**5.464.4.2** `template<typename _Container > front_insert_iterator std::front_insert_iterator< _Container >::operator++(int) [inline]`

Simply returns \*this. (This iterator does not *move*.).

Definition at line 530 of file stl\_iterator.h.

**5.464.4.3** `template<typename _Container > front_insert_iterator& std::front_insert_iterator<_Container >::operator++ () [inline]`

Simply returns \*this. (This iterator does not *move*.)

Definition at line 525 of file stl\_iterator.h.

**5.464.4.4** `template<typename _Container > front_insert_iterator& std::front_insert_iterator<_Container >::operator= (typename _Container::const_reference __value) [inline]`

**Parameters:**

*value* An instance of whatever type `container_type::const_reference` is; presumably a reference-to-const T for `container<T>`.

**Returns:**

This iterator, for chained operations.

This kind of iterator doesn't really have a *position* in the container (you can think of the position as being permanently at the front, if you like). Assigning a value to the iterator will always prepend the value to the front of the container.

Definition at line 503 of file stl\_iterator.h.

- `static const std::size_t _M_max_size`

### 5.465.1 Detailed Description

`template<typename _Res, typename... _ArgTypes> class std::function< _Res(_-`  
`ArgTypes...)>`

Primary class template for `std::function`.

Polymorphic function wrapper.

Definition at line 1800 of file functional.

## 5.465.2 Constructor & Destructor Documentation

**5.465.2.1** `template<typename _Res , typename... _ArgTypes> std::function< _Res(_ArgTypes...)>::function () [inline, explicit]`

Default construct creates an empty function call wrapper.

**Postcondition:**

!(bool)\*this

Definition at line 1818 of file functional.

**5.465.2.2** `template<typename _Res , typename... _ArgTypes> std::function< _Res(_ArgTypes...)>::function (_M_clear_type *) [inline]`

Default construct creates an empty function call wrapper.

**Postcondition:**

!(bool)\*this

Definition at line 1824 of file functional.

**5.465.2.3** `template<typename _Res , typename... _ArgTypes> std::function< _Res(_ArgTypes...)>::function (const function< _Res(_ArgTypes...)> & _x) [inline]`

Function copy constructor.

**Parameters:**

*x* A function object with identical call signature.

**Postcondition:**

(bool)\*this == (bool)*x*

The newly-created function contains a copy of the target of *x* (if it has one).

Definition at line 2068 of file functional.

**5.465.2.4** `template<typename _Res , typename... _ArgTypes> std::function<_Res(_ArgTypes...)>::function (function< _Res(_ArgTypes...)> &&_x) [inline]`

Function move constructor.

**Parameters:**

*x* A function object rvalue with identical call signature.

The newly-created function contains the target of *x* (if it has one).

Definition at line 1843 of file functional.

**5.465.2.5** `template<typename _Res , typename... _ArgTypes> template<typename _Function > std::function<_Res(_ArgTypes...)>::function (_Function _f, typename enable_if<!is_integral<_Function >::value, _Useless >::type = _Useless ()) [inline]`

Builds a function that targets a copy of the incoming function object.

**Parameters:**

*f* A function object that is callable with parameters of type T1, T2, ..., TN and returns a value convertible to Res.

The newly-created function object will target a copy of *f*. If *f* is `reference_wrapper<F>`, then this function object will contain a reference to the function object `f.get()`. If *f* is a NULL function pointer or NULL pointer-to-member, the newly-created object will be empty.

If *f* is a non-NULL function pointer or an object of type `reference_wrapper<F>`, this function will not throw.

Definition at line 2082 of file functional.

### 5.465.3 Member Function Documentation

**5.465.3.1** `template<typename _Res , typename... _ArgTypes> std::function<_Res(_ArgTypes...)>::operator bool () const [inline, explicit]`

Determine if the function wrapper has a target.

**Returns:**

`true` when this function object contains a target, or `false` when it is empty.

This function will not throw an exception.

Definition at line 2011 of file `functional`.

```
5.465.3.2 template<typename _Res , typename... _ArgTypes> _Res
std::function< _Res(_ArgTypes...)>::operator() (_ArgTypes...
__args) const [inline]
```

Invokes the function targeted by `*this`.

**Returns:**

the result of the target.

**Exceptions:**

*bad\_function\_call* when `!(bool)*this`

The function call operator invokes the target function object stored by `this`.

Definition at line 2100 of file `functional`.

```
5.465.3.3 template<typename _Res , typename... _ArgTypes>
template<typename _Functor > enable_if<!is_integral<_
Functor>::value, function&>::type std::function<
_Res(_ArgTypes...)>::operator=(reference_wrapper< _Functor >
__f) [inline]
```

This is an overloaded member function, provided for convenience. It differs from the above function only in what argument(s) it accepts.

Definition at line 1955 of file `functional`.

```
5.465.3.4 template<typename _Res , typename... _ArgTypes>
template<typename _Functor > enable_if<!is_integral<_
Functor>::value, function&>::type std::function<
_Res(_ArgTypes...)>::operator=(_Functor && __f) [inline]
```

Function assignment to a new target.

**Parameters:**

*f* A function object that is callable with parameters of type `T1`, `T2`, ..., `TN` and returns a value convertible to `Res`.

**Returns:**

`*this`

This function object wrapper will target a copy of  $f$ . If  $f$  is `reference_wrapper<F>`, then this function object will contain a reference to the function object `f.get()`. If  $f$  is a NULL function pointer or NULL pointer-to-member, this object will be empty.

If  $f$  is a non-NULL function pointer or an object of type `reference_wrapper<F>`, this function will not throw.

Definition at line 1946 of file `functional`.

**5.465.3.5** `template<typename _Res, typename... _ArgTypes> function& std::function<_Res(_ArgTypes...)>::operator= (_M_clear_type *) [inline]`

Function assignment to zero.

**Postcondition:**

`!(bool)*this`

**Returns:**

`*this`

The target of `*this` is deallocated, leaving it empty.

Definition at line 1917 of file `functional`.

**5.465.3.6** `template<typename _Res, typename... _ArgTypes> function& std::function<_Res(_ArgTypes...)>::operator= (function<_Res(_ArgTypes...)> && __x) [inline]`

Function move-assignment operator.

**Parameters:**

$x$  A function rvalue with identical call signature.

**Returns:**

`*this`

The target of  $x$  is moved to `*this`. If  $x$  has no target, then `*this` will be empty.

If  $x$  targets a function pointer or a reference to a function object, then this operation will not throw an exception.

Definition at line 1903 of file `functional`.

**5.465.3.7** `template<typename _Res , typename... _ArgTypes> function& std::function< _Res(_ArgTypes...)>::operator= (const function< _Res(_ArgTypes...)> & _x) [inline]`

Function assignment operator.

**Parameters:**

*x* A function with identical call signature.

**Postcondition:**

`(bool)*this == (bool)x`

**Returns:**

`*this`

The target of *x* is copied to `*this`. If *x* has no target, then `*this` will be empty.

If *x* targets a function pointer or a reference to a function object, then this operation will not throw an exception.

Definition at line 1885 of file functional.

**5.465.3.8** `template<typename _Res , typename... _ArgTypes> void std::function< _Res(_ArgTypes...)>::swap (function< _Res(_ArgTypes...)> & _x) [inline]`

Swap the targets of two function objects.

**Parameters:**

*f* A function with identical call signature.

Swap the targets of `this` function object and *f*. This function will not throw an exception.

Definition at line 1970 of file functional.

References `std::swap()`.

**5.465.3.9** `template<typename _Res , typename... _ArgTypes> template<typename _Functor > const _Functor * std::function< _Res(_ArgTypes...)>::target () const [inline]`

This is an overloaded member function, provided for convenience. It differs from the above function only in what argument(s) it accepts.

Definition at line 2146 of file functional.

**5.465.3.10** `template<typename _Res , typename... _ArgTypes>  
template<typename _Functor > _Functor * std::function<  
_Res(_ArgTypes...)>::target () [inline]`

Access the stored target function object.

**Returns:**

Returns a pointer to the stored target function object, if `typeid(Functor).equals(target_type())`; otherwise, a NULL pointer.

This function will not throw an exception.

Definition at line 2127 of file functional.

**5.465.3.11** `template<typename _Res , typename... _ArgTypes> const type_info  
& std::function< _Res(_ArgTypes...)>::target_type () const  
[inline]`

Determine the type of the target of this function object wrapper.

**Returns:**

the type identifier of the target function object, or `typeid(void)` if `!(bool)*this`.

This function will not throw an exception.

Definition at line 2111 of file functional.

`std::basic_istream<_CharT, _Traits> & operator>>> (std::basic_istream<_-`  
`CharT, _Traits> &, std::gamma_distribution<_RealType1> &)`

### 5.470.1 Detailed Description

`template<typename _RealType = double> class std::gamma_distribution<_-`  
`RealType>`

A gamma continuous distribution for random numbers. The formula for the gamma probability density function is:

$$p(x|\alpha, \beta) = \frac{1}{\beta\Gamma(\alpha)} (x/\beta)^{\alpha-1} e^{-x/\beta}$$

Definition at line 2118 of file `random.h`.

### 5.470.2 Member Typedef Documentation

**5.470.2.1** `template<typename _RealType = double> typedef _RealType`  
`std::gamma_distribution<_RealType>::result_type`

The type of the range of the distribution.

Definition at line 2125 of file `random.h`.

### 5.470.3 Constructor & Destructor Documentation

**5.470.3.1** `template<typename _RealType = double> std::gamma_distribution<`  
`_RealType>::gamma_distribution (_RealType __alpha_val =`  
`_RealType(1), _RealType __beta_val = _RealType(1))`  
`[inline, explicit]`

Constructs a gamma distribution with parameters  $\alpha$  and  $\beta$ .

Definition at line 2165 of file `random.h`.

## 5.470.4 Member Function Documentation

**5.470.4.1** `template<typename _RealType = double> _RealType  
std::gamma_distribution<_RealType >::alpha () const [inline]`

Returns the  $\alpha$  of the distribution.

Definition at line 2186 of file random.h.

**5.470.4.2** `template<typename _RealType = double> _RealType  
std::gamma_distribution<_RealType >::beta () const [inline]`

Returns the  $\beta$  of the distribution.

Definition at line 2193 of file random.h.

**5.470.4.3** `template<typename _RealType = double> result_type  
std::gamma_distribution<_RealType >::max () const [inline]`

Returns the least upper bound value of the distribution.

Definition at line 2222 of file random.h.

Referenced by `std::gamma_distribution< result_type >::max()`.

**5.470.4.4** `template<typename _RealType = double> result_type  
std::gamma_distribution<_RealType >::min () const [inline]`

Returns the greatest lower bound value of the distribution.

Definition at line 2215 of file random.h.

**5.470.4.5** `template<typename _RealType > template<typename  
_UniformRandomNumberGenerator > gamma_distribution<  
_RealType >::result_type std::gamma_distribution<_RealType  
>::operator() (_UniformRandomNumberGenerator & __urng, const  
param_type & __param) [inline]`

Marsaglia, G. and Tsang, W. W. "A Simple Method for Generating Gamma Variables"  
ACM Transactions on Mathematical Software, 26, 3, 363-372, 2000.

Definition at line 1945 of file random.tcc.

References `std::log()`, and `std::pow()`.

**5.470.4.6** `template<typename _RealType = double> void  
std::gamma_distribution<_RealType>::param (const param_type  
& __param) [inline]`

Sets the parameter `set` of the distribution.

**Parameters:**

`__param` The new parameter `set` of the distribution.

Definition at line 2208 of file `random.h`.

**5.470.4.7** `template<typename _RealType = double> param_type  
std::gamma_distribution<_RealType>::param () const [inline]`

Returns the parameter `set` of the distribution.

Definition at line 2200 of file `random.h`.

**5.470.4.8** `template<typename _RealType = double> void  
std::gamma_distribution<_RealType>::reset () [inline]`

Resets the distribution state.

Definition at line 2179 of file `random.h`.

Referenced by `std::negative_binomial_distribution<_IntType>::reset()`, `std::student_t_distribution<_RealType>::reset()`, `std::fisher_f_distribution<_RealType>::reset()`, and `std::chi_squared_distribution<_RealType>::reset()`.

## 5.470.5 Friends And Related Function Documentation

**5.470.5.1** `template<typename _RealType = double> template<typename  
_RealType1, typename _CharT, typename _Traits >  
std::basic_ostream<_CharT, _Traits>& operator<<  
(std::basic_ostream<_CharT, _Traits> &, const  
std::gamma_distribution<_RealType1> &) [friend]`

Inserts a `gamma_distribution` random number distribution `__x` into the output stream `__os`.

**Parameters:**

`__os` An output stream.

`__x` A `gamma_distribution` random number distribution.

**Returns:**

The output stream with the state of `__x` inserted or in an error state.

**5.470.5.2** `template<typename _RealType = double> template<typename  
_RealType1 , typename _CharT , typename _Traits > std::basic_  
istream<_CharT, _Traits>& operator>> (std::basic_istream<  
_CharT, _Traits > &, std::gamma_distribution<_RealType1 > &)  
[friend]`

Extracts a `gamma_distribution` random number distribution `__x` from the input stream `__is`.

**Parameters:**

`__is` An input stream.

`__x` A `gamma_distribution` random number generator engine.

**Returns:**

The input stream with `__x` extracted or in an error state.

#### 5.472.1 Detailed Description

```
template<typename _IntType = int> class std::geometric_distribution< _IntType >
```

A discrete geometric random number distribution. The formula for the geometric probability density function is  $p(i|p) = (1 - p)p^{i-1}$  where  $p$  is the parameter of the distribution.

Definition at line 3194 of file `random.h`.

## 5.472.2 Member Typedef Documentation

**5.472.2.1** `template<typename _IntType = int> typedef _IntType  
std::geometric_distribution< _IntType >::result_type`

The type of the range of the distribution.

Definition at line 3201 of file `random.h`.

## 5.472.3 Member Function Documentation

**5.472.3.1** `template<typename _IntType = int> result_type  
std::geometric_distribution< _IntType >::max () const [inline]`

Returns the least upper bound value of the distribution.

Definition at line 3283 of file `random.h`.

**5.472.3.2** `template<typename _IntType = int> result_type  
std::geometric_distribution< _IntType >::min () const [inline]`

Returns the greatest lower bound value of the distribution.

Definition at line 3276 of file `random.h`.

**5.472.3.3** `template<typename _IntType = int> double  
std::geometric_distribution< _IntType >::p () const [inline]`

Returns the distribution parameter `p`.

Definition at line 3254 of file `random.h`.

**5.472.3.4** `template<typename _IntType = int> void std::geometric_  
distribution< _IntType >::param (const param_type & __param)  
[inline]`

Sets the parameter `set` of the distribution.

### Parameters:

`__param` The new parameter `set` of the distribution.

Definition at line 3269 of file `random.h`.

**5.472.3.5** `template<typename _IntType = int> param_type  
std::geometric_distribution< _IntType >::param () const  
[inline]`

Returns the parameter [set](#) of the distribution.

Definition at line 3261 of file random.h.

Referenced by `std::operator>>()`.

**5.472.3.6** `template<typename _IntType = int> void  
std::geometric_distribution< _IntType >::reset () [inline]`

Resets the distribution state. Does nothing for the geometric distribution.

Definition at line 3248 of file random.h.

The documentation for this class was generated from the following files:

- [random.h](#)
- [random.tcc](#)

## 5.473 std::geometric\_distribution< \_IntType >::param\_type Struct Reference

### 5.473 std::geometric\_distribution< \_IntType >::param\_type Struct Reference

#### Public Types

- typedef [geometric\\_distribution< \\_IntType >](#) **distribution\_type**

#### Public Member Functions

- **param\_type** (double \_\_p=0.5)
- double **p** () const

#### Friends

- class [geometric\\_distribution< \\_IntType >](#)

#### 5.473.1 Detailed Description

**template<typename \_IntType = int> struct std::geometric\_distribution< \_IntType >::param\_type**

Parameter type.

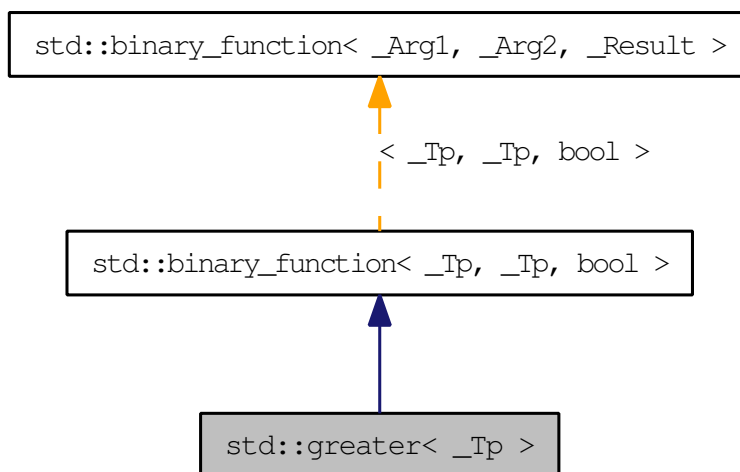

Definition at line 3203 of file random.h.

The documentation for this struct was generated from the following file:

- [random.h](#)

## 5.474 `std::greater< _Tp >` Struct Template Reference

One of the [comparison functors](#). Inheritance diagram for `std::greater< _Tp >`:

### Public Types

- typedef `_Tp` `first_argument_type`
- typedef `bool` `result_type`
- typedef `_Tp` `second_argument_type`

### Public Member Functions

- `bool operator() (const _Tp &__x, const _Tp &__y) const`

#### 5.474.1 Detailed Description

```
template<typename _Tp> struct std::greater< _Tp >
```

One of the [comparison functors](#).

Definition at line 217 of file `stl_function.h`.

## 5.474.2 Member Typedef Documentation

**5.474.2.1** `typedef _Tp std::binary_function<_Tp, _Tp, bool >::first_argument_type` `[inherited]`

the type of the first argument (no surprises here)

Definition at line 114 of file `stl_function.h`.

**5.474.2.2** `typedef bool std::binary_function<_Tp, _Tp, bool >::result_type` `[inherited]`

type of the return type

Definition at line 118 of file `stl_function.h`.

**5.474.2.3** `typedef _Tp std::binary_function<_Tp, _Tp, bool >::second_argument_type` `[inherited]`

the type of the second argument

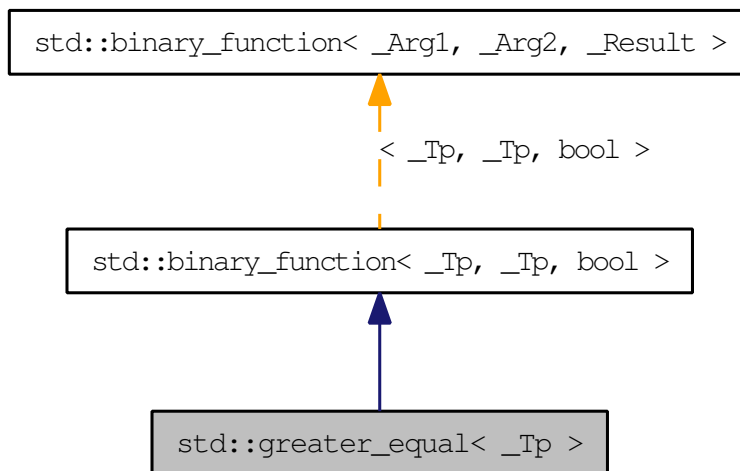

Definition at line 117 of file `stl_function.h`.

The documentation for this struct was generated from the following file:

- [stl\\_function.h](#)

## 5.475 `std::greater_equal< _Tp >` Struct Template Reference

One of the [comparison functors](#). Inheritance diagram for `std::greater_equal< _Tp >`:

### Public Types

- typedef `_Tp` `first_argument_type`
- typedef `bool` `result_type`
- typedef `_Tp` `second_argument_type`

### Public Member Functions

- `bool operator() (const _Tp &__x, const _Tp &__y) const`

#### 5.475.1 Detailed Description

`template<typename _Tp> struct std::greater_equal< _Tp >`

One of the [comparison functors](#).

Definition at line 235 of file `stl_function.h`.

## 5.475.2 Member Typedef Documentation

**5.475.2.1** `typedef _Tp std::binary_function< _Tp , _Tp , bool >::first_argument_type [inherited]`

the type of the first argument (no surprises here)

Definition at line 114 of file stl\_function.h.

**5.475.2.2** `typedef bool std::binary_function< _Tp , _Tp , bool >::result_type [inherited]`

type of the return type

Definition at line 118 of file stl\_function.h.

**5.475.2.3** `typedef _Tp std::binary_function< _Tp , _Tp , bool >::second_argument_type [inherited]`

the type of the second argument

Definition at line 117 of file stl\_function.h.

The documentation for this struct was generated from the following file:

- [stl\\_function.h](#)

## 5.476 `std::gslice` Class Reference

Class defining multi-dimensional subset of an [array](#).

### Public Member Functions

- [gslice](#) (const [gslice](#) &)

- [valarray](#)< size\_t > [size](#) () const
- [size\\_t](#) [start](#) () const
- [valarray](#)< size\_t > [stride](#) () const

### Friends

- class [valarray](#)

#### 5.476.1 Detailed Description

Class defining multi-dimensional subset of an [array](#). The [slice](#) class represents a multi-dimensional subset of an [array](#), specified by three parameter sets: start offset, size [array](#), and stride [array](#). The start offset is the index of the first element of the [array](#) that is part of the subset. The size and stride [array](#) describe each dimension of the [slice](#). Size is the number of elements in that dimension, and stride is the distance in the [array](#) between successive elements in that dimension. Each dimension's size and stride is taken to begin at an [array](#) element described by the previous dimension. The size [array](#) and stride [array](#) must be the same size.

For example, if you have `offset==3`, `stride[0]==11`, `size[1]==3`, `stride[1]==3`, then `slice[0,0]==array[3]`, `slice[0,1]==array[6]`, `slice[0,2]==array[9]`, `slice[1,0]==array[14]`, `slice[1,1]==array[17]`, `slice[1,2]==array[20]`.

Definition at line 63 of file `gslice.h`.

The documentation for this class was generated from the following file:

- [gslice.h](#)

## 5.477 `std::gslice_array< _Tp >` Class Template Reference

## Friends

- `class valarray< _Tp >`

### 5.477.1 Detailed Description

`template<typename _Tp> class std::gslice_array< _Tp >`

Reference to multi-dimensional subset of an [array](#). A [gslice\\_array](#) is a reference to the actual elements of an [array](#) specified by a [gslice](#). The way to get a [gslice\\_array](#) is to call `operator[]`([gslice](#)) on a [valarray](#). The returned [gslice\\_array](#) then permits carrying operations out on the referenced subset of elements in the original [valarray](#). For example, `operator+=(valarray)` will add values to the subset of elements in the underlying [valarray](#) this [gslice\\_array](#) refers to.

#### Parameters:

*Tp* Element type.

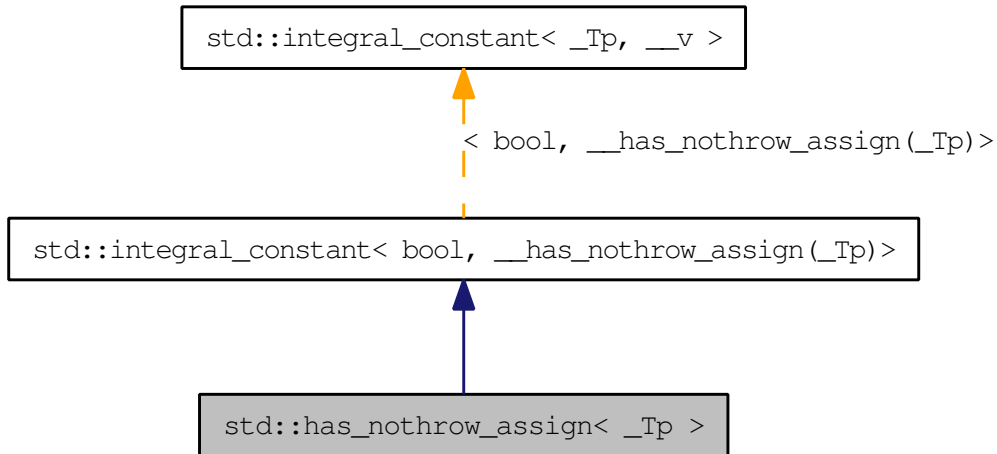

Definition at line 59 of file `gslice_array.h`.

The documentation for this class was generated from the following file:

- [gslice\\_array.h](#)

## 5.478 `std::has_nothrow_assign< _Tp >` Struct Template Reference

#### 5.492.1 Detailed Description

```
template<> struct std::hash< __gnu_cxx::throw_value_random >
```

Explicit specialization of `std::hash` for `__gnu_cxx::throw_value_limit`.

Definition at line 742 of file `throw_allocator.h`.

## 5.492 std::hash< \_\_gnu\_cxx::throw\_value\_random > Struct Template Reference

### 5.492.2 Member Typedef Documentation

**5.492.2.1** `typedef __gnu_cxx::throw_value_random std::unary_function< __gnu_cxx::throw_value_random , size_t >::argument_type`  
[`inherited`]

`argument_type` is the type of the argument (no surprises here)

Definition at line 102 of file `stl_function.h`.

**5.492.2.2** `typedef size_t std::unary_function< __gnu_cxx::throw_value_random , size_t >::result_type`  
[`inherited`]

`result_type` is the return type

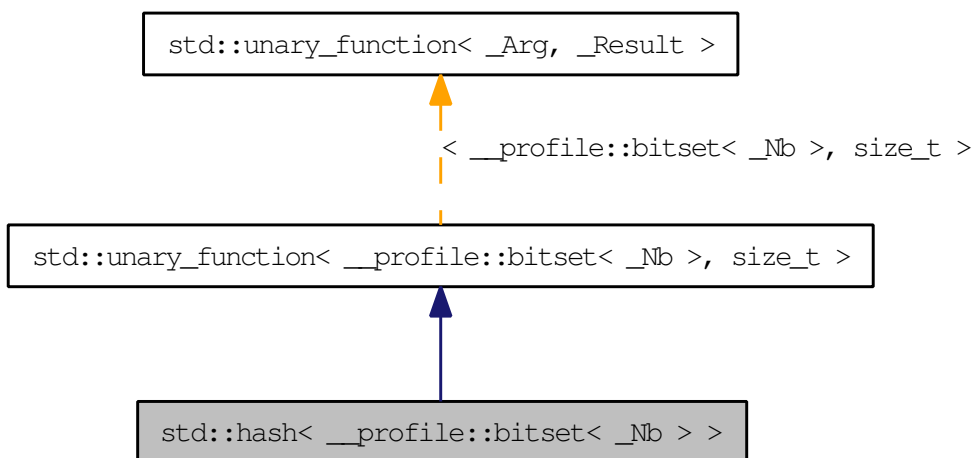

Definition at line 105 of file `stl_function.h`.

The documentation for this struct was generated from the following file:

- [throw\\_allocator.h](#)

## 5.493 `std::hash< __profile::bitset< _Nb > >` Struct Template Reference

`std::hash` specialization for `bitset`. Inheritance diagram for `std::hash< __profile::bitset< _Nb > >`:

### Public Types

- typedef `__profile::bitset< _Nb >` `argument_type`
- typedef `size_t` `result_type`

### Public Member Functions

- `size_t operator() (const __profile::bitset< _Nb > &__b) const`

#### 5.493.1 Detailed Description

```
template<size_t _Nb> struct std::hash< __profile::bitset< _Nb > >
```

`std::hash` specialization for `bitset`.

Definition at line 361 of file `profile/bitset`.

## **5.493.2 Member Typedef Documentation**

**5.493.2.1 typedef \_\_profile::bitset< \_Nb > std::unary\_function< \_\_profile::bitset< \_Nb >, size\_t >::argument\_type [inherited]**

`argument_type` is the type of the argument (no surprises here)

Definition at line 102 of file `stl_function.h`.

**5.493.2.2 typedef size\_t std::unary\_function< \_\_profile::bitset< \_Nb >, size\_t >::result\_type [inherited]**

`result_type` is the return type

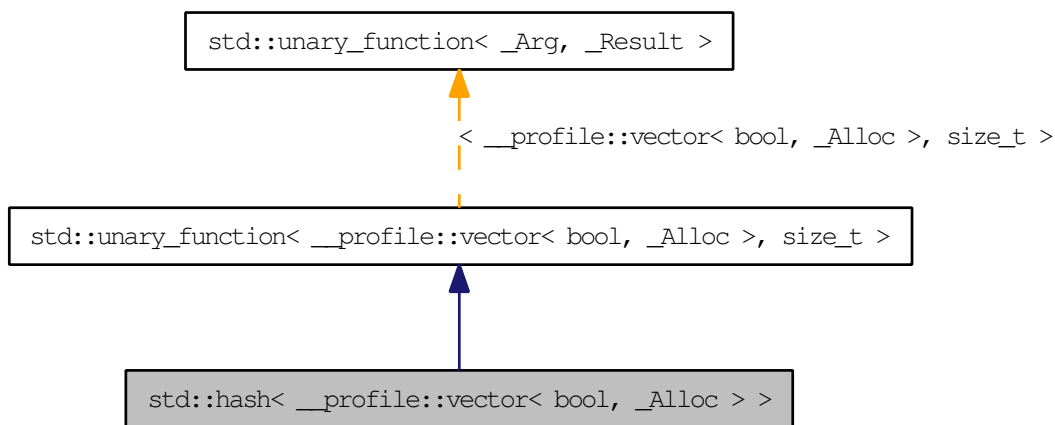

Definition at line 105 of file `stl_function.h`.

The documentation for this struct was generated from the following file:

- [profile/bitset](#)

## 5.494 `std::hash< __profile::vector< bool, _Alloc > >` Struct Template Reference

`std::hash` specialization for `vector<bool>`. Inheritance diagram for `std::hash< __profile::vector< bool, _Alloc > >`:

### Public Types

- typedef `__profile::vector< bool, _Alloc >` `argument_type`
- typedef `size_t` `result_type`

### Public Member Functions

- `size_t operator()` (`const __profile::vector< bool, _Alloc > &__b`) `const`

#### 5.494.1 Detailed Description

```
template<typename _Alloc> struct std::hash< __profile::vector< bool, _Alloc > >
```

`std::hash` specialization for `vector<bool>`.

Definition at line 469 of file `profile/vector`.

## **5.494 std::hash< \_\_profile::vector< bool, \_Alloc > > Struct Template Reference**

### **5.494.2 Member Typedef Documentation**

**5.494.2.1** `typedef __profile::vector< bool, _Alloc > std::unary_function< __profile::vector< bool, _Alloc >, size_t >::argument_type [inherited]`

`argument_type` is the type of the argument (no surprises here)

Definition at line 102 of file `stl_function.h`.

**5.494.2.2** `typedef size_t std::unary_function< __profile::vector< bool, _Alloc >, size_t >::result_type [inherited]`

`result_type` is the return type

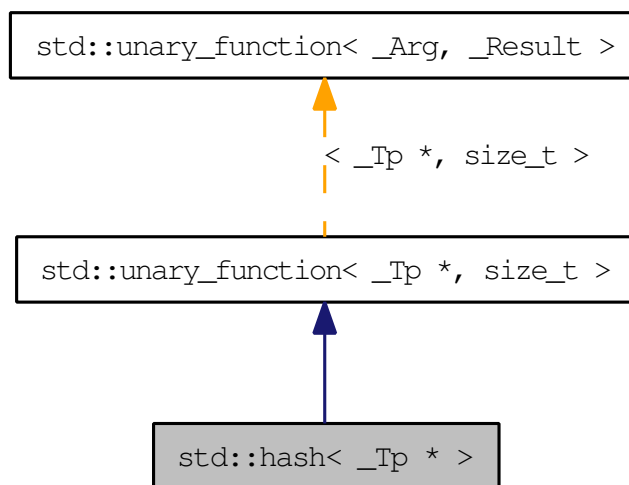

Definition at line 105 of file `stl_function.h`.

The documentation for this struct was generated from the following file:

- [profile/vector](#)

## 5.495 `std::hash<_Tp*>` Struct Template Reference

Partial specializations for pointer types. Inheritance diagram for `std::hash<_Tp*>`:

### Public Types

- typedef `_Tp*` [argument\\_type](#)
- typedef `size_t` [result\\_type](#)

### Public Member Functions

- `size_t operator() (_Tp* __p) const`

#### 5.495.1 Detailed Description

```
template<typename _Tp> struct std::hash<_Tp*>
```

Partial specializations for pointer types.

Definition at line 58 of file `functional_hash.h`.

## 5.495.2 Member Typedef Documentation

### 5.495.2.1 `typedef _Tp * std::unary_function<_Tp *, size_t >::argument_type` [`inherited`]

`argument_type` is the type of the argument (no surprises here)

Definition at line 102 of file `stl_function.h`.

### 5.495.2.2 `typedef size_t std::unary_function<_Tp *, size_t >::result_type` [`inherited`]

`result_type` is the return type

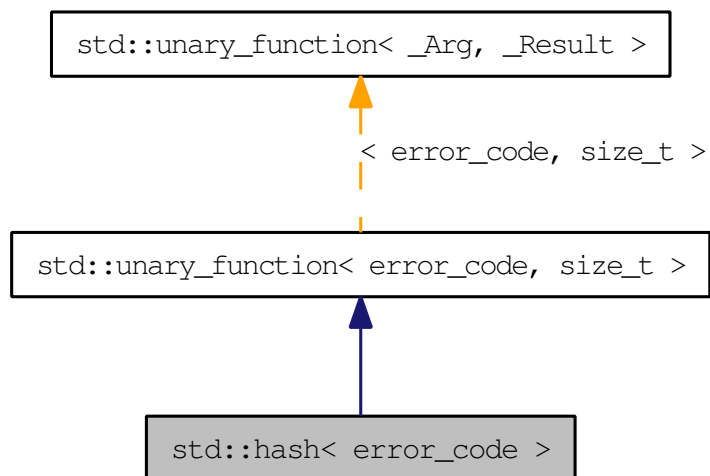

Definition at line 105 of file `stl_function.h`.

The documentation for this struct was generated from the following file:

- [functional\\_hash.h](#)

## 5.496 `std::hash< error_code >` Struct Template Reference

`std::hash` specialization for `error_code`. Inheritance diagram for `std::hash< error_code >`:

### Public Types

- typedef `error_code` `argument_type`
- typedef `size_t` `result_type`

### Public Member Functions

- `size_t operator() (const error_code &__e) const`

#### 5.496.1 Detailed Description

`template<> struct std::hash< error_code >`

`std::hash` specialization for `error_code`.

Definition at line 352 of file `system_error`.

## 5.496.2 Member Typedef Documentation

### 5.496.2.1 `typedef error_code std::unary_function< error_code , size_t >::argument_type [inherited]`

`argument_type` is the type of the argument (no surprises here)

Definition at line 102 of file `stl_function.h`.

### 5.496.2.2 `typedef size_t std::unary_function< error_code , size_t >::result_type [inherited]`

`result_type` is the return type

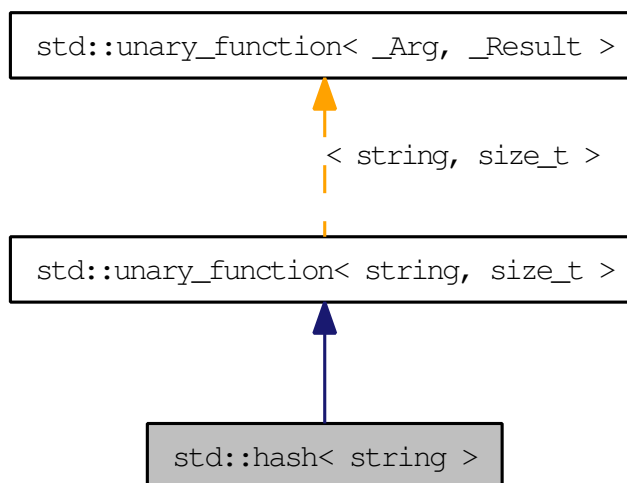

Definition at line 105 of file `stl_function.h`.

The documentation for this struct was generated from the following file:

- [system\\_error](#)

## 5.497 `std::hash< string >` Struct Template Reference

`std::hash` specialization for string. Inheritance diagram for `std::hash< string >`:

### Public Types

- typedef `string` `argument_type`
- typedef `size_t` `result_type`

### Public Member Functions

- `size_t operator() (const string &__s) const`

#### 5.497.1 Detailed Description

`template<> struct std::hash< string >`

`std::hash` specialization for string.

Definition at line 2885 of file `basic_string.h`.

## 5.497.2 Member Typedef Documentation

### 5.497.2.1 typedef string std::unary\_function< string , size\_t >::argument\_type [inherited]

argument\_type is the type of the argument (no surprises here)

Definition at line 102 of file stl\_function.h.

### 5.497.2.2 typedef size\_t std::unary\_function< string , size\_t >::result\_type [inherited]

result\_type is the return type

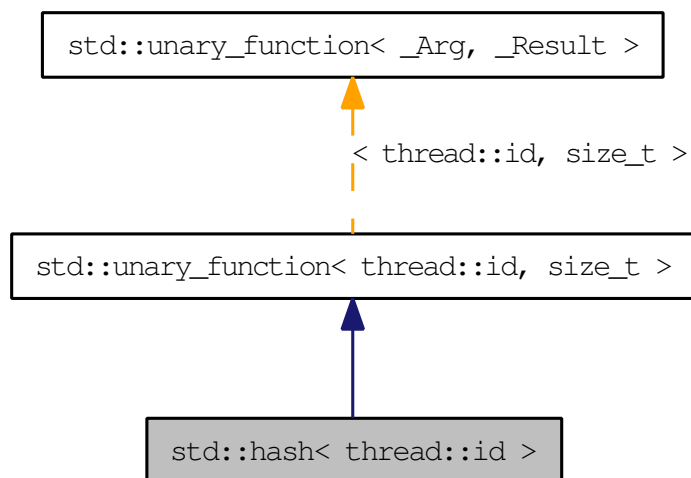

Definition at line 105 of file stl\_function.h.

The documentation for this struct was generated from the following file:

- [basic\\_string.h](#)

## 5.498 `std::hash< thread::id >` Struct Template Reference

`std::hash` specialization for `thread::id`. Inheritance diagram for `std::hash< thread::id >`:

### Public Types

- typedef `thread::id` `argument_type`
- typedef `size_t` `result_type`

### Public Member Functions

- `size_t operator()` (const `thread::id` &`__id`) const

#### 5.498.1 Detailed Description

`template<> struct std::hash< thread::id >`

`std::hash` specialization for `thread::id`.

Definition at line 226 of file `thread`.

## 5.498.2 Member Typedef Documentation

### 5.498.2.1 `typedef thread::id std::unary_function< thread::id , size_t >::argument_type` [inherited]

`argument_type` is the type of the argument (no surprises here)

Definition at line 102 of file `stl_function.h`.

### 5.498.2.2 `typedef size_t std::unary_function< thread::id , size_t >::result_type` [inherited]

`result_type` is the return type

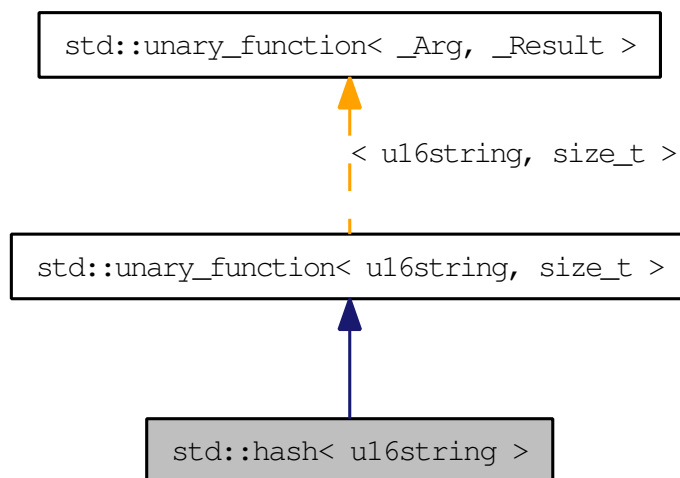

Definition at line 105 of file `stl_function.h`.

The documentation for this struct was generated from the following file:

- [thread](#)

## 5.499 `std::hash< u16string >` Struct Template Reference

`std::hash` specialization for `u16string`. Inheritance diagram for `std::hash< u16string >`:

### Public Types

- typedef `u16string` `argument_type`
- typedef `size_t` `result_type`

### Public Member Functions

- `size_t operator() (const u16string &__s) const`

#### 5.499.1 Detailed Description

```
template<> struct std::hash< u16string >
```

`std::hash` specialization for `u16string`.

Definition at line 2910 of file `basic_string.h`.

## 5.499.2 Member Typedef Documentation

### 5.499.2.1 typedef u16string std::unary\_function< u16string , size\_t >::argument\_type [inherited]

argument\_type is the type of the argument (no surprises here)

Definition at line 102 of file stl\_function.h.

### 5.499.2.2 typedef size\_t std::unary\_function< u16string , size\_t >::result\_type [inherited]

result\_type is the return type

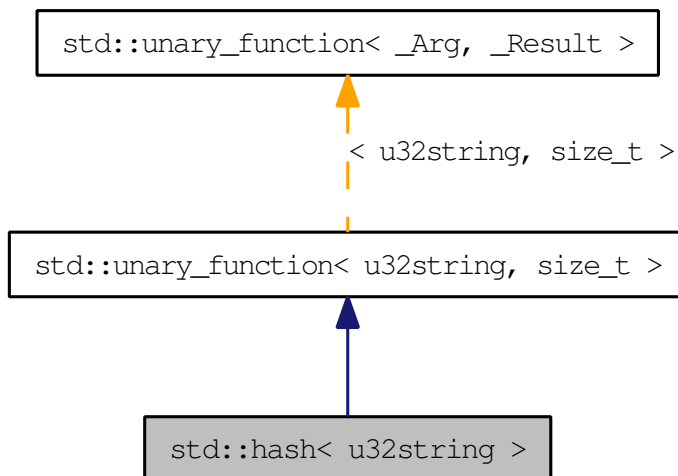

Definition at line 105 of file stl\_function.h.

The documentation for this struct was generated from the following file:

- [basic\\_string.h](#)

## 5.500 `std::hash< u32string >` Struct Template Reference

`std::hash` specialization for `u32string`. Inheritance diagram for `std::hash< u32string >`:

### Public Types

- typedef `u32string` `argument_type`
- typedef `size_t` `result_type`

### Public Member Functions

- `size_t operator() (const u32string &__s) const`

#### 5.500.1 Detailed Description

`template<> struct std::hash< u32string >`

`std::hash` specialization for `u32string`.

Definition at line 2921 of file `basic_string.h`.

## 5.500.2 Member Typedef Documentation

### 5.500.2.1 typedef u32string std::unary\_function< u32string , size\_t >::argument\_type [inherited]

argument\_type is the type of the argument (no surprises here)

Definition at line 102 of file stl\_function.h.

### 5.500.2.2 typedef size\_t std::unary\_function< u32string , size\_t >::result\_type [inherited]

result\_type is the return type

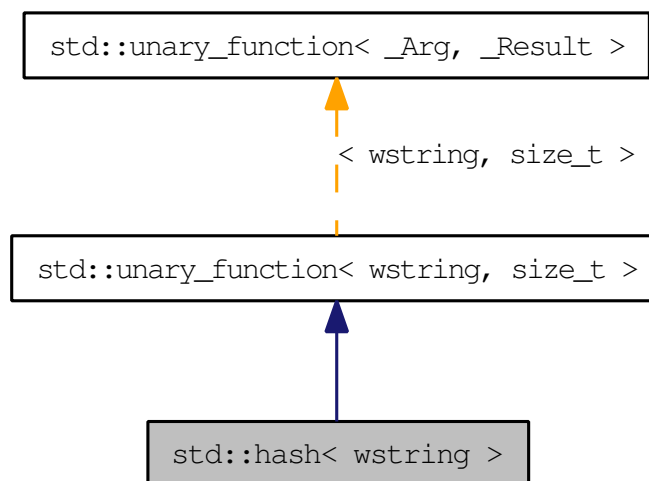

Definition at line 105 of file stl\_function.h.

The documentation for this struct was generated from the following file:

- [basic\\_string.h](#)

## 5.501 `std::hash<wstring>` Struct Template Reference

`std::hash` specialization for `wstring`. Inheritance diagram for `std::hash<wstring>`:

### Public Types

- typedef `wstring` `argument_type`
- typedef `size_t` `result_type`

### Public Member Functions

- `size_t operator() (const wstring &__s) const`

#### 5.501.1 Detailed Description

`template<> struct std::hash<wstring>`

`std::hash` specialization for `wstring`.

Definition at line 2896 of file `basic_string.h`.

## 5.501.2 Member Typedef Documentation

### 5.501.2.1 typedef wstring std::unary\_function< wstring , size\_t >::argument\_type [inherited]

argument\_type is the type of the argument (no surprises here)

Definition at line 102 of file stl\_function.h.

### 5.501.2.2 typedef size\_t std::unary\_function< wstring , size\_t >::result\_type [inherited]

result\_type is the return type

Definition at line 105 of file stl\_function.h.

The documentation for this struct was generated from the following file:

- [basic\\_string.h](#)

## 5.502 `std::identity<_Tp >` Struct Template Reference

[identity](#)

### Public Types

- `typedef _Tp type`

#### 5.502.1 Detailed Description

`template<typename _Tp> struct std::identity<_Tp >`

[identity](#)

Definition at line 44 of file `move.h`.

The documentation for this struct was generated from the following file:

- [move.h](#)

## 5.503 `std::independent_bits_engine<_RandomNumberEngine, __w, _UIntType` Class Template Reference

### Public Types

- typedef `_UIntType` `result_type`

### Public Member Functions

- `template<typename _Sseq, typename = typename std::enable_if<!std::is_same<_Sseq, independent_bits_engine>::value && !std::is_same<_Sseq, _RandomNumberEngine>::value>::type>`  
`independent_bits_engine` (`_Sseq` &`_q`)
- `independent_bits_engine` (`result_type` `__s`)
- `independent_bits_engine` (`_RandomNumberEngine` &&`__rne`)
- `independent_bits_engine` (`const _RandomNumberEngine` &`__rne`)
- `independent_bits_engine` ()
- `const _RandomNumberEngine` & `base` () `const`
- void `discard` (`unsigned long long` `__z`)
- `result_type` `max` () `const`
- `result_type` `min` () `const`
- `result_type` `operator()` ()
- `template<typename _Sseq >`  
void `seed` (`_Sseq` &`_q`)
- void `seed` (`result_type` `__s`)
- void `seed` ()

### Friends

- bool `operator==` (`const independent_bits_engine` &`__lhs`, `const independent_bits_engine` &`__rhs`)
- `template<typename _CharT, typename _Traits >`  
`std::basic_istream<_CharT, _Traits >` & `operator>>` (`std::basic_istream<_CharT, _Traits >` &`__is`, `std::independent_bits_engine<_RandomNumberEngine, __w, _UIntType >` &`__x`)

### 5.503.1 Detailed Description

```
template<typename _RandomNumberEngine, size_t __w, typename _UIntType>
class std::independent_bits_engine< _RandomNumberEngine, __w, _UIntType
>
```

Produces random numbers by combining random numbers from some base engine to produce random numbers with a specifies number of bits `__w`.

Definition at line 921 of file random.h.

### 5.503.2 Member Typedef Documentation

**5.503.2.1** `template<typename _RandomNumberEngine, size_t __w, typename _UIntType> typedef _UIntType std::independent_bits_engine< _RandomNumberEngine, __w, _UIntType >::result_type`

The type of the generated random value.

Definition at line 930 of file random.h.

### 5.503.3 Constructor & Destructor Documentation

**5.503.3.1** `template<typename _RandomNumberEngine, size_t __w, typename _UIntType> std::independent_bits_engine< _RandomNumberEngine, __w, _UIntType >::independent_bits_engine() [inline]`

Constructs a default `independent_bits_engine` engine. The underlying engine is default constructed as well.

Definition at line 937 of file random.h.

**5.503.3.2** `template<typename _RandomNumberEngine, size_t __w, typename _UIntType> std::independent_bits_engine< _RandomNumberEngine, __w, _UIntType >::independent_bits_engine(const _RandomNumberEngine & __rne) [inline, explicit]`

Copy constructs a `independent_bits_engine` engine. Copies an existing base class random number generator.

#### Parameters:

*rng* An existing (base class) engine object.

Definition at line 947 of file random.h.

**5.503** `std::independent_bits_engine<_RandomNumberEngine, __w, _UIntType>` **Class Template Reference** 2721

---

**5.503.3.3** `template<typename _RandomNumberEngine, size_t __w, typename _UIntType> std::independent_bits_engine<_RandomNumberEngine, __w, _UIntType>::independent_bits_engine(_RandomNumberEngine && __rne) [inline, explicit]`

Move constructs a `independent_bits_engine` engine. Copies an existing base class random number generator.

**Parameters:**

*rng* An existing (base class) engine object.

Definition at line 957 of file `random.h`.

**5.503.3.4** `template<typename _RandomNumberEngine, size_t __w, typename _UIntType> std::independent_bits_engine<_RandomNumberEngine, __w, _UIntType>::independent_bits_engine(result_type __s) [inline, explicit]`

Seed constructs a `independent_bits_engine` engine. Constructs the underlying generator engine seeded with `__s`.

**Parameters:**

`__s` A seed value for the base class engine.

Definition at line 967 of file `random.h`.

**5.503.3.5** `template<typename _RandomNumberEngine, size_t __w, typename _UIntType> template<typename _Sseq, typename = typename std::enable_if<!std::is_same<_Sseq, independent_bits_engine>::value && !std::is_same<_Sseq, _RandomNumberEngine>::value> ::type> std::independent_bits_engine<_RandomNumberEngine, __w, _UIntType>::independent_bits_engine(_Sseq & __q) [inline, explicit]`

Generator construct a `independent_bits_engine` engine.

**Parameters:**

`__q` A seed sequence.

Definition at line 980 of file `random.h`.

### 5.503.4 Member Function Documentation

**5.503.4.1** `template<typename _RandomNumberEngine, size_t __w, typename _UIntType> const _RandomNumberEngine& std::independent_bits_engine< _RandomNumberEngine, __w, _UIntType >::base () const [inline]`

Gets a const reference to the underlying generator engine object.

Definition at line 1015 of file random.h.

**5.503.4.2** `template<typename _RandomNumberEngine, size_t __w, typename _UIntType> void std::independent_bits_engine< _RandomNumberEngine, __w, _UIntType >::discard (unsigned long long __z) [inline]`

Discard a sequence of random numbers.

#### Todo

Look for a faster way to do discard.

Definition at line 1042 of file random.h.

**5.503.4.3** `template<typename _RandomNumberEngine, size_t __w, typename _UIntType> result_type std::independent_bits_engine< _RandomNumberEngine, __w, _UIntType >::max () const [inline]`

Gets the maximum value in the generated random number range.

#### Todo

This should be constexpr.

Definition at line 1033 of file random.h.

**5.503.4.4** `template<typename _RandomNumberEngine, size_t __w, typename _UIntType> result_type std::independent_bits_engine< _RandomNumberEngine, __w, _UIntType >::min () const [inline]`

Gets the minimum value in the generated random number range.

#### Todo

This should be constexpr.

**5.503 std::independent\_bits\_engine<\_RandomNumberEngine, \_\_w, \_UIntType > Class Template Reference** 2723

---

Definition at line 1024 of file random.h.

**5.503.4.5** `template<typename _RandomNumberEngine, size_t __w, typename _UIntType > independent_bits_engine<_RandomNumberEngine, __w, _UIntType >::result_type std::independent_bits_engine<_RandomNumberEngine, __w, _UIntType >::operator() () [inline]`

Gets the next value in the generated random number sequence.

Definition at line 709 of file random.tcc.

References std::log().

**5.503.4.6** `template<typename _RandomNumberEngine, size_t __w, typename _UIntType> template<typename _Sseq > void std::independent_bits_engine<_RandomNumberEngine, __w, _UIntType >::seed (_Sseq & __q) [inline]`

Reseeds the independent\_bits\_engine object with the given seed sequence.

**Parameters:**

`__q` A seed generator function.

Definition at line 1007 of file random.h.

**5.503.4.7** `template<typename _RandomNumberEngine, size_t __w, typename _UIntType> void std::independent_bits_engine<_RandomNumberEngine, __w, _UIntType >::seed (result_type __s) [inline]`

Reseeds the independent\_bits\_engine object with the default seed for the underlying base class generator engine.

Definition at line 997 of file random.h.

**5.503.4.8** `template<typename _RandomNumberEngine, size_t __w, typename _UIntType> void std::independent_bits_engine<_RandomNumberEngine, __w, _UIntType >::seed () [inline]`

Reseeds the independent\_bits\_engine object with the default seed for the underlying base class generator engine.

Definition at line 989 of file random.h.

### 5.503.5 Friends And Related Function Documentation

**5.503.5.1** `template<typename _RandomNumberEngine, size_t __w, typename _UIntType> bool operator==(const independent_bits_engine<_RandomNumberEngine, __w, _UIntType > & __lhs, const independent_bits_engine<_RandomNumberEngine, __w, _UIntType > & __rhs) [friend]`

Compares two `independent_bits_engine` random number generator objects of the same type for equality.

**Parameters:**

`__lhs` A `independent_bits_engine` random number generator object.  
`__rhs` Another `independent_bits_engine` random number generator object.

**Returns:**

true if the two objects are equal, false otherwise.

Definition at line 1066 of file `random.h`.

**5.503.5.2** `template<typename _RandomNumberEngine, size_t __w, typename _UIntType> template<typename _CharT, typename _Traits > std::basic_istream<_CharT, _Traits>& operator>>(std::basic_istream<_CharT, _Traits > & __is, std::independent_bits_engine<_RandomNumberEngine, __w, _UIntType > & __x) [friend]`

Extracts the current state of a `% subtract_with_carry_engine` random number generator engine `__x` from the input stream `__is`.

**Parameters:**

`__is` An input stream.  
`__x` A `independent_bits_engine` random number generator engine.

**Returns:**

The input stream with the state of `__x` extracted or in an error state.

Definition at line 1084 of file `random.h`.

The documentation for this class was generated from the following files:

- [random.h](#)
- [random.tcc](#)

## 5.504 `std::indirect_array< _Tp >` Class Template Reference

Reference to arbitrary subset of an [array](#).

### Public Types

- `void operator|= (const valarray< _Tp > &) const`

## Friends

- `class gslice_array< _Tp >`
- `class valarray< _Tp >`

### 5.504.1 Detailed Description

`template<class _Tp> class std::indirect_array< _Tp >`

Reference to arbitrary subset of an [array](#). An [indirect\\_array](#) is a reference to the actual elements of an [array](#) specified by an ordered [array](#) of indices. The way to get an [indirect\\_array](#) is to call `operator[]`(`valarray<size_t>`) on a [valarray](#). The returned [indirect\\_array](#) then permits carrying operations out on the referenced subset of elements in the original [valarray](#).

For example, if an [indirect\\_array](#) is obtained using the [array](#) (4,2,0) as an argument, and then assigned to an [array](#) containing (1,2,3), then the underlying [array](#) will have `array[0]==3`, `array[2]==2`, and `array[4]==1`.

#### Parameters:

***Tp***  Element type.

Definition at line 61 of file `indirect_array.h`.

The documentation for this class was generated from the following file:

- [indirect\\_array.h](#)

## 5.505 `std::initializer_list<_E>` Class Template Reference

- `insert_iterator` & `operator*` ()
- `insert_iterator` & `operator++` (int)
- `insert_iterator` & `operator++` ()
- `insert_iterator` & `operator=` (`typename _Container::value_type &&__value`)
- `insert_iterator` & `operator=` (`typename _Container::const_reference __value`)

### Protected Attributes

- `_Container * container`
- `_Container::iterator iter`

### 5.507.1 Detailed Description

**template<typename \_Container> class std::insert\_iterator< \_Container >**

Turns assignment into insertion. These are output iterators, constructed from a container-of-T. Assigning a T to the [iterator](#) inserts it in the container at the iterator's position, rather than overwriting the value at that position.

(Sequences will actually insert a *copy* of the value before the iterator's position.)

Tip: Using the inserter function to create these iterators can save typing.

Definition at line 565 of file stl\_iterator.h.

### 5.507.2 Member Typedef Documentation

**5.507.2.1 template<typename \_Container> typedef \_Container  
std::insert\_iterator< \_Container >::container\_type**

A nested typedef for the type of whatever container you used.

Definition at line 574 of file stl\_iterator.h.

**5.507.2.2 typedef void std::iterator< output\_iterator\_tag , void , void , void ,  
void >::difference\_type [inherited]**

Distance between iterators is represented as this type.

Definition at line 115 of file stl\_iterator\_base\_types.h.

**5.507.2.3 typedef output\_iterator\_tag std::iterator< output\_iterator\_tag , void  
, void , void , void >::iterator\_category [inherited]**

One of the [tag types](#).

Definition at line 111 of file stl\_iterator\_base\_types.h.

**5.507.2.4 typedef void std::iterator< output\_iterator\_tag , void , void , void ,  
void >::pointer [inherited]**

This type represents a pointer-to-value\_type.

Definition at line 117 of file stl\_iterator\_base\_types.h.

**5.507.2.5** `typedef void std::iterator< output_iterator_tag, void, void, void, void >::reference [inherited]`

This type represents a reference-to-value\_type.

Definition at line 119 of file `stl_iterator_base_types.h`.

**5.507.2.6** `typedef void std::iterator< output_iterator_tag, void, void, void, void >::value_type [inherited]`

The type "pointed to" by the iterator.

Definition at line 113 of file `stl_iterator_base_types.h`.

### 5.507.3 Constructor & Destructor Documentation

**5.507.3.1** `template<typename _Container> std::insert_iterator<_Container >::insert_iterator (_Container & __x, typename _Container::iterator __i) [inline]`

The only way to create this iterator is with a container and an initial position (a normal iterator into the container).

Definition at line 580 of file `stl_iterator.h`.

### 5.507.4 Member Function Documentation

**5.507.4.1** `template<typename _Container> insert_iterator& std::insert_iterator<_Container >::operator* () [inline]`

Simply returns `*this`.

Definition at line 626 of file `stl_iterator.h`.

**5.507.4.2** `template<typename _Container> insert_iterator& std::insert_iterator<_Container >::operator++ (int) [inline]`

Simply returns `*this`. (This iterator does not *move*.).

Definition at line 636 of file `stl_iterator.h`.

**5.507.4.3** `template<typename _Container> insert_iterator&  
std::insert_iterator< _Container >::operator++ () [inline]`

Simply returns \*this. (This iterator does not *move*).

Definition at line 631 of file stl\_iterator.h.

**5.507.4.4** `template<typename _Container> insert_iterator&  
std::insert_iterator< _Container >::operator= (typename  
_Container::const_reference __value) [inline]`**Parameters:**

*value* An instance of whatever type `container_type::const_reference` is; presumably a reference-to-const T for `container<T>`.

**Returns:**

This iterator, for chained operations.

This kind of iterator maintains its own position in the container. Assigning a value to the iterator will insert the value into the container at the place before the iterator.

The position is maintained such that subsequent assignments will insert values immediately after one another. For example,

```
// vector v contains A and Z

insert_iterator i (v, ++v.begin());
i = 1;
i = 2;
i = 3;

// vector v contains A, 1, 2, 3, and Z
```

Definition at line 607 of file stl\_iterator.h.

## 5.509 std::invalid\_argument Class Reference

Inheritance diagram for std::invalid\_argument:

### Public Member Functions

- **invalid\_argument** (const [string](#) &\_\_arg)
- virtual const char \* [what](#) () const throw ()

### 5.509.1 Detailed Description

Thrown to report invalid arguments to functions.

Definition at line 80 of file `stdexcept`.

### 5.509.2 Member Function Documentation

#### 5.509.2.1 virtual const char\* std::logic\_error::what () const throw () [virtual, inherited]

Returns a C-style character string describing the general cause of the current error (the same string passed to the ctor).

Reimplemented from [std::exception](#).

Reimplemented in [std::future\\_error](#).

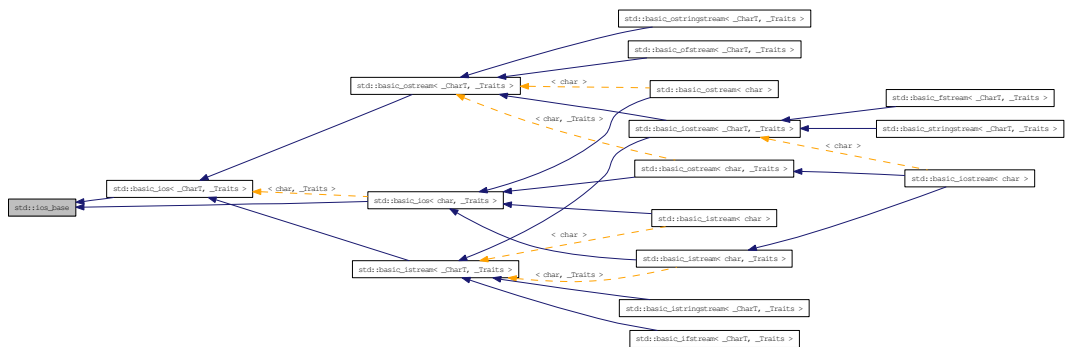

The documentation for this class was generated from the following file:

- [stdexcept](#)

## 5.510 std::ios\_base Class Reference

The base of the I/O class hierarchy.

This class defines everything that can be defined about I/O that does not depend on the type of characters being input or output. Most people will only see `ios_base` when they need to specify the full name of the various I/O flags (e.g., the openmodes). Inheritance diagram for `std::ios_base`:

### Classes

- class [failure](#)

*These are thrown to indicate problems with io.*  
 27.4.2.1.1 Class `ios_base::failure`.

### Public Types

### 5.510.1 Detailed Description

The base of the I/O class hierarchy.

This class defines everything that can be defined about I/O that does not depend on the type of characters being input or output. Most people will only see `ios_base` when they need to specify the full name of the various I/O flags (e.g., the openmodes).

Definition at line 207 of file `ios_base.h`.

### 5.510.2 Member Typedef Documentation

#### 5.510.2.1 `typedef void(* std::ios_base::event_callback)(event, ios_base &, int)`

The type of an event callback function.

##### Parameters:

*event* One of the members of the event enum.

*ios\_base* Reference to the `ios_base` object.

*int* The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several `ios_base` and `basic_ios` functions, specifically `imbue()`, `copyfmt()`, and `~ios()`.

Definition at line 444 of file `ios_base.h`.

#### 5.510.2.2 `typedef _Ios_Fmtflags std::ios_base::fmtflags`

This is a bitmask type. `_Ios_Fmtflags` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `fmtflags` are:

- `boolalpha`
- `dec`
- `fixed`
- `hex`
- `internal`
- `left`
- `oct`
- `right`

- scientific
- showbase
- showpoint
- showpos
- skipws
- unitbuf
- uppercase
- adjustfield
- basefield
- floatfield

Definition at line 263 of file ios\_base.h.

#### 5.510.2.3 typedef `_Ios_Iostate` `std::ios_base::iostate`

This is a bitmask type. `_Ios_Iostate` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `iostate` are:

- badbit
- eofbit
- failbit
- goodbit

Definition at line 338 of file ios\_base.h.

#### 5.510.2.4 typedef `_Ios_Openmode` `std::ios_base::openmode`

This is a bitmask type. `_Ios_Openmode` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `openmode` are:

- app
- ate
- binary

- in
- out
- trunc

Definition at line 369 of file ios\_base.h.

#### 5.510.2.5 typedef `_Ios_Seekdir` std::ios\_base::seekdir

This is an enumerated type. `_Ios_Seekdir` is implementation-defined. Defined values of type `seekdir` are:

- beg
- cur, equivalent to `SEEK_CUR` in the C standard library.
- end, equivalent to `SEEK_END` in the C standard library.

Definition at line 401 of file ios\_base.h.

### 5.510.3 Member Enumeration Documentation

#### 5.510.3.1 enum std::ios\_base::event

The [set](#) of events that may be passed to an event callback. `erase_event` is used during `~ios()` and `copyfmt()`. `imbue_event` is used during `imbue()`. `copyfmt_event` is used during `copyfmt()`.

Definition at line 427 of file ios\_base.h.

### 5.510.4 Constructor & Destructor Documentation

#### 5.510.4.1 virtual std::ios\_base::~ios\_base () [virtual]

Invokes each callback with `erase_event`. Destroys local storage.

Note that the `ios_base` object for the standard streams never gets destroyed. As a result, any callbacks registered with the standard streams will not get invoked with `erase_event` (unless `copyfmt` is used).

### 5.510.5 Member Function Documentation

#### 5.510.5.1 const locale& std::ios\_base::\_M\_getloc () const [inline]

Locale access.

**Returns:**

A reference to the current [locale](#).

Like `getloc` above, but returns a reference instead of generating a copy.

Definition at line 705 of file `ios_base.h`.

Referenced by `std::money_get<_CharT, _InIter>::do_get()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::time_get<_CharT, _InIter>::do_get_date()`, `std::time_get<_CharT, _InIter>::do_get_monthname()`, `std::time_get<_CharT, _InIter>::do_get_time()`, `std::time_get<_CharT, _InIter>::do_get_weekday()`, `std::time_get<_CharT, _InIter>::do_get_year()`, `std::time_put<_CharT, _OutIter>::do_put()`, `std::num_put<_CharT, _OutIter>::do_put()`, and `std::time_put<_CharT, _OutIter>::put()`.

**5.510.5.2 `fmtflags std::ios_base::flags (fmtflags __fmtfl) [inline]`**

Setting new format flags all at once.

**Parameters:**

*fmtfl* The new flags to [set](#).

**Returns:**

The previous format control flags.

This function overwrites all the format flags with *fmtfl*.

Definition at line 561 of file `ios_base.h`.

**5.510.5.3 `fmtflags std::ios_base::flags () const [inline]`**

Access to format flags.

**Returns:**

The format control flags for both input and output.

Definition at line 550 of file `ios_base.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::num_put<_CharT, _OutIter>::do_put()`, `std::basic_ostream<_CharT, _Traits>::operator<<()`, `std::operator<<()`, and `std::operator>>()`.

**5.510.5.4 `locale std::ios_base::getloc () const [inline]`**

Locale access.

**Returns:**

A copy of the current [locale](#).

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ [locale](#).

Definition at line 694 of file `ios_base.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::money_put<_CharT, _OutIter>::do_put()`, `std::basic_ios<_CharT, _Traits>::imbue()`, `std::operator>>()`, and `std::ws()`.

**5.510.5.5 locale std::ios\_base::imbue (const locale & \_\_loc) throw ()**

Setting a new [locale](#).

**Parameters:**

*loc* The new [locale](#).

**Returns:**

The previous [locale](#).

Sets the new [locale](#) for this stream, and then invokes each callback with `imbue_event`.

Reimplemented in `std::basic_ios<_CharT, _Traits>`, and `std::basic_ios<char, _Traits>`.

**5.510.5.6 long& std::ios\_base::iword (int \_\_ix) [inline]**

Access to integer [array](#).

**Parameters:**

*\_\_ix* Index into the [array](#).

**Returns:**

A reference to an integer associated with the index.

The `iword` function provides access to an [array](#) of integers that can be used for any purpose. The [array](#) grows as required to hold the supplied index. All integers in the [array](#) are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the [array](#) can grow dynamically, it is not safe to hold onto the reference.

Definition at line 740 of file `ios_base.h`.

**5.510.5.7** `streamsize std::ios_base::precision (streamsize __prec) [inline]`

Changing flags.

**Parameters:**

*prec* The new precision value.

**Returns:**

The previous value of [precision\(\)](#).

Definition at line 629 of file `ios_base.h`.

**5.510.5.8** `streamsize std::ios_base::precision () const [inline]`

Flags access.

**Returns:**

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Definition at line 620 of file `ios_base.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, and `std::operator<<()`.

**5.510.5.9** `void*& std::ios_base::pword (int __ix) [inline]`

Access to void pointer [array](#).

**Parameters:**

*\_\_ix* Index into the [array](#).

**Returns:**

A reference to a `void*` associated with the index.

The `pword` function provides access to an [array](#) of pointers that can be used for any purpose. The [array](#) grows as required to hold the supplied index. All pointers in the [array](#) are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the [array](#) can grow dynamically, it is not safe to hold onto the reference.

Definition at line 761 of file `ios_base.h`.

**5.510.5.10 void std::ios\_base::register\_callback (event\_callback \_\_fn, int \_\_index)**

Add the callback `__fn` with parameter `__index`.

**Parameters:**

`__fn` The function to add.

