unused bits are always zero.

If you think of `bitset` as a *simple array of bits*, be aware that your mental picture is reversed: a `bitset` behaves the same way as bits in integers do, with the bit at index 0 in the *least significant / right-hand* position, and the bit at index *Nb-1* in the *most significant / left-hand* position. Thus, unlike other containers, a `bitset`'s index *counts from right to left*, to put it very loosely.

This behavior is preserved when translating to and from strings. For example, the first line of the following program probably prints *b('a')* is `0001100001` on a modern ASCII system.

```
#include <bitset>
#include <iostream>
#include <sstream>

using namespace std;

int main()
{
 long a = 'a';
 bitset<10> b(a);

 cout << "b('a') is " << b << endl;

 ostringstream s;
 s << b;
```

```

string str = s.str();
cout << "index 3 in the string is " << str[3] << " but\n"
 << "index 3 in the bitset is " << b[3] << endl;
}

```

Also see: <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt12ch33s02.html> for a description of extensions.

Most of the actual code isn't contained in `bitset<>` itself, but in the base class `_Base_bitset`. The base class works with whole words, not with individual bits. This allows us to specialize `_Base_bitset` for the important special case where the bitset is only a single word.

Extra confusion can result due to the fact that the storage for `_Base_bitset` is a regular array, and is indexed as such. This is carefully encapsulated.

Definition at line 709 of file `bitset`.

## 5.397.2 Constructor & Destructor Documentation

### 5.397.2.1 `template<size_t _Nb> std::bitset<_Nb>::bitset () [inline]`

All bits `set` to zero.

Definition at line 803 of file `bitset`.

### 5.397.2.2 `template<size_t _Nb> std::bitset<_Nb>::bitset (unsigned long long __val) [inline]`

Initial bits bitwise-copied from a single word (others `set` to zero).

Definition at line 808 of file `bitset`.

### 5.397.2.3 `template<size_t _Nb> template<class _CharT, class _Traits, class _Alloc> std::bitset<_Nb>::bitset (const std::basic_string<_CharT, _Traits, _Alloc> & __s, size_t __position = 0) [inline, explicit]`

Use a subset of a string.

#### Parameters:

*s* A string of *0* and *1* characters.

*position* Index of the first character in *s* to use; defaults to zero.

#### Exceptions:

`std::out_of_range` If *pos* is bigger the size of *s*.

*std::invalid\_argument* If a character appears in the string which is neither *0* nor *1*.

Definition at line 826 of file `bitset`.

**5.397.2.4** `template<size_t _Nb> template<class _CharT, class _Traits, class _Alloc> std::bitset<_Nb>::bitset (const std::basic_string<_CharT, _Traits, _Alloc> & __s, size_t __position, size_t __n) [inline]`

Use a subset of a string.

**Parameters:**

*s* A string of *0* and *1* characters.

*position* Index of the first character in *s* to use.

*n* The number of characters to copy.

**Exceptions:**

*std::out\_of\_range* If *pos* is bigger the size of *s*.

*std::invalid\_argument* If a character appears in the string which is neither *0* nor *1*.

Definition at line 848 of file `bitset`.

**5.397.2.5** `template<size_t _Nb> std::bitset<_Nb>::bitset (const char * __str) [inline, explicit]`

Construct from a string.

**Parameters:**

*str* A string of *0* and *1* characters.

**Exceptions:**

*std::invalid\_argument* If a character appears in the string which is neither *0* nor *1*.

Definition at line 880 of file `bitset`.

### 5.397.3 Member Function Documentation

**5.397.3.1** `template<size_t _Nb> bitset<_Nb>& std::bitset< _Nb >::_Unchecked_flip (size_t __pos) [inline]`

These versions of single-bit [set](#), [reset](#), [flip](#), and [test](#) are extensions from the SGI version. They do no range checking.

Definition at line 987 of file `bitset`.

**5.397.3.2** `template<size_t _Nb> bitset<_Nb>& std::bitset< _Nb >::_Unchecked_reset (size_t __pos) [inline]`

These versions of single-bit [set](#), [reset](#), [flip](#), and [test](#) are extensions from the SGI version. They do no range checking.

Definition at line 980 of file `bitset`.

**5.397.3.3** `template<size_t _Nb> bitset<_Nb>& std::bitset< _Nb >::_Unchecked_set (size_t __pos, int __val) [inline]`

These versions of single-bit [set](#), [reset](#), [flip](#), and [test](#) are extensions from the SGI version. They do no range checking.

Definition at line 970 of file `bitset`.

**5.397.3.4** `template<size_t _Nb> bool std::bitset< _Nb >::_Unchecked_test (size_t __pos) const [inline]`

These versions of single-bit [set](#), [reset](#), [flip](#), and [test](#) are extensions from the SGI version. They do no range checking.

Definition at line 994 of file `bitset`.

**5.397.3.5** `template<size_t _Nb> bool std::bitset< _Nb >::all () const [inline]`

Tests whether all the bits are on.

**Returns:**

True if all the bits are [set](#).

Definition at line 1267 of file `bitset`.

**5.397.3.6** `template<size_t _Nb> bool std::bitset< _Nb >::any () const`  
`[inline]`

Tests whether any of the bits are on.

**Returns:**

True if at least one bit is [set](#).

Definition at line 1275 of file `bitset`.

**5.397.3.7** `template<size_t _Nb> size_t std::bitset< _Nb >::count () const`  
`[inline]`

Returns the number of bits which are [set](#).

Definition at line 1227 of file `bitset`.

**5.397.3.8** `template<size_t _Nb> bitset<_Nb>& std::bitset< _Nb >::flip (size_t`  
`__position) [inline]`

Toggles a given bit to its opposite value.

**Parameters:**

*position* The index of the bit.

**Exceptions:**

[std::out\\_of\\_range](#) If *pos* is bigger the size of the set.

Definition at line 1067 of file `bitset`.

**5.397.3.9** `template<size_t _Nb> bitset<_Nb>& std::bitset< _Nb >::flip ()`  
`[inline]`

Toggles every bit to its opposite value.

Definition at line 1054 of file `bitset`.

**5.397.3.10** `template<size_t _Nb> bool std::bitset< _Nb >::none () const`  
`[inline]`

Tests whether any of the bits are on.

**Returns:**

True if none of the bits are [set](#).

Definition at line 1283 of file `bitset`.

**5.397.3.11** `template<size_t _Nb> bool std::bitset< _Nb >::operator!=(const bitset< _Nb > & __rhs) const [inline]`

These versions of single-bit [set](#), [reset](#), [flip](#), and [test](#) are extensions from the SGI version. They do no range checking.

Definition at line 1242 of file `bitset`.

**5.397.3.12** `template<size_t _Nb> bitset<_Nb>& std::bitset< _Nb >::operator&= (const bitset< _Nb > & __rhs) [inline]`

Operations on bitsets.

**Parameters:**

*rhs* A same-sized [bitset](#).

These should be self-explanatory.

Definition at line 901 of file `bitset`.

**5.397.3.13** `template<size_t _Nb> bitset<_Nb> std::bitset< _Nb >::operator<< (size_t __position) const [inline]`

Self-explanatory.

Definition at line 1289 of file `bitset`.

**5.397.3.14** `template<size_t _Nb> bitset<_Nb>& std::bitset< _Nb >::operator<<= (size_t __position) [inline]`

Operations on bitsets.

**Parameters:**

*position* The number of places to shift.

These should be self-explanatory.

Definition at line 930 of file `bitset`.

**5.397.3.15** `template<size_t _Nb> bool std::bitset<_Nb >::operator==(const bitset<_Nb > & __rhs) const [inline]`

These comparisons for equality/inequality are, well, *bitwise*.

Definition at line 1238 of file `bitset`.

**5.397.3.16** `template<size_t _Nb> bitset<_Nb> std::bitset<_Nb >::operator>>(size_t __position) const [inline]`

These versions of single-bit `set`, `reset`, `flip`, and `test` are extensions from the SGI version. They do no range checking.

Definition at line 1293 of file `bitset`.

**5.397.3.17** `template<size_t _Nb> bitset<_Nb>& std::bitset<_Nb >::operator>>=(size_t __position) [inline]`

These versions of single-bit `set`, `reset`, `flip`, and `test` are extensions from the SGI version. They do no range checking.

Definition at line 943 of file `bitset`.

**5.397.3.18** `template<size_t _Nb> bool std::bitset<_Nb >::operator[] (size_t __position) const [inline]`

These versions of single-bit `set`, `reset`, `flip`, and `test` are extensions from the SGI version. They do no range checking.

Definition at line 1099 of file `bitset`.

**5.397.3.19** `template<size_t _Nb> reference std::bitset<_Nb >::operator[] (size_t __position) [inline]`

Array-indexing support.

**Parameters:**

*position* Index into the `bitset`.

**Returns:**

A `bool` for a *const* `bitset`. For non-const `bitsets`, an instance of the `reference` proxy class.

**Note:**

These operators do no range checking and throw no exceptions, as required by DR 11 to the standard.

`_GLIBCXX_RESOLVE_LIB_DEFECTS` Note that this implementation already resolves DR 11 (items 1 and 2), but does not do the range-checking required by that DR's resolution. `-pme` The DR has since been changed: range-checking is a precondition (users' responsibility), and these functions must not throw. `-pme`

Definition at line 1095 of file `bitset`.

**5.397.3.20** `template<size_t _Nb> bitset<_Nb>& std::bitset<_Nb>::operator^=(const bitset<_Nb> & __rhs) [inline]`

These versions of single-bit `set`, `reset`, `flip`, and `test` are extensions from the SGI version. They do no range checking.

Definition at line 915 of file `bitset`.

**5.397.3.21** `template<size_t _Nb> bitset<_Nb>& std::bitset<_Nb>::operator|=(const bitset<_Nb> & __rhs) [inline]`

These versions of single-bit `set`, `reset`, `flip`, and `test` are extensions from the SGI version. They do no range checking.

Definition at line 908 of file `bitset`.

**5.397.3.22** `template<size_t _Nb> bitset<_Nb> std::bitset<_Nb>::operator~() const [inline]`

See the no-argument `flip()`.

Definition at line 1076 of file `bitset`.

**5.397.3.23** `template<size_t _Nb> bitset<_Nb>& std::bitset<_Nb>::reset(size_t __position) [inline]`

Sets a given bit to false.

**Parameters:**

*position* The index of the bit.

**Exceptions:**

`std::out_of_range` If *pos* is bigger the size of the set.

Same as writing `set (pos, false)`.

Definition at line 1043 of file `bitset`.

**5.397.3.24** `template<size_t _Nb> bitset<_Nb>& std::bitset<_Nb >::reset ()`  
`[inline]`

Sets every bit to false.

Definition at line 1029 of file `bitset`.

**5.397.3.25** `template<size_t _Nb> bitset<_Nb>& std::bitset<_Nb >::set`  
`(size_t __position, bool __val = true) [inline]`

Sets a given bit to a particular value.

**Parameters:**

*position* The index of the bit.

*val* Either true or false, defaults to true.

**Exceptions:**

[\*std::out\\_of\\_range\*](#) If *pos* is bigger the size of the set.

Definition at line 1018 of file `bitset`.

**5.397.3.26** `template<size_t _Nb> bitset<_Nb>& std::bitset<_Nb >::set ()`  
`[inline]`

Sets every bit to true.

Definition at line 1004 of file `bitset`.

**5.397.3.27** `template<size_t _Nb> size_t std::bitset<_Nb >::size () const`  
`[inline]`

Returns the total number of bits.

Definition at line 1232 of file `bitset`.

**5.397.3.28** `template<size_t _Nb> bool std::bitset<_Nb >::test (size_t`  
`__position) const [inline]`

Tests the value of a bit.

**Parameters:**

*position* The index of a bit.

**Returns:**

The value at *pos*.

**Exceptions:**

[\*std::out\\_of\\_range\*](#) If *pos* is bigger the size of the set.

Definition at line 1253 of file `bitset`.

**5.397.3.29** `template<size_t _Nb> template<class _CharT, class _Traits, class _Alloc> std::basic_string<_CharT, _Traits, _Alloc> std::bitset<_Nb>::to_string() const [inline]`

Returns a character interpretation of the bitset.

**Returns:**

The string equivalent of the bits.

Note the ordering of the bits: decreasing character positions correspond to increasing bit positions (see the main class notes for an example).

Definition at line 1129 of file `bitset`.

**5.397.3.30** `template<size_t _Nb> unsigned long std::bitset<_Nb>::to_ulong() const [inline]`

Returns a numerical interpretation of the bitset.

**Returns:**

The integral equivalent of the bits.

**Exceptions:**

[\*std::overflow\\_error\*](#) If there are too many bits to be represented in an unsigned long.

Definition at line 1110 of file `bitset`.

- `reference & operator= (const reference &__j)`
- `reference & operator= (bool __x)`
- `bool operator~ () const`

### Friends

- class `bitset`

### 5.398.1 Detailed Description

`template<size_t _Nb> class std::bitset<_Nb>::reference`

This encapsulates the concept of a single bit. An instance of this class is a proxy for an actual bit; this way the individual bit operations are done as faster word-size bitwise instructions.

Most users will never need to use this class directly; conversions to and from `bool` are automatic and should be transparent. Overloaded operators help to preserve the illusion.

(On a typical system, this *bit reference* is 64 times the size of an actual bit. Ha.)

Definition at line 740 of file `bitset`.

The documentation for this class was generated from the following file:

- `bitset`

## 5.399 `std::cauchy_distribution<_RealType>` Class Template Reference

A [cauchy\\_distribution](#) random number distribution.

#### 5.399.1 Detailed Description

```
template<typename _RealType = double> class std::cauchy_distribution<_RealType>
```

A [cauchy\\_distribution](#) random number distribution. The formula for the normal probability mass function is  $p(x|a, b) = (\pi b(1 + (\frac{x-a}{b})^2))^{-1}$

Definition at line 2416 of file random.h.

## 5.399.2 Member Typedef Documentation

### 5.399.2.1 `template<typename _RealType = double> typedef _RealType std::cauchy_distribution< _RealType >::result_type`

The type of the range of the distribution.

Definition at line 2423 of file random.h.

## 5.399.3 Member Function Documentation

### 5.399.3.1 `template<typename _RealType = double> result_type std::cauchy_distribution< _RealType >::max () const [inline]`

Returns the least upper bound value of the distribution.

Definition at line 2503 of file random.h.

### 5.399.3.2 `template<typename _RealType = double> result_type std::cauchy_distribution< _RealType >::min () const [inline]`

Returns the greatest lower bound value of the distribution.

Definition at line 2496 of file random.h.

### 5.399.3.3 `template<typename _RealType = double> void std::cauchy_distribution< _RealType >::param (const param_type & __param) [inline]`

Sets the parameter `set` of the distribution.

#### Parameters:

`__param` The new parameter `set` of the distribution.

Definition at line 2489 of file random.h.

### 5.399.3.4 `template<typename _RealType = double> param_type std::cauchy_distribution< _RealType >::param () const [inline]`

Returns the parameter `set` of the distribution.

Definition at line 2481 of file random.h.

Referenced by `std::operator>>()`.

## 5.399 std::cauchy\_distribution<\_RealType > Class Template Reference 2383

**5.399.3.5** `template<typename _RealType = double> void  
std::cauchy_distribution<_RealType >::reset () [inline]`

Resets the distribution state.

Definition at line 2463 of file random.h.

The documentation for this class was generated from the following files:

- [random.h](#)
- [random.tcc](#)

## 5.400 `std::cauchy_distribution<_RealType>::param_type` Struct Reference

- static `int_type` **to\_int\_type** (`const char_type &__c`)

### 5.401.1 Detailed Description

```
template<class _CharT> struct std::char_traits< _CharT >
```

Basis for explicit traits specializations.

**Note:**

For any given actual character type, this definition is probably wrong. Since this is just a thin wrapper around [\\_\\_gnu\\_cxx::char\\_traits](#), it is possible to achieve a more appropriate definition by specializing [\\_\\_gnu\\_cxx::char\\_traits](#).

See <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt05ch13s03.html> for advice on how to make use of this class for *unusual* character types. Also, check out [include/ext/pod\\_char\\_traits.h](#).

Definition at line 231 of file `char_traits.h`.

The documentation for this struct was generated from the following file:

- [char\\_traits.h](#)

## 5.405 `std::chi_squared_distribution<_RealType>` Class Template Reference 2391

### 5.405.1 Detailed Description

`template<typename _RealType = double> class std::chi_squared_distribution<_RealType>`

A `chi_squared_distribution` random number distribution. The formula for the normal probability mass function is  $p(x|n) = \frac{x^{(n/2)-1} e^{-x/2}}{\Gamma(n/2) 2^{n/2}}$

Definition at line 2278 of file `random.h`.

### 5.405.2 Member Typedef Documentation

**5.405.2.1** `template<typename _RealType = double> typedef _RealType std::chi_squared_distribution<_RealType>::result_type`

The type of the range of the distribution.

Definition at line 2285 of file `random.h`.

### 5.405.3 Member Function Documentation

**5.405.3.1** `template<typename _RealType = double> result_type std::chi_squared_distribution<_RealType>::max () const [inline]`

Returns the least upper bound value of the distribution.

Definition at line 2354 of file `random.h`.

**5.405.3.2** `template<typename _RealType = double> result_type std::chi_squared_distribution<_RealType>::min () const [inline]`

Returns the greatest lower bound value of the distribution.

Definition at line 2347 of file `random.h`.

**5.405.3.3** `template<typename _RealType = double> void std::chi_squared_distribution<_RealType>::param (const param_type & __param) [inline]`

Sets the parameter `set` of the distribution.

**Parameters:**

*\_\_param* The new parameter [set](#) of the distribution.

Definition at line 2340 of file random.h.

**5.405.3.4** `template<typename _RealType = double> param_type  
std::chi_squared_distribution<_RealType >::param () const  
[inline]`

Returns the parameter [set](#) of the distribution.

Definition at line 2332 of file random.h.

**5.405.3.5** `template<typename _RealType = double> void  
std::chi_squared_distribution<_RealType >::reset () [inline]`

Resets the distribution state.

Definition at line 2318 of file random.h.

References `std::gamma_distribution<_RealType >::reset()`.

**5.405.4 Friends And Related Function Documentation**

**5.405.4.1** `template<typename _RealType = double> template<typename  
_RealType1 , typename _CharT , typename _Traits >  
std::basic_ostream<_CharT, _Traits>& operator<<  
(std::basic_ostream<_CharT, _Traits > &, const  
std::chi_squared_distribution<_RealType1 > &) [friend]`

Inserts a `chi_squared_distribution` random number distribution `__x` into the output stream `__os`.

**Parameters:**

*\_\_os* An output stream.

*\_\_x* A `chi_squared_distribution` random number distribution.

**Returns:**

The output stream with the state of `__x` inserted or in an error state.

## 5.405 std::chi\_squared\_distribution<\_RealType> Class Template Reference 2393

**5.405.4.2** `template<typename _RealType = double> template<typename _RealType1, typename _CharT, typename _Traits> std::basic_istream<_CharT, _Traits>& operator>>(std::basic_istream<_CharT, _Traits> &, std::chi_squared_distribution<_RealType1> &) [friend]`

Extracts a `chi_squared_distribution` random number distribution `__x` from the input stream `__is`.

### Parameters:

`__is` An input stream.

`__x` A `chi_squared_distribution` random number generator engine.

### Returns:

The input stream with `__x` extracted or in an error state.

### 5.412.1 Detailed Description

`template<typename _InternT, typename _ExternT, typename _StateT> class std::codecvt<_InternT, _ExternT, _StateT >`

Primary class template [codecvt](#).

NB: Generic, mostly useless implementation.

Definition at line 275 of file `codecvt.h`.

### 5.412.2 Member Function Documentation

**5.412.2.1** `template<typename _InternT, typename _ExternT, typename _StateT > virtual result std::codecvt<_InternT, _ExternT, _StateT >::do_out (state_type & __state, const intern_type * __from, const intern_type * __from_end, const intern_type *& __from_next, extern_type * __to, extern_type * __to_end, extern_type *& __to_next) const` [`protected`, `virtual`]

Convert from internal to external character [set](#). Converts input string of `intern_type` to output string of `extern_type`. This function is a hook for derived classes to change the value returned.

#### See also:

- [out](#) for more information.

Implements `std::__codecvt_abstract_base<_InternT, _ExternT, _StateT >`.

```
5.412.2.2 template<typename _InternT, typename _ExternT, typename
_StateT> result std::_codecvt_abstract_base< _InternT, _ExternT,
_StateT >::in (state_type & __state, const extern_type * __from,
const extern_type * __from_end, const extern_type *& __from_next,
intern_type * __to, intern_type * __to_end, intern_type *&
__to_next) const [inline, inherited]
```

Convert from external to internal character [set](#). Converts input string of `extern_type` to output string of `intern_type`. This is analogous to `mbsrtowcs`. It does this by calling `codecvt::do_in`.

The source and destination character sets are determined by the facet's [locale](#), internal and external types.

The characters in `[from,from_end)` are converted and written to `[to,to_end)`. `from_next` and `to_next` are [set](#) to point to the character following the last successfully converted character, respectively. If the result needed no conversion, `from_next` and `to_next` are not affected.

The `state` argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how `state` is used.

The result returned is a member of `codecvt_base::result`. If all the input is converted, returns `codecvt_base::ok`. If no conversion is necessary, returns `codecvt_base::noconv`. If the input ends early or there is insufficient space in the output, returns `codecvt_base::partial`. Otherwise the conversion failed and `codecvt_base::error` is returned.

#### Parameters:

*state* Persistent conversion state data.

*from* Start of input.

*from\_end* End of input.

*from\_next* Returns start of unconverted data.

*to* Start of output buffer.

*to\_end* End of output buffer.

*to\_next* Returns start of unused output area.

#### Returns:

`codecvt_base::result`.

Definition at line 195 of file `codecvt.h`.

Referenced by `std::basic_filebuf< _CharT, _Traits >::underflow()`.

## 5.412 `std::codecvt<_InternT, _ExternT, _StateT >` Class Template Reference 2405

**5.412.2.3** `template<typename _InternT, typename _ExternT, typename _StateT> result std::_codecvt_abstract_base<_InternT, _ExternT, _StateT >::out (state_type & __state, const intern_type * __from, const intern_type * __from_end, const intern_type *& __from_next, extern_type * __to, extern_type * __to_end, extern_type *& __to_next) const` [`inline`, `inherited`]

Convert from internal to external character set. Converts input string of `intern_type` to output string of `extern_type`. This is analogous to `wcsrtombs`. It does this by calling `codecvt::do_out`.

The source and destination character sets are determined by the facet's `locale`, internal and external types.

The characters in `[from,from_end)` are converted and written to `[to,to_end)`. `from_next` and `to_next` are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, `from_next` and `to_next` are not affected.

The `state` argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how `state` is used.

The result returned is a member of `codecvt_base::result`. If all the input is converted, returns `codecvt_base::ok`. If no conversion is necessary, returns `codecvt_base::noconv`. If the input ends early or there is insufficient space in the output, returns `codecvt_base::partial`. Otherwise the conversion failed and `codecvt_base::error` is returned.

### Parameters:

- state* Persistent conversion state data.
- from* Start of input.
- from\_end* End of input.
- from\_next* Returns start of unconverted data.
- to* Start of output buffer.
- to\_end* End of output buffer.
- to\_next* Returns start of unused output area.

### Returns:

`codecvt_base::result`.

Definition at line 115 of file `codecvt.h`.

```
5.412.2.4 template<typename _InternT, typename _ExternT, typename
_StateT> result std::_codecvt_abstract_base< _InternT,
_ExternT, _StateT >::unshift (state_type & __state, extern_type
* __to, extern_type * __to_end, extern_type *& __to_next) const
[inline, inherited]
```

Reset conversion state. Writes characters to output that would restore *state* to initial conditions. The idea is that if a partial conversion occurs, then the converting the characters written by this function would leave the state in initial conditions, rather than partial conversion state. It does this by calling `codecvt::do_unshift()`.

For example, if 4 external characters always converted to 1 internal character, and input to `in()` had 6 external characters with state saved, this function would write two characters to the output and `set` the state to initialized conditions.

The source and destination character sets are determined by the facet's `locale`, internal and external types.

The result returned is a member of `codecvt_base::result`. If the state could be reset and data written, returns `codecvt_base::ok`. If no conversion is necessary, returns `codecvt_base::noconv`. If the output has insufficient space, returns `codecvt_base::partial`. Otherwise the reset failed and `codecvt_base::error` is returned.

**Parameters:**

- state* Persistent conversion state data.
- to* Start of output buffer.
- to\_end* End of output buffer.
- to\_next* Returns start of unused output area.

**Returns:**

`codecvt_base::result`.

Definition at line 154 of file `codecvt.h`.

### 5.414.1 Detailed Description

`template<> class std::codecvt< char, char, mbstate_t >`

class `codecvt<char, char, mbstate_t>` specialization.

Definition at line 337 of file `codecvt.h`.

## 5.414.2 Member Function Documentation

**5.414.2.1** virtual result std::codecvt< char, char, mbstate\_t >::do\_out  
 (state\_type & \_\_state, const intern\_type \* \_\_from, const intern\_type  
 \* \_\_from\_end, const intern\_type \*& \_\_from\_next, extern\_type \*  
 \_\_to, extern\_type \* \_\_to\_end, extern\_type \*& \_\_to\_next) const  
 [protected, virtual]

Convert from internal to external character set. Converts input string of intern\_type to output string of extern\_type. This function is a hook for derived classes to change the value returned.

### See also:

[out](#) for more information.

Implements [std::\\_\\_codecvt\\_abstract\\_base< char, char, mbstate\\_t >](#).

**5.414.2.2** result std::\_\_codecvt\_abstract\_base< char , char , mbstate\_t >::in  
 (state\_type & \_\_state, const extern\_type \* \_\_from, const extern\_type  
 \* \_\_from\_end, const extern\_type \*& \_\_from\_next, intern\_type \* \_\_to,  
 intern\_type \* \_\_to\_end, intern\_type \*& \_\_to\_next) const [inline,  
 inherited]

Convert from external to internal character set. Converts input string of extern\_type to output string of intern\_type. This is analogous to mbsrtowcs. It does this by calling codecvt::do\_in.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in [from,from\_end) are converted and written to [to,to\_end). from\_next and to\_next are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, from\_next and to\_next are not affected.

The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.

The result returned is a member of codecvt\_base::result. If all the input is converted, returns codecvt\_base::ok. If no conversion is necessary, returns codecvt\_base::noconv. If the input ends early or there is insufficient space in the output, returns codecvt\_base::partial. Otherwise the conversion failed and codecvt\_base::error is returned.

### Parameters:

*state* Persistent conversion state data.

*from* Start of input.  
*from\_end* End of input.  
*from\_next* Returns start of unconverted data.  
*to* Start of output buffer.  
*to\_end* End of output buffer.  
*to\_next* Returns start of unused output area.

**Returns:**

codecvt\_base::result.

Definition at line 195 of file codecvt.h.

**5.414.2.3 result std::\_\_codecvt\_abstract\_base< char , char , mbstate\_t >::out (state\_type & \_\_state, const intern\_type \* \_\_from, const intern\_type \* \_\_from\_end, const intern\_type \* \_\_from\_next, extern\_type \* \_\_to, extern\_type \* \_\_to\_end, extern\_type \* \_\_to\_next) const [inline, inherited]**

Convert from internal to external character set. Converts input string of intern\_type to output string of extern\_type. This is analogous to wcsrtombs. It does this by calling codecvt::do\_out.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in [from,from\_end) are converted and written to [to,to\_end). from\_next and to\_next are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, from\_next and to\_next are not affected.

The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.

The result returned is a member of codecvt\_base::result. If all the input is converted, returns codecvt\_base::ok. If no conversion is necessary, returns codecvt\_base::noconv. If the input ends early or there is insufficient space in the output, returns codecvt\_base::partial. Otherwise the conversion failed and codecvt\_base::error is returned.

**Parameters:**

*state* Persistent conversion state data.  
*from* Start of input.  
*from\_end* End of input.

*from\_next* Returns start of unconverted data.

*to* Start of output buffer.

*to\_end* End of output buffer.

*to\_next* Returns start of unused output area.

#### Returns:

`codecvt_base::result`.

Definition at line 115 of file `codecvt.h`.

**5.414.2.4** `result std::__codecvt_abstract_base< char , char , mbstate_t >::unshift (state_type & __state, extern_type * __to, extern_type * __to_end, extern_type *& __to_next) const` [`inline`, `inherited`]

Reset conversion state. Writes characters to output that would restore *state* to initial conditions. The idea is that if a partial conversion occurs, then the converting the characters written by this function would leave the state in initial conditions, rather than partial conversion state. It does this by calling `codecvt::do_unshift()`.

For example, if 4 external characters always converted to 1 internal character, and input to `in()` had 6 external characters with state saved, this function would write two characters to the output and set the state to initialized conditions.

The source and destination character sets are determined by the facet's locale, internal and external types.

The result returned is a member of `codecvt_base::result`. If the state could be reset and data written, returns `codecvt_base::ok`. If no conversion is necessary, returns `codecvt_base::noconv`. If the output has insufficient space, returns `codecvt_base::partial`. Otherwise the reset failed and `codecvt_base::error` is returned.

#### Parameters:

*state* Persistent conversion state data.

*to* Start of output buffer.

*to\_end* End of output buffer.

*to\_next* Returns start of unused output area.

#### Returns:

`codecvt_base::result`.

### 5.415.1 Detailed Description

`template<> class std::codecvt< wchar_t, char, mbstate_t >`

class `codecvt<wchar_t, char, mbstate_t>` specialization.

Definition at line 395 of file `codecvt.h`.

## 5.415.2 Member Function Documentation

**5.415.2.1** virtual result std::codecvt< wchar\_t, char, mbstate\_t >::do\_out (state\_type & \_\_state, const intern\_type \* \_\_from, const intern\_type \* \_\_from\_end, const intern\_type \*& \_\_from\_next, extern\_type \* \_\_to, extern\_type \* \_\_to\_end, extern\_type \*& \_\_to\_next) const [protected, virtual]

Convert from internal to external character set. Converts input string of intern\_type to output string of extern\_type. This function is a hook for derived classes to change the value returned.

### See also:

[out](#) for more information.

Implements [std::\\_\\_codecvt\\_abstract\\_base< wchar\\_t, char, mbstate\\_t >](#).

**5.415.2.2** result std::\_\_codecvt\_abstract\_base< wchar\_t, char, mbstate\_t >::in (state\_type & \_\_state, const extern\_type \* \_\_from, const extern\_type \* \_\_from\_end, const extern\_type \*& \_\_from\_next, intern\_type \* \_\_to, intern\_type \* \_\_to\_end, intern\_type \*& \_\_to\_next) const [inline, inherited]

Convert from external to internal character set. Converts input string of extern\_type to output string of intern\_type. This is analogous to mbsrtowcs. It does this by calling codecvt::do\_in.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in [from,from\_end) are converted and written to [to,to\_end). from\_next and to\_next are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, from\_next and to\_next are not affected.