`__index` The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

**5.510.5.11 fmtflags std::ios\_base::setf (fmtflags \_\_fmtfl, fmtflags \_\_mask) [inline]**

Setting new format flags.

**Parameters:**

`fmtfl` Additional flags to `set`.

`mask` The flags mask for `fmtfl`.

**Returns:**

The previous format control flags.

This function clears `mask` in the format flags, then sets `fmtfl` & `mask`. An example mask is `ios_base::adjustfield`.

Definition at line 594 of file `ios_base.h`.

**5.510.5.12 fmtflags std::ios\_base::setf (fmtflags \_\_fmtfl) [inline]**

Setting new format flags.

**Parameters:**

`fmtfl` Additional flags to `set`.

**Returns:**

The previous format control flags.

This function sets additional flags in format control. Flags that were previously `set` remain `set`.

Definition at line 577 of file `ios_base.h`.

Referenced by `std::boolalpha()`, `std::dec()`, `std::fixed()`, `std::hex()`, `std::internal()`, `std::left()`, `std::oct()`, `std::right()`, `std::scientific()`, `std::showbase()`, `std::showpoint()`, `std::showpos()`, `std::skipws()`, `std::unitbuf()`, and `std::uppercase()`.

#### 5.510.5.13 `static bool std::ios_base::sync_with_stdio (bool __sync = true) [static]`

Interaction with the standard C I/O objects.

##### Parameters:

*sync* Whether to synchronize or not.

##### Returns:

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., `stdout`) and the standard C++ objects (e.g., `cout`). User-declared streams are unaffected. See <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch28s02.html>

#### 5.510.5.14 `void std::ios_base::unsetf (fmtflags __mask) [inline]`

Clearing format flags.

##### Parameters:

*mask* The flags to unset.

This function clears *mask* in the format flags.

Definition at line 609 of file `ios_base.h`.

Referenced by `std::noboolalpha()`, `std::noshowbase()`, `std::noshowpoint()`, `std::noshowpos()`, `std::noskipws()`, `std::nunitbuf()`, and `std::nouppercase()`.

#### 5.510.5.15 `streamsize std::ios_base::width (streamsize __wide) [inline]`

Changing flags.

**Parameters:**

*wide* The new width value.

**Returns:**

The previous value of `width()`.

Definition at line 652 of file `ios_base.h`.

**5.510.5.16 streamsize std::ios\_base::width () const [inline]**

Flags access.

**Returns:**

The minimum field width to generate on output operations.

*Minimum field width* refers to the number of characters.

Definition at line 643 of file `ios_base.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::num_put<_CharT, _OutIter>::do_put()`, and `std::operator>>()`.

**5.510.5.17 static int std::ios\_base::xalloc () throw () [static]**

Access to unique indices.

**Returns:**

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the `word` and `pword` functions. The expectation is that an application calls `xalloc` in order to obtain an index in the `word` and `pword` arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. `xalloc` is guaranteed to return an index that is safe to use in the `word` and `pword` arrays.

**5.510.6 Member Data Documentation****5.510.6.1 const fmtflags std::ios\_base::adjustfield [static]**

A mask of `left|right|internal`. Useful for the 2-arg form of `setf`.

Definition at line 318 of file `ios_base.h`.

Referenced by `std::num_put<_CharT, _OutIter >::do_put()`.

#### 5.510.6.2 `const openmode std::ios_base::app` **[static]**

Seek to end before each write.

Definition at line 372 of file `ios_base.h`.

#### 5.510.6.3 `const openmode std::ios_base::ate` **[static]**

Open and seek to end immediately after opening.

Definition at line 375 of file `ios_base.h`.

Referenced by `std::basic_filebuf<_CharT, _Traits >::open()`.

#### 5.510.6.4 `const iostate std::ios_base::badbit` **[static]**

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).

Definition at line 342 of file `ios_base.h`.

Referenced by `std::basic_ostream<_CharT, _Traits >::flush()`, `std::basic_istream<_CharT, _Traits >::get()`, `std::basic_istream<_CharT, _Traits >::getline()`, `std::basic_istream<_CharT, _Traits >::ignore()`, `std::basic_ios<_CharT, _Traits >::init()`, `std::operator<<()`, `std::basic_ostream<_CharT, _Traits >::operator<<()`, `std::operator>>()`, `std::basic_istream<_CharT, _Traits >::operator>>()`, `std::basic_istream<_CharT, _Traits >::peek()`, `std::basic_ostream<_CharT, _Traits >::put()`, `std::basic_istream<_CharT, _Traits >::putback()`, `std::basic_istream<_CharT, _Traits >::read()`, `std::basic_istream<_CharT, _Traits >::readsome()`, `std::basic_istream<_CharT, _Traits >::seekg()`, `std::basic_ostream<_CharT, _Traits >::seekp()`, `std::basic_istream<_CharT, _Traits >::sync()`, `std::basic_istream<_CharT, _Traits >::tellg()`, `std::basic_ostream<_CharT, _Traits >::tellp()`, `std::basic_istream<_CharT, _Traits >::unget()`, and `std::basic_ostream<_CharT, _Traits >::write()`.

#### 5.510.6.5 `const fmtflags std::ios_base::basefield` **[static]**

A mask of `dec|oct|hex`. Useful for the 2-arg form of `setf`.

Definition at line 321 of file `ios_base.h`.

Referenced by `std::num_get<_CharT, _InIter >::do_get()`, and `std::basic_ostream<_CharT, _Traits >::operator<<()`.

**5.510.6.6 const seekdir std::ios\_base::beg [static]**

Request a seek relative to the beginning of the stream.

Definition at line 404 of file ios\_base.h.

Referenced by std::basic\_filebuf< \_CharT, \_Traits >::seekpos().

**5.510.6.7 const openmode std::ios\_base::binary [static]**

Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch27s02.html>.

Definition at line 380 of file ios\_base.h.

Referenced by std::basic\_filebuf< \_CharT, \_Traits >::showmanyc().

**5.510.6.8 const fmtflags std::ios\_base::boolalpha [static]**

Insert/extract `bool` in alphabetic rather than numeric format.

Definition at line 266 of file ios\_base.h.

Referenced by std::num\_get< \_CharT, \_InIter >::do\_get(), and std::num\_put< \_CharT, \_OutIter >::do\_put().

**5.510.6.9 const seekdir std::ios\_base::cur [static]**

Request a seek relative to the current position within the sequence.

Definition at line 407 of file ios\_base.h.

Referenced by std::basic\_filebuf< \_CharT, \_Traits >::imbue(), std::basic\_filebuf< \_CharT, \_Traits >::pbackfail(), std::basic\_stringbuf< \_CharT, \_Traits, \_Alloc >::seekoff(), std::basic\_filebuf< \_CharT, \_Traits >::seekoff(), std::basic\_istream< \_CharT, \_Traits >::tellg(), and std::basic\_ostream< \_CharT, \_Traits >::tellp().

**5.510.6.10 const fmtflags std::ios\_base::dec [static]**

Converts integer input or generates integer output in `decimal` base.

Definition at line 269 of file ios\_base.h.

**5.510.6.11 const seekdir std::ios\_base::end [static]**

Request a seek relative to the current end of the sequence.

Definition at line 410 of file ios\_base.h.

Referenced by `std::basic_filebuf<_CharT, _Traits >::open()`, and `std::basic_stringbuf<_CharT, _Traits, _Alloc >::seekoff()`.

#### 5.510.6.12 `const iostate std::ios_base::eofbit` [static]

Indicates that an input operation reached the end of an input sequence.

Definition at line 345 of file ios\_base.h.

Referenced by `std::num_get<_CharT, _InIter >::do_get()`, `std::time_get<_CharT, _InIter >::do_get_date()`, `std::time_get<_CharT, _InIter >::do_get_monthname()`, `std::time_get<_CharT, _InIter >::do_get_time()`, `std::time_get<_CharT, _InIter >::do_get_weekday()`, `std::time_get<_CharT, _InIter >::do_get_year()`, `std::basic_istream<_CharT, _Traits >::get()`, `std::basic_istream<_CharT, _Traits >::getline()`, `std::basic_istream<_CharT, _Traits >::ignore()`, `std::operator>>()`, `std::basic_istream<_CharT, _Traits >::operator>>()`, `std::basic_istream<_CharT, _Traits >::peek()`, `std::basic_istream<_CharT, _Traits >::read()`, `std::basic_istream<_CharT, _Traits >::readsome()`, and `std::ws()`.

#### 5.510.6.13 `const iostate std::ios_base::failbit` [static]

Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.

Definition at line 350 of file ios\_base.h.

Referenced by `std::num_get<_CharT, _InIter >::do_get()`, `std::time_get<_CharT, _InIter >::do_get_monthname()`, `std::time_get<_CharT, _InIter >::do_get_weekday()`, `std::time_get<_CharT, _InIter >::do_get_year()`, `std::basic_istream<_CharT, _Traits >::get()`, `std::basic_istream<_CharT, _Traits >::getline()`, `std::basic_ostream<_CharT, _Traits >::operator<<()`, `std::basic_istream<_CharT, _Traits >::operator>>()`, `std::operator>>()`, `std::basic_istream<_CharT, _Traits >::read()`, `std::basic_istream<_CharT, _Traits >::seekg()`, and `std::basic_ostream<_CharT, _Traits >::seekp()`.

#### 5.510.6.14 `const fmtflags std::ios_base::fixed` [static]

Generate floating-point output in fixed-point notation.

Definition at line 272 of file ios\_base.h.

#### 5.510.6.15 `const fmtflags std::ios_base::floatfield` [static]

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.

Definition at line 324 of file ios\_base.h.

#### 5.510.6.16 const iostate std::ios\_base::goodbit [static]

Indicates all is well.

Definition at line 353 of file ios\_base.h.

Referenced by std::num\_get< \_CharT, \_InIter >::do\_get(), std::time\_get< \_CharT, \_InIter >::do\_get\_monthname(), std::time\_get< \_CharT, \_InIter >::do\_get\_weekday(), std::time\_get< \_CharT, \_InIter >::do\_get\_year(), std::basic\_ostream< \_CharT, \_Traits >::flush(), std::basic\_istream< \_CharT, \_Traits >::get(), std::basic\_istream< \_CharT, \_Traits >::getline(), std::basic\_istream< \_CharT, \_Traits >::ignore(), std::basic\_ios< \_CharT, \_Traits >::init(), std::basic\_ostream< \_CharT, \_Traits >::operator<<(), std::operator>>(), std::basic\_istream< \_CharT, \_Traits >::operator>>(), std::basic\_istream< \_CharT, \_Traits >::peek(), std::basic\_ostream< \_CharT, \_Traits >::put(), std::basic\_istream< \_CharT, \_Traits >::putback(), std::basic\_istream< \_CharT, \_Traits >::read(), std::basic\_istream< \_CharT, \_Traits >::readsome(), std::basic\_istream< \_CharT, \_Traits >::seekg(), std::basic\_ostream< \_CharT, \_Traits >::seekp(), std::basic\_istream< \_CharT, \_Traits >::sync(), and std::basic\_istream< \_CharT, \_Traits >::unget().

#### 5.510.6.17 const fmtflags std::ios\_base::hex [static]

Converts integer input or generates integer output in hexadecimal base.

Definition at line 275 of file ios\_base.h.

Referenced by std::num\_get< \_CharT, \_InIter >::do\_get(), std::num\_put< \_CharT, \_OutIter >::do\_put(), and std::basic\_ostream< \_CharT, \_Traits >::operator<<().

#### 5.510.6.18 const openmode std::ios\_base::in [static]

Open for input. Default for ifstream and fstream.

Definition at line 383 of file ios\_base.h.

Referenced by std::basic\_filebuf< \_CharT, \_Traits >::pbackfail(), std::basic\_istream< \_CharT, \_Traits >::seekg(), std::basic\_stringbuf< \_CharT, \_Traits, \_Alloc >::seekoff(), std::basic\_stringbuf< \_CharT, \_Traits, \_Alloc >::seekpos(), std::basic\_filebuf< \_CharT, \_Traits >::showmanyc(), std::basic\_istream< \_CharT, \_Traits >::tellg(), std::basic\_stringbuf< \_CharT, \_Traits, \_Alloc >::underflow(), std::basic\_filebuf< \_CharT, \_Traits >::underflow(), and std::basic\_filebuf< \_CharT, \_Traits >::xsgetn().

**5.510.6.19 const fmtflags std::ios\_base::internal [static]**

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.

Definition at line 280 of file `ios_base.h`.

**5.510.6.20 const fmtflags std::ios\_base::left [static]**

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.)

Definition at line 284 of file `ios_base.h`.

Referenced by `std::num_put<_CharT, _OutIter >::do_put()`.

**5.510.6.21 const fmtflags std::ios\_base::oct [static]**

Converts integer input or generates integer output in octal base.

Definition at line 287 of file `ios_base.h`.

Referenced by `std::basic_ostream<_CharT, _Traits >::operator<<()`.

**5.510.6.22 const openmode std::ios\_base::out [static]**

Open for output. Default for `ofstream` and `fstream`.

Definition at line 386 of file `ios_base.h`.

Referenced by `std::basic_stringbuf<_CharT, _Traits, _Alloc >::overflow()`, `std::basic_filebuf<_CharT, _Traits >::overflow()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc >::seekoff()`, `std::basic_ostream<_CharT, _Traits >::seekp()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc >::seekpos()`, `std::basic_ostream<_CharT, _Traits >::tellp()`, and `std::basic_filebuf<_CharT, _Traits >::xsputn()`.

**5.510.6.23 const fmtflags std::ios\_base::right [static]**

Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.)

Definition at line 291 of file `ios_base.h`.

**5.510.6.24 const fmtflags std::ios\_base::scientific [static]**

Generates floating-point output in scientific notation.

Definition at line 294 of file `ios_base.h`.

#### 5.510.6.25 `const fmtflags std::ios_base::showbase [static]`

Generates a prefix indicating the numeric base of generated integer output.

Definition at line 298 of file `ios_base.h`.

#### 5.510.6.26 `const fmtflags std::ios_base::showpoint [static]`

Generates a decimal-point character unconditionally in generated floating-point output.

Definition at line 302 of file `ios_base.h`.

#### 5.510.6.27 `const fmtflags std::ios_base::showpos [static]`

Generates a + sign in non-negative generated numeric output.

Definition at line 305 of file `ios_base.h`.

#### 5.510.6.28 `const fmtflags std::ios_base::skipws [static]`

Skips leading white space before certain input operations.

Definition at line 308 of file `ios_base.h`.

#### 5.510.6.29 `const openmode std::ios_base::trunc [static]`

Open for input. Default for `ofstream`.

Definition at line 389 of file `ios_base.h`.

#### 5.510.6.30 `const fmtflags std::ios_base::unitbuf [static]`

Flushes output after each output operation.

Definition at line 311 of file `ios_base.h`.

#### 5.510.6.31 `const fmtflags std::ios_base::uppercase [static]`

Replaces certain lowercase letters with their uppercase equivalents in generated output.

Definition at line 315 of file `ios_base.h`.

Referenced by `std::num_put<_CharT, _OutIter >::do_put()`.

The documentation for this class was generated from the following file:

- [ios\\_base.h](#)

## 5.511 `std::ios_base::failure` Class Reference

These are thrown to indicate problems with io.

27.4.2.1.1 Class `ios_base::failure`. Inheritance diagram for `std::ios_base::failure`:

### Public Member Functions

- `failure` (const `string` &\_\_str) throw ()
- virtual const char \* `what` () const throw ()

#### 5.511.1 Detailed Description

These are thrown to indicate problems with io.

27.4.2.1.1 Class `ios_base::failure`.

Definition at line 217 of file `ios_base.h`.

#### 5.511.2 Member Function Documentation

##### 5.511.2.1 virtual const char\* `std::ios_base::failure::what` () const throw () [`virtual`]

Returns a C-style character string describing the general cause of the current error.

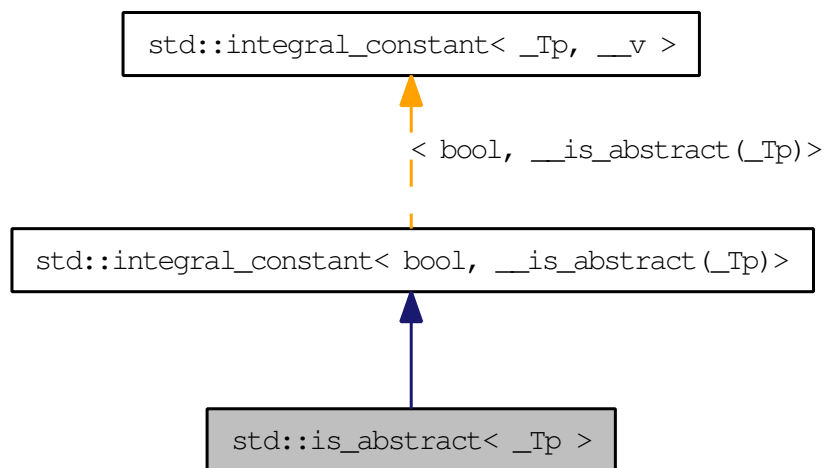

Reimplemented from `std::exception`.

The documentation for this class was generated from the following file:

- `ios_base.h`

## 5.512 `std::is_abstract< _Tp >` Struct Template Reference

[is\\_abstract](#) Inheritance diagram for `std::is_abstract< _Tp >`:

### Public Types

- typedef `integral_constant< bool, __v >` **type**
- typedef `bool` **value\_type**

### Static Public Attributes

- static const `bool` **value**

#### 5.512.1 Detailed Description

```
template<typename _Tp> struct std::is_abstract< _Tp >
```

[is\\_abstract](#)

Definition at line 338 of file `tr1_impl/type_traits`.

The documentation for this struct was generated from the following file:

- [tr1\\_impl/type\\_traits](#)

## 5.513 std::is\_arithmetic< \_Tp > Struct Template Reference

[is\\_arithmetic](#) Inheritance diagram for std::is\_arithmetic< \_Tp >:

### Public Types

- typedef [integral\\_constant](#)< bool, \_\_v > **type**
- typedef bool **value\_type**

### Static Public Attributes

- static const bool **value**

#### 5.513.1 Detailed Description

**template<typename \_Tp> struct std::is\_arithmetic< \_Tp >**

[is\\_arithmetic](#)

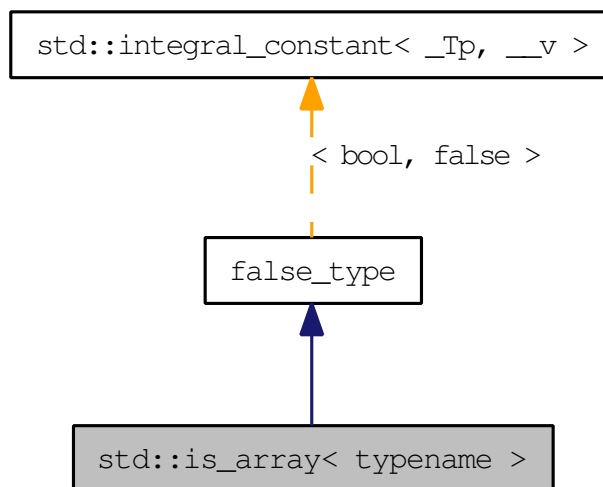

Definition at line 255 of file `tr1_impl/type_traits`.

The documentation for this struct was generated from the following file:

- [tr1\\_impl/type\\_traits](#)

## 5.514 `std::is_array< typename >` Struct Template Reference

[is\\_array](#) Inheritance diagram for `std::is_array< typename >`:

### Public Types

- typedef [integral\\_constant](#)< bool, \_\_v > **type**
- typedef bool **value\_type**

### Static Public Attributes

- static const bool **value**

#### 5.514.1 Detailed Description

`template<typename> struct std::is_array< typename >`

[is\\_array](#)

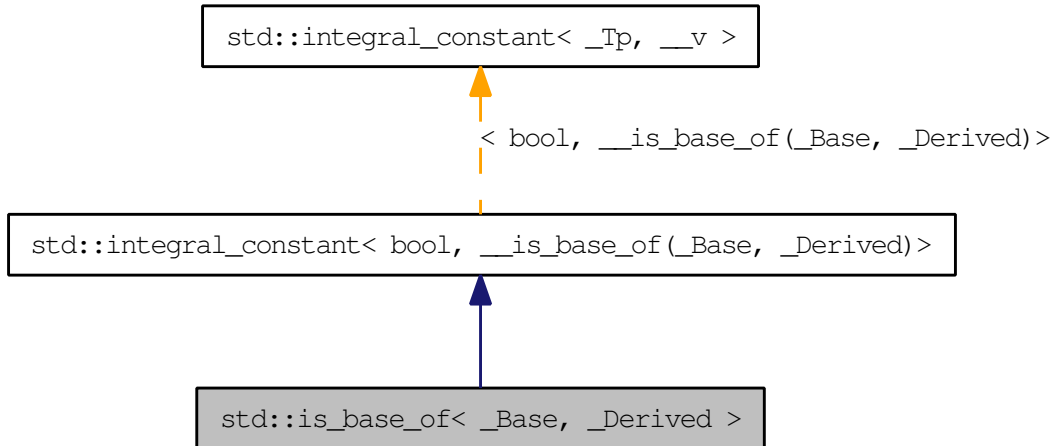

Definition at line 147 of file `tr1_impl/type_traits`.

The documentation for this struct was generated from the following file:

- [tr1\\_impl/type\\_traits](#)

## 5.515 `std::is_base_of<_Base, _Derived>` Struct Template Reference

[is\\_base\\_of](#) Inheritance diagram for `std::is_base_of<_Base, _Derived>`:

### Public Types

- typedef `integral_constant<bool, __v>` **type**
- typedef `bool` **value\_type**

### Static Public Attributes

- static const `bool` **value**

### 5.515.1 Detailed Description

```
template<typename _Base, typename _Derived> struct std::is_base_of<_Base,
_Derived >
```

[is\\_base\\_of](#)

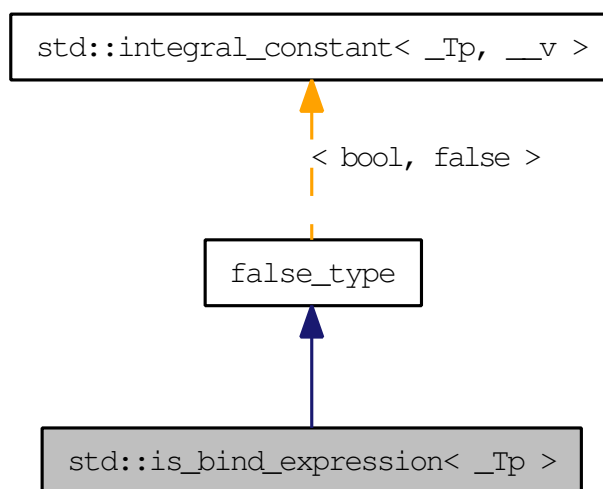

Definition at line 283 of file `type_traits`.

The documentation for this struct was generated from the following file:

- [type\\_traits](#)

## 5.516 `std::is_bind_expression<_Tp>` Struct Template Reference

Determines if the given type `_Tp` is a function object should be treated as a subexpression when evaluating calls to function objects returned by `bind()`. [TR1 3.6.1]. Inheritance diagram for `std::is_bind_expression<_Tp>`:

### Public Types

- typedef `integral_constant<bool, __v>` **type**
- typedef `bool` **value\_type**

### Static Public Attributes

- static const `bool` **value**

#### 5.516.1 Detailed Description

**template<typename \_Tp> struct `std::is_bind_expression<_Tp>`**

Determines if the given type `_Tp` is a function object should be treated as a subexpression when evaluating calls to function objects returned by `bind()`. [TR1 3.6.1].

Definition at line 778 of file `functional`.

The documentation for this struct was generated from the following file:

- [functional](#)

## 5.517 `std::is_bind_expression< _Bind< _Signature > >` > Struct Template Reference

Class template `_Bind` is always a bind expression. Inheritance diagram for `std::is_bind_expression< _Bind< _Signature > >`:

### Public Types

- typedef `integral_constant< _Tp, __v > type`
- typedef `_Tp value_type`

### Static Public Attributes

- static const `_Tp value`

#### 5.517.1 Detailed Description

`template<typename _Signature> struct std::is_bind_expression< _Bind< _Signature > >`

Class template `_Bind` is always a bind expression.

Definition at line 1354 of file `functional`.

The documentation for this struct was generated from the following file:

- `functional`

## 5.518 `std::is_bind_expression< _Bind_result< _Result, _Signature > >` Struct Template Reference

Class template `_Bind` is always a bind expression. Inheritance diagram for `std::is_bind_expression< _Bind_result< _Result, _Signature > >`:

### Public Types

- typedef `integral_constant< _Tp, __v >` **type**
- typedef `_Tp` **value\_type**

### Static Public Attributes

- static const `_Tp` **value**

#### 5.518.1 Detailed Description

```
template<typename _Result, typename _Signature> struct std::is_bind_expression< _Bind_result< _Result, _Signature > >
```

Class template `_Bind` is always a bind expression.

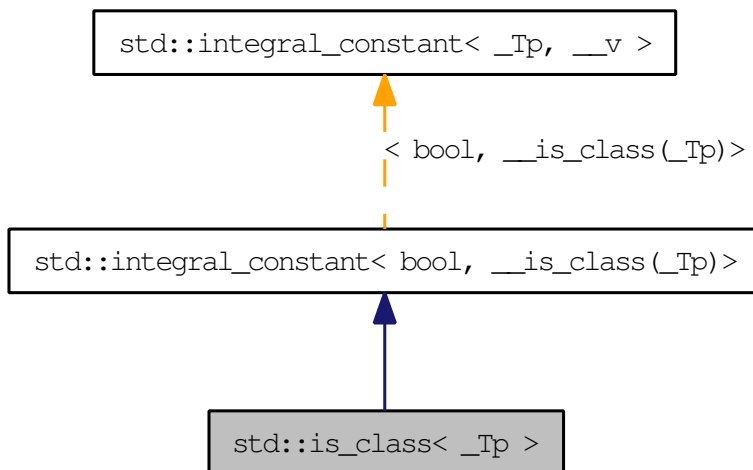

Definition at line 1362 of file `functional`.

The documentation for this struct was generated from the following file:

- [functional](#)

## 5.519 `std::is_class< _Tp >` Struct Template Reference

[is\\_class](#) Inheritance diagram for `std::is_class< _Tp >`:

### Public Types

- typedef `integral_constant< bool, __v >` **type**
- typedef `bool` **value\_type**

### Static Public Attributes

- static const `bool` **value**

#### 5.519.1 Detailed Description

```
template<typename _Tp> struct std::is_class< _Tp >
```

[is\\_class](#)

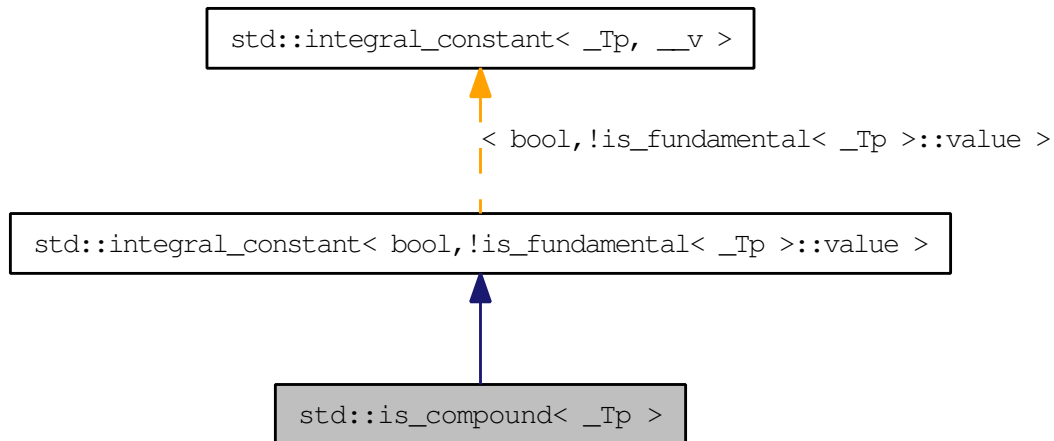

Definition at line 218 of file `tr1_impl/type_traits`.

The documentation for this struct was generated from the following file:

- [tr1\\_impl/type\\_traits](#)

## 5.520 `std::is_compound<_Tp>` Struct Template Reference

`is_compound` Inheritance diagram for `std::is_compound<_Tp>`:

### Public Types

- typedef `integral_constant<bool, __v>` **type**
- typedef `bool` **value\_type**

### Static Public Attributes

- static const `bool` **value**

### 5.520.1 Detailed Description

```
template<typename _Tp> struct std::is_compound<_Tp>
```

`is_compound`

Definition at line 290 of file `tr1_impl/type_traits`.

The documentation for this struct was generated from the following file:

- `tr1_impl/type_traits`

## 5.521 `std::is_const< typename >` Struct Template Reference

[is\\_const](#) Inheritance diagram for `std::is_const< typename >`:

### Public Types

- typedef [integral\\_constant](#)< `_Tp`, `__v` > **type**
- typedef `_Tp` **value\_type**

### Static Public Attributes

- static const `_Tp` **value**

#### 5.521.1 Detailed Description

`template<typename> struct std::is_const< typename >`

[is\\_const](#)

Definition at line 308 of file `tr1_impl/type_traits`.

The documentation for this struct was generated from the following file:

- [tr1\\_impl/type\\_traits](#)

## 5.522 `std::is_constructible< _Tp, _Args >` Struct Template Reference

[is\\_constructible](#) Inheritance diagram for `std::is_constructible< _Tp, _Args >`:

### Public Types

- typedef `integral_constant< bool, __v >` **type**
- typedef `bool` **value\_type**

### Static Public Attributes

- static const `bool` **value**

#### 5.522.1 Detailed Description

`template<typename _Tp, typename... _Args> struct std::is_constructible< _Tp, _Args >`

[is\\_constructible](#)

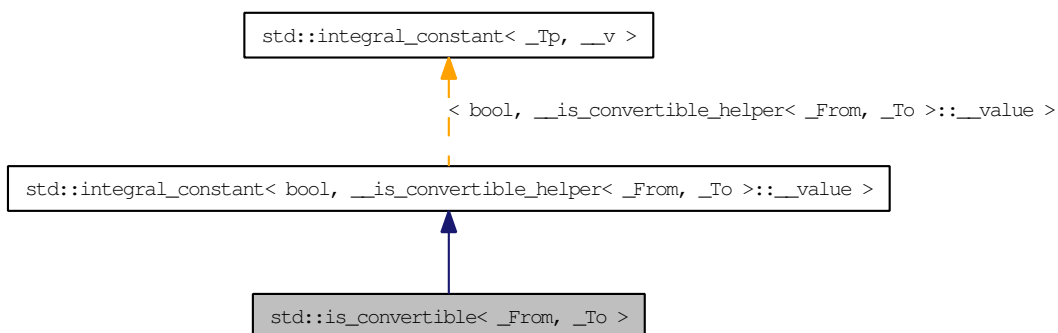

Definition at line 231 of file `type_traits`.

The documentation for this struct was generated from the following file:

- [type\\_traits](#)

## 5.523 `std::is_convertible< _From, _To >` Struct Template Reference

[is\\_convertible](#) Inheritance diagram for `std::is_convertible< _From, _To >`:

### Public Types

- typedef [integral\\_constant](#)< bool, \_\_v > **type**
- typedef bool **value\_type**

### Static Public Attributes

- static const bool **value**

#### 5.523.1 Detailed Description

```
template<typename _From, typename _To> struct std::is_convertible< _From,
_To >
```

[is\\_convertible](#)

Definition at line 309 of file `type_traits`.

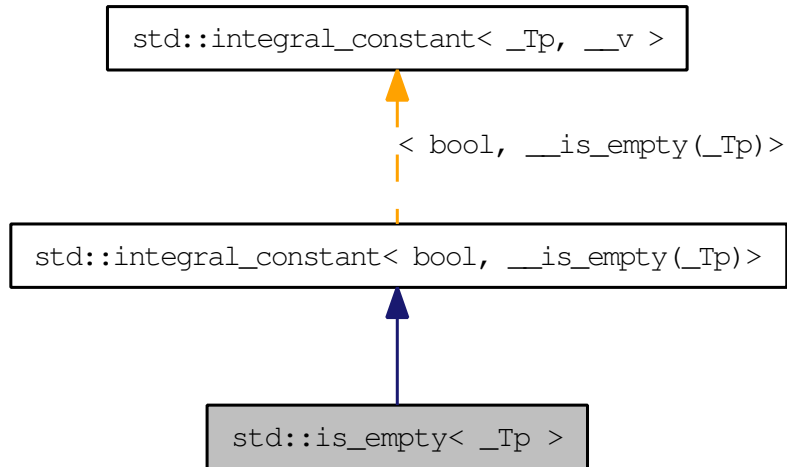

The documentation for this struct was generated from the following file:

- [type\\_traits](#)

## 5.524 `std::is_empty< _Tp >` Struct Template Reference

[is\\_empty](#) Inheritance diagram for `std::is_empty< _Tp >`:

### Public Types

- typedef `integral_constant< bool, __v >` **type**
- typedef `bool` **value\_type**

### Static Public Attributes

- static const `bool` **value**

#### 5.524.1 Detailed Description

```
template<typename _Tp> struct std::is_empty< _Tp >
```

[is\\_empty](#)

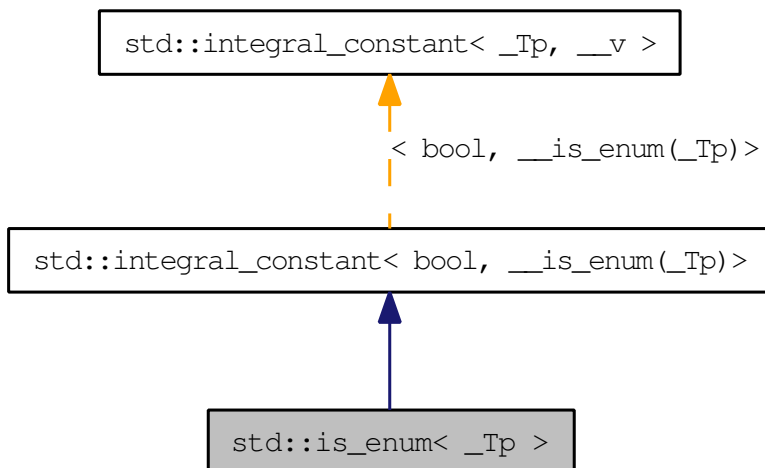

Definition at line 326 of file `tr1_impl/type_traits`.

The documentation for this struct was generated from the following file:

- [tr1\\_impl/type\\_traits](#)

## 5.525 `std::is_enum< _Tp >` Struct Template Reference

[is\\_enum](#) Inheritance diagram for `std::is_enum< _Tp >`:

### Public Types

- typedef [integral\\_constant](#)`< bool, __v >` **type**
- typedef `bool` **value\_type**

### Static Public Attributes

- static const `bool` **value**

#### 5.525.1 Detailed Description

```
template<typename _Tp> struct std::is_enum< _Tp >
```

[is\\_enum](#)

Definition at line 206 of file `tr1_impl/type_traits`.

The documentation for this struct was generated from the following file:

- [tr1\\_impl/type\\_traits](#)

## 5.526 `std::is_error_code_enum< _Tp >` Struct Template Reference

[is\\_error\\_code\\_enum](#) Inheritance diagram for `std::is_error_code_enum< _Tp >`:

### Public Types

- typedef [integral\\_constant](#)< `_Tp`, `__v` > **type**
- typedef `_Tp` **value\_type**

### Static Public Attributes

- static const `_Tp` **value**

#### 5.526.1 Detailed Description

```
template<typename _Tp> struct std::is_error_code_enum< _Tp >
```

[is\\_error\\_code\\_enum](#)

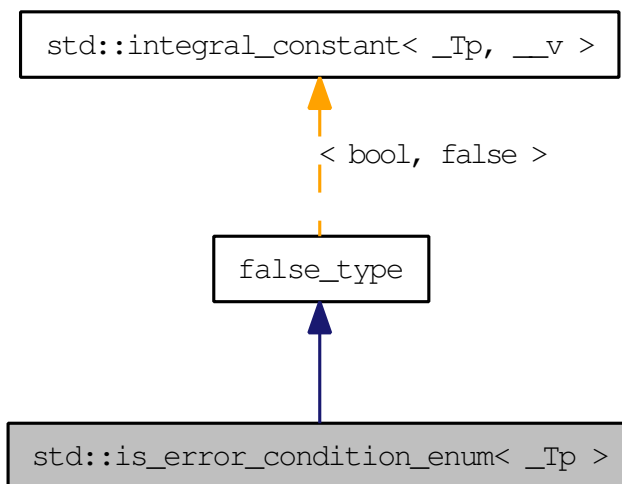

Definition at line 52 of file `system_error`.

The documentation for this struct was generated from the following file:

- [system\\_error](#)

## 5.527 `std::is_error_condition_enum< _Tp >` Struct Template Reference

[is\\_error\\_condition\\_enum](#) Inheritance diagram for `std::is_error_condition_enum< _Tp >`:

### Public Types

- typedef [integral\\_constant](#)`< bool, __v >` **type**
- typedef `bool` **value\_type**

### Static Public Attributes

- static const `bool` **value**

#### 5.527.1 Detailed Description

`template<typename _Tp> struct std::is_error_condition_enum< _Tp >`

[is\\_error\\_condition\\_enum](#)

Definition at line 56 of file `system_error`.

The documentation for this struct was generated from the following file:

- [system\\_error](#)

## 5.528 `std::is_explicitly_convertible<_From, _To>` Struct Template Reference 2773

### 5.528 `std::is_explicitly_convertible<_From, _To>` Struct Template Reference

[is\\_explicitly\\_convertible](#) Inheritance diagram for `std::is_explicitly_convertible<_From, _To>`:

#### Public Types

- typedef `integral_constant<bool, __v>` type
- typedef `bool value_type`

#### Static Public Attributes

- static const `bool value`

#### 5.528.1 Detailed Description

```
template<typename _From, typename _To> struct std::is_explicitly_convertible<_From, _To>
```

[is\\_explicitly\\_convertible](#)

Definition at line 316 of file `type_traits`.

The documentation for this struct was generated from the following file:

- [type\\_traits](#)

## 5.530 `std::is_function< typename >` Struct Template Reference

[is\\_function](#) Inheritance diagram for `std::is_function< typename >`:

### Public Types

- typedef [integral\\_constant](#)< `_Tp`, `__v` > **type**
- typedef `_Tp` **value\_type**

### Static Public Attributes

- static const `_Tp` **value**

### 5.530.1 Detailed Description

`template<typename> struct std::is_function< typename >`

[is\\_function](#)

Definition at line 224 of file `tr1_impl/type_traits`.

The documentation for this struct was generated from the following file:

- [tr1\\_impl/type\\_traits](#)

## 5.531 `std::is_fundamental< _Tp >` Struct Template Reference

[is\\_fundamental](#) Inheritance diagram for `std::is_fundamental< _Tp >`:

### Public Types

- typedef [integral\\_constant](#)< bool, \_\_v > **type**
- typedef bool **value\_type**

### Static Public Attributes

- static const bool **value**

#### 5.531.1 Detailed Description

`template<typename _Tp> struct std::is_fundamental< _Tp >`

[is\\_fundamental](#)

Definition at line 262 of file `tr1_impl/type_traits`.

The documentation for this struct was generated from the following file:

- [tr1\\_impl/type\\_traits](#)

## 5.532 `std::is_integral< _Tp >` Struct Template Reference

[is\\_integral](#) Inheritance diagram for `std::is_integral< _Tp >`:

### Public Types

- typedef `integral_constant< bool, __v >` **type**
- typedef `bool` **value\_type**

### Static Public Attributes

- static const `bool` **value**

#### 5.532.1 Detailed Description

`template<typename _Tp> struct std::is_integral< _Tp >`

[is\\_integral](#)

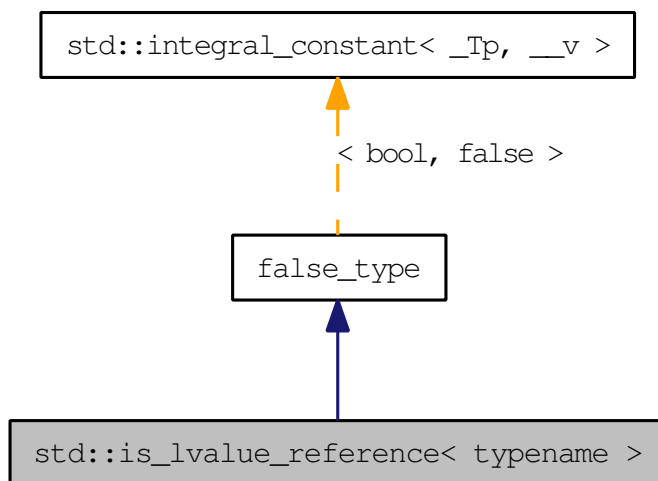

Definition at line 126 of file `tr1_impl/type_traits`.

The documentation for this struct was generated from the following file:

- [tr1\\_impl/type\\_traits](#)

## 5.533 `std::is_lvalue_reference< typename >` Struct Template Reference

[is\\_lvalue\\_reference](#) Inheritance diagram for `std::is_lvalue_reference< typename >`:

### Public Types

- typedef [integral\\_constant](#)`< bool, __v >` **type**
- typedef `bool` **value\_type**

### Static Public Attributes

- static const `bool` **value**

#### 5.533.1 Detailed Description

`template<typename> struct std::is_lvalue_reference< typename >`

[is\\_lvalue\\_reference](#)

Definition at line 69 of file `type_traits`.

The documentation for this struct was generated from the following file:

- [type\\_traits](#)

## 5.534 `std::is_member_function_pointer< _Tp >` Struct Template Reference 2779

### 5.534 `std::is_member_function_pointer< _Tp >` Struct Template Reference

[is\\_member\\_function\\_pointer](#) Inheritance diagram for `std::is_member_function_pointer< _Tp >`:

#### Public Types

- typedef `integral_constant< bool, __v >` **type**
- typedef `bool` **value\_type**

#### Static Public Attributes

- static const `bool` **value**

#### 5.534.1 Detailed Description

`template<typename _Tp> struct std::is_member_function_pointer< _Tp >`

[is\\_member\\_function\\_pointer](#)

Definition at line 199 of file `tr1_impl/type_traits`.

The documentation for this struct was generated from the following file:

- [tr1\\_impl/type\\_traits](#)

## 5.535 `std::is_member_object_pointer< _Tp >` Struct Template Reference

[is\\_member\\_object\\_pointer](#) Inheritance diagram for `std::is_member_object_pointer< _Tp >`:

### Public Types

- typedef [integral\\_constant](#)< bool, \_\_v > **type**
- typedef bool **value\_type**

### Static Public Attributes

- static const bool **value**

#### 5.535.1 Detailed Description

`template<typename _Tp> struct std::is_member_object_pointer< _Tp >`

[is\\_member\\_object\\_pointer](#)

Definition at line 186 of file `tr1_impl/type_traits`.

The documentation for this struct was generated from the following file:

- [tr1\\_impl/type\\_traits](#)

## 5.536 std::is\_object< \_Tp > Struct Template Reference

[is\\_object](#) Inheritance diagram for std::is\_object< \_Tp >:

### Public Types

- typedef [integral\\_constant](#)< bool, \_\_v > **type**
- typedef bool **value\_type**

### Static Public Attributes

- static const bool **value**

### 5.536.1 Detailed Description

**template<typename \_Tp> struct std::is\_object< \_Tp >**

[is\\_object](#)

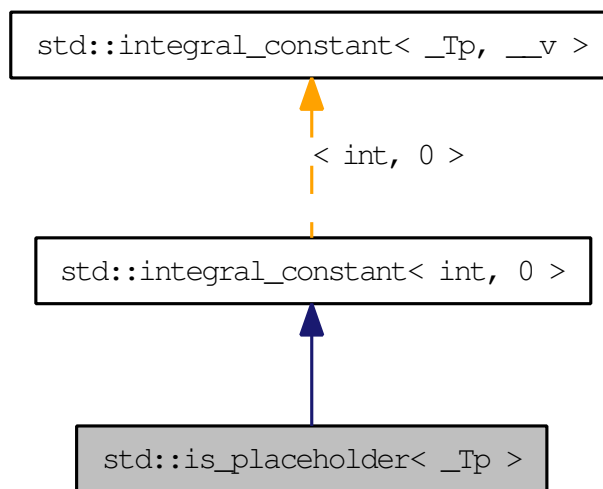

Definition at line 269 of file `tr1_impl/type_traits`.

The documentation for this struct was generated from the following file:

- [tr1\\_impl/type\\_traits](#)

## 5.537 `std::is_placeholder< _Tp >` Struct Template Reference

Determines if the given type `_Tp` is a placeholder in a `bind()` expression and, if so, which placeholder it is. [TR1 3.6.2]. Inheritance diagram for `std::is_placeholder< _Tp >`:

### Public Types

- typedef `integral_constant< int, __v >` **type**
- typedef `int` **value\_type**

### Static Public Attributes

- static const `int` **value**

#### 5.537.1 Detailed Description

**template<typename \_Tp> struct `std::is_placeholder< _Tp >`**

Determines if the given type `_Tp` is a placeholder in a `bind()` expression and, if so, which placeholder it is. [TR1 3.6.2].

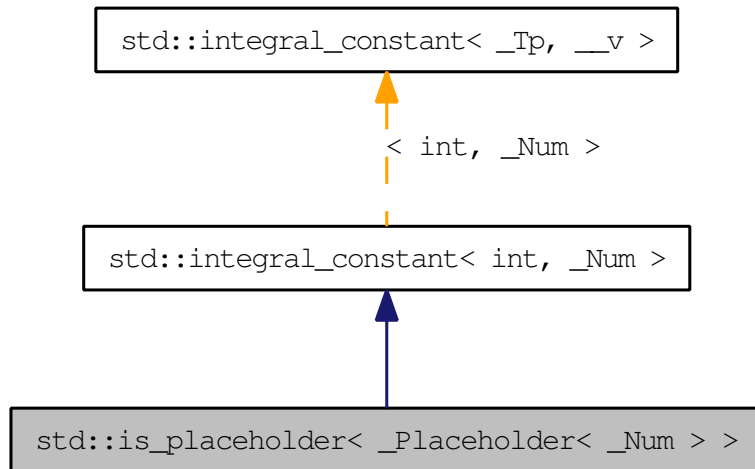

Definition at line 787 of file `functional`.

The documentation for this struct was generated from the following file:

- [functional](#)

## 5.538 `std::is_placeholder<_Placeholder<_Num>>>` Struct Template Reference

Inheritance diagram for `std::is_placeholder<_Placeholder<_Num>>>`:

### Public Types

- typedef `integral_constant<int, __v >` **type**
- typedef `int` **value\_type**

### Static Public Attributes

- static const `int` **value**

#### 5.538.1 Detailed Description

`template<int _Num> struct std::is_placeholder<_Placeholder<_Num>>>`

Partial specialization of `is_placeholder` that provides the placeholder number for the placeholder objects defined by libstdc++.

Definition at line 844 of file `functional`.

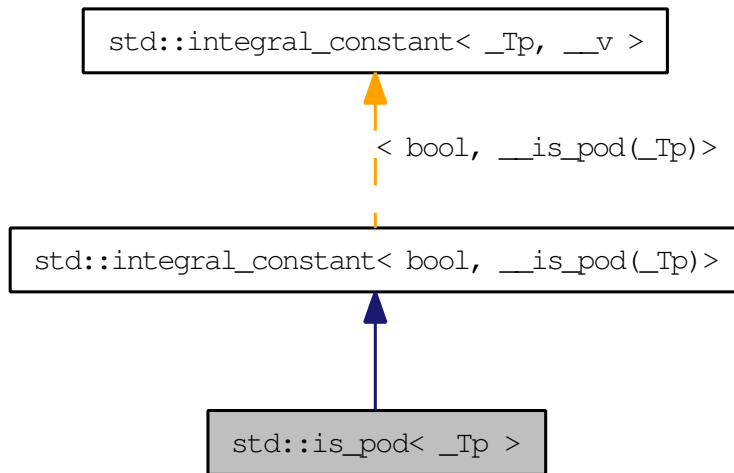

The documentation for this struct was generated from the following file:

- `functional`

## 5.539 std::is\_pod< \_Tp > Struct Template Reference

[is\\_pod](#) Inheritance diagram for std::is\_pod< \_Tp >:

### Public Types

- typedef `integral_constant< bool, __v >` **type**
- typedef `bool` **value\_type**

### Static Public Attributes

- static const `bool` **value**

### 5.539.1 Detailed Description

```
template<typename _Tp> struct std::is_pod< _Tp >
```

[is\\_pod](#)

Definition at line 191 of file `type_traits`.

The documentation for this struct was generated from the following file:

- [type\\_traits](#)

## 5.540 `std::is_pointer< _Tp >` Struct Template Reference

[is\\_pointer](#) Inheritance diagram for `std::is_pointer< _Tp >`:

### Public Types

- typedef [integral\\_constant](#)< bool, \_\_v > **type**
- typedef bool **value\_type**

### Static Public Attributes

- static const bool **value**

#### 5.540.1 Detailed Description

`template<typename _Tp> struct std::is_pointer< _Tp >`

[is\\_pointer](#)

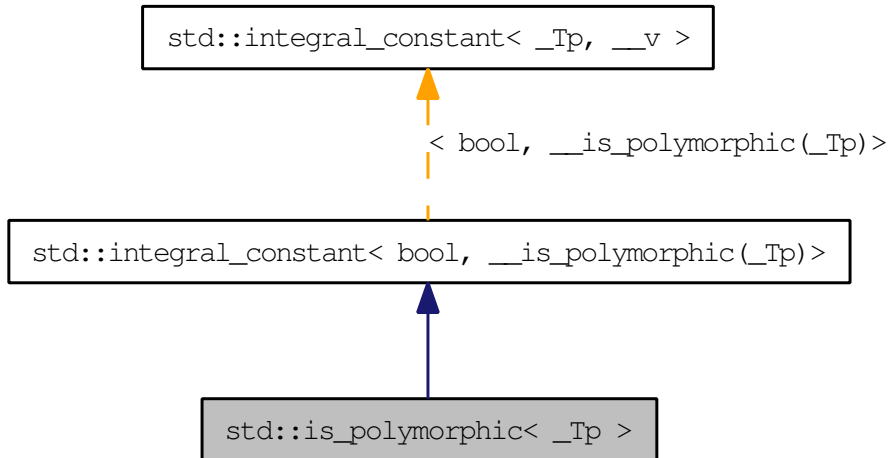

Definition at line 165 of file `tr1_impl/type_traits`.

The documentation for this struct was generated from the following file:

- [tr1\\_impl/type\\_traits](#)

## 5.541 std::is\_polymorphic< \_Tp > Struct Template Reference

[is\\_polymorphic](#) Inheritance diagram for std::is\_polymorphic< \_Tp >:

### Public Types

- typedef `integral_constant< bool, __v >` **type**
- typedef `bool` **value\_type**

### Static Public Attributes

- static const `bool` **value**

#### 5.541.1 Detailed Description

```
template<typename _Tp> struct std::is_polymorphic< _Tp >
```

[is\\_polymorphic](#)

Definition at line 332 of file `tr1_impl/type_traits`.

The documentation for this struct was generated from the following file:

- [tr1\\_impl/type\\_traits](#)

## 5.542 `std::is_reference< _Tp >` Struct Template Reference

[is\\_reference](#) Inheritance diagram for `std::is_reference< _Tp >`:

### Public Types

- typedef [integral\\_constant](#)< bool, \_\_v > **type**
- typedef bool **value\_type**

### Static Public Attributes

- static const bool **value**

#### 5.542.1 Detailed Description

`template<typename _Tp> struct std::is_reference< _Tp >`

[is\\_reference](#)

Definition at line 89 of file `type_traits`.

The documentation for this struct was generated from the following file:

- [type\\_traits](#)

## 5.543 `std::is_rvalue_reference< typename >` Struct Template Reference

[is\\_rvalue\\_reference](#) Inheritance diagram for `std::is_rvalue_reference< typename >`:

### Public Types

- typedef `integral_constant< _Tp, __v >` **type**
- typedef `_Tp` **value\_type**

### Static Public Attributes

- static const `_Tp` **value**

#### 5.543.1 Detailed Description

`template<typename> struct std::is_rvalue_reference< typename >`

[is\\_rvalue\\_reference](#)

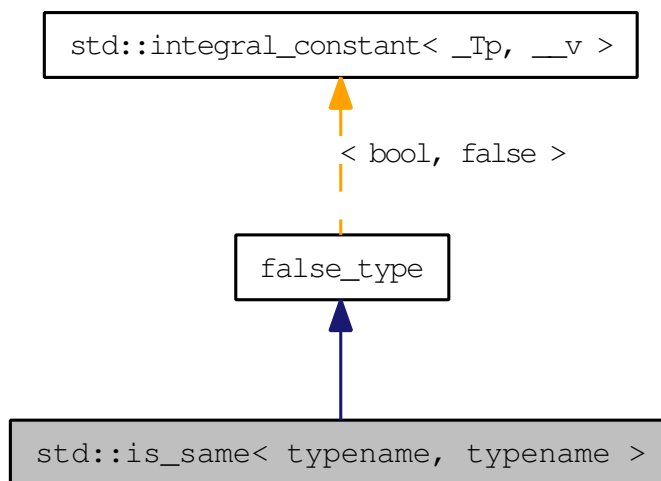

Definition at line 78 of file `type_traits`.

The documentation for this struct was generated from the following file:

- [type\\_traits](#)

## 5.544 `std::is_same< typename, typename >` Struct Template Reference

[is\\_same](#) Inheritance diagram for `std::is_same< typename, typename >`:

### Public Types

- typedef `integral_constant< bool, __v >` **type**
- typedef `bool` **value\_type**

### Static Public Attributes

- static const `bool` **value**

#### 5.544.1 Detailed Description

`template<typename, typename> struct std::is_same< typename, typename >`

[is\\_same](#)

Definition at line 389 of file `tr1_impl/type_traits`.

The documentation for this struct was generated from the following file:

- `tr1_impl/type_traits`

## 5.545 std::is\_scalar< \_Tp > Struct Template Reference

[is\\_scalar](#) Inheritance diagram for std::is\_scalar< \_Tp >:

### Public Types

- typedef [integral\\_constant](#)< bool, \_\_v > **type**
- typedef bool **value\_type**

### Static Public Attributes

- static const bool **value**

### 5.545.1 Detailed Description

`template<typename _Tp> struct std::is_scalar< _Tp >`

[is\\_scalar](#)

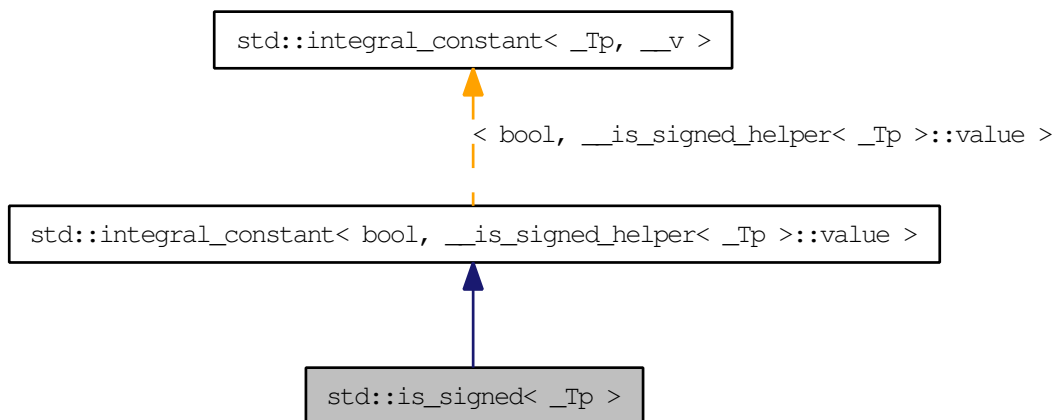

Definition at line 281 of file `tr1_impl/type_traits`.

The documentation for this struct was generated from the following file:

- [tr1\\_impl/type\\_traits](#)

## 5.546 `std::is_signed< _Tp >` Struct Template Reference

[is\\_signed](#) Inheritance diagram for `std::is_signed< _Tp >`:

### Public Types

- typedef `integral_constant< bool, __v >` **type**
- typedef `bool` **value\_type**

### Static Public Attributes

- static const `bool` **value**

#### 5.546.1 Detailed Description

```
template<typename _Tp> struct std::is_signed< _Tp >
```

[is\\_signed](#)

Definition at line 163 of file `type_traits`.

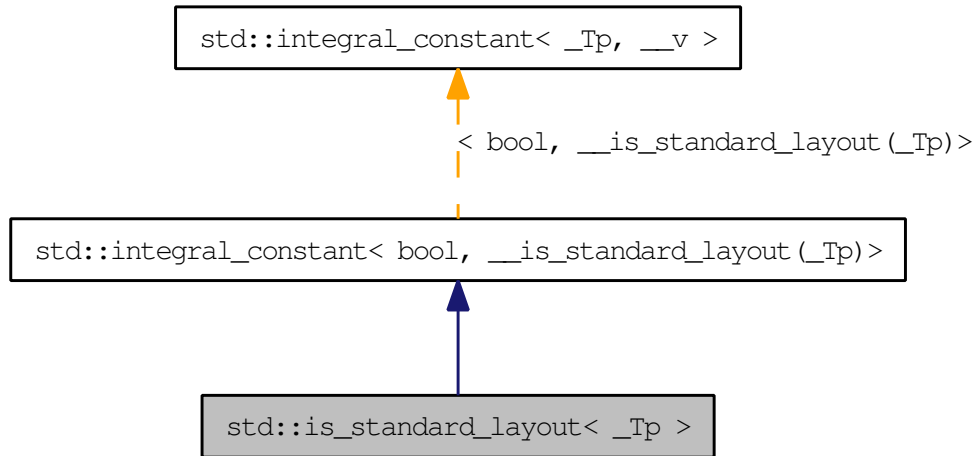

The documentation for this struct was generated from the following file:

- [type\\_traits](#)

## 5.547 std::is\_standard\_layout< \_Tp > Struct Template Reference

[is\\_standard\\_layout](#) Inheritance diagram for std::is\_standard\_layout< \_Tp >:

### Public Types

- typedef `integral_constant< bool, __v >` **type**
- typedef `bool` **value\_type**

### Static Public Attributes

- static const `bool` **value**

#### 5.547.1 Detailed Description

```
template<typename _Tp> struct std::is_standard_layout< _Tp >
```

[is\\_standard\\_layout](#)

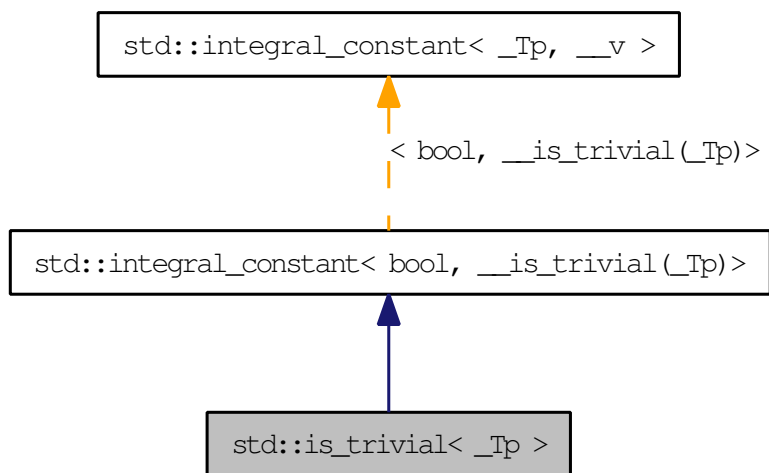

Definition at line 184 of file `type_traits`.

The documentation for this struct was generated from the following file:

- [type\\_traits](#)

## 5.548 `std::is_trivial< _Tp >` Struct Template Reference

[is\\_trivial](#) Inheritance diagram for `std::is_trivial< _Tp >`:

### Public Types

- typedef `integral_constant< bool, __v >` **type**
- typedef `bool` **value\_type**

### Static Public Attributes

- static const `bool` **value**

#### 5.548.1 Detailed Description

```
template<typename _Tp> struct std::is_trivial< _Tp >
```

[is\\_trivial](#)

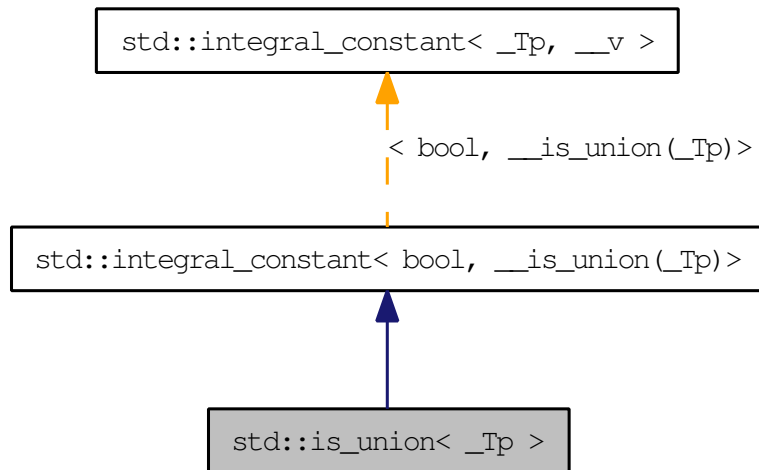

Definition at line 178 of file `type_traits`.

The documentation for this struct was generated from the following file:

- [type\\_traits](#)

## 5.549 `std::is_union< _Tp >` Struct Template Reference

[is\\_union](#) Inheritance diagram for `std::is_union< _Tp >`:

### Public Types

- typedef `integral_constant< bool, __v >` **type**
- typedef `bool` **value\_type**

### Static Public Attributes

- static const `bool` **value**

### 5.549.1 Detailed Description

```
template<typename _Tp> struct std::is_union< _Tp >
```

[is\\_union](#)

Definition at line 212 of file `tr1_impl/type_traits`.

The documentation for this struct was generated from the following file:

- [tr1\\_impl/type\\_traits](#)

## 5.550 `std::is_unsigned< _Tp >` Struct Template Reference

[is\\_unsigned](#) Inheritance diagram for `std::is_unsigned< _Tp >`:

### Public Types

- typedef [integral\\_constant](#)< bool, \_\_v > **type**
- typedef bool **value\_type**

### Static Public Attributes

- static const bool **value**

#### 5.550.1 Detailed Description

`template<typename _Tp> struct std::is_unsigned< _Tp >`

[is\\_unsigned](#)

Definition at line 169 of file `type_traits`.

The documentation for this struct was generated from the following file:

- [type\\_traits](#)

## 5.551 std::is\_void< \_Tp > Struct Template Reference

[is\\_void](#) Inheritance diagram for std::is\_void< \_Tp >:

### Public Types

- typedef `integral_constant< bool, __v >` **type**
- typedef `bool` **value\_type**

### Static Public Attributes

- static const `bool` **value**

#### 5.551.1 Detailed Description

`template<typename _Tp> struct std::is_void< _Tp >`

[is\\_void](#)

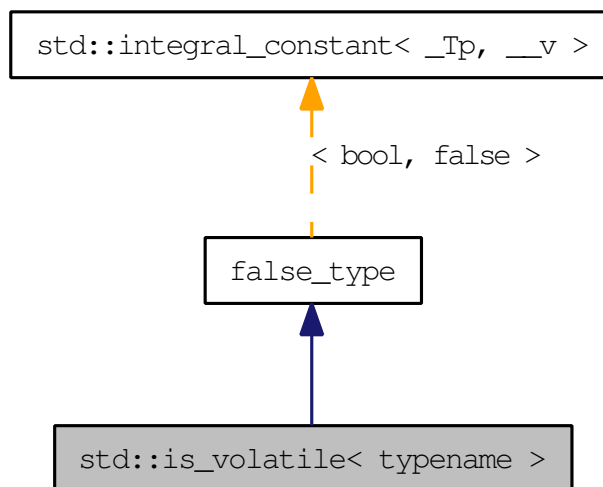

Definition at line 96 of file `tr1_impl/type_traits`.

The documentation for this struct was generated from the following file:

- [tr1\\_impl/type\\_traits](#)

## 5.552 `std::is_volatile< typename >` Struct Template Reference

[is\\_volatile](#) Inheritance diagram for `std::is_volatile< typename >`:

### Public Types

- typedef [integral\\_constant](#)< bool, \_\_v > **type**
- typedef bool **value\_type**

### Static Public Attributes

- static const bool **value**

#### 5.552.1 Detailed Description

`template<typename> struct std::is_volatile< typename >`

[is\\_volatile](#)

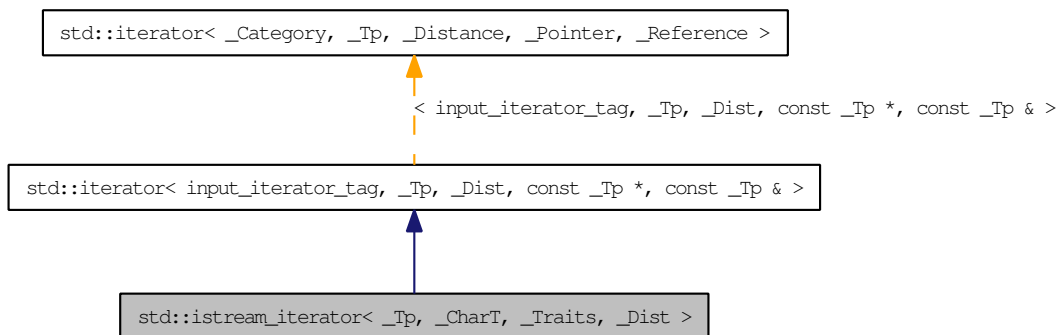

Definition at line 317 of file `tr1_impl/type_traits`.

The documentation for this struct was generated from the following file:

- [tr1\\_impl/type\\_traits](#)

## 5.553 `std::istream_iterator< _Tp, _CharT, _Traits, _Dist >` Class Template Reference

Provides input [iterator](#) semantics for streams. Inheritance diagram for `std::istream_iterator< _Tp, _CharT, _Traits, _Dist >`:

### Public Types

- typedef `_CharT` **char\_type**
- typedef `_Dist` **difference\_type**
- typedef `basic_istream< _CharT, _Traits >` **istream\_type**
- typedef `input_iterator_tag` **iterator\_category**
- typedef `const _Tp *` **pointer**
- typedef `const _Tp &` **reference**
- typedef `_Traits` **traits\_type**
- typedef `_Tp` **value\_type**

### Public Member Functions

- **istream\_iterator** (const `istream_iterator` &\_\_obj)
- **istream\_iterator** (`istream_type` &\_\_s)
- **istream\_iterator** ()
- `bool` **\_M\_equal** (const `istream_iterator` &\_\_x) const
- `const _Tp &` **operator\*** () const
- `istream_iterator` **operator++** (int)
- `istream_iterator` & **operator++** ()
- `const _Tp *` **operator->** () const

### 5.553.1 Detailed Description

```
template<typename _Tp, typename _CharT = char, typename _Traits = char_traits<_CharT>, typename _Dist = ptrdiff_t> class std::istream_iterator< _Tp, _CharT, _Traits, _Dist >
```

Provides input [iterator](#) semantics for streams.

Definition at line 47 of file stream\_iterator.h.

### 5.553.2 Member Typedef Documentation

**5.553.2.1** `typedef _Dist std::iterator< input_iterator_tag , _Tp , _Dist , const _Tp * , const _Tp & >::difference_type` [*inherited*]

Distance between iterators is represented as this type.

Definition at line 115 of file stl\_iterator\_base\_types.h.

**5.553.2.2** `typedef input_iterator_tag std::iterator< input_iterator_tag , _Tp , _Dist , const _Tp * , const _Tp & >::iterator_category` [*inherited*]

One of the [tag types](#).

Definition at line 111 of file stl\_iterator\_base\_types.h.

**5.553.2.3** `typedef const _Tp * std::iterator< input_iterator_tag , _Tp , _Dist , const _Tp * , const _Tp & >::pointer` [*inherited*]

This type represents a pointer-to-value\_type.

Definition at line 117 of file stl\_iterator\_base\_types.h.

**5.553.2.4** `typedef const _Tp & std::iterator< input_iterator_tag , _Tp , _Dist , const _Tp * , const _Tp & >::reference` [*inherited*]

This type represents a reference-to-value\_type.

Definition at line 119 of file stl\_iterator\_base\_types.h.

**5.553.2.5** `typedef _Tp std::iterator< input_iterator_tag , _Tp , _Dist , const _Tp * , const _Tp & >::value_type` [*inherited*]

The type "pointed to" by the iterator.

**5.553 std::istream\_iterator< \_Tp, \_CharT, \_Traits, \_Dist > Class Template Reference** **2801**

---

Definition at line 113 of file stl\_iterator\_base\_types.h.

### 5.553.3 Constructor & Destructor Documentation

**5.553.3.1** `template<typename _Tp, typename _CharT = char, typename _Traits = char_traits<_CharT>, typename _Dist = ptrdiff_t> std::istream_iterator< _Tp, _CharT, _Traits, _Dist >::istream_iterator () [inline]`

Construct end of input stream [iterator](#).

Definition at line 62 of file stream\_iterator.h.

**5.553.3.2** `template<typename _Tp, typename _CharT = char, typename _Traits = char_traits<_CharT>, typename _Dist = ptrdiff_t> std::istream_iterator< _Tp, _CharT, _Traits, _Dist >::istream_iterator (istream_type & __s) [inline]`

Construct start of input stream [iterator](#).

Definition at line 66 of file stream\_iterator.h.

The documentation for this class was generated from the following file:

- [stream\\_iterator.h](#)

## 5.554 `std::istreambuf_iterator< _CharT, _Traits >` Class Template Reference

Provides input [iterator](#) semantics for streambufs. Inheritance diagram for `std::istreambuf_iterator< _CharT, _Traits >`:

### Public Types

- typedef `_Traits::off_type` [difference\\_type](#)
- typedef `input_iterator_tag` [iterator\\_category](#)
- typedef `_CharT *` [pointer](#)
- typedef `_CharT &` [reference](#)
- typedef `_CharT` [value\\_type](#)
  
- typedef `_CharT` [char\\_type](#)
- typedef `_Traits::int_type` [int\\_type](#)
- typedef `basic_istream< _CharT, _Traits >` [istream\\_type](#)
- typedef `basic_streambuf< _CharT, _Traits >` [streambuf\\_type](#)
- typedef `_Traits` [traits\\_type](#)

### Public Member Functions

- [istreambuf\\_iterator](#) (`streambuf_type * __s`) `throw ()`
- [istreambuf\\_iterator](#) (`istream_type & __s`) `throw ()`
- [istreambuf\\_iterator](#) () `throw ()`
- `bool` [equal](#) (`const istreambuf_iterator & __b`) `const`
- `char_type` [operator\\*](#) () `const`
- [istreambuf\\_iterator](#) `operator++` (`int`)
- [istreambuf\\_iterator](#) & `operator++` ()

### Friends

- `template<bool _IsMove, typename _CharT2 >`  
`__gnu_cxx::__enable_if< __is_char< _CharT2 >::__value, _CharT2 * >::__-`  
`type` [\\_\\_copy\\_move\\_a2](#) (`istreambuf_iterator< _CharT2 >`, `istreambuf_iterator<`  
`_CharT2 >`, `_CharT2 *`)

`istreambuf_iterator< _CharT2 >`, `ostreambuf_iterator< _CharT2 >`)

## 5.554 `std::istreambuf_iterator<_CharT, _Traits>` Class Template Reference 2803

- `template<typename _CharT2 >`  
`__gnu_cxx::__enable_if< __is_char< _CharT2 >::__value, istreambuf_`  
`iterator< _CharT2 > >::__type find (istreambuf_iterator< _CharT2 >`  
`istreambuf_iterator< _CharT2 >, const _CharT2 &)`

### 5.554.1 Detailed Description

`template<typename _CharT, typename _Traits> class std::istreambuf_iterator<`  
`_CharT, _Traits >`

Provides input `iterator` semantics for streambufs.

Definition at line 50 of file `streambuf_iterator.h`.

### 5.554.2 Member Typedef Documentation

**5.554.2.1** `template<typename _CharT, typename _Traits > typedef _CharT`  
`std::istreambuf_iterator< _CharT, _Traits >::char_type`

Public typedefs.

Definition at line 58 of file `streambuf_iterator.h`.

**5.554.2.2** `typedef _Traits::off_type std::iterator< input_iterator_tag, _CharT`  
`, _Traits::off_type, _CharT *, _CharT & >::difference_type`  
`[inherited]`

Distance between iterators is represented as this type.

Definition at line 115 of file `stl_iterator_base_types.h`.

**5.554.2.3** `template<typename _CharT, typename _Traits > typedef`  
`_Traits::int_type std::istreambuf_iterator< _CharT, _Traits`  
`>::int_type`

Public typedefs.

Definition at line 60 of file `streambuf_iterator.h`.

**5.554.2.4** `template<typename _CharT, typename _Traits > typedef`  
`basic_istream< _CharT, _Traits> std::istreambuf_iterator< _CharT,`  
`_Traits >::istream_type`

Public typedefs.

Definition at line 62 of file streambuf\_iterator.h.

**5.554.2.5** `typedef input_iterator_tag std::iterator< input_iterator_tag , _CharT ,  
_Traits::off_type , _CharT * , _CharT & >::iterator_category  
[inherited]`

One of the [tag types](#).

Definition at line 111 of file stl\_iterator\_base\_types.h.

**5.554.2.6** `typedef _CharT * std::iterator< input_iterator_tag , _CharT ,  
_Traits::off_type , _CharT * , _CharT & >::pointer [inherited]`

This type represents a pointer-to-value\_type.

Definition at line 117 of file stl\_iterator\_base\_types.h.

**5.554.2.7** `typedef _CharT & std::iterator< input_iterator_tag , _CharT ,  
_Traits::off_type , _CharT * , _CharT & >::reference  
[inherited]`

This type represents a reference-to-value\_type.

Definition at line 119 of file stl\_iterator\_base\_types.h.

**5.554.2.8** `template<typename _CharT , typename _Traits > typedef  
basic_streambuf< _CharT, _Traits> std::istreambuf_iterator<  
_CharT, _Traits >::streambuf_type`

Public typedefs.

Definition at line 61 of file streambuf\_iterator.h.

**5.554.2.9** `template<typename _CharT , typename _Traits > typedef _Traits  
std::istreambuf_iterator< _CharT, _Traits >::traits_type`

Public typedefs.

Definition at line 59 of file streambuf\_iterator.h.

## **5.554 std::istreambuf\_iterator< \_CharT, \_Traits > Class Template Reference**

**5.554.2.10** `typedef _CharT std::iterator< input_iterator_tag , _CharT  
, _Traits::off_type , _CharT * , _CharT & >::value_type  
[inherited]`

The type "pointed to" by the iterator.

Definition at line 113 of file `stl_iterator_base_types.h`.

### **5.554.3 Constructor & Destructor Documentation**

**5.554.3.1** `template<typename _CharT , typename _Traits >  
std::istreambuf_iterator< _CharT, _Traits >::istreambuf_iterator ()  
throw () [inline]`

Construct end of input stream [iterator](#).

Definition at line 96 of file `streambuf_iterator.h`.

**5.554.3.2** `template<typename _CharT , typename _Traits >  
std::istreambuf_iterator< _CharT, _Traits >::istreambuf_iterator  
(istream_type & __s) throw () [inline]`

Construct start of input stream [iterator](#).

Definition at line 100 of file `streambuf_iterator.h`.

**5.554.3.3** `template<typename _CharT , typename _Traits >  
std::istreambuf_iterator< _CharT, _Traits >::istreambuf_iterator  
(streambuf_type * __s) throw () [inline]`

Construct start of streambuf [iterator](#).

Definition at line 104 of file `streambuf_iterator.h`.

### **5.554.4 Member Function Documentation**

**5.554.4.1** `template<typename _CharT , typename _Traits > bool  
std::istreambuf_iterator< _CharT, _Traits >::equal (const  
istreambuf_iterator< _CharT, _Traits > & __b) const [inline]`

Return true both iterators are end or both are not end.

Definition at line 160 of file `streambuf_iterator.h`.

**5.554.4.2** `template<typename _CharT , typename _Traits > char_type  
std::istreambuf_iterator< _CharT, _Traits >::operator* () const  
[inline]`

Return the current character pointed to by [iterator](#). This returns [streambuf.sgetc\(\)](#). It cannot be assigned. NB: The result of [operator\\*\(\)](#) on an end of stream is undefined.

Definition at line 111 of file [streambuf\\_iterator.h](#).

**5.554.4.3** `template<typename _CharT , typename _Traits >  
istreambuf_iterator std::istreambuf_iterator< _CharT, _Traits  
>::operator++ (int) [inline]`

Advance the [iterator](#). Calls [streambuf.sbumpc\(\)](#).

Definition at line 140 of file [streambuf\\_iterator.h](#).

References [std::basic\\_streambuf< \\_CharT, \\_Traits >::sbumpc\(\)](#).

**5.554.4.4** `template<typename _CharT , typename _Traits >  
istreambuf_iterator& std::istreambuf_iterator< _CharT, _Traits  
>::operator++ () [inline]`

Advance the [iterator](#). Calls [streambuf.sbumpc\(\)](#).

Definition at line 125 of file [streambuf\\_iterator.h](#).

References [std::basic\\_streambuf< \\_CharT, \\_Traits >::sbumpc\(\)](#).

The documentation for this class was generated from the following file:

- [streambuf\\_iterator.h](#)

## 5.555 `std::iterator< _Category, _Tp, _Distance, _Pointer, _Reference > Struct` Template Reference

Common iterator class. Inheritance diagram for `std::iterator< _Category, _Tp, _Distance, _Pointer, _Reference >`:

### Public Types

- typedef `_Distance` [difference\\_type](#)
- typedef `_Category` [iterator\\_category](#)
- typedef `_Pointer` [pointer](#)
- typedef `_Reference` [reference](#)
- typedef `_Tp` [value\\_type](#)

### 5.555.1 Detailed Description

```
template<typename _Category, typename _Tp, typename _Distance = ptrdiff_t,
typename _Pointer = _Tp*, typename _Reference = _Tp&> struct std::iterator<
_Category, _Tp, _Distance, _Pointer, _Reference >
```

Common iterator class. This class does nothing but define nested typedefs. Iterator classes can inherit from this class to save some work. The typedefs are then used in specializations and overloading.

In particular, there are no default implementations of requirements such as `operator++` and the like. (How could there be?)

Definition at line 108 of file `stl_iterator_base_types.h`.

### 5.555.2 Member Typedef Documentation

**5.555.2.1** `template<typename _Category, typename _Tp, typename _Distance = ptrdiff_t, typename _Pointer = _Tp*, typename _Reference = _Tp&> typedef _Distance std::iterator< _Category, _Tp, _Distance, _Pointer, _Reference >::difference_type`

Distance between iterators is represented as this type.

Reimplemented in [std::reverse\\_iterator<\\_Iterator>](#).

Definition at line 115 of file `stl_iterator_base_types.h`.

**5.555.2.2** `template<typename _Category, typename _Tp, typename _Distance = ptrdiff_t, typename _Pointer = _Tp*, typename _Reference = _Tp&> typedef _Category std::iterator<_Category, _Tp, _Distance, _Pointer, _Reference >::iterator_category`

One of the [tag types](#).

Definition at line 111 of file `stl_iterator_base_types.h`.

**5.555.2.3** `template<typename _Category, typename _Tp, typename _Distance = ptrdiff_t, typename _Pointer = _Tp*, typename _Reference = _Tp&> typedef _Pointer std::iterator<_Category, _Tp, _Distance, _Pointer, _Reference >::pointer`

This type represents a pointer-to-value\_type.

Reimplemented in [std::reverse\\_iterator<\\_Iterator>](#).

Definition at line 117 of file `stl_iterator_base_types.h`.

**5.555.2.4** `template<typename _Category, typename _Tp, typename _Distance = ptrdiff_t, typename _Pointer = _Tp*, typename _Reference = _Tp&> typedef _Reference std::iterator<_Category, _Tp, _Distance, _Pointer, _Reference >::reference`

This type represents a reference-to-value\_type.

Reimplemented in [std::reverse\\_iterator<\\_Iterator>](#).

Definition at line 119 of file `stl_iterator_base_types.h`.

**5.555.2.5** `template<typename _Category, typename _Tp, typename _Distance = ptrdiff_t, typename _Pointer = _Tp*, typename _Reference = _Tp&> typedef _Tp std::iterator<_Category, _Tp, _Distance, _Pointer, _Reference >::value_type`

The type "pointed to" by the [iterator](#).

Definition at line 113 of file `stl_iterator_base_types.h`.

The documentation for this struct was generated from the following file:

- [stl\\_iterator\\_base\\_types.h](#)

## 5.556 std::iterator\_traits< \_Iterator > Struct Template Reference

Traits class for iterators. Inheritance diagram for std::iterator\_traits< \_Iterator >:

### Public Types

- typedef `_Iterator::difference_type` **difference\_type**
- typedef `_Iterator::iterator_category` **iterator\_category**
- typedef `_Iterator::pointer` **pointer**
- typedef `_Iterator::reference` **reference**
- typedef `_Iterator::value_type` **value\_type**

### 5.556.1 Detailed Description

```
template<typename _Iterator> struct std::iterator_traits< _Iterator >
```

Traits class for iterators. This class does nothing but define nested typedefs. The general version simply *forwards* the nested typedefs from the `Iterator` argument. Specialized versions for pointers and pointers-to-const provide tighter, more correct semantics.

Definition at line 131 of file `stl_iterator_base_types.h`.

The documentation for this struct was generated from the following file:

- [stl\\_iterator\\_base\\_types.h](#)

## 5.557 `std::iterator_traits< _Tp * >` Struct Template Reference

Partial specialization for pointer types.

### Public Types

- typedef ptrdiff\_t **difference\_type**
- typedef [random\\_access\\_iterator\\_tag](#) **iterator\_category**
- typedef \_Tp \* **pointer**
- typedef \_Tp & **reference**
- typedef \_Tp **value\_type**

### 5.557.1 Detailed Description

```
template<typename _Tp> struct std::iterator_traits< _Tp * >
```

Partial specialization for pointer types.

Definition at line 142 of file `stl_iterator_base_types.h`.

The documentation for this struct was generated from the following file:

- [stl\\_iterator\\_base\\_types.h](#)

## 5.558 `std::iterator_traits< const _Tp * >` Struct Template Reference

Partial specialization for const pointer types.

### Public Types

- typedef `ptrdiff_t` **difference\_type**
- typedef [random\\_access\\_iterator\\_tag](#) **iterator\_category**
- typedef `const _Tp *` **pointer**
- typedef `const _Tp &` **reference**
- typedef `_Tp` **value\_type**

### 5.558.1 Detailed Description

```
template<typename _Tp> struct std::iterator_traits< const _Tp * >
```

Partial specialization for const pointer types.

Definition at line 153 of file `stl_iterator_base_types.h`.

The documentation for this struct was generated from the following file:

- [stl\\_iterator\\_base\\_types.h](#)

## 5.559 std::length\_error Class Reference

Inheritance diagram for std::length\_error:

### Public Member Functions

- **length\_error** (const [string](#) &\_\_arg)
- virtual const char \* **what** () const throw ()

#### 5.559.1 Detailed Description

Thrown when an object is constructed that would exceed its maximum permitted size (e.g., a [basic\\_string](#) instance).

Definition at line 88 of file `stdexcept`.

#### 5.559.2 Member Function Documentation

##### 5.559.2.1 virtual const char\* std::length\_error::what () const throw () [virtual, inherited]

Returns a C-style character string describing the general cause of the current error (the same string passed to the ctor).

Reimplemented from [std::exception](#).

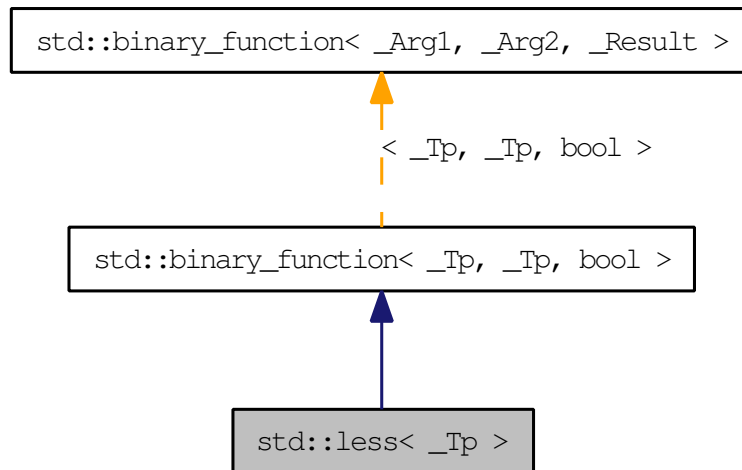

Reimplemented in [std::future\\_error](#).

The documentation for this class was generated from the following file:

- [stdexcept](#)

## 5.560 `std::less< _Tp >` Struct Template Reference

One of the [comparison functors](#). Inheritance diagram for `std::less< _Tp >`:

### Public Types

- typedef `_Tp` `first_argument_type`
- typedef `bool` `result_type`
- typedef `_Tp` `second_argument_type`

### Public Member Functions

- `bool operator() (const _Tp &__x, const _Tp &__y) const`

#### 5.560.1 Detailed Description

```
template<typename _Tp> struct std::less< _Tp >
```

One of the [comparison functors](#).

Definition at line 226 of file `stl_function.h`.

## 5.560.2 Member Typedef Documentation

**5.560.2.1** `typedef _Tp std::binary_function< _Tp , _Tp , bool >::first_argument_type [inherited]`

the type of the first argument (no surprises here)

Definition at line 114 of file stl\_function.h.

**5.560.2.2** `typedef bool std::binary_function< _Tp , _Tp , bool >::result_type [inherited]`

type of the return type

Definition at line 118 of file stl\_function.h.

**5.560.2.3** `typedef _Tp std::binary_function< _Tp , _Tp , bool >::second_argument_type [inherited]`

the type of the second argument

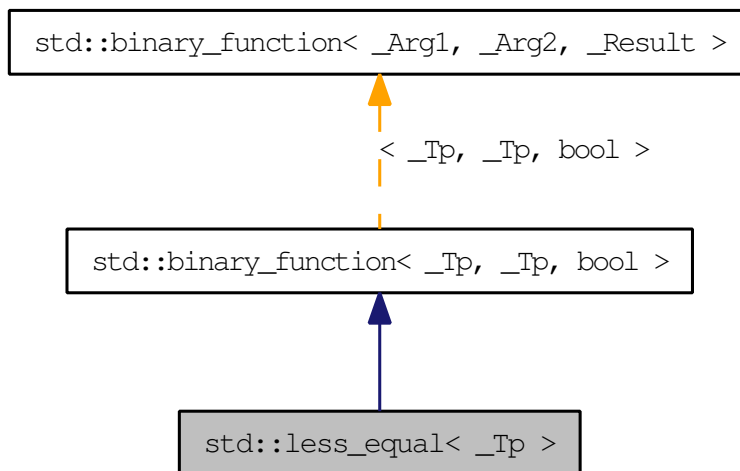

Definition at line 117 of file stl\_function.h.

The documentation for this struct was generated from the following file:

- [stl\\_function.h](#)

## 5.561 `std::less_equal< _Tp >` Struct Template Reference

One of the [comparison functors](#). Inheritance diagram for `std::less_equal< _Tp >`:

### Public Types

- typedef `_Tp` `first_argument_type`
- typedef `bool` `result_type`
- typedef `_Tp` `second_argument_type`

### Public Member Functions

- `bool operator() (const _Tp &__x, const _Tp &__y) const`

#### 5.561.1 Detailed Description

```
template<typename _Tp> struct std::less_equal< _Tp >
```

One of the [comparison functors](#).

Definition at line 244 of file `stl_function.h`.

## 5.561.2 Member Typedef Documentation

**5.561.2.1** `typedef _Tp std::binary_function< _Tp , _Tp , bool >::first_argument_type [inherited]`

the type of the first argument (no surprises here)

Definition at line 114 of file stl\_function.h.

**5.561.2.2** `typedef bool std::binary_function< _Tp , _Tp , bool >::result_type [inherited]`

type of the return type

Definition at line 118 of file stl\_function.h.

**5.561.2.3** `typedef _Tp std::binary_function< _Tp , _Tp , bool >::second_argument_type [inherited]`

the type of the second argument

Definition at line 117 of file stl\_function.h.

The documentation for this struct was generated from the following file:

- [stl\\_function.h](#)

## 5.562 `std::linear_congruential_engine<_UIntType, __a, __c, __m >` Class Template Reference

A model of a linear congruential random number generator.

### Public Types

- typedef `_UIntType` `result_type`

### Public Member Functions

- template<typename `_Sseq`, typename = typename `std::enable_if<!std::is_same<_Sseq, linear_congruential_engine>::value >::type`> `linear_congruential_engine` (`_Sseq` &`_q`)

- bool `operator==` (const `linear_congruential_engine` &`_lhs`, const `linear_congruential_engine` &`_rhs`)

## 5.562 `std::linear_congruential_engine<_UIntType, __a, __c, __m >` Class Template Reference 2819

---

- `template<typename _UIntType1, _UIntType1 __a1, _UIntType1 __c1, _UIntType1 __m1, typename _CharT, typename _Traits >`  
`std::basic_istream<_CharT, _Traits > & operator>> (std::basic_istream<_CharT, _Traits > &, std::linear_congruential_engine<_UIntType1, __a1, __c1, __m1 > &)`

### 5.562.1 Detailed Description

`template<typename _UIntType, _UIntType __a, _UIntType __c, _UIntType __m> class std::linear_congruential_engine<_UIntType, __a, __c, __m >`

A model of a linear congruential random number generator. A random number generator that produces pseudorandom numbers via linear function:

$$x_{i+1} \leftarrow (ax_i + c) \bmod m$$

The template parameter `_UIntType` must be an unsigned integral type large enough to store values up to `(__m-1)`. If the template parameter `__m` is 0, the modulus `__m` used is `std::numeric_limits<_UIntType>::max()` plus 1. Otherwise, the template parameters `__a` and `__c` must be less than `__m`.

The size of the state is 1.

Definition at line 157 of file `random.h`.

### 5.562.2 Member Typedef Documentation

**5.562.2.1** `template<typename _UIntType, _UIntType __a, _UIntType __c, _UIntType __m> typedef _UIntType std::linear_congruential_engine<_UIntType, __a, __c, __m >::result_type`

The type of the generated random value.

Definition at line 166 of file `random.h`.

### 5.562.3 Constructor & Destructor Documentation

**5.562.3.1** `template<typename _UIntType, _UIntType __a, _UIntType __c, _UIntType __m> std::linear_congruential_engine<_UIntType, __a, __c, __m >::linear_congruential_engine(result_type __s = default_seed) [inline, explicit]`

Constructs a `linear_congruential_engine` random number generator engine with seed `__s`. The default seed value is 1.

**Parameters:**

`__s` The initial seed value.

Definition at line 184 of file random.h.

References `std::linear_congruential_engine<_UIntType, __a, __c, __m >::seed()`.

```
5.562.3.2 template<typename _UIntType, _UIntType __a, _UIntType
__c, _UIntType __m> template<typename _Sseq, typename =
typename std::enable_if<!std::is_same<_Sseq, linear_congruential_
engine>::value> ::type> std::linear_congruential_engine<
_UIntType, __a, __c, __m >::linear_congruential_engine (_Sseq &
__q) [inline, explicit]
```

Constructs a `linear_congruential_engine` random number generator engine seeded from the seed sequence `__q`.

**Parameters:**

`__q` the seed sequence.

Definition at line 197 of file random.h.

References `std::linear_congruential_engine<_UIntType, __a, __c, __m >::seed()`.

**5.562.4 Member Function Documentation**

```
5.562.4.1 template<typename _UIntType, _UIntType __a, _UIntType __c,
_UIntType __m> void std::linear_congruential_engine<_UIntType,
__a, __c, __m >::discard (unsigned long long __z) [inline]
```

Discard a sequence of random numbers.

**Todo**

Look for a faster way to do discard.

Definition at line 247 of file random.h.

```
5.562.4.2 template<typename _UIntType, _UIntType __a, _UIntType __c,
_UIntType __m> result_type std::linear_congruential_engine<
_UIntType, __a, __c, __m >::max () const [inline]
```

Gets the largest possible value in the output range.

**Todo**

This should be `constexpr`.

Definition at line 238 of file `random.h`.

**5.562.4.3** `template<typename _UIntType, _UIntType __a, _UIntType __c, _UIntType __m> result_type std::linear_congruential_engine<_UIntType, __a, __c, __m >::min () const [inline]`

Gets the smallest possible value in the output range. The minimum depends on the `__c` parameter: if it is zero, the minimum generated must be  $> 0$ , otherwise 0 is allowed.

**Todo**

This should be `constexpr`.

Definition at line 229 of file `random.h`.

**5.562.4.4** `template<typename _UIntType, _UIntType __a, _UIntType __c, _UIntType __m> result_type std::linear_congruential_engine<_UIntType, __a, __c, __m >::operator() () [inline]`

Gets the next random number in the sequence.

Definition at line 257 of file `random.h`.

**5.562.4.5** `template<typename _UIntType, _UIntType __a, _UIntType __c, _UIntType __m> template<typename _Sseq > std::enable_if< std::is_class<_Sseq >::value >::type std::linear_congruential_engine<_UIntType, __a, __c, __m >::seed (_Sseq & __q) [inline]`

Reseeds the `linear_congruential_engine` random number generator engine sequence using values from the seed sequence `__q`.

**Parameters:**

`__q` the seed sequence.

Seeds the LCR engine with a value generated by `__q`.

Definition at line 132 of file `random.tcc`.

References `std::lg()`, and `std::linear_congruential_engine<_UIntType, __a, __c, __m >::seed()`.

**5.562.4.6** `template<typename _UIntType, _UIntType __a, _UIntType __c, _UIntType __m> void std::linear_congruential_engine<_UIntType, __a, __c, __m >::seed (result_type __s = default_seed) [inline]`

Reseeds the `linear_congruential_engine` random number generator engine sequence to the seed `__s`.

**Parameters:**

`__s` The new seed.

Seeds the LCR with integral value `__s`, adjusted so that the ring [identity](#) is never a member of the convergence [set](#).

Definition at line 116 of file `random.tcc`.

Referenced by `std::linear_congruential_engine<_UIntType, __a, __c, __m >::linear_congruential_engine()`, and `std::linear_congruential_engine<_UIntType, __a, __c, __m >::seed()`.

## 5.562.5 Friends And Related Function Documentation

**5.562.5.1** `template<typename _UIntType, _UIntType __a, _UIntType __c, _UIntType __m> template<typename _UIntType1, _UIntType1 __a1, _UIntType1 __c1, _UIntType1 __m1, typename _CharT, typename _Traits > std::basic_ostream<_CharT, _Traits>& operator<< (std::basic_ostream<_CharT, _Traits > &, const std::linear_congruential_engine<_UIntType1, __a1, __c1, __m1 > &) [friend]`

Writes the textual representation of the state  $x(i)$  of  $x$  to `__os`.

**Parameters:**

`__os` The output stream.

`__lcr` A `% linear_congruential_engine` random number generator.

**Returns:**

`__os`.

5.562.5.2 `template<typename _UIntType, _UIntType __a, _UIntType __c, _UIntType __m> bool operator==(const linear_congruential_engine<_UIntType, __a, __c, __m > & __lhs, const linear_congruential_engine<_UIntType, __a, __c, __m > & __rhs) [friend]`

Compares two linear congruential random number generator objects of the same type for equality.

**Parameters:**

`__lhs` A linear congruential random number generator object.

`__rhs` Another linear congruential random number generator object.

**Returns:**

true if the two objects are equal, false otherwise.

Definition at line 274 of file `random.h`.

5.562.5.3 `template<typename _UIntType, _UIntType __a, _UIntType __c, _UIntType __m> template<typename _UIntType1, _UIntType1 __a1, _UIntType1 __c1, _UIntType1 __m1, typename _CharT, typename _Traits > std::basic_istream<_CharT, _Traits>& operator>>(std::basic_istream<_CharT, _Traits > &, std::linear_congruential_engine<_UIntType1, __a1, __c1, __m1 > &) [friend]`

Sets the state of the engine by reading its textual representation from `__is`. The textual representation must have been previously written using an output stream whose imbued [locale](#) and whose type's template specialization arguments `_CharT` and `_Traits` were the same as those of `__is`.

**Parameters:**

`__is` The input stream.

`__lcr` A % [linear\\_congruential\\_engine](#) random number generator.

**Returns:**

`__is`.

## 5.562.6 Member Data Documentation

**5.562.6.1** `template<typename _UIntType, _UIntType __a, _UIntType __c, _UIntType __m> const _UIntType std::linear_congruential_engine<_UIntType, __a, __c, __m >::increment [inline, static]`

An increment.

Definition at line 171 of file random.h.

**5.562.6.2** `template<typename _UIntType, _UIntType __a, _UIntType __c, _UIntType __m> const _UIntType std::linear_congruential_engine<_UIntType, __a, __c, __m >::modulus [inline, static]`

The [modulus](#).

Definition at line 173 of file random.h.

**5.562.6.3** `template<typename _UIntType, _UIntType __a, _UIntType __c, _UIntType __m> const _UIntType std::linear_congruential_engine<_UIntType, __a, __c, __m >::multiplier [inline, static]`

The multiplier.

Definition at line 169 of file random.h.

The documentation for this class was generated from the following files:

- [random.h](#)
- [random.tcc](#)

### 5.563.1 Detailed Description

`template<typename _Tp, typename _Alloc = std::allocator<_Tp>> class std::list<_Tp, _Alloc >`

A standard container with linear time access to elements, and fixed time insertion/deletion at any point in the sequence. Meets the requirements of a [container](#), a [reversible container](#), and a [sequence](#), including the [optional sequence requirements](#) with the exception of `at` and `operator[]`.

This is a *doubly linked* list. Traversal up and down the list requires linear time, but adding and removing elements (or *nodes*) is done in constant time, regardless of where the change takes place. Unlike `std::vector` and `std::deque`, random-access iterators are not provided, so subscripting ( `[]` ) access is not allowed. For algorithms which only need sequential access, this lack makes no difference.

Also unlike the other standard containers, `std::list` provides specialized algorithms unique to linked lists, such as splicing, sorting, and in-place reversal.

A couple points on memory allocation for `list<Tp>`:

First, we never actually allocate a `TP`, we allocate `List_node<Tp>`'s and trust [20.1.5]/4 to DTRT. This is to ensure that after elements from `list<X,Alloc1>` are spliced into `list<X,Alloc2>`, destroying the memory of the second list is a valid operation, i.e., `Alloc1` giveth and `Alloc2` taketh away.

Second, a list conceptually represented as

```
A <---> B <---> C <---> D
```

is actually circular; a link exists between A and D. The list class holds (as its only data member) a private `list::iterator` pointing to *D*, not to *A*! To get to the head of the list, we start at the tail and move forward by one. When this member iterator's `next/previous` pointers refer to itself, the list is empty.

Definition at line 417 of file `stl_list.h`.

## 5.563.2 Constructor & Destructor Documentation

**5.563.2.1** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
std::list<_Tp, _Alloc >::list () [inline]`

Default constructor creates no elements.

Definition at line 499 of file `stl_list.h`.

**5.563.2.2** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
std::list<_Tp, _Alloc >::list (const allocator_type & __a)  
[inline, explicit]`

Creates a list with no elements.

### Parameters:

*a* An `allocator` object.

Definition at line 507 of file `stl_list.h`.

```
5.563.2.3 template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
std::list<_Tp, _Alloc >::list (size_type _n, const value_type
& _value = value_type(), const allocator_type & _a =
allocator_type()) [inline, explicit]
```

Creates a list with copies of an exemplar element.

**Parameters:**

- n* The number of elements to initially create.
- value* An element to copy.
- a* An [allocator](#) object.

This constructor fills the list with *n* copies of *value*.

Definition at line 519 of file `stl_list.h`.

```
5.563.2.4 template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
std::list<_Tp, _Alloc >::list (const list<_Tp, _Alloc > & _x)
[inline]
```

List copy constructor.

**Parameters:**

- x* A list of identical element and [allocator](#) types.

The newly-created list uses a copy of the allocation object used by *x*.

Definition at line 531 of file `stl_list.h`.

References `std::list<_Tp, _Alloc>::begin()`, and `std::list<_Tp, _Alloc>::end()`.

```
5.563.2.5 template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
std::list<_Tp, _Alloc >::list (list<_Tp, _Alloc > && _x)
[inline]
```

List move constructor.

**Parameters:**

- x* A list of identical element and [allocator](#) types.

The newly-created list contains the exact contents of *x*. The contents of *x* are a valid, but unspecified list.

Definition at line 543 of file `stl_list.h`.

```
5.563.2.6 template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
std::list<_Tp, _Alloc>::list (initializer_list< value_type > __l, const
allocator_type & __a = allocator_type ()) [inline]
```

Builds a list from an [initializer\\_list](#).

**Parameters:**

- l* An [initializer\\_list](#) of value\_type.
- a* An [allocator](#) object.

Create a list consisting of copies of the elements in the [initializer\\_list](#) *l*. This is linear in *l.size()*.

Definition at line 554 of file `stl_list.h`.

```
5.563.2.7 template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
template<typename _InputIterator > std::list<_Tp, _Alloc>::list
(_InputIterator __first, _InputIterator __last, const allocator_type &
__a = allocator_type ()) [inline]
```

Builds a list from a range.

**Parameters:**

- first* An input [iterator](#).
- last* An input [iterator](#).
- a* An [allocator](#) object.

Create a list consisting of copies of the elements from *[first,last)*. This is linear in *N* (where *N* is `distance(first,last)`).

Definition at line 571 of file `stl_list.h`.

### 5.563.3 Member Function Documentation

```
5.563.3.1 template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
template<typename... _Args> _Node* std::list<_Tp, _Alloc>
>::_M_create_node (_Args &&... __args) [inline,
protected]
```

**Parameters:**

- x* An instance of user data.

Allocates space for a new node and constructs a copy of *x* in it.

Definition at line 476 of file `stl_list.h`.

Referenced by `std::list< _Tp, _Alloc >::emplace()`, and `std::list< _Tp, _Alloc >::insert()`.

**5.563.3.2** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
void std::list< _Tp, _Alloc >::assign (initializer_list< value_type >  
__l) [inline]`

Assigns an [initializer\\_list](#) to a list.

**Parameters:**

*l* An [initializer\\_list](#) of `value_type`.

Replace the contents of the list with copies of the elements in the [initializer\\_list](#) *l*. This is linear in `l.size()`.

Definition at line 675 of file `stl_list.h`.

References `std::list< _Tp, _Alloc >::assign()`.

Referenced by `std::list< _Tp, _Alloc >::assign()`.

**5.563.3.3** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
template<typename _InputIterator > void std::list< _Tp, _Alloc  
>::assign (_InputIterator __first, _InputIterator __last) [inline]`

Assigns a range to a list.

**Parameters:**

*first* An input [iterator](#).

*last* An input [iterator](#).

This function fills a list with copies of the elements in the range `[first,last)`.

Note that the assignment completely changes the list and that the resulting list's size is the same as the number of elements assigned. Old data may be lost.

Definition at line 659 of file `stl_list.h`.

**5.563.3.4** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
void std::list< _Tp, _Alloc >::assign (size_type __n, const value_type  
& __val) [inline]`

Assigns a given value to a list.

**Parameters:**

*n* Number of elements to be assigned.

*val* Value to be assigned.

This function fills a list with *n* copies of the given value. Note that the assignment completely changes the list and that the resulting list's size is the same as the number of elements assigned. Old data may be lost.

Definition at line 642 of file `stl_list.h`.

**5.563.3.5** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
const_reference std::list<_Tp, _Alloc >::back () const [inline]`

Returns a read-only (constant) reference to the data at the last element of the list.

Definition at line 860 of file `stl_list.h`.

**5.563.3.6** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
reference std::list<_Tp, _Alloc >::back () [inline]`

Returns a read/write reference to the data at the last element of the list.

Definition at line 848 of file `stl_list.h`.

**5.563.3.7** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
const_iterator std::list<_Tp, _Alloc >::begin () const [inline]`

Returns a read-only (constant) [iterator](#) that points to the first element in the list. Iteration is done in ordinary element order.

Definition at line 699 of file `stl_list.h`.

**5.563.3.8** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
iterator std::list<_Tp, _Alloc >::begin () [inline]`

Returns a read/write [iterator](#) that points to the first element in the list. Iteration is done in ordinary element order.

Definition at line 690 of file `stl_list.h`.

Referenced by `std::list<_Tp, _Alloc >::list()`, `std::list<_Tp, _Alloc >::merge()`, `std::list<_Tp, _Alloc >::operator=()`, `std::operator==(, std::list<_Tp, _Alloc >::remove()`, `std::list<_Tp, _Alloc >::remove_if()`, `std::list<_Tp, _Alloc >::resize()`, `std::list<_Tp, _Alloc >::sort()`, `std::list<_Tp, _Alloc >::splice()`, and `std::list<_Tp, _Alloc >::unique()`.

**5.563.3.9** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
const_iterator std::list<_Tp, _Alloc>::cbegin () const [inline]`

Returns a read-only (constant) [iterator](#) that points to the first element in the list. Iteration is done in ordinary element order.

Definition at line 763 of file `stl_list.h`.

**5.563.3.10** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
const_iterator std::list<_Tp, _Alloc>::cend () const [inline]`

Returns a read-only (constant) [iterator](#) that points one past the last element in the list. Iteration is done in ordinary element order.

Definition at line 772 of file `stl_list.h`.

**5.563.3.11** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
void std::list<_Tp, _Alloc>::clear () [inline]`

Erases all the elements. Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 1127 of file `stl_list.h`.

**5.563.3.12** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
const_reverse_iterator std::list<_Tp, _Alloc>::crbegin () const  
[inline]`

Returns a read-only (constant) reverse [iterator](#) that points to the last element in the list. Iteration is done in reverse element order.

Definition at line 781 of file `stl_list.h`.

**5.563.3.13** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
const_reverse_iterator std::list<_Tp, _Alloc>::crend () const  
[inline]`

Returns a read-only (constant) reverse [iterator](#) that points to one before the first element in the list. Iteration is done in reverse element order.

Definition at line 790 of file `stl_list.h`.

**5.563.3.14** `template<typename _Tp, typename _Alloc > template<typename...  
_Args> list< _Tp, _Alloc >::iterator list::emplace (iterator  
_position, _Args &&... _args) [inline]`

Constructs object in list before specified [iterator](#).

**Parameters:**

*position* A `const_iterator` into the list.

*args* Arguments.

**Returns:**

An [iterator](#) that points to the inserted data.

This function will insert an object of type `T` constructed with `T(std::forward<Args>(args)...) before the specified location. Due to the nature of a list this operation can be done in constant time, and does not invalidate iterators and references.`

Definition at line 87 of file `list.tcc`.

References `std::list< _Tp, _Alloc >::_M_create_node()`.

**5.563.3.15** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
bool std::list< _Tp, _Alloc >::empty () const [inline]`

Returns true if the list is empty. (Thus [begin\(\)](#) would equal [end\(\)](#).)

Definition at line 800 of file `stl_list.h`.

Referenced by `std::list< _Tp, _Alloc >::sort()`, and `std::list< _Tp, _Alloc >::splice()`.

**5.563.3.16** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
const_iterator std::list< _Tp, _Alloc >::end () const [inline]`

Returns a read-only (constant) [iterator](#) that points one past the last element in the list. Iteration is done in ordinary element order.

Definition at line 717 of file `stl_list.h`.

**5.563.3.17** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
iterator std::list< _Tp, _Alloc >::end () [inline]`

Returns a read/write [iterator](#) that points one past the last element in the list. Iteration is done in ordinary element order.

Definition at line 708 of file `stl_list.h`.

Referenced by `std::list<_Tp, _Alloc>::list()`, `std::list<_Tp, _Alloc>::merge()`, `std::list<_Tp, _Alloc>::operator=()`, `std::operator==(())`, `std::list<_Tp, _Alloc>::remove()`, `std::list<_Tp, _Alloc>::remove_if()`, `std::list<_Tp, _Alloc>::resize()`, `std::list<_Tp, _Alloc>::splice()`, and `std::list<_Tp, _Alloc>::unique()`.

**5.563.3.18** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
iterator std::list<_Tp, _Alloc>::erase (iterator __first, iterator  
__last) [inline]`

Remove a range of elements.

**Parameters:**

*first* Iterator pointing to the first element to be erased.

*last* Iterator pointing to one past the last element to be erased.

**Returns:**

An [iterator](#) pointing to the element pointed to by *last* prior to erasing (or `end()`).

This function will erase the elements in the range `[first,last)` and shorten the list accordingly.

This operation is linear time in the size of the range and only invalidates iterators/references to the element being removed. The user is also cautioned that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 1093 of file `stl_list.h`.

**5.563.3.19** `template<typename _Tp , typename _Alloc > list<_Tp, _Alloc  
>::iterator list::erase (iterator __position) [inline]`

Remove element at given position.

**Parameters:**

*position* Iterator pointing to element to be erased.

**Returns:**

An [iterator](#) pointing to the next element (or `end()`).

This function will erase the element at the given position and thus shorten the list by one.

Due to the nature of a list this operation can be done in constant time, and only invalidates iterators/references to the element being removed. The user is also cautioned that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 108 of file list.tcc.

Referenced by `std::list< _Tp, _Alloc >::operator=()`, and `std::list< _Tp, _Alloc >::resize()`.

**5.563.3.20** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
const_reference std::list< _Tp, _Alloc >::front () const [inline]`

Returns a read-only (constant) reference to the data at the first element of the list.

Definition at line 840 of file stl\_list.h.

**5.563.3.21** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
reference std::list< _Tp, _Alloc >::front () [inline]`

Returns a read/write reference to the data at the first element of the list.

Definition at line 832 of file stl\_list.h.

**5.563.3.22** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
allocator_type std::list< _Tp, _Alloc >::get_allocator () const  
[inline]`

Get a copy of the memory allocation object.

Reimplemented from `std::_List_base< _Tp, _Alloc >`.

Definition at line 681 of file stl\_list.h.

**5.563.3.23** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
template<typename _InputIterator > void std::list< _Tp, _Alloc  
>::insert (iterator __position, _InputIterator __first, _InputIterator  
__last) [inline]`

Inserts a range into the list.

**Parameters:**

*position* An [iterator](#) into the list.

*first* An input [iterator](#).

*last* An input [iterator](#).

This function will insert copies of the data in the range [*first,last*) into the list before the location specified by *position*.

This operation is linear in the number of elements inserted and does not invalidate iterators and references.

Definition at line 1049 of file `stl_list.h`.

```
5.563.3.24 template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
void std::list< _Tp, _Alloc >::insert (iterator __position, size_type
__n, const value_type & __x) [inline]
```

Inserts a number of copies of given data into the list.

**Parameters:**

*position* An [iterator](#) into the list.

*n* Number of elements to be inserted.

*x* Data to be inserted.

This function will insert a specified number of copies of the given data before the location specified by *position*.

This operation is linear in the number of elements inserted and does not invalidate iterators and references.

Definition at line 1028 of file `stl_list.h`.

```
5.563.3.25 template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
void std::list< _Tp, _Alloc >::insert (iterator __p, initializer_list<
value_type > __l) [inline]
```

Inserts the contents of an [initializer\\_list](#) into list before specified [iterator](#).

**Parameters:**

*p* An [iterator](#) into the list.

*l* An [initializer\\_list](#) of `value_type`.

This function will insert copies of the data in the [initializer\\_list](#) *l* into the list before the location specified by *p*.

This operation is linear in the number of elements inserted and does not invalidate iterators and references.

Definition at line 1011 of file `stl_list.h`.

References std::list< \_Tp, \_Alloc >::insert().

Referenced by std::list< \_Tp, \_Alloc >::insert().

**5.563.3.26** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
iterator std::list< _Tp, _Alloc >::insert (iterator __position,  
value_type && __x) [inline]`

Inserts given rvalue into list before specified [iterator](#).

**Parameters:**

*position* An [iterator](#) into the list.

*x* Data to be inserted.

**Returns:**

An [iterator](#) that points to the inserted data.

This function will insert a copy of the given rvalue before the specified location. Due to the nature of a list this operation can be done in constant time, and does not invalidate iterators and references.

Definition at line 994 of file stl\_list.h.

**5.563.3.27** `template<typename _Tp , typename _Alloc > list< _Tp, _Alloc  
>::iterator list::insert (iterator __position, const value_type & __x)  
[inline]`

Inserts given value into list before specified [iterator](#).

**Parameters:**

*position* An [iterator](#) into the list.

*x* Data to be inserted.

**Returns:**

An [iterator](#) that points to the inserted data.

This function will insert a copy of the given value before the specified location. Due to the nature of a list this operation can be done in constant time, and does not invalidate iterators and references.

Definition at line 98 of file list.tcc.

References std::list< \_Tp, \_Alloc >::\_M\_create\_node().

Referenced by std::list< \_Tp, \_Alloc >::operator=(), and std::list< \_Tp, \_Alloc >::resize().

**5.563.3.28** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
size_type std::list<_Tp, _Alloc >::max_size () const [inline]`

Returns the `size()` of the largest possible list.

Definition at line 810 of file `stl_list.h`.

**5.563.3.29** `template<typename _Tp, typename _Alloc > template<typename  
_StrictWeakOrdering > void list::merge (list<_Tp, _Alloc > &&  
__x, _StrictWeakOrdering __comp) [inline]`

Merge sorted lists according to comparison function.

**Parameters:**

`x` Sorted `list` to merge.

*StrictWeakOrdering* Comparison function defining sort order.

Assumes that both `x` and this `list` are sorted according to `StrictWeakOrdering`. Merges elements of `x` into this `list` in sorted order, leaving `x` empty when complete. Elements in this `list` precede elements in `x` that are equivalent according to `StrictWeakOrdering()`.

Definition at line 270 of file `list.tcc`.

References `std::list<_Tp, _Alloc >::begin()`, and `std::list<_Tp, _Alloc >::end()`.

**5.563.3.30** `template<typename _Tp, typename _Alloc > void list::merge (list<  
_Tp, _Alloc > && __x) [inline]`

Merge sorted lists.

**Parameters:**

`x` Sorted `list` to merge.

Assumes that both `x` and this `list` are sorted according to `operator<()`. Merges elements of `x` into this `list` in sorted order, leaving `x` empty when complete. Elements in this `list` precede elements in `x` that are equal.

Definition at line 236 of file `list.tcc`.

References `std::list<_Tp, _Alloc >::begin()`, and `std::list<_Tp, _Alloc >::end()`.

Referenced by `std::list<_Tp, _Alloc >::sort()`.

**5.563.3.31** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
list& std::list< _Tp, _Alloc >::operator= (initializer_list<  
value_type > __l) [inline]`

List initializer [list](#) assignment operator.

**Parameters:**

*l* An [initializer\\_list](#) of value\_type.

Replace the contents of the list with copies of the elements in the [initializer\\_list](#) *l*. This is linear in *l*.size().

Definition at line 624 of file stl\_list.h.

**5.563.3.32** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
list& std::list< _Tp, _Alloc >::operator= (list< _Tp, _Alloc > &&  
__x) [inline]`

List move assignment operator.

**Parameters:**

*x* A list of identical element and [allocator](#) types.

The contents of *x* are moved into this list (without copying). *x* is a valid, but unspecified list

Definition at line 607 of file stl\_list.h.

References std::swap().

**5.563.3.33** `template<typename _Tp, typename _Alloc > list< _Tp, _Alloc > &  
list::operator= (const list< _Tp, _Alloc > & __x) [inline]`

List assignment operator. No explicit dtor needed as the `_Base` dtor takes care of things. The `_Base` dtor only erases the elements, and note that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

**Parameters:**

*x* A list of identical element and [allocator](#) types.

All the elements of *x* are copied, but unlike the copy constructor, the [allocator](#) object is not copied.

Definition at line 133 of file list.tcc.

References `std::list< _Tp, _Alloc >::begin()`, `std::list< _Tp, _Alloc >::end()`, `std::list< _Tp, _Alloc >::erase()`, and `std::list< _Tp, _Alloc >::insert()`.

**5.563.3.34** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>`  
`void std::list< _Tp, _Alloc >::pop_back () [inline]`

Removes last element. This is a typical [stack](#) operation. It shrinks the list by one. Due to the nature of a list this operation can be done in constant time, and only invalidates iterators/references to the element being removed.

Note that no data is returned, and if the last element's data is needed, it should be retrieved before `pop_back()` is called.

Definition at line 946 of file `stl_list.h`.

**5.563.3.35** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>`  
`void std::list< _Tp, _Alloc >::pop_front () [inline]`

Removes first element. This is a typical [stack](#) operation. It shrinks the list by one. Due to the nature of a list this operation can be done in constant time, and only invalidates iterators/references to the element being removed.

Note that no data is returned, and if the first element's data is needed, it should be retrieved before `pop_front()` is called.

Definition at line 906 of file `stl_list.h`.

**5.563.3.36** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>`  
`void std::list< _Tp, _Alloc >::push_back (const value_type & __x)`  
`[inline]`

Add data to the end of the list.

**Parameters:**

*x* Data to be added.

This is a typical [stack](#) operation. The function creates an element at the end of the list and assigns the given data to it. Due to the nature of a list this operation can be done in constant time, and does not invalidate iterators and references.

Definition at line 920 of file `stl_list.h`.

**5.563.3.37** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
void std::list<_Tp, _Alloc >::push_front (const value_type & __x)  
[inline]`

Add data to the front of the list.

**Parameters:**

*x* Data to be added.

This is a typical [stack](#) operation. The function creates an element at the front of the list and assigns the given data to it. Due to the nature of a list this operation can be done in constant time, and does not invalidate iterators and references.

Definition at line 879 of file stl\_list.h.

**5.563.3.38** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
const_reverse_iterator std::list<_Tp, _Alloc >::rbegin () const  
[inline]`

Returns a read-only (constant) reverse [iterator](#) that points to the last element in the list. Iteration is done in reverse element order.

Definition at line 735 of file stl\_list.h.

**5.563.3.39** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
reverse_iterator std::list<_Tp, _Alloc >::rbegin () [inline]`

Returns a read/write reverse [iterator](#) that points to the last element in the list. Iteration is done in reverse element order.

Definition at line 726 of file stl\_list.h.

**5.563.3.40** `template<typename _Tp, typename _Alloc > void list::remove  
(const _Tp & __value) [inline]`

Remove all elements equal to value.

**Parameters:**

*value* The value to remove.

Removes every element in the [list](#) equal to *value*. Remaining elements stay in [list](#) order. Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 187 of file list.tcc.

References `std::list< _Tp, _Alloc >::begin()`, and `std::list< _Tp, _Alloc >::end()`.

**5.563.3.41** `template<typename _Tp, typename _Alloc > template<typename  
_Predicate > void list::remove_if (_Predicate __pred) [inline]`

Remove all elements satisfying a predicate.

**Parameters:**

*Predicate* Unary predicate function or object.

Removes every element in the [list](#) for which the predicate returns true. Remaining elements stay in [list](#) order. Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 340 of file list.tcc.

References `std::list< _Tp, _Alloc >::begin()`, and `std::list< _Tp, _Alloc >::end()`.

**5.563.3.42** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
const_reverse_iterator std::list< _Tp, _Alloc >::rend () const  
[inline]`

Returns a read-only (constant) reverse [iterator](#) that points to one before the first element in the list. Iteration is done in reverse element order.

Definition at line 753 of file stl\_list.h.

**5.563.3.43** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
reverse_iterator std::list< _Tp, _Alloc >::rend () [inline]`

Returns a read/write reverse [iterator](#) that points to one before the first element in the list. Iteration is done in reverse element order.

Definition at line 744 of file stl\_list.h.

**5.563.3.44** `template<typename _Tp, typename _Alloc > void list::resize  
(size_type __new_size, value_type __x = value_type())  
[inline]`

Resizes the list to the specified number of elements.

**Parameters:**

*new\_size* Number of elements the list should contain.

*x* Data with which new elements should be populated.

This function will resize the list to the specified number of elements. If the number is smaller than the list's current size the list is truncated, otherwise the list is extended and new elements are populated with given data.

Definition at line 118 of file list.tcc.

References std::list< \_Tp, \_Alloc >::begin(), std::list< \_Tp, \_Alloc >::end(), std::list< \_Tp, \_Alloc >::erase(), and std::list< \_Tp, \_Alloc >::insert().

**5.563.3.45** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
void std::list< _Tp, _Alloc >::reverse () [inline]`

Reverse the elements in [list](#). Reverse the order of elements in the [list](#) in linear time.

Definition at line 1347 of file stl\_list.h.

**5.563.3.46** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
size_type std::list< _Tp, _Alloc >::size () const [inline]`

Returns the number of elements in the list.

Definition at line 805 of file stl\_list.h.

References `__gnu_cxx::distance()`.

**5.563.3.47** `template<typename _Tp , typename _Alloc > template<typename  
_StrictWeakOrdering > void list::sort (_StrictWeakOrdering  
_comp) [inline]`

Sort the elements according to comparison function. Sorts the elements of this [list](#) in NlogN time. Equivalent elements remain in [list](#) order.

Definition at line 379 of file list.tcc.

References std::list< \_Tp, \_Alloc >::begin(), std::list< \_Tp, \_Alloc >::empty(), std::list< \_Tp, \_Alloc >::merge(), std::list< \_Tp, \_Alloc >::splice(), and std::list< \_Tp, \_Alloc >::swap().

**5.563.3.48** `template<typename _Tp, typename _Alloc > void list::sort ()`  
**[inline]**

Sort the elements. Sorts the elements of this [list](#) in NlogN time. Equivalent elements remain in [list](#) order.

Definition at line 302 of file list.tcc.

References `std::list< _Tp, _Alloc >::begin()`, `std::list< _Tp, _Alloc >::empty()`, `std::list< _Tp, _Alloc >::merge()`, `std::list< _Tp, _Alloc >::splice()`, and `std::list< _Tp, _Alloc >::swap()`.

`void std::list< _Tp, _Alloc >::splice (iterator __position, list< _Tp,`  
`_Alloc > && __x, iterator __first, iterator __last) [inline]`

Insert range from another list.

**Parameters:**

*position* Iterator referencing the element to insert before.

*x* Source [list](#).

*first* Iterator referencing the start of range in *x*.

*last* Iterator referencing the end of range in *x*.

Removes elements in the range [first,last) and inserts them before *position* in constant time.

Undefined if *position* is in [first,last).

Definition at line 1213 of file stl\_list.h.

**5.563.3.50** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>`  
`void std::list< _Tp, _Alloc >::splice (iterator __position, list< _Tp,`  
`_Alloc > && __x, iterator __i) [inline]`

Insert element from another list.

**Parameters:**

*position* Iterator referencing the element to insert before.

*x* Source [list](#).

*i* Iterator referencing the element to move.

Removes the element in [list](#) *x* referenced by *i* and inserts it into the current [list](#) before *position*.

Definition at line 1177 of file stl\_list.h.

**5.563.3.51** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
void std::list< _Tp, _Alloc >::splice (iterator __position, list< _Tp,  
_Alloc > && __x) [inline]`

Insert contents of another list.

**Parameters:**

*position* Iterator referencing the element to insert before.

*x* Source [list](#).

The elements of *x* are inserted in constant time in front of the element referenced by *position*. *x* becomes an empty [list](#).

Requires this != *x*.

Definition at line 1147 of file `stl_list.h`.

References `std::list< _Tp, _Alloc >::begin()`, `std::list< _Tp, _Alloc >::empty()`, and `std::list< _Tp, _Alloc >::end()`.

Referenced by `std::list< _Tp, _Alloc >::sort()`.

**5.563.3.52** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
void std::list< _Tp, _Alloc >::swap (list< _Tp, _Alloc > & __x)  
[inline]`

Swaps data with another list.

**Parameters:**

*x* A list of the same element and [allocator](#) types.

This exchanges the elements between two lists in constant time. Note that the global [std::swap\(\)](#) function is specialized such that `std::swap(l1,l2)` will feed to this function.

Definition at line 1110 of file `stl_list.h`.

References `std::swap()`.

Referenced by `std::list< _Tp, _Alloc >::sort()`, and `std::swap()`.

**5.563.3.53** `template<typename _Tp, typename _Alloc > template<typename  
_BinaryPredicate > void list::unique (_BinaryPredicate  
__binary_pred) [inline]`

Remove consecutive elements satisfying a predicate.

**Parameters:**

*BinaryPredicate* Binary predicate function or object.

For each consecutive [set](#) of elements [first,last) that satisfy predicate(first,i) where i is an [iterator](#) in [first,last), remove all but the first one. Remaining elements stay in [list](#) order. Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 358 of file list.tcc.

References `std::list< _Tp, _Alloc >::begin()`, and `std::list< _Tp, _Alloc >::end()`.

#### **5.563.3.54** `template<typename _Tp , typename _Alloc > void list::unique ()` `[inline]`

Remove consecutive duplicate elements. For each consecutive [set](#) of elements with the same value, remove all but the first one. Remaining elements stay in [list](#) order. Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 215 of file list.tcc.

References `std::list< _Tp, _Alloc >::begin()`, and `std::list< _Tp, _Alloc >::end()`.

The documentation for this class was generated from the following files:

- [stl\\_list.h](#)
- [list.tcc](#)

## 5.564 std::locale Class Reference

Container class for localization functionality.

The `locale` class is first a class wrapper for C library locales. It is also an extensible container for user-defined localization. A `locale` is a collection of facets that implement various localization features such as money, time, and number printing.

### Classes

- class `facet`

*Localization functionality base class.*

*The `facet` class is the base class for a localization feature, such as money, time, and number printing. It provides common support for facets and reference management.*

- class `id`

*Facet ID class.*

*The ID class provides facets with an index used to identify them. Every `facet` class must define a public static member `locale::id`, or be derived from a `facet` that provides this member, otherwise the `facet` cannot be used in a `locale`. The `locale::id` ensures that each class type gets a unique identifier.*

### Public Types

- typedef int `category`

### Public Member Functions

### 5.564.1 Detailed Description

Container class for localization functionality.

The `locale` class is first a class wrapper for C library locales. It is also an extensible container for user-defined localization. A `locale` is a collection of facets that implement various localization features such as money, time, and number printing. Constructing C++ locales does not change the C library `locale`.

This library supports efficient construction and copying of locales through a reference counting implementation of the `locale` class.

Definition at line 62 of file `locale_classes.h`.

## 5.564.2 Member Typedef Documentation

### 5.564.2.1 typedef int std::locale::category

Definition of [locale::category](#).

Definition at line 67 of file locale\_classes.h.

## 5.564.3 Constructor & Destructor Documentation

### 5.564.3.1 std::locale::locale () throw ()

Default constructor. Constructs a copy of the global [locale](#). If no [locale](#) has been explicitly [set](#), this is the C [locale](#).

Referenced by [combine\(\)](#).

### 5.564.3.2 std::locale::locale (const locale & \_\_other) throw ()

Copy constructor. Constructs a copy of *other*.

#### Parameters:

*other* The [locale](#) to copy.

### 5.564.3.3 std::locale::locale (const char \* \_\_s) [explicit]

Named [locale](#) constructor. Constructs a copy of the named C library [locale](#).

#### Parameters:

*s* Name of the [locale](#) to construct.

#### Exceptions:

[std::runtime\\_error](#) if *s* is null or an undefined [locale](#).

### 5.564.3.4 std::locale::locale (const locale & \_\_base, const char \* \_\_s, category \_\_cat)

Construct [locale](#) with facets from another [locale](#). Constructs a copy of the [locale](#) *base*. The facets specified by *cat* are replaced with those from the [locale](#) named by *s*. If *base* is named, this [locale](#) instance will also be named.

**Parameters:**

- base* The [locale](#) to copy.
- s* Name of the [locale](#) to use facets from.
- cat* Set of categories defining the facets to use from *s*.

**Exceptions:**

- [std::runtime\\_error](#) if *s* is null or an undefined [locale](#).

**5.564.3.5 `std::locale::locale (const locale & __base, const locale & __add, category __cat)`**

Construct [locale](#) with facets from another [locale](#). Constructs a copy of the [locale](#) *base*. The facets specified by *cat* are replaced with those from the [locale](#) *add*. If *base* and *add* are named, this [locale](#) instance will also be named.

**Parameters:**

- base* The [locale](#) to copy.
- add* The [locale](#) to use facets from.
- cat* Set of categories defining the facets to use from *add*.

**5.564.3.6 `template<typename _Facet > std::locale::locale (const locale & __other, _Facet * __f) [inline]`**

Construct [locale](#) with another [facet](#). Constructs a copy of the [locale](#) *other*. The [facet](#) is added to , replacing an existing [facet](#) of type *Facet* if there is one. If *f* is null, this [locale](#) is a copy of *other*.

**Parameters:**

- other* The [locale](#) to copy.
- f* The [facet](#) to add in.

Definition at line 43 of file `locale_classes.tcc`.

**5.564.3.7 `std::locale::~~locale () throw ()`**

Locale destructor.

## 5.564.4 Member Function Documentation

### 5.564.4.1 static const locale& std::locale::classic () [static]

Return reference to the C [locale](#).

### 5.564.4.2 template<typename \_Facet > locale std::locale::combine (const locale & \_\_other) const [inline]

Construct [locale](#) with another [facet](#). Constructs and returns a new copy of this [locale](#). Adds or replaces an existing [facet](#) of type [Facet](#) from the [locale](#) *other* into the new [locale](#).

#### Parameters:

*Facet* The [facet](#) type to copy from other  
*other* The [locale](#) to copy from.

#### Returns:

Newly constructed [locale](#).

#### Exceptions:

[std::runtime\\_error](#) if *other* has no [facet](#) of type [Facet](#).

Definition at line 61 of file `locale_classes.tcc`.

References `locale()`.

### 5.564.4.3 static locale std::locale::global (const locale &) [static]

Set global [locale](#). This function sets the global [locale](#) to the argument and returns a copy of the previous global [locale](#). If the argument has a name, it will also call `std::setlocale(LC_ALL, loc.name())`.

#### Parameters:

*locale* The new [locale](#) to make global.

#### Returns:

Copy of the old global [locale](#).

**5.564.4.4** `string std::locale::name () const`

Return [locale](#) name.

**Returns:**

Locale name or "\*" if unnamed.

**5.564.4.5** `bool std::locale::operator!=(const locale & __other) const throw () [inline]`

Locale inequality.

**Parameters:**

*other* The [locale](#) to compare against.

**Returns:**

! (\*this == other)

Definition at line 234 of file locale\_classes.h.

**5.564.4.6** `template<typename _Char , typename _Traits , typename _Alloc > bool std::locale::operator() (const basic_string< _Char, _Traits, _Alloc > & __s1, const basic_string< _Char, _Traits, _Alloc > & __s2) const [inline]`

Compare two strings according to [collate](#). Template operator to compare two strings using the compare function of the [collate facet](#) in this [locale](#). One use is to provide the [locale](#) to the sort function. For example, a [vector](#) v of strings could be sorted according to [locale](#) loc by doing:

```
std::sort(v.begin(), v.end(), loc);
```

**Parameters:**

*s1* First string to compare.

*s2* Second string to compare.

**Returns:**

True if `collate<Char> facet` compares `s1 < s2`, else false.

**5.564.4.7 const locale& std::locale::operator= (const locale & \_\_other) throw ()**

Assignment operator. Set this [locale](#) to be a copy of *other*.

**Parameters:**

*other* The [locale](#) to copy.

**Returns:**

A reference to this [locale](#).

**5.564.4.8 bool std::locale::operator== (const locale & \_\_other) const throw ()**

Locale equality.

**Parameters:**

*other* The [locale](#) to compare against.

**Returns:**

True if *other* and this refer to the same [locale](#) instance, are copies, or have the same name. False otherwise.

**5.564.5 Member Data Documentation****5.564.5.1 const category std::locale::all [static]**

Category values. The standard category values are none, [ctype](#), numeric, [collate](#), time, monetary, and [messages](#). They form a bitmask that supports union and intersection. The category all is the union of these values.

NB: Order must match `_S_facet_categories` definition in `locale.cc`

Definition at line 105 of file `locale_classes.h`.

**5.564.5.2 const category std::locale::collate [static]**

Category values. The standard category values are none, [ctype](#), numeric, [collate](#), time, monetary, and [messages](#). They form a bitmask that supports union and intersection. The category all is the union of these values.

NB: Order must match `_S_facet_categories` definition in `locale.cc`

Definition at line 101 of file `locale_classes.h`.

**5.564.5.3 const category std::locale::ctype [static]**

Category values. The standard category values are none, [ctype](#), numeric, [collate](#), time, monetary, and [messages](#). They form a bitmask that supports union and intersection. The category all is the union of these values.

NB: Order must match `_S_facet_categories` definition in `locale.cc`

Definition at line 99 of file `locale_classes.h`.

**5.564.5.4 const category std::locale::messages [static]**

Category values. The standard category values are none, [ctype](#), numeric, [collate](#), time, monetary, and [messages](#). They form a bitmask that supports union and intersection. The category all is the union of these values.

NB: Order must match `_S_facet_categories` definition in `locale.cc`

Definition at line 104 of file `locale_classes.h`.

**5.564.5.5 const category std::locale::monetary [static]**

Category values. The standard category values are none, [ctype](#), numeric, [collate](#), time, monetary, and [messages](#). They form a bitmask that supports union and intersection. The category all is the union of these values.

NB: Order must match `_S_facet_categories` definition in `locale.cc`

Definition at line 103 of file `locale_classes.h`.

**5.564.5.6 const category std::locale::none [static]**

Category values. The standard category values are none, [ctype](#), numeric, [collate](#), time, monetary, and [messages](#). They form a bitmask that supports union and intersection. The category all is the union of these values.

NB: Order must match `_S_facet_categories` definition in `locale.cc`

Definition at line 98 of file `locale_classes.h`.

**5.564.5.7 const category std::locale::numeric [static]**

Category values. The standard category values are none, [ctype](#), numeric, [collate](#), time, monetary, and [messages](#). They form a bitmask that supports union and intersection. The category all is the union of these values.

NB: Order must match `_S_facet_categories` definition in `locale.cc`

Definition at line 100 of file locale\_classes.h.

#### 5.564.5.8 const category std::locale::time [static]

Category values. The standard category values are none, [ctype](#), numeric, [collate](#), time, monetary, and [messages](#). They form a bitmask that supports union and intersection. The category all is the union of these values.

NB: Order must match `_S_facet_categories` definition in locale.cc

Definition at line 102 of file locale\_classes.h.

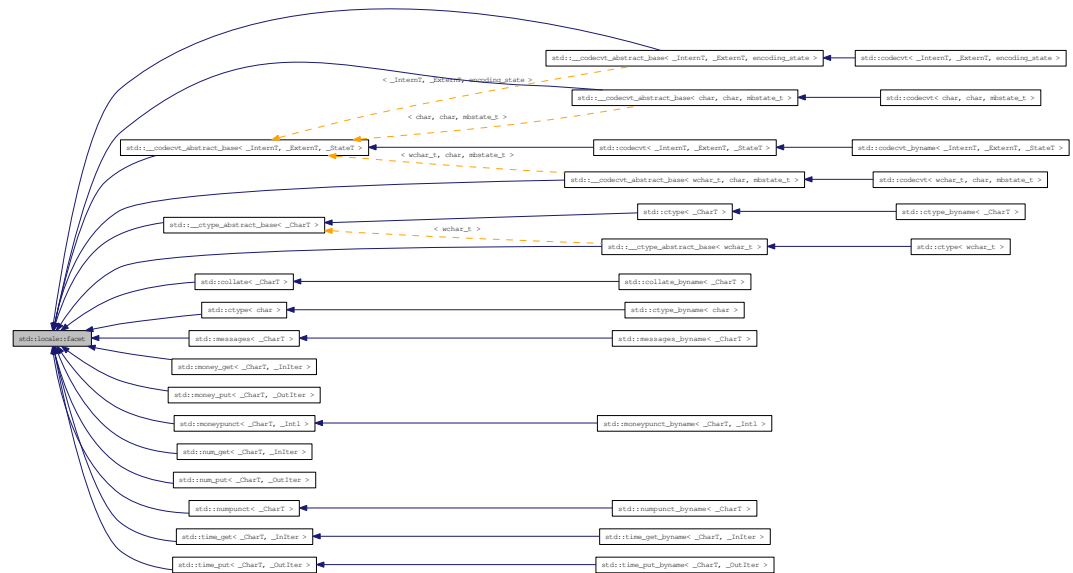

The documentation for this class was generated from the following files:

- [locale\\_classes.h](#)
- [locale\\_classes.tcc](#)

## 5.565 std::locale::facet Class Reference

Localization functionality base class.