The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.

The result returned is a member of codecvt\_base::result. If all the input is converted, returns codecvt\_base::ok. If no conversion is necessary, returns codecvt\_base::noconv. If the input ends early or there is insufficient space in the output, returns codecvt\_base::partial. Otherwise the conversion failed and codecvt\_base::error is returned.

### Parameters:

*state* Persistent conversion state data.

*from* Start of input.  
*from\_end* End of input.  
*from\_next* Returns start of unconverted data.  
*to* Start of output buffer.  
*to\_end* End of output buffer.  
*to\_next* Returns start of unused output area.

**Returns:**

codecvt\_base::result.

Definition at line 195 of file codecvt.h.

**5.415.2.3 result std::\_\_codecvt\_abstract\_base< wchar\_t , char , mbstate\_t >::out (state\_type & \_\_state, const intern\_type \* \_\_from, const intern\_type \* \_\_from\_end, const intern\_type \*& \_\_from\_next, extern\_type \* \_\_to, extern\_type \* \_\_to\_end, extern\_type \*& \_\_to\_next) const [inline, inherited]**

Convert from internal to external character set. Converts input string of intern\_type to output string of extern\_type. This is analogous to wcsrtombs. It does this by calling codecvt::do\_out.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in [from,from\_end) are converted and written to [to,to\_end). from\_next and to\_next are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, from\_next and to\_next are not affected.

The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.

The result returned is a member of codecvt\_base::result. If all the input is converted, returns codecvt\_base::ok. If no conversion is necessary, returns codecvt\_base::noconv. If the input ends early or there is insufficient space in the output, returns codecvt\_base::partial. Otherwise the conversion failed and codecvt\_base::error is returned.

**Parameters:**

*state* Persistent conversion state data.  
*from* Start of input.  
*from\_end* End of input.

*from\_next* Returns start of unconverted data.

*to* Start of output buffer.

*to\_end* End of output buffer.

*to\_next* Returns start of unused output area.

**Returns:**

`codecvt_base::result`.

Definition at line 115 of file `codecvt.h`.

**5.415.2.4** `result std::__codecvt_abstract_base< wchar_t , char , mbstate_t >::unshift (state_type & __state, extern_type * __to, extern_type * __to_end, extern_type *& __to_next) const` [`inline`, `inherited`]

Reset conversion state. Writes characters to output that would restore *state* to initial conditions. The idea is that if a partial conversion occurs, then the converting the characters written by this function would leave the state in initial conditions, rather than partial conversion state. It does this by calling `codecvt::do_unshift()`.

For example, if 4 external characters always converted to 1 internal character, and input to `in()` had 6 external characters with state saved, this function would write two characters to the output and set the state to initialized conditions.

The source and destination character sets are determined by the facet's locale, internal and external types.

The result returned is a member of `codecvt_base::result`. If the state could be reset and data written, returns `codecvt_base::ok`. If no conversion is necessary, returns `codecvt_base::noconv`. If the output has insufficient space, returns `codecvt_base::partial`. Otherwise the reset failed and `codecvt_base::error` is returned.

**Parameters:**

*state* Persistent conversion state data.

*to* Start of output buffer.

*to\_end* End of output buffer.

*to\_next* Returns start of unused output area.

**Returns:**

`codecvt_base::result`.

#### 5.418.1 Detailed Description

`template<typename _CharT> class std::collate<_CharT>`

Facet for localized string comparison. This facet encapsulates the code to compare strings in a localized manner.

The `collate` template uses protected virtual functions to provide the actual results. The public accessors forward the call to the virtual functions. These virtual functions are hooks for developers to implement the behavior they require from the `collate` facet.

Definition at line 610 of file `locale_classes.h`.

## 5.418.2 Member Typedef Documentation

### 5.418.2.1 `template<typename _CharT> typedef _CharT std::collate< _CharT >::char_type`

Public typedefs.

Reimplemented in `std::collate_byname< _CharT >`.

Definition at line 616 of file `locale_classes.h`.

### 5.418.2.2 `template<typename _CharT> typedef basic_string< _CharT > std::collate< _CharT >::string_type`

Public typedefs.

Reimplemented in `std::collate_byname< _CharT >`.

Definition at line 617 of file `locale_classes.h`.

## 5.418.3 Constructor & Destructor Documentation

### 5.418.3.1 `template<typename _CharT> std::collate< _CharT >::collate (size_t __refs = 0) [inline, explicit]`

Constructor performs initialization. This is the constructor provided by the standard.

#### Parameters:

*refs* Passed to the base facet class.

Definition at line 637 of file `locale_classes.h`.

### 5.418.3.2 `template<typename _CharT> std::collate< _CharT >::collate (__c_locale __cloc, size_t __refs = 0) [inline, explicit]`

Internal constructor. Not for general use. This is a constructor for use by the library itself to `set` up new locales.

**Parameters:**

- oloc* The C locale.
- refs* Passed to the base facet class.

Definition at line 651 of file locale\_classes.h.

**5.418.3.3** `template<typename _CharT> virtual std::collate<_CharT>::~~collate() [inline, protected, virtual]`

Destructor.

Definition at line 714 of file locale\_classes.h.

**5.418.4 Member Function Documentation**

**5.418.4.1** `template<typename _CharT> int std::collate<_CharT>::compare(const _CharT * __lo1, const _CharT * __hi1, const _CharT * __lo2, const _CharT * __hi2) const [inline]`

Compare two strings. This function compares two strings and returns the result by calling `collate::do_compare()`.

**Parameters:**

- lo1* Start of string 1.
- hi1* End of string 1.
- lo2* Start of string 2.
- hi2* End of string 2.

**Returns:**

- 1 if string1 > string2, -1 if string1 < string2, else 0.

Definition at line 668 of file locale\_classes.h.

**5.418.4.2** `template<typename _CharT> int std::collate<_CharT>::do_compare(const _CharT * __lo1, const _CharT * __hi1, const _CharT * __lo2, const _CharT * __hi2) const [inline, protected, virtual]`

Compare two strings. This function is a hook for derived classes to change the value returned.

**See also:**

[compare\(\)](#).

**Parameters:**

*lo1* Start of string 1.

*hi1* End of string 1.

*lo2* Start of string 2.

*hi2* End of string 2.

**Returns:**

1 if string1 > string2, -1 if string1 < string2, else 0.

Definition at line 134 of file locale\_classes.tcc.

References `std::basic_string<_CharT, _Traits, _Alloc>::c_str()`, `std::basic_string<_CharT, _Traits, _Alloc>::data()`, and `std::basic_string<_CharT, _Traits, _Alloc>::length()`.

**5.418.4.3** `template<typename _CharT> long std::collate<_CharT>::do_hash(const _CharT * __lo, const _CharT * __hi) const [inline, protected, virtual]`

Return [hash](#) of a string. This function computes and returns a [hash](#) on the input string. This function is a hook for derived classes to change the value returned.

**Parameters:**

*lo* Start of string.

*hi* End of string.

**Returns:**

Hash value.

Definition at line 229 of file locale\_classes.tcc.

**5.418.4.4** `template<typename _CharT> collate<_CharT>::string_type std::collate<_CharT>::do_transform(const _CharT * __lo, const _CharT * __hi) const [inline, protected, virtual]`

Transform string to comparable form. This function is a hook for derived classes to change the value returned.

**Parameters:**

*lo1* Start of string 1.

*hi1* End of string 1.

*lo2* Start of string 2.

*hi2* End of string 2.

**Returns:**

1 if string1 > string2, -1 if string1 < string2, else 0.

Definition at line 173 of file locale\_classes.tcc.

References `std::basic_string<_CharT, _Traits, _Alloc>::append()`, `std::basic_string<_CharT, _Traits, _Alloc>::c_str()`, `std::basic_string<_CharT, _Traits, _Alloc>::data()`, `std::basic_string<_CharT, _Traits, _Alloc>::length()`, and `std::basic_string<_CharT, _Traits, _Alloc>::push_back()`.

**5.418.4.5** `template<typename _CharT> long std::collate<_CharT>::hash`  
`(const _CharT * __lo, const _CharT * __hi) const [inline]`

Return [hash](#) of a string. This function computes and returns a [hash](#) on the input string. It does so by returning `collate::do_hash()`.

**Parameters:**

*lo* Start of string.

*hi* End of string.

**Returns:**

Hash value.

Definition at line 701 of file locale\_classes.h.

**5.418.4.6** `template<typename _CharT> string_type std::collate<_CharT>`  
`>::transform (const _CharT * __lo, const _CharT * __hi) const`  
`[inline]`

Transform string to comparable form. This function is a wrapper for `strxfrm` functionality. It takes the input string and returns a modified string that can be directly compared to other transformed strings. In the [C locale](#), this function just returns a copy of the input string. In some other locales, it may replace two chars with one, change a char for another, etc. It does so by returning `collate::do_transform()`.

**Parameters:**

*lo* Start of string.

*hi* End of string.

**Returns:**

Transformed string\_type.

Definition at line 687 of file locale\_classes.h.

Referenced by std::regex\_traits< \_Ch\_type >::transform().

## 5.418.5 Member Data Documentation

### 5.418.5.1 `template<typename _CharT> locale::id std::collate< _CharT >::id` `[inline, static]`

Numpunct facet id.

Definition at line 627 of file locale\_classes.h.

The documentation for this class was generated from the following files:

- [locale\\_classes.h](#)
- [locale\\_classes.tcc](#)

## 5.419 `std::collate_byname<_CharT>` Class Template Reference

class `collate_byname` [22.2.4.2]. Inheritance diagram for `std::collate_byname<_CharT>`:

### Public Types

- typedef `_CharT` [char\\_type](#)
- typedef `basic_string<_CharT>` [string\\_type](#)

### Public Member Functions

- **`collate_byname`** (`const char *__s`, `size_t __refs=0`)
- `template<>`  
**`_M_compare`** (`const wchar_t*`, `const wchar_t*`) `const throw()`

### 5.419.1 Detailed Description

`template<typename _CharT> class std::collate_byname< _CharT >`

class [collate\\_byname](#) [22.2.4.2].

Definition at line 786 of file `locale_classes.h`.

## 5.419.2 Member Typedef Documentation

### 5.419.2.1 `template<typename _CharT > typedef _CharT std::collate_byname< _CharT >::char_type`

Public typedefs.

Reimplemented from [std::collate< \\_CharT >](#).

Definition at line 791 of file locale\_classes.h.

### 5.419.2.2 `template<typename _CharT > typedef basic_string<_CharT> std::collate_byname< _CharT >::string_type`

Public typedefs.

Reimplemented from [std::collate< \\_CharT >](#).

Definition at line 792 of file locale\_classes.h.

## 5.419.3 Member Function Documentation

### 5.419.3.1 `template<typename _CharT> int std::collate< _CharT >::compare (const _CharT * __lo1, const _CharT * __hi1, const _CharT * __lo2, const _CharT * __hi2) const [inline, inherited]`

Compare two strings. This function compares two strings and returns the result by calling [collate::do\\_compare\(\)](#).

#### Parameters:

*lo1* Start of string 1.

*hi1* End of string 1.

*lo2* Start of string 2.

*hi2* End of string 2.

#### Returns:

1 if string1 > string2, -1 if string1 < string2, else 0.

Definition at line 668 of file locale\_classes.h.

```
5.419.3.2 template<typename _CharT> int std::collate< _CharT
>::do_compare (const _CharT * __lo1, const _CharT * __hi1,
const _CharT * __lo2, const _CharT * __hi2) const [inline,
protected, virtual, inherited]
```

Compare two strings. This function is a hook for derived classes to change the value returned.

**See also:**

[compare\(\)](#).

**Parameters:**

*lo1* Start of string 1.

*hi1* End of string 1.

*lo2* Start of string 2.

*hi2* End of string 2.

**Returns:**

1 if string1 > string2, -1 if string1 < string2, else 0.

Definition at line 134 of file locale\_classes.tcc.

References `std::basic_string< _CharT, _Traits, _Alloc >::c_str()`, `std::basic_string< _CharT, _Traits, _Alloc >::data()`, and `std::basic_string< _CharT, _Traits, _Alloc >::length()`.

```
5.419.3.3 template<typename _CharT> long std::collate< _CharT >::do_hash
(const _CharT * __lo, const _CharT * __hi) const [inline,
protected, virtual, inherited]
```

Return [hash](#) of a string. This function computes and returns a [hash](#) on the input string. This function is a hook for derived classes to change the value returned.

**Parameters:**

*lo* Start of string.

*hi* End of string.

**Returns:**

Hash value.

Definition at line 229 of file locale\_classes.tcc.

**5.419.3.4** `template<typename _CharT> collate< _CharT >::string_type  
std::collate< _CharT >::do_transform(const _CharT * __lo, const  
_CharT * __hi) const [inline, protected, virtual,  
inherited]`

Transform string to comparable form. This function is a hook for derived classes to change the value returned.

**Parameters:**

*lo1* Start of string 1.

*hi1* End of string 1.

*lo2* Start of string 2.

*hi2* End of string 2.

**Returns:**

1 if string1 > string2, -1 if string1 < string2, else 0.

Definition at line 173 of file locale\_classes.tcc.

References `std::basic_string< _CharT, _Traits, _Alloc >::append()`, `std::basic_string< _CharT, _Traits, _Alloc >::c_str()`, `std::basic_string< _CharT, _Traits, _Alloc >::data()`, `std::basic_string< _CharT, _Traits, _Alloc >::length()`, and `std::basic_string< _CharT, _Traits, _Alloc >::push_back()`.

**5.419.3.5** `template<typename _CharT> long std::collate< _CharT >::hash  
(const _CharT * __lo, const _CharT * __hi) const [inline,  
inherited]`

Return [hash](#) of a string. This function computes and returns a [hash](#) on the input string. It does so by returning `collate::do_hash()`.

**Parameters:**

*lo* Start of string.

*hi* End of string.

**Returns:**

Hash value.

Definition at line 701 of file locale\_classes.h.

**5.419.3.6** `template<typename _CharT> string_type std::collate< _CharT >::transform (const _CharT * __lo, const _CharT * __hi) const`  
`[inline, inherited]`

Transform string to comparable form. This function is a wrapper for `strxfrm` functionality. It takes the input string and returns a modified string that can be directly compared to other transformed strings. In the C [locale](#), this function just returns a copy of the input string. In some other locales, it may replace two chars with one, change a char for another, etc. It does so by returning [collate::do\\_transform\(\)](#).

**Parameters:**

*lo* Start of string.

*hi* End of string.

**Returns:**

Transformed `string_type`.

Definition at line 687 of file `locale_classes.h`.

Referenced by `std::regex_traits< _Ch_type >::transform()`.

## 5.419.4 Member Data Documentation

**5.419.4.1** `template<typename _CharT> locale::id std::collate< _CharT >::id`  
`[inline, static, inherited]`

Numpunct facet id.

Definition at line 627 of file `locale_classes.h`.

The documentation for this class was generated from the following file:

- [locale\\_classes.h](#)

## 5.420 `std::complex< _Tp >` Struct Template Reference

`complex< _Tp >` & `operator=` (const `complex< _Up >` &)
- `complex< _Tp >` & `operator=` (const `_Tp` &)
- void `real` (`_Tp` \_\_val)
- `_Tp` `real` () const

### 5.420.1 Detailed Description

`template<typename _Tp> struct std::complex< _Tp >`

Template to represent `complex` numbers.

Specializations for float, double, and long double are part of the library. Results with any other type are not guaranteed.

#### Parameters:

- *`Tp`* Type of real and imaginary values.

Definition at line 122 of file `complex`.

## 5.420.2 Member Typedef Documentation

### 5.420.2.1 `template<typename _Tp> typedef _Tp std::complex< _Tp >::value_type`

Value typedef.

Definition at line 125 of file `complex`.

## 5.420.3 Constructor & Destructor Documentation

### 5.420.3.1 `template<typename _Tp> std::complex< _Tp >::complex (const _Tp & __r = _Tp(), const _Tp & __i = _Tp()) [inline]`

Default constructor. First parameter is `x`, second parameter is `y`. Unspecified parameters default to 0.

Definition at line 129 of file `complex`.

### 5.420.3.2 `template<typename _Tp> template<typename _Up > std::complex< _Tp >::complex (const complex< _Up > & __z) [inline]`

Copy constructor.

Definition at line 136 of file `complex`.

## 5.420.4 Member Function Documentation

### 5.420.4.1 `template<typename _Tp> complex<_Tp>& std::complex< _Tp >::operator+=( const _Tp & __t) [inline]`

Add `t` to this `complex` number.

Definition at line 179 of file `complex`.

### 5.420.4.2 `template<typename _Tp> complex<_Tp>& std::complex< _Tp >::operator-= (const _Tp & __t) [inline]`

Subtract `t` from this `complex` number.

Definition at line 188 of file `complex`.

The documentation for this struct was generated from the following file:

- [complex](#)

## 5.421 `std::condition_variable` Class Reference

[condition\\_variable](#)

### Public Types

## 5.424 `std::const_mem_fun1_ref_t<_Ret, _Tp, _Arg>` Class Template Reference

One of the [adaptors for member pointers](#). Inheritance diagram for `std::const_mem_fun1_ref_t<_Ret, _Tp, _Arg>`:

### Public Types

- typedef `_Tp` [first\\_argument\\_type](#)
- typedef `_Ret` [result\\_type](#)
- typedef `_Arg` [second\\_argument\\_type](#)

### Public Member Functions

- `const_mem_fun1_ref_t` (`_Ret`(`_Tp::*_pf`)(`_Arg`) `const`)
- `_Ret operator()` (`const _Tp &__r`, `_Arg __x`) `const`

#### 5.424.1 Detailed Description

`template<typename _Ret, typename _Tp, typename _Arg> class std::const_mem_fun1_ref_t<_Ret, _Tp, _Arg>`

One of the [adaptors for member pointers](#).

Definition at line 650 of file `stl_function.h`.

## 5.424.2 Member Typedef Documentation

**5.424.2.1** `typedef _Tp std::binary_function< _Tp, _Arg, _Ret >::first_argument_type [inherited]`

the type of the first argument (no surprises here)

Definition at line 114 of file `stl_function.h`.

**5.424.2.2** `typedef _Ret std::binary_function< _Tp, _Arg, _Ret >::result_type [inherited]`

type of the return type

Definition at line 118 of file `stl_function.h`.

**5.424.2.3** `typedef _Arg std::binary_function< _Tp, _Arg, _Ret >::second_argument_type [inherited]`

the type of the second argument

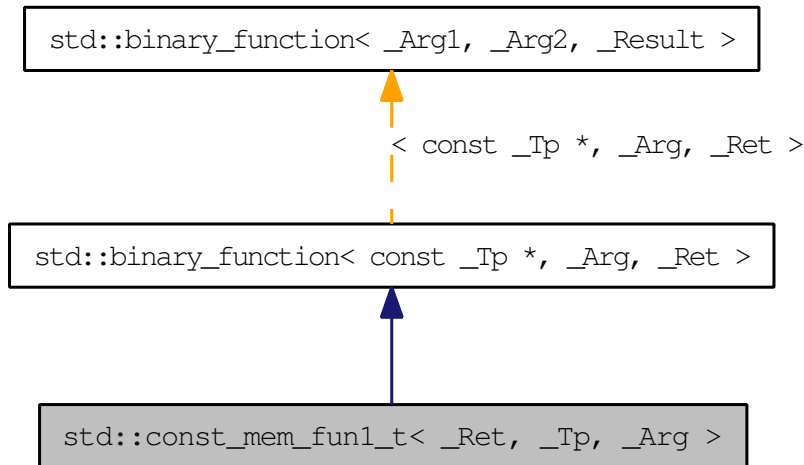

Definition at line 117 of file `stl_function.h`.

The documentation for this class was generated from the following file:

- [stl\\_function.h](#)

## 5.425 `std::const_mem_fun1_t< _Ret, _Tp, _Arg >` Class Template Reference

One of the [adaptors for member pointers](#). Inheritance diagram for `std::const_mem_fun1_t< _Ret, _Tp, _Arg >`:

### Public Types

- typedef `const_Tp *` [first\\_argument\\_type](#)
- typedef `_Ret` [result\\_type](#)
- typedef `_Arg` [second\\_argument\\_type](#)

### Public Member Functions

- `const_mem_fun1_t` (`_Ret`(`_Tp::*_pf`)(`_Arg`) `const`)
- `_Ret operator()` (`const_Tp *_p`, `_Arg __x`) `const`

#### 5.425.1 Detailed Description

`template<typename _Ret, typename _Tp, typename _Arg> class std::const_mem_fun1_t< _Ret, _Tp, _Arg >`

One of the [adaptors for member pointers](#).

Definition at line 614 of file `stl_function.h`.

## 5.425.2 Member Typedef Documentation

**5.425.2.1** `typedef const_Tp * std::binary_function< const_Tp *, _Arg , _Ret >::first_argument_type [inherited]`

the type of the first argument (no surprises here)

Definition at line 114 of file `stl_function.h`.

**5.425.2.2** `typedef _Ret std::binary_function< const_Tp *, _Arg , _Ret >::result_type [inherited]`

type of the return type

Definition at line 118 of file `stl_function.h`.

**5.425.2.3** `typedef _Arg std::binary_function< const_Tp *, _Arg , _Ret >::second_argument_type [inherited]`

the type of the second argument

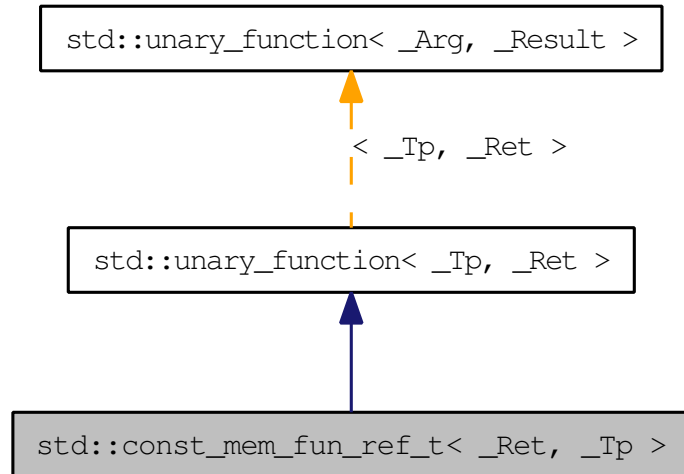

Definition at line 117 of file `stl_function.h`.

The documentation for this class was generated from the following file:

- [stl\\_function.h](#)

## 5.426 `std::const_mem_fun_ref_t<_Ret, _Tp>` Class Template Reference

One of the [adaptors for member pointers](#). Inheritance diagram for `std::const_mem_fun_ref_t<_Ret, _Tp>`:

### Public Types

- typedef `_Tp` [argument\\_type](#)
- typedef `_Ret` [result\\_type](#)

### Public Member Functions

- `const_mem_fun_ref_t` (`_Ret`(`_Tp`::\*`__pf`)() const)
- `_Ret operator()` (const `_Tp` &`__r`) const

#### 5.426.1 Detailed Description

```
template<typename _Ret, typename _Tp> class std::const_mem_fun_ref_t<_Ret, _Tp>
```

One of the [adaptors for member pointers](#).

Definition at line 578 of file `stl_function.h`.

## 5.426.2 Member Typedef Documentation

### 5.426.2.1 `typedef _Tp std::unary_function< _Tp , _Ret >::argument_type` [`inherited`]

`argument_type` is the type of the argument (no surprises here)

Definition at line 102 of file `stl_function.h`.

### 5.426.2.2 `typedef _Ret std::unary_function< _Tp , _Ret >::result_type` [`inherited`]

`result_type` is the return type

Definition at line 105 of file `stl_function.h`.

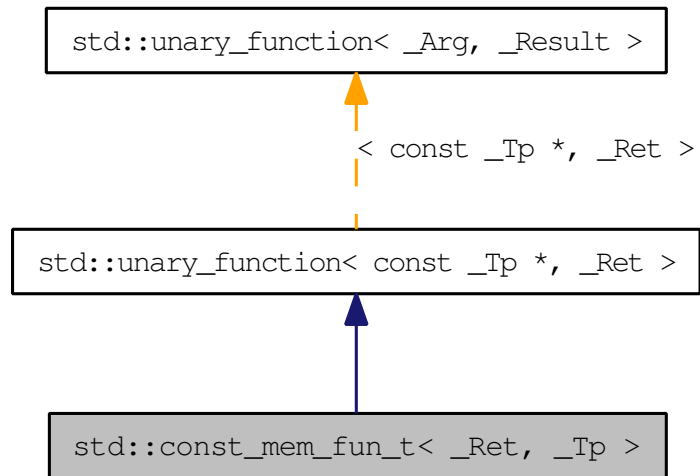

The documentation for this class was generated from the following file:

- [stl\\_function.h](#)

## 5.427 `std::const_mem_fun_t<_Ret, _Tp>` Class Template Reference

One of the [adaptors for member pointers](#). Inheritance diagram for `std::const_mem_fun_t<_Ret, _Tp>`:

### Public Types

- typedef `const _Tp *` [argument\\_type](#)
- typedef `_Ret` [result\\_type](#)

### Public Member Functions

- `const_mem_fun_t(_Ret(_Tp::*_pf)() const)`
- `_Ret operator() (const _Tp *_p) const`

#### 5.427.1 Detailed Description

```
template<typename _Ret, typename _Tp> class std::const_mem_fun_t<_Ret,
_Tp>
```

One of the [adaptors for member pointers](#).

Definition at line 542 of file `stl_function.h`.

## 5.427.2 Member Typedef Documentation

### 5.427.2.1 `typedef const _Tp * std::unary_function< const _Tp * , _Ret >::argument_type [inherited]`

`argument_type` is the type of the argument (no surprises here)

Definition at line 102 of file `stl_function.h`.

### 5.427.2.2 `typedef _Ret std::unary_function< const _Tp * , _Ret >::result_type [inherited]`

`result_type` is the return type

Definition at line 105 of file `stl_function.h`.

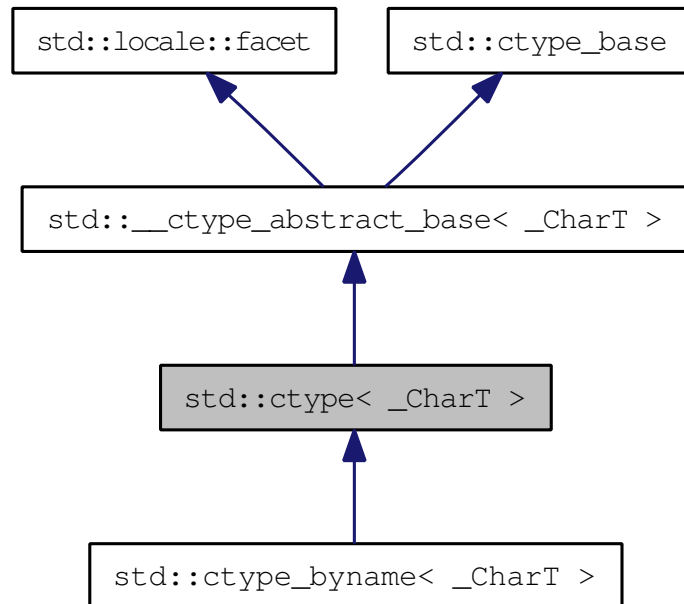

The documentation for this class was generated from the following file:

### Friends

- class `locale::_Impl`

### 5.428.1 Detailed Description

`template<typename _CharT> class std::ctype< _CharT >`

Primary class template `ctype` facet.

This template class defines classification and conversion functions for character sets. It wraps `cctype` functionality. `Ctype` gets used by streams for many I/O operations. This template provides the protected virtual functions the developer will have to replace in a derived class or specialization to make a working facet. The public functions that access them are defined in `__ctype_abstract_base`, to allow for implementation flexibility. See `ctype<wchar_t>` for an example. The functions are documented in `__ctype_abstract_base`.

Note: implementations are provided for all the protected virtual functions, but will likely not be useful.

Definition at line 604 of file `locale_facets.h`.

## 5.428.2 Member Typedef Documentation

### 5.428.2.1 `template<typename _CharT> typedef _CharT std::ctype< _CharT >::char_type`

Typedef for the template parameter.

Reimplemented from [std::\\_\\_ctype\\_abstract\\_base< \\_CharT >](#).

Definition at line 608 of file locale\_facets.h.

## 5.428.3 Member Function Documentation

### 5.428.3.1 `template<typename _CharT> virtual const char_type* std::ctype< _CharT >::do_is (const char_type * __lo, const char_type * __hi, mask * __vec) const` [`protected`, `virtual`]

Return a mask [array](#). This function finds the mask for each char\_type in the range [lo,hi) and successively writes it to vec. vec must have as many elements as the input.

[do\\_is\(\)](#) is a hook for a derived facet to change the behavior of classifying. [do\\_is\(\)](#) must always return the same result for the same input.

#### Parameters:

- lo* Pointer to start of range.
- hi* Pointer to end of range.
- vec* Pointer to an [array](#) of mask storage.

#### Returns:

*hi*.

Implements [std::\\_\\_ctype\\_abstract\\_base< \\_CharT >](#).

### 5.428.3.2 `template<typename _CharT> virtual bool std::ctype< _CharT >::do_is (mask __m, char_type __c) const` [`protected`, `virtual`]

Test char\_type classification. This function finds a mask M for *c* and compares it to mask *m*.

[do\\_is\(\)](#) is a hook for a derived facet to change the behavior of classifying. [do\\_is\(\)](#) must always return the same result for the same input.

#### Parameters:

- c* The char\_type to find the mask of.

*m* The mask to compare against.

**Returns:**

(M & m) != 0.

Implements [std::\\_\\_ctype\\_abstract\\_base<\\_CharT>](#).

**5.428.3.3** `template<typename _CharT> virtual const char_type* std::ctype<_CharT>::do_narrow (const char_type * __lo, const char_type * __hi, char __dfault, char * __dest) const [protected, virtual]`

Narrow `char_type` [array](#) to `char`. This virtual function converts each `char_type` in the range `[lo,hi)` to `char` using the simplest reasonable transformation and writes the results to the destination [array](#). For any element in the input that cannot be converted, *dfault* is used instead.

`do_narrow()` is a hook for a derived facet to change the behavior of narrowing. `do_narrow()` must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See [codecvt](#) for that.

**Parameters:**

*lo* Pointer to start of range.  
*hi* Pointer to end of range.  
*dfault* Char to use if conversion fails.  
*to* Pointer to the destination [array](#).

**Returns:**

*hi*.

Implements [std::\\_\\_ctype\\_abstract\\_base<\\_CharT>](#).

**5.428.3.4** `template<typename _CharT> virtual char std::ctype<_CharT>::do_narrow (char_type, char __dfault) const [protected, virtual]`

Narrow `char_type` to `char`. This virtual function converts the argument to `char` using the simplest reasonable transformation. If the conversion fails, *dfault* is returned instead.

`do_narrow()` is a hook for a derived facet to change the behavior of narrowing. `do_narrow()` must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See [codecvt](#) for that.

**Parameters:**

*c* The char\_type to convert.  
*dfault* Char to return if conversion fails.

**Returns:**

The converted char.

Implements [std::\\_\\_ctype\\_abstract\\_base<\\_CharT>](#).

**5.428.3.5** `template<typename _CharT> virtual const char_type* std::ctype<_CharT>::do_scan_is (mask __m, const char_type * __lo, const char_type * __hi) const [protected, virtual]`

Find char\_type matching mask. This function searches for and returns the first char\_type c in [lo,hi) for which is(m,c) is true.

[do\\_scan\\_is\(\)](#) is a hook for a derived facet to change the behavior of match searching. [do\\_is\(\)](#) must always return the same result for the same input.

**Parameters:**

*m* The mask to compare against.  
*lo* Pointer to start of range.  
*hi* Pointer to end of range.

**Returns:**

Pointer to a matching char\_type if found, else *hi*.

Implements [std::\\_\\_ctype\\_abstract\\_base<\\_CharT>](#).

**5.428.3.6** `template<typename _CharT> virtual const char_type* std::ctype<_CharT>::do_scan_not (mask __m, const char_type * __lo, const char_type * __hi) const [protected, virtual]`

Find char\_type not matching mask. This function searches for and returns a pointer to the first char\_type c of [lo,hi) for which is(m,c) is false.

[do\\_scan\\_is\(\)](#) is a hook for a derived facet to change the behavior of match searching. [do\\_is\(\)](#) must always return the same result for the same input.

**Parameters:**

*m* The mask to compare against.

*lo* Pointer to start of range.

*hi* Pointer to end of range.

**Returns:**

Pointer to a non-matching `char_type` if found, else *hi*.

Implements [std::\\_\\_ctype\\_abstract\\_base<\\_CharT>](#).

```
5.428.3.7 template<typename _CharT> virtual const char_type* std::ctype<
 _CharT >::do_tolower (char_type * __lo, const char_type * __hi)
 const [protected, virtual]
```

Convert [array](#) to lowercase. This virtual function converts each `char_type` in the range `[lo,hi)` to lowercase if possible. Other elements remain untouched.

[do\\_tolower\(\)](#) is a hook for a derived facet to change the behavior of lowercasing. [do\\_tolower\(\)](#) must always return the same result for the same input.

**Parameters:**

*lo* Pointer to start of range.

*hi* Pointer to end of range.

**Returns:**

*hi*.

Implements [std::\\_\\_ctype\\_abstract\\_base<\\_CharT>](#).

```
5.428.3.8 template<typename _CharT> virtual char_type std::ctype<_CharT
 >::do_tolower (char_type) const [protected, virtual]
```

Convert to lowercase. This virtual function converts the argument to lowercase if possible. If not possible (for example, '2'), returns the argument.

[do\\_tolower\(\)](#) is a hook for a derived facet to change the behavior of lowercasing. [do\\_tolower\(\)](#) must always return the same result for the same input.

**Parameters:**

*c* The `char_type` to convert.

**Returns:**

The lowercase `char_type` if convertible, else *c*.

Implements [std::\\_\\_ctype\\_abstract\\_base<\\_CharT>](#).

**5.428.3.9** `template<typename _CharT> virtual const char_type* std::ctype<_CharT >::do_toupper (char_type * __lo, const char_type * __hi) const [protected, virtual]`

Convert [array](#) to uppercase. This virtual function converts each `char_type` in the range `[lo,hi)` to uppercase if possible. Other elements remain untouched.

`do_toupper()` is a hook for a derived facet to change the behavior of uppercasing. `do_toupper()` must always return the same result for the same input.

**Parameters:**

- lo* Pointer to start of range.
- hi* Pointer to end of range.

**Returns:**

*hi*.

Implements `std::__ctype_abstract_base<_CharT >`.

**5.428.3.10** `template<typename _CharT> virtual char_type std::ctype<_CharT >::do_toupper (char_type) const [protected, virtual]`

Convert to uppercase. This virtual function converts the `char_type` argument to uppercase if possible. If not possible (for example, '2'), returns the argument.

`do_toupper()` is a hook for a derived facet to change the behavior of uppercasing. `do_toupper()` must always return the same result for the same input.

**Parameters:**

- c* The `char_type` to convert.

**Returns:**

The uppercase `char_type` if convertible, else *c*.

Implements `std::__ctype_abstract_base<_CharT >`.

**5.428.3.11** `template<typename _CharT> virtual const char* std::ctype<_CharT >::do_widen (const char * __lo, const char * __hi, char_type * __dest) const [protected, virtual]`

Widen `char` [array](#). This function converts each `char` in the input to `char_type` using the simplest reasonable transformation.

[do\\_widen\(\)](#) is a hook for a derived facet to change the behavior of widening. [do\\_widen\(\)](#) must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See [codecvt](#) for that.

**Parameters:**

- lo* Pointer to start range.
- hi* Pointer to end of range.
- to* Pointer to the destination [array](#).

**Returns:**

*hi*.

Implements [std::\\_\\_ctype\\_abstract\\_base< \\_CharT >](#).

**5.428.3.12** `template<typename _CharT> virtual char_type std::ctype<_CharT >::do_widen(char) const [protected, virtual]`

Widen char. This virtual function converts the char to char\_type using the simplest reasonable transformation.

[do\\_widen\(\)](#) is a hook for a derived facet to change the behavior of widening. [do\\_widen\(\)](#) must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See [codecvt](#) for that.

**Parameters:**

- c* The char to convert.

**Returns:**

The converted char\_type

Implements [std::\\_\\_ctype\\_abstract\\_base< \\_CharT >](#).

**5.428.3.13** `template<typename _CharT> const char_type* std::__ctype_abstract_base< _CharT >::is(const char_type * __lo, const char_type * __hi, mask * __vec) const [inline, inherited]`

Return a mask [array](#). This function finds the mask for each char\_type in the range [lo,hi) and successively writes it to vec. vec must have as many elements as the char [array](#). It does so by returning the value of [ctype<char\\_type>::do\\_is\(\)](#).

**Parameters:**

- lo* Pointer to start of range.
- hi* Pointer to end of range.
- vec* Pointer to an [array](#) of mask storage.

**Returns:**

*hi*.

Definition at line 178 of file locale\_facets.h.

**5.428.3.14** `template<typename _CharT> bool std::__ctype_abstract_base<_CharT >::is (mask __m, char_type __c) const [inline, inherited]`

Test *char\_type* classification. This function finds a mask *M* for *c* and compares it to mask *m*. It does so by returning the value of `ctype<char_type>::do_is()`.

**Parameters:**

- c* The *char\_type* to compare the mask of.
- m* The mask to compare against.

**Returns:**

$(M \& m) \neq 0$ .

Definition at line 161 of file locale\_facets.h.

Referenced by `std::regex_traits<_Ch_type >::isctype()`, and `std::basic_istream<_CharT, _Traits >::sentry::sentry()`.

**5.428.3.15** `template<typename _CharT> const char_type* std::__ctype_abstract_base<_CharT >::narrow (const char_type * __lo, const char_type * __hi, char __dfault, char * __to) const [inline, inherited]`

Narrow [array](#) to `char` [array](#). This function converts each *char\_type* in the input to `char` using the simplest reasonable transformation and writes the results to the destination [array](#). For any *char\_type* in the input that cannot be converted, *dfault* is used instead. It does so by returning `ctype<char_type>::do_narrow(lo, hi, dfault, to)`.

Note: this is not what you want for codepage conversions. See [codecvt](#) for that.

**Parameters:**

- lo* Pointer to start of range.

*hi* Pointer to end of range.  
*dfault* Char to use if conversion fails.  
*to* Pointer to the destination [array](#).

**Returns:**

*hi*.

Definition at line 345 of file locale\_facets.h.

**5.428.3.16** `template<typename _CharT> char std::_ctype_abstract_base<_CharT >::narrow(char_type __c, char __dfault) const [inline, inherited]`

Narrow char\_type to char. This function converts the char\_type to char using the simplest reasonable transformation. If the conversion fails, dfault is returned instead. It does so by returning ctype<char\_type>::do\_narrow(c).

Note: this is not what you want for codepage conversions. See [codecvt](#) for that.

**Parameters:**

*c* The char\_type to convert.  
*dfault* Char to return if conversion fails.

**Returns:**

The converted char.

Definition at line 323 of file locale\_facets.h.

Referenced by std::time\_put< \_CharT, \_OutIter >::put().

**5.428.3.17** `template<typename _CharT> const char_type* std::_ctype_abstract_base<_CharT >::scan_is(mask __m, const char_type * __lo, const char_type * __hi) const [inline, inherited]`

Find char\_type matching a mask. This function searches for and returns the first char\_type c in [lo,hi) for which is(m,c) is true. It does so by returning ctype<char\_type>::do\_scan\_is().

**Parameters:**

*m* The mask to compare against.

*lo* Pointer to start of range.

*hi* Pointer to end of range.

**Returns:**

Pointer to matching `char_type` if found, else *hi*.

Definition at line 194 of file `locale_facets.h`.

**5.428.3.18** `template<typename _CharT> const char_type*  
std::_ctype_abstract_base<_CharT >::scan_not (mask __m,  
const char_type * __lo, const char_type * __hi) const [inline,  
inherited]`

Find `char_type` not matching a mask. This function searches for and returns the first `char_type` `c` in `[lo,hi)` for which `is(m,c)` is false. It does so by returning `ctype<char_type>::do_scan_not()`.

**Parameters:**

*m* The mask to compare against.

*lo* Pointer to first char in range.

*hi* Pointer to end of range.

**Returns:**

Pointer to non-matching char if found, else *hi*.

Definition at line 210 of file `locale_facets.h`.

**5.428.3.19** `template<typename _CharT> const char_type*  
std::_ctype_abstract_base<_CharT >::tolower (char_type * __lo,  
const char_type * __hi) const [inline, inherited]`

Convert `array` to lowercase. This function converts each `char_type` in the range `[lo,hi)` to lowercase if possible. Other elements remain untouched. It does so by returning `ctype<char_type>::do_tolower(lo, hi)`.

**Parameters:**

*lo* Pointer to start of range.

*hi* Pointer to end of range.

**Returns:**

*hi*.

Definition at line 268 of file `locale_facets.h`.

---

**5.428.3.20** `template<typename _CharT> char_type std::__ctype_abstract_base<_CharT>::tolower(char_type __c) const [inline, inherited]`

Convert to lowercase. This function converts the argument to lowercase if possible. If not possible (for example, '2'), returns the argument. It does so by returning `ctype<char_type>::do_tolower(c)`.

**Parameters:**

*c* The `char_type` to convert.

**Returns:**

The lowercase `char_type` if convertible, else *c*.

Definition at line 253 of file `locale_facets.h`.

**5.428.3.21** `template<typename _CharT> const char_type* std::__ctype_abstract_base<_CharT>::toupper(char_type * __lo, const char_type * __hi) const [inline, inherited]`

Convert [array](#) to uppercase. This function converts each `char_type` in the range `[lo,hi)` to uppercase if possible. Other elements remain untouched. It does so by returning `ctype<char_type>::do_toupper(lo, hi)`.

**Parameters:**

*lo* Pointer to start of range.

*hi* Pointer to end of range.

**Returns:**

*hi*.

Definition at line 239 of file `locale_facets.h`.

**5.428.3.22** `template<typename _CharT> char_type std::__ctype_abstract_base<_CharT>::toupper(char_type __c) const [inline, inherited]`

Convert to uppercase. This function converts the argument to uppercase if possible. If not possible (for example, '2'), returns the argument. It does so by returning `ctype<char_type>::do_toupper()`.

**Parameters:**

*c* The char\_type to convert.

**Returns:**

The uppercase char\_type if convertible, else *c*.

Definition at line 224 of file locale\_facets.h.

**5.428.3.23** `template<typename _CharT> const char* std::__ctype_abstract_base<_CharT >::widen (const char * __lo, const char * __hi, char_type * __to) const [inline, inherited]`

Widen [array](#) to char\_type. This function converts each char in the input to char\_type using the simplest reasonable transformation. It does so by returning ctype<char\_type>::do\_widen(c).

Note: this is not what you want for codepage conversions. See [codecv](#) for that.

**Parameters:**

*lo* Pointer to start of range.

*hi* Pointer to end of range.

*to* Pointer to the destination [array](#).

**Returns:**

*hi*.

Definition at line 304 of file locale\_facets.h.

**5.428.3.24** `template<typename _CharT> char_type std::__ctype_abstract_base<_CharT >::widen (char __c) const [inline, inherited]`

Widen char to char\_type. This function converts the char argument to char\_type using the simplest reasonable transformation. It does so by returning ctype<char\_type>::do\_widen(c).

Note: this is not what you want for codepage conversions. See [codecv](#) for that.

**Parameters:**

*c* The char to convert.

**Returns:**

The converted char\_type.

Definition at line 285 of file locale\_facets.h.

Referenced by std::money\_get< \_CharT, \_InIter >::do\_get(), std::time\_put< \_CharT, \_OutIter >::do\_put(), std::money\_put< \_CharT, \_OutIter >::do\_put(), std::regex\_traits< \_Ch\_type >::isctype(), and std::operator<<().

**5.428.4 Member Data Documentation****5.428.4.1 template<typename \_CharT> locale::id std::ctype< \_CharT >::id  
[inline, static]**

The facet id for ctype<char\_type>.

### 5.429.1 Detailed Description

`template<> class std::ctype< char >`

The `ctype<char>` specialization.

This class defines classification and conversion functions for the char type. It gets used by char streams for many I/O operations. The char specialization provides a number of optimizations as well.

Definition at line 673 of file `locale_facets.h`.

### 5.429.2 Member Typedef Documentation

#### 5.429.2.1 typedef `char std::ctype< char >::char_type`

Typedef for the template parameter char.

Definition at line 678 of file `locale_facets.h`.

### 5.429.3 Constructor & Destructor Documentation

**5.429.3.1** `std::ctype< char >::ctype (const mask * __table = 0, bool __del = false, size_t __refs = 0) [explicit]`

Constructor performs initialization. This is the constructor provided by the standard.

**Parameters:**

*table* If non-zero, table is used as the per-char mask. Else `classic_table()` is used.

*del* If true, passes ownership of table to this facet.

*refs* Passed to the base facet class.

**5.429.3.2** `std::ctype< char >::ctype (__c_locale __cloc, const mask * __table = 0, bool __del = false, size_t __refs = 0) [explicit]`

Constructor performs static initialization. This constructor is used to construct the initial C `locale` facet.

**Parameters:**

*cloc* Handle to C `locale` data.

*table* If non-zero, table is used as the per-char mask.

*del* If true, passes ownership of table to this facet.

*refs* Passed to the base facet class.

**5.429.3.3** `virtual std::ctype< char >::~~ctype () [protected, virtual]`

Destructor. This function deletes `table()` if *del* was true in the constructor.

### 5.429.4 Member Function Documentation

**5.429.4.1** `static const mask* std::ctype< char >::classic_table () throw () [static]`

Returns a pointer to the C `locale` mask table.

**5.429.4.2 virtual const char\_type\* std::ctype< char >::do\_narrow (const char\_type \* \_\_lo, const char\_type \* \_\_hi, char, char \* \_\_dest) const [inline, protected, virtual]**

Narrow char [array](#) to char [array](#). This virtual function converts each char in the range [lo,hi) to char using the simplest reasonable transformation and writes the results to the destination [array](#). For any char in the input that cannot be converted, *dfault* is used instead. For an underived [ctype<char>](#) facet, the argument will be copied unchanged.

[do\\_narrow\(\)](#) is a hook for a derived facet to change the behavior of narrowing. [do\\_narrow\(\)](#) must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See [codecv](#) for that.

**Parameters:**

- lo* Pointer to start of range.
- hi* Pointer to end of range.
- dfault* Char to use if conversion fails.
- to* Pointer to the destination [array](#).

**Returns:**

*hi*.

Definition at line 1149 of file locale\_facets.h.

**5.429.4.3 virtual char std::ctype< char >::do\_narrow (char\_type \_\_c, char) const [inline, protected, virtual]**

Narrow char. This virtual function converts the char to char using the simplest reasonable transformation. If the conversion fails, *dfault* is returned instead. For an underived [ctype<char>](#) facet, *c* will be returned unchanged.

[do\\_narrow\(\)](#) is a hook for a derived facet to change the behavior of narrowing. [do\\_narrow\(\)](#) must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See [codecv](#) for that.

**Parameters:**

- c* The char to convert.
- dfault* Char to return if conversion fails.

**Returns:**

The converted char.

Definition at line 1123 of file locale\_facets.h.

**5.429.4.4** `virtual const char_type* std::ctype< char >::do_tolower (char_type * __lo, const char_type * __hi) const [protected, virtual]`

Convert [array](#) to lowercase. This virtual function converts each char in the range [lo,hi) to lowercase if possible. Other chars remain untouched.

[do\\_tolower\(\)](#) is a hook for a derived facet to change the behavior of lowercasing. [do\\_tolower\(\)](#) must always return the same result for the same input.

**Parameters:**

*lo* Pointer to first char in range.

*hi* Pointer to end of range.

**Returns:**

*hi*.

**5.429.4.5** `virtual char_type std::ctype< char >::do_tolower (char_type) const [protected, virtual]`

Convert to lowercase. This virtual function converts the char argument to lowercase if possible. If not possible (for example, '2'), returns the argument.

[do\\_tolower\(\)](#) is a hook for a derived facet to change the behavior of lowercasing. [do\\_tolower\(\)](#) must always return the same result for the same input.

**Parameters:**

*c* The char to convert.

**Returns:**

The lowercase char if convertible, else *c*.

**5.429.4.6** `virtual const char_type* std::ctype< char >::do_toupper (char_type * __lo, const char_type * __hi) const [protected, virtual]`

Convert [array](#) to uppercase. This virtual function converts each char in the range [lo,hi) to uppercase if possible. Other chars remain untouched.

[do\\_toupper\(\)](#) is a hook for a derived facet to change the behavior of uppercasing. [do\\_toupper\(\)](#) must always return the same result for the same input.

**Parameters:**

*lo* Pointer to start of range.

*hi* Pointer to end of range.

**Returns:**

*hi*.

**5.429.4.7 virtual char\_type std::ctype< char >::do\_toupper (char\_type) const [protected, virtual]**

Convert to uppercase. This virtual function converts the char argument to uppercase if possible. If not possible (for example, '2'), returns the argument.

[do\\_toupper\(\)](#) is a hook for a derived facet to change the behavior of uppercasing. [do\\_toupper\(\)](#) must always return the same result for the same input.

**Parameters:**

*c* The char to convert.

**Returns:**

The uppercase char if convertible, else *c*.

**5.429.4.8 virtual const char\* std::ctype< char >::do\_widen (const char \* \_\_lo, const char \* \_\_hi, char\_type \* \_\_dest) const [inline, protected, virtual]**

Widen char [array](#). This function converts each char in the range [lo,hi) to char using the simplest reasonable transformation. For an underived [ctype<char>](#) facet, the argument will be copied unchanged.

[do\\_widen\(\)](#) is a hook for a derived facet to change the behavior of widening. [do\\_widen\(\)](#) must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See [codecv](#) for that.

**Parameters:**

*lo* Pointer to start of range.

*hi* Pointer to end of range.

*to* Pointer to the destination [array](#).

**Returns:**

*hi*.

Definition at line 1097 of file locale\_facets.h.

**5.429.4.9 virtual char\_type std::ctype< char >::do\_widen (char \_\_c) const [inline, protected, virtual]**

Widen char. This virtual function converts the char to char using the simplest reasonable transformation. For an underived [ctype<char>](#) facet, the argument will be returned unchanged.

[do\\_widen\(\)](#) is a hook for a derived facet to change the behavior of widening. [do\\_widen\(\)](#) must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See [codecvt](#) for that.

**Parameters:**

*c* The char to convert.

**Returns:**

The converted character.

Definition at line 1074 of file locale\_facets.h.

**5.429.4.10 const char \* std::ctype< char >::is (const char \* \_\_lo, const char \* \_\_hi, mask \* \_\_vec) const [inline]**

Return a mask [array](#). This function finds the mask for each char in the range [lo, hi) and successively writes it to vec. vec must have as many elements as the char [array](#).

**Parameters:**

*lo* Pointer to start of range.

*hi* Pointer to end of range.

*vec* Pointer to an [array](#) of mask storage.

**Returns:**

*hi*.

Definition at line 46 of file ctype\_inline.h.

**5.429.4.11 bool std::ctype< char >::is (mask \_\_m, char \_\_c) const [inline]**

Test char classification. This function compares the mask table[c] to *m*.

**Parameters:**

*c* The char to compare the mask of.

*m* The mask to compare against.

**Returns:**

True if `m & table[c]` is true, false otherwise.

Definition at line 41 of file `ctype_inline.h`.

**5.429.4.12** `const char_type* std::ctype< char >::narrow (const char_type *  
__lo, const char_type * __hi, char __dfault, char * __to) const  
[inline]`

Narrow char [array](#). This function converts each char in the input to char using the simplest reasonable transformation and writes the results to the destination [array](#). For any char in the input that cannot be converted, *dfault* is used instead. For an underived `ctype<char>` facet, the argument will be copied unchanged.

This function works as if it returns `ctype<char>::do_narrow(lo, hi, dfault, to)`. `do_narrow()` must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See [codecvt](#) for that.

**Parameters:**

*lo* Pointer to start of range.

*hi* Pointer to end of range.

*dfault* Char to use if conversion fails.

*to* Pointer to the destination [array](#).

**Returns:**

*hi*.

Definition at line 955 of file `locale_facets.h`.

**5.429.4.13** `char std::ctype< char >::narrow (char_type __c, char __dfault)  
const [inline]`

Narrow char. This function converts the char to char using the simplest reasonable transformation. If the conversion fails, *dfault* is returned instead. For an underived `ctype<char>` facet, *c* will be returned unchanged.

This function works as if it returns `ctype<char>::do_narrow(c)`. `do_narrow()` must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See [codecvt](#) for that.

**Parameters:**

- c* The char to convert.
- dfault* Char to return if conversion fails.

**Returns:**

The converted character.

Definition at line 922 of file locale\_facets.h.

**5.429.4.14** `const char * std::ctype< char >::scan_is (mask __m, const char * __lo, const char * __hi) const` `[inline]`

Find char matching a mask. This function searches for and returns the first char in [lo,hi) for which is(m,char) is true.

**Parameters:**

- m* The mask to compare against.
- lo* Pointer to start of range.
- hi* Pointer to end of range.

**Returns:**

Pointer to a matching char if found, else *hi*.

Definition at line 55 of file ctype\_inline.h.

**5.429.4.15** `const char * std::ctype< char >::scan_not (mask __m, const char * __lo, const char * __hi) const` `[inline]`

Find char not matching a mask. This function searches for and returns a pointer to the first char in [lo,hi) for which is(m,char) is false.

**Parameters:**

- m* The mask to compare against.
- lo* Pointer to start of range.
- hi* Pointer to end of range.

**Returns:**

Pointer to a non-matching char if found, else *hi*.

Definition at line 65 of file ctype\_inline.h.

**5.429.4.16** `const mask* std::ctype< char >::table () const throw () [inline]`

Returns a pointer to the mask table provided to the constructor, or the default from [classic\\_table\(\)](#) if none was provided.

Definition at line 973 of file locale\_facets.h.

**5.429.4.17** `const char_type* std::ctype< char >::tolower (char_type * __lo, const char_type * __hi) const [inline]`

Convert [array](#) to lowercase. This function converts each char in the range [lo,hi) to lowercase if possible. Other chars remain untouched.

[tolower\(\)](#) acts as if it returns `ctype<char>::do_tolower(lo, hi)`. [do\\_tolower\(\)](#) must always return the same result for the same input.

**Parameters:**

*lo* Pointer to first char in range.

*hi* Pointer to end of range.

**Returns:**

*hi*.

Definition at line 844 of file locale\_facets.h.

**5.429.4.18** `char_type std::ctype< char >::tolower (char_type __c) const [inline]`

Convert to lowercase. This function converts the char argument to lowercase if possible. If not possible (for example, '2'), returns the argument.

[tolower\(\)](#) acts as if it returns `ctype<char>::do_tolower(c)`. [do\\_tolower\(\)](#) must always return the same result for the same input.

**Parameters:**

*c* The char to convert.

**Returns:**

The lowercase char if convertible, else *c*.

Definition at line 827 of file locale\_facets.h.

---

**5.429.4.19** `const char_type* std::ctype< char >::toupper (char_type * __lo, const char_type * __hi) const [inline]`

Convert [array](#) to uppercase. This function converts each char in the range [lo,hi) to uppercase if possible. Other chars remain untouched.

[toupper\(\)](#) acts as if it returns `ctype<char>::do_toupper(lo, hi)`. [do\\_toupper\(\)](#) must always return the same result for the same input.

**Parameters:**

*lo* Pointer to first char in range.

*hi* Pointer to end of range.

**Returns:**

*hi*.

Definition at line 811 of file locale\_facets.h.

**5.429.4.20** `char_type std::ctype< char >::toupper (char_type __c) const [inline]`

Convert to uppercase. This function converts the char argument to uppercase if possible. If not possible (for example, '2'), returns the argument.

[toupper\(\)](#) acts as if it returns `ctype<char>::do_toupper(c)`. [do\\_toupper\(\)](#) must always return the same result for the same input.

**Parameters:**

*c* The char to convert.

**Returns:**

The uppercase char if convertible, else *c*.

Definition at line 794 of file locale\_facets.h.

**5.429.4.21** `const char* std::ctype< char >::widen (const char * __lo, const char * __hi, char_type * __to) const [inline]`

Widen char [array](#). This function converts each char in the input to char using the simplest reasonable transformation. For an underived `ctype<char>` facet, the argument will be copied unchanged.

This function works as if it returns `ctype<char>::do_widen(c)`. `do_widen()` must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See [codecvt](#) for that.

**Parameters:**

- lo* Pointer to first char in range.
- hi* Pointer to end of range.
- to* Pointer to the destination [array](#).

**Returns:**

*hi*.

Definition at line 891 of file `locale_facets.h`.

**5.429.4.22 char\_type std::ctype< char >::widen (char \_\_c) const [inline]**

Widen char. This function converts the char to `char_type` using the simplest reasonable transformation. For an underived `ctype<char>` facet, the argument will be returned unchanged.

This function works as if it returns `ctype<char>::do_widen(c)`. `do_widen()` must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See [codecvt](#) for that.

**Parameters:**

- c* The char to convert.

**Returns:**

The converted character.

Definition at line 864 of file `locale_facets.h`.

**5.429.5 Member Data Documentation****5.429.5.1 locale::id std::ctype< char >::id [static]**

The facet id for `ctype<char>`.

Definition at line 695 of file `locale_facets.h`.

**5.429.5.2** `const size_t std::ctype< char >::table_size` [`static`]

The size of the mask table. It is `SCHAR_MAX + 1`.

Definition at line 697 of file `locale_facets.h`.

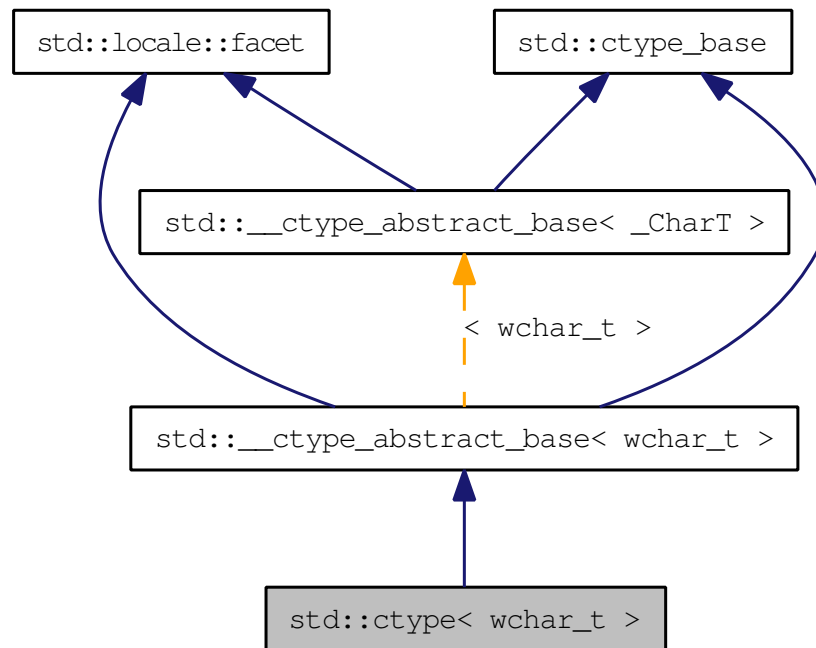

The documentation for this class was generated from the following files:

### 5.430.1 Detailed Description

`template<> class std::ctype< wchar_t >`

The `ctype<wchar_t>` specialization.

This class defines classification and conversion functions for the `wchar_t` type. It gets used by `wchar_t` streams for many I/O operations. The `wchar_t` specialization provides a number of optimizations as well. `ctype<wchar_t>` inherits its public methods from `__ctype_abstract_base<wchar_t>`.

Definition at line 1174 of file `locale_facets.h`.

## 5.430.2 Member Typedef Documentation

### 5.430.2.1 `typedef wchar_t std::ctype< wchar_t >::char_type`

Typedef for the template parameter `wchar_t`.

Reimplemented from `std::__ctype_abstract_base< wchar_t >`.

Definition at line 1179 of file `locale_facets.h`.

## 5.430.3 Constructor & Destructor Documentation

### 5.430.3.1 `std::ctype< wchar_t >::ctype (size_t __refs = 0) [explicit]`

Constructor performs initialization. This is the constructor provided by the standard.

#### Parameters:

*refs* Passed to the base facet class.

### 5.430.3.2 `std::ctype< wchar_t >::ctype (__c_locale __cloc, size_t __refs = 0) [explicit]`

Constructor performs static initialization. This constructor is used to construct the initial C `locale` facet.

#### Parameters:

*cloc* Handle to C `locale` data.

*refs* Passed to the base facet class.

### 5.430.3.3 `virtual std::ctype< wchar_t >::~~ctype () [protected, virtual]`

Destructor.

## 5.430.4 Member Function Documentation

**5.430.4.1** `virtual const char_type* std::ctype< wchar_t >::do_is (const char_type * __lo, const char_type * __hi, mask * __vec) const`  
[protected, virtual]

Return a mask [array](#). This function finds the mask for each `wchar_t` in the range `[lo,hi)` and successively writes it to `vec`. `vec` must have as many elements as the input.