The `facet` class is the base class for a localization feature, such as money, time, and number printing. It provides common support for facets and reference management. Inheritance diagram for `std::locale::facet`:

### Protected Member Functions

- `facet` (`size_t __refs=0`) `throw ()`
- `virtual ~facet ()`
- `__attribute__((__const__))` `static const char *_S_get_c_name() throw ()`

### Static Protected Member Functions

- `static __c_locale _S_clone_c_locale (__c_locale &__cloc) throw ()`
- `static void _S_create_c_locale (__c_locale &__cloc, const char *__s, __c_locale __old=0)`
- `static void _S_destroy_c_locale (__c_locale &__cloc)`
- `static __c_locale _S_get_c_locale ()`
- `static __c_locale _S_lc_ctype_c_locale (__c_locale __cloc, const char *__s)`

## Friends

- class `locale`
- class `locale::_Impl`

### 5.565.1 Detailed Description

Localization functionality base class.

The `facet` class is the base class for a localization feature, such as money, time, and number printing. It provides common support for facets and reference management. Facets may not be copied or assigned.

Definition at line 337 of file `locale_classes.h`.

### 5.565.2 Constructor & Destructor Documentation

#### 5.565.2.1 `std::locale::facet::facet (size_t __refs = 0) throw () [inline, explicit, protected]`

Facet constructor. This is the constructor provided by the standard. If `refs` is 0, the `facet` is destroyed when the last referencing `locale` is destroyed. Otherwise the `facet` will never be destroyed.

#### Parameters:

*refs* The initial value for reference count.

Definition at line 369 of file `locale_classes.h`.

#### 5.565.2.2 `virtual std::locale::facet::~~facet () [protected, virtual]`

Facet destructor.

The documentation for this class was generated from the following file:

- [locale\\_classes.h](#)

## 5.566 std::locale::id Class Reference

Facet ID class.

The ID class provides facets with an index used to identify them. Every [facet](#) class must define a public static member [locale::id](#), or be derived from a [facet](#) that provides this member, otherwise the [facet](#) cannot be used in a [locale](#). The [locale::id](#) ensures that each class type gets a unique identifier.

### Public Member Functions

- [id](#) ()
- [size\\_t \\_M\\_id](#) () const throw ()

### Friends

- `template<typename _Facet >`  
`bool has\_facet (const locale &) throw ()`
- class **locale**
- class **locale::\_Impl**
- `template<typename _Facet >`  
`const _Facet & use\_facet (const locale &)`

### 5.566.1 Detailed Description

Facet ID class.

The ID class provides facets with an index used to identify them. Every [facet](#) class must define a public static member [locale::id](#), or be derived from a [facet](#) that provides this member, otherwise the [facet](#) cannot be used in a [locale](#). The [locale::id](#) ensures that each class type gets a unique identifier.

Definition at line 432 of file [locale\\_classes.h](#).

### 5.566.2 Constructor & Destructor Documentation

#### 5.566.2.1 std::locale::id::id () [inline]

Constructor.

Definition at line 463 of file [locale\\_classes.h](#).

### 5.566.3 Friends And Related Function Documentation

#### 5.566.3.1 `template<typename _Facet > bool has_facet (const locale &) throw ()` [friend]

Test for the presence of a [facet](#). `has_facet` tests the [locale](#) argument for the presence of the [facet](#) type provided as the template parameter. Facets derived from the [facet](#) parameter will also return true.

##### Parameters:

*Facet* The [facet](#) type to test the presence of.

*locale* The [locale](#) to test.

##### Returns:

true if [locale](#) contains a [facet](#) of type `Facet`, else false.

#### 5.566.3.2 `template<typename _Facet > const _Facet& use_facet (const locale &)` [friend]

Return a [facet](#). `use_facet` looks for and returns a reference to a [facet](#) of type `Facet` where `Facet` is the template parameter. If `has_facet(locale)` is true, there is a suitable [facet](#) to return. It throws [std::bad\\_cast](#) if the [locale](#) doesn't contain a [facet](#) of type `Facet`.

##### Parameters:

*Facet* The [facet](#) type to access.

*locale* The [locale](#) to use.

##### Returns:

Reference to [facet](#) of type `Facet`.

##### Exceptions:

[std::bad\\_cast](#) if [locale](#) doesn't contain a [facet](#) of type `Facet`.

The documentation for this class was generated from the following file:

- [locale\\_classes.h](#)

## 5.567 `std::lock_guard<_Mutex>` Class Template Reference

Scoped lock idiom.

### Public Types

- typedef `_Mutex` `mutex_type`

### Public Member Functions

- `lock_guard` (const `lock_guard` &)
- `lock_guard` (`mutex_type` &\_\_m, `adopt_lock_t`)
- `lock_guard` (`mutex_type` &\_\_m)

#### 5.567.1 Detailed Description

`template<typename _Mutex> class std::lock_guard<_Mutex>`

Scoped lock idiom.

Definition at line 393 of file `mutex`.

The documentation for this class was generated from the following file:

- `mutex`

## 5.568 `std::logic_error` Class Reference

One of two subclasses of `exception`. Inheritance diagram for `std::logic_error`:

### Public Member Functions

- `logic_error` (const `string` &\_\_arg)
- virtual const char \* `what` () const throw ()

#### 5.568.1 Detailed Description

One of two subclasses of `exception`. Logic errors represent problems in the internal logic of a program; in theory, these are preventable, and even detectable before the program runs (e.g., violations of class invariants).

Definition at line 53 of file `stdexcept`.

#### 5.568.2 Constructor & Destructor Documentation

##### 5.568.2.1 `std::logic_error::logic_error` (const `string` & \_\_arg) [`explicit`]

Takes a character string describing the error.

### 5.568.3 Member Function Documentation

#### 5.568.3.1 `virtual const char* std::logic_error::what () const throw ()` `[virtual]`

Returns a C-style character string describing the general cause of the current error (the same string passed to the ctor).

Reimplemented from [std::exception](#).

Reimplemented in [std::future\\_error](#).

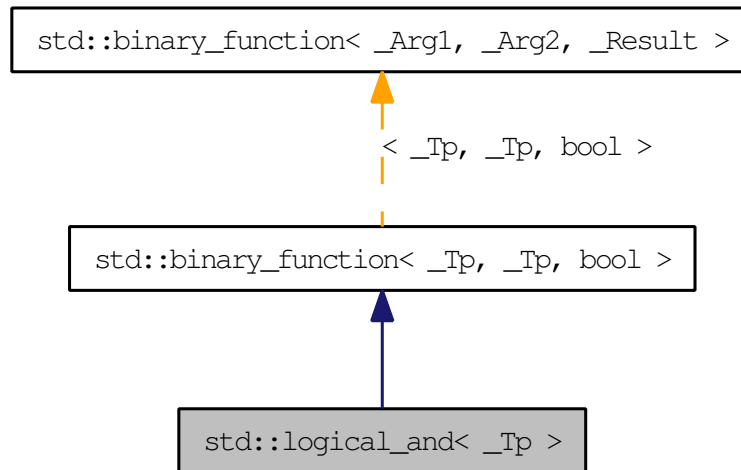

The documentation for this class was generated from the following file:

- [stdexcept](#)

## 5.569 std::logical\_and< \_Tp > Struct Template Reference

One of the [Boolean operations functors](#). Inheritance diagram for std::logical\_and< \_Tp >:

### Public Types

- typedef `_Tp` [first\\_argument\\_type](#)
- typedef `bool` [result\\_type](#)
- typedef `_Tp` [second\\_argument\\_type](#)

### Public Member Functions

- `bool operator() (const _Tp &__x, const _Tp &__y) const`

#### 5.569.1 Detailed Description

```
template<typename _Tp> struct std::logical_and< _Tp >
```

One of the [Boolean operations functors](#).

### 5.572.1 Detailed Description

**template<typename `_RealType` = double> class `std::lognormal_distribution<_RealType>`**

A [lognormal\\_distribution](#) random number distribution. The formula for the normal probability mass function is

$$p(x|m, s) = \frac{1}{sx\sqrt{2\pi}} \exp - \frac{(\ln x - m)^2}{2s^2}$$

Definition at line 1970 of file random.h.

### 5.572.2 Member Typedef Documentation

**5.572.2.1 `template<typename _RealType = double> typedef _RealType std::lognormal_distribution<_RealType>::result_type`**

The type of the range of the distribution.

Definition at line 1977 of file random.h.

### 5.572.3 Member Function Documentation

**5.572.3.1 `template<typename _RealType = double> result_type std::lognormal_distribution<_RealType>::max () const [inline]`**

Returns the least upper bound value of the distribution.

Definition at line 2057 of file random.h.

**5.572.3.2 `template<typename _RealType = double> result_type std::lognormal_distribution<_RealType>::min () const [inline]`**

Returns the greatest lower bound value of the distribution.

Definition at line 2050 of file random.h.

**5.572.3.3 `template<typename _RealType = double> void std::lognormal_distribution<_RealType>::param (const param_type & __param) [inline]`**

Sets the parameter [set](#) of the distribution.

## 5.572 std::lognormal\_distribution< \_RealType > Class Template Reference 2873

### Parameters:

*\_\_param* The new parameter [set](#) of the distribution.

Definition at line 2043 of file random.h.

**5.572.3.4** `template<typename _RealType = double> param_type  
std::lognormal_distribution< _RealType >::param () const  
[inline]`

Returns the parameter [set](#) of the distribution.

Definition at line 2035 of file random.h.

**5.572.3.5** `template<typename _RealType = double> void  
std::lognormal_distribution< _RealType >::reset () [inline]`

Resets the distribution state.

Definition at line 2017 of file random.h.

References `std::normal_distribution< _RealType >::reset()`.

## 5.572.4 Friends And Related Function Documentation

**5.572.4.1** `template<typename _RealType = double> template<typename  
_RealType1 , typename _CharT , typename _Traits >  
std::basic_ostream<_CharT, _Traits>& operator<<  
(std::basic_ostream< _CharT, _Traits > &, const  
std::lognormal_distribution< _RealType1 > &) [friend]`

Inserts a `lognormal_distribution` random number distribution `__x` into the output stream `__os`.

### Parameters:

*\_\_os* An output stream.

*\_\_x* A `lognormal_distribution` random number distribution.

### Returns:

The output stream with the state of `__x` inserted or in an error state.

**5.572.4.2** `template<typename _RealType = double> template<typename _RealType1, typename _CharT, typename _Traits > std::basic_istream<_CharT, _Traits>& operator>> (std::basic_istream<_CharT, _Traits > &, std::lognormal_distribution<_RealType1 > &) [friend]`

Extracts a `lognormal_distribution` random number distribution `__x` from the input stream `__is`.

**Parameters:**

`__is` An input stream.

`__x` A `lognormal_distribution` random number generator engine.

**Returns:**

The input stream with `__x` extracted or in an error state.

### 5.576.1 Detailed Description

```
template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>,
typename _Alloc = std::allocator<std::pair<const _Key, _Tp> >> class
std::map< _Key, _Tp, _Compare, _Alloc >
```

A standard container made up of (key,value) pairs, which can be retrieved based on a key, in logarithmic time. Meets the requirements of a [container](#), a [reversible container](#), and an [associative container](#) (using unique keys). For a `map<Key, T>` the `key_type` is `Key`, the `mapped_type` is `T`, and the `value_type` is `std::pair<const Key, T>`.

Maps support bidirectional iterators.

The private tree data is declared exactly the same way for [map](#) and [multimap](#); the distinction is made entirely in how the tree functions are called (`*_unique` versus `*_equal`, same as the standard).

Definition at line 86 of file `stl_map.h`.

### 5.576.2 Constructor & Destructor Documentation

**5.576.2.1** `template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp> >> std::map< _Key, _Tp, _Compare, _Alloc >::map () [inline]`

Default constructor creates no elements.

Definition at line 150 of file `stl_map.h`.

## 5.576 std::map< \_Key, \_Tp, \_Compare, \_Alloc > Class Template Reference 2881

**5.576.2.2** `template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp>>> std::map<_Key, _Tp, _Compare, _Alloc>::map(const _Compare & _comp, const allocator_type & _a = allocator_type()) [inline, explicit]`

Creates a map with no elements.

### Parameters:

*comp* A comparison object.

*a* An [allocator](#) object.

Definition at line 159 of file stl\_map.h.

**5.576.2.3** `template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp>>> std::map<_Key, _Tp, _Compare, _Alloc>::map(const map<_Key, _Tp, _Compare, _Alloc> & _x) [inline]`

Map copy constructor.

### Parameters:

*x* A map of identical element and [allocator](#) types.

The newly-created map uses a copy of the allocation object used by *x*.

Definition at line 170 of file stl\_map.h.

**5.576.2.4** `template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp>>> std::map<_Key, _Tp, _Compare, _Alloc>::map(map<_Key, _Tp, _Compare, _Alloc> && _x) [inline]`

Map move constructor.

### Parameters:

*x* A map of identical element and [allocator](#) types.

The newly-created map contains the exact contents of *x*. The contents of *x* are a valid, but unspecified map.

Definition at line 181 of file stl\_map.h.

```

5.576.2.5 template<typename _Key, typename _Tp, typename _Compare =
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const
_Key, _Tp>>> std::map<_Key, _Tp, _Compare, _Alloc >::map
(initializer_list< value_type > __l, const _Compare & __c =
_Compare(), const allocator_type & __a = allocator_type())
[inline]

```

Builds a map from an [initializer\\_list](#).

**Parameters:**

- l* An [initializer\\_list](#).
- comp* A comparison object.
- a* An [allocator](#) object.

Create a map consisting of copies of the elements in the [initializer\\_list](#) *l*. This is linear in *N* if the range is already sorted, and *N*log*N* otherwise (where *N* is *l.size()*).

Definition at line 195 of file `stl_map.h`.

```

5.576.2.6 template<typename _Key, typename _Tp, typename _Compare =
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const
_Key, _Tp>>> template<typename _InputIterator > std::map<
_Key, _Tp, _Compare, _Alloc >::map (_InputIterator __first,
_InputIterator __last) [inline]

```

Builds a map from a range.

**Parameters:**

- first* An input [iterator](#).
- last* An input [iterator](#).

Create a map consisting of copies of the elements from `[first,last)`. This is linear in *N* if the range is already sorted, and *N*log*N* otherwise (where *N* is `distance(first,last)`).

Definition at line 212 of file `stl_map.h`.

```

5.576.2.7 template<typename _Key, typename _Tp, typename _Compare =
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const
_Key, _Tp>>> template<typename _InputIterator > std::map<
_Key, _Tp, _Compare, _Alloc >::map (_InputIterator __first,
_InputIterator __last, const _Compare & __comp, const
allocator_type & __a = allocator_type()) [inline]

```

Builds a map from a range.

## 5.576 `std::map<_Key, _Tp, _Compare, _Alloc >` Class Template Reference 2883

### Parameters:

- first* An input [iterator](#).
- last* An input [iterator](#).
- comp* A comparison functor.
- a* An [allocator](#) object.

Create a map consisting of copies of the elements from [first,last). This is linear in N if the range is already sorted, and NlogN otherwise (where N is distance(first,last)).

Definition at line 228 of file `stl_map.h`.

### 5.576.3 Member Function Documentation

**5.576.3.1** `template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp>>> mapped_type& std::map<_Key, _Tp, _Compare, _Alloc >::at (const key_type & __k) [inline]`

Access to map data.

### Parameters:

- k* The key for which data should be retrieved.

### Returns:

A reference to the data whose key is equivalent to *k*, if such a data is present in the map.

### Exceptions:

- `std::out_of_range` If no such data is present.

Definition at line 465 of file `stl_map.h`.

**5.576.3.2** `template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp>>> const_iterator std::map<_Key, _Tp, _Compare, _Alloc >::begin () const [inline]`

Returns a read-only (constant) [iterator](#) that points to the first [pair](#) in the map. Iteration is done in ascending order according to the keys.

Definition at line 316 of file `stl_map.h`.

**5.576.3.3** `template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp>>> iterator std::map<_Key, _Tp, _Compare, _Alloc>::begin () [inline]`

Returns a read/write [iterator](#) that points to the first [pair](#) in the map. Iteration is done in ascending order according to the keys.

Definition at line 307 of file `stl_map.h`.

**5.576.3.4** `template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp>>> const_iterator std::map<_Key, _Tp, _Compare, _Alloc>::cbegin () const [inline]`

Returns a read-only (constant) [iterator](#) that points to the first [pair](#) in the map. Iteration is done in ascending order according to the keys.

Definition at line 380 of file `stl_map.h`.

**5.576.3.5** `template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp>>> const_iterator std::map<_Key, _Tp, _Compare, _Alloc>::cend () const [inline]`

Returns a read-only (constant) [iterator](#) that points one past the last [pair](#) in the map. Iteration is done in ascending order according to the keys.

Definition at line 389 of file `stl_map.h`.

**5.576.3.6** `template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp>>> void std::map<_Key, _Tp, _Compare, _Alloc>::clear () [inline]`

Erases all elements in a map. Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 663 of file `stl_map.h`.

## 5.576 std::map< \_Key, \_Tp, \_Compare, \_Alloc > Class Template Reference 2885

**5.576.3.7** `template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp>>> size_type std::map<_Key, _Tp, _Compare, _Alloc>::count (const key_type & __x) const [inline]`

Finds the number of elements with given key.

### Parameters:

*x* Key of (key, value) pairs to be located.

### Returns:

Number of elements with specified key.

This function only makes sense for multimaps; for [map](#) the result will either be 0 (not present) or 1 (present).

Definition at line 723 of file `stl_map.h`.

**5.576.3.8** `template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp>>> const_reverse_iterator std::map<_Key, _Tp, _Compare, _Alloc>::crbegin () const [inline]`

Returns a read-only (constant) reverse [iterator](#) that points to the last [pair](#) in the map. Iteration is done in descending order according to the keys.

Definition at line 398 of file `stl_map.h`.

**5.576.3.9** `template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp>>> const_reverse_iterator std::map<_Key, _Tp, _Compare, _Alloc>::crend () const [inline]`

Returns a read-only (constant) reverse [iterator](#) that points to one before the first [pair](#) in the map. Iteration is done in descending order according to the keys.

Definition at line 407 of file `stl_map.h`.

**5.576.3.10** `template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp>>> bool std::map<_Key, _Tp, _Compare, _Alloc>::empty () const [inline]`

Returns true if the map is empty. (Thus [begin\(\)](#) would equal [end\(\)](#).)

Definition at line 416 of file stl\_map.h.

**5.576.3.11** `template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp>>> const_iterator std::map<_Key, _Tp, _Compare, _Alloc>::end () const [inline]`

Returns a read-only (constant) [iterator](#) that points one past the last [pair](#) in the map. Iteration is done in ascending order according to the keys.

Definition at line 334 of file stl\_map.h.

**5.576.3.12** `template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp>>> iterator std::map<_Key, _Tp, _Compare, _Alloc>::end () [inline]`

Returns a read/write [iterator](#) that points one past the last [pair](#) in the map. Iteration is done in ascending order according to the keys.

Definition at line 325 of file stl\_map.h.

**5.576.3.13** `template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp>>> std::pair<const_iterator, const_iterator> std::map<_Key, _Tp, _Compare, _Alloc>::equal_range (const key_type & __x) const [inline]`

Finds a subsequence matching given key.

**Parameters:**

*x* Key of (key, value) pairs to be located.

**Returns:**

Pair of read-only (constant) iterators that possibly points to the subsequence matching given key.

This function is equivalent to

```
std::make_pair(c.lower_bound(val),
 c.upper_bound(val))
```

(but is faster than making the calls separately).

## 5.576 std::map< \_Key, \_Tp, \_Compare, \_Alloc > Class Template Reference 2887

This function probably only makes sense for multimaps.

Definition at line 811 of file stl\_map.h.

```
5.576.3.14 template<typename _Key, typename _Tp, typename _Compare =
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const
_Key, _Tp> >> std::pair<iterator, iterator> std::map<_Key,
_Tp, _Compare, _Alloc >::equal_range (const key_type & __x)
[inline]
```

Finds a subsequence matching given key.

### Parameters:

*x* Key of (key, value) pairs to be located.

### Returns:

Pair of iterators that possibly points to the subsequence matching given key.

This function is equivalent to

```
std::make_pair(c.lower_bound(val),
c.upper_bound(val))
```

(but is faster than making the calls separately).

This function probably only makes sense for multimaps.

Definition at line 792 of file stl\_map.h.

```
5.576.3.15 template<typename _Key, typename _Tp, typename _Compare =
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const
_Key, _Tp> >> iterator std::map<_Key, _Tp, _Compare, _Alloc
>::erase (iterator __first, iterator __last) [inline]
```

Erases a [first,last) range of elements from a map.

### Parameters:

*first* Iterator pointing to the start of the range to be erased.

*last* Iterator pointing to the end of the range to be erased.

### Returns:

The iterator *last*.

This function erases a sequence of elements from a map. Note that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 622 of file `stl_map.h`.

**5.576.3.16** `template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp>>> size_type std::map<_Key, _Tp, _Compare, _Alloc>::erase(const key_type & __x) [inline]`

Erases elements according to the provided key.

**Parameters:**

*x* Key of element to be erased.

**Returns:**

The number of elements erased.

This function erases all the elements located by the given key from a map. Note that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 603 of file `stl_map.h`.

**5.576.3.17** `template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp>>> iterator std::map<_Key, _Tp, _Compare, _Alloc>::erase(iterator __position) [inline]`

Erases an element from a map.

**Parameters:**

*position* An [iterator](#) pointing to the element to be erased.

**Returns:**

An [iterator](#) pointing to the element immediately following *position* prior to the element being erased. If no such element exists, `end()` is returned.

This function erases an element, pointed to by the given [iterator](#), from a map. Note that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 573 of file `stl_map.h`.

## 5.576 std::map< \_Key, \_Tp, \_Compare, \_Alloc > Class Template Reference 2889

**5.576.3.18** `template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp>>> const_iterator std::map< _Key, _Tp, _Compare, _Alloc >::find (const key_type & __x) const [inline]`

Tries to locate an element in a map.

### **Parameters:**

**x** Key of (key, value) pair to be located.

### **Returns:**

Read-only (constant) [iterator](#) pointing to sought-after element, or `end()` if not found.

This function takes a key and tries to locate the element with which the key matches. If successful the function returns a constant [iterator](#) pointing to the sought after pair. If unsuccessful it returns the past-the-end ( `end()` ) [iterator](#).

Definition at line 711 of file `stl_map.h`.

**5.576.3.19** `template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp>>> iterator std::map< _Key, _Tp, _Compare, _Alloc >::find (const key_type & __x) [inline]`

Tries to locate an element in a map.

### **Parameters:**

**x** Key of (key, value) pair to be located.

### **Returns:**

Iterator pointing to sought-after element, or `end()` if not found.

This function takes a key and tries to locate the element with which the key matches. If successful the function returns an [iterator](#) pointing to the sought after pair. If unsuccessful it returns the past-the-end ( `end()` ) [iterator](#).

Definition at line 696 of file `stl_map.h`.

**5.576.3.20** `template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp>>> allocator_type std::map< _Key, _Tp, _Compare, _Alloc >::get_allocator () const [inline]`

Get a copy of the memory allocation object.

Definition at line 297 of file stl\_map.h.

```
5.576.3.21 template<typename _Key, typename _Tp, typename _Compare =
 std::less<_Key>, typename _Alloc = std::allocator<std::pair<const
 _Key, _Tp> >> template<typename _InputIterator > void
 std::map< _Key, _Tp, _Compare, _Alloc >::insert (_InputIterator
 __first, _InputIterator __last) [inline]
```

Template function that attempts to insert a range of elements.

**Parameters:**

*first* Iterator pointing to the start of the range to be inserted.

*last* Iterator pointing to the end of the range.

Complexity similar to that of the range constructor.

Definition at line 553 of file stl\_map.h.

```
5.576.3.22 template<typename _Key, typename _Tp, typename _Compare =
 std::less<_Key>, typename _Alloc = std::allocator<std::pair<const
 _Key, _Tp> >> iterator std::map< _Key, _Tp, _Compare, _Alloc
 >::insert (iterator __position, const value_type & __x) [inline]
```

Attempts to insert a [std::pair](#) into the map.

**Parameters:**

*position* An [iterator](#) that serves as a hint as to where the [pair](#) should be inserted.

*x* Pair to be inserted (see [std::make\\_pair](#) for easy creation of pairs).

**Returns:**

An [iterator](#) that points to the element with key of *x* (may or may not be the pair passed in).

This function is not concerned about whether the insertion took place, and thus does not return a boolean like the single-argument [insert\(\)](#) does. Note that the first parameter is only a hint and can potentially improve the performance of the insertion process. A bad hint would cause no gains in efficiency.

See <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt07ch17.html> for more on *hinting*.

Insertion requires logarithmic time (if the hint is not taken).

Definition at line 540 of file stl\_map.h.

## 5.576 std::map< \_Key, \_Tp, \_Compare, \_Alloc > Class Template Reference 2891

**5.576.3.23** `template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp>>> void std::map< _Key, _Tp, _Compare, _Alloc >::insert (std::initializer_list< value_type > __list) [inline]`

Attempts to insert a [list](#) of `std::pairs` into the map.

### Parameters:

*list* A `std::initializer_list<value_type>` of pairs to be inserted.

Complexity similar to that of the range constructor.

Definition at line 512 of file `stl_map.h`.

References `std::map< _Key, _Tp, _Compare, _Alloc >::insert()`.

Referenced by `std::map< _Key, _Tp, _Compare, _Alloc >::insert()`.

**5.576.3.24** `template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp>>> std::pair<iterator, bool> std::map< _Key, _Tp, _Compare, _Alloc >::insert (const value_type & __x) [inline]`

Attempts to insert a [std::pair](#) into the map.

### Parameters:

*x* Pair to be inserted (see `std::make_pair` for easy creation of pairs).

### Returns:

A [pair](#), of which the first element is an [iterator](#) that points to the possibly inserted [pair](#), and the second is a `bool` that is true if the [pair](#) was actually inserted.

This function attempts to insert a (key, value) pair into the map. A map relies on unique keys and thus a pair is only inserted if its first element (the key) is not already present in the map.

Insertion requires logarithmic time.

Definition at line 500 of file `stl_map.h`.

**5.576.3.25** `template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp>>> key_compare std::map< _Key, _Tp, _Compare, _Alloc >::key_comp () const [inline]`

Returns the key comparison object out of which the map was constructed.

Definition at line 672 of file `stl_map.h`.

**5.576.3.26** `template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp>>> const_iterator std::map<_Key, _Tp, _Compare, _Alloc>::lower_bound (const key_type & __x) const [inline]`

Finds the beginning of a subsequence matching given key.

**Parameters:**

*x* Key of (key, value) [pair](#) to be located.

**Returns:**

Read-only (constant) [iterator](#) pointing to first element equal to or [greater](#) than key, or [end\(\)](#).

This function returns the first element of a subsequence of elements that matches the given key. If unsuccessful it returns an [iterator](#) pointing to the first element that has a [greater](#) value than given key or [end\(\)](#) if no such element exists.

Definition at line 753 of file `stl_map.h`.

**5.576.3.27** `template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp>>> iterator std::map<_Key, _Tp, _Compare, _Alloc>::lower_bound (const key_type & __x) [inline]`

Finds the beginning of a subsequence matching given key.

**Parameters:**

*x* Key of (key, value) [pair](#) to be located.

**Returns:**

Iterator pointing to first element equal to or [greater](#) than key, or [end\(\)](#).

This function returns the first element of a subsequence of elements that matches the given key. If unsuccessful it returns an [iterator](#) pointing to the first element that has a [greater](#) value than given key or [end\(\)](#) if no such element exists.

Definition at line 738 of file `stl_map.h`.

## 5.576 std::map< \_Key, \_Tp, \_Compare, \_Alloc > Class Template Reference 2893

**5.576.3.28** `template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp>>> size_type std::map< _Key, _Tp, _Compare, _Alloc >::max_size () const [inline]`

Returns the maximum size of the map.

Definition at line 426 of file stl\_map.h.

**5.576.3.29** `template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp>>> map& std::map< _Key, _Tp, _Compare, _Alloc >::operator= (initializer_list< value_type > __l) [inline]`

Map [list](#) assignment operator.

### Parameters:

*l* An [initializer\\_list](#).

This function fills a map with copies of the elements in the initializer [list](#) *l*.

Note that the assignment completely changes the map and that the resulting map's size is the same as the number of elements assigned. Old data may be lost.

Definition at line 287 of file stl\_map.h.

**5.576.3.30** `template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp>>> map& std::map< _Key, _Tp, _Compare, _Alloc >::operator= (map< _Key, _Tp, _Compare, _Alloc > && __x) [inline]`

Map move assignment operator.

### Parameters:

*x* A map of identical element and [allocator](#) types.

The contents of *x* are moved into this [map](#) (without copying). *x* is a valid, but unspecified map.

Definition at line 266 of file stl\_map.h.

References `std::swap()`.

```

5.576.3.31 template<typename _Key, typename _Tp, typename _Compare =
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const
_Key, _Tp>>> map& std::map<_Key, _Tp, _Compare, _Alloc
>::operator= (const map<_Key, _Tp, _Compare, _Alloc> & __x)
[inline]

```

Map assignment operator. The dtor only erases the elements, and note that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

**Parameters:**

*x* A map of identical element and [allocator](#) types.

All the elements of *x* are copied, but unlike the copy constructor, the [allocator](#) object is not copied.

Definition at line 251 of file `stl_map.h`.

```

5.576.3.32 template<typename _Key, typename _Tp, typename _Compare =
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const
_Key, _Tp>>> mapped_type& std::map<_Key, _Tp, _Compare,
_Alloc>::operator[] (const key_type & __k) [inline]

```

Subscript ( `[]` ) access to map data.

**Parameters:**

*k* The key for which data should be retrieved.

**Returns:**

A reference to the data of the (key,data) pair.

Allows for easy lookup with the subscript ( `[]` ) operator. Returns data associated with the key specified in subscript. If the key does not exist, a [pair](#) with that key is created using default values, which is then returned.

Lookup requires logarithmic time.

Definition at line 443 of file `stl_map.h`.

## 5.576 std::map< \_Key, \_Tp, \_Compare, \_Alloc > Class Template Reference 2895

**5.576.3.33** `template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp>>> const_reverse_iterator std::map<_Key, _Tp, _Compare, _Alloc >::rbegin() const [inline]`

Returns a read-only (constant) reverse [iterator](#) that points to the last [pair](#) in the map. Iteration is done in descending order according to the keys.

Definition at line 352 of file `stl_map.h`.

**5.576.3.34** `template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp>>> reverse_iterator std::map<_Key, _Tp, _Compare, _Alloc >::rbegin() [inline]`

Returns a read/write reverse [iterator](#) that points to the last [pair](#) in the map. Iteration is done in descending order according to the keys.

Definition at line 343 of file `stl_map.h`.

**5.576.3.35** `template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp>>> const_reverse_iterator std::map<_Key, _Tp, _Compare, _Alloc >::rend() const [inline]`

Returns a read-only (constant) reverse [iterator](#) that points to one before the first [pair](#) in the map. Iteration is done in descending order according to the keys.

Definition at line 370 of file `stl_map.h`.

**5.576.3.36** `template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp>>> reverse_iterator std::map<_Key, _Tp, _Compare, _Alloc >::rend() [inline]`

Returns a read/write reverse [iterator](#) that points to one before the first [pair](#) in the map. Iteration is done in descending order according to the keys.

Definition at line 361 of file `stl_map.h`.

**5.576.3.37** `template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp>>> size_type std::map<_Key, _Tp, _Compare, _Alloc>::size() const [inline]`

Returns the size of the map.

Definition at line 421 of file `stl_map.h`.

**5.576.3.38** `template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp>>> void std::map<_Key, _Tp, _Compare, _Alloc>::swap(map<_Key, _Tp, _Compare, _Alloc> & __x) [inline]`

Swaps data with another map.

**Parameters:**

`x` A map of the same element and [allocator](#) types.

This exchanges the elements between two maps in constant time. (It is only swapping a pointer, an integer, and an instance of the `Compare` type (which itself is often stateless and empty), so it should be quite fast.) Note that the global [std::swap\(\)](#) function is specialized such that `std::swap(m1,m2)` will feed to this function.

Definition at line 653 of file `stl_map.h`.

Referenced by `std::swap()`.

**5.576.3.39** `template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp>>> const_iterator std::map<_Key, _Tp, _Compare, _Alloc>::upper_bound(const key_type & __x) const [inline]`

Finds the end of a subsequence matching given key.

**Parameters:**

`x` Key of (key, value) [pair](#) to be located.

**Returns:**

Read-only (constant) [iterator](#) pointing to first [iterator](#) greater than key, or `end()`.

Definition at line 773 of file `stl_map.h`.

## 5.576 std::map< \_Key, \_Tp, \_Compare, \_Alloc > Class Template Reference 2897

**5.576.3.40** `template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp>>> iterator std::map<_Key, _Tp, _Compare, _Alloc>::upper_bound (const key_type & __x) [inline]`

Finds the end of a subsequence matching given key.

### Parameters:

**x** Key of (key, value) [pair](#) to be located.

### Returns:

Iterator pointing to the first element [greater](#) than key, or [end\(\)](#).

Definition at line 763 of file [stl\\_map.h](#).

**5.576.3.41** `template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp>>> value_compare std::map<_Key, _Tp, _Compare, _Alloc>::value_comp () const [inline]`

Returns a value comparison object, built from the key comparison object out of which the map was constructed.

Definition at line 680 of file [stl\\_map.h](#).

The documentation for this class was generated from the following file:

## Friends

- class `valarray<_Tp>`

### 5.577.1 Detailed Description

`template<class _Tp> class std::mask_array<_Tp>`

Reference to selected subset of an `array`. A `mask_array` is a reference to the actual elements of an `array` specified by a bitmask in the form of an `array` of `bool`. The way to get a `mask_array` is to call `operator[](valarray<bool>)` on a `valarray`. The returned `mask_array` then permits carrying operations out on the referenced subset of elements in the original `valarray`.

For example, if a `mask_array` is obtained using the `array` (false, true, false, true) as an argument, the mask `array` has two elements referring to `array[1]` and `array[3]` in the underlying `array`.

#### Parameters:

***Tp*** Element type.

Definition at line 61 of file `mask_array.h`.

The documentation for this class was generated from the following file:

- `mask_array.h`

### 10.6 Swap

- void `swap` (match\_results &\_\_that)

#### 5.578.1 Detailed Description

`template<typename _Bi_iter, typename _Allocator = allocator<sub_match<_Bi_iter>>> class std::match_results<_Bi_iter, _Allocator >`

The results of a match or search operation. A collection of character sequences representing the result of a regular expression match. Storage for the collection is allocated and freed as necessary by the member functions of class template `match_results`.

This class satisfies the Sequence requirements, with the `exception` that only the operations defined for a const-qualified Sequence are supported.

The `sub_match` object stored at index 0 represents sub-expression 0, i.e. the whole match. In this case the `sub_match` member `matched` is always true. The `sub_match` object stored at index n denotes what matched the marked sub-expression n within the

matched expression. If the sub-expression *n* participated in a regular expression match then the `sub_match` member `matched` evaluates to true, and members `first` and `second` denote the range of characters [`first`, `second`) which formed that match. Otherwise `matched` is false, and members `first` and `second` point to the end of the sequence that was searched.

Definition at line 1765 of file `tr1_impl/regex`.

## 5.578.2 Constructor & Destructor Documentation

**5.578.2.1** `template<typename _Bi_iter, typename _Allocator = allocator<sub_match<_Bi_iter> >> std::match_results<_Bi_iter, _Allocator >::match_results(const _Allocator & __a = _Allocator()) [inline, explicit]`

Constructs a default `match_results` container.

### Postcondition:

`size()` returns 0 and `str()` returns an empty string.

Definition at line 1801 of file `tr1_impl/regex`.

**5.578.2.2** `template<typename _Bi_iter, typename _Allocator = allocator<sub_match<_Bi_iter> >> std::match_results<_Bi_iter, _Allocator >::match_results(const match_results<_Bi_iter, _Allocator > & __rhs) [inline]`

Copy constructs a `match_results`.

Definition at line 1808 of file `tr1_impl/regex`.

**5.578.2.3** `template<typename _Bi_iter, typename _Allocator = allocator<sub_match<_Bi_iter> >> std::match_results<_Bi_iter, _Allocator >::~~match_results() [inline]`

Destroys a `match_results` object.

Definition at line 1827 of file `tr1_impl/regex`.

### 5.578.3 Member Function Documentation

**5.578.3.1** `template<typename _Bi_iter, typename _Allocator = allocator<sub_match<_Bi_iter> >> const_iterator std::match_results<_Bi_iter, _Allocator >::begin () const [inline]`

Gets an [iterator](#) to the start of the `sub_match` collection.

Reimplemented from [std::vector< std::\\_GLIBCXX\\_TR1 sub\\_match<\\_Bi\\_iter >, \\_Allocator >](#).

Definition at line 1949 of file `tr1_impl/regex`.

**5.578.3.2** `template<typename _Bi_iter, typename _Allocator = allocator<sub_match<_Bi_iter> >> const_iterator std::match_results<_Bi_iter, _Allocator >::cbegin () const [inline]`

Gets an [iterator](#) to the start of the `sub_match` collection.

Reimplemented from [std::vector< std::\\_GLIBCXX\\_TR1 sub\\_match<\\_Bi\\_iter >, \\_Allocator >](#).

Definition at line 1957 of file `tr1_impl/regex`.

**5.578.3.3** `template<typename _Bi_iter, typename _Allocator = allocator<sub_match<_Bi_iter> >> const_iterator std::match_results<_Bi_iter, _Allocator >::cend () const [inline]`

Gets an [iterator](#) to one-past-the-end of the collection.

Reimplemented from [std::vector< std::\\_GLIBCXX\\_TR1 sub\\_match<\\_Bi\\_iter >, \\_Allocator >](#).

Definition at line 1973 of file `tr1_impl/regex`.

**5.578.3.4** `template<typename _Bi_iter, typename _Allocator = allocator<sub_match<_Bi_iter> >> bool std::match_results<_Bi_iter, _Allocator >::empty () const [inline]`

Indicates if the `match_results` contains no results.

#### Return values:

*true* The `match_results` object is empty.

*false* The `match_results` object is not empty.

Reimplemented from `std::vector< std::_GLIBCXX_TR1 sub_match< _Bi_iter >, _Allocator >`.

Definition at line 1860 of file `tr1_impl/regex`.

```
5.578.3.5 template<typename _Bi_iter, typename _Allocator =
allocator<sub_match<_Bi_iter> >> const_iterator
std::match_results<_Bi_iter, _Allocator >::end () const [inline]
```

Gets an [iterator](#) to one-past-the-end of the collection.

Reimplemented from `std::vector< std::_GLIBCXX_TR1 sub_match< _Bi_iter >, _Allocator >`.

Definition at line 1965 of file `tr1_impl/regex`.

```
5.578.3.6 template<typename _Bi_iter, typename _Allocator
= allocator<sub_match<_Bi_iter> >> string_type
std::match_results<_Bi_iter, _Allocator >::format (const
string_type & __fmt, regex_constants::match_flag_type __flags =
regex_constants::format_default) const
```

#### Todo

Implement this function.

```
5.578.3.7 template<typename _Bi_iter, typename _Allocator =
allocator<sub_match<_Bi_iter> >> template<typename
_Out_iter > _Out_iter std::match_results<_Bi_iter,
_Allocator >::format (_Out_iter __out, const string_type
& __fmt, regex_constants::match_flag_type __flags =
regex_constants::format_default) const [inline]
```

#### Todo

Implement this function.

```
5.578.3.8 template<typename _Bi_iter, typename _Allocator =
allocator<sub_match<_Bi_iter> >> difference_type
std::match_results<_Bi_iter, _Allocator >::length (size_type __sub =
0) const [inline]
```

Gets the length of the indicated submatch.

## 5.578 std::match\_results< \_Bi\_iter, \_Allocator > Class Template Reference 2907

### Parameters:

*sub* indicates the submatch.

This function returns the length of the indicated submatch, or the length of the entire match if *sub* is zero (the default).

Definition at line 1878 of file tr1\_impl/regex.

```
5.578.3.9 template<typename _Bi_iter, typename _Allocator =
allocator<sub_match<_Bi_iter> >> match_results&
std::match_results< _Bi_iter, _Allocator >::operator= (const
match_results< _Bi_iter, _Allocator > & __rhs) [inline]
```

Assigns rhs to \*this.

Definition at line 1817 of file tr1\_impl/regex.

```
5.578.3.10 template<typename _Bi_iter, typename _Allocator =
allocator<sub_match<_Bi_iter> >> const_reference
std::match_results< _Bi_iter, _Allocator >::operator[] (size_type
__sub) const [inline]
```

Gets a sub\_match reference for the match or submatch.

### Parameters:

*sub* indicates the submatch.

This function gets a reference to the indicated submatch, or the entire match if *sub* is zero.

If *sub* >= `size()` then this function returns a sub\_match with a special value indicating no submatch.

Definition at line 1920 of file tr1\_impl/regex.

```
5.578.3.11 template<typename _Bi_iter, typename _Allocator =
allocator<sub_match<_Bi_iter> >> difference_type
std::match_results< _Bi_iter, _Allocator >::position (size_type
__sub = 0) const [inline]
```

Gets the offset of the beginning of the indicated submatch.

### Parameters:

*sub* indicates the submatch.

This function returns the offset from the beginning of the target sequence to the beginning of the submatch, unless the value of `sub` is zero (the default), in which case this function returns the offset from the beginning of the target sequence to the beginning of the match.

Definition at line 1892 of file `tr1_impl/regex`.

**5.578.3.12** `template<typename _Bi_iter, typename _Allocator = allocator<sub_match<_Bi_iter>>> const_reference std::match_results<_Bi_iter, _Allocator>::prefix () const [inline]`

Gets a `sub_match` representing the match prefix. This function gets a reference to a `sub_match` object representing the part of the target range between the start of the target range and the start of the match.

Definition at line 1931 of file `tr1_impl/regex`.

Referenced by `std::match_results<_Bi_iter>::position()`.

**5.578.3.13** `template<typename _Bi_iter, typename _Allocator = allocator<sub_match<_Bi_iter>>> size_type std::match_results<_Bi_iter, _Allocator>::size () const [inline]`

Gets the number of matches and submatches. The number of matches for a given regular expression will be either 0 if there was no match or `mark_count() + 1` if a match was successful. Some matches may be empty.

**Returns:**

the number of matches found.

Reimplemented from `std::vector< std::_GLIBCXX_TR1 sub_match<_Bi_iter>, _Allocator >`.

Definition at line 1847 of file `tr1_impl/regex`.

Referenced by `std::match_results<_Bi_iter>::empty()`.

**5.578.3.14** `template<typename _Bi_iter, typename _Allocator = allocator<sub_match<_Bi_iter>>> string_type std::match_results<_Bi_iter, _Allocator>::str (size_type __sub = 0) const [inline]`

Gets the match or submatch converted to a string type.

## 5.578 std::match\_results< \_Bi\_iter, \_Allocator > Class Template Reference 2909

### Parameters:

*sub* indicates the submatch.

This function gets the submatch (or match, if *sub* is zero) extracted from the target range and converted to the associated string type.

Definition at line 1906 of file `tr1_impl/regex`.

Referenced by `std::match_results< _Bi_iter >::length()`.

```
5.578.3.15 template<typename _Bi_iter, typename _Allocator =
allocator<sub_match<_Bi_iter> >> const_reference
std::match_results< _Bi_iter, _Allocator >::suffix () const
[inline]
```

Gets a `sub_match` representing the match suffix. This function gets a reference to a `sub_match` object representing the part of the target range between the end of the match and the end of the target range.

Definition at line 1942 of file `tr1_impl/regex`.

```
5.578.3.16 template<typename _Bi_iter, typename _Allocator =
allocator<sub_match<_Bi_iter> >> void std::match_results<
_Bi_iter, _Allocator >::swap (match_results< _Bi_iter, _Allocator >
& that) [inline]
```

Swaps the contents of two `match_results`.

Definition at line 2031 of file `tr1_impl/regex`.

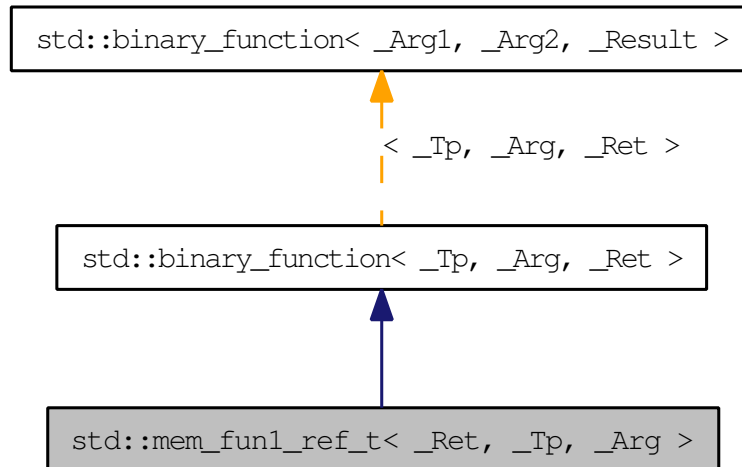

Referenced by `std::match_results< _Bi_iter >::operator=()`, `std::swap()`, and `std::match_results< _Bi_iter >::swap()`.

- const char \* **\_M\_name\_messages**

### Friends

- class [locale::Impl](#)

### 5.583.1 Detailed Description

**template<typename \_CharT> class std::messages< \_CharT >**

Primary class template [messages](#).

This facet encapsulates the code to retrieve [messages](#) from message catalogs. The only thing defined by the standard for this facet is the interface. All underlying functionality is implementation-defined. This library currently implements 3 versions of the message facet. The first version (gnu) is a wrapper around `gettext`, provided by `libintl`. The second version (ieee) is a wrapper around `catgets`. The final version (default) does no actual translation. These implementations are only provided for `char` and `wchar_t` instantiations.

The [messages](#) template uses protected virtual functions to provide the actual results. The public accessors forward the call to the virtual functions. These virtual functions are hooks for developers to implement the behavior they require from the [messages](#) facet.

Definition at line 1689 of file `locale_facets_nonio.h`.

### 5.583.2 Member Typedef Documentation

**5.583.2.1 template<typename \_CharT > typedef \_CharT std::messages< \_CharT >::char\_type**

Public typedefs.

Reimplemented in [std::messages\\_byname< \\_CharT >](#).

Definition at line 1695 of file `locale_facets_nonio.h`.

**5.583.2.2 template<typename \_CharT > typedef basic\_string<\_CharT> std::messages< \_CharT >::string\_type**

Public typedefs.

Reimplemented in [std::messages\\_byname< \\_CharT >](#).

Definition at line 1696 of file `locale_facets_nonio.h`.

### 5.583.3 Constructor & Destructor Documentation

**5.583.3.1 template<typename \_CharT > std::messages< \_CharT >::messages (size\_t \_\_refs = 0) [inline, explicit]**

Constructor performs initialization. This is the constructor provided by the standard.

**Parameters:**

*refs* Passed to the base facet class.

Definition at line 43 of file messages\_members.h.

**5.583.3.2** `template<typename _CharT> std::messages<_CharT>::messages  
(__c_locale __cloc, const char * __s, size_t __refs = 0) [inline,  
explicit]`

Internal constructor. Not for general use. This is a constructor for use by the library itself to [set](#) up new locales.

**Parameters:**

*cloc* The C [locale](#).

*s* The name of a [locale](#).

*refs* Refcount to pass to the base class.

Definition at line 49 of file messages\_members.h.

**5.583.3.3** `template<typename _CharT> std::messages<_CharT  
>::~messages() [inline, protected, virtual]`

Destructor.

Definition at line 78 of file messages\_members.h.

## 5.583.4 Member Data Documentation

**5.583.4.1** `template<typename _CharT> locale::id std::messages<_CharT  
>::id [inline, static]`

Numpunct facet id.

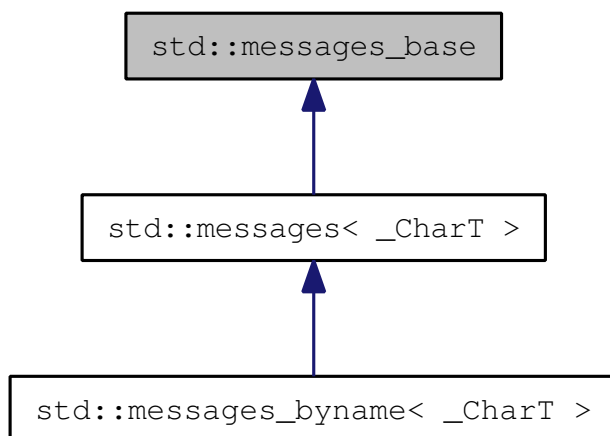

Definition at line 1707 of file locale\_facets\_nonio.h.

The documentation for this class was generated from the following files:

- [locale\\_facets\\_nonio.h](#)
- [messages\\_members.h](#)

## 5.584 std::messages\_base Struct Reference

Messages facet base class providing catalog typedef. Inheritance diagram for std::messages\_base:

### Public Types

- typedef int **catalog**

### 5.584.1 Detailed Description

Messages facet base class providing catalog typedef.

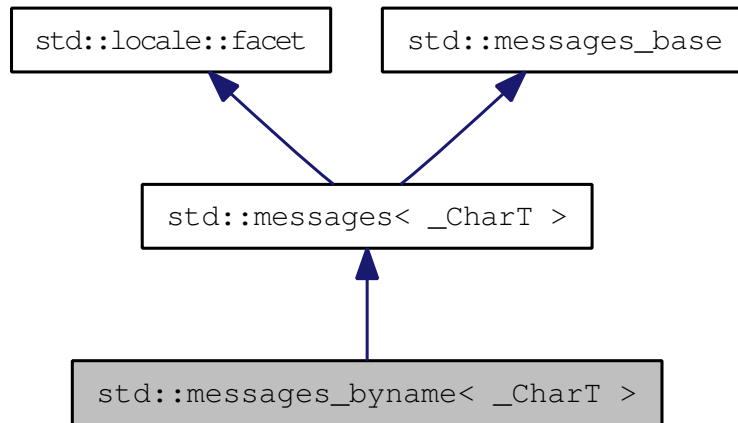

Definition at line 1662 of file `locale_facets_nonio.h`.

The documentation for this struct was generated from the following file:

### 5.585.1 Detailed Description

`template<typename _CharT> class std::messages_byname< _CharT >`

class [messages\\_byname](#) [22.2.7.2].

Definition at line 1906 of file `locale_facets_nonio.h`.

## 5.585.2 Member Typedef Documentation

### 5.585.2.1 `template<typename _CharT> typedef _CharT std::messages_byname<_CharT>::char_type`

Public typedefs.

Reimplemented from [std::messages<\\_CharT>](#).

Definition at line 1909 of file `locale_facets_nonio.h`.

### 5.585.2.2 `template<typename _CharT> typedef basic_string<_CharT> std::messages_byname<_CharT>::string_type`

Public typedefs.

Reimplemented from [std::messages<\\_CharT>](#).

Definition at line 1910 of file `locale_facets_nonio.h`.

## 5.585.3 Member Data Documentation

### 5.585.3.1 `template<typename _CharT> locale::id std::messages<_CharT> >::id [inline, static, inherited]`

Numpunct facet id.

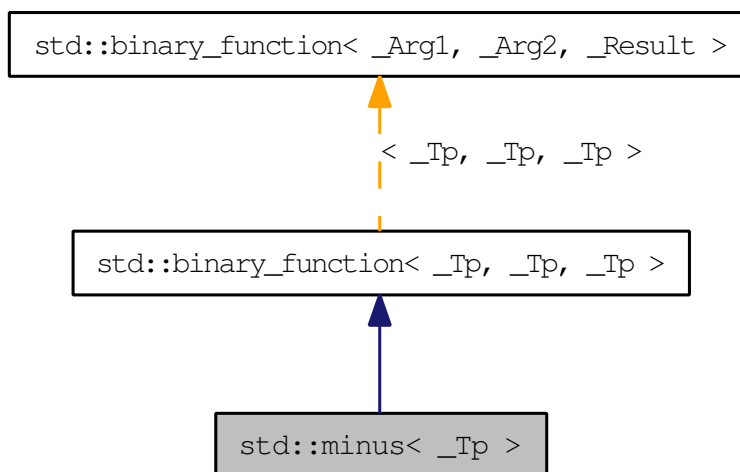

Definition at line 1707 of file `locale_facets_nonio.h`.

The documentation for this class was generated from the following files:

- [locale\\_facets\\_nonio.h](#)
- [messages\\_members.h](#)

## 5.586 `std::minus<_Tp>` Struct Template Reference

One of the [math functors](#). Inheritance diagram for `std::minus<_Tp>`:

### Public Types

- typedef `_Tp` [first\\_argument\\_type](#)
- typedef `_Tp` [result\\_type](#)
- typedef `_Tp` [second\\_argument\\_type](#)

### Public Member Functions

- `_Tp operator() (const _Tp &__x, const _Tp &__y) const`

#### 5.586.1 Detailed Description

```
template<typename _Tp> struct std::minus<_Tp>
```

One of the [math functors](#).

Definition at line 144 of file `stl_function.h`.

## 5.586.2 Member Typedef Documentation

**5.586.2.1** `typedef _Tp std::binary_function< _Tp , _Tp , _Tp >::first_argument_type [inherited]`

the type of the first argument (no surprises here)

Definition at line 114 of file stl\_function.h.

**5.586.2.2** `typedef _Tp std::binary_function< _Tp , _Tp , _Tp >::result_type [inherited]`

type of the return type

Definition at line 118 of file stl\_function.h.

**5.586.2.3** `typedef _Tp std::binary_function< _Tp , _Tp , _Tp >::second_argument_type [inherited]`

the type of the second argument

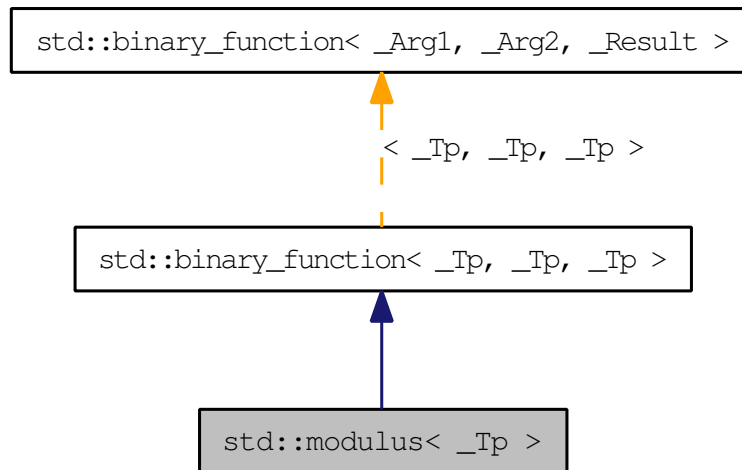

Definition at line 117 of file stl\_function.h.

The documentation for this struct was generated from the following file:

- [stl\\_function.h](#)

## 5.587 `std::modulus<_Tp>` Struct Template Reference

One of the [math functors](#). Inheritance diagram for `std::modulus<_Tp>`:

### Public Types

- typedef `_Tp` [first\\_argument\\_type](#)
- typedef `_Tp` [result\\_type](#)
- typedef `_Tp` [second\\_argument\\_type](#)

### Public Member Functions

- `_Tp` [operator\(\)](#) (const `_Tp` &`_x`, const `_Tp` &`_y`) const

#### 5.587.1 Detailed Description

```
template<typename _Tp> struct std::modulus<_Tp>
```

One of the [math functors](#).

Definition at line 171 of file `stl_function.h`.

## 5.587.2 Member Typedef Documentation

**5.587.2.1** `typedef _Tp std::binary_function< _Tp , _Tp , _Tp  
>::first_argument_type [inherited]`

the type of the first argument (no surprises here)

Definition at line 114 of file stl\_function.h.

**5.587.2.2** `typedef _Tp std::binary_function< _Tp , _Tp , _Tp >::result_type  
[inherited]`

type of the return type

Definition at line 118 of file stl\_function.h.

**5.587.2.3** `typedef _Tp std::binary_function< _Tp , _Tp , _Tp  
>::second_argument_type [inherited]`

the type of the second argument

Definition at line 117 of file stl\_function.h.

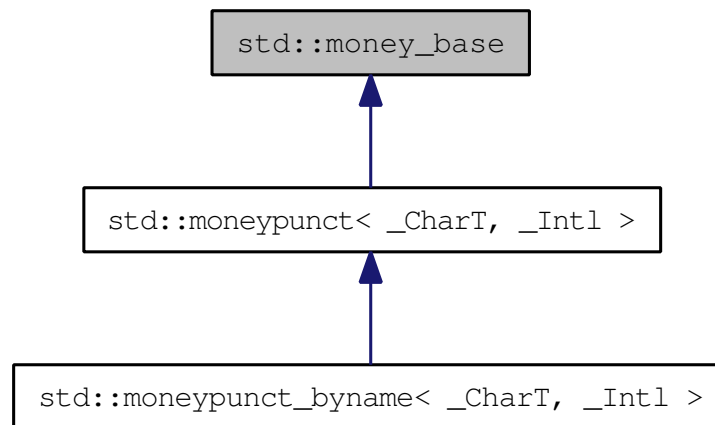

The documentation for this struct was generated from the following file:

- [stl\\_function.h](#)

## 5.588 `std::money_base` Class Reference

Money format ordering data.

This class contains an ordered [array](#) of 4 fields to represent the pattern for formatting a money amount. Each field may contain one entry from the `part` enum. `symbol`, `sign`, and `value` must be present and the remaining field must contain either `none` or `space`. Inheritance diagram for `std::money_base`:

### Public Types

- enum { `_S_minus`, `_S_zero`, `_S_end` }
- enum `part` {  
`none`, `space`, `symbol`, `sign`,  
`value` }

### Public Member Functions

- `__attribute__ ((__const__)) static pattern _S_construct_pattern(char __precedes`
- `char char __posn throw ()`

### Public Attributes

- `char __space`

## Static Public Attributes

- static const char \* `_S_atoms`
- static const pattern `_S_default_pattern`

### 5.588.1 Detailed Description

Money format ordering data.

This class contains an ordered [array](#) of 4 fields to represent the pattern for formatting a money amount. Each field may contain one entry from the part enum. symbol, sign, and value must be present and the remaining field must contain either none or space.

#### See also:

[moneypunct::pos\\_format\(\)](#) and [moneypunct::neg\\_format\(\)](#) for details of how these fields are interpreted.

Definition at line 835 of file `locale_facets_nonio.h`.

The documentation for this class was generated from the following file:

- [locale\\_facets\\_nonio.h](#)

## 5.589 `std::money_get< _CharT, _InIter >` Class Template Reference

Primary class template [money\\_get](#).

This facet encapsulates the code to parse and return a monetary amount from a string. Inheritance diagram for `std::money_get< _CharT, _InIter >`:

### Public Types

- typedef `_CharT` [char\\_type](#)
- typedef `_InIter` [iter\\_type](#)
- typedef [basic\\_string< \\_CharT >](#) [string\\_type](#)

### 5.589.1 Detailed Description

`template<typename _CharT, typename _InIter> class std::money_get<_CharT, _InIter>`

Primary class template [money\\_get](#).

This facet encapsulates the code to parse and return a monetary amount from a string. The [money\\_get](#) template uses protected virtual functions to provide the actual results. The public accessors forward the call to the virtual functions. These virtual functions are hooks for developers to implement the behavior they require from the [money\\_get](#) facet.

Definition at line 1364 of file `locale_facets_nonio.h`.

### 5.589.2 Member Typedef Documentation

**5.589.2.1** `template<typename _CharT, typename _InIter> typedef _CharT std::money_get<_CharT, _InIter>::char_type`

Public typedefs.

Definition at line 1370 of file `locale_facets_nonio.h`.

**5.589.2.2** `template<typename _CharT, typename _InIter > typedef _InIter  
std::money_get< _CharT, _InIter >::iter_type`

Public typedefs.

Definition at line 1371 of file locale\_facets\_nonio.h.

**5.589.2.3** `template<typename _CharT, typename _InIter > typedef  
basic_string<_CharT> std::money_get< _CharT, _InIter  
>::string_type`

Public typedefs.

Definition at line 1372 of file locale\_facets\_nonio.h.

### 5.589.3 Constructor & Destructor Documentation

**5.589.3.1** `template<typename _CharT, typename _InIter > std::money_get<  
_CharT, _InIter >::money_get (size_t __refs = 0) [inline,  
explicit]`

Constructor performs initialization. This is the constructor provided by the standard.

#### Parameters:

*refs* Passed to the base facet class.

Definition at line 1386 of file locale\_facets\_nonio.h.

**5.589.3.2** `template<typename _CharT, typename _InIter > virtual  
std::money_get< _CharT, _InIter >::~~money_get () [inline,  
protected, virtual]`

Destructor.

Definition at line 1454 of file locale\_facets\_nonio.h.

## 5.589.4 Member Function Documentation

**5.589.4.1** `template<typename _CharT , typename _InIter > _InIter  
std::money_get< _CharT, _InIter >::do_get (iter_type __s,  
iter_type __end, bool __intl, ios_base & __io, ios_base::iostate &  
__err, string_type & __digits) const [inline, protected,  
virtual]`

Read and parse a monetary value. This function reads and parses characters representing a monetary value. This function is a hook for derived classes to change the value returned.

**See also:**

[get\(\)](#) for details.

Definition at line 376 of file locale\_facets\_nonio.tcc.

References `std::ios_base::_M_getloc()`, `std::basic_string< _CharT, _Traits, _Alloc >::resize()`, and `std::__ctype_abstract_base< _CharT >::widen()`.

**5.589.4.2** `template<typename _CharT , typename _InIter > _InIter  
std::money_get< _CharT, _InIter >::do_get (iter_type __s, iter_type  
__end, bool __intl, ios_base & __io, ios_base::iostate & __err, long  
double & __units) const [inline, protected, virtual]`

Read and parse a monetary value. This function reads and parses characters representing a monetary value. This function is a hook for derived classes to change the value returned.

**See also:**

[get\(\)](#) for details.

Definition at line 363 of file locale\_facets\_nonio.tcc.

References `std::basic_string< _CharT, _Traits, _Alloc >::c_str()`.

Referenced by `std::money_get< _CharT, _InIter >::get()`.

**5.589.4.3** `template<typename _CharT , typename _InIter > iter_type  
std::money_get< _CharT, _InIter >::get (iter_type __s, iter_type  
__end, bool __intl, ios_base & __io, ios_base::iostate & __err,  
string_type & __digits) const [inline]`

Read and parse a monetary value. This function reads characters from *s*, interprets them as a monetary value according to [moneypunct](#) and [ctype](#) facets retrieved from

`io.getloc()`, and returns the result in *digits*. For example, the string \$10.01 in a US [locale](#) would store 1001 in *digits*.

Any characters not part of a valid money amount are not consumed.

If a money value cannot be parsed from the input stream, sets `err=(err|io.failbit)`. If the stream is consumed before finishing parsing, sets `err=(err|io.failbit|io.eofbit)`.

This function works by returning the result of `do_get()`.

**Parameters:**

- s* Start of characters to parse.
- end* End of characters to parse.
- intl* Parameter to use `_facet<money_punct<CharT,intl>>`.
- io* Source of facets and io state.
- err* Error field to [set](#) if parsing fails.
- digits* Place to store result of parsing.

**Returns:**

Iterator referencing first character beyond valid money amount.

Definition at line 1447 of file `locale_facets_nonio.h`.

References `std::money_get<_CharT, _InIter >::do_get()`.

**5.589.4.4** `template<typename _CharT, typename _InIter > iter_type  
std::money_get<_CharT, _InIter >::get(iter_type __s, iter_type  
__end, bool __intl, ios_base & __io, ios_base::iostate & __err, long  
double & __units) const [inline]`

Read and parse a monetary value. This function reads characters from *s*, interprets them as a monetary value according to [money\\_punct](#) and [ctype](#) facets retrieved from `io.getloc()`, and returns the result in *units* as an integral value `money_punct::frac_digits()` \* the actual amount. For example, the string \$10.01 in a US [locale](#) would store 1001 in *units*.

Any characters not part of a valid money amount are not consumed.

If a money value cannot be parsed from the input stream, sets `err=(err|io.failbit)`. If the stream is consumed before finishing parsing, sets `err=(err|io.failbit|io.eofbit)`. *units* is unchanged if parsing fails.

This function works by returning the result of `do_get()`.

**Parameters:**

- s* Start of characters to parse.

*end* End of characters to parse.  
*intl* Parameter to `use_facet<money_punct<CharT,intl>>`.  
*io* Source of facets and io state.  
*err* Error field to [set](#) if parsing fails.  
*units* Place to store result of parsing.

**Returns:**

Iterator referencing first character beyond valid money amount.

Definition at line 1416 of file `locale_facets_nonio.h`.

References `std::money_get<_CharT, _InIter >::do_get()`.

### 5.589.5 Member Data Documentation

**5.589.5.1** `template<typename _CharT, typename _InIter > locale::id  
std::money_get<_CharT, _InIter >::id [inline, static]`

Numpunct facet id.

Definition at line 1376 of file `locale_facets_nonio.h`.

### 5.590.1 Detailed Description

`template<typename _CharT, typename _OutIter> class std::money_put<_CharT, _OutIter>`

Primary class template `money_put`.

This facet encapsulates the code to format and output a monetary amount. The `money_put` template uses protected virtual functions to provide the actual results. The public accessors forward the call to the virtual functions. These virtual functions are hooks for developers to implement the behavior they require from the `money_put` facet.

Definition at line 1515 of file `locale_facets_nonio.h`.

### 5.590.2 Member Typedef Documentation

**5.590.2.1** `template<typename _CharT, typename _OutIter> typedef _CharT std::money_put<_CharT, _OutIter>::char_type`

Public typedefs.

Definition at line 1520 of file `locale_facets_nonio.h`.

**5.590.2.2** `template<typename _CharT, typename _OutIter > typedef _OutIter  
std::money_put< _CharT, _OutIter >::iter_type`

Public typedefs.

Definition at line 1521 of file locale\_facets\_nonio.h.

**5.590.2.3** `template<typename _CharT, typename _OutIter > typedef  
basic_string<_CharT> std::money_put< _CharT, _OutIter  
>::string_type`

Public typedefs.

Definition at line 1522 of file locale\_facets\_nonio.h.

### 5.590.3 Constructor & Destructor Documentation

**5.590.3.1** `template<typename _CharT, typename _OutIter >  
std::money_put< _CharT, _OutIter >::money_put (size_t __refs = 0)  
[inline, explicit]`

Constructor performs initialization. This is the constructor provided by the standard.

#### Parameters:

*refs* Passed to the base facet class.

Definition at line 1536 of file locale\_facets\_nonio.h.

**5.590.3.2** `template<typename _CharT, typename _OutIter > virtual  
std::money_put< _CharT, _OutIter >::~~money_put () [inline,  
protected, virtual]`

Destructor.

Definition at line 1586 of file locale\_facets\_nonio.h.

## 5.590.4 Member Function Documentation

**5.590.4.1** `template<typename _CharT, typename _OutIter > _OutIter  
std::money_put<_CharT, _OutIter >::do_put (iter_type __s, bool  
__intl, ios_base & __io, char_type __fill, const string_type &  
__digits) const [inline, protected, virtual]`

Format and output a monetary value. This function formats *digits* as a monetary value according to [moneypunct](#) and [ctype](#) facets retrieved from `io.getloc()`, and writes the resulting characters to *s*. For example, the string 1001 in a US [locale](#) would write \$10.01 to *s*.

This function is a hook for derived classes to change the value returned.

### See also:

[put\(\)](#).

### Parameters:

*s* The stream to write to.

*intl* Parameter to use `_facet<moneypunct<CharT,intl>>`.

*io* Source of facets and io state.

*fill* `char_type` to use for padding.

*units* Place to store result of parsing.

### Returns:

Iterator after writing.

Definition at line 606 of file `locale_facets_nonio.tcc`.

**5.590.4.2** `template<typename _CharT, typename _OutIter > _OutIter  
std::money_put<_CharT, _OutIter >::do_put (iter_type __s, bool  
__intl, ios_base & __io, char_type __fill, long double __units) const  
[inline, protected, virtual]`

Format and output a monetary value. This function formats *units* as a monetary value according to [moneypunct](#) and [ctype](#) facets retrieved from `io.getloc()`, and writes the resulting characters to *s*. For example, the value 1001 in a US [locale](#) would write \$10.01 to *s*.

This function is a hook for derived classes to change the value returned.

### See also:

[put\(\)](#).

**Parameters:**

- s* The stream to write to.
- intl* Parameter to use\_facet<money\_punct<CharT,intl> >.
- io* Source of facets and io state.
- fill* char\_type to use for padding.
- units* Place to store result of parsing.

**Returns:**

Iterator after writing.

Definition at line 568 of file locale\_facets\_nonio.tcc.