`do_is()` is a hook for a derived facet to change the behavior of classifying. `do_is()` must always return the same result for the same input.

### Parameters:

*lo* Pointer to start of range.

*hi* Pointer to end of range.

*vec* Pointer to an [array](#) of mask storage.

### Returns:

*hi*.

Implements `std::__ctype_abstract_base< wchar_t >`.

**5.430.4.2** `virtual bool std::ctype< wchar_t >::do_is (mask __m, char_type __c) const`  
[protected, virtual]

Test `wchar_t` classification. This function finds a mask `M` for `c` and compares it to mask `m`.

`do_is()` is a hook for a derived facet to change the behavior of classifying. `do_is()` must always return the same result for the same input.

### Parameters:

*c* The `wchar_t` to find the mask of.

*m* The mask to compare against.

### Returns:

$(M \& m) \neq 0$ .

Implements `std::__ctype_abstract_base< wchar_t >`.

**5.430.4.3 virtual const char\_type\* std::ctype< wchar\_t >::do\_narrow (const char\_type \* \_\_lo, const char\_type \* \_\_hi, char \_\_dfault, char \* \_\_dest) const [protected, virtual]**

Narrow `wchar_t` [array](#) to `char` [array](#). This virtual function converts each `wchar_t` in the range `[lo,hi)` to `char` using the simplest reasonable transformation and writes the results to the destination [array](#). For any `wchar_t` in the input that cannot be converted, *dfault* is used instead. For an undervived [ctype<wchar\\_t>](#) facet, the argument will be copied, casting each element to `char`.

`do_narrow()` is a hook for a derived facet to change the behavior of narrowing. `do_narrow()` must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See [codecvt](#) for that.

**Parameters:**

- lo* Pointer to start of range.
- hi* Pointer to end of range.
- dfault* Char to use if conversion fails.
- to* Pointer to the destination [array](#).

**Returns:**

- hi*.

Implements `std::__ctype_abstract_base< wchar_t >`.

**5.430.4.4 virtual char std::ctype< wchar\_t >::do\_narrow (char\_type, char \_\_dfault) const [protected, virtual]**

Narrow `wchar_t` to `char`. This virtual function converts the argument to `char` using the simplest reasonable transformation. If the conversion fails, *dfault* is returned instead. For an undervived [ctype<wchar\\_t>](#) facet, *c* will be cast to `char` and returned.

`do_narrow()` is a hook for a derived facet to change the behavior of narrowing. `do_narrow()` must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See [codecvt](#) for that.

**Parameters:**

- c* The `wchar_t` to convert.
- dfault* Char to return if conversion fails.

**Returns:**

- The converted `char`.

Implements `std::__ctype_abstract_base< wchar_t >`.

**5.430.4.5** `virtual const char_type* std::ctype< wchar_t >::do_scan_is (mask __m, const char_type * __lo, const char_type * __hi) const`  
`[protected, virtual]`

Find `wchar_t` matching mask. This function searches for and returns the first `wchar_t` `c` in `[lo,hi)` for which `is(m,c)` is true.

[do\\_scan\\_is\(\)](#) is a hook for a derived facet to change the behavior of match searching. [do\\_is\(\)](#) must always return the same result for the same input.

**Parameters:**

*m* The mask to compare against.

*lo* Pointer to start of range.

*hi* Pointer to end of range.

**Returns:**

Pointer to a matching `wchar_t` if found, else *hi*.

Implements [std::\\_\\_ctype\\_abstract\\_base< wchar\\_t >](#).

**5.430.4.6** `virtual const char_type* std::ctype< wchar_t >::do_scan_not (mask __m, const char_type * __lo, const char_type * __hi) const`  
`[protected, virtual]`

Find `wchar_t` not matching mask. This function searches for and returns a pointer to the first `wchar_t` `c` of `[lo,hi)` for which `is(m,c)` is false.

[do\\_scan\\_is\(\)](#) is a hook for a derived facet to change the behavior of match searching. [do\\_is\(\)](#) must always return the same result for the same input.

**Parameters:**

*m* The mask to compare against.

*lo* Pointer to start of range.

*hi* Pointer to end of range.

**Returns:**

Pointer to a non-matching `wchar_t` if found, else *hi*.

Implements [std::\\_\\_ctype\\_abstract\\_base< wchar\\_t >](#).

**5.430.4.7** `virtual const char_type* std::ctype< wchar_t >::do_tolower`  
(`char_type * __lo`, `const char_type * __hi`) `const` [`protected`,  
`virtual`]

Convert `array` to lowercase. This virtual function converts each `wchar_t` in the range `[lo,hi)` to lowercase if possible. Other elements remain untouched.

`do_tolower()` is a hook for a derived facet to change the behavior of lowercasing. `do_tolower()` must always return the same result for the same input.

**Parameters:**

*lo* Pointer to start of range.

*hi* Pointer to end of range.

**Returns:**

*hi*.

Implements `std::__ctype_abstract_base< wchar_t >`.

**5.430.4.8** `virtual char_type std::ctype< wchar_t >::do_tolower (char_type)`  
`const` [`protected`, `virtual`]

Convert to lowercase. This virtual function converts the argument to lowercase if possible. If not possible (for example, `'2'`), returns the argument.

`do_tolower()` is a hook for a derived facet to change the behavior of lowercasing. `do_tolower()` must always return the same result for the same input.

**Parameters:**

*c* The `wchar_t` to convert.

**Returns:**

The lowercase `wchar_t` if convertible, else *c*.

Implements `std::__ctype_abstract_base< wchar_t >`.

**5.430.4.9** `virtual const char_type* std::ctype< wchar_t >::do_toupper`  
(`char_type * __lo`, `const char_type * __hi`) `const` [`protected`,  
`virtual`]

Convert `array` to uppercase. This virtual function converts each `wchar_t` in the range `[lo,hi)` to uppercase if possible. Other elements remain untouched.

[do\\_toupper\(\)](#) is a hook for a derived facet to change the behavior of uppercasing. [do\\_toupper\(\)](#) must always return the same result for the same input.

**Parameters:**

*lo* Pointer to start of range.  
*hi* Pointer to end of range.

**Returns:**

*hi*.

Implements [std::\\_\\_ctype\\_abstract\\_base< wchar\\_t >](#).

**5.430.4.10 virtual char\_type std::ctype< wchar\_t >::do\_toupper (char\_type) const [protected, virtual]**

Convert to uppercase. This virtual function converts the `wchar_t` argument to uppercase if possible. If not possible (for example, '2'), returns the argument.

[do\\_toupper\(\)](#) is a hook for a derived facet to change the behavior of uppercasing. [do\\_toupper\(\)](#) must always return the same result for the same input.

**Parameters:**

*c* The `wchar_t` to convert.

**Returns:**

The uppercase `wchar_t` if convertible, else *c*.

Implements [std::\\_\\_ctype\\_abstract\\_base< wchar\\_t >](#).

**5.430.4.11 virtual const char\* std::ctype< wchar\_t >::do\_widen (const char \* \_\_lo, const char \* \_\_hi, char\_type \* \_\_dest) const [protected, virtual]**

Widen `char` array to `wchar_t` array. This function converts each `char` in the input to `wchar_t` using the simplest reasonable transformation. For an underived [ctype<wchar\\_t>](#) facet, the argument will be copied, casting each element to `wchar_t`.

[do\\_widen\(\)](#) is a hook for a derived facet to change the behavior of widening. [do\\_widen\(\)](#) must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See [codecvt](#) for that.

**Parameters:**

*lo* Pointer to start range.

*hi* Pointer to end of range.  
*to* Pointer to the destination [array](#).

**Returns:**

*hi*.

Implements [std::\\_\\_ctype\\_abstract\\_base< wchar\\_t >](#).

**5.430.4.12 virtual char\_type std::ctype< wchar\_t >::do\_widen(char) const [protected, virtual]**

Widen char to wchar\_t. This virtual function converts the char to wchar\_t using the simplest reasonable transformation. For an underived [ctype<wchar\\_t>](#) facet, the argument will be cast to wchar\_t.

[do\\_widen\(\)](#) is a hook for a derived facet to change the behavior of widening. [do\\_widen\(\)](#) must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See [codecvt](#) for that.

**Parameters:**

*c* The char to convert.

**Returns:**

The converted wchar\_t.

Implements [std::\\_\\_ctype\\_abstract\\_base< wchar\\_t >](#).

**5.430.4.13 const char\_type\* std::\_\_ctype\_abstract\_base< wchar\_t >::is(const char\_type \* \_\_lo, const char\_type \* \_\_hi, mask \* \_\_vec) const [inline, inherited]**

Return a mask array. This function finds the mask for each char\_type in the range [lo,hi) and successively writes it to vec. vec must have as many elements as the char array. It does so by returning the value of [ctype<char\\_type>::do\\_is\(\)](#).

**Parameters:**

*lo* Pointer to start of range.  
*hi* Pointer to end of range.  
*vec* Pointer to an array of mask storage.

**Returns:**

*hi*.

Definition at line 178 of file locale\_facets.h.

**5.430.4.14** `bool std::__ctype_abstract_base< wchar_t >::is (mask __m, char_type __c) const [inline, inherited]`

Test `char_type` classification. This function finds a mask `M` for `c` and compares it to mask `m`. It does so by returning the value of `ctype<char_type>::do_is()`.

**Parameters:**

*c* The `char_type` to compare the mask of.

*m* The mask to compare against.

**Returns:**

$(M \& m) \neq 0$ .

Definition at line 161 of file locale\_facets.h.

**5.430.4.15** `const char_type* std::__ctype_abstract_base< wchar_t >::narrow (const char_type * __lo, const char_type * __hi, char __dfault, char * __to) const [inline, inherited]`

Narrow array to char array. This function converts each `char_type` in the input to char using the simplest reasonable transformation and writes the results to the destination array. For any `char_type` in the input that cannot be converted, *dfault* is used instead. It does so by returning `ctype<char_type>::do_narrow(lo, hi, dfault, to)`.

Note: this is not what you want for codepage conversions. See `codecv`t for that.

**Parameters:**

*lo* Pointer to start of range.

*hi* Pointer to end of range.

*dfault* Char to use if conversion fails.

*to* Pointer to the destination array.

**Returns:**

*hi*.

Definition at line 345 of file locale\_facets.h.

---

**5.430.4.16** char std::\_\_ctype\_abstract\_base< wchar\_t >::narrow (char\_type \_\_c, char \_\_dfault) const [inline, inherited]

Narrow char\_type to char. This function converts the char\_type to char using the simplest reasonable transformation. If the conversion fails, dfault is returned instead. It does so by returning ctype<char\_type>::do\_narrow(c).

Note: this is not what you want for codepage conversions. See codecvt for that.

**Parameters:**

- c* The char\_type to convert.
- dfault* Char to return if conversion fails.

**Returns:**

The converted char.

Definition at line 323 of file locale\_facets.h.

**5.430.4.17** const char\_type\* std::\_\_ctype\_abstract\_base< wchar\_t >::scan\_is (mask \_\_m, const char\_type \* \_\_lo, const char\_type \* \_\_hi) const [inline, inherited]

Find char\_type matching a mask. This function searches for and returns the first char\_type c in [lo,hi) for which is(m,c) is true. It does so by returning ctype<char\_type>::do\_scan\_is().

**Parameters:**

- m* The mask to compare against.
- lo* Pointer to start of range.
- hi* Pointer to end of range.

**Returns:**

Pointer to matching char\_type if found, else *hi*.

Definition at line 194 of file locale\_facets.h.

**5.430.4.18** const char\_type\* std::\_\_ctype\_abstract\_base< wchar\_t >::scan\_not (mask \_\_m, const char\_type \* \_\_lo, const char\_type \* \_\_hi) const [inline, inherited]

Find char\_type not matching a mask. This function searches for and returns the first char\_type c in [lo,hi) for which is(m,c) is false. It does so by returning ctype<char\_type>::do\_scan\_not().

**Parameters:**

- m* The mask to compare against.
- lo* Pointer to first char in range.
- hi* Pointer to end of range.

**Returns:**

Pointer to non-matching char if found, else *hi*.

Definition at line 210 of file locale\_facets.h.

**5.430.4.19** `const char_type* std::__ctype_abstract_base< wchar_t >::tolower  
(char_type * __lo, const char_type * __hi) const [inline,  
inherited]`

Convert array to lowercase. This function converts each `char_type` in the range `[lo,hi)` to lowercase if possible. Other elements remain untouched. It does so by returning `ctype<char_type>::do_tolower(lo, hi)`.

**Parameters:**

- lo* Pointer to start of range.
- hi* Pointer to end of range.

**Returns:**

*hi*.

Definition at line 268 of file locale\_facets.h.

**5.430.4.20** `char_type std::__ctype_abstract_base< wchar_t >::tolower  
(char_type __c) const [inline, inherited]`

Convert to lowercase. This function converts the argument to lowercase if possible. If not possible (for example, '2'), returns the argument. It does so by returning `ctype<char_type>::do_tolower(c)`.

**Parameters:**

- c* The `char_type` to convert.

**Returns:**

The lowercase `char_type` if convertible, else *c*.

Definition at line 253 of file locale\_facets.h.

---

**5.430.4.21** `const char_type* std::_ctype_abstract_base< wchar_t >::toupper`  
(char\_type \* \_\_lo, const char\_type \* \_\_hi) const [inline, inherited]

Convert array to uppercase. This function converts each char\_type in the range [lo,hi) to uppercase if possible. Other elements remain untouched. It does so by returning ctype<char\_type>::do\_toupper(lo, hi).

**Parameters:**

*lo* Pointer to start of range.

*hi* Pointer to end of range.

**Returns:**

*hi*.

Definition at line 239 of file locale\_facets.h.

**5.430.4.22** `char_type std::_ctype_abstract_base< wchar_t >::toupper`  
(char\_type \_\_c) const [inline, inherited]

Convert to uppercase. This function converts the argument to uppercase if possible. If not possible (for example, '2'), returns the argument. It does so by returning ctype<char\_type>::do\_toupper().

**Parameters:**

*c* The char\_type to convert.

**Returns:**

The uppercase char\_type if convertible, else *c*.

Definition at line 224 of file locale\_facets.h.

**5.430.4.23** `const char* std::_ctype_abstract_base< wchar_t >::widen` (const  
char \* \_\_lo, const char \* \_\_hi, char\_type \* \_\_to) const [inline, inherited]

Widen array to char\_type. This function converts each char in the input to char\_type using the simplest reasonable transformation. It does so by returning ctype<char\_type>::do\_widen(c).

Note: this is not what you want for codepage conversions. See codecvt for that.

**Parameters:**

- lo* Pointer to start of range.
- hi* Pointer to end of range.
- to* Pointer to the destination array.

**Returns:**

*hi*.

Definition at line 304 of file locale\_facets.h.

**5.430.4.24 char\_type std::\_ctype\_abstract\_base< wchar\_t >::widen (char \_\_c) const [inline, inherited]**

Widen char to char\_type. This function converts the char argument to char\_type using the simplest reasonable transformation. It does so by returning ctype<char\_type>::do\_widen(c).

Note: this is not what you want for codepage conversions. See codecvt for that.

**Parameters:**

- c* The char to convert.

**Returns:**

The converted char\_type.

Definition at line 285 of file locale\_facets.h.

**5.430.5 Member Data Documentation****5.430.5.1 locale::id std::ctype< wchar\_t >::id [static]**

The facet id for [ctype<wchar\\_t>](#).

Definition at line 1197 of file locale\_facets.h.

The documentation for this class was generated from the following file:

- [locale\\_facets.h](#)

## 5.431 std::ctype\_base Struct Reference

Base class for [ctype](#). Inheritance diagram for std::ctype\_base:

### Public Types

- typedef const int \* **\_\_to\_type**
- typedef unsigned short **mask**

### Static Public Attributes

- static const mask **alnum**
- static const mask **alpha**
- static const mask **cntrl**
- static const mask **digit**
- static const mask **graph**
- static const mask **lower**
- static const mask **print**
- static const mask **punct**
- static const mask **space**
- static const mask **upper**
- static const mask **xdigit**

#### 5.431.1 Detailed Description

Base class for [ctype](#).

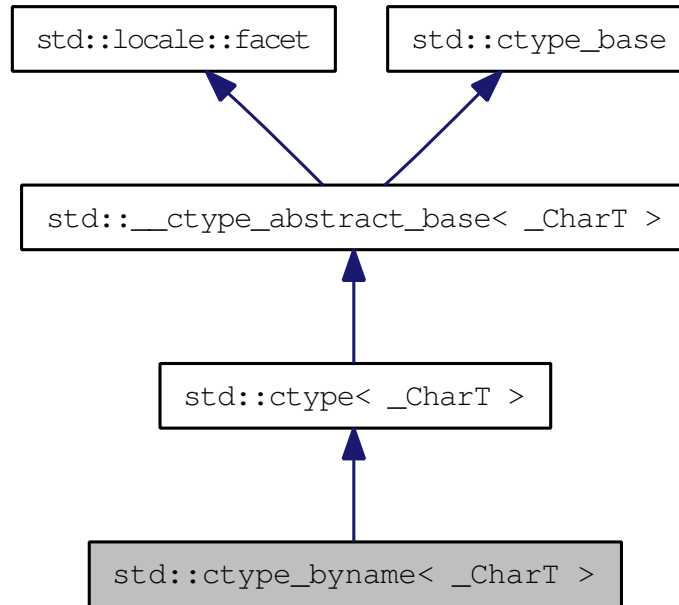

Definition at line 40 of file [ctype\\_base.h](#).

The documentation for this struct was generated from the following file:

- [ctype\\_base.h](#)

## 5.432 `std::ctype_byname< _CharT >` Class Template Reference

class `ctype_byname` [22.2.1.2]. Inheritance diagram for `std::ctype_byname< _CharT >`:

### Public Types

- typedef `const int * __to_type`
- typedef `_CharT char_type`
- typedef `ctype< _CharT >::mask mask`

### Public Member Functions

- `ctype_byname` (`const char * __s, size_t __refs=0`)
- `const char_type * is` (`const char_type * __lo, const char_type * __hi, mask * __vec`) `const`
- `bool is` (`mask __m, char_type __c`) `const`
- `const char_type * narrow` (`const char_type * __lo, const char_type * __hi, char __default, char * __to`) `const`
- `char narrow` (`char_type __c, char __default`) `const`

- const `char_type` \* `scan_is` (mask `__m`, const `char_type` \* `__lo`, const `char_type` \* `__hi`) const
- const `char_type` \* `scan_not` (mask `__m`, const `char_type` \* `__lo`, const `char_type` \* `__hi`) const
- const `char_type` \* `tolower` (`char_type` \* `__lo`, const `char_type` \* `__hi`) const
- `char_type` `tolower` (`char_type` `__c`) const
- const `char_type` \* `toupper` (`char_type` \* `__lo`, const `char_type` \* `__hi`) const
- `char_type` `toupper` (`char_type` `__c`) const
- const `char` \* `widen` (const `char` \* `__lo`, const `char` \* `__hi`, `char_type` \* `__to`) const
- `char_type` `widen` (`char` `__c`) const

### Static Public Attributes

- static const mask **alnum**
- static const mask **alpha**
- static const mask **cntrl**
- static const mask **digit**
- static const mask **graph**

### 5.432.1 Detailed Description

`template<typename _CharT> class std::ctype_byname< _CharT >`

class `ctype_byname` [22.2.1.2].

Definition at line 1466 of file `locale_facets.h`.

### 5.432.2 Member Typedef Documentation

**5.432.2.1** `template<typename _CharT> typedef _CharT std::ctype< _CharT >::char_type [inherited]`

Typedef for the template parameter.

Reimplemented from `std::__ctype_abstract_base< _CharT >`.

Definition at line 608 of file `locale_facets.h`.

### 5.432.3 Member Function Documentation

**5.432.3.1** `template<typename _CharT> virtual const char_type* std::ctype<_CharT>::do_is(const char_type * __lo, const char_type * __hi, mask * __vec) const` [protected, virtual, inherited]

Return a mask [array](#). This function finds the mask for each char\_type in the range [lo,hi) and successively writes it to vec. vec must have as many elements as the input.

[do\\_is\(\)](#) is a hook for a derived facet to change the behavior of classifying. [do\\_is\(\)](#) must always return the same result for the same input.

**Parameters:**

- lo* Pointer to start of range.
- hi* Pointer to end of range.
- vec* Pointer to an [array](#) of mask storage.

**Returns:**

*hi*.

Implements [std::\\_\\_ctype\\_abstract\\_base<\\_CharT>](#).

**5.432.3.2** `template<typename _CharT> virtual bool std::ctype<_CharT>::do_is(mask __m, char_type __c) const` [protected, virtual, inherited]

Test char\_type classification. This function finds a mask M for *c* and compares it to mask *m*.

[do\\_is\(\)](#) is a hook for a derived facet to change the behavior of classifying. [do\\_is\(\)](#) must always return the same result for the same input.

**Parameters:**

- c* The char\_type to find the mask of.
- m* The mask to compare against.

**Returns:**

(M & m) != 0.

Implements [std::\\_\\_ctype\\_abstract\\_base<\\_CharT>](#).

**5.432.3.3** `template<typename _CharT> virtual const char_type* std::ctype<_CharT >::do_narrow (const char_type * __lo, const char_type * __hi, char __dfault, char * __dest) const [protected, virtual, inherited]`

Narrow `char_type` [array](#) to `char`. This virtual function converts each `char_type` in the range `[lo,hi)` to `char` using the simplest reasonable transformation and writes the results to the destination [array](#). For any element in the input that cannot be converted, *dfault* is used instead.

`do_narrow()` is a hook for a derived facet to change the behavior of narrowing. `do_narrow()` must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See [codecvt](#) for that.

**Parameters:**

- lo* Pointer to start of range.
- hi* Pointer to end of range.
- dfault* Char to use if conversion fails.
- to* Pointer to the destination [array](#).

**Returns:**

*hi*.

Implements [std::\\_\\_ctype\\_abstract\\_base<\\_CharT >](#).

**5.432.3.4** `template<typename _CharT> virtual char std::ctype<_CharT >::do_narrow (char_type, char __dfault) const [protected, virtual, inherited]`

Narrow `char_type` to `char`. This virtual function converts the argument to `char` using the simplest reasonable transformation. If the conversion fails, *dfault* is returned instead.

`do_narrow()` is a hook for a derived facet to change the behavior of narrowing. `do_narrow()` must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See [codecvt](#) for that.

**Parameters:**

- c* The `char_type` to convert.
- dfault* Char to return if conversion fails.

**Returns:**

The converted `char`.

Implements [std::\\_\\_ctype\\_abstract\\_base<\\_CharT >](#).

```
5.432.3.5 template<typename _CharT> virtual const char_type* std::ctype<
 _CharT >::do_scan_is (mask __m, const char_type * __lo, const
 char_type * __hi) const [protected, virtual, inherited]
```

Find char\_type matching mask. This function searches for and returns the first char\_type c in [lo,hi) for which is(m,c) is true.

[do\\_scan\\_is\(\)](#) is a hook for a derived facet to change the behavior of match searching. [do\\_is\(\)](#) must always return the same result for the same input.

**Parameters:**

*m* The mask to compare against.

*lo* Pointer to start of range.

*hi* Pointer to end of range.

**Returns:**

Pointer to a matching char\_type if found, else *hi*.

Implements [std::\\_\\_ctype\\_abstract\\_base<\\_CharT >](#).

```
5.432.3.6 template<typename _CharT> virtual const char_type* std::ctype<
 _CharT >::do_scan_not (mask __m, const char_type * __lo, const
 char_type * __hi) const [protected, virtual, inherited]
```

Find char\_type not matching mask. This function searches for and returns a pointer to the first char\_type c of [lo,hi) for which is(m,c) is false.

[do\\_scan\\_is\(\)](#) is a hook for a derived facet to change the behavior of match searching. [do\\_is\(\)](#) must always return the same result for the same input.

**Parameters:**

*m* The mask to compare against.

*lo* Pointer to start of range.

*hi* Pointer to end of range.

**Returns:**

Pointer to a non-matching char\_type if found, else *hi*.

Implements [std::\\_\\_ctype\\_abstract\\_base<\\_CharT >](#).

**5.432.3.7** `template<typename _CharT> virtual const char_type* std::ctype<_CharT >::do_tolower (char_type * __lo, const char_type * __hi) const [protected, virtual, inherited]`

Convert [array](#) to lowercase. This virtual function converts each `char_type` in the range `[lo,hi)` to lowercase if possible. Other elements remain untouched.

`do_tolower()` is a hook for a derived facet to change the behavior of lowercasing. `do_tolower()` must always return the same result for the same input.

**Parameters:**

*lo* Pointer to start of range.

*hi* Pointer to end of range.

**Returns:**

*hi*.

Implements `std::__ctype_abstract_base<_CharT >`.

**5.432.3.8** `template<typename _CharT> virtual char_type std::ctype<_CharT >::do_tolower (char_type) const [protected, virtual, inherited]`

Convert to lowercase. This virtual function converts the argument to lowercase if possible. If not possible (for example, '2'), returns the argument.

`do_tolower()` is a hook for a derived facet to change the behavior of lowercasing. `do_tolower()` must always return the same result for the same input.

**Parameters:**

*c* The `char_type` to convert.

**Returns:**

The lowercase `char_type` if convertible, else *c*.

Implements `std::__ctype_abstract_base<_CharT >`.

**5.432.3.9** `template<typename _CharT> virtual const char_type* std::ctype<_CharT >::do_toupper (char_type * __lo, const char_type * __hi) const [protected, virtual, inherited]`

Convert [array](#) to uppercase. This virtual function converts each `char_type` in the range `[lo,hi)` to uppercase if possible. Other elements remain untouched.

`do_toupper()` is a hook for a derived facet to change the behavior of uppercasing. `do_toupper()` must always return the same result for the same input.

**Parameters:**

*lo* Pointer to start of range.

*hi* Pointer to end of range.

**Returns:**

*hi*.

Implements `std::__ctype_abstract_base<_CharT>`.

**5.432.3.10** `template<typename _CharT> virtual char_type std::ctype<_CharT>::do_toupper(char_type) const` [`protected`, `virtual`, `inherited`]

Convert to uppercase. This virtual function converts the `char_type` argument to uppercase if possible. If not possible (for example, '2'), returns the argument.

`do_toupper()` is a hook for a derived facet to change the behavior of uppercasing. `do_toupper()` must always return the same result for the same input.

**Parameters:**

*c* The `char_type` to convert.

**Returns:**

The uppercase `char_type` if convertible, else *c*.

Implements `std::__ctype_abstract_base<_CharT>`.

**5.432.3.11** `template<typename _CharT> virtual const char* std::ctype<_CharT>::do_widen(const char * __lo, const char * __hi, char_type * __dest) const` [`protected`, `virtual`, `inherited`]

Widen char `array`. This function converts each char in the input to `char_type` using the simplest reasonable transformation.

`do_widen()` is a hook for a derived facet to change the behavior of widening. `do_widen()` must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

**Parameters:**

*lo* Pointer to start range.  
*hi* Pointer to end of range.  
*to* Pointer to the destination [array](#).

**Returns:**

*hi*.

Implements [std::\\_\\_ctype\\_abstract\\_base<\\_CharT>](#).

**5.432.3.12** `template<typename _CharT> virtual char_type std::ctype<_CharT >::do_widen(char) const [protected, virtual, inherited]`

Widen char. This virtual function converts the char to char\_type using the simplest reasonable transformation.

[do\\_widen\(\)](#) is a hook for a derived facet to change the behavior of widening. [do\\_widen\(\)](#) must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See [codecv](#) for that.

**Parameters:**

*c* The char to convert.

**Returns:**

The converted char\_type

Implements [std::\\_\\_ctype\\_abstract\\_base<\\_CharT>](#).

**5.432.3.13** `template<typename _CharT> const char_type* std::__ctype_abstract_base<_CharT >::is(const char_type * __lo, const char_type * __hi, mask * __vec) const [inline, inherited]`

Return a mask [array](#). This function finds the mask for each char\_type in the range [lo,hi) and successively writes it to vec. vec must have as many elements as the char [array](#). It does so by returning the value of [ctype<char\\_type>::do\\_is\(\)](#).

**Parameters:**

*lo* Pointer to start of range.  
*hi* Pointer to end of range.

*vec* Pointer to an [array](#) of mask storage.

**Returns:**

*hi*.

Definition at line 178 of file locale\_facets.h.

**5.432.3.14** `template<typename _CharT> bool std::_ctype_abstract_base<_CharT>::is(mask __m, char_type __c) const [inline, inherited]`

Test *char\_type* classification. This function finds a mask *M* for *c* and compares it to mask *m*. It does so by returning the value of `ctype<char_type>::do_is()`.

**Parameters:**

*c* The *char\_type* to compare the mask of.

*m* The mask to compare against.

**Returns:**

$(M \& m) \neq 0$ .

Definition at line 161 of file locale\_facets.h.

Referenced by `std::regex_traits<_Ch_type>::isctype()`, and `std::basic_istream<_CharT, _Traits>::sentry::sentry()`.

**5.432.3.15** `template<typename _CharT> const char_type* std::_ctype_abstract_base<_CharT>::narrow(const char_type * __lo, const char_type * __hi, char __dfault, char * __to) const [inline, inherited]`

Narrow [array](#) to *char* [array](#). This function converts each *char\_type* in the input to *char* using the simplest reasonable transformation and writes the results to the destination [array](#). For any *char\_type* in the input that cannot be converted, *dfault* is used instead. It does so by returning `ctype<char_type>::do_narrow(lo, hi, dfault, to)`.

Note: this is not what you want for codepage conversions. See [codecvt](#) for that.

**Parameters:**

*lo* Pointer to start of range.

*hi* Pointer to end of range.

*dfault* Char to use if conversion fails.

*to* Pointer to the destination [array](#).

**Returns:**

*hi*.

Definition at line 345 of file `locale_facets.h`.

**5.432.3.16** `template<typename _CharT> char std::__ctype_abstract_base<_CharT >::narrow (char_type __c, char __dfault) const [inline, inherited]`

Narrow `char_type` to `char`. This function converts the `char_type` to `char` using the simplest reasonable transformation. If the conversion fails, `dfault` is returned instead. It does so by returning `ctype<char_type>::do_narrow(c)`.

Note: this is not what you want for codepage conversions. See [codecvt](#) for that.

**Parameters:**

*c* The `char_type` to convert.

*dfault* Char to return if conversion fails.

**Returns:**

The converted `char`.

Definition at line 323 of file `locale_facets.h`.

Referenced by `std::time_put<_CharT, _OutIter >::put()`.

**5.432.3.17** `template<typename _CharT> const char_type* std::__ctype_abstract_base<_CharT >::scan_is (mask __m, const char_type * __lo, const char_type * __hi) const [inline, inherited]`

Find `char_type` matching a mask. This function searches for and returns the first `char_type` `c` in `[lo,hi)` for which `is(m,c)` is true. It does so by returning `ctype<char_type>::do_scan_is()`.

**Parameters:**

*m* The mask to compare against.

*lo* Pointer to start of range.

*hi* Pointer to end of range.

**Returns:**

Pointer to matching char\_type if found, else *hi*.

Definition at line 194 of file locale\_facets.h.

```
5.432.3.18 template<typename _CharT> const char_type*
std::__ctype_abstract_base<_CharT>::scan_not (mask __m,
const char_type * __lo, const char_type * __hi) const [inline,
inherited]
```

Find char\_type not matching a mask. This function searches for and returns the first char\_type c in [lo,hi) for which is(m,c) is false. It does so by returning [ctype<char\\_type>::do\\_scan\\_not\(\)](#).

**Parameters:**

*m* The mask to compare against.

*lo* Pointer to first char in range.

*hi* Pointer to end of range.

**Returns:**

Pointer to non-matching char if found, else *hi*.

Definition at line 210 of file locale\_facets.h.

```
5.432.3.19 template<typename _CharT> const char_type*
std::__ctype_abstract_base<_CharT>::tolower (char_type * __lo,
const char_type * __hi) const [inline, inherited]
```

Convert [array](#) to lowercase. This function converts each char\_type in the range [lo,hi) to lowercase if possible. Other elements remain untouched. It does so by returning [ctype<char\\_type>::do\\_tolower\(lo, hi\)](#).

**Parameters:**

*lo* Pointer to start of range.

*hi* Pointer to end of range.

**Returns:**

*hi*.

Definition at line 268 of file locale\_facets.h.

**5.432.3.20** `template<typename _CharT> char_type std::__ctype_abstract_base<_CharT >::tolower (char_type __c) const [inline, inherited]`

Convert to lowercase. This function converts the argument to lowercase if possible. If not possible (for example, '2'), returns the argument. It does so by returning `ctype<char_type>::do_tolower(c)`.

**Parameters:**

*c* The `char_type` to convert.

**Returns:**

The lowercase `char_type` if convertible, else *c*.

Definition at line 253 of file `locale_facets.h`.

**5.432.3.21** `template<typename _CharT> const char_type* std::__ctype_abstract_base<_CharT >::toupper (char_type * __lo, const char_type * __hi) const [inline, inherited]`

Convert [array](#) to uppercase. This function converts each `char_type` in the range `[lo,hi)` to uppercase if possible. Other elements remain untouched. It does so by returning `ctype<char_type>::do_toupper(lo, hi)`.

**Parameters:**

*lo* Pointer to start of range.

*hi* Pointer to end of range.

**Returns:**

*hi*.

Definition at line 239 of file `locale_facets.h`.

**5.432.3.22** `template<typename _CharT> char_type std::__ctype_abstract_base<_CharT >::toupper (char_type __c) const [inline, inherited]`

Convert to uppercase. This function converts the argument to uppercase if possible. If not possible (for example, '2'), returns the argument. It does so by returning `ctype<char_type>::do_toupper()`.

**Parameters:**

*c* The char\_type to convert.

**Returns:**

The uppercase char\_type if convertible, else *c*.

Definition at line 224 of file locale\_facets.h.

**5.432.3.23** `template<typename _CharT> const char* std::__ctype_abstract_base<_CharT>::widen (const char * __lo, const char * __hi, char_type * __to) const [inline, inherited]`

Widen [array](#) to char\_type. This function converts each char in the input to char\_type using the simplest reasonable transformation. It does so by returning ctype<char\_type>::do\_widen(c).

Note: this is not what you want for codepage conversions. See [codecvt](#) for that.

**Parameters:**

*lo* Pointer to start of range.

*hi* Pointer to end of range.

*to* Pointer to the destination [array](#).

**Returns:**

*hi*.

Definition at line 304 of file locale\_facets.h.

**5.432.3.24** `template<typename _CharT> char_type std::__ctype_abstract_base<_CharT>::widen (char __c) const [inline, inherited]`

Widen char to char\_type. This function converts the char argument to char\_type using the simplest reasonable transformation. It does so by returning ctype<char\_type>::do\_widen(c).

Note: this is not what you want for codepage conversions. See [codecvt](#) for that.

**Parameters:**

*c* The char to convert.

**Returns:**

The converted char\_type.

Definition at line 285 of file locale\_facets.h.

Referenced by std::money\_get<\_CharT, \_InIter >::do\_get(), std::time\_put<\_CharT, \_OutIter >::do\_put(), std::money\_put<\_CharT, \_OutIter >::do\_put(), std::regex\_traits<\_Ch\_type >::isctype(), and std::operator<<().

### 5.432.4 Member Data Documentation

#### 5.432.4.1 `template<typename _CharT> locale::id std::ctype<_CharT >::id` `[inline, static, inherited]`

The facet id for ctype<char\_type>.

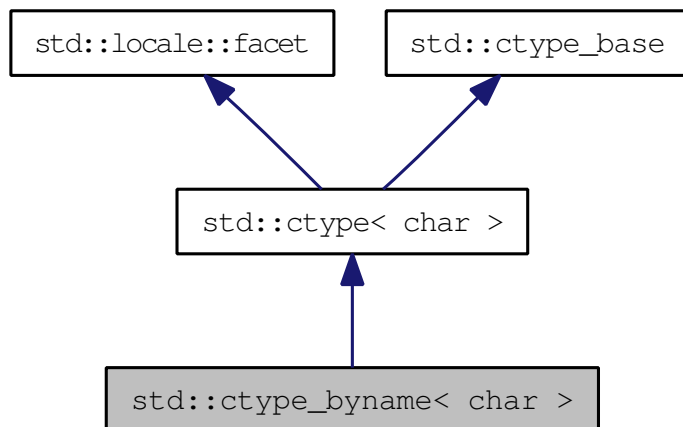

Definition at line 612 of file locale\_facets.h.

The documentation for this class was generated from the following file:

### 5.433.1 Detailed Description

`template<> class std::ctype_byname< char >`

22.2.1.4 Class [ctype\\_byname](#) specializations.

Definition at line 1481 of file `locale_facets.h`.

### 5.433.2 Member Typedef Documentation

**5.433.2.1** `typedef char std::ctype< char >::char_type` `[inherited]`

Typedef for the template parameter `char`.

Definition at line 678 of file `locale_facets.h`.

### 5.433.3 Member Function Documentation

**5.433.3.1** `static const mask* std::ctype< char >::classic_table () throw ()`  
**[static, inherited]**

Returns a pointer to the C [locale](#) mask table.

**5.433.3.2** `virtual const char_type* std::ctype< char >::do_narrow (const char_type * __lo, const char_type * __hi, char, char * __dest) const`  
**[inline, protected, virtual, inherited]**

Narrow [char array](#) to [char array](#). This virtual function converts each char in the range [lo,hi) to char using the simplest reasonable transformation and writes the results to the destination [array](#). For any char in the input that cannot be converted, *dfault* is used instead. For an underived [ctype<char>](#) facet, the argument will be copied unchanged.

[do\\_narrow\(\)](#) is a hook for a derived facet to change the behavior of narrowing. [do\\_narrow\(\)](#) must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See [codecv](#) for that.

#### Parameters:

*lo* Pointer to start of range.

*hi* Pointer to end of range.

*dfault* Char to use if conversion fails.

*to* Pointer to the destination [array](#).

#### Returns:

*hi*.

Definition at line 1149 of file [locale\\_facets.h](#).

**5.433.3.3** `virtual char std::ctype< char >::do_narrow (char_type __c, char) const`  
**[inline, protected, virtual, inherited]**

Narrow [char](#). This virtual function converts the [char](#) to [char](#) using the simplest reasonable transformation. If the conversion fails, *dfault* is returned instead. For an underived [ctype<char>](#) facet, *c* will be returned unchanged.

[do\\_narrow\(\)](#) is a hook for a derived facet to change the behavior of narrowing. [do\\_narrow\(\)](#) must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See [codecv](#) for that.

**Parameters:**

- c* The char to convert.  
*dfault* Char to return if conversion fails.

**Returns:**

The converted char.

Definition at line 1123 of file locale\_facets.h.

**5.433.3.4 virtual const char\_type\* std::ctype< char >::do\_tolower (char\_type \* \_\_lo, const char\_type \* \_\_hi) const [protected, virtual, inherited]**

Convert [array](#) to lowercase. This virtual function converts each char in the range [lo,hi) to lowercase if possible. Other chars remain untouched.

[do\\_tolower\(\)](#) is a hook for a derived facet to change the behavior of lowercasing. [do\\_tolower\(\)](#) must always return the same result for the same input.

**Parameters:**

- lo* Pointer to first char in range.  
*hi* Pointer to end of range.

**Returns:**

*hi*.

**5.433.3.5 virtual char\_type std::ctype< char >::do\_tolower (char\_type) const [protected, virtual, inherited]**

Convert to lowercase. This virtual function converts the char argument to lowercase if possible. If not possible (for example, '2'), returns the argument.

[do\\_tolower\(\)](#) is a hook for a derived facet to change the behavior of lowercasing. [do\\_tolower\(\)](#) must always return the same result for the same input.

**Parameters:**

- c* The char to convert.

**Returns:**

The lowercase char if convertible, else *c*.

**5.433.3.6** `virtual const char_type* std::ctype< char >::do_toupper (char_type * __lo, const char_type * __hi) const [protected, virtual, inherited]`

Convert [array](#) to uppercase. This virtual function converts each char in the range [lo,hi) to uppercase if possible. Other chars remain untouched.

[do\\_toupper\(\)](#) is a hook for a derived facet to change the behavior of uppercasing. [do\\_toupper\(\)](#) must always return the same result for the same input.

**Parameters:**

*lo* Pointer to start of range.

*hi* Pointer to end of range.

**Returns:**

*hi*.

**5.433.3.7** `virtual char_type std::ctype< char >::do_toupper (char_type) const [protected, virtual, inherited]`

Convert to uppercase. This virtual function converts the char argument to uppercase if possible. If not possible (for example, '2'), returns the argument.

[do\\_toupper\(\)](#) is a hook for a derived facet to change the behavior of uppercasing. [do\\_toupper\(\)](#) must always return the same result for the same input.

**Parameters:**

*c* The char to convert.

**Returns:**

The uppercase char if convertible, else *c*.

**5.433.3.8** `virtual const char* std::ctype< char >::do_widen (const char * __lo, const char * __hi, char_type * __dest) const [inline, protected, virtual, inherited]`

Widen char [array](#). This function converts each char in the range [lo,hi) to char using the simplest reasonable transformation. For an underived [ctype<char>](#) facet, the argument will be copied unchanged.

[do\\_widen\(\)](#) is a hook for a derived facet to change the behavior of widening. [do\\_widen\(\)](#) must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See [codecv](#) for that.

**Parameters:**

- lo* Pointer to start of range.
- hi* Pointer to end of range.
- to* Pointer to the destination [array](#).

**Returns:**

- hi*.

Definition at line 1097 of file `locale_facets.h`.

**5.433.3.9** `virtual char_type std::ctype< char >::do_widen (char __c) const`  
[`inline`, `protected`, `virtual`, `inherited`]

Widen char. This virtual function converts the char to char using the simplest reasonable transformation. For an underived `ctype<char>` facet, the argument will be returned unchanged.

`do_widen()` is a hook for a derived facet to change the behavior of widening. `do_widen()` must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See [codecvt](#) for that.

**Parameters:**

- c* The char to convert.

**Returns:**

- The converted character.

Definition at line 1074 of file `locale_facets.h`.

**5.433.3.10** `const char * std::ctype< char >::is (const char * __lo, const char * __hi, mask * __vec) const`  
[`inline`, `inherited`]

Return a mask [array](#). This function finds the mask for each char in the range [lo, hi) and successively writes it to vec. vec must have as many elements as the char [array](#).

**Parameters:**

- lo* Pointer to start of range.
- hi* Pointer to end of range.
- vec* Pointer to an [array](#) of mask storage.

**Returns:***hi*.

Definition at line 46 of file ctype\_inline.h.

**5.433.3.11 bool std::ctype< char >::is (mask \_\_m, char \_\_c) const [inline, inherited]**Test char classification. This function compares the mask table[c] to *m*.**Parameters:***c* The char to compare the mask of.*m* The mask to compare against.**Returns:**True if *m* & table[c] is true, false otherwise.

Definition at line 41 of file ctype\_inline.h.

**5.433.3.12 const char\_type\* std::ctype< char >::narrow (const char\_type \* \_\_lo, const char\_type \* \_\_hi, char \_\_dfault, char \* \_\_to) const [inline, inherited]**Narrow char [array](#). This function converts each char in the input to char using the simplest reasonable transformation and writes the results to the destination [array](#). For any char in the input that cannot be converted, *dfault* is used instead. For an underived [ctype<char>](#) facet, the argument will be copied unchanged.This function works as if it returns [ctype<char>::do\\_narrow](#)(lo, hi, dfault, to). [do\\_narrow\(\)](#) must always return the same result for the same input.Note: this is not what you want for codepage conversions. See [codecvt](#) for that.**Parameters:***lo* Pointer to start of range.*hi* Pointer to end of range.*dfault* Char to use if conversion fails.*to* Pointer to the destination [array](#).**Returns:***hi*.

Definition at line 955 of file locale\_facets.h.

**5.433.3.13 char std::ctype< char >::narrow (char\_type \_\_c, char \_\_dfault)  
const [inline, inherited]**

Narrow char. This function converts the char to char using the simplest reasonable transformation. If the conversion fails, dfault is returned instead. For an underived [ctype<char>](#) facet, *c* will be returned unchanged.

This function works as if it returns `ctype<char>::do_narrow(c)`. `do_narrow()` must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See [codecvt](#) for that.

**Parameters:**

- c* The char to convert.
- dfault* Char to return if conversion fails.

**Returns:**

The converted character.

Definition at line 922 of file locale\_facets.h.

**5.433.3.14 const char \* std::ctype< char >::scan\_is (mask \_\_m, const char \*  
\_\_lo, const char \* \_\_hi) const [inline, inherited]**

Find char matching a mask. This function searches for and returns the first char in [lo,hi) for which `is(m,char)` is true.

**Parameters:**

- m* The mask to compare against.
- lo* Pointer to start of range.
- hi* Pointer to end of range.

**Returns:**

Pointer to a matching char if found, else *hi*.

Definition at line 55 of file ctype\_inline.h.

**5.433.3.15 const char \* std::ctype< char >::scan\_not (mask \_\_m, const char \*  
\_\_lo, const char \* \_\_hi) const [inline, inherited]**

Find char not matching a mask. This function searches for and returns a pointer to the first char in [lo,hi) for which `is(m,char)` is false.

**Parameters:**

- m* The mask to compare against.
- lo* Pointer to start of range.
- hi* Pointer to end of range.

**Returns:**

Pointer to a non-matching char if found, else *hi*.

Definition at line 65 of file ctype\_inline.h.

#### 5.433.3.16 `const mask* std::ctype< char >::table () const throw () [inline, inherited]`

Returns a pointer to the mask table provided to the constructor, or the default from `classic_table()` if none was provided.

Definition at line 973 of file locale\_facets.h.

#### 5.433.3.17 `const char_type* std::ctype< char >::tolower (char_type * __lo, const char_type * __hi) const [inline, inherited]`

Convert `array` to lowercase. This function converts each char in the range [lo,hi) to lowercase if possible. Other chars remain untouched.

`tolower()` acts as if it returns `ctype<char>:: do_tolower(lo, hi)`. `do_tolower()` must always return the same result for the same input.

**Parameters:**

- lo* Pointer to first char in range.
- hi* Pointer to end of range.

**Returns:**

*hi*.

Definition at line 844 of file locale\_facets.h.

#### 5.433.3.18 `char_type std::ctype< char >::tolower (char_type __c) const [inline, inherited]`

Convert to lowercase. This function converts the char argument to lowercase if possible. If not possible (for example, '2'), returns the argument.

[tolower\(\)](#) acts as if it returns `ctype<char>::do_tolower(c)`. [do\\_tolower\(\)](#) must always return the same result for the same input.

**Parameters:**

*c* The char to convert.

**Returns:**

The lowercase char if convertible, else *c*.

Definition at line 827 of file `locale_facets.h`.

**5.433.3.19** `const char_type* std::ctype< char >::toupper (char_type * __lo, const char_type * __hi) const` [`inline, inherited`]

Convert [array](#) to uppercase. This function converts each char in the range [lo,hi) to uppercase if possible. Other chars remain untouched.

[toupper\(\)](#) acts as if it returns `ctype<char>::do_toupper(lo, hi)`. [do\\_toupper\(\)](#) must always return the same result for the same input.

**Parameters:**

*lo* Pointer to first char in range.

*hi* Pointer to end of range.

**Returns:**

*hi*.

Definition at line 811 of file `locale_facets.h`.

**5.433.3.20** `char_type std::ctype< char >::toupper (char_type __c) const` [`inline, inherited`]

Convert to uppercase. This function converts the char argument to uppercase if possible. If not possible (for example, '2'), returns the argument.

[toupper\(\)](#) acts as if it returns `ctype<char>::do_toupper(c)`. [do\\_toupper\(\)](#) must always return the same result for the same input.

**Parameters:**

*c* The char to convert.

**Returns:**

The uppercase char if convertible, else *c*.

Definition at line 794 of file locale\_facets.h.

**5.433.3.21** `const char* std::ctype< char >::widen (const char * __lo, const char * __hi, char_type * __to) const [inline, inherited]`

Widen char [array](#). This function converts each char in the input to char using the simplest reasonable transformation. For an underived `ctype<char>` facet, the argument will be copied unchanged.

This function works as if it returns `ctype<char>::do_widen(c)`. `do_widen()` must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See [codecv](#) for that.

**Parameters:**

- lo* Pointer to first char in range.
- hi* Pointer to end of range.
- to* Pointer to the destination [array](#).

**Returns:**

*hi*.

Definition at line 891 of file locale\_facets.h.

**5.433.3.22** `char_type std::ctype< char >::widen (char __c) const [inline, inherited]`

Widen char. This function converts the char to char\_type using the simplest reasonable transformation. For an underived `ctype<char>` facet, the argument will be returned unchanged.

This function works as if it returns `ctype<char>::do_widen(c)`. `do_widen()` must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See [codecv](#) for that.

**Parameters:**

- c* The char to convert.

**Returns:**

The converted character.

Definition at line 864 of file locale\_facets.h.

### 5.441.1 Detailed Description

`template<typename _Tp, typename _Alloc = std::allocator<_Tp>> class std::deque<_Tp, _Alloc >`

A standard container using fixed-size memory allocation and constant-time manipulation of elements at either end. Meets the requirements of a [container](#), a [reversible container](#), and a [sequence](#), including the [optional sequence requirements](#).

In previous HP/SGI versions of [deque](#), there was an extra template parameter so users could control the node size. This extension turned out to violate the C++ standard (it can be detected using template template parameters), and it was removed.

Here's how a `deque<Tp>` manages memory. Each [deque](#) has 4 members:

- `Tp** \_M\_map`
- `size_t \_M\_map\_size`
- `iterator \_M\_start, \_M\_finish`

`map_size` is at least 8. `map` is an [array](#) of `map_size` pointers-to-. (The name `map` has nothing to do with the `std::map` class, and **nodes** should not be confused with `std::list`'s usage of *node*.)

A *node* has no specific type name as such, but it is referred to as *node* in this file. It is a simple array-of-`Tp`. If `Tp` is very large, there will be one `Tp` element per node (i.e., an [array](#) of one). For non-huge `Tp`'s, node size is inversely related to `Tp` size: the larger the `Tp`, the fewer `Tp`'s will fit in a node. The goal here is to keep the total size of a node relatively small and constant over different `Tp`'s, to improve [allocator](#) efficiency.

Not every pointer in the `map` [array](#) will point to a node. If the initial number of elements in the `deque` is small, the /middle/ `map` pointers will be valid, and the ones at the edges will be unused. This same situation will arise as the `map` grows: available `map` pointers, if any, will be on the ends. As new nodes are created, only a subset of the `map`'s pointers need to be copied *outward*.

Class invariants:

- For any nonsingular [iterator](#) `i`:
  - `i.node` points to a member of the `map` [array](#). (Yes, you read that correctly: `i.node` does not actually point to a node.) The member of the `map` [array](#) is what actually points to the node.
  - `i.first == *(i.node)` (This points to the node (first `Tp` element).)
  - `i.last == i.first + node_size`
  - `i.cur` is a pointer in the range `[i.first, i.last)`. NOTE: the implication of this is that `i.cur` is always a dereferenceable pointer, even if `i` is a past-the-end [iterator](#).
- `start` and `finish` are always nonsingular iterators. NOTE: this means that an empty `deque` must have one node, a `deque` with  $<N$  elements (where  $N$  is the node buffer size) must have one node, a `deque` with  $N$  through  $(2N-1)$  elements must have two nodes, etc.
- For every node other than `start.node` and `finish.node`, every element in the node is an initialized object. If `start.node == finish.node`, then `[start.cur, finish.cur)` are initialized objects, and the elements outside that range are uninitialized storage. Otherwise, `[start.cur, start.last)` and `[finish.first, finish.cur)` are initialized objects, and `[start.first, start.cur)` and `[finish.cur, finish.last)` are uninitialized storage.
- `[map, map + map_size)` is a valid, non-empty range.
- `[start.node, finish.node]` is a valid range contained within `[map, map + map_size)`.
- A pointer in the range `[map, map + map_size)` points to an allocated node if and only if the pointer is in the range `[start.node, finish.node]`.

Here's the magic: nothing in `deque` is **aware** of the discontinuous storage!

The memory setup and layout occurs in the parent, `_Base`, and the `iterator` class is entirely responsible for *leaping* from one node to the next. All the implementation routines for `deque` itself work only through the start and finish iterators. This keeps the routines simple and sane, and we can use other standard algorithms as well.

Definition at line 713 of file `stl_deque.h`.

## 5.441.2 Constructor & Destructor Documentation

**5.441.2.1** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
std::deque<_Tp, _Alloc>::deque () [inline]`

Default constructor creates no elements.

Definition at line 765 of file `stl_deque.h`.

**5.441.2.2** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
std::deque<_Tp, _Alloc>::deque (const allocator_type & __a)  
[inline, explicit]`

Creates a deque with no elements.

### Parameters:

*a* An `allocator` object.

Definition at line 773 of file `stl_deque.h`.

**5.441.2.3** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
std::deque<_Tp, _Alloc>::deque (size_type __n, const value_type  
& __value = value_type (), const allocator_type & __a =  
allocator_type ()) [inline, explicit]`

Creates a deque with copies of an exemplar element.

### Parameters:

*n* The number of elements to initially create.

*value* An element to copy.

*a* An `allocator`.

This constructor fills the deque with *n* copies of *value*.

Definition at line 785 of file `stl_deque.h`.

References `std::deque<_Tp, _Alloc>::_M_fill_initialize()`.

**5.441.2.4** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
std::deque<_Tp, _Alloc>::deque (const deque<_Tp, _Alloc> &  
__x) [inline]`

Deque copy constructor.

**Parameters:**

*x* A deque of identical element and [allocator](#) types.

The newly-created deque uses a copy of the allocation object used by *x*.

Definition at line 797 of file `stl_deque.h`.

References `std::deque<_Tp, _Alloc>::begin()`, and `std::deque<_Tp, _Alloc>::end()`.

**5.441.2.5** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
std::deque<_Tp, _Alloc>::deque (deque<_Tp, _Alloc> && __x)  
[inline]`

Deque move constructor.

**Parameters:**

*x* A deque of identical element and [allocator](#) types.

The newly-created deque contains the exact contents of *x*. The contents of *x* are a valid, but unspecified deque.

Definition at line 811 of file `stl_deque.h`.

**5.441.2.6** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
std::deque<_Tp, _Alloc>::deque (initializer_list<value_type> __l,  
const allocator_type & __a = allocator_type()) [inline]`

Builds a deque from an initializer [list](#).

**Parameters:**

*l* An [initializer\\_list](#).

*a* An [allocator](#) object.

Create a deque consisting of copies of the elements in the [initializer\\_list](#) *l*.

This will call the element type's copy constructor *N* times (where *N* is `l.size()`) and do no memory reallocation.

Definition at line 825 of file `stl_deque.h`.

References `std::deque<_Tp, _Alloc>::_M_range_initialize()`.

```
5.441.2.7 template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
 template<typename _InputIterator > std::deque<_Tp, _Alloc
 >::deque (_InputIterator __first, _InputIterator __last, const
 allocator_type & __a = allocator_type()) [inline]
```

Builds a deque from a range.

**Parameters:**

*first* An input [iterator](#).

*last* An input [iterator](#).

*a* An [allocator](#) object.

Create a deque consisting of copies of the elements from [first, last).

If the iterators are forward, bidirectional, or random-access, then this will call the elements' copy constructor N times (where N is `distance(first,last)`) and do no memory reallocation. But if only input iterators are used, then this will do at most 2N calls to the copy constructor, and logN memory reallocations.

Definition at line 850 of file `stl_deque.h`.

```
5.441.2.8 template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
 std::deque<_Tp, _Alloc>::~~deque () [inline]
```

The dtor only erases the elements, and note that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 864 of file `stl_deque.h`.

References `std::deque<_Tp, _Alloc>::begin()`, and `std::deque<_Tp, _Alloc>::end()`.

### 5.441.3 Member Function Documentation

```
5.441.3.1 template<typename _Tp , typename _Alloc > void
 deque::_M_fill_initialize (const value_type & __value) [inline,
 protected]
```

Fills the deque with copies of value.

**Parameters:**

*value* Initial value.

**Returns:**

Nothing.

**Precondition:**

`_M_start` and `_M_finish` have already been initialized, but none of the deque's elements have yet been constructed.

This function is called only when the user provides an explicit size (with or without an explicit exemplar value).

Definition at line 277 of file deque.tcc.

References `std::_Destroy()`.

Referenced by `std::deque< _Tp, _Alloc >::deque()`.

**5.441.3.2** `template<typename _Tp , typename _Alloc > void  
std::_Deque_base< _Tp, _Alloc >::_M_initialize_map (size_t  
__num_elements) [inline, protected, inherited]`

Layout storage.

**Parameters:**

*num\_elements* The count of T's for which to allocate space at first.

**Returns:**

Nothing.

The initial underlying memory layout is a bit complicated...

Definition at line 568 of file stl\_deque.h.

_InputIterator > void deque::_M_range_initialize (_InputIterator  
__first, _InputIterator __last, std::input_iterator_tag) [inline,  
protected]`

Fills the deque with whatever is in [first,last).

**Parameters:**

*first* An input iterator.

*last* An input iterator.

**Returns:**

Nothing.

If the iterators are actually forward iterators (or better), then the memory layout can be done all at once. Else we move forward using `push_back` on each value from the [iterator](#).

Definition at line 303 of file `deque.tcc`.

Referenced by `std::deque< _Tp, _Alloc >::_M_new_elements_at_front()`.

**5.441.3.17** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
void std::deque< _Tp, _Alloc >::assign (initializer_list< value_type  
> __l) [inline]`

Assigns an initializer [list](#) to a deque.

**Parameters:**

*l* An [initializer\\_list](#).

This function fills a deque with copies of the elements in the [initializer\\_list](#) *l*.

Note that the assignment completely changes the deque and that the resulting deque's size is the same as the number of elements assigned. Old data may be lost.

Definition at line 961 of file `stl_deque.h`.

References `std::deque< _Tp, _Alloc >::assign()`.

Referenced by `std::deque< _Tp, _Alloc >::assign()`.

```
5.441.3.18 template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
template<typename _InputIterator > void std::deque< _Tp,
_Alloc >::assign (_InputIterator __first, _InputIterator __last)
[inline]
```

Assigns a range to a deque.

**Parameters:**

*first* An input [iterator](#).

*last* An input [iterator](#).

This function fills a deque with copies of the elements in the range [first,last).

Note that the assignment completely changes the deque and that the resulting deque's size is the same as the number of elements assigned. Old data may be lost.

Definition at line 942 of file stl\_deque.h.

```
5.441.3.19 template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
void std::deque< _Tp, _Alloc >::assign (size_type __n, const
value_type & __val) [inline]
```

Assigns a given value to a deque.

**Parameters:**

*n* Number of elements to be assigned.

*val* Value to be assigned.

This function fills a deque with *n* copies of the given value. Note that the assignment completely changes the deque and that the resulting deque's size is the same as the number of elements assigned. Old data may be lost.

Definition at line 925 of file stl\_deque.h.

Referenced by `std::deque< _Tp, _Alloc >::operator=()`.

```
5.441.3.20 template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
const_reference std::deque< _Tp, _Alloc >::at (size_type __n) const
[inline]
```

Provides access to the data contained in the deque.

**Parameters:**

*n* The index of the element for which data should be accessed.

**Returns:**

Read-only (constant) reference to data.

**Exceptions:**

*[std::out\\_of\\_range](#)* If *n* is an invalid index.

This function provides for safer data access. The parameter is first checked that it is in the range of the [deque](#). The function throws [out\\_of\\_range](#) if the check fails.

Definition at line 1196 of file `stl_deque.h`.

References `std::deque<_Tp, _Alloc >::_M_range_check()`.

**5.441.3.21** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
reference std::deque<_Tp, _Alloc >::at (size_type __n)  
[inline]`

Provides access to the data contained in the deque.

**Parameters:**

*n* The index of the element for which data should be accessed.

**Returns:**

Read/write reference to data.

**Exceptions:**

*[std::out\\_of\\_range](#)* If *n* is an invalid index.

This function provides for safer data access. The parameter is first checked that it is in the range of the [deque](#). The function throws [out\\_of\\_range](#) if the check fails.

Definition at line 1178 of file `stl_deque.h`.

References `std::deque<_Tp, _Alloc >::_M_range_check()`.

**5.441.3.22** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
const_reference std::deque<_Tp, _Alloc >::back () const  
[inline]`

Returns a read-only (constant) reference to the data at the last element of the deque.

Definition at line 1235 of file `stl_deque.h`.

References `std::deque<_Tp, _Alloc >::end()`.

**5.441.3.23** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
reference std::deque<_Tp, _Alloc >::back () [inline]`

Returns a read/write reference to the data at the last element of the deque.

Definition at line 1223 of file `stl_deque.h`.

References `std::deque<_Tp, _Alloc >::end()`.

**5.441.3.24** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
const_iterator std::deque<_Tp, _Alloc >::begin () const  
[inline]`

Returns a read-only (constant) [iterator](#) that points to the first element in the deque. Iteration is done in ordinary element order.

Definition at line 984 of file `stl_deque.h`.

**5.441.3.25** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
iterator std::deque<_Tp, _Alloc >::begin () [inline]`

Returns a read/write [iterator](#) that points to the first element in the deque. Iteration is done in ordinary element order.