References std::ios\_base::getloc(), and std::\_\_ctype\_abstract\_base< \_CharT >::widen().

Referenced by std::money\_put< \_CharT, \_OutIter >::put().

**5.590.4.3** `template<typename _CharT, typename _OutIter> iter_type  
std::money_put< _CharT, _OutIter >::put(iter_type __s, bool  
__intl, ios_base & __io, char_type __fill, const string_type &  
__digits) const [inline]`

Format and output a monetary value. This function formats *digits* as a monetary value according to [money\\_punct](#) and [ctype](#) facets retrieved from `io.getloc()`, and writes the resulting characters to *s*. For example, the string 1001 in a US [locale](#) would write \$10.01 to *s*.

This function works by returning the result of `do_put()`.

**Parameters:**

- s* The stream to write to.
- intl* Parameter to use\_facet<money\_punct<CharT,intl> >.
- io* Source of facets and io state.
- fill* char\_type to use for padding.
- units* Place to store result of parsing.

**Returns:**

Iterator after writing.

Definition at line 1579 of file locale\_facets\_nonio.h.

References std::money\_put< \_CharT, \_OutIter >::do\_put().

**5.590.4.4** `template<typename _CharT, typename _OutIter > iter_type  
std::money_put<_CharT, _OutIter >::put(iter_type __s, bool  
__intl, ios_base & __io, char_type __fill, long double __units) const  
[inline]`

Format and output a monetary value. This function formats *units* as a monetary value according to [moneypunct](#) and [ctype](#) facets retrieved from `io.getloc()`, and writes the resulting characters to *s*. For example, the value 1001 in a US [locale](#) would write \$10.01 to *s*.

This function works by returning the result of [do\\_put\(\)](#).

**Parameters:**

- s* The stream to write to.
- intl* Parameter to use `use_facet<moneypunct<CharT,intl> >`.
- io* Source of facets and io state.
- fill* `char_type` to use for padding.
- units* Place to store result of parsing.

**Returns:**

Iterator after writing.

Definition at line 1556 of file `locale_facets_nonio.h`.

References `std::money_put<_CharT, _OutIter >::do_put()`.

### 5.591.1 Detailed Description

`template<typename _CharT, bool _Intl> class std::moneypunct<_CharT, _Intl>`

Primary class template [moneypunct](#).

This facet encapsulates the punctuation, grouping and other formatting features of money amount string representations.

Definition at line 929 of file `locale_facets_nonio.h`.

### 5.591.2 Member Typedef Documentation

**5.591.2.1** `template<typename _CharT, bool _Intl> typedef _CharT std::moneypunct<_CharT, _Intl>::char_type`

Public typedefs.

Reimplemented in `std::moneypunct_byname<_CharT, _Intl>`.

Definition at line 935 of file `locale_facets_nonio.h`.

```
5.591.2.2 template<typename _CharT, bool _Intl> typedef
 basic_string<_CharT> std::moneypunct<_CharT, _Intl
 >::string_type
```

Public typedefs.

Reimplemented in [std::moneypunct\\_byname<\\_CharT, \\_Intl>](#).

Definition at line 936 of file `locale_facets_nonio.h`.

### 5.591.3 Constructor & Destructor Documentation

```
5.591.3.1 template<typename _CharT, bool _Intl> std::moneypunct<_CharT,
 _Intl>::moneypunct(size_t __refs = 0) [inline, explicit]
```

Constructor performs initialization. This is the constructor provided by the standard.

#### Parameters:

*refs* Passed to the base facet class.

Definition at line 958 of file `locale_facets_nonio.h`.

```
5.591.3.2 template<typename _CharT, bool _Intl> std::moneypunct<_CharT,
 _Intl>::moneypunct(__cache_type * __cache, size_t __refs = 0)
 [inline, explicit]
```

Constructor performs initialization. This is an internal constructor.

#### Parameters:

*cache* Cache for optimization.

*refs* Passed to the base facet class.

Definition at line 970 of file `locale_facets_nonio.h`.

```
5.591.3.3 template<typename _CharT, bool _Intl> std::moneypunct<_CharT,
 _Intl>::moneypunct(__c_locale __cloc, const char * __s, size_t
 __refs = 0) [inline, explicit]
```

Internal constructor. Not for general use. This is a constructor for use by the library itself to [set](#) up new locales.

#### Parameters:

*cloc* The C locale.

*s* The name of a [locale](#).

*refs* Passed to the base facet class.

Definition at line 985 of file locale\_facets\_nonio.h.

**5.591.3.4** `template<typename _CharT, bool _Intl> virtual std::moneypunct<_CharT, _Intl >::~~moneypunct () [protected, virtual]`

Destructor.

## 5.591.4 Member Function Documentation

**5.591.4.1** `template<typename _CharT, bool _Intl> string_type std::moneypunct< _CharT, _Intl >::curr_symbol () const [inline]`

Return currency symbol string. This function returns a `string_type` to use as a currency symbol. It does so by returning returning [moneypunct<char\\_type>::do\\_curr\\_symbol\(\)](#).

### Returns:

*string\_type* representing a currency symbol.

Definition at line 1055 of file locale\_facets\_nonio.h.

References `std::moneypunct< _CharT, _Intl >::do_curr_symbol()`.

**5.591.4.2** `template<typename _CharT, bool _Intl> char_type std::moneypunct< _CharT, _Intl >::decimal_point () const [inline]`

Return [decimal](#) point character. This function returns a `char_type` to use as a [decimal](#) point. It does so by returning returning [moneypunct<char\\_type>::do\\_decimal\\_point\(\)](#).

### Returns:

*char\_type* representing a [decimal](#) point.

Definition at line 999 of file locale\_facets\_nonio.h.

References `std::moneypunct< _CharT, _Intl >::do_decimal_point()`.

**5.591.4.3** `template<typename _CharT, bool _Intl> virtual string_type  
std::moneypunct< _CharT, _Intl >::do_curr_symbol () const  
[inline, protected, virtual]`

Return currency symbol string. This function returns a `string_type` to use as a currency symbol. This function is a hook for derived classes to change the value returned.

**See also:**

[curr\\_symbol\(\)](#) for details.

**Returns:**

*string\_type* representing a currency symbol.

Definition at line 1201 of file `locale_facets_nonio.h`.

Referenced by `std::moneypunct< _CharT, _Intl >::curr_symbol()`.

**5.591.4.4** `template<typename _CharT, bool _Intl> virtual char_type  
std::moneypunct< _CharT, _Intl >::do_decimal_point () const  
[inline, protected, virtual]`

Return [decimal](#) point character. Returns a `char_type` to use as a [decimal](#) point. This function is a hook for derived classes to change the value returned.

**Returns:**

*char\_type* representing a [decimal](#) point.

Definition at line 1163 of file `locale_facets_nonio.h`.

Referenced by `std::moneypunct< _CharT, _Intl >::decimal_point()`.

**5.591.4.5** `template<typename _CharT, bool _Intl> virtual int  
std::moneypunct< _CharT, _Intl >::do_frac_digits () const  
[inline, protected, virtual]`

Return number of digits in fraction. This function returns the exact number of digits that make up the fractional part of a money amount. This function is a hook for derived classes to change the value returned.

**See also:**

[frac\\_digits\(\)](#) for details.

**Returns:**

Number of digits in amount fraction.

Definition at line 1241 of file locale\_facets\_nonio.h.

Referenced by `std::moneypunct<_CharT, _Intl >::frac_digits()`.

**5.591.4.6** `template<typename _CharT, bool _Intl> virtual string  
std::moneypunct<_CharT, _Intl >::do_grouping () const  
[inline, protected, virtual]`

Return grouping specification. Returns a string representing groupings for the integer part of a number. This function is a hook for derived classes to change the value returned.

**See also:**

[grouping\(\)](#) for details.

**Returns:**

String representing grouping specification.

Definition at line 1188 of file locale\_facets\_nonio.h.

Referenced by `std::moneypunct<_CharT, _Intl >::grouping()`.

**5.591.4.7** `template<typename _CharT, bool _Intl> virtual pattern  
std::moneypunct<_CharT, _Intl >::do_neg_format () const  
[inline, protected, virtual]`

Return pattern for money values. This function returns a pattern describing the formatting of a negative valued money amount. This function is a hook for derived classes to change the value returned.

**See also:**

[neg\\_format\(\)](#) for details.

**Returns:**

Pattern for money values.

Definition at line 1269 of file locale\_facets\_nonio.h.

Referenced by `std::moneypunct<_CharT, _Intl >::neg_format()`.

**5.591.4.8** `template<typename _CharT, bool _Intl> virtual string_type  
std::moneypunct<_CharT, _Intl>::do_negative_sign () const  
[inline, protected, virtual]`

Return negative sign string. This function returns a `string_type` to use as a sign for negative amounts. This function is a hook for derived classes to change the value returned.

**See also:**

[negative\\_sign\(\)](#) for details.

**Returns:**

*string\_type* representing a negative sign.

Definition at line 1227 of file `locale_facets_nonio.h`.

Referenced by `std::moneypunct<_CharT, _Intl>::negative_sign()`.

**5.591.4.9** `template<typename _CharT, bool _Intl> virtual pattern  
std::moneypunct<_CharT, _Intl>::do_pos_format () const  
[inline, protected, virtual]`

Return pattern for money values. This function returns a pattern describing the formatting of a positive valued money amount. This function is a hook for derived classes to change the value returned.

**See also:**

[pos\\_format\(\)](#) for details.

**Returns:**

Pattern for money values.

Definition at line 1255 of file `locale_facets_nonio.h`.

Referenced by `std::moneypunct<_CharT, _Intl>::pos_format()`.

**5.591.4.10** `template<typename _CharT, bool _Intl> virtual string_type  
std::moneypunct<_CharT, _Intl>::do_positive_sign () const  
[inline, protected, virtual]`

Return positive sign string. This function returns a `string_type` to use as a sign for positive amounts. This function is a hook for derived classes to change the value returned.

**See also:**

[positive\\_sign\(\)](#) for details.

**Returns:**

*string\_type* representing a positive sign.

Definition at line 1214 of file locale\_facets\_nonio.h.

Referenced by `std::moneypunct<_CharT, _Intl >::positive_sign()`.

**5.591.4.11** `template<typename _CharT, bool _Intl> virtual char_type  
std::moneypunct<_CharT, _Intl >::do_thousands_sep () const  
[inline, protected, virtual]`

Return thousands separator character. Returns a `char_type` to use as a thousands separator. This function is a hook for derived classes to change the value returned.

**Returns:**

*char\_type* representing a thousands separator.

Definition at line 1175 of file locale\_facets\_nonio.h.

Referenced by `std::moneypunct<_CharT, _Intl >::thousands_sep()`.

**5.591.4.12** `template<typename _CharT, bool _Intl> int std::moneypunct<  
_CharT, _Intl >::frac_digits () const [inline]`

Return number of digits in fraction. This function returns the exact number of digits that make up the fractional part of a money amount. It does so by returning `moneypunct<char_type>::do_frac_digits()`.

The fractional part of a money amount is optional. But if it is present, there must be `frac_digits()` digits.

**Returns:**

Number of digits in amount fraction.

Definition at line 1105 of file locale\_facets\_nonio.h.

References `std::moneypunct<_CharT, _Intl >::do_frac_digits()`.

**5.591.4.13** `template<typename _CharT, bool _Intl> string std::moneypunct< _CharT, _Intl >::grouping () const [inline]`

Return grouping specification. This function returns a string representing groupings for the integer part of an amount. Groupings indicate where thousands separators should be inserted.

Each char in the return string is interpret as an integer rather than a character. These numbers represent the number of digits in a group. The first char in the string represents the number of digits in the least significant group. If a char is negative, it indicates an unlimited number of digits for the group. If more chars from the string are required to group a number, the last char is used repeatedly.

For example, if the `grouping()` returns `32` and is applied to the number 123456789, this corresponds to 12,34,56,789. Note that if the string was `32`, this would put more than 50 digits into the least significant group if the character `set` is ASCII.

The string is returned by calling `moneypunct<char_type>::do_grouping()`.

**Returns:**

string representing grouping specification.

Definition at line 1042 of file `locale_facets_nonio.h`.

References `std::moneypunct< _CharT, _Intl >::do_grouping()`.

**5.591.4.14** `template<typename _CharT, bool _Intl> pattern std::moneypunct< _CharT, _Intl >::neg_format () const [inline]`

Public typedefs.

Definition at line 1145 of file `locale_facets_nonio.h`.

References `std::moneypunct< _CharT, _Intl >::do_neg_format()`.

**5.591.4.15** `template<typename _CharT, bool _Intl> string_type std::moneypunct< _CharT, _Intl >::negative_sign () const [inline]`

Return negative sign string. This function returns a `string_type` to use as a sign for negative amounts. It does so by returning returning `moneypunct<char_type>::do_negative_sign()`.

If the return value contains more than one character, the first character appears in the position indicated by `neg_format()` and the remainder appear at the end of the formatted string.

**Returns:**

*string\_type* representing a negative sign.

Definition at line 1089 of file locale\_facets\_nonio.h.

References `std::moneypunct<_CharT, _Intl >::do_negative_sign()`.

#### 5.591.4.16 `template<typename _CharT, bool _Intl> pattern std::moneypunct<_CharT, _Intl >::pos_format () const [inline]`

Return pattern for money values. This function returns a pattern describing the formatting of a positive or negative valued money amount. It does so by returning `moneypunct<char_type>::do_pos_format()` or `moneypunct<char_type>::do_neg_format()`.

The pattern has 4 fields describing the ordering of symbol, sign, value, and none or space. There must be one of each in the pattern. The none and space enums may not appear in the first field and space may not appear in the final field.

The parts of a money string must appear in the order indicated by the fields of the pattern. The symbol field indicates that the value of `curr_symbol()` may be present. The sign field indicates that the value of `positive_sign()` or `negative_sign()` must be present. The value field indicates that the absolute value of the money amount is present. none indicates 0 or more whitespace characters, except at the end, where it permits no whitespace. space indicates that 1 or more whitespace characters must be present.

For example, for the US locale and `pos_format()` pattern {symbol,sign,value,none}, `curr_symbol() == '$'` `positive_sign() == '+'`, and value 10.01, and options `set` to force the symbol, the corresponding string is `$+10.01`.

**Returns:**

Pattern for money values.

Definition at line 1141 of file locale\_facets\_nonio.h.

References `std::moneypunct<_CharT, _Intl >::do_pos_format()`.

#### 5.591.4.17 `template<typename _CharT, bool _Intl> string_type std::moneypunct<_CharT, _Intl >::positive_sign () const [inline]`

Return positive sign string. This function returns a `string_type` to use as a sign for positive amounts. It does so by returning `moneypunct<char_type>::do_positive_sign()`.

If the return value contains more than one character, the first character appears in the position indicated by `pos_format()` and the remainder appear at the end of the formatted string.

**Returns:**

*string\_type* representing a positive sign.

Definition at line 1072 of file `locale_facets_nonio.h`.

References `std::moneypunct<_CharT, _Intl >::do_positive_sign()`.

**5.591.4.18** `template<typename _CharT, bool _Intl> char_type  
std::moneypunct<_CharT, _Intl >::thousands_sep () const  
[inline]`

Return thousands separator character. This function returns a `char_type` to use as a thousands separator. It does so by returning `moneypunct<char_type>::do_thousands_sep()`.

**Returns:**

`char_type` representing a thousands separator.

Definition at line 1012 of file `locale_facets_nonio.h`.

References `std::moneypunct<_CharT, _Intl >::do_thousands_sep()`.

## 5.591.5 Member Data Documentation

**5.591.5.1** `template<typename _CharT, bool _Intl> locale::id

Definition at line 1322 of file `locale_facets_nonio.h`.

### 5.592.3 Member Function Documentation

**5.592.3.1** `template<typename _CharT, bool _Intl> string_type  
std::moneypunct< _CharT, _Intl >::curr_symbol () const  
[inline, inherited]`

Return currency symbol string. This function returns a `string_type` to use as a currency symbol. It does so by returning `moneypunct<char_type>::do_curr_symbol()`.

**Returns:**

*string\_type* representing a currency symbol.

Definition at line 1055 of file `locale_facets_nonio.h`.

References `std::moneypunct< _CharT, _Intl >::do_curr_symbol()`.

**5.592.3.2** `template<typename _CharT, bool _Intl> char_type  
std::moneypunct< _CharT, _Intl >::decimal_point () const  
[inline, inherited]`

Return `decimal` point character. This function returns a `char_type` to use as a `decimal` point. It does so by returning `moneypunct<char_type>::do_decimal_point()`.

**Returns:**

*char\_type* representing a `decimal` point.

Definition at line 999 of file `locale_facets_nonio.h`.

References `std::moneypunct< _CharT, _Intl >::do_decimal_point()`.

**5.592.3.3** `template<typename _CharT, bool _Intl> virtual string_type  
std::moneypunct< _CharT, _Intl >::do_curr_symbol () const  
[inline, protected, virtual, inherited]`

Return currency symbol string. This function returns a `string_type` to use as a currency symbol. This function is a hook for derived classes to change the value returned.

**See also:**

`curr_symbol()` for details.

**Returns:**

*string\_type* representing a currency symbol.

## 5.592 std::moneypunct\_byname<\_CharT, \_Intl > Class Template Reference 2961

Definition at line 1201 of file locale\_facets\_nonio.h.

Referenced by std::moneypunct<\_CharT, \_Intl >::curr\_symbol().

**5.592.3.4** `template<typename _CharT, bool _Intl> virtual char_type  
std::moneypunct<_CharT, _Intl >::do_decimal_point () const  
[inline, protected, virtual, inherited]`

Return [decimal](#) point character. Returns a `char_type` to use as a [decimal](#) point. This function is a hook for derived classes to change the value returned.

### Returns:

*char\_type* representing a [decimal](#) point.

Definition at line 1163 of file locale\_facets\_nonio.h.

Referenced by std::moneypunct<\_CharT, \_Intl >::decimal\_point().

**5.592.3.5** `template<typename _CharT, bool _Intl> virtual int  
std::moneypunct<_CharT, _Intl >::do_frac_digits () const  
[inline, protected, virtual, inherited]`

Return number of digits in fraction. This function returns the exact number of digits that make up the fractional part of a money amount. This function is a hook for derived classes to change the value returned.

### See also:

[frac\\_digits\(\)](#) for details.

### Returns:

Number of digits in amount fraction.

Definition at line 1241 of file locale\_facets\_nonio.h.

Referenced by std::moneypunct<\_CharT, \_Intl >::frac\_digits().

**5.592.3.6** `template<typename _CharT, bool _Intl> virtual string  
std::moneypunct<_CharT, _Intl >::do_grouping () const  
[inline, protected, virtual, inherited]`

Return grouping specification. Returns a string representing groupings for the integer part of a number. This function is a hook for derived classes to change the value returned.

**See also:**

[grouping\(\)](#) for details.

**Returns:**

String representing grouping specification.

Definition at line 1188 of file locale\_facets\_nonio.h.

Referenced by `std::moneypunct<_CharT, _Intl >::grouping()`.

**5.592.3.7** `template<typename _CharT, bool _Intl> virtual pattern  
std::moneypunct<_CharT, _Intl >::do_neg_format () const  
[inline, protected, virtual, inherited]`

Return pattern for money values. This function returns a pattern describing the formatting of a negative valued money amount. This function is a hook for derived classes to change the value returned.

**See also:**

[neg\\_format\(\)](#) for details.

**Returns:**

Pattern for money values.

Definition at line 1269 of file locale\_facets\_nonio.h.

Referenced by `std::moneypunct<_CharT, _Intl >::neg_format()`.

**5.592.3.8** `template<typename _CharT, bool _Intl> virtual string_type  
std::moneypunct<_CharT, _Intl >::do_negative_sign () const  
[inline, protected, virtual, inherited]`

Return negative sign string. This function returns a `string_type` to use as a sign for negative amounts. This function is a hook for derived classes to change the value returned.

**See also:**

[negative\\_sign\(\)](#) for details.

**Returns:**

*string\_type* representing a negative sign.

Definition at line 1227 of file locale\_facets\_nonio.h.

Referenced by `std::moneypunct<_CharT, _Intl >::negative_sign()`.

## 5.592 std::moneypunct\_byname< \_CharT, \_Intl > Class Template Reference2963

**5.592.3.9** `template<typename _CharT, bool _Intl> virtual pattern  
std::moneypunct< _CharT, _Intl >::do_pos_format () const  
[inline, protected, virtual, inherited]`

Return pattern for money values. This function returns a pattern describing the formatting of a positive valued money amount. This function is a hook for derived classes to change the value returned.

**See also:**

[pos\\_format\(\)](#) for details.

**Returns:**

Pattern for money values.

Definition at line 1255 of file locale\_facets\_nonio.h.

Referenced by `std::moneypunct< _CharT, _Intl >::pos_format()`.

**5.592.3.10** `template<typename _CharT, bool _Intl> virtual string_type  
std::moneypunct< _CharT, _Intl >::do_positive_sign () const  
[inline, protected, virtual, inherited]`

Return positive sign string. This function returns a `string_type` to use as a sign for positive amounts. This function is a hook for derived classes to change the value returned.

**See also:**

[positive\\_sign\(\)](#) for details.

**Returns:**

*string\_type* representing a positive sign.

Definition at line 1214 of file locale\_facets\_nonio.h.

Referenced by `std::moneypunct< _CharT, _Intl >::positive_sign()`.

**5.592.3.11** `template<typename _CharT, bool _Intl> virtual char_type  
std::moneypunct< _CharT, _Intl >::do_thousands_sep () const  
[inline, protected, virtual, inherited]`

Return thousands separator character. Returns a `char_type` to use as a thousands separator. This function is a hook for derived classes to change the value returned.

**Returns:**

*char\_type* representing a thousands separator.

Definition at line 1175 of file locale\_facets\_nonio.h.

Referenced by `std::moneypunct<_CharT, _Intl >::thousands_sep()`.

#### 5.592.3.12 `template<typename _CharT, bool _Intl> int std::moneypunct<_CharT, _Intl >::frac_digits () const [inline, inherited]`

Return number of digits in fraction. This function returns the exact number of digits that make up the fractional part of a money amount. It does so by returning `moneypunct<char_type>::do_frac_digits()`.

The fractional part of a money amount is optional. But if it is present, there must be `frac_digits()` digits.

#### Returns:

Number of digits in amount fraction.

Definition at line 1105 of file locale\_facets\_nonio.h.

References `std::moneypunct<_CharT, _Intl >::do_frac_digits()`.

#### 5.592.3.13 `template<typename _CharT, bool _Intl> string std::moneypunct<_CharT, _Intl >::grouping () const [inline, inherited]`

Return grouping specification. This function returns a string representing groupings for the integer part of an amount. Groupings indicate where thousands separators should be inserted.

Each char in the return string is interpreted as an integer rather than a character. These numbers represent the number of digits in a group. The first char in the string represents the number of digits in the least significant group. If a char is negative, it indicates an unlimited number of digits for the group. If more chars from the string are required to group a number, the last char is used repeatedly.

For example, if the `grouping()` returns `32` and is applied to the number 123456789, this corresponds to 12,34,56,789. Note that if the string was `32`, this would put more than 50 digits into the least significant group if the character `set` is ASCII.

The string is returned by calling `moneypunct<char_type>::do_grouping()`.

#### Returns:

string representing grouping specification.

Definition at line 1042 of file locale\_facets\_nonio.h.

References `std::moneypunct<_CharT, _Intl >::do_grouping()`.

---

## 5.592 std::moneypunct\_byname<\_CharT, \_Intl > Class Template Reference2965

### 5.592.3.14 `template<typename _CharT, bool _Intl> pattern std::moneypunct<_CharT, _Intl >::neg_format () const [inline, inherited]`

Public typedefs.

Definition at line 1145 of file locale\_facets\_nonio.h.

References `std::moneypunct<_CharT, _Intl >::do_neg_format()`.

### 5.592.3.15 `template<typename _CharT, bool _Intl> string_type std::moneypunct<_CharT, _Intl >::negative_sign () const [inline, inherited]`

Return negative sign string. This function returns a `string_type` to use as a sign for negative amounts. It does so by returning `moneypunct<char_type>::do_negative_sign()`.

If the return value contains more than one character, the first character appears in the position indicated by `neg_format()` and the remainder appear at the end of the formatted string.

#### Returns:

*string\_type* representing a negative sign.

Definition at line 1089 of file locale\_facets\_nonio.h.

References `std::moneypunct<_CharT, _Intl >::do_negative_sign()`.

### 5.592.3.16 `template<typename _CharT, bool _Intl> pattern std::moneypunct<_CharT, _Intl >::pos_format () const [inline, inherited]`

Return pattern for money values. This function returns a pattern describing the formatting of a positive or negative valued money amount. It does so by returning `moneypunct<char_type>::do_pos_format()` or `moneypunct<char_type>::do_neg_format()`.

The pattern has 4 fields describing the ordering of symbol, sign, value, and none or space. There must be one of each in the pattern. The none and space enums may not appear in the first field and space may not appear in the final field.

The parts of a money string must appear in the order indicated by the fields of the pattern. The symbol field indicates that the value of `curr_symbol()` may be present. The sign field indicates that the value of `positive_sign()` or `negative_sign()` must be present. The value field indicates that the absolute value of the money amount is present. none indicates 0 or more whitespace characters, except at the end, where it permits no whitespace. space indicates that 1 or more whitespace characters must be present.

For example, for the US [locale](#) and [pos\\_format\(\)](#) pattern {symbol,sign,value,none}, [curr\\_symbol\(\) == '\\$'](#) [positive\\_sign\(\) == '+'](#), and value 10.01, and options [set](#) to force the symbol, the corresponding string is \$+10.01.

**Returns:**

Pattern for money values.

Definition at line 1141 of file `locale_facets_nonio.h`.

References `std::moneypunct<_CharT, _Intl >::do_pos_format()`.

**5.592.3.17** `template<typename _CharT, bool _Intl> string_type  
std::moneypunct<_CharT, _Intl >::positive_sign () const  
[inline, inherited]`

Return positive sign string. This function returns a `string_type` to use as a sign for positive amounts. It does so by returning `moneypunct<char_type>::do_positive_sign()`.

If the return value contains more than one character, the first character appears in the position indicated by [pos\\_format\(\)](#) and the remainder appear at the end of the formatted string.

**Returns:**

*string\_type* representing a positive sign.

Definition at line 1072 of file `locale_facets_nonio.h`.

References `std::moneypunct<_CharT, _Intl >::do_positive_sign()`.

**5.592.3.18** `template<typename _CharT, bool _Intl> char_type  
std::moneypunct<_CharT, _Intl >::thousands_sep () const  
[inline, inherited]`

Return thousands separator character. This function returns a `char_type` to use as a thousands separator. It does so by returning `moneypunct<char_type>::do_thousands_sep()`.

**Returns:**

`char_type` representing a thousands separator.

Definition at line 1012 of file `locale_facets_nonio.h`.

References `std::moneypunct<_CharT, _Intl >::do_thousands_sep()`.

### 5.593.1 Detailed Description

```
template<typename _Iterator> class std::move_iterator<_Iterator >
```

Class template `move_iterator` is an `iterator` adapter with the same behavior as the underlying `iterator` except that its dereference operator implicitly converts the value returned by the underlying iterator's dereference operator to an rvalue reference. Some generic algorithms can be called with move iterators to replace copying with moving.

Definition at line 894 of file `stl_iterator.h`.

The documentation for this class was generated from the following file:

- [stl\\_iterator.h](#)

## 5.594 `std::multimap< _Key, _Tp, _Compare, _Alloc >` Class Template Reference

A standard container made up of (key,value) pairs, which can be retrieved based on a key, in logarithmic time.

### Public Types

### 5.594.1 Detailed Description

```
template<typename _Key, typename _Tp, typename _Compare = std::less<_
Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp> >> class
std::multimap< _Key, _Tp, _Compare, _Alloc >
```

A standard container made up of (key,value) pairs, which can be retrieved based on a key, in logarithmic time. Meets the requirements of a [container](#), a [reversible container](#), and an [associative container](#) (using equivalent keys). For a `multimap<Key, T>` the `key_type` is `Key`, the `mapped_type` is `T`, and the `value_type` is `std::pair<const Key,T>`.

Multimaps support bidirectional iterators.

The private tree data is declared exactly the same way for [map](#) and [multimap](#); the distinction is made entirely in how the tree functions are called (`*_unique` versus `*_equal`, same as the standard).

Definition at line 86 of file `stl_multimap.h`.

### 5.594.2 Constructor & Destructor Documentation

**5.594.2.1** `template<typename _Key, typename _Tp, typename _Compare =`  
`std::less<_Key>, typename _Alloc = std::allocator<std::pair<const`  
`_Key, _Tp> >> std::multimap< _Key, _Tp, _Compare, _Alloc`  
`>::multimap () [inline]`

Default constructor creates no elements.

Definition at line 148 of file `stl_multimap.h`.

## 5.594 `std::multimap<_Key, _Tp, _Compare, _Alloc >` Class Template Reference

**5.594.2.2** `template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp>>> std::multimap<_Key, _Tp, _Compare, _Alloc>::multimap(const _Compare & __comp, const allocator_type & __a = allocator_type()) [inline, explicit]`

Creates a multimap with no elements.

### Parameters:

*comp* A comparison object.

*a* An `allocator` object.

Definition at line 157 of file `stl_multimap.h`.

**5.594.2.3** `template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp>>> std::multimap<_Key, _Tp, _Compare, _Alloc>::multimap(const multimap<_Key, _Tp, _Compare, _Alloc > & __x) [inline]`

Multimap copy constructor.

### Parameters:

*x* A multimap of identical element and `allocator` types.

The newly-created multimap uses a copy of the allocation object used by *x*.

Definition at line 168 of file `stl_multimap.h`.

**5.594.2.4** `template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp>>> std::multimap<_Key, _Tp, _Compare, _Alloc>::multimap(multimap<_Key, _Tp, _Compare, _Alloc > && __x) [inline]`

Multimap move constructor.

### Parameters:

*x* A multimap of identical element and `allocator` types.

The newly-created multimap contains the exact contents of *x*. The contents of *x* are a valid, but unspecified multimap.

Definition at line 179 of file `stl_multimap.h`.

```

5.594.2.5 template<typename _Key, typename _Tp, typename _Compare =
 std::less<_Key>, typename _Alloc = std::allocator<std::pair<const
 _Key, _Tp>>> std::multimap<_Key, _Tp, _Compare, _Alloc
 >::multimap (initializer_list< value_type > __l, const _Compare
 & __comp = _Compare(), const allocator_type & __a =
 allocator_type()) [inline]

```

Builds a multimap from an [initializer\\_list](#).

**Parameters:**

- l* An [initializer\\_list](#).
- comp* A comparison functor.
- a* An [allocator](#) object.

Create a multimap consisting of copies of the elements from the [initializer\\_list](#). This is linear in N if the [list](#) is already sorted, and NlogN otherwise (where N is `__l.size()`).

Definition at line 192 of file `stl_multimap.h`.

```

5.594.2.6 template<typename _Key, typename _Tp, typename _Compare =
 std::less<_Key>, typename _Alloc = std::allocator<std::pair<const
 _Key, _Tp>>> template<typename _InputIterator >
 std::multimap<_Key, _Tp, _Compare, _Alloc >::multimap
 (_InputIterator __first, _InputIterator __last) [inline]

```

Builds a multimap from a range.

**Parameters:**

- first* An input [iterator](#).
- last* An input [iterator](#).

Create a multimap consisting of copies of the elements from `[first,last)`. This is linear in N if the range is already sorted, and NlogN otherwise (where N is `distance(first,last)`).

Definition at line 209 of file `stl_multimap.h`.

```

5.594.2.7 template<typename _Key, typename _Tp, typename _Compare =
 std::less<_Key>, typename _Alloc = std::allocator<std::pair<const
 _Key, _Tp>>> template<typename _InputIterator >
 std::multimap<_Key, _Tp, _Compare, _Alloc >::multimap
 (_InputIterator __first, _InputIterator __last, const _Compare &
 __comp, const allocator_type & __a = allocator_type())
 [inline]

```

Builds a multimap from a range.

## 5.594 `std::multimap<_Key, _Tp, _Compare, _Alloc >` Class Template Reference

### Parameters:

*first* An input [iterator](#).

*last* An input [iterator](#).

*comp* A comparison functor.

*a* An [allocator](#) object.

Create a multimap consisting of copies of the elements from [first,last). This is linear in N if the range is already sorted, and NlogN otherwise (where N is distance(first,last)).

Definition at line 225 of file `stl_multimap.h`.

### 5.594.3 Member Function Documentation

**5.594.3.1** `template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp>>> const_iterator std::multimap<_Key, _Tp, _Compare, _Alloc >::begin () const [inline]`

Returns a read-only (constant) [iterator](#) that points to the first [pair](#) in the multimap. Iteration is done in ascending order according to the keys.

Definition at line 313 of file `stl_multimap.h`.

**5.594.3.2** `template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp>>> iterator std::multimap<_Key, _Tp, _Compare, _Alloc >::begin () [inline]`

Returns a read/write [iterator](#) that points to the first [pair](#) in the multimap. Iteration is done in ascending order according to the keys.

Definition at line 304 of file `stl_multimap.h`.

**5.594.3.3** `template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp>>> const_iterator std::multimap<_Key, _Tp, _Compare, _Alloc >::cbegin () const [inline]`

Returns a read-only (constant) [iterator](#) that points to the first [pair](#) in the multimap. Iteration is done in ascending order according to the keys.

Definition at line 377 of file `stl_multimap.h`.

**5.594.3.4** `template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp>>> const_iterator std::multimap<_Key, _Tp, _Compare, _Alloc>::cend () const [inline]`

Returns a read-only (constant) [iterator](#) that points one past the last [pair](#) in the multimap. Iteration is done in ascending order according to the keys.

Definition at line 386 of file `stl_multimap.h`.

**5.594.3.5** `template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp>>> void std::multimap<_Key, _Tp, _Compare, _Alloc>::clear () [inline]`

Erases all elements in a multimap. Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 601 of file `stl_multimap.h`.

**5.594.3.6** `template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp>>> size_type std::multimap<_Key, _Tp, _Compare, _Alloc>::count (const key_type & __x) const [inline]`

Finds the number of elements with given key.

**Parameters:**

*x* Key of (key, value) pairs to be located.

**Returns:**

Number of elements with specified key.

Definition at line 658 of file `stl_multimap.h`.

**5.594.3.7** `template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp>>> const_reverse_iterator std::multimap<_Key, _Tp, _Compare, _Alloc>::crbegin () const [inline]`

Returns a read-only (constant) reverse [iterator](#) that points to the last [pair](#) in the multimap. Iteration is done in descending order according to the keys.

Definition at line 395 of file `stl_multimap.h`.

## 5.594 std::multimap< \_Key, \_Tp, \_Compare, \_Alloc > Class Template Reference

**5.594.3.8** `template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp>>> const_reverse_iterator std::multimap< _Key, _Tp, _Compare, _Alloc >::crend () const [inline]`

Returns a read-only (constant) reverse [iterator](#) that points to one before the first [pair](#) in the multimap. Iteration is done in descending order according to the keys.

Definition at line 404 of file `stl_multimap.h`.

**5.594.3.9** `template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp>>> bool std::multimap< _Key, _Tp, _Compare, _Alloc >::empty () const [inline]`

Returns true if the multimap is empty.

Definition at line 411 of file `stl_multimap.h`.

**5.594.3.10** `template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp>>> const_iterator std::multimap< _Key, _Tp, _Compare, _Alloc >::end () const [inline]`

Returns a read-only (constant) [iterator](#) that points one past the last [pair](#) in the multimap. Iteration is done in ascending order according to the keys.

Definition at line 331 of file `stl_multimap.h`.

**5.594.3.11** `template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp>>> iterator std::multimap< _Key, _Tp, _Compare, _Alloc >::end () [inline]`

Returns a read/write [iterator](#) that points one past the last [pair](#) in the multimap. Iteration is done in ascending order according to the keys.

Definition at line 322 of file `stl_multimap.h`.

**5.594.3.12** `template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp>>> std::pair<const_iterator, const_iterator> std::multimap<_Key, _Tp, _Compare, _Alloc >::equal_range (const key_type & __x) const [inline]`

Finds a subsequence matching given key.

**Parameters:**

*x* Key of (key, value) pairs to be located.

**Returns:**

Pair of read-only (constant) iterators that possibly points to the subsequence matching given key.

This function is equivalent to

```
std::make_pair(c.lower_bound(val),
 c.upper_bound(val))
```

(but is faster than making the calls separately).

Definition at line 742 of file stl\_multimap.h.

**5.594.3.13** `template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp>>> std::pair<iterator, iterator> std::multimap<_Key, _Tp, _Compare, _Alloc >::equal_range (const key_type & __x) [inline]`

Finds a subsequence matching given key.

**Parameters:**

*x* Key of (key, value) pairs to be located.

**Returns:**

Pair of iterators that possibly points to the subsequence matching given key.

This function is equivalent to

```
std::make_pair(c.lower_bound(val),
 c.upper_bound(val))
```

(but is faster than making the calls separately).

Definition at line 725 of file stl\_multimap.h.

## 5.594 std::multimap< \_Key, \_Tp, \_Compare, \_Alloc > Class Template Reference

**5.594.3.14** `template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp>>> iterator std::multimap<_Key, _Tp, _Compare, _Alloc>::erase(iterator __first, iterator __last) [inline]`

Erases a [first,last) range of elements from a multimap.

### Parameters:

*first* Iterator pointing to the start of the range to be erased.

*last* Iterator pointing to the end of the range to be erased.

### Returns:

The iterator *last*.

This function erases a sequence of elements from a multimap. Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 558 of file stl\_multimap.h.

**5.594.3.15** `template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp>>> size_type std::multimap<_Key, _Tp, _Compare, _Alloc>::erase(const key_type & __x) [inline]`

Erases elements according to the provided key.

### Parameters:

*x* Key of element to be erased.

### Returns:

The number of elements erased.

This function erases all elements located by the given key from a multimap. Note that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 539 of file stl\_multimap.h.

```
5.594.3.16 template<typename _Key, typename _Tp, typename _Compare =
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const
_Key, _Tp>>> iterator std::multimap<_Key, _Tp, _Compare,
_Alloc >::erase (iterator __position) [inline]
```

Erases an element from a multimap.

**Parameters:**

*position* An [iterator](#) pointing to the element to be erased.

**Returns:**

An [iterator](#) pointing to the element immediately following *position* prior to the element being erased. If no such element exists, [end\(\)](#) is returned.

This function erases an element, pointed to by the given [iterator](#), from a multimap. Note that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 509 of file `stl_multimap.h`.

```
5.594.3.17 template<typename _Key, typename _Tp, typename _Compare =
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const
_Key, _Tp>>> const_iterator std::multimap<_Key, _Tp,
_Compare, _Alloc >::find (const key_type & __x) const [inline]
```

Tries to locate an element in a multimap.

**Parameters:**

*x* Key of (key, value) [pair](#) to be located.

**Returns:**

Read-only (constant) [iterator](#) pointing to sought-after element, or [end\(\)](#) if not found.

This function takes a key and tries to locate the element with which the key matches. If successful the function returns a constant [iterator](#) pointing to the sought after pair. If unsuccessful it returns the past-the-end ( [end\(\)](#) ) [iterator](#).

Definition at line 649 of file `stl_multimap.h`.

## 5.594 std::multimap< \_Key, \_Tp, \_Compare, \_Alloc > Class Template Reference

**5.594.3.18** `template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp>>> iterator std::multimap< _Key, _Tp, _Compare, _Alloc >::find (const key_type & __x) [inline]`

Tries to locate an element in a multimap.

### Parameters:

*x* Key of (key, value) pair to be located.

### Returns:

Iterator pointing to sought-after element, or `end()` if not found.

This function takes a key and tries to locate the element with which the key matches. If successful the function returns an iterator pointing to the sought after pair. If unsuccessful it returns the past-the-end (`end()`) iterator.

Definition at line 634 of file `stl_multimap.h`.

**5.594.3.19** `template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp>>> allocator_type std::multimap< _Key, _Tp, _Compare, _Alloc >::get_allocator () const [inline]`

Get a copy of the memory allocation object.

Definition at line 294 of file `stl_multimap.h`.

**5.594.3.20** `template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp>>> void std::multimap< _Key, _Tp, _Compare, _Alloc >::insert (initializer_list< value_type > __l) [inline]`

Attempts to insert a list of `std::pairs` into the multimap.

### Parameters:

*list* A `std::initializer_list<value_type>` of pairs to be inserted.

Complexity similar to that of the range constructor.

Definition at line 488 of file `stl_multimap.h`.

References `std::multimap< _Key, _Tp, _Compare, _Alloc >::insert()`.

Referenced by `std::multimap< _Key, _Tp, _Compare, _Alloc >::insert()`.

```
5.594.3.21 template<typename _Key, typename _Tp, typename _Compare =
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const
_Key, _Tp> >> template<typename _InputIterator > void
std::multimap< _Key, _Tp, _Compare, _Alloc >::insert
(_InputIterator __first, _InputIterator __last) [inline]
```

A template function that attempts to insert a range of elements.

**Parameters:**

*first* Iterator pointing to the start of the range to be inserted.

*last* Iterator pointing to the end of the range.

Complexity similar to that of the range constructor.

Definition at line 476 of file stl\_multimap.h.

```
5.594.3.22 template<typename _Key, typename _Tp, typename _Compare =
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const
_Key, _Tp> >> iterator std::multimap< _Key, _Tp, _Compare,
_Alloc >::insert (iterator __position, const value_type & __x)
[inline]
```

Inserts a `std::pair` into the multimap.

**Parameters:**

*position* An `iterator` that serves as a hint as to where the `pair` should be inserted.

*x* Pair to be inserted (see `std::make_pair` for easy creation of pairs).

**Returns:**

An `iterator` that points to the inserted (key,value) `pair`.

This function inserts a (key, value) `pair` into the multimap. Contrary to a `std::map` the multimap does not rely on unique keys and thus multiple pairs with the same key can be inserted. Note that the first parameter is only a hint and can potentially improve the performance of the insertion process. A bad hint would cause no gains in efficiency.

For more on *hinting*, see: <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt07ch17>

Insertion requires logarithmic time (if the hint is not taken).

Definition at line 462 of file stl\_multimap.h.

## 5.594 `std::multimap<_Key, _Tp, _Compare, _Alloc >` Class Template Reference

**5.594.3.23** `template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp>>> iterator std::multimap<_Key, _Tp, _Compare, _Alloc >::insert (const value_type & __x) [inline]`

Inserts a `std::pair` into the multimap.

### Parameters:

`x` Pair to be inserted (see `std::make_pair` for easy creation of pairs).

### Returns:

An `iterator` that points to the inserted (key,value) `pair`.

This function inserts a (key, value) `pair` into the multimap. Contrary to a `std::map` the multimap does not rely on unique keys and thus multiple pairs with the same key can be inserted.

Insertion requires logarithmic time.

Definition at line 438 of file `stl_multimap.h`.

**5.594.3.24** `template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp>>> key_compare std::multimap<_Key, _Tp, _Compare, _Alloc >::key_comp () const [inline]`

Returns the key comparison object out of which the multimap was constructed.

Definition at line 610 of file `stl_multimap.h`.

**5.594.3.25** `template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp>>> const_iterator std::multimap<_Key, _Tp, _Compare, _Alloc >::lower_bound (const key_type & __x) const [inline]`

Finds the beginning of a subsequence matching given key.

### Parameters:

`x` Key of (key, value) `pair` to be located.

### Returns:

Read-only (constant) `iterator` pointing to first element equal to or `greater` than key, or `end()`.

This function returns the first element of a subsequence of elements that matches the given key. If unsuccessful the [iterator](#) will point to the next greatest element or, if no such [greater](#) element exists, to [end\(\)](#).

Definition at line 688 of file `stl_multimap.h`.

```
5.594.3.26 template<typename _Key, typename _Tp, typename _Compare =
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const
_Key, _Tp> >> iterator std::multimap< _Key, _Tp, _Compare,
_Alloc >::lower_bound (const key_type & __x) [inline]
```

Finds the beginning of a subsequence matching given key.

**Parameters:**

*x* Key of (key, value) [pair](#) to be located.

**Returns:**

Iterator pointing to first element equal to or [greater](#) than key, or [end\(\)](#).

This function returns the first element of a subsequence of elements that matches the given key. If unsuccessful it returns an [iterator](#) pointing to the first element that has a [greater](#) value than given key or [end\(\)](#) if no such element exists.

Definition at line 673 of file `stl_multimap.h`.

```
5.594.3.27 template<typename _Key, typename _Tp, typename _Compare =
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const
_Key, _Tp> >> size_type std::multimap< _Key, _Tp, _Compare,
_Alloc >::max_size () const [inline]
```

Returns the maximum size of the multimap.

Definition at line 421 of file `stl_multimap.h`.

```
5.594.3.28 template<typename _Key, typename _Tp, typename _Compare =
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const
_Key, _Tp> >> multimap& std::multimap< _Key, _Tp, _Compare,
_Alloc >::operator= (initializer_list< value_type > __l) [inline]
```

Multimap [list](#) assignment operator.

**Parameters:**

*l* An [initializer\\_list](#).

## 5.594 `std::multimap<_Key, _Tp, _Compare, _Alloc >` Class Template Reference

This function fills a multimap with copies of the elements in the initializer [list](#) *l*.

Note that the assignment completely changes the multimap and that the resulting multimap's size is the same as the number of elements assigned. Old data may be lost.

Definition at line 284 of file `stl_multimap.h`.

```
5.594.3.29 template<typename _Key, typename _Tp, typename _Compare =
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const
_Key, _Tp>>> multimap& std::multimap<_Key, _Tp, _Compare,
_Alloc >::operator=(multimap<_Key, _Tp, _Compare, _Alloc >
&& __x) [inline]
```

Multimap move assignment operator.

### Parameters:

*x* A multimap of identical element and [allocator](#) types.

The contents of *x* are moved into this [multimap](#) (without copying). *x* is a valid, but unspecified [multimap](#).

Definition at line 263 of file `stl_multimap.h`.

References `std::swap()`.

```
5.594.3.30 template<typename _Key, typename _Tp, typename _Compare =
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const
_Key, _Tp>>> multimap& std::multimap<_Key, _Tp, _Compare,
_Alloc >::operator=(const multimap<_Key, _Tp, _Compare,
_Alloc > & __x) [inline]
```

Multimap assignment operator. The dtor only erases the elements, and note that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

### Parameters:

*x* A multimap of identical element and [allocator](#) types.

All the elements of *x* are copied, but unlike the copy constructor, the [allocator](#) object is not copied.

Definition at line 248 of file `stl_multimap.h`.

**5.594.3.31** `template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp>>> const_reverse_iterator std::multimap<_Key, _Tp, _Compare, _Alloc >::rbegin () const [inline]`

Returns a read-only (constant) reverse [iterator](#) that points to the last [pair](#) in the multimap. Iteration is done in descending order according to the keys.

Definition at line 349 of file `stl_multimap.h`.

**5.594.3.32** `template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp>>> reverse_iterator std::multimap<_Key, _Tp, _Compare, _Alloc >::rbegin () [inline]`

Returns a read/write reverse [iterator](#) that points to the last [pair](#) in the multimap. Iteration is done in descending order according to the keys.

Definition at line 340 of file `stl_multimap.h`.

**5.594.3.33** `template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp>>> const_reverse_iterator std::multimap<_Key, _Tp, _Compare, _Alloc >::rend () const [inline]`

Returns a read-only (constant) reverse [iterator](#) that points to one before the first [pair](#) in the multimap. Iteration is done in descending order according to the keys.

Definition at line 367 of file `stl_multimap.h`.

**5.594.3.34** `template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp>>> reverse_iterator std::multimap<_Key, _Tp, _Compare, _Alloc >::rend () [inline]`

Returns a read/write reverse [iterator](#) that points to one before the first [pair](#) in the multimap. Iteration is done in descending order according to the keys.

Definition at line 358 of file `stl_multimap.h`.

## 5.594 `std::multimap<_Key, _Tp, _Compare, _Alloc >` Class Template Reference

**5.594.3.35** `template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp>>> size_type std::multimap<_Key, _Tp, _Compare, _Alloc >::size () const [inline]`

Returns the size of the multimap.

Definition at line 416 of file `stl_multimap.h`.

**5.594.3.36** `template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp>>> void std::multimap<_Key, _Tp, _Compare, _Alloc >::swap (multimap<_Key, _Tp, _Compare, _Alloc > & __x) [inline]`

Swaps data with another multimap.

### Parameters:

*x* A multimap of the same element and [allocator](#) types.

This exchanges the elements between two multimaps in constant time. (It is only swapping a pointer, an integer, and an instance of the `Compare` type (which itself is often stateless and empty), so it should be quite fast.) Note that the global `std::swap()` function is specialized such that `std::swap(m1,m2)` will feed to this function.

Definition at line 591 of file `stl_multimap.h`.

Referenced by `std::swap()`.

**5.594.3.37** `template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp>>> const_iterator std::multimap<_Key, _Tp, _Compare, _Alloc >::upper_bound (const key_type & __x) const [inline]`

Finds the end of a subsequence matching given key.

### Parameters:

*x* Key of (key, value) [pair](#) to be located.

### Returns:

Read-only (constant) [iterator](#) pointing to first [iterator](#) greater than key, or `end()`.

Definition at line 708 of file `stl_multimap.h`.

**5.594.3.38** `template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp>>> iterator std::multimap<_Key, _Tp, _Compare, _Alloc >::upper_bound (const key_type & __x) [inline]`

Finds the end of a subsequence matching given key.

**Parameters:**

*x* Key of (key, value) [pair](#) to be located.

**Returns:**

Iterator pointing to the first element [greater](#) than key, or [end\(\)](#).

Definition at line 698 of file `stl_multimap.h`.

**5.594.3.39** `template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp>>> value_compare std::multimap<_Key, _Tp, _Compare, _Alloc >::value_comp () const [inline]`

Returns a value comparison object, built from the key comparison object out of which the multimap was constructed.

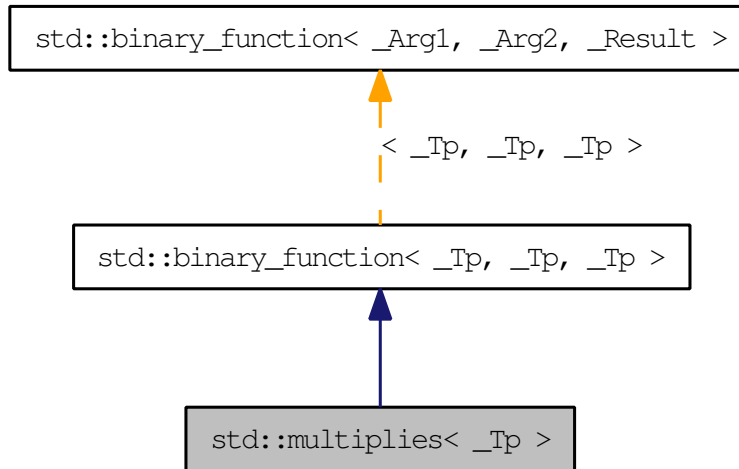

Definition at line 618 of file `stl_multimap.h`.

### 5.596.1 Detailed Description

```
template<typename _Key, typename _Compare = std::less<_Key>, typename _
Alloc = std::allocator<_Key>> class std::multiset< _Key, _Compare, _Alloc >
```

A standard container made up of elements, which can be retrieved in logarithmic time. Meets the requirements of a [container](#), a [reversible container](#), and an [associative container](#) (using equivalent keys). For a `multiset<Key>` the `key_type` and `value_type` are `Key`.

Multisets support bidirectional iterators.

The private tree data is declared exactly the same way for [set](#) and [multiset](#); the distinction is made entirely in how the tree functions are called (`*_unique` versus `*_equal`, same as the standard).

Definition at line 84 of file `stl_multiset.h`.

### 5.596.2 Constructor & Destructor Documentation

```
5.596.2.1 template<typename _Key, typename _Compare = std::less<_Key>,
typename _Alloc = std::allocator<_Key>> std::multiset< _Key,
_Compare, _Alloc >::multiset () [inline]
```

Default constructor creates no elements.

Definition at line 129 of file `stl_multiset.h`.

```
5.596.2.2 template<typename _Key, typename _Compare = std::less<_Key>,
typename _Alloc = std::allocator<_Key>> std::multiset< _Key,
_Compare, _Alloc >::multiset (const _Compare & __comp, const
allocator_type & __a = allocator_type ()) [inline,
explicit]
```

Creates a multiset with no elements.

#### Parameters:

*comp* Comparator to use.

*a* An [allocator](#) object.

Definition at line 138 of file `stl_multiset.h`.

**5.596.2.3** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> template<typename  
_InputIterator > std::multiset<_Key, _Compare, _Alloc >::multiset  
(_InputIterator __first, _InputIterator __last) [inline]`

Builds a multiset from a range.

**Parameters:**

*first* An input [iterator](#).

*last* An input [iterator](#).

Create a multiset consisting of copies of the elements from [first,last). This is linear in N if the range is already sorted, and NlogN otherwise (where N is distance(first,last)).

Definition at line 152 of file stl\_multiset.h.

**5.596.2.4** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> template<typename  
_InputIterator > std::multiset<_Key, _Compare, _Alloc >::multiset  
(_InputIterator __first, _InputIterator __last, const _Compare &  
__comp, const allocator_type & __a = allocator_type())  
[inline]`

Builds a multiset from a range.

**Parameters:**

*first* An input [iterator](#).

*last* An input [iterator](#).

*comp* A comparison functor.

*a* An [allocator](#) object.

Create a multiset consisting of copies of the elements from [first,last). This is linear in N if the range is already sorted, and NlogN otherwise (where N is distance(first,last)).

Definition at line 168 of file stl\_multiset.h.

**5.596.2.5** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> std::multiset<_Key,  
_Compare, _Alloc >::multiset (const multiset<_Key, _Compare,  
_Alloc > & __x) [inline]`

Multiset copy constructor.

## 5.596 std::multiset< \_Key, \_Compare, \_Alloc > Class Template Reference 2995

### Parameters:

*x* A multiset of identical element and [allocator](#) types.

The newly-created multiset uses a copy of the allocation object used by *x*.

Definition at line 181 of file `stl_multiset.h`.

```
5.596.2.6 template<typename _Key, typename _Compare = std::less<_Key>,
 typename _Alloc = std::allocator<_Key>> std::multiset<_Key,
 _Compare, _Alloc >::multiset (multiset<_Key, _Compare, _Alloc >
 && __x) [inline]
```

Multiset move constructor.

### Parameters:

*x* A multiset of identical element and [allocator](#) types.

The newly-created multiset contains the exact contents of *x*. The contents of *x* are a valid, but unspecified multiset.

Definition at line 192 of file `stl_multiset.h`.

```
5.596.2.7 template<typename _Key, typename _Compare = std::less<_Key>,
 typename _Alloc = std::allocator<_Key>> std::multiset<_Key,
 _Compare, _Alloc >::multiset (initializer_list< value_type > __l,
 const _Compare & __comp = _Compare(), const allocator_type &
 __a = allocator_type()) [inline]
```

Builds a multiset from an [initializer\\_list](#).

### Parameters:

*l* An [initializer\\_list](#).

*comp* A comparison functor.

*a* An [allocator](#) object.

Create a multiset consisting of copies of the elements from the [list](#). This is linear in N if the [list](#) is already sorted, and NlogN otherwise (where N is *l.size()*).

Definition at line 205 of file `stl_multiset.h`.

### 5.596.3 Member Function Documentation

**5.596.3.1** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> iterator std::multiset<  
_Key, _Compare, _Alloc >::begin () const [inline]`

Returns a read-only (constant) [iterator](#) that points to the first element in the multiset. Iteration is done in ascending order according to the keys.

Definition at line 285 of file `stl_multiset.h`.

**5.596.3.2** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> iterator std::multiset<  
_Key, _Compare, _Alloc >::cbegin () const [inline]`

Returns a read-only (constant) [iterator](#) that points to the first element in the multiset. Iteration is done in ascending order according to the keys.

Definition at line 322 of file `stl_multiset.h`.

**5.596.3.3** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> iterator std::multiset<  
_Key, _Compare, _Alloc >::cend () const [inline]`

Returns a read-only (constant) [iterator](#) that points one past the last element in the multiset. Iteration is done in ascending order according to the keys.

Definition at line 331 of file `stl_multiset.h`.

**5.596.3.4** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> void std::multiset< _Key,  
_Compare, _Alloc >::clear () [inline]`

Erases all elements in a multiset. Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 541 of file `stl_multiset.h`.

**5.596.3.5** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> size_type std::multiset<  
_Key, _Compare, _Alloc >::count (const key_type & __x) const  
[inline]`

Finds the number of elements with given key.

## 5.596 std::multiset< \_Key, \_Compare, \_Alloc > Class Template Reference 2997

### Parameters:

*x* Key of elements to be located.

### Returns:

Number of elements with specified key.

Definition at line 552 of file stl\_multiset.h.

**5.596.3.6** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> reverse_iterator  
std::multiset< _Key, _Compare, _Alloc >::crbegin () const  
[inline]`

Returns a read-only (constant) reverse [iterator](#) that points to the last element in the multiset. Iteration is done in descending order according to the keys.

Definition at line 340 of file stl\_multiset.h.

**5.596.3.7** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> reverse_iterator  
std::multiset< _Key, _Compare, _Alloc >::crend () const  
[inline]`

Returns a read-only (constant) reverse [iterator](#) that points to the last element in the multiset. Iteration is done in descending order according to the keys.

Definition at line 349 of file stl\_multiset.h.

**5.596.3.8** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> bool std::multiset< _Key,  
_Compare, _Alloc >::empty () const [inline]`

Returns true if the set is empty.

Definition at line 355 of file stl\_multiset.h.

**5.596.3.9** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> iterator std::multiset<  
_Key, _Compare, _Alloc >::end () const [inline]`

Returns a read-only (constant) [iterator](#) that points one past the last element in the multiset. Iteration is done in ascending order according to the keys.

Definition at line 294 of file stl\_multiset.h.

**5.596.3.10** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> std::pair<const_iterator,  
const_iterator> std::multiset<_Key, _Compare, _Alloc  
>::equal_range (const key_type & __x) const [inline]`

Finds a subsequence matching given key.

**Parameters:**

*x* Key to be located.

**Returns:**

Pair of iterators that possibly points to the subsequence matching given key.

This function is equivalent to

```
std::make_pair(c.lower_bound(val),
 c.upper_bound(val))
```

(but is faster than making the calls separately).

This function probably only makes sense for multisets.

Definition at line 636 of file stl\_multiset.h.

**5.596.3.11** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> std::pair<iterator,  
iterator> std::multiset<_Key, _Compare, _Alloc >::equal_range  
(const key_type & __x) [inline]`

Finds a subsequence matching given key.

**Parameters:**

*x* Key to be located.

**Returns:**

Pair of iterators that possibly points to the subsequence matching given key.

This function is equivalent to

```
std::make_pair(c.lower_bound(val),
 c.upper_bound(val))
```

(but is faster than making the calls separately).

This function probably only makes sense for multisets.

Definition at line 632 of file stl\_multiset.h.

## 5.596 std::multiset< \_Key, \_Compare, \_Alloc > Class Template Reference 2999

**5.596.3.12** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> iterator std::multiset<  
_Key, _Compare, _Alloc >::erase (iterator __first, iterator __last)  
[inline]`

Erases a [first,last) range of elements from a multiset.

### **Parameters:**

*first* Iterator pointing to the start of the range to be erased.

*last* Iterator pointing to the end of the range to be erased.

### **Returns:**

The iterator *last*.

This function erases a sequence of elements from a multiset. Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 515 of file stl\_multiset.h.

**5.596.3.13** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> size_type std::multiset<  
_Key, _Compare, _Alloc >::erase (const key_type & __x)  
[inline]`

Erases elements according to the provided key.

### **Parameters:**

*x* Key of element to be erased.

### **Returns:**

The number of elements erased.

This function erases all elements located by the given key from a multiset. Note that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 496 of file stl\_multiset.h.

**5.596.3.14** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> iterator std::multiset<  
_Key, _Compare, _Alloc >::erase (iterator __position) [inline]`

Erases an element from a multiset.

**Parameters:**

*position* An [iterator](#) pointing to the element to be erased.

**Returns:**

An [iterator](#) pointing to the element immediately following *position* prior to the element being erased. If no such element exists, `end()` is returned.

This function erases an element, pointed to by the given [iterator](#), from a multiset. Note that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 466 of file `stl_multiset.h`.

**5.596.3.15** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> const_iterator  
std::multiset<_Key, _Compare, _Alloc >::find (const key_type &  
__x) const [inline]`

Finds a subsequence matching given key.

**Parameters:**

*x* Key to be located.

**Returns:**

Pair of iterators that possibly points to the subsequence matching given key.

This function is equivalent to

```
std::make_pair(c.lower_bound(val),
 c.upper_bound(val))
```

(but is faster than making the calls separately).

This function probably only makes sense for multisets.

Definition at line 574 of file `stl_multiset.h`.

## 5.596 std::multiset< \_Key, \_Compare, \_Alloc > Class Template Reference 3001

**5.596.3.16** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> iterator std::multiset<  
_Key, _Compare, _Alloc >::find (const key_type & __x) [inline]`

Tries to locate an element in a set.

### Parameters:

*x* Element to be located.

### Returns:

Iterator pointing to sought-after element, or `end()` if not found.

This function takes a key and tries to locate the element with which the key matches. If successful the function returns an [iterator](#) pointing to the sought after element. If unsuccessful it returns the past-the-end ( `end ()` ) [iterator](#).

Definition at line 570 of file `stl_multiset.h`.

**5.596.3.17** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> allocator_type  
std::multiset< _Key, _Compare, _Alloc >::get_allocator () const  
[inline]`

Returns the memory allocation object.

Definition at line 276 of file `stl_multiset.h`.

**5.596.3.18** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> void std::multiset<  
_Key, _Compare, _Alloc >::insert (initializer_list< value_type >  
__l) [inline]`

Attempts to insert a [list](#) of elements into the multiset.

### Parameters:

*list* A `std::initializer_list<value_type>` of elements to be inserted.

Complexity similar to that of the range constructor.

Definition at line 445 of file `stl_multiset.h`.

References `std::multiset< _Key, _Compare, _Alloc >::insert()`.

Referenced by `std::multiset< _Key, _Compare, _Alloc >::insert()`.

```
5.596.3.19 template<typename _Key, typename _Compare = std::less<_Key>,
typename _Alloc = std::allocator<_Key>> template<typename
_InputIterator > void std::multiset<_Key, _Compare, _Alloc
>::insert (_InputIterator __first, _InputIterator __last) [inline]
```

A template function that tries to insert a range of elements.

**Parameters:**

*first* Iterator pointing to the start of the range to be inserted.

*last* Iterator pointing to the end of the range.

Complexity similar to that of the range constructor.

Definition at line 433 of file stl\_multiset.h.

```
5.596.3.20 template<typename _Key, typename _Compare = std::less<_Key>,
typename _Alloc = std::allocator<_Key>> iterator std::multiset<
_Key, _Compare, _Alloc >::insert (iterator __position, const
value_type & __x) [inline]
```

Inserts an element into the multiset.

**Parameters:**

*position* An [iterator](#) that serves as a hint as to where the element should be inserted.

*x* Element to be inserted.

**Returns:**

An [iterator](#) that points to the inserted element.

This function inserts an element into the multiset. Contrary to a [std::set](#) the multiset does not rely on unique keys and thus multiple copies of the same element can be inserted.

Note that the first parameter is only a hint and can potentially improve the performance of the insertion process. A bad hint would cause no gains in efficiency.

See <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt07ch17.html> for more on *hinting*.

Insertion requires logarithmic time (if the hint is not taken).

Definition at line 420 of file stl\_multiset.h.

**5.596.3.21** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> iterator std::multiset<  
_Key, _Compare, _Alloc >::insert (const value_type & __x)  
[inline]`

Inserts an element into the multiset.

**Parameters:**

*x* Element to be inserted.

**Returns:**

An [iterator](#) that points to the inserted element.

This function inserts an element into the multiset. Contrary to a [std::set](#) the multiset does not rely on unique keys and thus multiple copies of the same element can be inserted.

Insertion requires logarithmic time.

Definition at line 396 of file `stl_multiset.h`.

**5.596.3.22** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> key_compare  
std::multiset<_Key, _Compare, _Alloc >::key_comp () const  
[inline]`

Returns the comparison object.

Definition at line 268 of file `stl_multiset.h`.

**5.596.3.23** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> const_iterator  
std::multiset<_Key, _Compare, _Alloc >::lower_bound (const  
key_type & __x) const [inline]`

Finds a subsequence matching given key.

**Parameters:**

*x* Key to be located.

**Returns:**

Pair of iterators that possibly points to the subsequence matching given key.

This function is equivalent to

```
std::make_pair(c.lower_bound(val),
 c.upper_bound(val))
```

(but is faster than making the calls separately).

This function probably only makes sense for multisets.

Definition at line 595 of file stl\_multiset.h.

**5.596.3.24** `template<typename _Key, typename _Compare = std::less<_Key>,
typename _Alloc = std::allocator<_Key>> iterator std::multiset<
_Key, _Compare, _Alloc >::lower_bound (const key_type & __x)
[inline]`

Finds the beginning of a subsequence matching given key.

**Parameters:**

*x* Key to be located.

**Returns:**

Iterator pointing to first element equal to or [greater](#) than key, or [end\(\)](#).

This function returns the first element of a subsequence of elements that matches the given key. If unsuccessful it returns an [iterator](#) pointing to the first element that has a [greater](#) value than given key or [end\(\)](#) if no such element exists.

Definition at line 591 of file stl\_multiset.h.

**5.596.3.25** `template<typename _Key, typename _Compare = std::less<_Key>,
typename _Alloc = std::allocator<_Key>> size_type std::multiset<
_Key, _Compare, _Alloc >::max_size () const [inline]`

Returns the maximum size of the set.

Definition at line 365 of file stl\_multiset.h.

**5.596.3.26** `template<typename _Key, typename _Compare = std::less<_Key>,
typename _Alloc = std::allocator<_Key>> multiset&
std::multiset< _Key, _Compare, _Alloc >::operator=
(initializer_list< value_type > __l) [inline]`

Multiset [list](#) assignment operator.

**Parameters:**

*l* An [initializer\\_list](#).

## 5.596 std::multiset< \_Key, \_Compare, \_Alloc > Class Template Reference 3005

This function fills a multiset with copies of the elements in the initializer [list l](#).

Note that the assignment completely changes the multiset and that the resulting multiset's size is the same as the number of elements assigned. Old data may be lost.

Definition at line 256 of file stl\_multiset.h.

```
5.596.3.27 template<typename _Key, typename _Compare = std::less<_Key>,
typename _Alloc = std::allocator<_Key>> multiset&
std::multiset< _Key, _Compare, _Alloc >::operator= (multiset<
_Key, _Compare, _Alloc > && __x) [inline]
```

Multiset move assignment operator.

### Parameters:

*x* A multiset of identical element and [allocator](#) types.

The contents of *x* are moved into this multiset (without copying). *x* is a valid, but unspecified multiset.

Definition at line 235 of file stl\_multiset.h.

References [std::swap\(\)](#).

```
5.596.3.28 template<typename _Key, typename _Compare = std::less<_Key>,
typename _Alloc = std::allocator<_Key>> multiset&
std::multiset< _Key, _Compare, _Alloc >::operator= (const
multiset< _Key, _Compare, _Alloc > & __x) [inline]
```

Multiset assignment operator.

### Parameters:

*x* A multiset of identical element and [allocator](#) types.

All the elements of *x* are copied, but unlike the copy constructor, the [allocator](#) object is not copied.

Definition at line 220 of file stl\_multiset.h.

```
5.596.3.29 template<typename _Key, typename _Compare = std::less<_Key>,
typename _Alloc = std::allocator<_Key>> reverse_iterator
std::multiset< _Key, _Compare, _Alloc >::rbegin () const
[inline]
```

Returns a read-only (constant) reverse [iterator](#) that points to the last element in the multiset. Iteration is done in descending order according to the keys.

Definition at line 303 of file `stl_multiset.h`.

**5.596.3.30** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> reverse_iterator  
std::multiset< _Key, _Compare, _Alloc >::rend () const  
[inline]`

Returns a read-only (constant) reverse [iterator](#) that points to the last element in the multiset. Iteration is done in descending order according to the keys.

Definition at line 312 of file `stl_multiset.h`.

**5.596.3.31** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> size_type std::multiset<  
_Key, _Compare, _Alloc >::size () const [inline]`

Returns the size of the set.

Definition at line 360 of file `stl_multiset.h`.

**5.596.3.32** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> void std::multiset<  
_Key, _Compare, _Alloc >::swap (multiset< _Key, _Compare,  
_Alloc > & __x) [inline]`

Swaps data with another multiset.

**Parameters:**

`x` A multiset of the same element and [allocator](#) types.

This exchanges the elements between two multisets in constant time. (It is only swapping a pointer, an integer, and an instance of the `Compare` type (which itself is often stateless and empty), so it should be quite fast.) Note that the global `std::swap()` function is specialized such that `std::swap(s1,s2)` will feed to this function.

Definition at line 380 of file `stl_multiset.h`.

Referenced by `std::swap()`.

**5.596.3.33** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> const_iterator  
std::multiset< _Key, _Compare, _Alloc >::upper_bound (const  
key_type & __x) const [inline]`

Finds a subsequence matching given key.

## 5.596 std::multiset< \_Key, \_Compare, \_Alloc > Class Template Reference 3007

### Parameters:

*x* Key to be located.

### Returns:

Pair of iterators that possibly points to the subsequence matching given key.

This function is equivalent to

```
std::make_pair(c.lower_bound(val),
 c.upper_bound(val))
```

(but is faster than making the calls separately).

This function probably only makes sense for multisets.

Definition at line 611 of file stl\_multiset.h.

**5.596.3.34** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> iterator std::multiset<  
_Key, _Compare, _Alloc >::upper_bound (const key_type & __x)  
[inline]`

Finds the end of a subsequence matching given key.

### Parameters:

*x* Key to be located.

### Returns:

Iterator pointing to the first element [greater](#) than key, or [end\(\)](#).

Definition at line 607 of file stl\_multiset.h.

**5.596.3.35** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> value_compare  
std::multiset< _Key, _Compare, _Alloc >::value_comp () const  
[inline]`

Returns the comparison object.

Definition at line 272 of file stl\_multiset.h.

## 5.596.4 Friends And Related Function Documentation

**5.596.4.1** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> template<typename  
_K1, typename _C1, typename _A1 > bool operator< (const  
multiset< _K1, _C1, _A1 > &, const multiset< _K1, _C1, _A1 > &)  
[friend]`

Finds a subsequence matching given key.

**Parameters:**

*x* Key to be located.

**Returns:**

Pair of iterators that possibly points to the subsequence matching given key.

This function is equivalent to

```
std::make_pair(c.lower_bound(val),
 c.upper_bound(val))
```

(but is faster than making the calls separately).

This function probably only makes sense for multisets.

**5.596.4.2** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> template<typename  
_K1, typename _C1, typename _A1 > bool operator==(const  
multiset< _K1, _C1, _A1 > &, const multiset< _K1, _C1, _A1 > &)  
[friend]`

Finds a subsequence matching given key.

**Parameters:**

*x* Key to be located.

**Returns:**

Pair of iterators that possibly points to the subsequence matching given key.

This function is equivalent to

```
std::make_pair(c.lower_bound(val),
 c.upper_bound(val))
```

## **5.596 std::multiset< \_Key, \_Compare, \_Alloc > Class Template Reference 3009**

(but is faster than making the calls separately).

This function probably only makes sense for multisets.

The documentation for this class was generated from the following file:

### 5.599.1 Detailed Description

```
template<typename _IntType = int> class std::negative_binomial_distribution<
_IntType >
```

A [negative\\_binomial\\_distribution](#) random number distribution. The formula for the negative binomial probability mass function is  $p(i) = \binom{n}{i} p^i (1-p)^{t-i}$  where  $t$  and  $p$  are the parameters of the distribution.

Definition at line 3340 of file random.h.

### 5.599.2 Member Typedef Documentation

**5.599.2.1** `template<typename _IntType = int> typedef _IntType  
std::negative_binomial_distribution< _IntType >::result_type`

The type of the range of the distribution.

Definition at line 3347 of file random.h.

### 5.599.3 Member Function Documentation

**5.599.3.1** `template<typename _IntType = int> _IntType  
std::negative_binomial_distribution< _IntType >::k () const  
[inline]`

Return the  $k$  parameter of the distribution.

Definition at line 3392 of file random.h.

**5.599.3.2** `template<typename _IntType = int> result_type  
std::negative_binomial_distribution< _IntType >::max () const  
[inline]`

Returns the least upper bound value of the distribution.

Definition at line 3428 of file random.h.

**5.599.3.3** `template<typename _IntType = int> result_type  
std::negative_binomial_distribution< _IntType >::min () const  
[inline]`

Returns the greatest lower bound value of the distribution.

Definition at line 3421 of file random.h.

**5.599.3.4** `template<typename _IntType = int> double  
std::negative_binomial_distribution< _IntType >::p () const  
[inline]`

Return the  $p$  parameter of the distribution.

Definition at line 3399 of file `random.h`.

**5.599.3.5** `template<typename _IntType = int> void std::negative_binomial_  
distribution< _IntType >::param (const param_type & __param)  
[inline]`

Sets the parameter `set` of the distribution.

**Parameters:**

`__param` The new parameter `set` of the distribution.

Definition at line 3414 of file `random.h`.

**5.599.3.6** `template<typename _IntType = int> param_type  
std::negative_binomial_distribution< _IntType >::param () const  
[inline]`

Returns the parameter `set` of the distribution.

Definition at line 3406 of file `random.h`.

**5.599.3.7** `template<typename _IntType = int> void  
std::negative_binomial_distribution< _IntType >::reset ()  
[inline]`

Resets the distribution state.

Definition at line 3385 of file `random.h`.

References `std::gamma_distribution< _RealType >::reset()`.

## 5.599.4 Friends And Related Function Documentation

**5.599.4.1** `template<typename _IntType = int> template<typename _IntType1 ,  
typename _CharT , typename _Traits > std::basic_ostream<_CharT,  
_Traits>& operator<<< (std::basic_ostream<_CharT, _Traits >  
&, const std::negative_binomial_distribution<_IntType1 > &)  
[friend]`

Inserts a `negative_binomial_distribution` random number distribution `__x` into the output stream `__os`.

**Parameters:**

`__os` An output stream.

`__x` A `negative_binomial_distribution` random number distribution.

**Returns:**

The output stream with the state of `__x` inserted or in an error state.

**5.599.4.2** `template<typename _IntType = int> template<typename _IntType1 ,  
typename _CharT , typename _Traits > std::basic_istream<_CharT,  
_Traits>& operator>>> (std::basic_istream<_CharT, _Traits > &,  
std::negative_binomial_distribution<_IntType1 > &) [friend]`

Extracts a `negative_binomial_distribution` random number distribution `__x` from the input stream `__is`.

**Parameters:**

`__is` An input stream.

`__x` A `negative_binomial_distribution` random number generator engine.

**Returns:**

The input stream with `__x` extracted or in an error state.

### 5.602.1 Detailed Description

`template<typename _RealType = double> class std::normal_distribution< _RealType >`

A normal continuous distribution for random numbers. The formula for the normal probability density function is

$$p(x|\mu, \sigma) = \frac{1}{\sigma\sqrt{2\pi}} e^{-\frac{x-\mu^2}{2\sigma^2}}$$

Definition at line 1813 of file random.h.

### 5.602.2 Member Typedef Documentation

**5.602.2.1** `template<typename _RealType = double> typedef _RealType std::normal_distribution< _RealType >::result_type`

The type of the range of the distribution.

Definition at line 1820 of file random.h.

### 5.602.3 Constructor & Destructor Documentation

**5.602.3.1** `template<typename _RealType = double> std::normal_distribution< _RealType >::normal_distribution (result_type __mean = result_type (0), result_type __stddev = result_type (1)) [inline, explicit]`

Constructs a normal distribution with parameters *mean* and standard deviation.

Definition at line 1853 of file random.h.

## 5.602.4 Member Function Documentation

**5.602.4.1** `template<typename _RealType = double> result_type  
std::normal_distribution<_RealType>::max() const [inline]`

Returns the least upper bound value of the distribution.

Definition at line 1910 of file `random.h`.

Referenced by `std::normal_distribution<result_type>::max()`.

**5.602.4.2** `template<typename _RealType = double> _RealType  
std::normal_distribution<_RealType>::mean() const [inline]`

Returns the mean of the distribution.

Definition at line 1874 of file `random.h`.

**5.602.4.3** `template<typename _RealType = double> result_type  
std::normal_distribution<_RealType>::min() const [inline]`

Returns the greatest lower bound value of the distribution.

Definition at line 1903 of file `random.h`.

Referenced by `std::normal_distribution<result_type>::min()`.

**5.602.4.4** `template<typename _RealType> template<typename  
_UniformRandomNumberGenerator> normal_distribution<  
_RealType>::result_type std::normal_distribution<_RealType  
>::operator()(_UniformRandomNumberGenerator & __urng, const  
param_type & __param) [inline]`

Polar method due to Marsaglia.

Devroye, L. Non-Uniform Random Variates Generation. Springer-Verlag, New York, 1986, Ch. V, Sect. 4.4.

Definition at line 1597 of file `random.tcc`.

References `std::log()`, and `std::sqrt()`.

**5.602.4.5** `template<typename _RealType = double> void  
std::normal_distribution<_RealType>::param(const param_type  
& __param) [inline]`

Sets the parameter `set` of the distribution.

**Parameters:**

`__param` The new parameter [set](#) of the distribution.

Definition at line 1896 of file random.h.

**5.602.4.6** `template<typename _RealType = double> param_type  
std::normal_distribution<_RealType >::param () const [inline]`

Returns the parameter [set](#) of the distribution.

Definition at line 1888 of file random.h.

**5.602.4.7** `template<typename _RealType = double> void  
std::normal_distribution<_RealType >::reset () [inline]`

Resets the distribution state.

Definition at line 1867 of file random.h.

Referenced by `std::poisson_distribution<_IntType >::reset()`, `std::binomial_distribution<_IntType >::reset()`, `std::student_t_distribution<_RealType >::reset()`, `std::gamma_distribution<result_type >::reset()`, and `std::lognormal_distribution<_RealType >::reset()`.

**5.602.4.8** `template<typename _RealType = double> _RealType  
std::normal_distribution<_RealType >::stddev () const [inline]`

Returns the standard deviation of the distribution.

Definition at line 1881 of file random.h.

**5.602.5 Friends And Related Function Documentation**

**5.602.5.1** `template<typename _RealType = double> template<typename  
_RealType1 , typename _CharT , typename _Traits >  
std::basic_ostream<_CharT, _Traits>& operator<<  
(std::basic_ostream<_CharT, _Traits > &, const  
std::normal_distribution<_RealType1 > &) [friend]`

Inserts a `normal_distribution` random number distribution `__x` into the output stream `__os`.

**Parameters:**

`__os` An output stream.

`__x` A `normal_distribution` random number distribution.

**Returns:**

The output stream with the state of `__x` inserted or in an error state.

**5.602.5.2** `template<typename _RealType = double> template<typename _RealType1, typename _CharT, typename _Traits> std::basic_istream<_CharT, _Traits>& operator>>(std::basic_istream<_CharT, _Traits> &, std::normal_distribution<_RealType1> &)`  
[**friend**]

Extracts a `normal_distribution` random number distribution `__x` from the input stream `__is`.

**Parameters:**

`__is` An input stream.

`__x` A `normal_distribution` random number generator engine.

**Returns:**

The input stream with `__x` extracted or in an error state.

### 5.605.1 Detailed Description

`template<typename _CharT, typename _InIter> class std::num_get< _CharT, _InIter >`

Primary class template `num_get`.

This facet encapsulates the code to parse and return a number from a string. It is used by the istream numeric extraction operators. The `num_get` template uses protected virtual functions to provide the actual results. The public accessors forward the call to the virtual functions. These virtual functions are hooks for developers to implement the behavior they require from the `num_get` facet.

Definition at line 1909 of file `locale_facets.h`.

### 5.605.2 Member Typedef Documentation

**5.605.2.1** `template<typename _CharT, typename _InIter > typedef _CharT std::num_get< _CharT, _InIter >::char_type`

Public typedefs.

Definition at line 1915 of file `locale_facets.h`.

**5.605.2.2** `template<typename _CharT, typename _InIter > typedef _InIter  
std::num_get< _CharT, _InIter >::iter_type`

Public typedefs.

Definition at line 1916 of file locale\_facets.h.

### 5.605.3 Constructor & Destructor Documentation

**5.605.3.1** `template<typename _CharT, typename _InIter > std::num_get<  
_CharT, _InIter >::num_get (size_t __refs = 0) [inline,  
explicit]`

Constructor performs initialization. This is the constructor provided by the standard.

#### Parameters:

*refs* Passed to the base facet class.

Definition at line 1930 of file locale\_facets.h.

**5.605.3.2** `template<typename _CharT, typename _InIter > virtual  
std::num_get< _CharT, _InIter >::~~num_get () [inline,  
protected, virtual]`

Destructor.

Definition at line 2099 of file locale\_facets.h.

### 5.605.4 Member Function Documentation

**5.605.4.1** `template<typename _CharT, typename _InIter > _InIter  
std::num_get< _CharT, _InIter >::do_get (iter_type __beg, iter_type

std::num_get< _CharT, _InIter >::do_get (iter_type __beg,  
iter_type __end, ios_base & __io, ios_base::iostate & __err, long &  
__v) const [inline, protected, virtual]`

Public typedefs.

Definition at line 2167 of file locale\_facets.h.

**5.605.4.11** `template<typename _CharT, typename _InIter > _InIter  
std::num_get< _CharT, _InIter >::do_get (iter_type __beg,  
iter_type __end, ios_base & __io, ios_base::iostate & __err, bool &  
__v) const [inline, protected, virtual]`

Numeric parsing. Parses the input stream into the variable *v*. This function is a hook for derived classes to change the value returned.

**See also:**

[get\(\)](#) for more details.

**Parameters:**

*in* Start of input stream.

*end* End of input stream.

*io* Source of [locale](#) and flags.

*err* Error flags to [set](#).

*v* Value to format and insert.

**Returns:**

Iterator after reading.

Definition at line 590 of file locale\_facets.tcc.

References [std::ios\\_base::\\_M\\_getloc\(\)](#), [std::ios\\_base::boolalpha](#), [std::ios\\_base::eofbit](#), [std::ios\\_base::failbit](#), [std::ios\\_base::flags\(\)](#), and [std::ios\\_base::goodbit](#).

Referenced by [std::num\\_get< \\_CharT, \\_InIter >::get\(\)](#).

**5.605.4.12** `template<typename _CharT, typename _InIter > iter_type  
std::num_get< _CharT, _InIter >::get (iter_type __in, iter_type  
__end, ios_base & __io, ios_base::iostate & __err, void *& __v)  
const [inline]`

Numeric parsing. Parses the input stream into the pointer variable *v*. It does so by calling [num\\_get::do\\_get\(\)](#).

The input characters are parsed like the `scanf p` specifier.

Digit grouping is interpreted according to [numpunct::grouping\(\)](#) and [numpunct::thousands\\_sep\(\)](#). If the pattern of digit groups isn't consistent, sets err to [ios\\_base::failbit](#).

Note that the digit grouping effect for pointers is a bit ambiguous in the standard and shouldn't be relied on. See DR 344.

If parsing the string yields a valid value for *v*, *v* is [set](#). Otherwise, sets err to [ios\\_base::failbit](#) and leaves *v* unaltered. Sets err to [ios\\_base::eofbit](#) if the stream is emptied.

**Parameters:**

- in* Start of input stream.
- end* End of input stream.
- io* Source of [locale](#) and flags.
- err* Error flags to [set](#).
- v* Value to format and insert.

**Returns:**

Iterator after reading.

Definition at line 2093 of file `locale_facets.h`.

References `std::num_get<_CharT, _InIter >::do_get()`.

**5.605.4.13** `template<typename _CharT, typename _InIter > iter_type  
std::num_get<_CharT, _InIter >::get(iter_type __in, iter_type

__end, ios_base & __io, ios_base::iostate & __err, double & __v)  
const [inline]`

Public typedefs.

Definition at line 2056 of file `locale_facets.h`.

References `std::num_get<_CharT, _InIter >::do_get()`.

**5.605.4.15** `template<typename _CharT, typename _InIter > iter_type  
std::num_get<_CharT, _InIter >::get(iter_type __in, iter_type  
__end, ios_base & __io, ios_base::iostate & __err, float & __v)  
const [inline]`

Numeric parsing. Parses the input stream into the integral variable *v*. It does so by calling `num_get::do_get()`.

The input characters are parsed like the scanf g specifier. The matching type length modifier is also used.

The **decimal** point character used is `num_punct::decimal_point()`. Digit grouping is interpreted according to `num_punct::grouping()` and `num_punct::thousands_sep()`. If the pattern of digit groups isn't consistent, sets `err` to `ios_base::failbit`.

If parsing the string yields a valid value for `v`, `v` is `set`. Otherwise, sets `err` to `ios_base::failbit` and leaves `v` unaltered. Sets `err` to `ios_base::eofbit` if the stream is emptied.

**Parameters:**

*in* Start of input stream.

*end* End of input stream.

*io* Source of `locale` and flags.

*err* Error flags to `set`.

*v* Value to format and insert.

**Returns:**

Iterator after reading.

**5.605.4.20** `template<typename _CharT , typename _InIter > iter_type  
std::num_get< _CharT, _InIter >::get (iter_type __in, iter_type  
__end, ios_base & __io, ios_base::iostate & __err, unsigned short &  
__v) const [inline]`

Public typedefs.

Definition at line 1997 of file locale\_facets.h.

References `std::num_get< _CharT, _InIter >::do_get()`.

**5.605.4.21** `template<typename _CharT , typename _InIter > iter_type  
std::num_get< _CharT, _InIter >::get (iter_type __in, iter_type  
__end, ios_base & __io, ios_base::iostate & __err, long & __v)  
const [inline]`

Numeric parsing. Parses the input stream into the integral variable *v*. It does so by calling `num_get::do_get()`.

Parsing is affected by the flag settings in *io*.

The basic parse is affected by the value of `io.flags()` & `ios_base::basefield`. If equal to `ios_base::oct`, parses like the `scanf` `o` specifier. Else if equal to `ios_base::hex`, parses like `X` specifier. Else if `basefield` equal to 0, parses like the `i` specifier. Otherwise, parses like `d` for signed and `u` for unsigned types. The matching type length modifier is also used.

Digit grouping is interpreted according to [numpunct::grouping\(\)](#) and [numpunct::thousands\\_sep\(\)](#). If the pattern of digit groups isn't consistent, sets err to [ios\\_base::failbit](#).

If parsing the string yields a valid value for *v*, *v* is [set](#). Otherwise, sets err to [ios\\_base::failbit](#) and leaves *v* unaltered. Sets err to [ios\\_base::eofbit](#) if the stream is emptied.

**Parameters:**

- in* Start of input stream.
- end* End of input stream.
- io* Source of [locale](#) and flags.
- err* Error flags to [set](#).
- v* Value to format and insert.

**Returns:**

- Iterator after reading.

Definition at line 1992 of file locale\_facets.h.

References [std::num\\_get< \\_CharT, \\_InIter >::do\\_get\(\)](#).

```
5.605.4.22 template<typename _CharT, typename _InIter > iter_type
std::num_get< _CharT, _InIter >::get(iter_type __in, iter_type
__end, ios_base & __io, ios_base::iostate & __err, bool & __v)
const [inline]
```

Numeric parsing. Parses the input stream into the bool *v*. It does so by calling [num\\_get::do\\_get\(\)](#).

If [ios\\_base::boolalpha](#) is [set](#), attempts to read `cctype<CharT>::truenamename()` or `cctype<CharT>::falsenamename()`. Sets *v* to true or false if successful. Sets err to [ios\\_base::failbit](#) if reading the string fails. Sets err to [ios\\_base::eofbit](#) if the stream is emptied.

If [ios\\_base::boolalpha](#) is not [set](#), proceeds as with reading a long, except if the value is 1, sets *v* to true, if the value is 0, sets *v* to false, and otherwise [set](#) err to [ios\\_base::failbit](#).

**Parameters:**

- in* Start of input stream.
- end* End of input stream.
- io* Source of [locale](#) and flags.
- err* Error flags to [set](#).
- v* Value to format and insert.

**Returns:**

Iterator after reading.

Definition at line 1956 of file locale\_facets.h.

### 5.606.1 Detailed Description

**template<typename \_CharT, typename \_OutIter> class std::num\_put< \_CharT, \_OutIter >**

Primary class template `num_put`.

This facet encapsulates the code to convert a number to a string. It is used by the ostream numeric insertion operators. The `num_put` template uses protected virtual functions to provide the actual results. The public accessors forward the call to the virtual functions. These virtual functions are hooks for developers to implement the behavior they require from the `num_put` facet.

Definition at line 2247 of file `locale_facets.h`.

### 5.606.2 Member Typedef Documentation

**5.606.2.1 template<typename \_CharT , typename \_OutIter > typedef \_CharT std::num\_put< \_CharT, \_OutIter >::char\_type**

virtual]`

Public typedefs.

Definition at line 2467 of file locale\_facets.h.

**5.606.4.8** `template<typename _CharT, typename _OutIter > _OutIter  
std::num_put< _CharT, _OutIter >::do_put (iter_type __s, ios_base  
& __io, char_type __fill, bool __v) const [inline, protected,  
virtual]`

Numeric formatting. These functions do the work of formatting numeric values and inserting them into a stream. This function is a hook for derived classes to change the value returned.

**Parameters:**

- s* Stream to write to.
- io* Source of [locale](#) and flags.
- fill* Char\_type to use for filling.
- v* Value to format and insert.

**Returns:**

Iterator after writing.

Definition at line 1089 of file `locale_facets.tcc`.

References `std::ios_base::_M_getloc()`, `std::ios_base::adjustfield`, `std::ios_base::boolalpha`, `std::ios_base::flags()`, `std::ios_base::left`, and `std::ios_base::width()`.

Referenced by `std::num_put<_CharT, _OutIter >::put()`.

**5.606.4.9** `template<typename _CharT, typename _OutIter > iter_type  
std::num_put<_CharT, _OutIter >::put (iter_type __s, ios_base &  
__f, char_type __fill, const void * __v) const [inline]`

Numeric formatting. Formats the pointer value *v* and inserts it into a stream. It does so by calling `num_put::do_put()`.

This function formats *v* as an unsigned long with `ios_base::hex` and `ios_base::showbase` set.

**Parameters:**

- s* Stream to write to.
- io* Source of [locale](#) and flags.
- fill* Char\_type to use for filling.
- v* Value to format and insert.

**Returns:**

Iterator after writing.

Definition at line 2416 of file `locale_facets.h`.

References `std::num_put<_CharT, _OutIter >::do_put()`.

**5.606.4.10** `template<typename _CharT, typename _OutIter > iter_type  
std::num_put<_CharT, _OutIter >::put (iter_type __s, ios_base &  
__f, char_type __fill, long double __v) const [inline]`

Public typedefs.

Definition at line 2395 of file locale\_facets.h.

References std::num\_put< \_CharT, \_OutIter >::do\_put().

**5.606.4.11** `template<typename _CharT, typename _OutIter > iter_type  
std::num_put< _CharT, _OutIter >::put (iter_type __s, ios_base &  
__f, char_type __fill, double __v) const [inline]`

Numeric formatting. Formats the floating point value *v* and inserts it into a stream. It does so by calling `num_put::do_put()`.

Formatting is affected by the flag settings in *io*.

The basic format is affected by the value of `io.flags()` & `ios_base::floatfield`. If equal to `ios_base::fixed`, formats like the printf `f` specifier. Else if equal to `ios_base::scientific`, formats like `e` or `E` with `ios_base::uppercase` unset or `set` respectively. Otherwise, formats like `g` or `G` depending on uppercase. Note that if both `fixed` and `scientific` are `set`, the effect will also be like `g` or `G`.

The output precision is given by `io.precision()`. This precision is capped at `numeric_limits::digits10 + 2` (different for double and long double). The default precision is 6.

If `ios_base::showpos` is `set`, '+' is output before positive values. If `ios_base::showpoint` is `set`, a decimal point will always be output.

Thousands separators are inserted according to `num_punct::grouping()` and `num_punct::thousands_sep()`. The decimal point character used is `num_punct::decimal_point()`.

If `io.width()` is non-zero, enough *fill* characters are inserted to make the result at least that wide. If `(io.flags() & ios_base::adjustfield) == ios_base::left`, result is padded at the end. If `ios_base::internal`, then padding occurs immediately after either a '+' or '-' or after '0x' or '0X'. Otherwise, padding occurs at the beginning.

#### Parameters:

- s* Stream to write to.
- io* Source of `locale` and flags.
- fill* Char\_type to use for filling.
- v* Value to format and insert.

#### Returns:

Iterator after writing.

Definition at line 2391 of file locale\_facets.h.

References std::num\_put< \_CharT, \_OutIter >::do\_put().

**5.606.4.12** `template<typename _CharT, typename _OutIter> iter_type  
std::num_put< _CharT, _OutIter >::put (iter_type __s, ios_base &  
__f, char_type __fill, unsigned long long __v) const [inline]`

Public typedefs.

**5.606.4.13** `template<typename _CharT, typename _OutIter> iter_type  
std::num_put< _CharT, _OutIter >::put (iter_type __s, ios_base &  
__f, char_type __fill, long long __v) const [inline]`

Public typedefs.

Definition at line 2338 of file locale\_facets.h.

References `std::num_put< _CharT, _OutIter >::do_put()`.

**5.606.4.14** `template<typename _CharT, typename _OutIter> iter_type  
std::num_put< _CharT, _OutIter >::put (iter_type __s, ios_base &  
__f, char_type __fill, unsigned long __v) const [inline]`

Public typedefs.

Definition at line 2332 of file locale\_facets.h.

References `std::num_put< _CharT, _OutIter >::do_put()`.

**5.606.4.15** `template<typename _CharT, typename _OutIter> iter_type  
std::num_put< _CharT, _OutIter >::put (iter_type __s, ios_base &  
__f, char_type __fill, long __v) const [inline]`

Numeric formatting. Formats the integral value *v* and inserts it into a stream. It does so by calling `num_put::do_put()`.

Formatting is affected by the flag settings in *io*.

The basic format is affected by the value of `io.flags()` & `ios_base::basefield`. If equal to `ios_base::oct`, formats like the `printf` `o` specifier. Else if equal to `ios_base::hex`, formats like `x` or `X` with `ios_base::uppercase` unset or `set` respectively. Otherwise, formats like `d`, `ld`, `lld` for signed and `u`, `lu`, `llu` for unsigned values. Note that if both `oct` and `hex` are `set`, neither will take effect.

If `ios_base::showpos` is `set`, `'+'` is output before positive values. If `ios_base::showbase` is `set`, `'0'` precedes octal values (except 0) and `'0[xX]'` precedes hex values.

Thousands separators are inserted according to [num\\_punct::grouping\(\)](#) and [num\\_punct::thousands\\_sep\(\)](#). The [decimal](#) point character used is [num\\_punct::decimal\\_point\(\)](#).

If `io.width()` is non-zero, enough *fill* characters are inserted to make the result at least that wide. If `(io.flags() & ios_base::adjustfield) == ios_base::left`, result is padded at the end. If `ios_base::internal`, then padding occurs immediately after either a '+' or '-' or after '0x' or '0X'. Otherwise, padding occurs at the beginning.

**Parameters:**

- s* Stream to write to.
- io* Source of [locale](#) and flags.
- fill* Char\_type to use for filling.
- v* Value to format and insert.

**Returns:**

Iterator after writing.

Definition at line 2328 of file locale\_facets.h.

References `std::num_put< _CharT, _OutIter >::do_put()`.

**5.606.4.16** `template<typename _CharT, typename _OutIter> iter_type  
std::num_put< _CharT, _OutIter >::put(iter_type __s, ios_base &  
__f, char_type __fill, bool __v) const [inline]`

Numeric formatting. Formats the boolean *v* and inserts it into a stream. It does so by calling `num_put::do_put()`.

If `ios_base::boolalpha` is `set`, writes `ctype<CharT>::truename()` or `ctype<CharT>::falsename()`. Otherwise formats *v* as an int.

**Parameters:**

- s* Stream to write to.
- io* Source of [locale](#) and flags.
- fill* Char\_type to use for filling.
- v* Value to format and insert.

**Returns:**

Iterator after writing.

Definition at line 2286 of file locale\_facets.h.

References `std::num_put< _CharT, _OutIter >::do_put()`.

### 5.607.1 Detailed Description

**template<typename \_Tp> struct std::numeric\_limits< \_Tp >**

Properties of fundamental types. This class allows a program to obtain information about the representation of a fundamental type on a given platform. For non-fundamental types, the functions will return 0 and the data members will all be `false`.  
\_GLIBCXX\_RESOLVE\_LIB\_DEFECTS: DRs 201 and 184 (hi Gaby!) are noted, but not incorporated in this documented (yet).

Definition at line 284 of file limits.

### 5.607.2 Member Function Documentation

**5.607.2.1 template<typename \_Tp > static \_Tp std::numeric\_limits< \_Tp >::denorm\_min () throw () [inline, static]**

The minimum positive denormalized value. For types where `has_denorm` is false, this is the minimum positive normalized value.

Definition at line 313 of file limits.

**5.607.2.2 template<typename \_Tp > static \_Tp std::numeric\_limits< \_Tp >::epsilon () throw () [inline, static]**

The *machine epsilon*: the difference between 1 and the least value [greater](#) than 1 that is representable.

Definition at line 298 of file limits.

**5.607.2.3** `template<typename _Tp > static _Tp std::numeric_limits< _Tp >::infinity () throw () [inline, static]`

The representation of positive infinity, if `has_infinity`.

Definition at line 302 of file limits.

**5.607.2.4** `template<typename _Tp > static _Tp std::numeric_limits< _Tp >::lowest () throw () [inline, static]`

A finite value `x` such that there is no other finite value `y` where `y < x`.

Definition at line 294 of file limits.

**5.607.2.5** `template<typename _Tp > static _Tp std::numeric_limits< _Tp >::max () throw () [inline, static]`

The maximum finite value.

Definition at line 290 of file limits.

**5.607.2.6** `template<typename _Tp > static _Tp std::numeric_limits< _Tp >::min () throw () [inline, static]`

The minimum finite value, or for floating types with denormalization, the minimum positive normalized value.

Definition at line 288 of file limits.

**5.607.2.7** `template<typename _Tp > static _Tp std::numeric_limits< _Tp >::quiet_NaN () throw () [inline, static]`

The representation of a quiet *Not a Number*, if `has_quiet_NaN`.

Definition at line 306 of file limits.

**5.607.2.8** `template<typename _Tp > static _Tp std::numeric_limits< _Tp >::round_error () throw () [inline, static]`

The maximum rounding error measurement (see LIA-1).

Definition at line 300 of file limits.

**5.607.2.9** `template<typename _Tp > static _Tp std::numeric_limits< _Tp >::signaling_NaN () throw () [inline, static]`

The representation of a signaling *Not a Number*, if `has_signaling_NaN`.

Definition at line 309 of file `limits`.

### 5.607.3 Member Data Documentation

**5.607.3.1** `const int std::__numeric_limits_base::digits [static, inherited]`

The number of `radix` digits that be represented without change: for integer types, the number of non-sign bits in the mantissa; for floating types, the number of `radix` digits in the mantissa.

Definition at line 199 of file `limits`.

**5.607.3.2** `const int std::__numeric_limits_base::digits10 [static, inherited]`

The number of base 10 digits that can be represented without change.

Definition at line 201 of file `limits`.

**5.607.3.3** `const float_denorm_style std::__numeric_limits_base::has_denorm [static, inherited]`

See [std::float\\_denorm\\_style](#) for more information.

Definition at line 244 of file `limits`.

**5.607.3.4** `const bool std::__numeric_limits_base::has_denorm_loss [static, inherited]`

*True if loss of accuracy is detected as a denormalization loss, rather than as an inexact result.* [18.2.1.2]/42

Definition at line 247 of file `limits`.

**5.607.3.5** `const bool std::__numeric_limits_base::has_infinity [static, inherited]`

True if the type has a representation for positive infinity.

Definition at line 236 of file limits.

**5.607.3.6** `const bool std::__numeric_limits_base::has_quiet_NaN` [`static`, `inherited`]

True if the type has a representation for a quiet (non-signaling) *Not a Number*.

Definition at line 239 of file limits.

**5.607.3.7** `const bool std::__numeric_limits_base::has_signaling_NaN` [`static`, `inherited`]

True if the type has a representation for a signaling *Not a Number*.

Definition at line 242 of file limits.

**5.607.3.8** `const bool std::__numeric_limits_base::is_bounded` [`static`, `inherited`]

True if the *set* of values representable by the type is finite. All built-in types are bounded, this member would be false for arbitrary precision types. [18.2.1.2]/54

Definition at line 255 of file limits.

**5.607.3.9** `const bool std::__numeric_limits_base::is_exact` [`static`, `inherited`]

True if the type uses an exact representation. *All integer types are exact, but not all exact types are integer. For example, rational and fixed-exponent representations are exact but not integer.* [18.2.1.2]/15

Definition at line 216 of file limits.

**5.607.3.10** `const bool std::__numeric_limits_base::is_iec559` [`static`, `inherited`]

True if-and-only-if the type adheres to the IEC 559 standard, also known as IEEE 754. (Only makes sense for floating point types.)

Definition at line 251 of file limits.

**5.607.3.11** `const bool std::__numeric_limits_base::is_integer` [`static`, `inherited`]

True if the type is integer. Is this supposed to be *if the type is integral*?

Definition at line 211 of file limits.

**5.607.3.12** `const bool std::__numeric_limits_base::is_modulo` [`static`, `inherited`]

True if the type is *modulo*, that is, if it is possible to add two positive numbers and have a result that wraps around to a third number that is [less](#). Typically false for floating types, true for unsigned integers, and true for signed integers.

Definition at line 260 of file limits.

**5.607.3.13** `const bool std::__numeric_limits_base::is_signed` [`static`, `inherited`]

True if the type is signed.

Definition at line 208 of file limits.

**5.607.3.14** `const bool std::__numeric_limits_base::is_specialized` [`static`, `inherited`]

This will be true for all fundamental types (which have specializations), and false for everything else.

Definition at line 194 of file limits.

**5.607.3.15** `const int std::__numeric_limits_base::max_digits10` [`static`, `inherited`]

The number of base 10 digits required to ensure that values which differ are always differentiated.

Definition at line 205 of file limits.

**5.607.3.16** `const int std::__numeric_limits_base::max_exponent` [`static`, `inherited`]

The maximum positive integer such that `radix` raised to the power of (one [less](#) than that integer) is a representable finite floating point number.

Definition at line 230 of file `limits`.

**5.607.3.17** `const int std::__numeric_limits_base::max_exponent10` [`static`, `inherited`]

The maximum positive integer such that 10 raised to that power is in the range of representable finite floating point numbers.

Definition at line 233 of file `limits`.

**5.607.3.18** `const int std::__numeric_limits_base::min_exponent` [`static`, `inherited`]

The minimum negative integer such that `radix` raised to the power of (one less than that integer) is a normalized floating point number.

Definition at line 223 of file `limits`.

**5.607.3.19** `const int std::__numeric_limits_base::min_exponent10` [`static`, `inherited`]

The minimum negative integer such that 10 raised to that power is in the range of normalized floating point numbers.

Definition at line 226 of file `limits`.

**5.607.3.20** `const int std::__numeric_limits_base::radix` [`static`, `inherited`]

For integer types, specifies the base of the representation. For floating types, specifies the base of the exponent representation.

Definition at line 219 of file `limits`.

**5.607.3.21** `const float_round_style std::__numeric_limits_base::round_style` [`static`, `inherited`]

See `std::float_round_style` for more information. This is only meaningful for floating types; integer types will all be `round_toward_zero`.

Definition at line 269 of file `limits`.

**5.607.3.22** `const bool std::__numeric_limits_base::tinyness_before` [`static`, `inherited`]

True if tininess is detected before rounding. (see IEC 559)

Definition at line 265 of file limits.

**5.607.3.23** `const bool std::__numeric_limits_base::traps` [`static`, `inherited`]

True if trapping is implemented for this type.

Definition at line 263 of file limits.

The documentation for this struct was generated from the following file:

### 5.626.1 Detailed Description

**template<typename \_CharT> class std::num\_punct<\_CharT>**

Primary class template [num\\_punct](#).

This facet stores several pieces of information related to printing and scanning numbers, such as the [decimal](#) point character. It takes a template parameter specifying the char type. The [num\\_punct](#) facet is used by streams for many I/O operations involving numbers. The [num\\_punct](#) template uses protected virtual functions to provide the actual results. The public accessors forward the call to the virtual functions. These virtual functions are hooks for developers to implement the behavior they require from a [num\\_punct](#) facet.

Definition at line 1636 of file locale\_facets.h.

### 5.626.2 Member Typedef Documentation

**5.626.2.1 template<typename \_CharT> typedef \_CharT std::num\_punct<\_CharT>::char\_type**

Public typedefs.

Reimplemented in [std::num\\_punct\\_byname<\\_CharT>](#).

Definition at line 1642 of file locale\_facets.h.

**5.626.2.2 template<typename \_CharT> typedef basic\_string<\_CharT> std::num\_punct<\_CharT>::string\_type**

Public typedefs.

Reimplemented in [std::num\\_punct\\_byname<\\_CharT>](#).

Definition at line 1643 of file locale\_facets.h.

### 5.626.3 Constructor & Destructor Documentation

**5.626.3.1 template<typename \_CharT> std::num\_punct<\_CharT>::num\_punct(size\_t \_\_refs = 0) [inline, explicit]**

Num\_punct constructor.

#### Parameters:

*refs* Refcount to pass to the base class.

Definition at line 1660 of file locale\_facets.h.

```
5.626.3.2 template<typename _CharT > std::num_punct< _CharT
>::num_punct (__cache_type * __cache, size_t __refs = 0)
[inline, explicit]
```

Internal constructor. Not for general use. This is a constructor for use by the library itself to [set](#) up the predefined [locale](#) facets.

**Parameters:**

*cache* \_\_num\_punct\_cache object.

*refs* Refcount to pass to the base class.

Definition at line 1673 of file locale\_facets.h.

```
5.626.3.3 template<typename _CharT > std::num_punct< _CharT
>::num_punct (__c_locale __cloc, size_t __refs = 0) [inline,
explicit]
```

Internal constructor. Not for general use. This is a constructor for use by the library itself to [set](#) up new locales.

**Parameters:**

*cloc* The C [locale](#).

*refs* Refcount to pass to the base class.

Definition at line 1687 of file locale\_facets.h.

```
5.626.3.4 template<typename _CharT > virtual std::num_punct< _CharT
>::~~num_punct () [protected, virtual]
```

Destructor.

## 5.626.4 Member Function Documentation

```
5.626.4.1 template<typename _CharT > char_type std::num_punct< _CharT
>::decimal_point () const [inline]
```

Return [decimal](#) point character. This function returns a `char_type` to use as a [decimal](#) point. It does so by returning `num_punct<char_type>::do_decimal_point()`.

**Returns:**

*char\_type* representing a [decimal](#) point.

Definition at line 1701 of file locale\_facets.h.

References std::num\_punct<\_CharT>::do\_decimal\_point().

**5.626.4.2** `template<typename _CharT> virtual char_type std::num_punct<_CharT>::do_decimal_point() const [inline, protected, virtual]`

Return [decimal](#) point character. Returns a *char\_type* to use as a [decimal](#) point. This function is a hook for derived classes to change the value returned.

**Returns:**

*char\_type* representing a [decimal](#) point.

Definition at line 1788 of file locale\_facets.h.

Referenced by std::num\_punct<\_CharT>::decimal\_point().

**5.626.4.3** `template<typename _CharT> virtual string_type std::num_punct<_CharT>::do_falsename() const [inline, protected, virtual]`

Return string representation of bool false. Returns a *string\_type* containing the text representation for false bool variables. This function is a hook for derived classes to change the value returned.

**Returns:**

*string\_type* representing printed form of false.

Definition at line 1839 of file locale\_facets.h.

Referenced by std::num\_punct<\_CharT>::falsename().

**5.626.4.4** `template<typename _CharT> virtual string std::num_punct<_CharT>::do_grouping() const [inline, protected, virtual]`

Return grouping specification. Returns a string representing groupings for the integer part of a number. This function is a hook for derived classes to change the value returned.

**See also:**

[grouping\(\)](#) for details.

**Returns:**

String representing grouping specification.

Definition at line 1813 of file locale\_facets.h.

Referenced by `std::num_punct<_CharT>::grouping()`.

**5.626.4.5** `template<typename _CharT > virtual char_type std::num_punct<_CharT >::do_thousands_sep () const [inline, protected, virtual]`

Return thousands separator character. Returns a `char_type` to use as a thousands separator. This function is a hook for derived classes to change the value returned.

**Returns:**

*char\_type* representing a thousands separator.

Definition at line 1800 of file locale\_facets.h.

Referenced by `std::num_punct<_CharT>::thousands_sep()`.

**5.626.4.6** `template<typename _CharT > virtual string_type std::num_punct<_CharT >::do_truename () const [inline, protected, virtual]`

Return string representation of `bool true`. Returns a `string_type` containing the text representation for `true` `bool` variables. This function is a hook for derived classes to change the value returned.

**Returns:**

`string_type` representing printed form of `true`.

Definition at line 1826 of file locale\_facets.h.

Referenced by `std::num_punct<_CharT>::truename()`.

**5.626.4.7** `template<typename _CharT > string_type std::num_punct<_CharT >::falsename () const [inline]`

Return string representation of `bool false`. This function returns a `string_type` containing the text representation for `false` `bool` variables. It does so by calling

[num\\_punct<char\\_type>::do\\_falsename\(\)](#).

**Returns:**

string\_type representing printed form of false.

Definition at line 1771 of file locale\_facets.h.

References [std::num\\_punct<\\_CharT>::do\\_falsename\(\)](#).

**5.626.4.8 template<typename \_CharT> string std::num\_punct<\_CharT>::grouping () const [inline]**

Return grouping specification. This function returns a string representing groupings for the integer part of a number. Groupings indicate where thousands separators should be inserted in the integer part of a number.

Each char in the return string is interpreted as an integer rather than a character. These numbers represent the number of digits in a group. The first char in the string represents the number of digits in the least significant group. If a char is negative, it indicates an unlimited number of digits for the group. If more chars from the string are required to group a number, the last char is used repeatedly.

For example, if the [grouping\(\)](#) returns "\003\002" and is applied to the number 123456789, this corresponds to 12,34,56,789. Note that if the string was "32", this would put more than 50 digits into the least significant group if the character set is ASCII.

The string is returned by calling [num\\_punct<char\\_type>::do\\_grouping\(\)](#).

**Returns:**

string representing grouping specification.

Definition at line 1745 of file locale\_facets.h.

References [std::num\\_punct<\\_CharT>::do\\_grouping\(\)](#).

**5.626.4.9 template<typename \_CharT> char\_type std::num\_punct<\_CharT>::thousands\_sep () const [inline]**

Return thousands separator character. This function returns a char\_type to use as a thousands separator. It does so by returning [num\\_punct<char\\_type>::do\\_thousands\\_sep\(\)](#).

**Returns:**

char\_type representing a thousands separator.

Definition at line 1714 of file locale\_facets.h.

References `std::num_punct<_CharT>::do_thousands_sep()`.

#### **5.626.4.10** `template<typename _CharT> string_type std::num_punct<_CharT>::true_name() const [inline]`

Return string representation of bool true. This function returns a `string_type` containing the text representation for true bool variables. It does so by calling `num_punct<char_type>::do_true_name()`.

#### **Returns:**

`string_type` representing printed form of true.

Definition at line 1758 of file locale\_facets.h.

References `std::num_punct<_CharT>::do_true_name()`.

### **5.626.5 Member Data Documentation**

#### **5.626.5.1** `template<typename _CharT> locale::id std::num_punct<_CharT>::id [inline, static]`

Numpunct facet id.

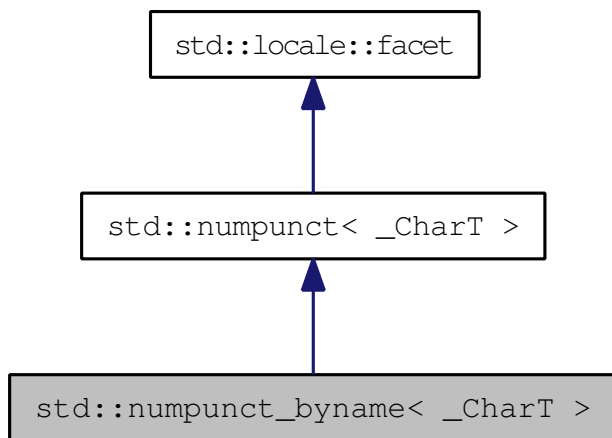

Definition at line 1652 of file locale\_facets.h.

Definition at line 1872 of file `locale_facets.h`.

## 5.627.3 Member Function Documentation

### 5.627.3.1 `template<typename _CharT> char_type std::num_punct<_CharT >::decimal_point() const [inline, inherited]`

Return [decimal](#) point character. This function returns a `char_type` to use as a [decimal](#) point. It does so by returning `num_punct<char_type>::do_decimal_point()`.

#### Returns:

*char\_type* representing a [decimal](#) point.

Definition at line 1701 of file `locale_facets.h`.

References `std::num_punct<_CharT>::do_decimal_point()`.

### 5.627.3.2 `template<typename _CharT> virtual char_type std::num_punct< _CharT>::do_decimal_point() const [inline, protected, virtual, inherited]`

Return [decimal](#) point character. Returns a `char_type` to use as a [decimal](#) point. This function is a hook for derived classes to change the value returned.

#### Returns:

*char\_type* representing a [decimal](#) point.

Definition at line 1788 of file locale\_facets.h.

Referenced by `std::num_punct<_CharT>::decimal_point()`.

**5.627.3.3** `template<typename _CharT > virtual string_type std::num_punct<_CharT>::do_falsename () const [inline, protected, virtual, inherited]`

Return string representation of bool false. Returns a `string_type` containing the text representation for false bool variables. This function is a hook for derived classes to change the value returned.

**Returns:**

`string_type` representing printed form of false.

Definition at line 1839 of file locale\_facets.h.

Referenced by `std::num_punct<_CharT>::falsename()`.

**5.627.3.4** `template<typename _CharT > virtual string std::num_punct<_CharT>::do_grouping () const [inline, protected, virtual, inherited]`

Return grouping specification. Returns a string representing groupings for the integer part of a number. This function is a hook for derived classes to change the value returned.

**See also:**

[grouping\(\)](#) for details.

**Returns:**

String representing grouping specification.

Definition at line 1813 of file locale\_facets.h.

Referenced by `std::num_punct<_CharT>::grouping()`.

**5.627.3.5** `template<typename _CharT > virtual char_type std::num_punct<_CharT>::do_thousands_sep () const [inline, protected, virtual, inherited]`

Return thousands separator character. Returns a `char_type` to use as a thousands separator. This function is a hook for derived classes to change the value returned.

**Returns:**

*char\_type* representing a thousands separator.

Definition at line 1800 of file `locale_facets.h`.

Referenced by `std::num_punct<_CharT>::thousands_sep()`.

**5.627.3.6 `template<typename _CharT> virtual string_type std::num_punct<_CharT>::do_truename() const [inline, protected, virtual, inherited]`**

Return string representation of `bool true`. Returns a `string_type` containing the text representation for `true` `bool` variables. This function is a hook for derived classes to change the value returned.

**Returns:**

`string_type` representing printed form of `true`.

Definition at line 1826 of file `locale_facets.h`.

Referenced by `std::num_punct<_CharT>::truename()`.

**5.627.3.7 `template<typename _CharT> string_type std::num_punct<_CharT>::do_falsename() const [inline, inherited]`**

Return string representation of `bool false`. This function returns a `string_type` containing the text representation for `false` `bool` variables. It does so by calling [num\\_punct<char\\_type>::do\\_falsename\(\)](#).

**Returns:**

`string_type` representing printed form of `false`.

Definition at line 1771 of file `locale_facets.h`.

References `std::num_punct<_CharT>::do_falsename()`.

**5.627.3.8 `template<typename _CharT> string std::num_punct<_CharT>::grouping() const [inline, inherited]`**

Return grouping specification. This function returns a string representing groupings for the integer part of a number. Groupings indicate where thousands separators should be inserted in the integer part of a number.

Each char in the return string is interpreted as an integer rather than a character. These numbers represent the number of digits in a group. The first char in the string represents the number of digits in the least significant group. If a char is negative, it indicates an unlimited number of digits for the group. If more chars from the string are required to group a number, the last char is used repeatedly.

For example, if the `grouping()` returns `"\003\002"` and is applied to the number 123456789, this corresponds to 12,34,56,789. Note that if the string was `"32"`, this would put more than 50 digits into the least significant group if the character `set` is ASCII.

The string is returned by calling `num_punct<char_type>::do_grouping()`.

**Returns:**

string representing grouping specification.

Definition at line 1745 of file `locale_facets.h`.

References `std::num_punct<_CharT>::do_grouping()`.

**5.627.3.9 `template<typename _CharT> char_type std::num_punct<_CharT>::thousands_sep() const [inline, inherited]`**

Return thousands separator character. This function returns a `char_type` to use as a thousands separator. It does so by returning `num_punct<char_type>::do_thousands_sep()`.

**Returns:**

`char_type` representing a thousands separator.

Definition at line 1714 of file `locale_facets.h`.

References `std::num_punct<_CharT>::do_thousands_sep()`.

**5.627.3.10 `template<typename _CharT> string_type std::num_punct<_CharT>::true_name() const [inline, inherited]`**

Return string representation of bool true. This function returns a `string_type` containing the text representation for true bool variables. It does so by calling `num_punct<char_type>::do_true_name()`.

**Returns:**

`string_type` representing printed form of true.

Definition at line 1758 of file locale\_facets.h.

References `std::numpunct<_CharT>::do_truename()`.

Provides output [iterator](#) semantics for streams. Inheritance diagram for `std::ostream_iterator< _Tp, _CharT, _Traits >`:

### Public Types

- typedef void [difference\\_type](#)
  - typedef [output\\_iterator\\_tag](#) [iterator\\_category](#)
  - typedef void [pointer](#)
  - typedef void [reference](#)
  - typedef void [value\\_type](#)
- 
- typedef `_CharT` [char\\_type](#)
  - typedef `basic_ostream< _CharT, _Traits >` [ostream\\_type](#)
  - typedef `_Traits` [traits\\_type](#)

### Public Member Functions

- [ostream\\_iterator](#) (`const ostream_iterator &__obj`)
- [ostream\\_iterator](#) (`ostream_type &__s, const _CharT *__c`)
- [ostream\\_iterator](#) (`ostream_type &__s`)
- [ostream\\_iterator](#) & **operator\*** ()
- [ostream\\_iterator](#) & **operator++** (int)
- [ostream\\_iterator](#) & **operator++** ()
- [ostream\\_iterator](#) & **operator=** (`const _Tp &__value`)

### 5.629.1 Detailed Description

```
template<typename _Tp, typename _CharT = char, typename _Traits = char_traits<_CharT>> class std::ostream_iterator< _Tp, _CharT, _Traits >
```

Provides output [iterator](#) semantics for streams. This class provides an [iterator](#) to write to an ostream. The type `Tp` is the only type written by this [iterator](#) and there must be an operator `<<(Tp)` defined.

#### Parameters:

*Tp* The type to write to the ostream.

*CharT* The ostream `char_type`.

*Traits* The ostream `char_traits`.

Definition at line 152 of file `stream_iterator.h`.

### 5.629.2 Member Typedef Documentation

**5.629.2.1** `template<typename _Tp , typename _CharT = char, typename _Traits = char_traits<_CharT>> typedef _CharT std::ostream_iterator< _Tp, _CharT, _Traits >::char_type`

Public typedef.

Definition at line 158 of file `stream_iterator.h`.

**5.629.2.2** `typedef void std::iterator< output_iterator_tag , void , void , void , void >::difference_type [inherited]`

Distance between iterators is represented as this type.

Definition at line 115 of file `stl_iterator_base_types.h`.

**5.629.2.3** `typedef output_iterator_tag std::iterator< output_iterator_tag , void , void , void , void >::iterator_category [inherited]`

One of the [tag types](#).

Definition at line 111 of file `stl_iterator_base_types.h`.

## 5.629 std::ostream\_iterator< \_Tp, \_CharT, \_Traits > Class Template Reference

**5.629.2.4** `template<typename _Tp, typename _CharT = char, typename  
_Traits = char_traits<_CharT>> typedef basic_ostream<_CharT,  
_Traits> std::ostream_iterator< _Tp, _CharT, _Traits  
>::ostream_type`

Public typedef.

Definition at line 160 of file stream\_iterator.h.

**5.629.2.5** `typedef void std::iterator< output_iterator_tag, void, void, void,  
void >::pointer [inherited]`

This type represents a pointer-to-value\_type.

Definition at line 117 of file stl\_iterator\_base\_types.h.

**5.629.2.6** `typedef void std::iterator< output_iterator_tag, void, void, void,  
void >::reference [inherited]`

This type represents a reference-to-value\_type.

Definition at line 119 of file stl\_iterator\_base\_types.h.

**5.629.2.7** `template<typename _Tp, typename _CharT = char,  
typename _Traits = char_traits<_CharT>> typedef _Traits  
std::ostream_iterator< _Tp, _CharT, _Traits >::traits_type`

Public typedef.

Definition at line 159 of file stream\_iterator.h.

**5.629.2.8** `typedef void std::iterator< output_iterator_tag, void, void, void,  
void >::value_type [inherited]`

The type "pointed to" by the iterator.

Definition at line 113 of file stl\_iterator\_base\_types.h.

### 5.629.3 Constructor & Destructor Documentation

**5.629.3.1** `template<typename _Tp , typename _CharT = char, typename _Traits = char_traits<_CharT>> std::ostream_iterator< _Tp, _CharT, _Traits >::ostream_iterator (ostream_type & __s) [inline]`

Construct from an ostream.

Definition at line 169 of file stream\_iterator.h.

**5.629.3.2** `template<typename _Tp , typename _CharT = char, typename _Traits = char_traits<_CharT>> std::ostream_iterator< _Tp, _CharT, _Traits >::ostream_iterator (ostream_type & __s, const _CharT * __c) [inline]`

Construct from an ostream.

The delimiter string *c* is written to the stream after every *Tp* written to the stream. The delimiter is not copied, and thus must not be destroyed while this [iterator](#) is in use.

#### Parameters:

- s* Underlying ostream to write to.
- c* CharT delimiter string to insert.

Definition at line 181 of file stream\_iterator.h.

**5.629.3.3** `template<typename _Tp , typename _CharT = char, typename _Traits = char_traits<_CharT>> std::ostream_iterator< _Tp, _CharT, _Traits >::ostream_iterator (const ostream_iterator< _Tp, _CharT, _Traits > & __obj) [inline]`

Copy constructor.

Definition at line 185 of file stream\_iterator.h.

### 5.629.4 Member Function Documentation

**5.629.4.1** `template<typename _Tp , typename _CharT = char, typename _Traits = char_traits<_CharT>> ostream_iterator& std::ostream_iterator< _Tp, _CharT, _Traits >::operator= (const _Tp & __value) [inline]`

Writes *value* to underlying ostream using operator<<. If constructed with delimiter string, writes delimiter to ostream.

### **5.629 std::ostream\_iterator< \_Tp, \_CharT, \_Traits > Class Template Reference**

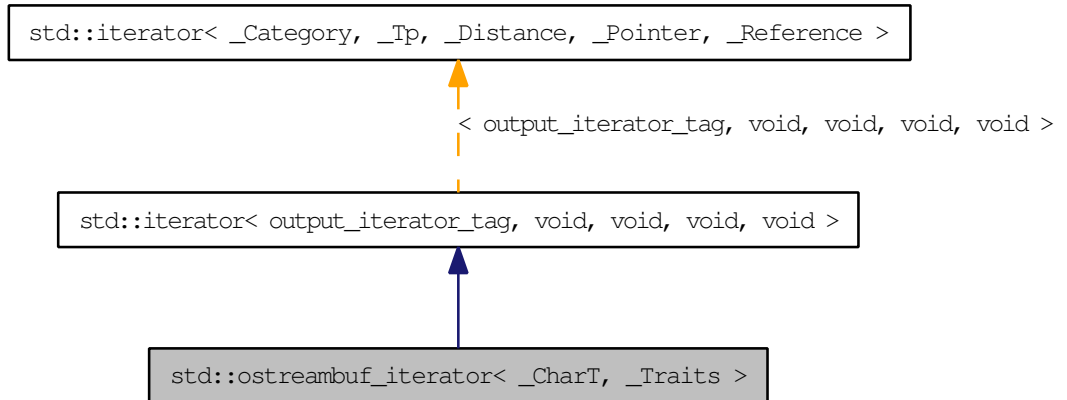

Definition at line 191 of file stream\_iterator.h.

The documentation for this class was generated from the following file:

- [stream\\_iterator.h](#)

## 5.630 `std::ostreambuf_iterator< _CharT, _Traits >` Class Template Reference

Provides output [iterator](#) semantics for streambufs. Inheritance diagram for `std::ostreambuf_iterator< _CharT, _Traits >`:

### Public Types

- typedef void [difference\\_type](#)
- typedef [output\\_iterator\\_tag](#) [iterator\\_category](#)

### Friends

- `template<typename _CharT2 > __gnu_cxx::__enable_if< __is_char< _CharT2 >::__value, ostreambuf_iterator< _CharT2 > >::__type copy (istreambuf_iterator< _CharT2 >, istreambuf_iterator< _CharT2 >, ostreambuf_iterator< _CharT2 >)`

### 5.630.1 Detailed Description

`template<typename _CharT, typename _Traits> class std::ostreambuf_iterator<_CharT, _Traits>`

Provides output [iterator](#) semantics for streambufs.

Definition at line 204 of file `streambuf_iterator.h`.

### 5.630.2 Member Typedef Documentation

**5.630.2.1** `template<typename _CharT, typename _Traits> typedef _CharT std::ostreambuf_iterator<_CharT, _Traits>::char_type`

Public typedefs.

Definition at line 211 of file `streambuf_iterator.h`.

**5.630.2.2** `typedef void std::iterator< output_iterator_tag, void, void, void, void >::difference_type [inherited]`

Distance between iterators is represented as this type.

Definition at line 115 of file `stl_iterator_base_types.h`.

**5.630.2.3** `typedef output_iterator_tag std::iterator< output_iterator_tag, void, void, void, void >::iterator_category [inherited]`

One of the [tag types](#).

Definition at line 111 of file `stl_iterator_base_types.h`.

**5.630.2.4** `template<typename _CharT, typename _Traits> typedef basic_ostream<_CharT, _Traits> std::ostreambuf_iterator<_CharT, _Traits>::ostream_type`

Public typedefs.

Definition at line 214 of file `streambuf_iterator.h`.

**5.630.2.5** `typedef void std::iterator< output_iterator_tag , void , void , void , void >::pointer [inherited]`

This type represents a pointer-to-value\_type.

Definition at line 117 of file `stl_iterator_base_types.h`.

**5.630.2.6** `typedef void std::iterator< output_iterator_tag , void , void , void , void >::reference [inherited]`

This type represents a reference-to-value\_type.

Definition at line 119 of file `stl_iterator_base_types.h`.

**5.630.2.7** `template<typename _CharT , typename _Traits > typedef basic_streambuf<_CharT, _Traits> std::ostreambuf_iterator<_CharT, _Traits >::streambuf_type`

Public typedefs.

Definition at line 213 of file `streambuf_iterator.h`.

**5.630.2.8** `template<typename _CharT , typename _Traits > typedef _Traits std::ostreambuf_iterator<_CharT, _Traits >::traits_type`

Public typedefs.

Definition at line 212 of file `streambuf_iterator.h`.

**5.630.2.9** `typedef void std::iterator< output_iterator_tag , void , void , void , void >::value_type [inherited]`

The type "pointed to" by the iterator.

Definition at line 113 of file `stl_iterator_base_types.h`.

## 5.630 std::ostreambuf\_iterator<\_CharT, \_Traits> Class Template Reference

### 5.630.3 Constructor & Destructor Documentation

**5.630.3.1** `template<typename _CharT, typename _Traits >  
std::ostreambuf_iterator<_CharT, _Traits >::ostreambuf_iterator  
(ostream_type & __s) throw () [inline]`

Construct output [iterator](#) from ostream.

Definition at line 229 of file ostreambuf\_iterator.h.

**5.630.3.2** `template<typename _CharT, typename _Traits >  
std::ostreambuf_iterator<_CharT, _Traits >::ostreambuf_iterator  
(streambuf_type * __s) throw () [inline]`

Construct output [iterator](#) from streambuf.

Definition at line 233 of file ostreambuf\_iterator.h.

### 5.630.4 Member Function Documentation

**5.630.4.1** `template<typename _CharT, typename _Traits > bool  
std::ostreambuf_iterator<_CharT, _Traits >::failed () const throw ()  
[inline]`

Return true if previous [operator=\(\)](#) failed.

Definition at line 263 of file ostreambuf\_iterator.h.

**5.630.4.2** `template<typename _CharT, typename _Traits >  
ostreambuf_iterator& std::ostreambuf_iterator<_CharT, _Traits  
>::operator* () [inline]`

Return \*this.

Definition at line 248 of file ostreambuf\_iterator.h.

**5.630.4.3** `template<typename _CharT, typename _Traits >  
ostreambuf_iterator& std::ostreambuf_iterator<_CharT, _Traits  
>::operator++ () [inline]`

Return \*this.

Definition at line 258 of file ostreambuf\_iterator.h.

**5.630.4.4** `template<typename _CharT , typename _Traits >  
ostreambuf_iterator& std::ostreambuf_iterator< _CharT, _Traits  
>::operator++ (int) [inline]`

Return \*this.

Definition at line 253 of file streambuf\_iterator.h.

**5.630.4.5** `template<typename _CharT , typename _Traits >  
ostreambuf_iterator& std::ostreambuf_iterator< _CharT, _Traits  
>::operator= (_CharT __c) [inline]`

Write character to streambuf. Calls [streambuf.sputc\(\)](#).

Definition at line 238 of file streambuf\_iterator.h.

References [std::basic\\_streambuf< \\_CharT, \\_Traits >::sputc\(\)](#).

The documentation for this class was generated from the following file:

- [streambuf\\_iterator.h](#)

## 5.631 `std::out_of_range` Class Reference

Inheritance diagram for `std::out_of_range`:

### Public Member Functions

- `out_of_range` (const [string](#) &\_\_arg)
- virtual const char \* `what` () const throw ()

#### 5.631.1 Detailed Description

This represents an argument whose value is not within the expected range (e.g., boundary checks in [basic\\_string](#)).

Definition at line 96 of file `stdexcept`.

#### 5.631.2 Member Function Documentation

##### 5.631.2.1 virtual const char\* `std::logic_error::what` () const throw () [[virtual](#), [inherited](#)]

Returns a C-style character string describing the general cause of the current error (the same string passed to the ctor).

Reimplemented from [std::exception](#).

Reimplemented in [std::future\\_error](#).

The documentation for this class was generated from the following file:

- [stdexcept](#)

## 5.632 `std::output_iterator_tag` Struct Reference

Marking output iterators.

### 5.632.1 Detailed Description

Marking output iterators.

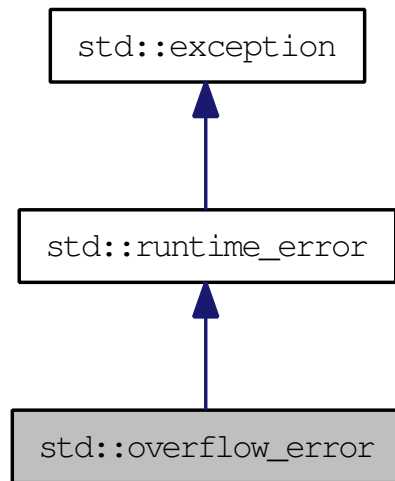

Definition at line 82 of file `stl_iterator_base_types.h`.

The documentation for this struct was generated from the following file:

- [stl\\_iterator\\_base\\_types.h](#)

## 5.633 `std::overflow_error` Class Reference

Inheritance diagram for `std::overflow_error`:

### Public Member Functions

- `overflow_error` (const [string](#) &\_\_arg)
- virtual const char \* `what` () const throw ()

#### 5.633.1 Detailed Description

Thrown to indicate arithmetic overflow.

Definition at line 133 of file `stdexcept`.

#### 5.633.2 Member Function Documentation

##### 5.633.2.1 virtual const char\* `std::runtime_error::what` () const throw () [virtual, inherited]

Returns a C-style character string describing the general cause of the current error (the same string passed to the ctor).

Reimplemented from [std::exception](#).

The documentation for this class was generated from the following file:

- [stdexcept](#)

## 5.634 `std::owner_less< shared_ptr< _Tp > >` Struct Template Reference

Partial specialization of `owner_less` for [shared\\_ptr](#).

Inherits `_Sp_owner_less< shared_ptr< _Tp >, weak_ptr< _Tp > >`.

### 5.634.1 Detailed Description

`template<typename _Tp> struct std::owner_less< shared_ptr< _Tp > >`

Partial specialization of `owner_less` for [shared\\_ptr](#).

Definition at line 385 of file `shared_ptr.h`.

The documentation for this struct was generated from the following file:

- [shared\\_ptr.h](#)

## **5.635 std::owner\_less< weak\_ptr< \_Tp > > Struct Template Reference**

Partial specialization of `owner_less` for `weak_ptr`.

Inherits `_Sp_owner_less< weak_ptr< _Tp >, shared_ptr< _Tp > >`.

### **5.635.1 Detailed Description**

```
template<typename _Tp> struct std::owner_less< weak_ptr< _Tp > >
```

Partial specialization of `owner_less` for `weak_ptr`.

Definition at line 391 of file `shared_ptr.h`.

The documentation for this struct was generated from the following file:

- [shared\\_ptr.h](#)

## 5.636 `std::packaged_task< _Res(_ArgTypes...)>` Class Template Reference

`packaged_task`

### Public Types

- typedef `_Res` **result\_type**

### Public Member Functions

- **packaged\_task** (`packaged_task &&__other`)
- **packaged\_task** (`packaged_task &`)
- **packaged\_task** (`_Res(*__fn)(_ArgTypes...)`)
- `template<typename _Fn >`  
**packaged\_task** (`_Fn &&__fn`)
- `template<typename _Fn >`  
**packaged\_task** (`const _Fn &__fn`)
- **future**< `_Res` > **get\_future** ()
- **operator bool** () const
- void **operator**() (`_ArgTypes...__args`)
- `packaged_task &` **operator=** (`packaged_task &&__other`)
- `packaged_task &` **operator=** (`packaged_task &`)
- void **reset** ()
- void **swap** (`packaged_task &__other`)

### 5.636.1 Detailed Description

`template<typename _Res, typename... _ArgTypes> class std::packaged_task< _Res(_ArgTypes...)>`

`packaged_task`

Definition at line 1183 of file `future`.

The documentation for this class was generated from the following file:

- [future](#)

## 5.637 std::pair< \_T1, \_T2 > Struct Template Reference

`pair` holds two objects of arbitrary type. Inheritance diagram for `std::pair< _T1, _T2 >`:

### Public Types

- typedef `_T1` [first\\_type](#)
- typedef `_T2` [second\\_type](#)

### Public Member Functions

- template<class `_U1`, class `_U2` >  
`pair` (`pair`< `_U1`, `_U2` > &&`_p`)
- template<class `_U1`, class `_U2` >  
`pair` (const `pair`< `_U1`, `_U2` > &`_p`)
- `pair` (`pair` &&`_p`)
- template<class `_U1`, class `_U2`, class = typename `std::enable_if`<`std::is_convertible`<`_U1`, `_T1`>::value && `std::is_convertible`<`_U2`, `_T2`>::value>::type>  
`pair` (`_U1` &&`_x`, `_U2` &&`_y`)
- template<class `_U2`, class = typename `std::enable_if`<`std::is_convertible`<`_U2`, `_T2`>::value>::type>  
`pair` (const `_T1` &`_x`, `_U2` &&`_y`)
- template<class `_U1`, class = typename `std::enable_if`<`std::is_convertible`<`_U1`, `_T1`>::value>::type>  
`pair` (`_U1` &&`_x`, const `_T2` &`_y`)
- `pair` (const `_T1` &`_a`, const `_T2` &`_b`)
- `pair` ()
- template<class `_U1`, class `_U2` >  
`pair` & `operator=` (`pair`< `_U1`, `_U2` > &&`_p`)
- `pair` & `operator=` (`pair` &&`_p`)
- void `swap` (`pair` &`_p`)

## Public Attributes

- `_T1` [first](#)
- `_T2` [second](#)

### 5.637.1 Detailed Description

```
template<class _T1, class _T2> struct std::pair< _T1, _T2 >
```

[pair](#) holds two objects of arbitrary type.