Definition at line 976 of file `stl_deque.h`.

Referenced by `std::deque<_Tp, _Alloc >::clear()`, `std::deque<_Tp, _Alloc >::deque()`, `std::deque<_Tp, _Alloc >::erase()`, `std::deque<_Tp, _Alloc >::front()`, `std::operator==(,)`, and `std::deque<_Tp, _Alloc >::~~deque()`.

**5.441.3.26** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
const_iterator std::deque<_Tp, _Alloc >::cbegin () const  
[inline]`

Returns a read-only (constant) [iterator](#) that points to the first element in the deque. Iteration is done in ordinary element order.

Definition at line 1047 of file `stl_deque.h`.

**5.441.3.27** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
const_iterator std::deque<_Tp, _Alloc >::cend () const  
[inline]`

Returns a read-only (constant) [iterator](#) that points one past the last element in the deque. Iteration is done in ordinary element order.

Definition at line 1056 of file `stl_deque.h`.

**5.441.3.28** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
void std::deque< _Tp, _Alloc >::clear () [inline]`

Erases all the elements. Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 1501 of file stl\_deque.h.

References `std::deque< _Tp, _Alloc >::begin()`.

Referenced by `std::deque< _Tp, _Alloc >::_M_range_initialize()`, `std::deque< _Tp, _Alloc >::erase()`, and `std::deque< _Tp, _Alloc >::operator=()`.

**5.441.3.29** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
const_reverse_iterator std::deque< _Tp, _Alloc >::crbegin () const  
[inline]`

Returns a read-only (constant) reverse [iterator](#) that points to the last element in the deque. Iteration is done in reverse element order.

Definition at line 1065 of file stl\_deque.h.

**5.441.3.30** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
const_reverse_iterator std::deque< _Tp, _Alloc >::crend () const  
[inline]`

Returns a read-only (constant) reverse [iterator](#) that points to one before the first element in the deque. Iteration is done in reverse element order.

Definition at line 1074 of file stl\_deque.h.

**5.441.3.31** `template<typename _Tp, typename _Alloc > template<typename...  
_Args> deque< _Tp, _Alloc >::iterator deque::emplace (iterator  
_position, _Args &&... _args) [inline]`

Inserts an object in deque before specified [iterator](#).

**Parameters:**

*position* An [iterator](#) into the deque.

*args* Arguments.

**Returns:**

An [iterator](#) that points to the inserted data.

This function will insert an object of type `T` constructed with `T(std::forward<Args>(args)...) before the specified location.`

Definition at line 144 of file `deque.tcc`.

References `std::deque<_Tp, _Alloc >::push_back()`, and `std::deque<_Tp, _Alloc >::push_front()`.

Referenced by `std::deque<_Tp, _Alloc >::insert()`.

**5.441.3.32** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>`  
`bool std::deque<_Tp, _Alloc >::empty() const [inline]`

Returns true if the deque is empty. (Thus `begin()` would equal `end()`.)

Definition at line 1122 of file `stl_deque.h`.

**5.441.3.33** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>`  
`const_iterator std::deque<_Tp, _Alloc >::end() const [inline]`

Returns a read-only (constant) `iterator` that points one past the last element in the deque. Iteration is done in ordinary element order.

Definition at line 1002 of file `stl_deque.h`.

**5.441.3.34** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>`  
`iterator std::deque<_Tp, _Alloc >::end() [inline]`

Returns a read/write `iterator` that points one past the last element in the deque. Iteration is done in ordinary element order.

Definition at line 993 of file `stl_deque.h`.

Referenced by `std::deque<_Tp, _Alloc >::back()`, `std::deque<_Tp, _Alloc >::deque()`, `std::deque<_Tp, _Alloc >::erase()`, `std::operator==(, and std::deque<_Tp, _Alloc >::~~deque().`

**5.441.3.35** `template<typename _Tp, typename _Alloc > deque<_Tp,`  
`_Alloc >::iterator deque::erase(iterator __first, iterator __last)`  
`[inline]`

Remove a range of elements.

#### Parameters:

*first* Iterator pointing to the first element to be erased.

*last* Iterator pointing to one past the last element to be erased.

**Returns:**

An [iterator](#) pointing to the element pointed to by *last* prior to erasing (or [end\(\)](#)).

This function will erase the elements in the range [first,last) and shorten the deque accordingly.

The user is cautioned that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 189 of file deque.tcc.

References [std::deque< \\_Tp, \\_Alloc >::begin\(\)](#), [std::deque< \\_Tp, \\_Alloc >::clear\(\)](#), [std::deque< \\_Tp, \\_Alloc >::end\(\)](#), and [std::deque< \\_Tp, \\_Alloc >::size\(\)](#).

**5.441.3.36** `template<typename _Tp, typename _Alloc > deque< _Tp, _Alloc >::iterator deque::erase (iterator __position) [inline]`

Remove element at given position.

**Parameters:**

*position* Iterator pointing to element to be erased.

**Returns:**

An [iterator](#) pointing to the next element (or [end\(\)](#)).

This function will erase the element at the given position and thus shorten the deque by one.

The user is cautioned that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 166 of file deque.tcc.

**5.441.3.37** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> const_reference std::deque< _Tp, _Alloc >::front () const [inline]`

Returns a read-only (constant) reference to the data at the first element of the deque.

Definition at line 1215 of file stl\_deque.h.

References [std::deque< \\_Tp, \\_Alloc >::begin\(\)](#).

**5.441.3.38** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
reference std::deque<_Tp, _Alloc >::front () [inline]`

Returns a read/write reference to the data at the first element of the deque.

Definition at line 1207 of file `stl_deque.h`.

References `std::deque<_Tp, _Alloc >::begin()`.

**5.441.3.39** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
allocator_type std::deque<_Tp, _Alloc >::get_allocator () const  
[inline]`

Get a copy of the memory allocation object.

Reimplemented from `std::_Deque_base<_Tp, _Alloc >`.

Definition at line 967 of file `stl_deque.h`.

**5.441.3.40** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
template<typename _InputIterator > void std::deque<_Tp, _Alloc  
>::insert (iterator __position, _InputIterator __first, _InputIterator  
__last) [inline]`

Inserts a range into the deque.

**Parameters:**

*position* An [iterator](#) into the deque.

*first* An input [iterator](#).

*last* An input [iterator](#).

This function will insert copies of the data in the range `[first,last)` into the deque before the location specified by *pos*. This is known as *range insert*.

Definition at line 1428 of file `stl_deque.h`.

**5.441.3.41** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
void std::deque<_Tp, _Alloc >::insert (iterator __position,  
size_type __n, const value_type & __x) [inline]`

Inserts a number of copies of given data into the deque.

**Parameters:**

*position* An [iterator](#) into the deque.

- n* Number of elements to be inserted.
- x* Data to be inserted.

This function will insert a specified number of copies of the given data before the location specified by *position*.

Definition at line 1413 of file stl\_deque.h.

```
5.441.3.42 template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
void std::deque< _Tp, _Alloc >::insert (iterator __p,
initializer_list< value_type > __l) [inline]
```

Inserts an initializer [list](#) into the deque.

**Parameters:**

- p* An [iterator](#) into the deque.
- l* An [initializer\\_list](#).

This function will insert copies of the data in the [initializer\\_list](#) *l* into the deque before the location specified by *p*. This is known as *list insert*.

Definition at line 1399 of file stl\_deque.h.

References std::deque< \_Tp, \_Alloc >::insert().

Referenced by std::deque< \_Tp, \_Alloc >::insert().

```
5.441.3.43 template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
iterator std::deque< _Tp, _Alloc >::insert (iterator __position,
value_type && __x) [inline]
```

Inserts given rvalue into deque before specified [iterator](#).

**Parameters:**

- position* An [iterator](#) into the deque.
- x* Data to be inserted.

**Returns:**

- An [iterator](#) that points to the inserted data.

This function will insert a copy of the given rvalue before the specified location.

Definition at line 1386 of file stl\_deque.h.

References std::deque< \_Tp, \_Alloc >::emplace().

**5.441.3.44** `template<typename _Tp, typename _Alloc > deque< _Tp, _Alloc >::iterator deque::insert (iterator __position, const value_type & __x) [inline]`

Inserts given value into deque before specified [iterator](#).

**Parameters:**

*position* An [iterator](#) into the deque.

*x* Data to be inserted.

**Returns:**

An [iterator](#) that points to the inserted data.

This function will insert a copy of the given value before the specified location.

Definition at line 121 of file deque.tcc.

References `std::deque< _Tp, _Alloc >::push_back()`, and `std::deque< _Tp, _Alloc >::push_front()`.

**5.441.3.45** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> size_type std::deque< _Tp, _Alloc >::max_size () const [inline]`

Returns the [size\(\)](#) of the largest possible deque.

Definition at line 1086 of file stl\_deque.h.

Referenced by `std::deque< _Tp, _Alloc >::_M_new_elements_at_back()`, and `std::deque< _Tp, _Alloc >::_M_new_elements_at_front()`.

**5.441.3.46** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> deque& std::deque< _Tp, _Alloc >::operator= (initializer_list< value_type > __l) [inline]`

Assigns an initializer [list](#) to a deque.

**Parameters:**

*l* An [initializer\\_list](#).

This function fills a deque with copies of the elements in the [initializer\\_list](#) *l*.

Note that the assignment completely changes the deque and that the resulting deque's size is the same as the number of elements assigned. Old data may be lost.

Definition at line 907 of file stl\_deque.h.

References std::deque< \_Tp, \_Alloc >::assign().

**5.441.3.47** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
deque& std::deque< _Tp, _Alloc >::operator= (deque< _Tp, _Alloc  
> && _x) [inline]`

Deque move assignment operator.

**Parameters:**

*x* A deque of identical element and [allocator](#) types.

The contents of *x* are moved into this [deque](#) (without copying). *x* is a valid, but unspecified deque.

Definition at line 886 of file stl\_deque.h.

References std::deque< \_Tp, \_Alloc >::clear(), and std::deque< \_Tp, \_Alloc >::swap().

**5.441.3.48** `template<typename _Tp, typename _Alloc > deque< _Tp, _Alloc  
> & deque::operator= (const deque< _Tp, _Alloc > & _x)  
[inline]`

Deque assignment operator.

**Parameters:**

*x* A deque of identical element and [allocator](#) types.

All the elements of *x* are copied, but unlike the copy constructor, the [allocator](#) object is not copied.

Definition at line 65 of file deque.tcc.

**5.441.3.49** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
const_reference std::deque< _Tp, _Alloc >::operator[] (size_type  
__n) const [inline]`

Subscript access to the data contained in the deque.

**Parameters:**

*n* The index of the element for which data should be accessed.

**Returns:**

Read-only (constant) reference to data.

This operator allows for easy, array-style, data access. Note that data access with this operator is unchecked and [out\\_of\\_range](#) lookups are not defined. (For checked lookups see [at\(\)](#).)

Definition at line 1153 of file `stl_deque.h`.

**5.441.3.50** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
reference std::deque<_Tp, _Alloc>::operator[ ] (size_type __n)  
[inline]`

Subscript access to the data contained in the deque.

**Parameters:**

*n* The index of the element for which data should be accessed.

**Returns:**

Read/write reference to data.

This operator allows for easy, array-style, data access. Note that data access with this operator is unchecked and [out\\_of\\_range](#) lookups are not defined. (For checked lookups see [at\(\)](#).)

Definition at line 1138 of file `stl_deque.h`.

**5.441.3.51** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
void std::deque<_Tp, _Alloc>::pop_back () [inline]`

Removes last element. This is a typical [stack](#) operation. It shrinks the deque by one.

Note that no data is returned, and if the last element's data is needed, it should be retrieved before [pop\\_back\(\)](#) is called.

Definition at line 1336 of file `stl_deque.h`.

References `std::deque<_Tp, _Alloc>::_M_pop_back_aux()`.

Referenced by `std::deque<_Tp, _Alloc>::erase()`.

**5.441.3.52** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
void std::deque<_Tp, _Alloc>::pop_front () [inline]`

Removes first element. This is a typical [stack](#) operation. It shrinks the deque by one.

Note that no data is returned, and if the first element's data is needed, it should be retrieved before [pop\\_front\(\)](#) is called.

Definition at line 1315 of file `stl_deque.h`.

References `std::deque< _Tp, _Alloc >::_M_pop_front_aux()`.

Referenced by `std::deque< _Tp, _Alloc >::erase()`.

**5.441.3.53** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
void std::deque< _Tp, _Alloc >::push_back (const value_type &  
__x) [inline]`

Add data to the end of the deque.

**Parameters:**

**x** Data to be added.

This is a typical [stack](#) operation. The function creates an element at the end of the deque and assigns the given data to it. Due to the nature of a deque this operation can be done in constant time.

Definition at line 1284 of file `stl_deque.h`.

References `std::deque< _Tp, _Alloc >::_M_push_back_aux()`.

Referenced by `std::deque< _Tp, _Alloc >::_M_range_initialize()`, `std::deque< _Tp, _Alloc >::emplace()`, and `std::deque< _Tp, _Alloc >::insert()`.

**5.441.3.54** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
void std::deque< _Tp, _Alloc >::push_front (const value_type &  
__x) [inline]`

Add data to the front of the deque.

**Parameters:**

**x** Data to be added.

This is a typical [stack](#) operation. The function creates an element at the front of the deque and assigns the given data to it. Due to the nature of a deque this operation can be done in constant time.

Definition at line 1253 of file `stl_deque.h`.

References `std::deque< _Tp, _Alloc >::_M_push_front_aux()`.

Referenced by `std::deque< _Tp, _Alloc >::emplace()`, and `std::deque< _Tp, _Alloc >::insert()`.

**5.441.3.55** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
const_reverse_iterator std::deque<_Tp, _Alloc>::rbegin() const  
[inline]`

Returns a read-only (constant) reverse [iterator](#) that points to the last element in the deque. Iteration is done in reverse element order.

Definition at line 1020 of file `stl_deque.h`.

**5.441.3.56** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
reverse_iterator std::deque<_Tp, _Alloc>::rbegin() [inline]`

Returns a read/write reverse [iterator](#) that points to the last element in the deque. Iteration is done in reverse element order.

Definition at line 1011 of file `stl_deque.h`.

**5.441.3.57** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
const_reverse_iterator std::deque<_Tp, _Alloc>::rend() const  
[inline]`

Returns a read-only (constant) reverse [iterator](#) that points to one before the first element in the deque. Iteration is done in reverse element order.

Definition at line 1038 of file `stl_deque.h`.

**5.441.3.58** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
reverse_iterator std::deque<_Tp, _Alloc>::rend() [inline]`

Returns a read/write reverse [iterator](#) that points to one before the first element in the deque. Iteration is done in reverse element order.

Definition at line 1029 of file `stl_deque.h`.

**5.441.3.59** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
void std::deque<_Tp, _Alloc>::resize(size_type __new_size,  
value_type __x = value_type()) [inline]`

Resizes the deque to the specified number of elements.

**Parameters:**

*new\_size* Number of elements the deque should contain.

*x* Data with which new elements should be populated.

This function will resize the deque to the specified number of elements. If the number is smaller than the deque's current size the deque is truncated, otherwise the deque is extended and new elements are populated with given data.

Definition at line 1101 of file stl\_deque.h.

References `std::deque< _Tp, _Alloc >::insert()`, and `std::deque< _Tp, _Alloc >::size()`.

**5.441.3.60** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
void std::deque< _Tp, _Alloc >::shrink_to_fit () [inline]`

A non-binding request to reduce memory use.

Definition at line 1113 of file stl\_deque.h.

**5.441.3.61** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
size_type std::deque< _Tp, _Alloc >::size () const [inline]`

Returns the number of elements in the deque.

Definition at line 1081 of file stl\_deque.h.

Referenced by `std::deque< _Tp, _Alloc >::_M_new_elements_at_back()`, `std::deque< _Tp, _Alloc >::_M_new_elements_at_front()`, `std::deque< _Tp, _Alloc >::_M_range_check()`, `std::deque< _Tp, _Alloc >::erase()`, `std::operator==(,)`, and `std::deque< _Tp, _Alloc >::resize()`.

**5.441.3.62** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
void std::deque< _Tp, _Alloc >::swap (deque< _Tp, _Alloc > &  
__x) [inline]`

Swaps data with another deque.

#### Parameters:

**x** A deque of the same element and [allocator](#) types.

This exchanges the elements between two deques in constant time. (Four pointers, so it should be quite fast.) Note that the global [std::swap\(\)](#) function is specialized such that `std::swap(d1,d2)` will feed to this function.

Definition at line 1481 of file stl\_deque.h.

Referenced by `std::deque< _Tp, _Alloc >::operator=(,)`, and `std::swap()`.

### 5.442.1 Detailed Description

`template<typename _RandomNumberEngine, size_t __p, size_t __r> class`  
`std::discard_block_engine< _RandomNumberEngine, __p, __r >`

Produces random numbers from some base engine by discarding blocks of data.

$0 \leq \text{__r} \leq \text{__p}$

Definition at line 716 of file random.h.

### 5.442.2 Member Typedef Documentation

5.442.2.1 `template<typename _RandomNumberEngine, size_t __p,`  
`size_t __r> typedef _RandomNumberEngine::result_type`  
`std::discard_block_engine< _RandomNumberEngine, __p, __r`  
`>::result_type`

The type of the generated random value.

Definition at line 723 of file random.h.

### 5.442.3 Constructor & Destructor Documentation

5.442.3.1 `template<typename _RandomNumberEngine, size_t __p, size_t`  
`__r> std::discard_block_engine< _RandomNumberEngine, __p, __r`  
`>::discard_block_engine () [inline]`

Constructs a default discard\_block\_engine engine. The underlying engine is default constructed as well.

Definition at line 734 of file random.h.

**5.442 std::discard\_block\_engine<\_RandomNumberEngine, \_\_p, \_\_r > Class**  
**Template Reference** **2573**

---

**5.442.3.2** `template<typename _RandomNumberEngine, size_t __p, size_t  
__r> std::discard_block_engine<_RandomNumberEngine, __p, __r  
>::discard_block_engine (const _RandomNumberEngine & __rne)  
[inline, explicit]`

Copy constructs a discard\_block\_engine engine. Copies an existing base class random number generator.

**Parameters:**

*rne* An existing (base class) engine object.

Definition at line 744 of file random.h.

**5.442.3.3** `template<typename _RandomNumberEngine, size_t __p, size_t  
__r> std::discard_block_engine<_RandomNumberEngine, __p,  
__r >::discard_block_engine (_RandomNumberEngine && __rne)  
[inline, explicit]`

Move constructs a discard\_block\_engine engine. Copies an existing base class random number generator.

**Parameters:**

*rne* An existing (base class) engine object.

Definition at line 754 of file random.h.

**5.442.3.4** `template<typename _RandomNumberEngine, size_t __p, size_t  
__r> std::discard_block_engine<_RandomNumberEngine, __p, __r  
>::discard_block_engine (result_type __s) [inline, explicit]`

Seed constructs a discard\_block\_engine engine. Constructs the underlying generator engine seeded with \_\_s.

**Parameters:**

*s* A seed value for the base class engine.

Definition at line 764 of file random.h.

```
5.442.3.5 template<typename _RandomNumberEngine, size_t __p,
size_t __r> template<typename _Sseq, typename = typename
std::enable_if<!std::is_same<_Sseq, discard_block_engine>::value
&& !std::is_same<_Sseq, _RandomNumberEngine>::value>
::type> std::discard_block_engine< _RandomNumberEngine,
__p, __r >::discard_block_engine (_Sseq & __q) [inline,
explicit]
```

Generator construct a discard\_block\_engine engine.

**Parameters:**

`__q` A seed sequence.

Definition at line 777 of file random.h.

## 5.442.4 Member Function Documentation

```
5.442.4.1 template<typename _RandomNumberEngine, size_t __p, size_t
__r> const _RandomNumberEngine& std::discard_block_engine<
_RandomNumberEngine, __p, __r >::base () const [inline]
```

Gets a const reference to the underlying generator engine object.

Definition at line 821 of file random.h.

```
5.442.4.2 template<typename _RandomNumberEngine, size_t __p, size_t __r>
void std::discard_block_engine< _RandomNumberEngine, __p, __r
>::discard (unsigned long long __z) [inline]
```

Discard a sequence of random numbers.

**Todo**

Look for a faster way to do discard.

Definition at line 848 of file random.h.

```
5.442.4.3 template<typename _RandomNumberEngine, size_t __p, size_t __r>
result_type std::discard_block_engine< _RandomNumberEngine,
__p, __r >::max () const [inline]
```

Gets the maximum value in the generated random number range.

**5.442 std::discard\_block\_engine<\_RandomNumberEngine, \_\_p, \_\_r > Class**  
**Template Reference** **2575**

---

**Todo**

This should be constexpr.

Definition at line 839 of file random.h.

**5.442.4.4** `template<typename _RandomNumberEngine, size_t __p, size_t __r>  
result_type std::discard_block_engine<_RandomNumberEngine,  
__p, __r >::min () const [inline]`

Gets the minimum value in the generated random number range.

**Todo**

This should be constexpr.

Definition at line 830 of file random.h.

**5.442.4.5** `template<typename _RandomNumberEngine , size_t __p, size_t  
__r> discard_block_engine<_RandomNumberEngine, __p, __r  
>::result_type std::discard_block_engine<_RandomNumberEngine,  
__p, __r >::operator() () [inline]`

Gets the next value in the generated random number sequence.

Definition at line 652 of file random.tcc.

**5.442.4.6** `template<typename _RandomNumberEngine, size_t __p, size_t  
__r> template<typename _Sseq > void std::discard_block_engine<  
_RandomNumberEngine, __p, __r >::seed (_Sseq & __q)  
[inline]`

Reseeds the discard\_block\_engine object with the given seed sequence.

**Parameters:**

`__q` A seed generator function.

Definition at line 810 of file random.h.

**5.442.4.7** `template<typename _RandomNumberEngine, size_t __p, size_t __r>  
void std::discard_block_engine<_RandomNumberEngine, __p, __r  
>::seed (result_type __s) [inline]`

Reseeds the discard\_block\_engine object with the default seed for the underlying base class generator engine.

Definition at line 797 of file random.h.

**5.442.4.8** `template<typename _RandomNumberEngine, size_t __p, size_t __r>  
void std::discard_block_engine< _RandomNumberEngine, __p, __r  
>::seed () [inline]`

Reseeds the `discard_block_engine` object with the default seed for the underlying base class generator engine.

Definition at line 786 of file random.h.

## 5.442.5 Friends And Related Function Documentation

**5.442.5.1** `template<typename _RandomNumberEngine, size_t __p,  
size_t __r> template<typename _RandomNumberEngine1 ,  
size_t __p1, size_t __r1, typename _CharT , typename _Traits  
> std::basic_ostream<_CharT, _Traits>& operator<<  
(std::basic_ostream< _CharT, _Traits > &, const  
std::discard_block_engine< _RandomNumberEngine1, __p1, __r1 >  
&) [friend]`

Inserts the current state of a `discard_block_engine` random number generator engine `__x` into the output stream `__os`.

### Parameters:

`__os` An output stream.

`__x` A `discard_block_engine` random number generator engine.

### Returns:

The output stream with the state of `__x` inserted or in an error state.

**5.442.5.2** `template<typename _RandomNumberEngine, size_t __p,  
size_t __r> bool operator==(const discard_block_engine<  
_RandomNumberEngine, __p, __r > & __lhs, const  
discard_block_engine< _RandomNumberEngine, __p, __r > &  
__rhs) [friend]`

Compares two `discard_block_engine` random number generator objects of the same type for equality.

### Parameters:

`__lhs` A `discard_block_engine` random number generator object.

**5.442 std::discard\_block\_engine<\_RandomNumberEngine, \_\_p, \_\_r > Class**  
**Template Reference** **2577**

---

*\_\_rhs* Another discard\_block\_engine random number generator object.

**Returns:**

true if the two objects are equal, false otherwise.

Definition at line 871 of file random.h.

**5.442.5.3** `template<typename _RandomNumberEngine, size_t __p,  
size_t __r> template<typename _RandomNumberEngine1  
, size_t __p1, size_t __r1, typename _CharT , typename  
_Traits > std::basic_istream<_CharT, _Traits>&  
operator>> (std::basic_istream<_CharT, _Traits > &  
std::discard_block_engine<_RandomNumberEngine1, __p1, __r1 >  
&) [friend]`

Extracts the current state of a % subtract\_with\_carry\_engine random number generator engine *\_\_x* from the input stream *\_\_is*.

**Parameters:**

*\_\_is* An input stream.

*\_\_x* A discard\_block\_engine random number generator engine.

**Returns:**

The input stream with the state of *\_\_x* extracted or in an error state.

### 5.443.1 Detailed Description

```
template<typename _IntType = int> class std::discrete_distribution< _IntType
>
```

A [discrete\\_distribution](#) random number distribution. The formula for the discrete probability mass function is

Definition at line 4089 of file `random.h`.

### 5.443.2 Member Typedef Documentation

**5.443.2.1** `template<typename _IntType = int> typedef _IntType  
std::discrete_distribution< _IntType >::result_type`

The type of the range of the distribution.

Definition at line 4096 of file `random.h`.

### 5.443.3 Member Function Documentation

**5.443.3.1** `template<typename _IntType = int> result_type  
std::discrete_distribution< _IntType >::max () const [inline]`

Returns the least upper bound value of the distribution.

Definition at line 4198 of file `random.h`.

References `std::vector< _Tp, _Alloc >::size()`.

**5.443.3.2** `template<typename _IntType = int> result_type  
std::discrete_distribution< _IntType >::min () const [inline]`

Returns the greatest lower bound value of the distribution.

Definition at line 4191 of file `random.h`.

**5.443.3.3** `template<typename _IntType = int> void std::discrete_distribution<  
_IntType >::param (const param_type & __param) [inline]`

Sets the parameter [set](#) of the distribution.

#### Parameters:

`__param` The new parameter [set](#) of the distribution.

Definition at line 4184 of file random.h.

**5.443.3.4** `template<typename _IntType = int> param_type  
std::discrete_distribution< _IntType >::param () const [inline]`

Returns the parameter `set` of the distribution.

Definition at line 4176 of file random.h.

**5.443.3.5** `template<typename _IntType = int> std::vector<double>  
std::discrete_distribution< _IntType >::probabilities () const  
[inline]`

Returns the probabilities of the distribution.

Definition at line 4169 of file random.h.

**5.443.3.6** `template<typename _IntType = int> void std::discrete_distribution<  
_IntType >::reset () [inline]`

Resets the distribution state.

Definition at line 4162 of file random.h.

## 5.443.4 Friends And Related Function Documentation

**5.443.4.1** `template<typename _IntType = int> template<typename _IntType1 ,  
typename _CharT , typename _Traits > std::basic_ostream< _CharT,  
_Traits>& operator<< (std::basic_ostream< _CharT, _Traits > &,  
const std::discrete_distribution< _IntType1 > &) [friend]`

Inserts a `discrete_distribution` random number distribution `__x` into the output stream `__os`.

### Parameters:

`__os` An output stream.

`__x` A `discrete_distribution` random number distribution.

### Returns:

The output stream with the state of `__x` inserted or in an error state.

**5.443.4.2** `template<typename _IntType = int> template<typename _IntType1 ,  
typename _CharT , typename _Traits > std::basic_istream<_CharT,  
_Traits>& operator>> (std::basic_istream<_CharT, _Traits > &,  
std::discrete_distribution< _IntType1 > &) [friend]`

Extracts a discrete\_distribution random number distribution `__x` from the input stream `__is`.

**Parameters:**

`__is` An input stream.

`__x` A discrete\_distribution random number generator engine.

**Returns:**

The input stream with `__x` extracted or in an error state.

The documentation for this class was generated from the following files:

- [random.h](#)
- [random.tcc](#)

## 5.444 `std::discrete_distribution<_IntType>::param_type` Struct Reference

### Public Types

#### 5.444.1 Detailed Description

`template<typename _IntType = int> struct std::discrete_distribution<_IntType>::param_type`

Parameter type.

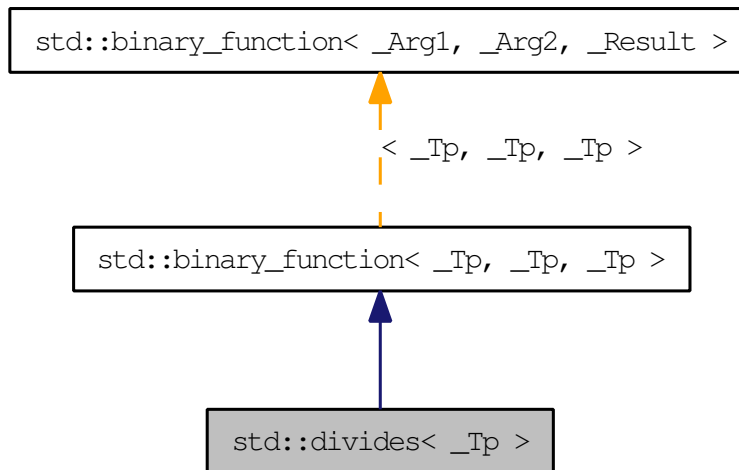

Definition at line 4098 of file `random.h`.

The documentation for this struct was generated from the following files:

- [random.h](#)
- [random.tcc](#)

## 5.445 std::divides< \_Tp > Struct Template Reference

One of the [math functors](#). Inheritance diagram for std::divides< \_Tp >:

### Public Types

- typedef `_Tp` [first\\_argument\\_type](#)
- typedef `_Tp` [result\\_type](#)
- typedef `_Tp` [second\\_argument\\_type](#)

### Public Member Functions

- `_Tp operator() (const _Tp &__x, const _Tp &__y) const`

#### 5.445.1 Detailed Description

```
template<typename _Tp> struct std::divides< _Tp >
```

One of the [math functors](#).

Definition at line 162 of file `stl_function.h`.

## 5.445.2 Member Typedef Documentation

**5.445.2.1** `typedef _Tp std::binary_function< _Tp, _Tp, _Tp  
>::first_argument_type` [*inherited*]

the type of the first argument (no surprises here)

Definition at line 114 of file `stl_function.h`.

**5.445.2.2** `typedef _Tp std::binary_function< _Tp, _Tp, _Tp >::result_type`  
[*inherited*]

type of the return type

Definition at line 118 of file `stl_function.h`.

**5.445.2.3** `typedef _Tp std::binary_function< _Tp, _Tp, _Tp  
>::second_argument_type` [*inherited*]

the type of the second argument

Definition at line 117 of file `stl_function.h`.