Definition at line 71 of file `stl_pair.h`.

### 5.637.2 Member Typedef Documentation

**5.637.2.1** `template<class _T1, class _T2> typedef _T1 std::pair< _T1, _T2 >::first_type`

`first_type` is the first bound type

Definition at line 73 of file `stl_pair.h`.

**5.637.2.2** `template<class _T1, class _T2> typedef _T2 std::pair< _T1, _T2 >::second_type`

`second_type` is the second bound type

Definition at line 74 of file `stl_pair.h`.

### 5.637.3 Constructor & Destructor Documentation

**5.637.3.1** `template<class _T1, class _T2> std::pair< _T1, _T2 >::pair () [inline]`

The default constructor creates `first` and `second` using their respective default constructors.

Definition at line 83 of file `stl_pair.h`.

**5.637.3.2** `template<class _T1, class _T2> std::pair< _T1, _T2 >::pair (const _T1 & __a, const _T2 & __b) [inline]`

Two objects may be passed to a [pair](#) constructor to be copied.

Definition at line 87 of file `stl_pair.h`.

```
5.637.3.3 template<class _T1, class _T2> template<class _U1, class _U2 >
std::pair<_T1, _T2 >::pair (const pair<_U1, _U2 > & __p)
[inline]
```

There is also a templated copy ctor for the `pair` class itself.

Definition at line 118 of file `stl_pair.h`.

## 5.637.4 Member Data Documentation

```
5.637.4.1 template<class _T1, class _T2> _T1 std::pair<_T1, _T2 >::first
```

`first` is a copy of the first object

Definition at line 76 of file `stl_pair.h`.

Referenced by `std::_Temporary_buffer<_ForwardIterator, _Tp >::_Temporary_buffer()`, `std::set<_Key, _Compare, _Alloc >::insert()`, and `std::operator==( )`.

```
5.637.4.2 template<class _T1, class _T2> _T2 std::pair<_T1, _T2 >::second
```

`second` is a copy of the second object

Definition at line 77 of file `stl_pair.h`.

Referenced by `std::_Temporary_buffer<_ForwardIterator, _Tp >::_Temporary_buffer()`, `std::set<_Key, _Compare, _Alloc >::insert()`, and `std::operator==( )`.

The documentation for this struct was generated from the following file:

- [stl\\_pair.h](#)

## 5.638 `std::piecewise_constant_distribution`< `_RealType` > Class Template Reference \_-

A `piecewise_constant_distribution` random number distribution.

### Classes

- struct `param_type`

### Public Types

- typedef `_RealType` `result_type`

### Public Member Functions

- `template<typename _RealType1, typename _CharT, typename _Traits > std::basic_istream<_CharT, _Traits > & operator>>> (std::basic_istream<_CharT, _Traits > &, std::piecewise_constant_distribution<_RealType1 > &)`

### 5.638.1 Detailed Description

`template<typename _RealType = double> class std::piecewise_constant_distribution<_RealType >`

A `piecewise_constant_distribution` random number distribution. The formula for the piecewise constant probability mass function is

Definition at line 4254 of file `random.h`.

### 5.638.2 Member Typedef Documentation

**5.638.2.1** `template<typename _RealType = double> typedef _RealType std::piecewise_constant_distribution<_RealType >::result_type`

The type of the range of the distribution.

Definition at line 4261 of file `random.h`.

### 5.638.3 Member Function Documentation

**5.638.3.1** `template<typename _RealType = double> std::vector<double> std::piecewise_constant_distribution<_RealType >::densities () const [inline]`

Returns a `vector` of the probability densities.

Definition at line 4349 of file `random.h`.

**5.638.3.2** `template<typename _RealType = double> std::vector<_RealType> std::piecewise_constant_distribution<_RealType >::intervals () const [inline]`

Returns a `vector` of the intervals.

Definition at line 4342 of file random.h.

**5.638.3.3** `template<typename _RealType = double> result_type  
std::piecewise_constant_distribution< _RealType >::max () const  
[inline]`

Returns the least upper bound value of the distribution.

Definition at line 4378 of file random.h.

References `std::vector< _Tp, _Alloc >::back()`.

**5.638.3.4** `template<typename _RealType = double> result_type  
std::piecewise_constant_distribution< _RealType >::min () const  
[inline]`

Returns the greatest lower bound value of the distribution.

Definition at line 4371 of file random.h.

References `std::vector< _Tp, _Alloc >::front()`.

**5.638.3.5** `template<typename _RealType = double> void  
std::piecewise_constant_distribution< _RealType >::param (const  
param_type & __param) [inline]`

Sets the parameter `set` of the distribution.

**Parameters:**

`__param` The new parameter `set` of the distribution.

Definition at line 4364 of file random.h.

**5.638.3.6** `template<typename _RealType = double> param_type  
std::piecewise_constant_distribution< _RealType >::param () const  
[inline]`

Returns the parameter `set` of the distribution.

Definition at line 4356 of file random.h.

**5.638.3.7** `template<typename _RealType = double> void  
std::piecewise_constant_distribution<_RealType>::reset ()  
[inline]`

Resets the distribution state.

Definition at line 4335 of file `random.h`.

## 5.638.4 Friends And Related Function Documentation

**5.638.4.1** `template<typename _RealType = double> template<typename  
_RealType1 , typename _CharT , typename _Traits >  
std::basic_ostream<_CharT, _Traits>& operator<<  
(std::basic_ostream<_CharT, _Traits > &, const  
std::piecewise_constant_distribution<_RealType1 > &) [friend]`

Inserts a `piecewise_constant_distribution` random number distribution `__x` into the output stream `__os`.

### Parameters:

`__os` An output stream.

`__x` A `piecewise_constant_distribution` random number distribution.

### Returns:

The output stream with the state of `__x` inserted or in an error state.

**5.638.4.2** `template<typename _RealType = double> template<typename  
_RealType1 , typename _CharT , typename _Traits > std::basic_istream<_CharT, _Traits>& operator>> (std::basic_istream<_CharT, _Traits > &, std::piecewise_constant_distribution<_RealType1 > &) [friend]`

Extracts a `piecewise_constant_distribution` random number distribution `__x` from the input stream `__is`.

### Parameters:

`__is` An input stream.

`__x` A `piecewise_constant_distribution` random number generator engine.

### Returns:

The input stream with `__x` extracted or in an error state.

**5.640.3.4** `template<typename _RealType = double> result_type  
std::piecewise_linear_distribution< _RealType >::min () const  
[inline]`

Returns the greatest lower bound value of the distribution.

Definition at line 4554 of file random.h.

References `std::vector< _Tp, _Alloc >::front()`.

**5.640.3.5** `template<typename _RealType = double> void  
std::piecewise_linear_distribution< _RealType >::param (const  
param_type & __param) [inline]`

Sets the parameter `set` of the distribution.

**Parameters:**

`__param` The new parameter `set` of the distribution.

Definition at line 4547 of file random.h.

**5.640.3.6** `template<typename _RealType = double> param_type  
std::piecewise_linear_distribution< _RealType >::param () const  
[inline]`

Returns the parameter `set` of the distribution.

Definition at line 4539 of file random.h.

**5.640.3.7** `template<typename _RealType = double> void  
std::piecewise_linear_distribution<_RealType>::reset ()  
[inline]`

Resets the distribution state.

Definition at line 4517 of file `random.h`.

## 5.640.4 Friends And Related Function Documentation

**5.640.4.1** `template<typename _RealType = double> template<typename  
_RealType1 , typename _CharT , typename _Traits >  
std::basic_ostream<_CharT, _Traits>& operator<<  
(std::basic_ostream<_CharT, _Traits > &, const  
std::piecewise_linear_distribution<_RealType1 > &) [friend]`

Inserts a `piecewise_linear_distribution` random number distribution `__x` into the output stream `__os`.

### Parameters:

`__os` An output stream.

`__x` A `piecewise_linear_distribution` random number distribution.

### Returns:

The output stream with the state of `__x` inserted or in an error state.

**5.640.4.2** `template<typename _RealType = double> template<typename

### 5.647.1 Detailed Description

```
template<typename _Tp, typename _Sequence = vector<_Tp>, typename _
Compare = less<typename _Sequence::value_type>> class std::priority_queue<
_Tp, _Sequence, _Compare >
```

A standard container automatically sorting its contents. This is not a true container, but an *adaptor*. It holds another container, and provides a wrapper interface to that container. The wrapper is what enforces priority-based sorting and queue behavior. Very few of the standard container/sequence interface requirements are met (e.g., iterators).

The second template parameter defines the type of the underlying sequence/container. It defaults to `std::vector`, but it can be any type that supports `front()`, `push_back`, `pop_back`, and random-access iterators, such as `std::deque` or an appropriate user-defined type.

The third template parameter supplies the means of making priority comparisons. It defaults to `less<value_type>` but can be anything defining a strict weak ordering.

Members not found in *normal* containers are `container_type`, which is a typedef for the second `Sequence` parameter, and `push`, `pop`, and `top`, which are standard queue operations.

#### Note:

No equality/comparison operators are provided for `priority_queue`. Sorting of the elements takes place as they are added to, and removed from, the `priority_queue` using the `priority_queue`'s member functions. If you access the elements by other means, and change their data such that the sorting order would be different, the `priority_queue` will not re-sort the elements for you. (How could it know to do so?)

Definition at line 359 of file `stl_queue.h`.

### 5.647.2 Constructor & Destructor Documentation

```
5.647.2.1 template<typename _Tp, typename _Sequence = vector<_Tp>,
typename _Compare = less<typename _Sequence::value_type>>
std::priority_queue<_Tp, _Sequence, _Compare >::priority_queue
(const _Compare & __x, const _Sequence & __s) [inline,
explicit]
```

Default constructor creates no elements.

Definition at line 394 of file `stl_queue.h`.

References `std::make_heap()`.

**5.647.2.2** `template<typename _Tp, typename _Sequence = vector<_Tp>, typename _Compare = less<typename _Sequence::value_type>> template<typename _InputIterator > std::priority_queue<_Tp, _Sequence, _Compare >::priority_queue (_InputIterator __first, _InputIterator __last, const _Compare & __x, const _Sequence & __s) [inline]`

Builds a queue from a range.

**Parameters:**

- first* An input [iterator](#).
- last* An input [iterator](#).
- x* A comparison functor describing a strict weak ordering.
- s* An initial sequence with which to start.

Begins by copying *s*, inserting a copy of the elements from [first,last) into the copy of *s*, then ordering the copy according to *x*.

For more information on function objects, see the documentation on [functor base classes](#).

Definition at line 434 of file `stl_queue.h`.

References `std::make_heap()`.

### 5.647.3 Member Function Documentation

**5.647.3.1** `template<typename _Tp, typename _Sequence = vector<_Tp>, typename _Compare = less<typename _Sequence::value_type>> bool std::priority_queue<_Tp, _Sequence, _Compare >::empty () const [inline]`

Returns true if the queue is empty.

Definition at line 471 of file `stl_queue.h`.

Referenced by `__gnu_parallel::multiseq_partition()`, and `__gnu_parallel::multiseq_selection()`.

**5.647.3.2** `template<typename _Tp, typename _Sequence = vector<_Tp>, typename _Compare = less<typename _Sequence::value_type>> void std::priority_queue<_Tp, _Sequence, _Compare >::pop () [inline]`

Removes first element. This is a typical queue operation. It shrinks the queue by one. The time complexity of the operation depends on the underlying sequence.

Note that no data is returned, and if the first element's data is needed, it should be retrieved before `pop()` is called.

Definition at line 534 of file `stl_queue.h`.

References `std::pop_heap()`.

Referenced by `__gnu_parallel::multiseq_partition()`, and `__gnu_parallel::multiseq_selection()`.

```
5.647.3.3 template<typename _Tp, typename _Sequence = vector<_Tp>,
 typename _Compare = less<typename _Sequence::value_type>>
void std::priority_queue<_Tp, _Sequence, _Compare >::push (const
value_type & __x) [inline]
```

Add data to the queue.

#### Parameters:

**x** Data to be added.

This is a typical queue operation. The time complexity of the operation depends on the underlying sequence.

Definition at line 499 of file `stl_queue.h`.

References `std::push_heap()`.

Referenced by `__gnu_parallel::multiseq_partition()`, and `__gnu_parallel::multiseq_selection()`.

```
5.647.3.4 template<typename _Tp, typename _Sequence = vector<_Tp>,
 typename _Compare = less<typename _Sequence::value_type>>
size_type std::priority_queue<_Tp, _Sequence, _Compare >::size ()
const [inline]
```

Returns the number of elements in the queue.

Definition at line 476 of file `stl_queue.h`.

```
5.647.3.5 template<typename _Tp, typename _Sequence = vector<_Tp>,
 typename _Compare = less<typename _Sequence::value_type>>
const_reference std::priority_queue<_Tp, _Sequence, _Compare
>::top () const [inline]
```

Returns a read-only (constant) reference to the data at the first element of the queue.

Definition at line 484 of file `stl_queue.h`.

**5.647 std::priority\_queue<\_Tp, \_Sequence, \_Compare > Class Template Reference**

`bool operator== (const queue< _Tp1, _Seq1 > &, const queue< _Tp1, _Seq1 > &)`

### 5.651.1 Detailed Description

`template<typename _Tp, typename _Sequence = deque<_Tp>> class std::queue< _Tp, _Sequence >`

A standard container giving FIFO behavior. Meets many of the requirements of a `container`, but does not define anything to do with iterators. Very few of the other standard container interfaces are defined.

This is not a true container, but an *adaptor*. It holds another container, and provides a wrapper interface to that container. The wrapper is what enforces strict first-in-first-out queue behavior.

The second template parameter defines the type of the underlying sequence/container. It defaults to `std::deque`, but it can be any type that supports `front`, `back`, `push_back`, and `pop_front`, such as `std::list` or an appropriate user-defined type.

Members not found in *normal* containers are `container_type`, which is a typedef for the second `Sequence` parameter, and `push` and `pop`, which are standard queue/FIFO operations.

Definition at line 89 of file `stl_queue.h`.

### 5.651.2 Constructor & Destructor Documentation

**5.651.2.1** `template<typename _Tp, typename _Sequence = deque<_Tp>>`  
`std::queue< _Tp, _Sequence >::queue (const _Sequence & __c)`  
`[inline, explicit]`

Default constructor creates no elements.

Definition at line 134 of file `stl_queue.h`.

### 5.651.3 Member Function Documentation

**5.651.3.1** `template<typename _Tp, typename _Sequence = deque<_Tp>>  
const_reference std::queue<_Tp, _Sequence >::back () const  
[inline]`

Returns a read-only (constant) reference to the data at the last element of the queue.

Definition at line 202 of file `stl_queue.h`.

**5.651.3.2** `template<typename _Tp, typename _Sequence = deque<_Tp>>  
reference std::queue<_Tp, _Sequence >::back () [inline]`

Returns a read/write reference to the data at the last element of the queue.

Definition at line 191 of file `stl_queue.h`.

**5.651.3.3** `template<typename _Tp, typename _Sequence = deque<_Tp>>  
bool std::queue<_Tp, _Sequence >::empty () const [inline]`

Returns true if the queue is empty.

Definition at line 156 of file `stl_queue.h`.

**5.651.3.4** `template<typename _Tp, typename _Sequence = deque<_Tp>>  
const_reference std::queue<_Tp, _Sequence >::front () const  
[inline]`

Returns a read-only (constant) reference to the data at the first element of the queue.

Definition at line 180 of file `stl_queue.h`.

**5.651.3.5** `template<typename _Tp, typename _Sequence = deque<_Tp>>  
reference std::queue<_Tp, _Sequence >::front () [inline]`

Returns a read/write reference to the data at the first element of the queue.

Definition at line 169 of file `stl_queue.h`.

**5.651.3.6** `template<typename _Tp, typename _Sequence = deque<_Tp>>  
void std::queue<_Tp, _Sequence >::pop () [inline]`

Removes first element. This is a typical queue operation. It shrinks the queue by one. The time complexity of the operation depends on the underlying sequence.

Note that no data is returned, and if the first element's data is needed, it should be retrieved before `pop()` is called.

Definition at line 244 of file `stl_queue.h`.

```
5.651.3.7 template<typename _Tp, typename _Sequence = deque<_Tp>>
void std::queue< _Tp, _Sequence >::push (const value_type & __x)
[inline]
```

Add data to the end of the queue.

**Parameters:**

**x** Data to be added.

This is a typical queue operation. The function creates an element at the end of the queue and assigns the given data to it. The time complexity of the operation depends on the underlying sequence.

Definition at line 218 of file `stl_queue.h`.

```
5.651.3.8 template<typename _Tp, typename _Sequence = deque<_Tp>>
size_type std::queue< _Tp, _Sequence >::size () const [inline]
```

Returns the number of elements in the queue.

Definition at line 161 of file `stl_queue.h`.

## 5.651.4 Member Data Documentation

```
5.651.4.1 template<typename _Tp, typename _Sequence = deque<_Tp>>
_Sequence std::queue< _Tp, _Sequence >::c [protected]
```

'c' is the underlying container. Maintainers wondering why this isn't uglified as per style guidelines should note that this name is specified in the standard, [23.2.3.1]. (Why? Presumably for the same reason that it's protected instead of private: to allow derivation. But none of the other containers allow for derivation. Odd.)

Definition at line 122 of file `stl_queue.h`.

Referenced by `std::operator==(())`.

The documentation for this class was generated from the following file:

- [stl\\_queue.h](#)

## 5.652 `std::random_access_iterator_tag` Struct Reference

Random-access iterators support a superset of bidirectional [iterator](#) operations. Inheritance diagram for `std::random_access_iterator_tag`:

### 5.652.1 Detailed Description

Random-access iterators support a superset of bidirectional [iterator](#) operations.

Definition at line 93 of file `stl_iterator_base_types.h`.

The documentation for this struct was generated from the following file:

- [stl\\_iterator\\_base\\_types.h](#)

## 5.653 `std::random_device` Class Reference

### Public Types

- typedef unsigned int [result\\_type](#)

### Public Member Functions

- **random\_device** (const [random\\_device](#) &)
- **random\_device** (const [std::string](#) &\_\_token="/dev/urandom")
- double **entropy** () const
- [result\\_type](#) **max** () const
- [result\\_type](#) **min** () const
- [result\\_type](#) **operator**() ()
- void **operator=** (const [random\\_device](#) &)

#### 5.653.1 Detailed Description

A standard interface to a platform-specific non-deterministic random number generator (if any are available).

Definition at line 1389 of file `random.h`.

#### 5.653.2 Member Typedef Documentation

##### 5.653.2.1 `typedef unsigned int std::random_device::result_type`

The type of the generated random value.

Definition at line 1393 of file `random.h`.

The documentation for this class was generated from the following file:

- [random.h](#)

## 5.654 `std::range_error` Class Reference

Inheritance diagram for `std::range_error`:

### Public Member Functions

- `range_error` (const [string](#) &\_\_arg)
- virtual const char \* `what` () const throw ()

#### 5.654.1 Detailed Description

Thrown to indicate range errors in internal computations.

Definition at line 126 of file `stdexcept`.

#### 5.654.2 Member Function Documentation

##### 5.654.2.1 virtual const char\* `std::runtime_error::what` () const throw () [`virtual`, `inherited`]

Returns a C-style character string describing the general cause of the current error (the same string passed to the ctor).

Reimplemented from [std::exception](#).

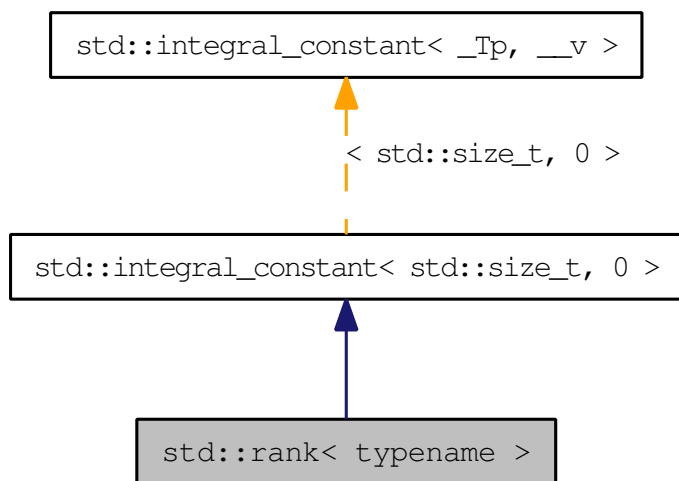

The documentation for this class was generated from the following file:

- [stdexcept](#)

## 5.655 `std::rank< typename >` Struct Template Reference

[rank](#) Inheritance diagram for `std::rank< typename >`:

### Public Types

- typedef `integral_constant< std::size_t, __v >` **type**
- typedef `std::size_t` **value\_type**

### Static Public Attributes

- static const `std::size_t` **value**

#### 5.655.1 Detailed Description

`template<typename> struct std::rank< typename >`

[rank](#)

Definition at line 355 of file `tr1_impl/type_traits`.

The documentation for this struct was generated from the following file:

- [tr1\\_impl/type\\_traits](#)

## 5.656 `std::ratio< _Num, _Den >` Struct Template Reference

Provides compile-time rational arithmetic.

### Public Member Functions

- **static\_assert** (`_Num >= __INTMAX_MAX__` && `_Den >= __INTMAX_MAX__`, "out of range")
- **static\_assert** (`_Den != 0`, "denominator cannot be zero")

### Static Public Attributes

- static const `intmax_t` **den**
- static const `intmax_t` **num**

#### 5.656.1 Detailed Description

`template<intmax_t _Num, intmax_t _Den = 1> struct std::ratio< _Num, _Den >`

Provides compile-time rational arithmetic. This class template represents any finite rational number with a numerator and denominator representable by compile-time constants of type `intmax_t`. The [ratio](#) is simplified when instantiated.

For example:

```
std::ratio<7,-21>::num == -1;
std::ratio<7,-21>::den == 3;
```

Definition at line 151 of file `ratio`.

The documentation for this struct was generated from the following file:

- [ratio](#)

## 5.657 `std::ratio_add< _R1, _R2 >` Struct Template Reference

[ratio\\_add](#)

### Public Types

- typedef `ratio< __safe_add< __safe_multiply< _R1::num,(_R2::den/___gcd)>::value, __safe_multiply< _R2::num,(_R1::den/___gcd)>::value >::value, __safe_multiply< _R1::den,(_R2::den/___gcd)>::value > type`

### 5.657.1 Detailed Description

```
template<typename _R1, typename _R2> struct std::ratio_add< _R1, _R2 >
```

[ratio\\_add](#)

Definition at line 173 of file `ratio`.

The documentation for this struct was generated from the following file:

- [ratio](#)

## 5.658 `std::ratio_divide< _R1, _R2 >` Struct Template Reference

[ratio\\_divide](#)

### Public Types

- typedef [ratio\\_multiply](#)< \_R1, [ratio](#)< \_R2::den, \_R2::num > >::type **type**

### Public Member Functions

- `static_assert` (\_R2::num!=0,"division by 0")

#### 5.658.1 Detailed Description

```
template<typename _R1, typename _R2> struct std::ratio_divide< _R1, _R2 >
```

[ratio\\_divide](#)

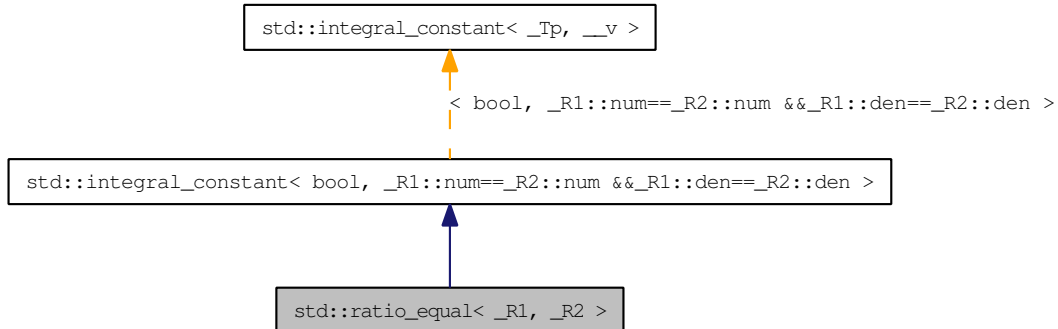

Definition at line 216 of file ratio.

The documentation for this struct was generated from the following file:

- [ratio](#)

## 5.659 std::ratio\_equal< \_R1, \_R2 > Struct Template Reference

[ratio\\_equal](#) Inheritance diagram for std::ratio\_equal< \_R1, \_R2 >:

### Public Types

- typedef [integral\\_constant](#)< bool, \_\_v > **type**
- typedef bool **value\_type**

### Static Public Attributes

- static const bool **value**

#### 5.659.1 Detailed Description

```
template<typename _R1, typename _R2> struct std::ratio_equal< _R1, _R2 >
```

[ratio\\_equal](#)

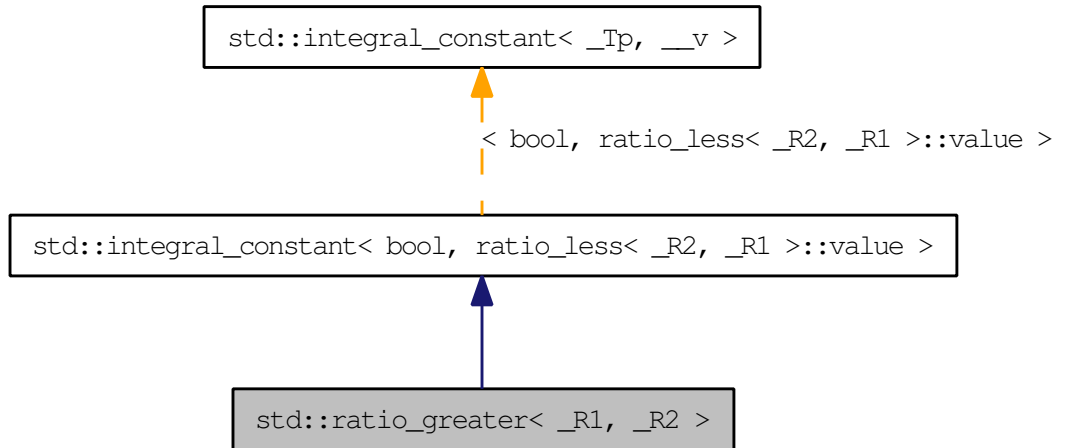

Definition at line 227 of file ratio.

The documentation for this struct was generated from the following file:

- [ratio](#)

## 5.660 `std::ratio_greater< _R1, _R2 >` Struct Template Reference

[ratio\\_greater](#) Inheritance diagram for `std::ratio_greater< _R1, _R2 >`:

### Public Types

- typedef [integral\\_constant](#)`< bool, __v >` **type**
- typedef `bool` **value\_type**

### Static Public Attributes

- static const `bool` **value**

#### 5.660.1 Detailed Description

```
template<typename _R1, typename _R2> struct std::ratio_greater< _R1, _R2 >
```

[ratio\\_greater](#)

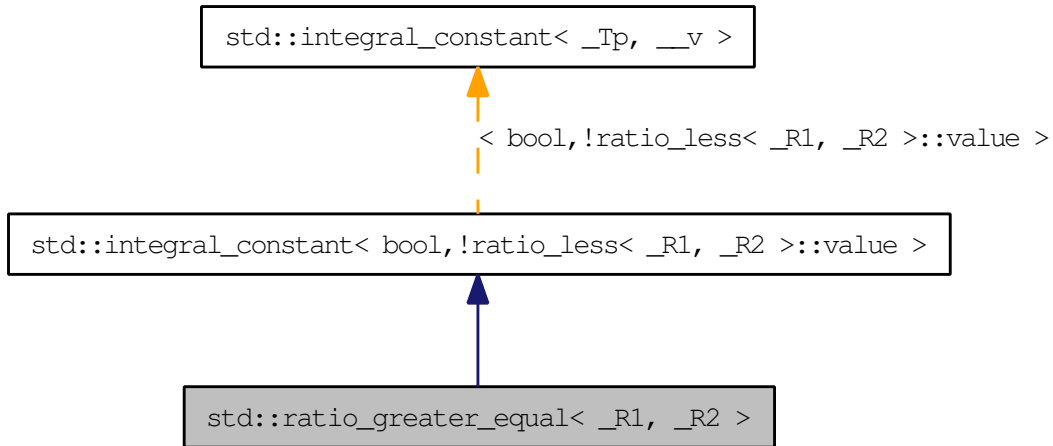

Definition at line 269 of file `ratio`.

The documentation for this struct was generated from the following file:

## 5.664 `std::ratio_multiply< _R1, _R2 >` Struct Template Reference

[ratio\\_multiply](#)

### Public Types

- typedef [ratio](#)< `__safe_multiply<(_R1::num/__gcd1),(_R2::num/__gcd2)>::value,` `__safe_multiply<(_R1::den/__gcd2),(_R2::den/__gcd1)>::value` > **type**

### 5.664.1 Detailed Description

```
template<typename _R1, typename _R2> struct std::ratio_multiply< _R1, _R2 >
```

[ratio\\_multiply](#)

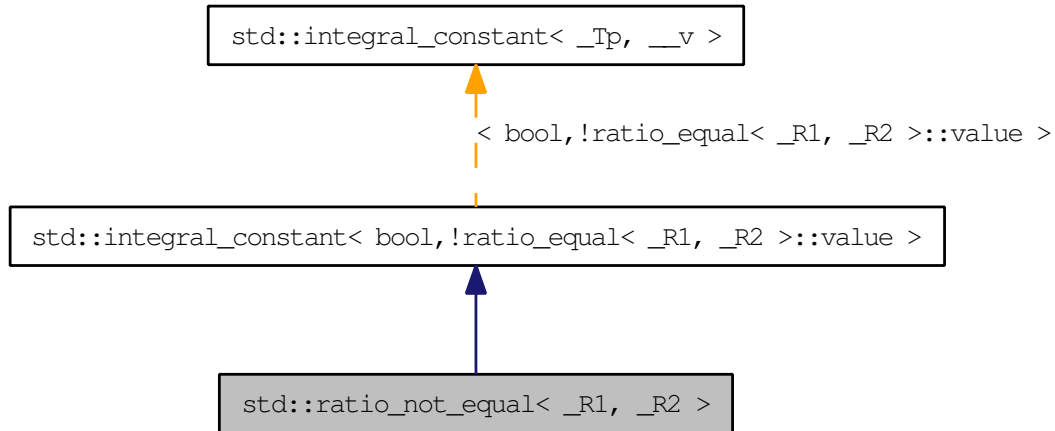

Definition at line 198 of file `ratio`.

The documentation for this struct was generated from the following file:

- [ratio](#)

## 5.665 `std::ratio_not_equal< _R1, _R2 >` Struct Template Reference

[ratio\\_not\\_equal](#) Inheritance diagram for `std::ratio_not_equal< _R1, _R2 >`:

### Public Types

- typedef `integral_constant< bool, __v >` **type**
- typedef `bool` **value\_type**

### Static Public Attributes

- static const `bool` **value**

#### 5.665.1 Detailed Description

```
template<typename _R1, typename _R2> struct std::ratio_not_equal< _R1, _R2 >
```

[ratio\\_not\\_equal](#)

Definition at line 233 of file `ratio`.

The documentation for this struct was generated from the following file:

- [ratio](#)

## 5.666 `std::ratio_subtract< _R1, _R2 >` Struct Template Reference

[ratio\\_subtract](#)

### Public Types

- typedef [ratio\\_add](#)< \_R1, [ratio](#)< \_R2::num, \_R2::den > >::type **type**

#### 5.666.1 Detailed Description

```
template<typename _R1, typename _R2> struct std::ratio_subtract< _R1, _R2 >
```

[ratio\\_subtract](#)

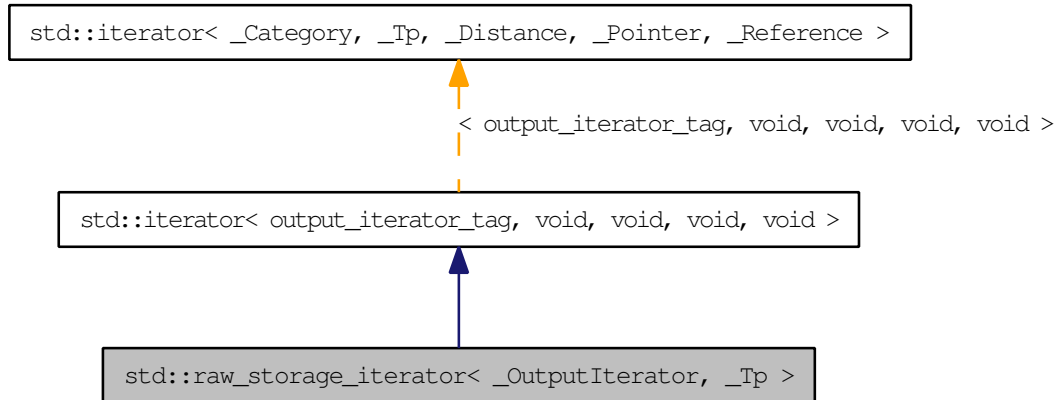

Definition at line 189 of file `ratio`.

The documentation for this struct was generated from the following file:

- [ratio](#)

## 5.667 `std::raw_storage_iterator< _OutputIterator, _Tp >` Class Template Reference

Inheritance diagram for `std::raw_storage_iterator< _OutputIterator, _Tp >`:

### Public Types

- typedef void [difference\\_type](#)
- typedef [output\\_iterator\\_tag](#) `iterator_category`
- typedef void [pointer](#)
- typedef void [reference](#)
- typedef void [value\\_type](#)

### Public Member Functions

- `raw_storage_iterator` (`_OutputIterator __x`)
- `raw_storage_iterator` & `operator*` ()
- `raw_storage_iterator< _OutputIterator, _Tp >` `operator++` (int)
- `raw_storage_iterator< _OutputIterator, _Tp >` & `operator++` ()
- `raw_storage_iterator` & `operator=` (const `_Tp` & `__element`)

### Protected Attributes

- `_OutputIterator _M_iter`

### 5.667.1 Detailed Description

```
template<class _OutputIterator, class _Tp> class std::raw_storage_iterator< _-
OutputIterator, _Tp >
```

This [iterator](#) class lets algorithms store their results into uninitialized memory.

Definition at line 67 of file `stl_raw_storage_iter.h`.

### 5.667.2 Member Typedef Documentation

**5.667.2.1** `typedef void std::iterator< output_iterator_tag , void , void , void ,  
void >::difference_type [inherited]`

Distance between iterators is represented as this type.

Definition at line 115 of file `stl_iterator_base_types.h`.

**5.667.2.2** `typedef output_iterator_tag std::iterator< output_iterator_tag , void  
, void , void , void >::iterator_category [inherited]`

One of the [tag types](#).

Definition at line 111 of file `stl_iterator_base_types.h`.

**5.667.2.3** `typedef void std::iterator< output_iterator_tag , void , void , void ,  
void >::pointer [inherited]`

This type represents a pointer-to-value\_type.

Definition at line 117 of file `stl_iterator_base_types.h`.

**5.667.2.4** `typedef void std::iterator< output_iterator_tag , void , void , void ,  
void >::reference [inherited]`

This type represents a reference-to-value\_type.

Definition at line 119 of file `stl_iterator_base_types.h`.

**5.667.2.5** `typedef void std::iterator< output_iterator_tag , void , void , void ,  
void >::value_type [inherited]`

The type "pointed to" by the iterator.

Definition at line 113 of file `stl_iterator_base_types.h`.

**5.667 std::raw\_storage\_iterator< \_OutputIterator, \_Tp > Class Template Reference**

---

### Public Types

- typedef `__native_type *` `native_handle_type`

### Public Member Functions

- `recursive_mutex` (const [recursive\\_mutex](#) &)
- void `lock` ()
- `native_handle_type` `native_handle` ()
- [recursive\\_mutex](#) & `operator=` (const [recursive\\_mutex](#) &)
- bool `try_lock` ()
- void `unlock` ()

#### 5.668.1 Detailed Description

[recursive\\_mutex](#)

Definition at line 115 of file `mutex`.

The documentation for this class was generated from the following file:

- [mutex](#)

## 5.669 `std::recursive_timed_mutex` Class Reference

[recursive\\_timed\\_mutex](#)

### Public Types

- typedef `__native_type * native_handle_type`

### Public Member Functions

- `recursive_timed_mutex` (const [recursive\\_timed\\_mutex](#) &)
- void `lock` ()
- `native_handle_type native_handle` ()
- [recursive\\_timed\\_mutex](#) & `operator=` (const [recursive\\_timed\\_mutex](#) &)
- bool `try_lock` ()
- template<class `_Rep`, class `_Period` >  
bool `try_lock_for` (const [chrono::duration](#)< `_Rep`, `_Period` > &\_\_rtime)
- template<class `_Clock`, class `_Duration` >  
bool `try_lock_until` (const [chrono::time\\_point](#)< `_Clock`, `_Duration` > &\_\_-  
atime)
- void `unlock` ()

### 5.669.1 Detailed Description

[recursive\\_timed\\_mutex](#)

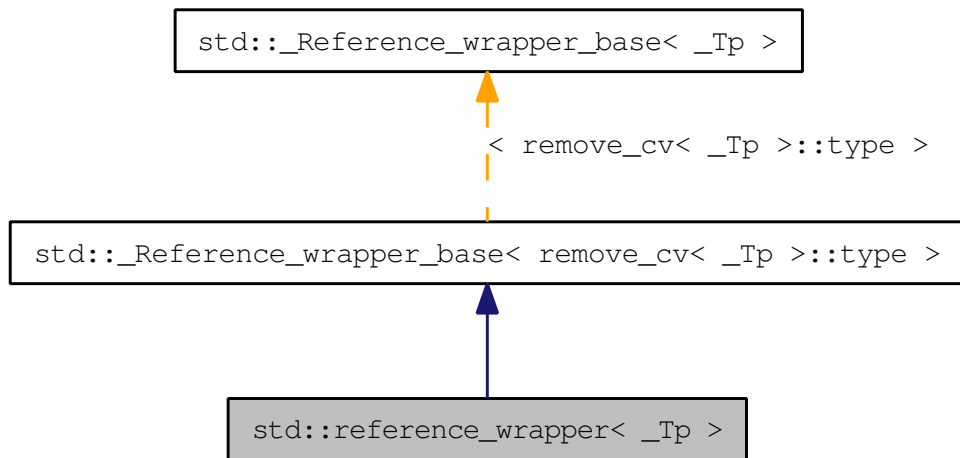

Definition at line 271 of file `mutex`.

The documentation for this class was generated from the following file:

- [mutex](#)

## 5.670 `std::reference_wrapper< _Tp >` Class Template Reference

Primary class template for [reference\\_wrapper](#). Inheritance diagram for `std::reference_wrapper< _Tp >`:

### Public Types

- typedef `_Tp` type

### Public Member Functions

- `reference_wrapper` (const [reference\\_wrapper](#)< `_Tp` > &\_\_inref)
- `reference_wrapper` (`_Tp` &&)
- `reference_wrapper` (`_Tp` &\_\_indata)
- `_Tp` & `get` () const
- `operator _Tp &` () const
- `template<typename... _Args>`  
`result_of< _M_func_type(_Args...)>::type` `operator`() (`_Args` &&...\_\_args)  
const
- `reference_wrapper` & `operator=` (const [reference\\_wrapper](#)< `_Tp` > &\_\_inref)

### **5.670.1 Detailed Description**

**template<typename \_Tp> class std::reference\_wrapper<\_Tp >**

Primary class template for [reference\\_wrapper](#).

Definition at line 392 of file functional.

The documentation for this class was generated from the following file:

- [functional](#)

## 5.671 `std::regex_error` Class Reference

A regular expression [exception](#) class.

The regular expression library throws objects of this class on error. Inheritance diagram for `std::regex_error`:

### Public Member Functions

- [regex\\_error](#) ([regex\\_constants::error\\_type](#) \_\_ecode)
- [regex\\_constants::error\\_type](#) code () const
- virtual const char \* [what](#) () const throw ()

### Protected Attributes

- [regex\\_constants::error\\_type](#) \_M\_code

#### 5.671.1 Detailed Description

A regular expression [exception](#) class.

The regular expression library throws objects of this class on error.

Definition at line 395 of file `tr1_impl/regex`.

## 5.671.2 Constructor & Destructor Documentation

### 5.671.2.1 `std::regex_error::regex_error (regex_constants::error_type __ecode)` [`inline`, `explicit`]

Constructs a [regex\\_error](#) object.

#### Parameters:

*ecode* the regex error code.

Definition at line 405 of file `tr1_impl/regex`.

## 5.671.3 Member Function Documentation

### 5.671.3.1 `regex_constants::error_type std::regex_error::code () const` [`inline`]

Gets the regex error code.

#### Returns:

the regex error code.

Definition at line 415 of file `tr1_impl/regex`.

### 5.671.3.2 `virtual const char* std::runtime_error::what () const throw ()` [`virtual`, `inherited`]

Returns a C-style character string describing the general cause of the current error (the same string passed to the ctor).

Reimplemented from [std::exception](#).

The documentation for this class was generated from the following file:

- [tr1\\_impl/regex](#)

## 5.672 `std::regex_iterator< _Bi_iter, _Ch_type, _Rx_traits >` Class Template Reference

### Public Types

- typedef `std::ptrdiff_t` **difference\_type**
- typedef `std::forward_iterator_tag` **iterator\_category**

#### 5.672.1 Detailed Description

```
template<typename _Bi_iter, typename _Ch_type = typename iterator_traits<_Bi_iter>::value_type, typename _Rx_traits = regex_traits<_Ch_type>> class
std::regex_iterator< _Bi_iter, _Ch_type, _Rx_traits >
```

An `iterator` adaptor that will provide repeated calls of `regex_search` over a range until no more matches remain.

Definition at line 2431 of file `tr1_impl/regex`.

## 5.672.2 Constructor & Destructor Documentation

**5.672.2.1** `template<typename _Bi_iter , typename _Ch_type = typename iterator_traits<_Bi_iter>::value_type, typename _Rx_traits = regex_traits<_Ch_type>> std::regex_iterator< _Bi_iter, _Ch_type, _Rx_traits >::regex_iterator ()`

Provides a singular [iterator](#), useful for indicating one-past-the-end of a range.

### Todo

Implement this function.

Doc me! See [doc/doxygen/TODO](#) and <http://gcc.gnu.org/ml/libstdc++/2002-02/msg00003.html> for more.

**5.672.2.2** `template<typename _Bi_iter , typename _Ch_type = typename iterator_traits<_Bi_iter>::value_type, typename _Rx_traits = regex_traits<_Ch_type>> std::regex_iterator< _Bi_iter, _Ch_type, _Rx_traits >::regex_iterator (_Bi_iter __a, _Bi_iter __b, const regex_type & __re, regex_constants::match_flag_type __m = regex_constants::match_default)`

Constructs a `regex_iterator`...

### Parameters:

*a* [IN] The start of a text range to search.

*b* [IN] One-past-the-end of the text range to search.

*re* [IN] The regular expression to match.

*m* [IN] Policy flags for match rules.

### Todo

Implement this function.

Doc me! See [doc/doxygen/TODO](#) and <http://gcc.gnu.org/ml/libstdc++/2002-02/msg00003.html> for more.

**5.672.2.3** `template<typename _Bi_iter , typename _Ch_type = typename iterator_traits<_Bi_iter>::value_type, typename _Rx_traits = regex_traits<_Ch_type>> std::regex_iterator< _Bi_iter, _Ch_type, _Rx_traits >::regex_iterator (const regex_iterator< _Bi_iter, _Ch_type, _Rx_traits > & __rhs)`

Copy constructs a `regex_iterator`.

**Todo**

Implement this function.

Doc me! See doc/doxygen/TODO and <http://gcc.gnu.org/ml/libstdc++/2002-02/msg0000> for more.

#### 5.673.1 Detailed Description

```
template<typename _Bi_iter, typename _Ch_type = typename iterator_traits<_Bi_iter>::value_type, typename _Rx_traits = regex_traits<_Ch_type>> class
std::regex_token_iterator< _Bi_iter, _Ch_type, _Rx_traits >
```

Iterates over submatches in a range (or *splits* a text string).

The purpose of this [iterator](#) is to enumerate all, or all specified, matches of a regular expression within a text range. The dereferenced value of an [iterator](#) of this class is a `std::tr1::sub_match` object.

Definition at line 2546 of file `tr1_impl/regex`.

## 5.673.2 Constructor & Destructor Documentation

**5.673.2.1** `template<typename _Bi_iter, typename _Ch_type = typename iterator_traits<_Bi_iter>::value_type, typename _Rx_traits = regex_traits<_Ch_type>> std::regex_token_iterator<_Bi_iter, _Ch_type, _Rx_traits>::regex_token_iterator()`

Default constructs a `regex_token_iterator`.

### Todo

Implement this function.

A default-constructed `regex_token_iterator` is a singular [iterator](#) that will compare equal to the one-past-the-end value for any [iterator](#) of the same type.

**5.673.2.2** `template<typename _Bi_iter, typename _Ch_type = typename iterator_traits<_Bi_iter>::value_type, typename _Rx_traits = regex_traits<_Ch_type>> std::regex_token_iterator<_Bi_iter, _Ch_type, _Rx_traits>::regex_token_iterator(_Bi_iter __a, _Bi_iter __b, const regex_type & __re, int __submatch = 0, regex_constants::match_flag_type __m = regex_constants::match_default)`

Constructs a `regex_token_iterator`...

### Parameters:

*a* [IN] The start of the text to search.

*b* [IN] One-past-the-end of the text to search.

*re* [IN] The regular expression to search for.

*submatch* [IN] Which submatch to return. There are some special values for this parameter:

- -1 each enumerated subexpression does NOT match the regular expression (aka field splitting)
- 0 the entire string matching the subexpression is returned for each match within the text.
- >0 enumerates only the indicated subexpression from a match within the text.

*m* [IN] Policy flags for match rules.

### Todo

Implement this function.

Doc me! See doc/doxygen/TODO and <http://gcc.gnu.org/ml/libstdc++/2002-02/msg00003.html> for more.

**5.673.2.3** `template<typename _Bi_iter , typename _Ch_type = typename iterator_traits<_Bi_iter>::value_type, typename _Rx_traits = regex_traits<_Ch_type>> std::regex_token_iterator<_Bi_iter, _Ch_type, _Rx_traits >::regex_token_iterator (_Bi_iter __a, _Bi_iter __b, const regex_type & __re, const std::vector<int > & __submatches, regex_constants::match_flag_type __m = regex_constants::match_default)`

Constructs a `regex_token_iterator`...

#### Parameters:

*a* [IN] The start of the text to search.

*b* [IN] One-past-the-end of the text to search.

*re* [IN] The regular expression to search for.

*submatches* [IN] A [list](#) of subexpressions to return for each regular expression match within the text.

*m* [IN] Policy flags for match rules.

### Todo

Implement this function.

Doc me! See doc/doxygen/TODO and <http://gcc.gnu.org/ml/libstdc++/2002-02/msg00003.html> for more.

**5.673.2.4** `template<typename _Bi_iter , typename _Ch_type = typename iterator_traits<_Bi_iter>::value_type, typename _Rx_traits = regex_traits<_Ch_type>> template<std::size_t _Nm> std::regex_token_iterator<_Bi_iter, _Ch_type, _Rx_traits >::regex_token_iterator (_Bi_iter __a, _Bi_iter __b, const regex_type & __re, const int(& __submatches[_Nm], regex_constants::match_flag_type __m = regex_constants::match_default) [inline]`

Constructs a `regex_token_iterator`...

**Parameters:**

- a* [IN] The start of the text to search.
- b* [IN] One-past-the-end of the text to search.
- re* [IN] The regular expression to search for.
- submatches* [IN] A [list](#) of subexpressions to return for each regular expression match within the text.
- m* [IN] Policy flags for match rules.

**Todo**

Implement this function.

Doc me! See doc/doxygen/TODO and <http://gcc.gnu.org/ml/libstdc++/2002-02/msg000> for more.

**5.673.2.5** `template<typename _Bi_iter , typename _Ch_type = typename iterator_traits<_Bi_iter>::value_type, typename _Rx_traits = regex_traits<_Ch_type>> std::regex_token_iterator<_Bi_iter, _Ch_type, _Rx_traits >::regex_token_iterator (const regex_token_iterator<_Bi_iter, _Ch_type, _Rx_traits > & __rhs)`

Copy constructs a `regex_token_iterator`.

**Parameters:**

- rhs* [IN] A `regex_token_iterator` to copy.

**Todo**

Implement this function.

**5.673.3 Member Function Documentation**

**5.673.3.1** `template<typename _Bi_iter , typename _Ch_type = typename iterator_traits<_Bi_iter>::value_type, typename _Rx_traits = regex_traits<_Ch_type>> bool std::regex_token_iterator<_Bi_iter, _Ch_type, _Rx_traits >::operator!= (const regex_token_iterator<_Bi_iter, _Ch_type, _Rx_traits > & __rhs)`

Compares a `regex_token_iterator` to another for inequality.

**Todo**

Implement this function.

**5.673.3.2** `template<typename _Bi_iter , typename _Ch_type =  
typename iterator_traits<_Bi_iter>::value_type, typename  
_Rx_traits = regex_traits<_Ch_type>> const value_type&  
std::regex_token_iterator< _Bi_iter, _Ch_type, _Rx_traits  
>::operator* ()`

Dereferences a regex\_token\_iterator.

**Todo**

Implement this function.

**5.673.3.3** `template<typename _Bi_iter , typename _Ch_type =  
typename iterator_traits<_Bi_iter>::value_type, typename  
_Rx_traits = regex_traits<_Ch_type>> regex_token_iterator  
std::regex_token_iterator< _Bi_iter, _Ch_type, _Rx_traits  
>::operator++ (int)`

Postincrements a regex\_token\_iterator.

**Todo**

Implement this function.

**5.673.3.4** `template<typename _Bi_iter , typename _Ch_type =  
typename iterator_traits<_Bi_iter>::value_type, typename  
_Rx_traits = regex_traits<_Ch_type>> regex_token_iterator&  
std::regex_token_iterator< _Bi_iter, _Ch_type, _Rx_traits  
>::operator++ ()`

Increments a regex\_token\_iterator.

**Todo**

Implement this function.

**5.673.3.5** `template<typename _Bi_iter , typename _Ch_type =  
typename iterator_traits<_Bi_iter>::value_type, typename  
_Rx_traits = regex_traits<_Ch_type>> const value_type*  
std::regex_token_iterator< _Bi_iter, _Ch_type, _Rx_traits  
>::operator-> ()`

Selects a regex\_token\_iterator member.

**Todo**

Implement this function.

**5.673.3.6** `template<typename _Bi_iter, typename _Ch_type =  
typename iterator_traits<_Bi_iter>::value_type, typename  
_Rx_traits = regex_traits<_Ch_type>> regex_token_iterator&  
std::regex_token_iterator<_Bi_iter, _Ch_type, _Rx_traits  
>::operator= (const regex_token_iterator<_Bi_iter, _Ch_type,  
_Rx_traits > & __rhs)`

Assigns a `regex_token_iterator` to another.

**Parameters:**

*rhs* [IN] A `regex_token_iterator` to copy.

**Todo**

Implement this function.

**5.673.3.7** `template<typename _Bi_iter, typename _Ch_type = typename  
iterator_traits<_Bi_iter>::value_type, typename _Rx_traits =  
regex_traits<_Ch_type>> bool std::regex_token_iterator<_Bi_iter,  
_Ch_type, _Rx_traits >::operator== (const regex_token_iterator<  
_Bi_iter, _Ch_type, _Rx_traits > & __rhs)`

Compares a `regex_token_iterator` to another for equality.

**Todo**

Implement this function.

### 5.674.1 Detailed Description

`template<typename _Ch_type> struct std::regex_traits< _Ch_type >`

Describes aspects of a regular expression. A regular expression traits class that satisfies the requirements of [tr1](#) section [7.2].

The class `regex` is parameterized around a [set](#) of related types and functions used to complete the definition of its semantics. This class satisfies the requirements of such a traits class.

Definition at line 434 of file `tr1_impl/regex`.

### 5.674.2 Constructor & Destructor Documentation

**5.674.2.1** `template<typename _Ch_type > std::regex_traits< _Ch_type >::regex_traits () [inline]`

Constructs a default traits object.

Definition at line 446 of file `tr1_impl/regex`.

### 5.674.3 Member Function Documentation

**5.674.3.1** `template<typename _Ch_type > locale_type std::regex_traits< _Ch_type >::getloc () const [inline]`

Gets a copy of the current [locale](#) in use by the [regex\\_traits](#) object.

Definition at line 646 of file `tr1_impl/regex`.

**5.674.3.2** `template<typename _Ch_type > locale_type std::regex_traits< _Ch_type >::imbue (locale_type __loc) [inline]`

Imbues the [regex\\_traits](#) object with a copy of a new [locale](#).

**Parameters:**

*loc* A [locale](#).

**Returns:**

a copy of the previous [locale](#) in use by the [regex\\_traits](#) object.

**Note:**

Calling `imbue` with a different [locale](#) than the one currently in use invalidates all cached data held by `*this`.

Definition at line 635 of file tr1\_impl/regex.

References std::swap().

**5.674.3.3** `template<typename _Ch_type > static std::size_t std::regex_traits< _Ch_type >::length (const char_type * __p) [inline, static]`

Gives the length of a C-style string starting at `__p`.

**Parameters:**

`__p` a pointer to the start of a character sequence.

**Returns:**

the number of characters between `*__p` and the first default-initialized value of type `char_type`. In other words, uses the C-string algorithm for determining the length of a sequence of characters.

Definition at line 460 of file tr1\_impl/regex.

References std::basic\_string< \_CharT, \_Traits, \_Alloc >::length().

**5.674.3.4** `template<typename _Ch_type > template<typename _Fwd_iter > char_class_type std::regex_traits< _Ch_type >::lookup_classname (_Fwd_iter __first, _Fwd_iter __last) const [inline]`

Maps one or more characters to a named character classification.

**Parameters:**

*first* beginning of the character sequence.

*last* one-past-the-end of the character sequence.

**Returns:**

an unspecified value that represents the character classification named by the character sequence designated by the [iterator](#) range [first, last). The value returned shall be independent of the case of the characters in the character sequence. If the name is not recognized then returns a value that compares equal to 0.

At least the following names (or their wide-character equivalent) are supported.

- d
- w

- s
- alnum
- alpha
- blank
- cntrl
- digit
- graph
- lower
- print
- punct
- space
- upper
- xdigit

#### Todo

Implement this function.

Referenced by `std::regex_traits<_Ch_type>::isctype()`.

**5.674.3.5** `template<typename _Ch_type > template<typename _Fwd_iter >  
string_type std::regex_traits<_Ch_type >::lookup_collatename  
(_Fwd_iter __first, _Fwd_iter __last) const [inline]`

Gets a collation element by name.

#### Parameters:

*first* beginning of the collation element name.

*last* one-past-the-end of the collation element name.

#### Returns:

a sequence of one or more characters that represents the collating element consisting of the character sequence designated by the [iterator](#) range [first, last). Returns an empty string if the character sequence is not a valid collating element.

#### Todo

Implement this function.

```
5.674.3.6 template<typename _Ch_type > template<typename _Fwd_iter >
string_type std::regex_traits< _Ch_type >::transform (_Fwd_iter
__first, _Fwd_iter __last) const [inline]
```

Gets a sort key for a character sequence.

**Parameters:**

*first* beginning of the character sequence.

*last* one-past-the-end of the character sequence.

Returns a sort key for the character sequence designated by the [iterator](#) range [F1, F2) such that if the character sequence [G1, G2) sorts before the character sequence [H1, H2) then v.transform(G1, G2) < v.transform(H1, H2).

What this really does is provide a more efficient way to compare a string to multiple other strings in locales with fancy collation rules and equivalence classes.

**Returns:**

a locale-specific sort key equivalent to the input range.

**Exceptions:**

[std::bad\\_cast](#) if the current [locale](#) does not have a [collate](#) facet.

Definition at line 513 of file tr1\_impl/regex.

References [std::basic\\_string< \\_CharT, \\_Traits, \\_Alloc >::data\(\)](#), [std::basic\\_string< \\_CharT, \\_Traits, \\_Alloc >::size\(\)](#), [std::collate< \\_CharT >::transform\(\)](#), and [std::use\\_facet\(\)](#).

```
5.674.3.7 template<typename _Ch_type > template<typename _Fwd_iter >
string_type std::regex_traits< _Ch_type >::transform_primary
(_Fwd_iter __first, _Fwd_iter __last) const [inline]
```

Dunno.

**Parameters:**

*first* beginning of the character sequence.

*last* one-past-the-end of the character sequence.

Effects: if typeid(use\_facet<collate<\_Ch\_type>>) == typeid(collate\_byname<\_Ch\_type>) and the form of the sort key returned by collate\_byname<\_Ch\_type>::transform(first, last) is known and can be converted into a primary sort key then returns that key, otherwise returns an empty string. WTF??

**Todo**

Implement this function.

**5.674.3.8** `template<typename _Ch_type > char_type std::regex_traits<_Ch_type >::translate (char_type __c) const [inline]`

Performs the [identity](#) translation.

**Parameters:**

*c* A character to the locale-specific character [set](#).

**Returns:**

*c*.

Definition at line 471 of file `tr1_impl/regex`.

**5.674.3.9** `template<typename _Ch_type > char_type std::regex_traits<_Ch_type >::translate_nocase (char_type __c) const [inline]`

Translates a character into a case-insensitive equivalent.

**Parameters:**

*c* A character to the locale-specific character [set](#).

**Returns:**

the locale-specific lower-case equivalent of *c*.

**Exceptions:**

[std::bad\\_cast](#) if the imbued [locale](#) does not support the [ctype](#) facet.

Definition at line 484 of file `tr1_impl/regex`.

References `std::tolower()`, and `std::use_facet()`.

### Protected Types

- typedef `iterator_traits< _Iterator > __traits_type`

## Protected Attributes

- `_Iterator current`

### 5.682.1 Detailed Description

**template<typename \_Iterator> class std::reverse\_iterator< \_Iterator >**

Bidirectional and random access iterators have corresponding reverse iterator adaptors that iterate through the data structure in the opposite direction. They have the same signatures as the corresponding iterators. The fundamental relation between a reverse iterator and its corresponding iterator `i` is established by the [identity](#):

```
&*(reverse_iterator(i)) == &(i - 1)
```

*This mapping is dictated by the fact that while there is always a pointer past the end of an [array](#), there might not be a valid pointer before the beginning of an [array](#).* [24.4.1]/1,2

Reverse iterators can be tricky and surprising at first. Their semantics make sense, however, and the trickiness is a side effect of the requirement that the iterators must be safe.

Definition at line 95 of file `stl_iterator.h`.

### 5.682.2 Member Typedef Documentation

**5.682.2.1 template<typename \_Iterator> typedef \_\_traits\_difference\_type std::reverse\_iterator< \_Iterator >::difference\_type**

Distance between iterators is represented as this type.

Reimplemented from [std::iterator< iterator\\_traits< \\_Iterator >::iterator\\_category, iterator\\_traits< \\_Iterator >::value\\_type, iterator\\_traits< \\_Iterator >::difference\\_type, iterator\\_traits< \\_Iterator >::pointer, iterator\\_traits< \\_Iterator >::reference >](#).

Definition at line 109 of file `stl_iterator.h`.

**5.682.2.2 typedef iterator\_traits< \_Iterator >::iterator\_category std::iterator< iterator\_traits< \_Iterator >::iterator\_category, iterator\_traits< \_Iterator >::value\_type, iterator\_traits< \_Iterator >::difference\_type, iterator\_traits< \_Iterator >::pointer, iterator\_traits< \_Iterator >::reference >::iterator\_category [inherited]**

One of the [tag types](#).

Definition at line 111 of file `stl_iterator_base_types.h`.

**5.682.2.3** `template<typename _Iterator> typedef __traits_type::pointer  
std::reverse_iterator< _Iterator >::pointer`

This type represents a pointer-to-value\_type.

Reimplemented from `std::iterator< iterator_traits< _Iterator >::iterator_category,  
iterator_traits< _Iterator >::value_type, iterator_traits< _Iterator >::difference_type,  
iterator_traits< _Iterator >::pointer, iterator_traits< _Iterator >::reference >`.

Definition at line 110 of file `stl_iterator.h`.

**5.682.2.4** `template<typename _Iterator> typedef __traits_type::reference  
std::reverse_iterator< _Iterator >::reference`

This type represents a reference-to-value\_type.

Reimplemented from `std::iterator< iterator_traits< _Iterator >::iterator_category,  
iterator_traits< _Iterator >::value_type, iterator_traits< _Iterator >::difference_type,  
iterator_traits< _Iterator >::pointer, iterator_traits< _Iterator >::reference >`.

Definition at line 111 of file `stl_iterator.h`.

**5.682.2.5** `typedef iterator_traits< _Iterator >::value_type std::iterator<  
iterator_traits< _Iterator >::iterator_category , iterator_traits<  
_Iterator >::value_type , iterator_traits< _Iterator  
>::difference_type , iterator_traits< _Iterator >::pointer  
, iterator_traits< _Iterator >::reference >::value_type  
[inherited]`

The type "pointed to" by the iterator.

Definition at line 113 of file `stl_iterator_base_types.h`.

## 5.682.3 Constructor & Destructor Documentation

**5.682.3.1** `template<typename _Iterator> std::reverse_iterator< _Iterator  
>::reverse_iterator () [inline]`

The default constructor default-initializes member `current`. If it is a pointer, that means it is zero-initialized.

Definition at line 119 of file `stl_iterator.h`.

**5.682.3.2** `template<typename _Iterator> std::reverse_iterator< _Iterator >::reverse_iterator (iterator_type __x) [inline, explicit]`

This iterator will move in the opposite direction that `x` does.

Definition at line 125 of file `stl_iterator.h`.

**5.682.3.3** `template<typename _Iterator> std::reverse_iterator< _Iterator >::reverse_iterator (const reverse_iterator< _Iterator > & __x) [inline]`

The copy constructor is normal.

Definition at line 130 of file `stl_iterator.h`.

**5.682.3.4** `template<typename _Iterator> template<typename _Iter > std::reverse_iterator< _Iterator >::reverse_iterator (const reverse_iterator< _Iter > & __x) [inline]`

A [reverse\\_iterator](#) across other types can be copied in the normal fashion.

Definition at line 138 of file `stl_iterator.h`.

## 5.682.4 Member Function Documentation

**5.682.4.1** `template<typename _Iterator> iterator_type std::reverse_iterator< _Iterator >::base () const [inline]`

### Returns:

`current`, the iterator used for underlying work.

Definition at line 145 of file `stl_iterator.h`.

Referenced by `std::operator==()`.

**5.682.4.2** `template<typename _Iterator> reference std::reverse_iterator< _Iterator >::operator* () const [inline]`

### Returns:

TODO

### Todo

Doc me! See `doc/doxygen/TODO` and <http://gcc.gnu.org/ml/libstdc++/2002-02/msg00003.html> for more.

Definition at line 154 of file stl\_iterator.h.

**5.682.4.3** `template<typename _Iterator> reverse_iterator  
std::reverse_iterator< _Iterator >::operator+ (difference_type __n)  
const [inline]`

**Returns:**

TODO

**Todo**

Doc me! See doc/doxygen/TODO and <http://gcc.gnu.org/ml/libstdc++/2002-02/msg0000> for more.

Definition at line 225 of file stl\_iterator.h.

**5.682.4.4** `template<typename _Iterator> reverse_iterator  
std::reverse_iterator< _Iterator >::operator++ (int) [inline]`

**Returns:**

TODO

**Todo**

Doc me! See doc/doxygen/TODO and <http://gcc.gnu.org/ml/libstdc++/2002-02/msg0000> for more.

Definition at line 187 of file stl\_iterator.h.

**5.682.4.5** `template<typename _Iterator> reverse_iterator&  
std::reverse_iterator< _Iterator >::operator++ () [inline]`

**Returns:**

TODO

**Todo**

Doc me! See doc/doxygen/TODO and <http://gcc.gnu.org/ml/libstdc++/2002-02/msg0000> for more.

Definition at line 175 of file stl\_iterator.h.

**5.682.4.6** `template<typename _Iterator> reverse_iterator&  
std::reverse_iterator< _Iterator >::operator+=( difference_type __n)  
[inline]`

**Returns:**

TODO

**Todo**

Doc me! See doc/doxygen/TODO and <http://gcc.gnu.org/ml/libstdc++/2002-02/msg00003.html> for more.

Definition at line 234 of file stl\_iterator.h.

**5.682.4.7** `template<typename _Iterator> reverse_iterator  
std::reverse_iterator< _Iterator >::operator- (difference_type __n)  
const [inline]`

**Returns:**

TODO

**Todo**

Doc me! See doc/doxygen/TODO and <http://gcc.gnu.org/ml/libstdc++/2002-02/msg00003.html> for more.

Definition at line 246 of file stl\_iterator.h.

**5.682.4.8** `template<typename _Iterator> reverse_iterator  
std::reverse_iterator< _Iterator >::operator-- (int) [inline]`

**Returns:**

TODO

**Todo**

Doc me! See doc/doxygen/TODO and <http://gcc.gnu.org/ml/libstdc++/2002-02/msg00003.html> for more.

Definition at line 212 of file stl\_iterator.h.

**5.682.4.9** `template<typename _Iterator> reverse_iterator& std::reverse_iterator< _Iterator >::operator-- () [inline]`

**Returns:**

TODO

**Todo**

Doc me! See doc/doxygen/TODO and <http://gcc.gnu.org/ml/libstdc++/2002-02/msg0000> for more.

Definition at line 200 of file stl\_iterator.h.

**5.682.4.10** `template<typename _Iterator> reverse_iterator& std::reverse_iterator< _Iterator >::operator-= (difference_type __n) [inline]`

**Returns:**

TODO

**Todo**

Doc me! See doc/doxygen/TODO and <http://gcc.gnu.org/ml/libstdc++/2002-02/msg0000> for more.

Definition at line 255 of file stl\_iterator.h.

**5.682.4.11** `template<typename _Iterator> pointer std::reverse_iterator< _Iterator >::operator-> () const [inline]`

**Returns:**

TODO

**Todo**

Doc me! See doc/doxygen/TODO and <http://gcc.gnu.org/ml/libstdc++/2002-02/msg0000> for more.

Definition at line 166 of file stl\_iterator.h.

**5.682.4.12** `template<typename _Iterator> reference std::reverse_iterator< _Iterator >::operator[] (difference_type __n) const [inline]`

**Returns:**

TODO

**Todo**

Doc me! See doc/doxygen/TODO and <http://gcc.gnu.org/ml/libstdc++/2002-02/msg00003.html> for more.

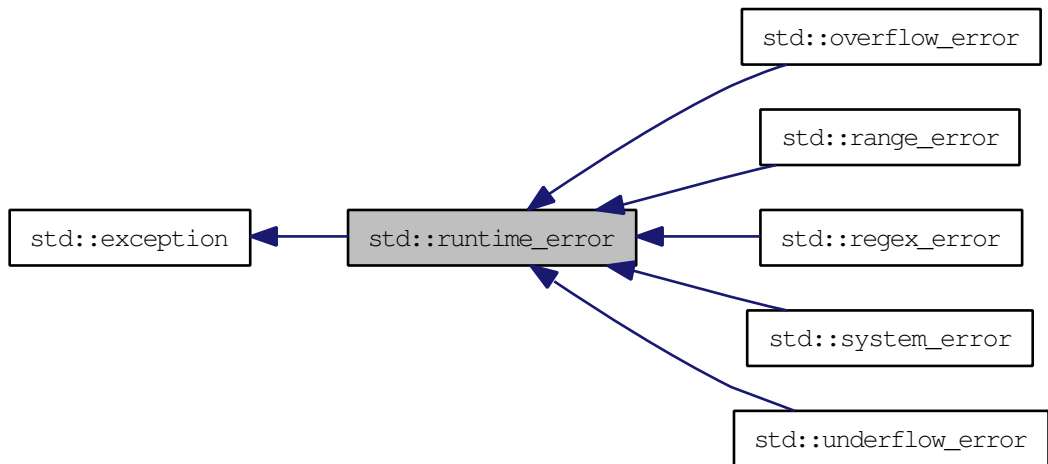

Definition at line 267 of file stl\_iterator.h.

## 5.683 `std::runtime_error` Class Reference

One of two subclasses of [exception](#). Inheritance diagram for `std::runtime_error`:

### Public Member Functions

- `runtime_error` (const [string](#) &\_\_arg)
- virtual const char \* `what` () const throw ()

#### 5.683.1 Detailed Description

One of two subclasses of [exception](#). Runtime errors represent problems outside the scope of a program; they cannot be easily predicted and can generally only be caught as the program executes.