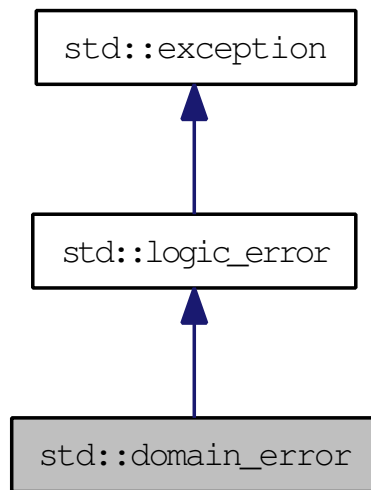

The documentation for this struct was generated from the following file:

- [stl\\_function.h](#)

## 5.446 `std::domain_error` Class Reference

Inheritance diagram for `std::domain_error`:

### Public Member Functions

- `domain_error` (const [string](#) &\_\_arg)
- virtual const char \* `what` () const throw ()

#### 5.446.1 Detailed Description

Thrown by the library, or by you, to report domain errors (domain in the mathematical sense).

Definition at line 73 of file `stdexcept`.

#### 5.446.2 Member Function Documentation

##### 5.446.2.1 virtual const char\* `std::logic_error::what` () const throw () [[virtual](#), [inherited](#)]

Returns a C-style character string describing the general cause of the current error (the same string passed to the ctor).

Reimplemented from [std::exception](#).

Reimplemented in [std::future\\_error](#).

The documentation for this class was generated from the following file:

- [stdexcept](#)

## 5.447 `std::enable_if< bool, _Tp >` Struct Template Reference

`enable_if` Inheritance diagram for `std::enable_if< bool, _Tp >`:

### 5.447.1 Detailed Description

```
template<bool, typename _Tp = void> struct std::enable_if< bool, _Tp >
```

`enable_if`

Definition at line 356 of file `type_traits`.

The documentation for this struct was generated from the following file:

- [type\\_traits](#)

## 5.448 `std::enable_shared_from_this< _Tp >` Class Template Reference

Base class allowing use of member function `shared_from_this`.

### Public Member Functions

- [shared\\_ptr](#)< const \_Tp > `shared_from_this` () const
- [shared\\_ptr](#)< \_Tp > `shared_from_this` ()

### Protected Member Functions

- `enable_shared_from_this` (const [enable\\_shared\\_from\\_this](#) &)
- `enable_shared_from_this` & `operator=` (const [enable\\_shared\\_from\\_this](#) &)

### Friends

- `template<typename _Tp1 >`  
`void` `__enable_shared_from_this_helper` (const `__shared_count`<> &`__pn`,  
const [enable\\_shared\\_from\\_this](#) \*`__pe`, const \_Tp1 \*`__px`)

### 5.448.1 Detailed Description

`template<typename _Tp> class std::enable_shared_from_this< _Tp >`

Base class allowing use of member function `shared_from_this`.

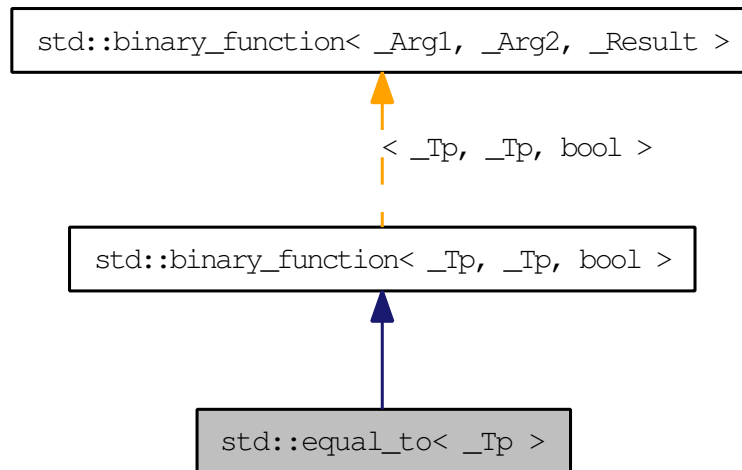

Definition at line 399 of file `shared_ptr.h`.

The documentation for this class was generated from the following file:

- [shared\\_ptr.h](#)

## 5.449 std::equal\_to< \_Tp > Struct Template Reference

One of the [comparison functors](#). Inheritance diagram for std::equal\_to< \_Tp >:

### Public Types

- typedef `_Tp` [first\\_argument\\_type](#)
- typedef `bool` [result\\_type](#)
- typedef `_Tp` [second\\_argument\\_type](#)

### Public Member Functions

- `bool operator() (const _Tp &__x, const _Tp &__y) const`

#### 5.449.1 Detailed Description

```
template<typename _Tp> struct std::equal_to< _Tp >
```

One of the [comparison functors](#).

Definition at line 199 of file `stl_function.h`.

## 5.449.2 Member Typedef Documentation

**5.449.2.1** `typedef _Tp std::binary_function< _Tp, _Tp, bool >::first_argument_type` [*inherited*]

the type of the first argument (no surprises here)

Definition at line 114 of file `stl_function.h`.

**5.449.2.2** `typedef bool std::binary_function< _Tp, _Tp, bool >::result_type` [*inherited*]

type of the return type

Definition at line 118 of file `stl_function.h`.

**5.449.2.3** `typedef _Tp std::binary_function< _Tp, _Tp, bool >::second_argument_type` [*inherited*]

the type of the second argument

Definition at line 117 of file `stl_function.h`.

The documentation for this struct was generated from the following file:

- [stl\\_function.h](#)

## 5.450 `std::error_category` Class Reference

[error\\_category](#)

### Public Member Functions

- `error_category` (const [error\\_category](#) &)
- virtual `error_condition default_error_condition` (int \_\_i) const
- virtual bool `equivalent` (const [error\\_code](#) &\_\_code, int \_\_i) const

`condition & >::type operator=` (`_ErrorConditionEnum __e`)
- `int value` () `const`

### 5.452.1 Detailed Description

[error\\_condition](#)

Definition at line 193 of file `system_error`.

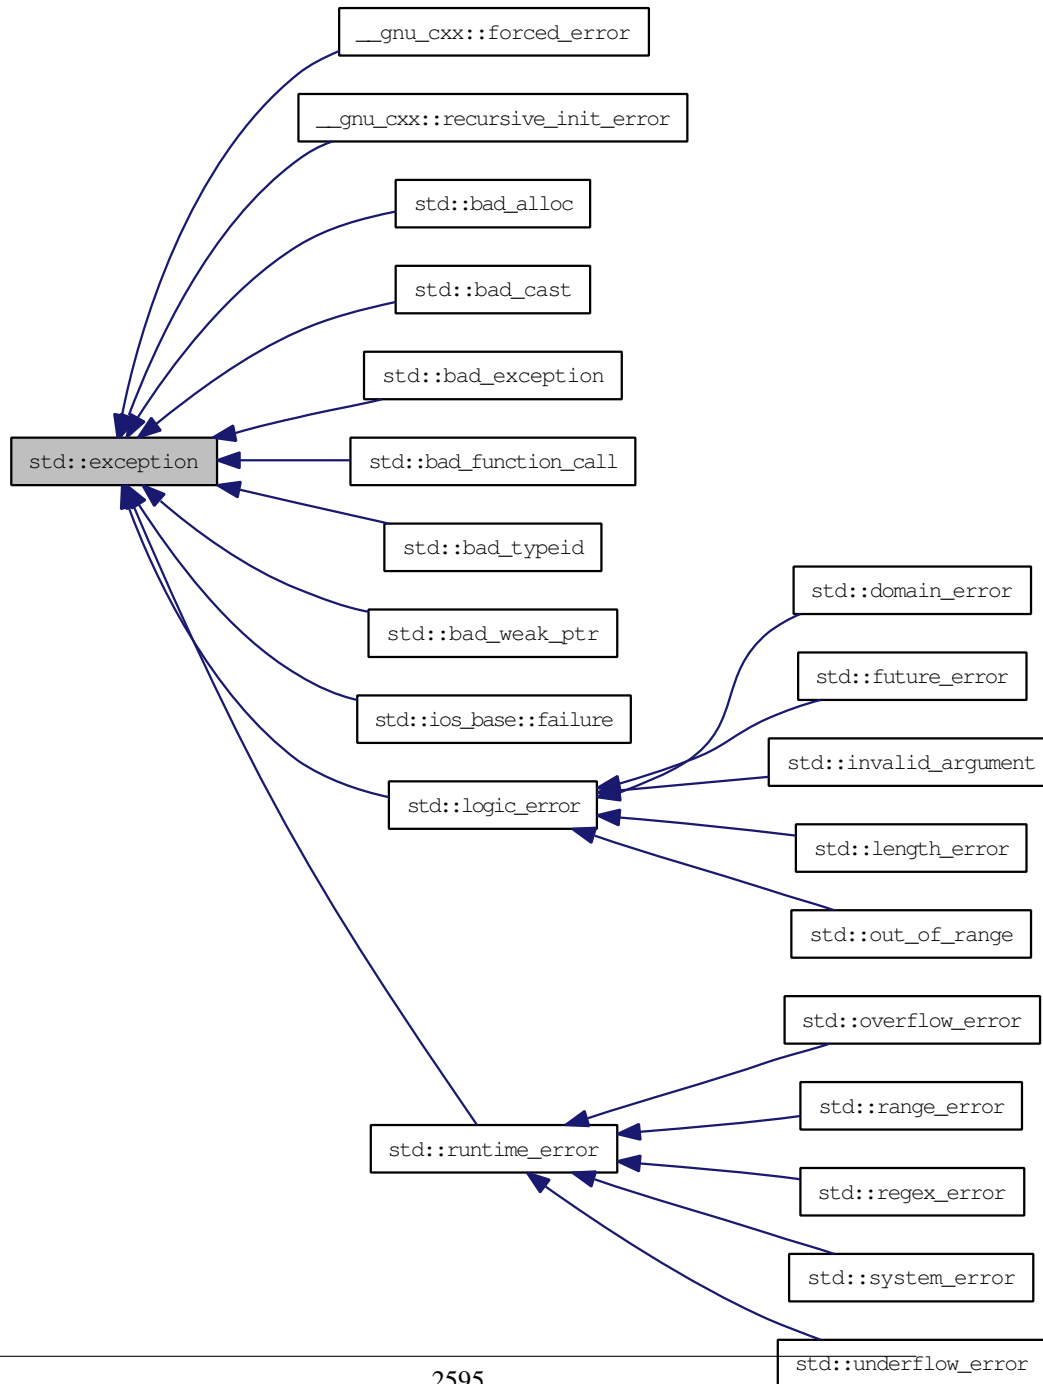

The documentation for this struct was generated from the following file:

- [system\\_error](#)

## 5.453 std::exception Class Reference

Base class for all library exceptions. Inheritance diagram for std::exception:

## Public Member Functions

- virtual const char \* [what](#) () const throw ()

### 5.453.1 Detailed Description

Base class for all library exceptions. This is the base class for all exceptions thrown by the standard library, and by certain language expressions. You are free to derive your own exception classes, or use a different hierarchy, or to throw non-class data (e.g., fundamental types).

Definition at line 61 of file `exception`.

### 5.453.2 Member Function Documentation

#### 5.453.2.1 virtual const char\* `std::exception::what` () const throw () [`virtual`]

Returns a C-style character string describing the general cause of the current error.

Reimplemented in [std::bad\\_exception](#), [std::bad\\_alloc](#), [std::bad\\_cast](#), [std::bad\\_typeid](#), [std::future\\_error](#), [std::logic\\_error](#), [std::runtime\\_error](#), [std::bad\\_weak\\_ptr](#), and [std::ios\\_base::failure](#).

The documentation for this class was generated from the following file:

- [exception](#)

## **5.454 `std::exponential_distribution<_RealType>` Class Template Reference**

An exponential continuous distribution for random numbers.

### **Classes**

- struct [param\\_type](#)

### **Public Types**

- typedef `_RealType` [result\\_type](#)

### **Public Member Functions**

- **exponential\_distribution** (const [param\\_type](#) &\_\_p)
- **exponential\_distribution** (const [result\\_type](#) &\_\_lambda=[result\\_type](#)(1))
- `_RealType` **lambda** () const
- [result\\_type](#) **max** () const
- [result\\_type](#) **min** () const
- template<typename `_UniformRandomNumberGenerator` >  
[result\\_type](#) **operator**() (`_UniformRandomNumberGenerator` &\_\_urng, const [param\\_type](#) &\_\_p)
- template<typename `_UniformRandomNumberGenerator` >  
[result\\_type](#) **operator**() (`_UniformRandomNumberGenerator` &\_\_urng)
- void **param** (const [param\\_type](#) &\_\_param)
- [param\\_type](#) **param** () const
- void **reset** ()

### **5.454.1 Detailed Description**

```
template<typename _RealType = double> class std::exponential_distribution<
_RealType >
```

An exponential continuous distribution for random numbers. The formula for the exponential probability density function is  $p(x|\lambda) = \lambda e^{-\lambda x}$ .

Definition at line 3649 of file random.h.

|                    |                         |
|--------------------|-------------------------|
| Mean               | $\frac{1}{\lambda}$     |
| Median             | $\frac{\ln 2}{\lambda}$ |
| Mode               | <i>zero</i>             |
| Range              | $[0, \infty]$           |
| Standard Deviation | $\frac{1}{\lambda}$     |

Table 5.1: Distribution Statistics

## 5.454.2 Member Typedef Documentation

**5.454.2.1** `template<typename _RealType = double> typedef _RealType  
std::exponential_distribution< _RealType >::result_type`

The type of the range of the distribution.

Definition at line 3656 of file random.h.

## 5.454.3 Constructor & Destructor Documentation

**5.454.3.1** `template<typename _RealType = double> std::exponential_  
distribution< _RealType >::exponential_distribution (const  
result_type & __lambda = result_type (1)) [inline, explicit]`

Constructs an exponential distribution with inverse scale parameter  $\lambda$ .

Definition at line 3683 of file random.h.

## 5.454.4 Member Function Documentation

**5.454.4.1** `template<typename _RealType = double> _RealType  
std::exponential_distribution< _RealType >::lambda () const  
[inline]`

Returns the inverse scale parameter of the distribution.

Definition at line 3704 of file random.h.

**5.454.4.2** `template<typename _RealType = double> result_type  
std::exponential_distribution< _RealType >::max () const  
[inline]`

Returns the least upper bound value of the distribution.

Definition at line 3733 of file random.h.

## 5.454 std::exponential\_distribution<\_RealType> Class Template Reference 2599

**5.454.4.3** `template<typename _RealType = double> result_type  
std::exponential_distribution<_RealType>::min () const  
[inline]`

Returns the greatest lower bound value of the distribution.

Definition at line 3726 of file random.h.

**5.454.4.4** `template<typename _RealType = double> void  
std::exponential_distribution<_RealType>::param (const  
param_type & __param) [inline]`

Sets the parameter `set` of the distribution.

### Parameters:

`__param` The new parameter `set` of the distribution.

Definition at line 3719 of file random.h.

**5.454.4.5** `template<typename _RealType = double> param_type  
std::exponential_distribution<_RealType>::param () const  
[inline]`

Returns the parameter `set` of the distribution.

Definition at line 3711 of file random.h.

Referenced by `std::operator>>()`.

**5.454.4.6** `template<typename _RealType = double> void  
std::exponential_distribution<_RealType>::reset () [inline]`

Resets the distribution state. Has no effect on exponential distributions.

Definition at line 3698 of file random.h.

The documentation for this class was generated from the following file:

- [random.h](#)

## 5.455 `std::exponential_distribution<_RealType>::param_type` Struct Reference

### Public Types

- typedef [exponential\\_distribution<\\_RealType>](#) `distribution_type`

### Public Member Functions

- `param_type` (`_RealType __lambda=_RealType(1)`)
- `_RealType lambda` () const

#### 5.455.1 Detailed Description

`template<typename _RealType = double> struct std::exponential_distribution<_RealType>::param_type`

Parameter type.

Definition at line 3658 of file `random.h`.

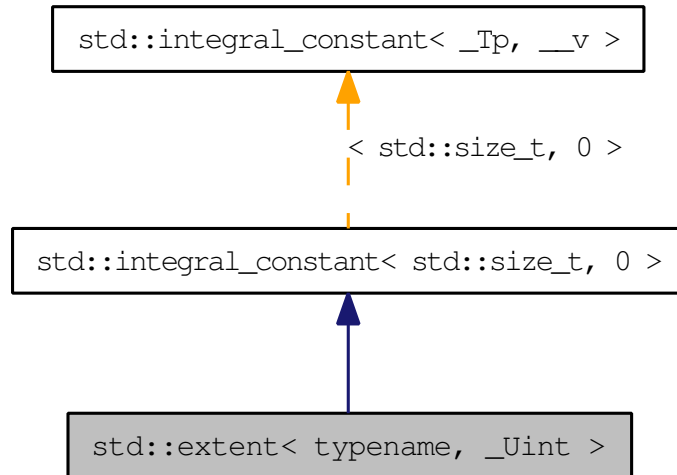

The documentation for this struct was generated from the following file:

- [random.h](#)

## 5.456 `std::extent< typename, _Uint >` Struct Template Reference

[extent](#) Inheritance diagram for `std::extent< typename, _Uint >`:

### Public Types

- typedef `integral_constant< std::size_t, __v >` **type**
- typedef `std::size_t` **value\_type**

### Static Public Attributes

- static const `std::size_t` **value**

#### 5.456.1 Detailed Description

`template<typename, unsigned _Uint = 0> struct std::extent< typename, _Uint >`

[extent](#)

Definition at line 368 of file `tr1_impl/type_traits`.

The documentation for this struct was generated from the following file:

- [tr1\\_impl/type\\_traits](#)

## 5.457 `std::extreme_value_distribution< _RealType >` Class Template Reference

A [extreme\\_value\\_distribution](#) random number distribution.

### Classes

- struct [param\\_type](#)

### Public Types

- typedef `_RealType` [result\\_type](#)

### Public Member Functions

- [extreme\\_value\\_distribution](#) (const [param\\_type](#) &\_\_p)

- `template<typename _UniformRandomNumberGenerator >`  
[result\\_type](#) [operator](#)() (`_UniformRandomNumberGenerator` &\_\_urng)
- void [param](#) (const [param\\_type](#) &\_\_param)
- [param\\_type](#) [param](#) () const
- void [reset](#) ()

#### 5.457.1 Detailed Description

```
template<typename _RealType = double> class std::extreme_value_
distribution< _RealType >
```

A [extreme\\_value\\_distribution](#) random number distribution. The formula for the normal probability mass function is

$$p(x|a, b) = \frac{1}{b} \exp\left(\frac{a-x}{b} - \exp\left(\frac{a-x}{b}\right)\right)$$

Definition at line 3944 of file random.h.

## 5.457.2 Member Typedef Documentation

5.457.2.1 `template<typename _RealType = double> typedef _RealType  
std::extreme_value_distribution<_RealType>::result_type`

The type of the range of the distribution.

Definition at line 3951 of file `random.h`.

## 5.457.3 Member Function Documentation

5.457.3.1 `template<typename _RealType = double> _RealType  
std::extreme_value_distribution<_RealType>::a () const  
[inline]`

Return the  $a$  parameter of the distribution.

Definition at line 3998 of file `random.h`.

5.457.3.2 `template<typename _RealType = double> _RealType  
std::extreme_value_distribution<_RealType>::b () const  
[inline]`

Return the  $b$  parameter of the distribution.

Definition at line 4005 of file `random.h`.

5.457.3.3 `template<typename _RealType = double> result_type  
std::extreme_value_distribution<_RealType>::max () const  
[inline]`

Returns the least upper bound value of the distribution.

Definition at line 4034 of file `random.h`.

5.457.3.4 `template<typename _RealType = double> result_type  
std::extreme_value_distribution<_RealType>::min () const  
[inline]`

Returns the greatest lower bound value of the distribution.

Definition at line 4027 of file `random.h`.

**5.457.3.5** `template<typename _RealType = double> void  
std::extreme_value_distribution< _RealType >::param (const  
param_type & __param) [inline]`

Sets the parameter [set](#) of the distribution.

**Parameters:**

`__param` The new parameter [set](#) of the distribution.

Definition at line 4020 of file random.h.

**5.457.3.6** `template<typename _RealType = double> param_type  
std::extreme_value_distribution< _RealType >::param () const  
[inline]`

Returns the parameter [set](#) of the distribution.

Definition at line 4012 of file random.h.

Referenced by `std::operator>>()`.

**5.457.3.7** `template<typename _RealType = double> void  
std::extreme_value_distribution< _RealType >::reset () [inline]`

Resets the distribution state.

Definition at line 3991 of file random.h.

The documentation for this class was generated from the following files:

- [random.h](#)
- [random.tcc](#)

## 5.458 `std::extreme_value_distribution<_RealType>::param_type` Struct Reference

### Public Types

- typedef `extreme_value_distribution<_RealType>` `distribution_type`

### Public Member Functions

`std::basic_istream`< `_CharT`, `_Traits` > & **operator>>** (`std::basic_istream`< `_CharT`, `_Traits` > &, [std::fisher\\_f\\_distribution](#)< `_RealType1` > &)

### 5.459.1 Detailed Description

`template<typename _RealType = double> class std::fisher_f_distribution<_RealType>`

A [fisher\\_f\\_distribution](#) random number distribution. The formula for the normal probability mass function is

$$p(x|m, n) = \frac{\Gamma((m+n)/2)}{\Gamma(m/2)\Gamma(n/2)} \left(\frac{m}{n}\right)^{m/2} x^{(m/2)-1} \left(1 + \frac{mx}{n}\right)^{-(m+n)/2}$$

Definition at line 2562 of file random.h.

### 5.459.2 Member Typedef Documentation

**5.459.2.1** `template<typename _RealType = double> typedef _RealType std::fisher_f_distribution<_RealType>::result_type`

The type of the range of the distribution.

Definition at line 2569 of file random.h.

### 5.459.3 Member Function Documentation

**5.459.3.1** `template<typename _RealType = double> result_type std::fisher_f_distribution<_RealType>::max () const [inline]`

Returns the least upper bound value of the distribution.

Definition at line 2652 of file random.h.

**5.459.3.2** `template<typename _RealType = double> result_type std::fisher_f_distribution<_RealType>::min () const [inline]`

Returns the greatest lower bound value of the distribution.

Definition at line 2645 of file random.h.

**5.459.3.3** `template<typename _RealType = double> void std::fisher_f_distribution<_RealType>::param (const param_type & __param) [inline]`

Sets the parameter `set` of the distribution.

**Parameters:**

`__param` The new parameter [set](#) of the distribution.

Definition at line 2638 of file random.h.

**5.459.3.4** `template<typename _RealType = double> param_type  
std::fisher_f_distribution<_RealType >::param () const [inline]`

Returns the parameter [set](#) of the distribution.

Definition at line 2630 of file random.h.

**5.459.3.5** `template<typename _RealType = double> void  
std::fisher_f_distribution<_RealType >::reset () [inline]`

Resets the distribution state.

Definition at line 2609 of file random.h.

References `std::gamma_distribution<_RealType >::reset()`.

**5.459.4 Friends And Related Function Documentation**

**5.459.4.1** `template<typename _RealType = double> template<typename  
_RealType1 , typename _CharT , typename _Traits >  
std::basic_ostream<_CharT, _Traits>& operator<<  
(std::basic_ostream<_CharT, _Traits > &, const  
std::fisher_f_distribution<_RealType1 > &) [friend]`

Inserts a `fisher_f_distribution` random number distribution `__x` into the output stream `__os`.

**Parameters:**

`__os` An output stream.

`__x` A `fisher_f_distribution` random number distribution.

**Returns:**

The output stream with the state of `__x` inserted or in an error state.

5.459.4.2 `template<typename _RealType = double> template<typename _RealType1, typename _CharT, typename _Traits> std::basic_istream<_CharT, _Traits>& operator>> (std::basic_istream<_CharT, _Traits> &, std::fisher_f_distribution<_RealType1> &)`  
[friend]

Extracts a `fisher_f_distribution` random number distribution `__x` from the input stream `__is`.

**Parameters:**

`__is` An input stream.

`__x` A `fisher_f_distribution` random number generator engine.

**Returns:**

The input stream with `__x` extracted or in an error state.

The documentation for this class was generated from the following file:

- [random.h](#)

## 5.460 `std::fisher_f_distribution<_RealType>::param_type` Struct Reference

### 5.462.1 Detailed Description

```
template<typename _Tp, typename _Alloc = allocator<_Tp>> class
std::forward_list<_Tp, _Alloc >
```

A standard container with linear time access to elements, and fixed time insertion/deletion at any point in the sequence. Meets the requirements of a [container](#), a [sequence](#), including the [optional sequence requirements](#) with the exception of `at` and `operator[]`.

This is a *singly linked* list. Traversal up the list requires linear time, but adding and removing elements (or *nodes*) is done in constant time, regardless of where the change takes place. Unlike `std::vector` and `std::deque`, random-access iterators are not provided, so subscripting ( `[]` ) access is not allowed. For algorithms which only need sequential access, this lack makes no difference.

Also unlike the other standard containers, `std::forward_list` provides specialized algorithms unique to linked lists, such as splicing, sorting, and in-place reversal.

A couple points on memory allocation for `forward_list<Tp>`:

First, we never actually allocate a `Tp`, we allocate `Fwd_list_node<Tp>`'s and trust [20.1.5]/4 to DTRT. This is to ensure that after elements from `forward_list<X,Alloc1>` are spliced into `forward_list<X,Alloc2>`, destroying the memory of the second list is a valid operation, i.e., `Alloc1` giveth and `Alloc2` taketh away.

Definition at line 389 of file `forward_list.h`.

### 5.462.2 Constructor & Destructor Documentation

```
5.462.2.1 template<typename _Tp, typename _Alloc = allocator<_Tp>>
std::forward_list<_Tp, _Alloc >::forward_list (const _Alloc & __al =
 _Alloc()) [inline, explicit]
```

Creates a `forward_list` with no elements.

#### Parameters:

*al* An [allocator](#) object.

Definition at line 418 of file `forward_list.h`.

```
5.462.2.2 template<typename _Tp, typename _Alloc = allocator<_Tp>>
std::forward_list<_Tp, _Alloc >::forward_list (const forward_list<
 _Tp, _Alloc > & __list, const _Alloc & __al) [inline]
```

Copy constructor with [allocator](#) argument.

**Parameters:**

- list* Input *list* to copy.
- al* An *allocator* object.

Definition at line 427 of file `forward_list.h`.

**5.462.2.3** `template<typename _Tp, typename _Alloc = allocator<_Tp>>  
std::forward_list<_Tp, _Alloc >::forward_list (forward_list<_Tp,  
_Alloc > && __list, const _Alloc & __al) [inline]`

Move constructor with *allocator* argument.

**Parameters:**

- list* Input *list* to move.
- al* An *allocator* object.

Definition at line 436 of file `forward_list.h`.

**5.462.2.4** `template<typename _Tp, typename _Alloc > std::forward_list<  
_Tp, _Alloc >::forward_list (size_type __n) [inline,  
explicit]`

Creates a `forward_list` with default constructed elements.

**Parameters:**

- n* The number of elements to initially create.

This constructor creates the `forward_list` with *n* default constructed elements.

Definition at line 179 of file `forward_list.tcc`.

**5.462.2.5** `template<typename _Tp, typename _Alloc = allocator<_Tp>>  
std::forward_list<_Tp, _Alloc >::forward_list (size_type __n, const  
_Tp & __value, const _Alloc & __al = _Alloc()) [inline]`

Creates a `forward_list` with copies of an exemplar element.

**Parameters:**

- n* The number of elements to initially create.
- value* An element to copy.
- al* An *allocator* object.

This constructor fills the forward\_list with *n* copies of *value*.

Definition at line 459 of file forward\_list.h.

```
5.462.2.6 template<typename _Tp, typename _Alloc = allocator<_Tp>>
 template<typename _InputIterator > std::forward_list< _Tp, _Alloc
 >::forward_list (_InputIterator __first, _InputIterator __last, const
 _Alloc & __al = _Alloc ()) [inline]
```

Builds a forward\_list from a range.

**Parameters:**

- first* An input [iterator](#).
- last* An input [iterator](#).
- al* An [allocator](#) object.

Create a forward\_list consisting of copies of the elements from [*first,last*). This is linear in N (where N is distance(*first,last*)).

Definition at line 475 of file forward\_list.h.

```
5.462.2.7 template<typename _Tp, typename _Alloc = allocator<_Tp>>
 std::forward_list< _Tp, _Alloc >::forward_list (const forward_list<
 _Tp, _Alloc > & __list) [inline]
```

The forward\_list copy constructor.

**Parameters:**

- list* A forward\_list of identical element and [allocator](#) types.

The newly-created forward\_list uses a copy of the allocation object used by *list*.

Definition at line 492 of file forward\_list.h.

References std::forward\_list< \_Tp, \_Alloc >::begin(), and std::forward\_list< \_Tp, \_-  
Alloc >::end().

```
5.462.2.8 template<typename _Tp, typename _Alloc = allocator<_Tp>>
 std::forward_list< _Tp, _Alloc >::forward_list (forward_list< _Tp,
 _Alloc > && __list) [inline]
```

The forward\_list move constructor.

**Parameters:**

- list* A forward\_list of identical element and [allocator](#) types.

The newly-created `forward_list` contains the exact contents of `forward_list`. The contents of `list` are a valid, but unspecified `forward_list`.

Definition at line 505 of file `forward_list.h`.

**5.462.2.9** `template<typename _Tp, typename _Alloc = allocator<_Tp>>  
std::forward_list<_Tp, _Alloc >::forward_list (std::initializer_list<  
_Tp > __il, const _Alloc & __al = _Alloc()) [inline]`

Builds a `forward_list` from an `initializer_list`.

**Parameters:**

`il` An `initializer_list` of `value_type`.

`al` An `allocator` object.

Create a `forward_list` consisting of copies of the elements in the `initializer_list` `il`. This is linear in `il.size()`.

Definition at line 516 of file `forward_list.h`.

**5.462.2.10** `template<typename _Tp, typename _Alloc = allocator<_Tp>>  
std::forward_list<_Tp, _Alloc >::~~forward_list () [inline]`

The `forward_list` dtor.

Definition at line 524 of file `forward_list.h`.

### 5.462.3 Member Function Documentation

**5.462.3.1** `template<typename _Tp, typename _Alloc = allocator<_Tp>> void  
std::forward_list<_Tp, _Alloc >::assign (std::initializer_list<_Tp >  
__il) [inline]`

Assigns an `initializer_list` to a `forward_list`.

**Parameters:**

`il` An `initializer_list` of `value_type`.

Replace the contents of the `forward_list` with copies of the elements in the `initializer_list` `il`. This is linear in `il.size()`.

Definition at line 618 of file `forward_list.h`.

**5.462.3.2** `template<typename _Tp, typename _Alloc = allocator<_Tp>> void  
std::forward_list< _Tp, _Alloc >::assign (size_type __n, const _Tp &  
__val) [inline]`

Assigns a given value to a forward\_list.

**Parameters:**

*n* Number of elements to be assigned.

*val* Value to be assigned.

This function fills a forward\_list with *n* copies of the given value. Note that the assignment completely changes the forward\_list and that the resulting forward\_list's size is the same as the number of elements assigned. Old data may be lost.

Definition at line 603 of file forward\_list.h.

**5.462.3.3** `template<typename _Tp, typename _Alloc = allocator<_Tp>>  
template<typename _InputIterator > void std::forward_list< _Tp,  
_Alloc >::assign (_InputIterator __first, _InputIterator __last)  
[inline]`

Assigns a range to a forward\_list.

**Parameters:**

*first* An input [iterator](#).

*last* An input [iterator](#).

This function fills a forward\_list with copies of the elements in the range [*first*,*last*).

Note that the assignment completely changes the forward\_list and that the resulting forward\_list's size is the same as the number of elements assigned. Old data may be lost.

Definition at line 586 of file forward\_list.h.

**5.462.3.4** `template<typename _Tp, typename _Alloc = allocator<_Tp>>  
const_iterator std::forward_list< _Tp, _Alloc >::before_begin ()  
const [inline]`

Returns a read-only (constant) [iterator](#) that points before the first element in the forward\_list. Iteration is done in ordinary element order.

Definition at line 645 of file forward\_list.h.

**5.462.3.5** `template<typename _Tp, typename _Alloc = allocator<_Tp>>  
iterator std::forward_list<_Tp, _Alloc >::before_begin ()  
[inline]`

Returns a read/write [iterator](#) that points before the first element in the `forward_list`. Iteration is done in ordinary element order.

Definition at line 636 of file `forward_list.h`.

Referenced by `std::forward_list<_Tp, _Alloc >::operator=()`, and `std::forward_list<_Tp, _Alloc >::resize()`.

**5.462.3.6** `template<typename _Tp, typename _Alloc = allocator<_Tp>>  
const_iterator std::forward_list<_Tp, _Alloc >::begin () const  
[inline]`

Returns a read-only (constant) [iterator](#) that points to the first element in the `forward_list`. Iteration is done in ordinary element order.

Definition at line 662 of file `forward_list.h`.

**5.462.3.7** `template<typename _Tp, typename _Alloc = allocator<_Tp>>  
iterator std::forward_list<_Tp, _Alloc >::begin () [inline]`

Returns a read/write [iterator](#) that points to the first element in the `forward_list`. Iteration is done in ordinary element order.

Definition at line 653 of file `forward_list.h`.

Referenced by `std::forward_list<_Tp, _Alloc >::forward_list()`, `std::forward_list<_Tp, _Alloc >::operator=()`, and `std::forward_list<_Tp, _Alloc >::unique()`.

**5.462.3.8** `template<typename _Tp, typename _Alloc = allocator<_Tp>>  
const_iterator std::forward_list<_Tp, _Alloc >::cbefore_begin ()  
const [inline]`

Returns a read-only (constant) [iterator](#) that points before the first element in the `forward_list`. Iteration is done in ordinary element order.

Definition at line 698 of file `forward_list.h`.

**5.462.3.9** `template<typename _Tp, typename _Alloc = allocator<_Tp>>  
const_iterator std::forward_list< _Tp, _Alloc >::cbegin () const  
[inline]`

Returns a read-only (constant) [iterator](#) that points to the first element in the forward\_list. Iteration is done in ordinary element order.

Definition at line 689 of file forward\_list.h.

Referenced by std::forward\_list< \_Tp, \_Alloc >::operator=(), and std::operator==(()).

**5.462.3.10** `template<typename _Tp, typename _Alloc = allocator<_Tp>>  
const_iterator std::forward_list< _Tp, _Alloc >::cend () const  
[inline]`

Returns a read-only (constant) [iterator](#) that points one past the last element in the forward\_list. Iteration is done in ordinary element order.

Definition at line 707 of file forward\_list.h.

Referenced by std::forward\_list< \_Tp, \_Alloc >::operator=(), and std::operator==(()).

**5.462.3.11** `template<typename _Tp, typename _Alloc = allocator<_Tp>> void  
std::forward_list< _Tp, _Alloc >::clear () [inline]`

Erases all the elements. Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 1019 of file forward\_list.h.

**5.462.3.12** `template<typename _Tp, typename _Alloc = allocator<_Tp>>  
template<typename... _Args> iterator std::forward_list< _Tp,  
_Alloc >::emplace_after (const_iterator __pos, _Args &&... __args)  
[inline]`

Constructs object in forward\_list after the specified [iterator](#).

**Parameters:**

*pos* A const\_iterator into the forward\_list.

*args* Arguments.

**Returns:**

An [iterator](#) that points to the inserted data.

This function will insert an object of type `T` constructed with `T(std::forward<Args>(args)...)`  after the specified location. Due to the nature of a `forward_list` this operation can be done in constant time, and does not invalidate iterators and references.

Definition at line 822 of file `forward_list.h`.

**5.462.3.13** `template<typename _Tp, typename _Alloc = allocator<_Tp>>`  
`template<typename... _Args> void std::forward_list<_Tp, _Alloc`  
`>::emplace_front(_Args &&... _args) [inline]`

Constructs object in `forward_list` at the front of the `list`.

**Parameters:**

*args* Arguments.

This function will insert an object of type `Tp` constructed with `Tp(std::forward<Args>(args)...)`  at the front of the `list` Due to the nature of a `forward_list` this operation can be done in constant time, and does not invalidate iterators and references.

Definition at line 766 of file `forward_list.h`.

**5.462.3.14** `template<typename _Tp, typename _Alloc = allocator<_Tp>> bool`  
`std::forward_list<_Tp, _Alloc >::empty () const [inline]`

Returns true if the `forward_list` is empty. (Thus `begin()` would equal `end()`.)

Definition at line 715 of file `forward_list.h`.

**5.462.3.15** `template<typename _Tp, typename _Alloc = allocator<_Tp>>`  
`const_iterator std::forward_list<_Tp, _Alloc >::end () const`  
`[inline]`

Returns a read-only `iterator` that points one past the last element in the `forward_list`. Iteration is done in ordinary element order.

Definition at line 680 of file `forward_list.h`.

**5.462.3.16** `template<typename _Tp, typename _Alloc = allocator<_Tp>>`  
`iterator std::forward_list<_Tp, _Alloc >::end () [inline]`

Returns a read/write `iterator` that points one past the last element in the `forward_list`. Iteration is done in ordinary element order.

Definition at line 671 of file forward\_list.h.

Referenced by std::forward\_list< \_Tp, \_Alloc >::forward\_list(), std::forward\_list< \_Tp, \_Alloc >::operator=(), std::forward\_list< \_Tp, \_Alloc >::resize(), and std::forward\_list< \_Tp, \_Alloc >::unique().

**5.462.3.17** `template<typename _Tp, typename _Alloc = allocator<_Tp>> void std::forward_list< _Tp, _Alloc >::erase_after (const_iterator __pos, const_iterator __last) [inline]`

Remove a range of elements.

**Parameters:**

*pos* Iterator pointing before the first element to be erased.

*last* Iterator pointing to one past the last element to be erased.

This function will erase the elements in the range (pos,last) and shorten the forward\_list accordingly.

This operation is linear time in the size of the range and only invalidates iterators/references to the element being removed. The user is also cautioned that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 960 of file forward\_list.h.

**5.462.3.18** `template<typename _Tp, typename _Alloc = allocator<_Tp>> void std::forward_list< _Tp, _Alloc >::erase_after (const_iterator __pos) [inline]`

Removes the element pointed to by the [iterator](#) following pos.

**Parameters:**

*pos* Iterator pointing before element to be erased.

This function will erase the element at the given position and thus shorten the forward\_list by one.

Due to the nature of a forward\_list this operation can be done in constant time, and only invalidates iterators/references to the element being removed. The user is also cautioned that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 936 of file forward\_list.h.

Referenced by `std::forward_list<_Tp, _Alloc >::operator=()`, `std::forward_list<_Tp, _Alloc >::resize()`, and `std::forward_list<_Tp, _Alloc >::unique()`.

**5.462.3.19** `template<typename _Tp, typename _Alloc = allocator<_Tp>>  
const_reference std::forward_list<_Tp, _Alloc >::front () const  
[inline]`

Returns a read-only (constant) reference to the data at the first element of the `forward_list`.

Definition at line 744 of file `forward_list.h`.

**5.462.3.20** `template<typename _Tp, typename _Alloc = allocator<_Tp>>  
reference std::forward_list<_Tp, _Alloc >::front () [inline]`

Returns a read/write reference to the data at the first element of the `forward_list`.

Definition at line 732 of file `forward_list.h`.

**5.462.3.21** `template<typename _Tp, typename _Alloc = allocator<_Tp>>  
allocator_type std::forward_list<_Tp, _Alloc >::get_allocator ()  
const [inline]`

Get a copy of the memory allocation object.

Definition at line 626 of file `forward_list.h`.

**5.462.3.22** `template<typename _Tp, typename _Alloc = allocator<_Tp>>  
iterator std::forward_list<_Tp, _Alloc >::insert_after  
(const_iterator __pos, std::initializer_list<_Tp > __il) [inline]`

Inserts the contents of an [initializer\\_list](#) into `forward_list` after the specified [iterator](#).

**Parameters:**

*pos* An [iterator](#) into the `forward_list`.

*il* An [initializer\\_list](#) of value\_type.

**Returns:**

*pos*.

This function will insert copies of the data in the [initializer\\_list](#) *il* into the `forward_list` before the location specified by *pos*.

This operation is linear in the number of elements inserted and does not invalidate iterators and references.

Definition at line 912 of file forward\_list.h.

```
5.462.3.23 template<typename _Tp, typename _Alloc = allocator<_Tp>>
template<typename _InputIterator > iterator std::forward_list<
_Tp, _Alloc >::insert_after (const_iterator __pos, _InputIterator
__first, _InputIterator __last) [inline]
```

Inserts a range into the forward\_list.

**Parameters:**

*position* An iterator into the forward\_list.

*first* An input iterator.

*last* An input iterator.

**Returns:**

pos.

This function will insert copies of the data in the range [*first*,*last*) into the forward\_list after the location specified by *pos*.

This operation is linear in the number of elements inserted and does not invalidate iterators and references.

Definition at line 888 of file forward\_list.h.

```
5.462.3.24 template<typename _Tp, typename _Alloc = allocator<_Tp>>
iterator std::forward_list< _Tp, _Alloc >::insert_after
(const_iterator __pos, size_type __n, const _Tp & __val)
[inline]
```

Inserts a number of copies of given data into the forward\_list.

**Parameters:**

*pos* An iterator into the forward\_list.

*n* Number of elements to be inserted.

*val* Data to be inserted.

**Returns:**

pos.

This function will insert a specified number of copies of the given data after the location specified by *pos*.

This operation is linear in the number of elements inserted and does not invalidate iterators and references.

Definition at line 864 of file `forward_list.h`.

```
5.462.3.25 template<typename _Tp, typename _Alloc = allocator<_Tp>>
iterator std::forward_list< _Tp, _Alloc >::insert_after
(const_iterator __pos, const _Tp & __val) [inline]
```

Inserts given value into `forward_list` after specified [iterator](#).

**Parameters:**

*pos* An [iterator](#) into the `forward_list`.

*val* Data to be inserted.

**Returns:**

An [iterator](#) that points to the inserted data.

This function will insert a copy of the given value after the specified location. Due to the nature of a `forward_list` this operation can be done in constant time, and does not invalidate iterators and references.

Definition at line 839 of file `forward_list.h`.

Referenced by `std::forward_list< _Tp, _Alloc >::operator=()`, and `std::forward_list< _Tp, _Alloc >::resize()`.

```
5.462.3.26 template<typename _Tp, typename _Alloc = allocator<_Tp>>
size_type std::forward_list< _Tp, _Alloc >::max_size () const
[inline]
```

Returns the largest possible size of `forward_list`.

Definition at line 722 of file `forward_list.h`.

```
5.462.3.27 template<typename _Tp , typename _Alloc > template<typename
_Comp > void std::forward_list< _Tp, _Alloc >::merge
(forward_list< _Tp, _Alloc > && __list, _Comp __comp)
[inline]
```

Merge sorted lists according to comparison function.

**Parameters:**

*list* Sorted *list* to merge.

*comp* Comparison function defining sort order.

Assumes that both *list* and this *list* are sorted according to *comp*. Merges elements of *list* into this *list* in sorted order, leaving *list* empty when complete. Elements in this *list* precede elements in *list* that are equivalent according to *comp*().

Definition at line 355 of file forward\_list.tcc.

```
5.462.3.28 template<typename _Tp, typename _Alloc = allocator<_Tp>>
void std::forward_list< _Tp, _Alloc >::merge (forward_list< _Tp,
_Alloc > && list) [inline]
```

Merge sorted lists.

**Parameters:**

*list* Sorted *list* to merge.

Assumes that both *list* and this *list* are sorted according to operator<(). Merges elements of *list* into this *list* in sorted order, leaving *list* empty when complete. Elements in this *list* precede elements in *list* that are equal.

Definition at line 1146 of file forward\_list.h.

References std::forward\_list< \_Tp, \_Alloc >::merge().

Referenced by std::forward\_list< \_Tp, \_Alloc >::merge().

```
5.462.3.29 template<typename _Tp, typename _Alloc = allocator<_Tp>>
forward_list& std::forward_list< _Tp, _Alloc >::operator=
(std::initializer_list< _Tp > il) [inline]
```

The forward\_list initializer *list* assignment operator.

**Parameters:**

*il* An *initializer\_list* of value\_type.

Replace the contents of the forward\_list with copies of the elements in the *initializer\_list* *il*. This is linear in *il.size*().

Definition at line 566 of file forward\_list.h.

**5.462.3.30** `template<typename _Tp, typename _Alloc = allocator<_Tp>>  
forward_list& std::forward_list<_Tp, _Alloc >::operator=  
(forward_list<_Tp, _Alloc > && __list) [inline]`

The `forward_list` move assignment operator.

**Parameters:**

*list* A `forward_list` of identical element and `allocator` types.

The contents of *list* are moved into this `forward_list` (without copying). *list* is a valid, but unspecified `forward_list`

Definition at line 548 of file `forward_list.h`.

References `std::swap()`.

**5.462.3.31** `template<typename _Tp, typename _Alloc > forward_list<_Tp,  
_Alloc > & std::forward_list<_Tp, _Alloc >::operator= (const  
forward_list<_Tp, _Alloc > & __list) [inline]`

The `forward_list` assignment operator.

**Parameters:**

*list* A `forward_list` of identical element and `allocator` types.

All the elements of *list* are copied, but unlike the copy constructor, the `allocator` object is not copied.

Definition at line 193 of file `forward_list.tcc`.

References `std::forward_list<_Tp, _Alloc >::before_begin()`, `std::forward_list<_Tp, _Alloc >::begin()`, `std::forward_list<_Tp, _Alloc >::cbegin()`, `std::forward_list<_Tp, _Alloc >::cend()`, `std::forward_list<_Tp, _Alloc >::end()`, `std::forward_list<_Tp, _Alloc >::erase_after()`, and `std::forward_list<_Tp, _Alloc >::insert_after()`.

**5.462.3.32** `template<typename _Tp, typename _Alloc = allocator<_Tp>> void  
std::forward_list<_Tp, _Alloc >::pop_front () [inline]`

Removes first element. This is a typical `stack` operation. It shrinks the `forward_list` by one. Due to the nature of a `forward_list` this operation can be done in constant time, and only invalidates iterators/references to the element being removed.

Note that no data is returned, and if the first element's data is needed, it should be retrieved before `pop_front()` is called.

Definition at line 804 of file `forward_list.h`.

**5.462.3.33** `template<typename _Tp, typename _Alloc = allocator<_Tp>> void  
std::forward_list<_Tp, _Alloc >::push_front (const _Tp & __val)  
[inline]`

Add data to the front of the `forward_list`.

**Parameters:**

*val* Data to be added.

This is a typical [stack](#) operation. The function creates an element at the front of the `forward_list` and assigns the given data to it. Due to the nature of a `forward_list` this operation can be done in constant time, and does not invalidate iterators and references.

Definition at line 781 of file `forward_list.h`.

**5.462.3.34** `template<typename _Tp , typename _Alloc > void  
std::forward_list<_Tp, _Alloc >::remove (const _Tp & __val)  
[inline]`

Remove all elements equal to value.

**Parameters:**

*val* The value to remove.

Removes every element in the [list](#) equal to *value*. Remaining elements stay in [list](#) order. Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 294 of file `forward_list.tcc`.

**5.462.3.35** `template<typename _Tp , typename _Alloc > template<typename  
_Pred > void std::forward_list<_Tp, _Alloc >::remove_if (_Pred  
__pred) [inline]`

Remove all elements satisfying a predicate.

**Parameters:**

*pred* Unary predicate function or object.

Removes every element in the [list](#) for which the predicate returns true. Remaining elements stay in [list](#) order. Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 314 of file `forward_list.tcc`.

**5.462.3.36** `template<typename _Tp, typename _Alloc > void  
std::forward_list<_Tp, _Alloc >::resize (size_type __sz, value_type  
__val) [inline]`

Resizes the `forward_list` to the specified number of elements.

**Parameters:**

`sz` Number of elements the `forward_list` should contain.

`val` Data with which new elements should be populated.

This function will resize the `forward_list` to the specified number of elements. If the number is smaller than the `forward_list`'s current size the `forward_list` is truncated, otherwise the `forward_list` is extended and new elements are populated with given data.

Definition at line 242 of file `forward_list.tcc`.

References `std::forward_list<_Tp, _Alloc >::before_begin()`, `std::forward_list<_Tp, _Alloc >::end()`, `std::forward_list<_Tp, _Alloc >::erase_after()`, and `std::forward_list<_Tp, _Alloc >::insert_after()`.

**5.462.3.37** `template<typename _Tp, typename _Alloc > void  
std::forward_list<_Tp, _Alloc >::resize (size_type __sz)  
[inline]`

Resizes the `forward_list` to the specified number of elements.

**Parameters:**

`sz` Number of elements the `forward_list` should contain.

This function will resize the `forward_list` to the specified number of elements. If the number is smaller than the `forward_list`'s current size the `forward_list` is truncated, otherwise the `forward_list` is extended and the new elements are default constructed.

Definition at line 220 of file `forward_list.tcc`.

References `std::forward_list<_Tp, _Alloc >::before_begin()`, `std::forward_list<_Tp, _Alloc >::end()`, `std::forward_list<_Tp, _Alloc >::erase_after()`, and `std::forward_list<_Tp, _Alloc >::splice_after()`.

**5.462.3.38** `template<typename _Tp, typename _Alloc = allocator<_Tp>> void  
std::forward_list<_Tp, _Alloc >::reverse () [inline]`

Reverse the elements in `list`. Reverse the order of elements in the `list` in linear time.

Definition at line 1190 of file `forward_list.h`.

**5.462.3.39** `template<typename _Tp, class _Alloc > template<typename  
_Comp > void std::forward_list< _Tp, _Alloc >::sort (_Comp  
_comp) [inline]`

Sort the [forward\\_list](#) using a comparison function. Sorts the elements of this [list](#) in NlogN time. Equivalent elements remain in [list](#) order.

Definition at line 401 of file `forward_list.tcc`.

**5.462.3.40** `template<typename _Tp, typename _Alloc = allocator<_Tp>> void  
std::forward_list< _Tp, _Alloc >::sort () [inline]`

Sort the elements of the [list](#). Sorts the elements of this [list](#) in NlogN time. Equivalent elements remain in [list](#) order.

Definition at line 1171 of file `forward_list.h`.

References `std::forward_list< _Tp, _Alloc >::sort()`.

Referenced by `std::forward_list< _Tp, _Alloc >::sort()`.

**5.462.3.41** `template<typename _Tp, typename _Alloc > void  
std::forward_list< _Tp, _Alloc >::splice_after (const_iterator __pos,  
forward_list< _Tp, _Alloc > && __list, const_iterator __before,  
const_iterator __last) [inline]`

Insert range from another [forward\\_list](#).

**Parameters:**

*pos* Iterator referencing the element to insert after.

*list* Source [list](#).

*before* Iterator referencing before the start of range in [list](#).

*last* Iterator referencing the end of range in [list](#).

Removes elements in the range (*before*,*last*) and inserts them after *pos* in constant time.

Undefined if *pos* is in (*before*,*last*).

Definition at line 278 of file `forward_list.tcc`.

**5.462.3.42** `template<typename _Tp, typename _Alloc = allocator<_Tp>>  
void std::forward_list< _Tp, _Alloc >::splice_after (const_iterator  
__pos, forward_list< _Tp, _Alloc > && __list, const_iterator __i)  
[inline]`

Insert element from another [forward\\_list](#).

**Parameters:**

*pos* Iterator referencing the element to insert after.

*list* Source list.

*i* Iterator referencing the element before the element to move.

Removes the element in *list list* referenced by *i* and inserts it into the current *list* after *pos*.

Definition at line 1049 of file forward\_list.h.

**5.462.3.43** `template<typename _Tp, typename _Alloc > void  
std::forward_list< _Tp, _Alloc >::splice_after (const_iterator __pos,  
forward_list< _Tp, _Alloc > && __list) [inline]`

Insert contents of another forward\_list.

**Parameters:**

*pos* Iterator referencing the element to insert after.

*list* Source list.

The elements of *list* are inserted in constant time after the element referenced by *pos*. *list* becomes an empty list.

Requires this != *x*.

Definition at line 261 of file forward\_list.tcc.

Referenced by std::forward\_list< \_Tp, \_Alloc >::resize().

**5.462.3.44** `template<typename _Tp, typename _Alloc = allocator<_Tp>> void  
std::forward_list< _Tp, _Alloc >::swap (forward_list< _Tp, _Alloc  
> & __list) [inline]`

Swaps data with another forward\_list.

**Parameters:**

*list* A forward\_list of the same element and allocator types.

This exchanges the elements between two lists in constant time. Note that the global `std::swap()` function is specialized such that `std::swap(l1,l2)` will feed to this function.

Definition at line 978 of file forward\_list.h.

References std::swap().

Referenced by std::swap().

**5.462.3.45** `template<typename _Tp, typename _Alloc > template<typename _BinPred > void std::forward_list< _Tp, _Alloc >::unique (_BinPred __binary_pred) [inline]`

Remove consecutive elements satisfying a predicate.

**Parameters:**

*binary\_pred* Binary predicate function or object.

For each consecutive [set](#) of elements [first,last) that satisfy predicate(first,i) where i is an [iterator](#) in [first,last), remove all but the first one. Remaining elements stay in [list](#) order. Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 334 of file forward\_list.tcc.

References `std::forward_list< _Tp, _Alloc >::begin()`, `std::forward_list< _Tp, _Alloc >::end()`, and `std::forward_list< _Tp, _Alloc >::erase_after()`.

**5.462.3.46** `template<typename _Tp, typename _Alloc = allocator<_Tp>> void std::forward_list< _Tp, _Alloc >::unique () [inline]`

Remove consecutive duplicate elements. For each consecutive [set](#) of elements with the same value, remove all but the first one. Remaining elements stay in [list](#) order. Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 1117 of file forward\_list.h.

References `std::forward_list< _Tp, _Alloc >::unique()`.

Referenced by `std::forward_list< _Tp, _Alloc >::unique()`.

## 5.463 `std::fpos<_StateT>` Class Template Reference

Class representing stream positions.

### Public Member Functions

- [fpos](#) ([streamoff](#) \_\_off)
- [operator streamoff](#) () const
- [fpos operator+](#) ([streamoff](#) \_\_off) const
- [fpos & operator+=](#) ([streamoff](#) \_\_off)
- [streamoff operator-](#) (const [fpos](#) &\_\_other) const
- [fpos operator-](#) ([streamoff](#) \_\_off) const
- [fpos & operator-=](#) ([streamoff](#) \_\_off)
- [\\_StateT state](#) () const
- void [state](#) ([\\_StateT](#) \_\_st)

### 5.463.1 Detailed Description

```
template<typename _StateT> class std::fpos<_StateT >
```

Class representing stream positions. The standard places no requirements upon the template parameter `StateT`. In this implementation `StateT` must be `DefaultConstructible`, `CopyConstructible` and `Assignable`. The standard only requires that `fpos` should contain a member of type `StateT`. In this implementation it also contains an offset stored as a signed integer.

#### Parameters:

*StateT* Type passed to and returned from `state()`.

Definition at line 112 of file `postypes.h`.

### 5.463.2 Constructor & Destructor Documentation

**5.463.2.1** `template<typename _StateT> std::fpos<_StateT >::fpos (streamoff __off) [inline]`

Construct position from offset.

Definition at line 133 of file `postypes.h`.

### 5.463.3 Member Function Documentation

**5.463.3.1** `template<typename _StateT> std::fpos< _StateT >::operator streamoff () const [inline]`

Convert to streamoff.

Definition at line 137 of file postypes.h.

**5.463.3.2** `template<typename _StateT> fpos std::fpos< _StateT >::operator+ (streamoff __off) const [inline]`

Add position and offset.

Definition at line 178 of file postypes.h.

**5.463.3.3** `template<typename _StateT> fpos& std::fpos< _StateT >::operator+= (streamoff __off) [inline]`

Add offset to this position.

Definition at line 154 of file postypes.h.

**5.463.3.4** `template<typename _StateT> streamoff std::fpos< _StateT >::operator- (const fpos< _StateT > & __other) const [inline]`

Subtract position to return offset.

Definition at line 205 of file postypes.h.

**5.463.3.5** `template<typename _StateT> fpos std::fpos< _StateT >::operator- (streamoff __off) const [inline]`

Subtract offset from position.

Definition at line 192 of file postypes.h.

**5.463.3.6** `template<typename _StateT> fpos& std::fpos< _StateT >::operator-= (streamoff __off) [inline]`

Subtract offset from this position.

Definition at line 165 of file postypes.h.

**5.463.3.7** `template<typename _StateT> _StateT std::fpos< _StateT >::state () const [inline]`

Return the last [set](#) value of *st*.

Definition at line 146 of file `postypes.h`.

**5.463.3.8** `template<typename _StateT> void std::fpos< _StateT >::state (_StateT __st) [inline]`

Remember the value of *st*.

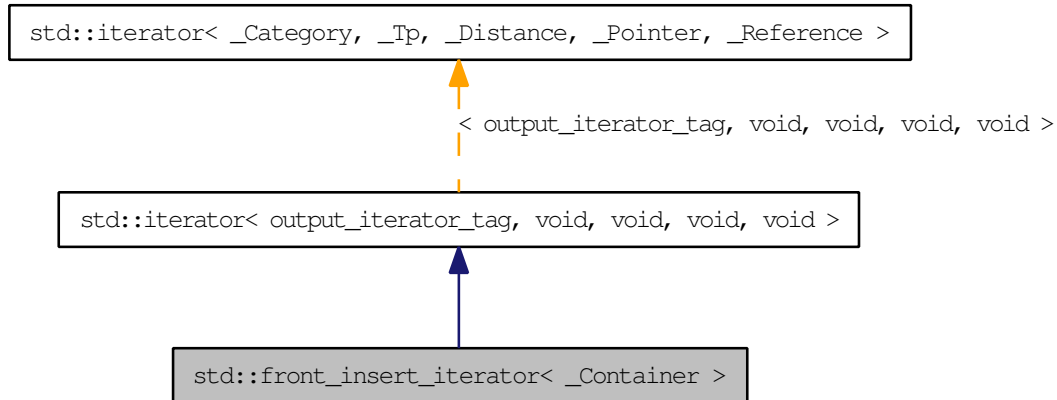

Definition at line 141 of file `postypes.h`.

The documentation for this class was generated from the following file:

## 5.464 `std::front_insert_iterator<_Container>` Class Template Reference

Turns assignment into insertion. Inheritance diagram for `std::front_insert_iterator<_Container>`:

### Public Types

- typedef `_Container` `container_type`
- typedef void `difference_type`
- typedef `output_iterator_tag` `iterator_category`
- typedef void `pointer`
- typedef void `reference`
- typedef void `value_type`

### Public Member Functions

- `front_insert_iterator` (`_Container &__x`)
- `front_insert_iterator` & `operator*` ()
- `front_insert_iterator` `operator++` (int)
- `front_insert_iterator` & `operator++` ()
- `front_insert_iterator` & `operator=` (typename `_Container::value_type` &&\_\_-value)
- `front_insert_iterator` & `operator=` (typename `_Container::const_reference` \_\_-value)

## Protected Attributes

- `_Container * container`

### 5.464.1 Detailed Description

`template<typename _Container> class std::front_insert_iterator<_Container >`

Turns assignment into insertion. These are output iterators, constructed from a container-of-T. Assigning a T to the `iterator` prepends it to the container using `push_front`.

Tip: Using the `front_inserter` function to create these iterators can save typing.

Definition at line 478 of file `stl_iterator.h`.

### 5.464.2 Member Typedef Documentation

**5.464.2.1** `template<typename _Container > typedef _Container std::front_insert_iterator<_Container >::container_type`

A nested typedef for the type of whatever container you used.

Definition at line 486 of file `stl_iterator.h`.

**5.464.2.2** `typedef void std::iterator< output_iterator_tag , void , void , void , void >::difference_type [inherited]`

Distance between iterators is represented as this type.

Definition at line 115 of file `stl_iterator_base_types.h`.

**5.464.2.3** `typedef output_iterator_tag std::iterator< output_iterator_tag , void , void , void , void >::iterator_category [inherited]`

One of the [tag types](#).

Definition at line 111 of file `stl_iterator_base_types.h`.

**5.464.2.4** `typedef void std::iterator< output_iterator_tag , void , void , void , void >::pointer [inherited]`

This type represents a pointer-to-value\_type.

Definition at line 117 of file `stl_iterator_base_types.h`.

## **5.464 std::front\_insert\_iterator< \_Container > Class Template Reference 2639**

**5.464.2.5** `typedef void std::iterator< output_iterator_tag, void, void, void, void >::reference [inherited]`

This type represents a reference-to-value\_type.

Definition at line 119 of file stl\_iterator\_base\_types.h.

**5.464.2.6** `typedef void std::iterator< output_iterator_tag, void, void, void, void >::value_type [inherited]`

The type "pointed to" by the iterator.

Definition at line 113 of file stl\_iterator\_base\_types.h.

### **5.464.3 Constructor & Destructor Documentation**

**5.464.3.1** `template<typename _Container > std::front_insert_iterator< _Container >::front_insert_iterator(_Container & __x) [inline, explicit]`

The only way to create this iterator is with a container.

Definition at line 489 of file stl\_iterator.h.

### **5.464.4 Member Function Documentation**

**5.464.4.1** `template<typename _Container > front_insert_iterator& std::front_insert_iterator< _Container >::operator*() [inline]`

Simply returns \*this.

Definition at line 520 of file stl\_iterator.h.