Definition at line 107 of file `stdexcept`.

#### 5.683.2 Constructor & Destructor Documentation

##### 5.683.2.1 `std::runtime_error::runtime_error` (const [string](#) & \_\_arg) [explicit]

Takes a character string describing the error.

### 5.683.3 Member Function Documentation

#### 5.683.3.1 `virtual const char* std::runtime_error::what () const throw ()` [`virtual`]

Returns a C-style character string describing the general cause of the current error (the same string passed to the ctor).

Reimplemented from [std::exception](#).

The documentation for this class was generated from the following file:

- [stdexcept](#)

## 5.684 std::seed\_seq Class Reference

The [seed\\_seq](#) class generates sequences of seeds for random number generators.

### Public Types

- typedef `uint_least32_t` [result\\_type](#)

### Public Member Functions

- `template<typename _InputIterator >`  
`seed_seq` (`_InputIterator __begin`, `_InputIterator __end`)
- `template<typename _IntType >`  
`seed_seq` (`std::initializer_list<_IntType > il`)

`void generate` (`_RandomAccessIterator __begin`, `_RandomAccessIterator __end`)
- `template<typename OutputIterator >`  
`void param` (`OutputIterator __dest`) `const`
- `size_t size` () `const`

### 5.684.1 Detailed Description

The [seed\\_seq](#) class generates sequences of seeds for random number generators.

Definition at line 4625 of file `random.h`.

### 5.684.2 Member Typedef Documentation

#### 5.684.2.1 typedef `uint_least32_t` `std::seed_seq::result_type`

The type of the seed vales.

Definition at line 4630 of file `random.h`.

### 5.684.3 Constructor & Destructor Documentation

#### 5.684.3.1 `std::seed_seq::seed_seq` () [`inline`]

Default constructor.

Definition at line 4633 of file `random.h`.

The documentation for this class was generated from the following files:

- [random.h](#)
- [random.tcc](#)

## 5.685 `std::set< _Key, _Compare, _Alloc >` Class Template Reference

A standard container made up of unique keys, which can be retrieved in logarithmic time.

### Public Member Functions

- `set` (`initializer_list< value_type > __l`, `const _Compare &__comp=_Compare()`, `const allocator_type &__a=allocator_type()`)

### 5.685.1 Detailed Description

```
template<typename _Key, typename _Compare = std::less<_Key>, typename _
Alloc = std::allocator<_Key>> class std::set< _Key, _Compare, _Alloc >
```

A standard container made up of unique keys, which can be retrieved in logarithmic time. Meets the requirements of a [container](#), a [reversible container](#), and an [associative container](#) (using unique keys).

Sets support bidirectional iterators.

#### Parameters:

*Key* Type of key objects.

*Compare* Comparison function object type, defaults to less<Key>.

*Alloc* Allocator type, defaults to allocator<Key>.

The private tree data is declared exactly the same way for [set](#) and [multiset](#); the distinction is made entirely in how the tree functions are called (\*\_unique versus \*\_equal, same as the standard).

Definition at line 87 of file stl\_set.h.

### 5.685.2 Member Typedef Documentation

**5.685.2.1** `template<typename _Key, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<_Key>> typedef _Alloc std::set< _Key, _Compare, _Alloc >::allocator_type`

Public typedefs.

Definition at line 104 of file stl\_set.h.

Public typedefs.

Definition at line 101 of file stl\_set.h.

### 5.685.3 Constructor & Destructor Documentation

**5.685.3.1** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> std::set< _Key,  
_Compare, _Alloc >::set () [inline]`

Default constructor creates no elements.

Definition at line 136 of file stl\_set.h.

**5.685.3.2** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> std::set< _Key,  
_Compare, _Alloc >::set (const _Compare & __comp, const  
allocator_type & __a = allocator_type ()) [inline, explicit]`

Creates a set with no elements.

#### Parameters:

*comp* Comparator to use.

*a* An [allocator](#) object.

Definition at line 145 of file `stl_set.h`.

**5.685.3.3** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> template<typename  
_InputIterator > std::set<_Key, _Compare, _Alloc >::set  
(_InputIterator __first, _InputIterator __last) [inline]`

Builds a set from a range.

**Parameters:**

*first* An input [iterator](#).

*last* An input [iterator](#).

Create a set consisting of copies of the elements from `[first,last)`. This is linear in `N` if the range is already sorted, and `NlogN` otherwise (where `N` is `distance(first,last)`).

Definition at line 159 of file `stl_set.h`.

**5.685.3.4** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> template<typename  
_InputIterator > std::set<_Key, _Compare, _Alloc >::set  
(_InputIterator __first, _InputIterator __last, const _Compare &  
__comp, const allocator_type & __a = allocator_type()) [inline]`

Builds a set from a range.

**Parameters:**

*first* An input [iterator](#).

*last* An input [iterator](#).

*comp* A comparison functor.

*a* An [allocator](#) object.

Create a set consisting of copies of the elements from `[first,last)`. This is linear in `N` if the range is already sorted, and `NlogN` otherwise (where `N` is `distance(first,last)`).

Definition at line 175 of file `stl_set.h`.

```
5.685.3.5 template<typename _Key, typename _Compare = std::less<_Key>,
typename _Alloc = std::allocator<_Key>> std::set< _Key,
_Compare, _Alloc >::set (const set< _Key, _Compare, _Alloc > &
_x) [inline]
```

Set copy constructor.

**Parameters:**

*x* A set of identical element and [allocator](#) types.

The newly-created set uses a copy of the allocation object used by *x*.

Definition at line 188 of file stl\_set.h.

```
5.685.3.6 template<typename _Key, typename _Compare = std::less<_Key>,
typename _Alloc = std::allocator<_Key>> std::set< _Key,
_Compare, _Alloc >::set (set< _Key, _Compare, _Alloc > && _x)
[inline]
```

Set move constructor

**Parameters:**

*x* A set of identical element and [allocator](#) types.

The newly-created set contains the exact contents of *x*. The contents of *x* are a valid, but unspecified set.

Definition at line 199 of file stl\_set.h.

```
5.685.3.7 template<typename _Key, typename _Compare = std::less<_Key>,
typename _Alloc = std::allocator<_Key>> std::set< _Key,
_Compare, _Alloc >::set (initializer_list< value_type > __l, const
_Compare & __comp = _Compare (), const allocator_type & __a =
allocator_type ()) [inline]
```

Builds a set from an [initializer\\_list](#).

**Parameters:**

*l* An [initializer\\_list](#).

*comp* A comparison functor.

*a* An [allocator](#) object.

Create a set consisting of copies of the elements in the [list](#). This is linear in *N* if the [list](#) is already sorted, and *N*log*N* otherwise (where *N* is *l.size()*).

Definition at line 212 of file stl\_set.h.

## 5.685.4 Member Function Documentation

**5.685.4.1** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> iterator std::set<_Key,  
_Compare, _Alloc >::begin () const [inline]`

Returns a read-only (constant) [iterator](#) that points to the first element in the set. Iteration is done in ascending order according to the keys.

Definition at line 292 of file `stl_set.h`.

**5.685.4.2** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> iterator std::set<_Key,  
_Compare, _Alloc >::cbegin () const [inline]`

Returns a read-only (constant) [iterator](#) that points to the first element in the set. Iteration is done in ascending order according to the keys.

Definition at line 329 of file `stl_set.h`.

**5.685.4.3** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> iterator std::set<_Key,  
_Compare, _Alloc >::end () const [inline]`

Returns a read-only (constant) [iterator](#) that points one past the last element in the set. Iteration is done in ascending order according to the keys.

Definition at line 338 of file `stl_set.h`.

**5.685.4.4** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> void std::set<_Key,  
_Compare, _Alloc >::clear () [inline]`

Erases all elements in a set. Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 552 of file `stl_set.h`.

**5.685.4.5** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> size_type std::set<  
_Key, _Compare, _Alloc >::count (const key_type & __x) const  
[inline]`

Finds the number of elements.

**Parameters:**

*x* Element to located.

**Returns:**

Number of elements with specified key.

This function only makes sense for multisets; for `set` the result will either be 0 (not present) or 1 (present).

Definition at line 566 of file `stl_set.h`.

**5.685.4.6** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> reverse_iterator std::set<  
_Key, _Compare, _Alloc >::crbegin () const [inline]`

Returns a read-only (constant) `iterator` that points to the last element in the set. Iteration is done in descending order according to the keys.

Definition at line 347 of file `stl_set.h`.

**5.685.4.7** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> reverse_iterator std::set<  
_Key, _Compare, _Alloc >::crend () const [inline]`

Returns a read-only (constant) reverse `iterator` that points to the last `pair` in the set. Iteration is done in descending order according to the keys.

Definition at line 356 of file `stl_set.h`.

**5.685.4.8** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> bool std::set<_Key,  
_Compare, _Alloc >::empty () const [inline]`

Returns true if the set is empty.

Definition at line 362 of file `stl_set.h`.

**5.685.4.9** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> iterator std::set<_Key,  
_Compare, _Alloc >::end () const [inline]`

Returns a read-only (constant) `iterator` that points one past the last element in the set. Iteration is done in ascending order according to the keys.

Definition at line 301 of file `stl_set.h`.

**5.685.4.10** `template<typename _Key, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<_Key>> std::pair<const_iterator, const_iterator> std::set<_Key, _Compare, _Alloc >::equal_range (const key_type & __x) const [inline]`

Public typedefs.

Definition at line 650 of file `stl_set.h`.

**5.685.4.11** `template<typename _Key, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<_Key>> std::pair<iterator, iterator> std::set<_Key, _Compare, _Alloc >::equal_range (const key_type & __x) [inline]`

Finds a subsequence matching given key.

**Parameters:**

*x* Key to be located.

**Returns:**

Pair of iterators that possibly points to the subsequence matching given key.

This function is equivalent to

```
std::make_pair(c.lower_bound(val),
 c.upper_bound(val))
```

(but is faster than making the calls separately).

This function probably only makes sense for multisets.

Definition at line 646 of file `stl_set.h`.

**5.685.4.12** `template<typename _Key, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<_Key>> iterator std::set<_Key, _Compare, _Alloc >::erase (iterator __first, iterator __last) [inline]`

Erases a `[first,last)` range of elements from a set.

**Parameters:**

*first* Iterator pointing to the start of the range to be erased.

*last* Iterator pointing to the end of the range to be erased.

**Returns:**

The [iterator](#) *last*.

This function erases a sequence of elements from a set. Note that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 526 of file stl\_set.h.

```
5.685.4.13 template<typename _Key, typename _Compare = std::less<_Key>,
typename _Alloc = std::allocator<_Key>> size_type std::set<_Key,
_Compare, _Alloc >::erase (const key_type & __x) [inline]
```

Erases elements according to the provided key.

**Parameters:**

*x* Key of element to be erased.

**Returns:**

The number of elements erased.

This function erases all the elements located by the given key from a set. Note that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 507 of file stl\_set.h.

```
5.685.4.14 template<typename _Key, typename _Compare = std::less<_Key>,
typename _Alloc = std::allocator<_Key>> iterator std::set<_Key,
_Compare, _Alloc >::erase (iterator __position) [inline]
```

Erases an element from a set.

**Parameters:**

*position* An [iterator](#) pointing to the element to be erased.

**Returns:**

An [iterator](#) pointing to the element immediately following *position* prior to the element being erased. If no such element exists, [end\(\)](#) is returned.

This function erases an element, pointed to by the given [iterator](#), from a set. Note that this function only erases the element, and that if the element is itself a pointer,

the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 478 of file `stl_set.h`.

```
5.685.4.15 template<typename _Key, typename _Compare = std::less<_Key>,
typename _Alloc = std::allocator<_Key>> const_iterator std::set<
_Key, _Compare, _Alloc >::find (const key_type & __x) const
[inline]
```

Public typedefs.

Definition at line 588 of file `stl_set.h`.

```
5.685.4.16 template<typename _Key, typename _Compare = std::less<_Key>,
typename _Alloc = std::allocator<_Key>> iterator std::set< _Key,
_Compare, _Alloc >::find (const key_type & __x) [inline]
```

Tries to locate an element in a set.

#### Parameters:

**x** Element to be located.

#### Returns:

Iterator pointing to sought-after element, or `end()` if not found.

This function takes a key and tries to locate the element with which the key matches. If successful the function returns an `iterator` pointing to the sought after element. If unsuccessful it returns the past-the-end (`end()`) `iterator`.

Definition at line 584 of file `stl_set.h`.

```
5.685.4.17 template<typename _Key, typename _Compare = std::less<_Key>,
typename _Alloc = std::allocator<_Key>> allocator_type std::set<
_Key, _Compare, _Alloc >::get_allocator () const [inline]
```

Returns the `allocator` object with which the set was constructed.

Definition at line 283 of file `stl_set.h`.

**5.685.4.18** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> void std::set< _Key,  
_Compare, _Alloc >::insert (initializer_list< value_type > __l)  
[inline]`

Attempts to insert a [list](#) of elements into the set.

**Parameters:**

*list* A std::initializer\_list<value\_type> of elements to be inserted.

Complexity similar to that of the range constructor.

Definition at line 458 of file stl\_set.h.

References std::set< \_Key, \_Compare, \_Alloc >::insert().

Referenced by std::set< \_Key, \_Compare, \_Alloc >::insert().

**5.685.4.19** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> template<typename  
_InputIterator > void std::set< _Key, _Compare, _Alloc >::insert  
(_InputIterator __first, _InputIterator __last) [inline]`

A template function that attempts to insert a range of elements.

**Parameters:**

*first* Iterator pointing to the start of the range to be inserted.

*last* Iterator pointing to the end of the range.

Complexity similar to that of the range constructor.

Definition at line 446 of file stl\_set.h.

**5.685.4.20** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> iterator std::set< _Key,  
_Compare, _Alloc >::insert (iterator __position, const value_type &  
__x) [inline]`

Attempts to insert an element into the set.

**Parameters:**

*position* An [iterator](#) that serves as a hint as to where the element should be inserted.

*x* Element to be inserted.

**Returns:**

An [iterator](#) that points to the element with key of  $x$  (may or may not be the element passed in).

This function is not concerned about whether the insertion took place, and thus does not return a boolean like the single-argument [insert\(\)](#) does. Note that the first parameter is only a hint and can potentially improve the performance of the insertion process. A bad hint would cause no gains in efficiency.

For more on *hinting*, see: <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt07ch17>

Insertion requires logarithmic time (if the hint is not taken).

Definition at line 432 of file `stl_set.h`.

```
5.685.4.21 template<typename _Key, typename _Compare = std::less<_Key>,
typename _Alloc = std::allocator<_Key>> std::pair<iterator,
bool> std::set<_Key, _Compare, _Alloc >::insert (const value_type
& __x) [inline]
```

Attempts to insert an element into the set.

**Parameters:**

$x$  Element to be inserted.

**Returns:**

A [pair](#), of which the first element is an [iterator](#) that points to the possibly inserted element, and the second is a `bool` that is true if the element was actually inserted.

This function attempts to insert an element into the set. A set relies on unique keys and thus an element is only inserted if it is not already present in the set.

Insertion requires logarithmic time.

Definition at line 405 of file `stl_set.h`.

References `std::pair<_T1, _T2 >::first`, and `std::pair<_T1, _T2 >::second`.

```
5.685.4.22 template<typename _Key, typename _Compare = std::less<_Key>,
typename _Alloc = std::allocator<_Key>> key_compare std::set<
_Key, _Compare, _Alloc >::key_comp () const [inline]
```

Returns the comparison object with which the set was constructed.

Definition at line 275 of file `stl_set.h`.

**5.685.4.23** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> const_iterator std::set<  
_Key, _Compare, _Alloc >::lower_bound (const key_type & __x)  
const [inline]`

Public typedefs.

Definition at line 609 of file stl\_set.h.

**5.685.4.24** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> iterator std::set<  
_Key, _Compare, _Alloc >::lower_bound (const key_type & __x)  
[inline]`

Finds the beginning of a subsequence matching given key.

**Parameters:**

*x* Key to be located.

**Returns:**

Iterator pointing to first element equal to or [greater](#) than key, or `end()`.

This function returns the first element of a subsequence of elements that matches the given key. If unsuccessful it returns an [iterator](#) pointing to the first element that has a [greater](#) value than given key or `end()` if no such element exists.

Definition at line 605 of file stl\_set.h.

**5.685.4.25** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> size_type std::set<  
_Key, _Compare, _Alloc >::max_size () const [inline]`

Returns the maximum size of the set.

Definition at line 372 of file stl\_set.h.

**5.685.4.26** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> set& std::set< _Key,  
_Compare, _Alloc >::operator= (initializer_list< value_type > __l)  
[inline]`

Set [list](#) assignment operator.

**Parameters:**

*l* An [initializer\\_list](#).

This function fills a set with copies of the elements in the initializer [list](#) *l*.

Note that the assignment completely changes the set and that the resulting set's size is the same as the number of elements assigned. Old data may be lost.

Definition at line 263 of file `stl_set.h`.

```
5.685.4.27 template<typename _Key, typename _Compare = std::less<_Key>,
typename _Alloc = std::allocator<_Key>> set& std::set<_Key,
_Compare, _Alloc >::operator= (set<_Key, _Compare, _Alloc >
&& __x) [inline]
```

Set move assignment operator.

**Parameters:**

*x* A set of identical element and [allocator](#) types.

The contents of *x* are moved into this set (without copying). *x* is a valid, but unspecified set.

Definition at line 242 of file `stl_set.h`.

References `std::swap()`.

```
5.685.4.28 template<typename _Key, typename _Compare = std::less<_Key>,
typename _Alloc = std::allocator<_Key>> set& std::set<_Key,
_Compare, _Alloc >::operator= (const set<_Key, _Compare, _Alloc
> & __x) [inline]
```

Set assignment operator.

**Parameters:**

*x* A set of identical element and [allocator](#) types.

All the elements of *x* are copied, but unlike the copy constructor, the [allocator](#) object is not copied.

Definition at line 227 of file `stl_set.h`.

**5.685.4.29** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> reverse_iterator  
std::set< _Key, _Compare, _Alloc >::rbegin () const [inline]`

Returns a read-only (constant) [iterator](#) that points to the last element in the set. Iteration is done in descending order according to the keys.

Definition at line 310 of file `stl_set.h`.

**5.685.4.30** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> reverse_iterator  
std::set< _Key, _Compare, _Alloc >::rend () const [inline]`

Returns a read-only (constant) reverse [iterator](#) that points to the last [pair](#) in the set. Iteration is done in descending order according to the keys.

Definition at line 319 of file `stl_set.h`.

**5.685.4.31** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> size_type std::set<  
_Key, _Compare, _Alloc >::size () const [inline]`

Returns the size of the set.

Definition at line 367 of file `stl_set.h`.

**5.685.4.32** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> void std::set< _Key,  
_Compare, _Alloc >::swap (set< _Key, _Compare, _Alloc > & __x)  
[inline]`

Swaps data with another set.

**Parameters:**

- x** A set of the same element and [allocator](#) types.

This exchanges the elements between two sets in constant time. (It is only swapping a pointer, an integer, and an instance of the `Compare` type (which itself is often stateless and empty), so it should be quite fast.) Note that the global `std::swap()` function is specialized such that `std::swap(s1,s2)` will feed to this function.

Definition at line 387 of file `stl_set.h`.

Referenced by `std::swap()`.

```
5.685.4.33 template<typename _Key, typename _Compare = std::less<_Key>,
typename _Alloc = std::allocator<_Key>> const_iterator std::set<
_Key, _Compare, _Alloc >::upper_bound (const key_type & __x)
const [inline]
```

Public typedefs.

Definition at line 625 of file stl\_set.h.

```
5.685.4.34 template<typename _Key, typename _Compare = std::less<_Key>,
typename _Alloc = std::allocator<_Key>> iterator std::set<
_Key, _Compare, _Alloc >::upper_bound (const key_type & __x)
[inline]
```

Finds the end of a subsequence matching given key.

**Parameters:**

**x** Key to be located.

**Returns:**

Iterator pointing to the first element [greater](#) than key, or [end\(\)](#).

Definition at line 621 of file stl\_set.h.

```
5.685.4.35 template<typename _Key, typename _Compare = std::less<_Key>,
typename _Alloc = std::allocator<_Key>> value_compare std::set<
_Key, _Compare, _Alloc >::value_comp () const [inline]
```

Returns the comparison object with which the set was constructed.

Definition at line 279 of file stl\_set.h.

### 5.689.1 Detailed Description

`template<typename _Tp> class std::shared_ptr<_Tp >`

A smart pointer with reference-counted copy semantics. The object pointed to is deleted when the last `shared_ptr` pointing to it is destroyed or reset.

Definition at line 91 of file `shared_ptr.h`.

### 5.689.2 Constructor & Destructor Documentation

**5.689.2.1** `template<typename _Tp> std::shared_ptr<_Tp >::shared_ptr ()`  
[`inline`]

Construct an empty `shared_ptr`.

**Postcondition:**

`use_count()==0 && get()==0`

Definition at line 98 of file `shared_ptr.h`.

**5.689.2.2** `template<typename _Tp> template<typename _Tp1 >`  
`std::shared_ptr<_Tp >::shared_ptr (_Tp1 * __p) [inline,`  
`explicit]`

Construct a `shared_ptr` that owns the pointer `__p`.

**Parameters:**

`__p` A pointer that is convertible to `element_type*`.

**Postcondition:**

`use_count() == 1 && get() == __p`

**Exceptions:**

*std::bad\_alloc*, *in* which case `delete __p` is called.

Definition at line 107 of file `shared_ptr.h`.

**5.689.2.3** `template<typename _Tp> template<typename _Tp1, typename  
_Deleter > std::shared_ptr< _Tp >::shared_ptr ( _Tp1 * __p,  
_Deleter __d) [inline]`

Construct a `shared_ptr` that owns the pointer `__p` and the deleter `__d`.

**Parameters:**

`__p` A pointer.

`__d` A deleter.

**Postcondition:**

`use_count() == 1 && get() == __p`

**Exceptions:**

*std::bad\_alloc*, *in* which case `__d(__p)` is called.

Requirements: `_Deleter`'s copy constructor and destructor must not throw

`__shared_ptr` will release `__p` by calling `__d(__p)`

Definition at line 123 of file `shared_ptr.h`.

**5.689.2.4** `template<typename _Tp> template<typename _Tp1, typename  
_Deleter, typename _Alloc > std::shared_ptr< _Tp >::shared_ptr  
( _Tp1 * __p, _Deleter __d, const _Alloc & __a) [inline]`

Construct a `shared_ptr` that owns the pointer `__p` and the deleter `__d`.

**Parameters:**

`__p` A pointer.

`__d` A deleter.

`__a` An [allocator](#).

**Postcondition:**

`use_count() == 1 && get() == __p`

**Exceptions:**

`std::bad_alloc`, in which case `__d(__p)` is called.

Requirements: `_Deleter`'s copy constructor and destructor must not throw `_Alloc`'s copy constructor and destructor must not throw.

`__shared_ptr` will release `__p` by calling `__d(__p)`

Definition at line 141 of file `shared_ptr.h`.

```
5.689.2.5 template<typename _Tp> template<typename _Tp1 >
std::shared_ptr<_Tp >::shared_ptr (const shared_ptr<_Tp1 > &
__r, _Tp * __p) [inline]
```

Constructs a `shared_ptr` instance that stores `__p` and shares ownership with `__r`.

**Parameters:**

`__r` A `shared_ptr`.

`__p` A pointer that will remain valid while `*__r` is valid.

**Postcondition:**

```
get() == __p && use_count() == __r.use_count()
```

This can be used to construct a `shared_ptr` to a sub-object of an object managed by an existing `shared_ptr`.

```
shared_ptr< pair<int,int> > pii(new pair<int,int>());
shared_ptr<int> pi(pii, &pii->first);
assert(pii.use_count() == 2);
```

Definition at line 163 of file `shared_ptr.h`.

```
5.689.2.6 template<typename _Tp> template<typename _Tp1 >
std::shared_ptr<_Tp >::shared_ptr (const shared_ptr<_Tp1 > &
__r) [inline]
```

If `__r` is empty, constructs an empty `shared_ptr`; otherwise construct a `shared_ptr` that shares ownership with `__r`.

**Parameters:**

`__r` A `shared_ptr`.

**Postcondition:**

`get() == __r.get() && use_count() == __r.use_count()`

Definition at line 174 of file `shared_ptr.h`.

**5.689.2.7** `template<typename _Tp> std::shared_ptr<_Tp>::shared_ptr (shared_ptr<_Tp> && __r) [inline]`

Move-constructs a `shared_ptr` instance from `__r`.

**Parameters:**

`__r` A `shared_ptr` rvalue.

**Postcondition:**

\*this contains the old value of `__r`, `__r` is empty.

Definition at line 181 of file `shared_ptr.h`.

**5.689.2.8** `template<typename _Tp> template<typename _Tp1 > std::shared_ptr<_Tp>::shared_ptr (shared_ptr<_Tp1> && __r) [inline]`

Move-constructs a `shared_ptr` instance from `__r`.

**Parameters:**

`__r` A `shared_ptr` rvalue.

**Postcondition:**

\*this contains the old value of `__r`, `__r` is empty.

Definition at line 190 of file `shared_ptr.h`.

**5.689.2.9** `template<typename _Tp> template<typename _Tp1 > std::shared_ptr<_Tp>::shared_ptr (const weak_ptr<_Tp1> & __r) [inline, explicit]`

Constructs a `shared_ptr` that shares ownership with `__r` and stores a copy of the pointer stored in `__r`.

**Parameters:**

`__r` A `weak_ptr`.

**Postcondition:**

use\_count() == \_\_r.use\_count()

**Exceptions:**

*bad\_weak\_ptr* when \_\_r.expired(), in which case the constructor has no effect.

Definition at line 202 of file shared\_ptr.h.

### 5.689.3 Friends And Related Function Documentation

**5.689.3.1** `template<typename _Tp> template<typename _Tp1, typename  
_Alloc, typename... _Args> shared_ptr<_Tp1> allocate_shared  
(_Alloc __a, _Args &&... __args) [friend]`

Create an object that is owned by a [shared\\_ptr](#).

**Parameters:**

*\_\_a* An [allocator](#).

*\_\_args* Arguments for the *\_Tp* object's constructor.

**Returns:**

A [shared\\_ptr](#) that owns the newly created object.

**Exceptions:**

An [exception](#) thrown from *\_Alloc::allocate* or from the constructor of *\_Tp*.

A copy of *\_\_a* will be used to allocate memory for the [shared\\_ptr](#) and the new object.

Definition at line 453 of file shared\_ptr.h.

The documentation for this class was generated from the following file:

- [shared\\_ptr.h](#)

## 5.690 `std::shuffle_order_engine<_RandomNumberEngine, __k >` Class Template Reference

Produces random numbers by combining random numbers from some base engine to produce random numbers with a specifies number of bits `__w`.

### 5.690.1 Detailed Description

`template<typename _RandomNumberEngine, size_t __k> class std::shuffle_order_engine<_RandomNumberEngine, __k>`

Produces random numbers by combining random numbers from some base engine to produce random numbers with a specifies number of bits `__w`.

Definition at line 1123 of file `random.h`.

### 5.690.2 Member Typedef Documentation

**5.690.2.1** `template<typename _RandomNumberEngine, size_t __k> typedef _RandomNumberEngine::result_type std::shuffle_order_engine<_RandomNumberEngine, __k>::result_type`

The type of the generated random value.

Definition at line 1130 of file `random.h`.

### 5.690.3 Constructor & Destructor Documentation

**5.690.3.1** `template<typename _RandomNumberEngine, size_t __k> std::shuffle_order_engine<_RandomNumberEngine, __k>::shuffle_order_engine() [inline]`

Constructs a default `shuffle_order_engine` engine. The underlying engine is default constructed as well.

Definition at line 1139 of file `random.h`.

**5.690.3.2** `template<typename _RandomNumberEngine, size_t __k>  
std::shuffle_order_engine< _RandomNumberEngine, __k  
>::shuffle_order_engine (const _RandomNumberEngine & __rne)  
[inline, explicit]`

Copy constructs a `shuffle_order_engine` engine. Copies an existing base class random number generator.

**Parameters:**

*rng* An existing (base class) engine object.

Definition at line 1150 of file `random.h`.

**5.690.3.3** `template<typename _RandomNumberEngine, size_t __k>  
std::shuffle_order_engine< _RandomNumberEngine, __k  
>::shuffle_order_engine (_RandomNumberEngine && __rne)  
[inline, explicit]`

Move constructs a `shuffle_order_engine` engine. Copies an existing base class random number generator.

**Parameters:**

*rng* An existing (base class) engine object.

Definition at line 1161 of file `random.h`.

**5.690.3.4** `template<typename _RandomNumberEngine, size_t __k>  
std::shuffle_order_engine< _RandomNumberEngine, __k  
>::shuffle_order_engine (result_type __s) [inline, explicit]`

Seed constructs a `shuffle_order_engine` engine. Constructs the underlying generator engine seeded with `__s`.

**Parameters:**

`__s` A seed value for the base class engine.

Definition at line 1172 of file `random.h`.

---

```
5.690.3.5 template<typename _RandomNumberEngine, size_t
 __k> template<typename _Sseq, typename = typename
 std::enable_if<!std::is_same<_Sseq, shuffle_order_engine>::value
 && !std::is_same<_Sseq, _RandomNumberEngine>::value>
 ::type> std::shuffle_order_engine<_RandomNumberEngine, __k
 >::shuffle_order_engine(_Sseq & __q) [inline, explicit]
```

Generator construct a `shuffle_order_engine` engine.

**Parameters:**

`__q` A seed sequence.

Definition at line 1186 of file `random.h`.

## 5.690.4 Member Function Documentation

```
5.690.4.1 template<typename _RandomNumberEngine, size_t __k>
 const _RandomNumberEngine& std::shuffle_order_engine<
 _RandomNumberEngine, __k >::base () const [inline]
```

Gets a const reference to the underlying generator engine object.

Definition at line 1229 of file `random.h`.

```
5.690.4.2 template<typename _RandomNumberEngine, size_t __k> void
 std::shuffle_order_engine<_RandomNumberEngine, __k >::discard
 (unsigned long long __z) [inline]
```

Discard a sequence of random numbers.

**Todo**

Look for a faster way to do discard.

Definition at line 1256 of file `random.h`.

```
5.690.4.3 template<typename _RandomNumberEngine, size_t __k>
 result_type std::shuffle_order_engine<_RandomNumberEngine, __k
 >::max () const [inline]
```

Gets the maximum value in the generated random number range.

**Todo**

This should be `constexpr`.

Definition at line 1247 of file random.h.

**5.690.4.4** `template<typename _RandomNumberEngine, size_t __k>  
result_type std::shuffle_order_engine< _RandomNumberEngine, __k  
>::min () const [inline]`

Gets the minimum value in the generated random number range.

#### Todo

This should be constexpr.

Definition at line 1238 of file random.h.

**5.690.4.5** `template<typename _RandomNumberEngine , size_t __k>  
shuffle_order_engine< _RandomNumberEngine, __k >::result_type  
std::shuffle_order_engine< _RandomNumberEngine, __k  
>::operator() () [inline]`

Gets the next value in the generated random number sequence.

Definition at line 757 of file random.tcc.

**5.690.4.6** `template<typename _RandomNumberEngine, size_t __k>  
template<typename _Sseq > void std::shuffle_order_engine<  
_RandomNumberEngine, __k >::seed (_Sseq & __q) [inline]`

Reseeds the shuffle\_order\_engine object with the given seed sequence.

#### Parameters:

`__q` A seed generator function.

Definition at line 1219 of file random.h.

**5.690.4.7** `template<typename _RandomNumberEngine, size_t __k> void  
std::shuffle_order_engine< _RandomNumberEngine, __k >::seed  
(result_type __s) [inline]`

Reseeds the shuffle\_order\_engine object with the default seed for the underlying base class generator engine.

Definition at line 1206 of file random.h.

**5.690.4.8** `template<typename _RandomNumberEngine, size_t __k> void  
std::shuffle_order_engine<_RandomNumberEngine, __k >::seed ()  
[inline]`

Reseeds the `shuffle_order_engine` object with the default seed for the underlying base class generator engine.

Definition at line 1195 of file `random.h`.

## 5.690.5 Friends And Related Function Documentation

**5.690.5.1** `template<typename _RandomNumberEngine, size_t __k>  
template<typename _RandomNumberEngine1, size_t __k1,  
typename _CharT, typename _Traits > std::basic_ostream<_CharT,  
_Traits>& operator<< (std::basic_ostream<_CharT, _Traits > &,  
const std::shuffle_order_engine<_RandomNumberEngine1, __k1 >  
&) [friend]`

Inserts the current state of a `shuffle_order_engine` random number generator engine `__x` into the output stream `__os`.

### Parameters:

`__os` An output stream.

`__x` A `shuffle_order_engine` random number generator engine.

### Returns:

The output stream with the state of `__x` inserted or in an error state.

**5.690.5.2** `template<typename _RandomNumberEngine, size_t  
__k> bool operator== (const shuffle_order_engine<  
_RandomNumberEngine, __k > & __lhs, const  
shuffle_order_engine<_RandomNumberEngine, __k > & __rhs)  
[friend]`

Compares two `shuffle_order_engine` random number generator objects of the same type for equality.

### Parameters:

`__lhs` A `shuffle_order_engine` random number generator object.

`__rhs` Another `shuffle_order_engine` random number generator object.

**Returns:**

true if the two objects are equal, false otherwise.

Definition at line 1279 of file random.h.

```
5.690.5.3 template<typename _RandomNumberEngine, size_t __k>
template<typename _RandomNumberEngine1, size_t __k1,
typename _CharT, typename _Traits > std::basic_istream<_CharT,
_Traits>& operator>> (std::basic_istream<_CharT, _Traits > &,
std::shuffle_order_engine< _RandomNumberEngine1, __k1 > &)
[friend]
```

Extracts the current state of a % subtract\_with\_carry\_engine random number generator engine `__x` from the input stream `__is`.

**Parameters:**

`__is` An input stream.

`__x` A shuffle\_order\_engine random number generator engine.

**Returns:**

The input stream with the state of `__x` extracted or in an error state.

## 5.691 std::slice Class Reference

Class defining one-dimensional subset of an [array](#).

### Public Member Functions

- [slice](#) (size\_t, size\_t, size\_t)
- [slice](#) ()
- size\_t [size](#) () const
- size\_t [start](#) () const
- size\_t [stride](#) () const

### 5.691.1 Detailed Description

Class defining one-dimensional subset of an [array](#). The [slice](#) class represents a one-dimensional subset of an [array](#), specified by three parameters: start offset, size, and stride. The start offset is the index of the first element of the [array](#) that is part of the subset. The size is the total number of elements in the subset. Stride is the distance between each successive [array](#) element to include in the subset.

For example, with an [array](#) of size 10, and a [slice](#) with offset 1, size 3 and stride 2, the subset consists of [array](#) elements 1, 3, and 5.

Definition at line 58 of file [slice\\_array.h](#).

The documentation for this class was generated from the following file:

- [slice\\_array.h](#)

## 5.692 `std::slice_array< _Tp >` Class Template Reference

## Friends

- class [valarray](#)<\_Tp >

### 5.692.1 Detailed Description

`template<typename _Tp> class std::slice_array<_Tp >`

Reference to one-dimensional subset of an [array](#). A [slice\\_array](#) is a reference to the actual elements of an [array](#) specified by a [slice](#). The way to get a [slice\\_array](#) is to call `operator[]`([slice](#)) on a [valarray](#). The returned [slice\\_array](#) then permits carrying operations out on the referenced subset of elements in the original [valarray](#). For example, `operator+=(valarray)` will add values to the subset of elements in the underlying [valarray](#) this [slice\\_array](#) refers to.

#### Parameters:

*Tp* Element type.

Definition at line 122 of file `slice_array.h`.

The documentation for this class was generated from the following file:

- [slice\\_array.h](#)

## 5.693 `std::stack< _Tp, _Sequence >` Class Template Reference

A standard container giving FILO behavior.

### Public Types

- `template<typename _Tp1, typename _Seq1 >`  
bool **operator**== (`const stack< _Tp1, _Seq1 > &`, `const stack< _Tp1, _Seq1 > &`)

### 5.693.1 Detailed Description

```
template<typename _Tp, typename _Sequence = deque<_Tp>> class
std::stack<_Tp, _Sequence >
```

A standard container giving FILO behavior. Meets many of the requirements of a `container`, but does not define anything to do with iterators. Very few of the other standard container interfaces are defined.

This is not a true container, but an *adaptor*. It holds another container, and provides a wrapper interface to that container. The wrapper is what enforces strict first-in-last-out stack behavior.

The second template parameter defines the type of the underlying sequence/container. It defaults to `std::deque`, but it can be any type that supports `back`, `push_back`, and `pop_front`, such as `std::list`, `std::vector`, or an appropriate user-defined type.

Members not found in *normal* containers are `container_type`, which is a typedef for the second Sequence parameter, and `push`, `pop`, and `top`, which are standard stack/FILO operations.

Definition at line 92 of file `stl_stack.h`.

### 5.693.2 Constructor & Destructor Documentation

```
5.693.2.1 template<typename _Tp, typename _Sequence = deque<_Tp>>
std::stack<_Tp, _Sequence >::stack (const _Sequence & __c)
[inline, explicit]
```

Default constructor creates no elements.

Definition at line 130 of file `stl_stack.h`.

### 5.693.3 Member Function Documentation

```
5.693.3.1 template<typename _Tp, typename _Sequence = deque<_Tp>>
bool std::stack<_Tp, _Sequence >::empty () const [inline]
```

Returns true if the stack is empty.

Definition at line 142 of file `stl_stack.h`.

**5.693.3.2** `template<typename _Tp, typename _Sequence = deque<_Tp>>  
void std::stack<_Tp, _Sequence >::pop () [inline]`

Removes first element. This is a typical stack operation. It shrinks the stack by one. The time complexity of the operation depends on the underlying sequence.

Note that no data is returned, and if the first element's data is needed, it should be retrieved before `pop()` is called.

Definition at line 208 of file `stl_stack.h`.

**5.693.3.3** `template<typename _Tp, typename _Sequence = deque<_Tp>>  
void std::stack<_Tp, _Sequence >::push (const value_type & __x)  
[inline]`

Add data to the top of the stack.

**Parameters:**

`x` Data to be added.

This is a typical stack operation. The function creates an element at the top of the stack and assigns the given data to it. The time complexity of the operation depends on the underlying sequence.

Definition at line 182 of file `stl_stack.h`.

**5.693.3.4** `template<typename _Tp, typename _Sequence = deque<_Tp>>  
size_type std::stack<_Tp, _Sequence >::size () const [inline]`

Returns the number of elements in the stack.

Definition at line 147 of file `stl_stack.h`.

**5.693.3.5** `template<typename _Tp, typename _Sequence = deque<_Tp>>  
const_reference std::stack<_Tp, _Sequence >::top () const  
[inline]`

Returns a read-only (constant) reference to the data at the first element of the stack.

Definition at line 166 of file `stl_stack.h`.

**5.693.3.6** `template<typename _Tp, typename _Sequence = deque<_Tp>>  
reference std::stack<_Tp, _Sequence >::top () [inline]`

Returns a read/write reference to the data at the first element of the stack.

Definition at line 155 of file stl\_stack.h.

### 5.694.1 Detailed Description

**template<typename \_RealType = double> class std::student\_t\_distribution<\_RealType>**

A `student_t_distribution` random number distribution. The formula for the normal probability mass function is:

$$p(x|n) = \frac{1}{\sqrt{(n\pi)}} \frac{\Gamma((n+1)/2)}{\Gamma(n/2)} \left(1 + \frac{x^2}{n}\right)^{-(n+1)/2}$$

Definition at line 2718 of file random.h.

### 5.694.2 Member Typedef Documentation

**5.694.2.1** `template<typename _RealType = double> typedef _RealType std::student_t_distribution<_RealType>::result_type`

The type of the range of the distribution.

Definition at line 2725 of file random.h.

### 5.694.3 Member Function Documentation

**5.694.3.1** `template<typename _RealType = double> result_type std::student_t_distribution<_RealType>::max () const [inline]`

Returns the least upper bound value of the distribution.

Definition at line 2797 of file random.h.

**5.694.3.2** `template<typename _RealType = double> result_type std::student_t_distribution<_RealType>::min () const [inline]`

Returns the greatest lower bound value of the distribution.

Definition at line 2790 of file random.h.

**5.694.3.3** `template<typename _RealType = double> void std::student_t_distribution<_RealType>::param (const param_type & __param) [inline]`

Sets the parameter `set` of the distribution.

**Parameters:**

`__param` The new parameter `set` of the distribution.

Definition at line 2783 of file random.h.

**5.694.3.4** `template<typename _RealType = double> param_type  
std::student_t_distribution< _RealType >::param () const  
[inline]`

Returns the parameter `set` of the distribution.

Definition at line 2775 of file random.h.

**5.694.3.5** `template<typename _RealType = double> void  
std::student_t_distribution< _RealType >::reset () [inline]`

Resets the distribution state.

Definition at line 2758 of file random.h.

References `std::gamma_distribution< _RealType >::reset()`, and `std::normal_distribution< _RealType >::reset()`.

**5.694.4 Friends And Related Function Documentation**

**5.694.4.1** `template<typename _RealType = double> template<typename  
_RealType1 , typename _CharT , typename _Traits >  
std::basic_ostream<_CharT, _Traits>& operator<<  
(std::basic_ostream< _CharT, _Traits > &, const  
std::student_t_distribution< _RealType1 > &) [friend]`

Inserts a `student_t_distribution` random number distribution `__x` into the output stream `__os`.

**Parameters:**

`__os` An output stream.

`__x` A `student_t_distribution` random number distribution.

**Returns:**

The output stream with the state of `__x` inserted or in an error state.

## 5.694 std::student\_t\_distribution<\_RealType> Class Template Reference 3277

**5.694.4.2** `template<typename _RealType = double> template<typename _RealType1, typename _CharT, typename _Traits> std::basic_istream<_CharT, _Traits>& operator>>(std::basic_istream<_CharT, _Traits> &, std::student_t_distribution<_RealType1> &)`  
**[friend]**

Extracts a student\_t\_distribution random number distribution `__x` from the input stream `__is`.

### **Parameters:**

`__is` An input stream.

`__x` A student\_t\_distribution random number generator engine.

### **Returns:**

The input stream with `__x` extracted or in an error state.

The documentation for this class was generated from the following file:

- void [swap](#) ([pair](#) &\_\_p)

## Public Attributes

- [\\_BIter](#) [first](#)
- bool [matched](#)
- [\\_BIter](#) [second](#)

### 5.696.1 Detailed Description

`template<typename \_BIter> class std::sub\_match< \_BIter >`

A sequence of characters matched by a particular marked sub-expression.

An object of this class is essentially a [pair](#) of iterators marking a matched subexpression within a regular expression pattern match. Such objects can be converted to and compared with [std::basic\\_string](#) objects of a similar base character type as the pattern matched by the regular expression.

The iterators that make up the [pair](#) are the usual half-open interval referencing the actual original pattern matched.

Definition at line 1088 of file `tr1_impl/regex`.

### 5.696.2 Member Typedef Documentation

**5.696.2.1** `typedef \_BIter std::pair< \_BIter , \_BIter >::first\_type`  
`[inherited]`

`first_type` is the first bound type

Definition at line 73 of file `stl_pair.h`.

**5.696.2.2** `typedef \_BIter std::pair< \_BIter , \_BIter >::second\_type`  
`[inherited]`

`second_type` is the second bound type

Definition at line 74 of file `stl_pair.h`.

### 5.696.3 Member Function Documentation

**5.696.3.1** `template<typename _BIter> int std::sub_match<_BIter>::compare (const value_type * __s) const [inline]`

Compares this `sub_match` to a C-style string.

**Parameters:**

*s* A C-style string to compare to this `sub_match`.

**Return values:**

<0 this matched sequence will `collate` before *s*.

=0 this matched sequence is equivalent to *s*.

>0 this matched sequence will `collate` after *s*.

Definition at line 1172 of file `tr1_impl/regex`.

**5.696.3.2** `template<typename _BIter> int std::sub_match<_BIter>::compare (const basic_string<value_type> & __s) const [inline]`

Compares this `sub_match` to a string.

**Parameters:**

*s* A string to compare to this `sub_match`.

**Return values:**

<0 this matched sequence will `collate` before *s*.

=0 this matched sequence is equivalent to *s*.

>0 this matched sequence will `collate` after *s*.

Definition at line 1159 of file `tr1_impl/regex`.

**5.696.3.3** `template<typename _BIter> int std::sub_match<_BIter>::compare (const sub_match<_BIter> & __s) const [inline]`

Compares this and another matched sequence.

**Parameters:**

*s* Another matched sequence to compare to this one.

**Return values:**

- <0 this matched sequence will [collate](#) before *s*.
- =0 this matched sequence is equivalent to *s*.
- >0 this matched sequence will [collate](#) after *s*.

Definition at line 1146 of file `tr1_impl/regex`.

Referenced by `std::operator!=()`, `std::operator==()`, `std::operator>()`, and `std::operator>=()`.

#### 5.696.3.4 `template<typename _BiIter> difference_type std::sub_match<_BiIter >::length () const [inline]`

Gets the length of the matching sequence.

Definition at line 1103 of file `tr1_impl/regex`.

#### 5.696.3.5 `template<typename _BiIter> std::sub_match<_BiIter >::operator basic_string<value_type > () const [inline]`

Gets the matching sequence as a string.

**Returns:**

the matching sequence as a string.

This is the implicit conversion operator. It is identical to the `str()` member function except that it will want to pop up in unexpected places and cause a great deal of confusion and cursing from the unwary.

Definition at line 1116 of file `tr1_impl/regex`.

#### 5.696.3.6 `template<typename _BiIter> basic_string<value_type> std::sub_match<_BiIter >::str () const [inline]`

Gets the matching sequence as a string.

**Returns:**

the matching sequence as a string.

Definition at line 1129 of file `tr1_impl/regex`.

Referenced by `std::sub_match<_Bi_iter >::compare()`, `std::operator!=()`, `std::operator<()`, `std::operator<=()`, `std::operator==()`, `std::operator>()`, and `std::operator>=()`.

## 5.696.4 Member Data Documentation

### 5.696.4.1 `_BiIter std::pair<_BiIter, _BiIter>::first` [inherited]

`first` is a copy of the first object

Definition at line 76 of file `stl_pair.h`.

Referenced by `std::sub_match<_Bi_iter>::length()`, `std::sub_match<_Bi_iter>::operator basic_string<value_type>()`, and `std::sub_match<_Bi_iter>::str()`.

### 5.696.4.2 `_BiIter std::pair<_BiIter, _BiIter>::second` [inherited]

`second` is a copy of the second object

Definition at line 77 of file `stl_pair.h`.

Referenced by `std::sub_match<_Bi_iter>::length()`, `std::sub_match<_Bi_iter>::operator basic_string<value_type>()`, and `std::sub_match<_Bi_iter>::str()`.

The documentation for this class was generated from the following file:

### 5.701.1 Detailed Description

`template<typename _CharT, typename _InIter> class std::time_get< _CharT, _InIter >`

Primary class template [time\\_get](#).

This facet encapsulates the code to parse and return a date or time from a string. It is used by the istream numeric extraction operators. The [time\\_get](#) template uses protected virtual functions to provide the actual results. The public accessors forward the call to the virtual functions. These virtual functions are hooks for developers to implement the behavior they require from the [time\\_get](#) facet.

Definition at line 363 of file `locale_facets_nonio.h`.

### 5.701.2 Member Typedef Documentation

**5.701.2.1** `template<typename _CharT , typename _InIter > typedef _CharT std::time_get< _CharT, _InIter >::char_type`

Public typedefs.

Reimplemented in [std::time\\_get\\_byname< \\_CharT, \\_InIter >](#).

Definition at line 369 of file `locale_facets_nonio.h`.

**5.701.2.2** `template<typename _CharT , typename _InIter > typedef _InIter std::time_get< _CharT, _InIter >::iter_type`

Public typedefs.

Reimplemented in [std::time\\_get\\_byname< \\_CharT, \\_InIter >](#).

Definition at line 370 of file `locale_facets_nonio.h`.

### 5.701.3 Constructor & Destructor Documentation

**5.701.3.1** `template<typename _CharT, typename _InIter > std::time_get< _CharT, _InIter >::time_get (size_t __refs = 0) [inline, explicit]`

Constructor performs initialization. This is the constructor provided by the standard.

**Parameters:**

*refs* Passed to the base facet class.

Definition at line 385 of file locale\_facets\_nonio.h.

**5.701.3.2** `template<typename _CharT, typename _InIter > virtual std::time_get< _CharT, _InIter >::~time_get () [inline, protected, virtual]`

Destructor.

Definition at line 541 of file locale\_facets\_nonio.h.

### 5.701.4 Member Function Documentation

**5.701.4.1** `template<typename _CharT, typename _InIter > dateorder std::time_get< _CharT, _InIter >::date_order () const [inline]`

Return preferred order of month, day, and year. This function returns an enum from `timebase::dateorder` giving the preferred ordering if the format *x* given to `time_put::put()` only uses month, day, and year. If the format *x* for the associated `locale` uses other fields, this function returns `timebase::dateorder::noorder`.

NOTE: The library always returns `noorder` at the moment.

**Returns:**

A member of `timebase::dateorder`.

Definition at line 402 of file locale\_facets\_nonio.h.

**5.701.4.2** `template<typename _CharT, typename _InIter > time_base::dateorder std::time_get< _CharT, _InIter >::do_date_order () const [inline, protected, virtual]`

Return preferred order of month, day, and year. This function returns an enum from `timebase::dateorder` giving the preferred ordering if the format *x* given to `time_`

[put::put\(\)](#) only uses month, day, and year. This function is a hook for derived classes to change the value returned.

**Returns:**

A member of `timebase::dateorder`.

Definition at line 618 of file `locale_facets_nonio.tcc`.

**5.701.4.3** `template<typename _CharT, typename _InIter > _InIter  
std::time_get< _CharT, _InIter >::do_get_date (iter_type __beg,  
iter_type __end, ios_base & __io, ios_base::iostate & __err, tm *  
__tm) const [inline, protected, virtual]`

Parse input date string. This function parses a date according to the format *X* and puts the results into a user-supplied struct `tm`. This function is a hook for derived classes to change the value returned.

**See also:**

[get\\_date\(\)](#) for details.

**Parameters:**

*beg* Start of string to parse.

*end* End of string to parse.

*io* Source of the [locale](#).

*err* Error flags to [set](#).

*tm* Pointer to struct `tm` to fill in.

**Returns:**

Iterator to first char beyond date string.

Definition at line 1044 of file `locale_facets_nonio.tcc`.

References `std::ios_base::_M_getloc()`, and `std::ios_base::eofbit`.

**5.701.4.4** `template<typename _CharT, typename _InIter > _InIter  
std::time_get< _CharT, _InIter >::do_get_monthname (iter_type  
__beg, iter_type __end, ios_base & __io, ios_base::iostate & __err,  
tm * __tm) const [inline, protected, virtual]`

Parse input month string. This function parses a month name and puts the results into a user-supplied struct `tm`. This function is a hook for derived classes to change the value returned.

**See also:**

[get\\_monthname\(\)](#) for details.

**Parameters:**

*beg* Start of string to parse.  
*end* End of string to parse.  
*io* Source of the [locale](#).  
*err* Error flags to [set](#).  
*tm* Pointer to struct tm to fill in.

**Returns:**

Iterator to first char beyond month name.

Definition at line 1089 of file locale\_facets\_nonio.tcc.

References [std::ios\\_base::\\_M\\_getloc\(\)](#), [std::ios\\_base::eofbit](#), [std::ios\\_base::failbit](#), and [std::ios\\_base::goodbit](#).

std::time_get< _CharT, _InIter >::do_get_time (iter_type __beg,
iter_type __end, ios_base & __io, ios_base::iostate & __err, tm *
__tm) const [inline, protected, virtual]
```

Parse input time string. This function parses a time according to the format *x* and puts the results into a user-supplied struct tm. This function is a hook for derived classes to change the value returned.

**See also:**

[get\\_time\(\)](#) for details.

**Parameters:**

*beg* Start of string to parse.  
*end* End of string to parse.  
*io* Source of the [locale](#).  
*err* Error flags to [set](#).  
*tm* Pointer to struct tm to fill in.

**Returns:**

Iterator to first char beyond time string.

Definition at line 1027 of file locale\_facets\_nonio.tcc.

std::time_get< _CharT, _InIter >::get_date (iter_type __beg,
iter_type __end, ios_base & __io, ios_base::iostate & __err, tm *
__tm) const [inline]
```

Parse input date string. This function parses a date according to the format *X* and puts the results into a user-supplied struct tm. The result is returned by calling [time\\_get::do\\_get\\_date\(\)](#).

If there is a valid date string according to format *X*, *tm* will be filled in accordingly and the returned [iterator](#) will point to the first character beyond the date string. If an error occurs before the end, err |= [ios\\_base::failbit](#). If parsing reads all the characters, err |= [ios\\_base::eofbit](#).

**Parameters:**

*beg* Start of string to parse.

*end* End of string to parse.

*io* Source of the [locale](#).

*err* Error flags to [set](#).

*tm* Pointer to struct tm to fill in.

**Returns:**

Iterator to first char beyond date string.

Definition at line 451 of file locale\_facets\_nonio.h.

**5.701.4.9** `template<typename _CharT, typename _InIter > iter_type  
std::time_get<_CharT, _InIter >::get_monthname (iter_type __beg,  
iter_type __end, ios_base & __io, ios_base::iostate & __err, tm *  
__tm) const [inline]`

Parse input month string. This function parses a month name and puts the results into a user-supplied struct `tm`. The result is returned by calling `time_get::do_get_monthname()`.

Parsing starts by parsing an abbreviated month name. If a valid abbreviation is followed by a character that would lead to the full month name, parsing continues until the full name is found or an error occurs. Otherwise parsing finishes at the end of the abbreviated name.

If an error occurs before the end, `err` |= `ios_base::failbit`. If parsing reads all the characters, `err` |= `ios_base::eofbit`.

**Parameters:**

- beg* Start of string to parse.
- end* End of string to parse.
- io* Source of the `locale`.
- err* Error flags to `set`.
- tm* Pointer to struct `tm` to fill in.

**Returns:**

Iterator to first char beyond month name.

Definition at line 508 of file `locale_facets_nonio.h`.

**5.701.4.10** `template<typename _CharT, typename _InIter > iter_type  
std::time_get<_CharT, _InIter >::get_time (iter_type __beg,  
iter_type __end, ios_base & __io, ios_base::iostate & __err, tm *  
__tm) const [inline]`

Parse input time string. This function parses a time according to the format `x` and puts the results into a user-supplied struct `tm`. The result is returned by calling `time_get::do_get_time()`.

If there is a valid time string according to format `x`, `tm` will be filled in accordingly and the returned `iterator` will point to the first character beyond the time string. If an error occurs before the end, `err` |= `ios_base::failbit`. If parsing reads all the characters, `err` |= `ios_base::eofbit`.

**Parameters:**

- beg* Start of string to parse.

*end* End of string to parse.

*io* Source of the [locale](#).

*err* Error flags to [set](#).

*tm* Pointer to struct tm to fill in.

**Returns:**

Iterator to first char beyond time string.

Definition at line 426 of file locale\_facets\_nonio.h.

```
5.701.4.11 template<typename _CharT, typename _InIter > iter_type
std::time_get< _CharT, _InIter >::get_weekday (iter_type __beg,
iter_type __end, ios_base & __io, ios_base::iostate & __err, tm *
__tm) const [inline]
```

Parse input weekday string. This function parses a weekday name and puts the results into a user-supplied struct tm. The result is returned by calling [time\\_get::do\\_get\\_weekday\(\)](#).

Parsing starts by parsing an abbreviated weekday name. If a valid abbreviation is followed by a character that would lead to the full weekday name, parsing continues until the full name is found or an error occurs. Otherwise parsing finishes at the end of the abbreviated name.

If an error occurs before the end, err |= [ios\\_base::failbit](#). If parsing reads all the characters, err |= [ios\\_base::eofbit](#).

**Parameters:**

*beg* Start of string to parse.

*end* End of string to parse.

*io* Source of the [locale](#).

*err* Error flags to [set](#).

*tm* Pointer to struct tm to fill in.

**Returns:**

Iterator to first char beyond weekday name.

Definition at line 479 of file locale\_facets\_nonio.h.

**5.701.4.12** `template<typename _CharT , typename _InIter > iter_type  
std::time_get< _CharT, _InIter >::get_year (iter_type __beg,  
iter_type __end, ios_base & __io, ios_base::iostate & __err, tm *  
__tm) const [inline]`

Parse input year string. This function reads up to 4 characters to parse a year string and puts the results into a user-supplied struct tm. The result is returned by calling [time\\_get::do\\_get\\_year\(\)](#).

4 consecutive digits are interpreted as a full year. If there are exactly 2 consecutive digits, the library interprets this as the number of years since 1900.

If an error occurs before the end, err |= [ios\\_base::failbit](#). If parsing reads all the characters, err |= [ios\\_base::eofbit](#).

**Parameters:**

- beg* Start of string to parse.
- end* End of string to parse.
- io* Source of the [locale](#).
- err* Error flags to [set](#).
- tm* Pointer to struct tm to fill in.

**Returns:**

Iterator to first char beyond year.

Definition at line 534 of file [locale\\_facets\\_nonio.h](#).

## 5.701.5 Member Data Documentation

**5.701.5.1** `template<typename _CharT , typename _InIter > locale::id  
std::time_get< _CharT, _InIter >::id [inline, static]`

Numpunct facet id.

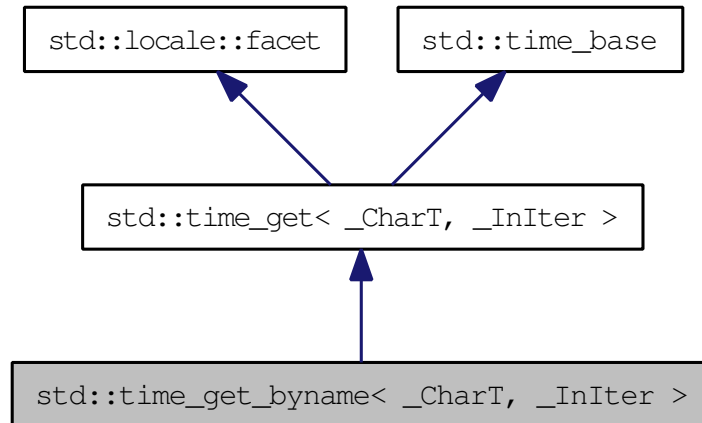

Definition at line 375 of file [locale\\_facets\\_nonio.h](#).

The documentation for this class was generated from the following files:

### 5.702.1 Detailed Description

`template<typename _CharT, typename _InIter> class std::time_get_byname<_CharT, _InIter >`

class `time_get_byname` [22.2.5.2].

Definition at line 681 of file `locale_facets_nonio.h`.

### 5.702.2 Member Typedef Documentation

**5.702.2.1** `template<typename _CharT, typename _InIter > typedef _CharT std::time_get_byname<_CharT, _InIter >::char_type`

Public typedefs.

Reimplemented from `std::time_get<_CharT, _InIter >`.

Definition at line 685 of file `locale_facets_nonio.h`.

**5.702.2.2** `template<typename _CharT, typename _InIter > typedef _InIter std::time_get_byname<_CharT, _InIter >::iter_type`

Public typedefs.

Reimplemented from `std::time_get<_CharT, _InIter >`.

Definition at line 686 of file `locale_facets_nonio.h`.

### 5.702.3 Member Function Documentation

**5.702.3.1** `template<typename _CharT, typename _InIter > dateorder std::time_get<_CharT, _InIter >::date_order () const [inline, inherited]`

Return preferred order of month, day, and year. This function returns an enum from `timebase::dateorder` giving the preferred ordering if the format `x` given to `time_put::put()` only uses month, day, and year. If the format `x` for the associated `locale` uses other fields, this function returns `timebase::dateorder::noorder`.

NOTE: The library always returns `noorder` at the moment.

**Returns:**

A member of `timebase::dateorder`.

Definition at line 402 of file `locale_facets_nonio.h`.

**5.702.3.2** `template<typename _CharT, typename _InIter >  
time_base::dateorder std::time_get< _CharT, _InIter  
>::do_date_order () const [inline, protected, virtual,  
inherited]`

Return preferred order of month, day, and year. This function returns an enum from `timebase::dateorder` giving the preferred ordering if the format `x` given to `time_put::put()` only uses month, day, and year. This function is a hook for derived classes to change the value returned.

**Returns:**

A member of `timebase::dateorder`.

Definition at line 618 of file `locale_facets_nonio.tcc`.

**5.702.3.3** `template<typename _CharT, typename _InIter > _InIter  
std::time_get< _CharT, _InIter >::do_get_date (iter_type __beg,  
iter_type __end, ios_base & __io, ios_base::iostate & __err, tm *  
__tm) const [inline, protected, virtual, inherited]`

Parse input date string. This function parses a date according to the format `X` and puts the results into a user-supplied struct `tm`. This function is a hook for derived classes to change the value returned.

**See also:**

[get\\_date\(\)](#) for details.

**Parameters:**

*beg* Start of string to parse.

*end* End of string to parse.

*io* Source of the [locale](#).

*err* Error flags to [set](#).

*tm* Pointer to struct `tm` to fill in.

**Returns:**

Iterator to first char beyond date string.

## 5.702 std::time\_get\_byname<\_CharT, \_InIter > Class Template Reference 3305

Definition at line 1044 of file locale\_facets\_nonio.tcc.

References `std::ios_base::_M_getloc()`, and `std::ios_base::eofbit`.

**5.702.3.4** `template<typename _CharT, typename _InIter > _InIter  
std::time_get<_CharT, _InIter >::do_get_monthname (iter_type  
__beg, iter_type __end, ios_base & __io, ios_base::iostate &  
__err, tm * __tm) const [inline, protected, virtual,  
inherited]`

Parse input month string. This function parses a month name and puts the results into a user-supplied struct tm. This function is a hook for derived classes to change the value returned.

### See also:

[get\\_monthname\(\)](#) for details.

### Parameters:

*beg* Start of string to parse.

*end* End of string to parse.

*io* Source of the [locale](#).

*err* Error flags to [set](#).

*tm* Pointer to struct tm to fill in.

### Returns:

Iterator to first char beyond month name.

Definition at line 1089 of file locale\_facets\_nonio.tcc.

References `std::ios_base::_M_getloc()`, `std::ios_base::eofbit`, `std::ios_base::failbit`, and `std::ios_base::goodbit`.

**5.702.3.5** `template<typename _CharT, typename _InIter > _InIter  
std::time_get<_CharT, _InIter >::do_get_time (iter_type __beg,  
iter_type __end, ios_base & __io, ios_base::iostate & __err, tm *  
__tm) const [inline, protected, virtual, inherited]`

Parse input time string. This function parses a time according to the format *x* and puts the results into a user-supplied struct tm. This function is a hook for derived classes to change the value returned.

### See also:

[get\\_time\(\)](#) for details.

**Parameters:**

*beg* Start of string to parse.  
*end* End of string to parse.  
*io* Source of the [locale](#).  
*err* Error flags to [set](#).  
*tm* Pointer to struct tm to fill in.

**Returns:**

Iterator to first char beyond time string.

Definition at line 1027 of file locale\_facets\_nonio.tcc.

References `std::ios_base::_M_getloc()`, and `std::ios_base::eofbit`.

**5.702.3.6** `template<typename _CharT, typename _InIter > _InIter  
std::time_get< _CharT, _InIter >::do_get_weekday (iter_type __beg,  
iter_type __end, ios_base & __io, ios_base::iostate & __err, tm *  
__tm) const [inline, protected, virtual, inherited]`

Parse input weekday string. This function parses a weekday name and puts the results into a user-supplied struct tm. This function is a hook for derived classes to change the value returned.

**See also:**

[get\\_weekday\(\)](#) for details.

**Parameters:**

*beg* Start of string to parse.  
*end* End of string to parse.  
*io* Source of the [locale](#).  
*err* Error flags to [set](#).  
*tm* Pointer to struct tm to fill in.

**Returns:**

Iterator to first char beyond weekday name.

Definition at line 1061 of file locale\_facets\_nonio.tcc.

References `std::ios_base::_M_getloc()`, `std::ios_base::eofbit`, `std::ios_base::failbit`, and `std::ios_base::goodbit`.

## 5.702 std::time\_get\_byname<\_CharT, \_InIter > Class Template Reference 3307

**5.702.3.7** `template<typename _CharT, typename _InIter > _InIter  
std::time_get<_CharT, _InIter >::do_get_year (iter_type __beg,  
iter_type __end, ios_base & __io, ios_base::iostate & __err, tm *  
__tm) const [inline, protected, virtual, inherited]`

Parse input year string. This function reads up to 4 characters to parse a year string and puts the results into a user-supplied struct tm. This function is a hook for derived classes to change the value returned.

### See also:

[get\\_year\(\)](#) for details.

### Parameters:

- beg* Start of string to parse.
- end* End of string to parse.
- io* Source of the [locale](#).
- err* Error flags to [set](#).
- tm* Pointer to struct tm to fill in.

### Returns:

Iterator to first char beyond year.

Definition at line 1117 of file locale\_facets\_nonio.tcc.

References [std::ios\\_base::\\_M\\_getloc\(\)](#), [std::ios\\_base::eofbit](#), [std::ios\\_base::failbit](#), and [std::ios\\_base::goodbit](#).

**5.702.3.8** `template<typename _CharT, typename _InIter > iter_type  
std::time_get<_CharT, _InIter >::get_date (iter_type __beg,  
iter_type __end, ios_base & __io, ios_base::iostate & __err, tm *  
__tm) const [inline, inherited]`

Parse input date string. This function parses a date according to the format *X* and puts the results into a user-supplied struct tm. The result is returned by calling [time\\_get::do\\_get\\_date\(\)](#).

If there is a valid date string according to format *X*, *tm* will be filled in accordingly and the returned [iterator](#) will point to the first character beyond the date string. If an error occurs before the end, `err` |= [ios\\_base::failbit](#). If parsing reads all the characters, `err` |= [ios\\_base::eofbit](#).

### Parameters:

- beg* Start of string to parse.

*end* End of string to parse.  
*io* Source of the [locale](#).  
*err* Error flags to [set](#).  
*tm* Pointer to struct tm to fill in.

**Returns:**

Iterator to first char beyond date string.

Definition at line 451 of file locale\_facets\_nonio.h.

**5.702.3.9** `template<typename _CharT, typename _InIter > iter_type  
 std::time_get< _CharT, _InIter >::get_monthname (iter_type __beg,  
 iter_type __end, ios_base & __io, ios_base::iostate & __err, tm *  
 __tm) const [inline, inherited]`

Parse input month string. This function parses a month name and puts the results into a user-supplied struct tm. The result is returned by calling [time\\_get::do\\_get\\_monthname\(\)](#).

Parsing starts by parsing an abbreviated month name. If a valid abbreviation is followed by a character that would lead to the full month name, parsing continues until the full name is found or an error occurs. Otherwise parsing finishes at the end of the abbreviated name.

If an error occurs before the end, `err |= ios_base::failbit`. If parsing reads all the characters, `err |= ios_base::eofbit`.

**Parameters:**

*beg* Start of string to parse.  
*end* End of string to parse.  
*io* Source of the [locale](#).  
*err* Error flags to [set](#).  
*tm* Pointer to struct tm to fill in.

**Returns:**

Iterator to first char beyond month name.

Definition at line 508 of file locale\_facets\_nonio.h.

## 5.702 `std::time_get_byname<_CharT, _InIter>` Class Template Reference 3309

**5.702.3.10** `template<typename _CharT, typename _InIter> iter_type  
std::time_get<_CharT, _InIter>::get_time(iter_type __beg,  
iter_type __end, ios_base & __io, ios_base::iostate & __err, tm *  
__tm) const [inline, inherited]`

Parse input time string. This function parses a time according to the format *x* and puts the results into a user-supplied struct *tm*. The result is returned by calling `time_get::do_get_time()`.

If there is a valid time string according to format *x*, *tm* will be filled in accordingly and the returned `iterator` will point to the first character beyond the time string. If an error occurs before the end, `err` |= `ios_base::failbit`. If parsing reads all the characters, `err` |= `ios_base::eofbit`.

### Parameters:

- beg* Start of string to parse.
- end* End of string to parse.
- io* Source of the `locale`.
- err* Error flags to `set`.
- tm* Pointer to struct *tm* to fill in.

### Returns:

- Iterator to first char beyond time string.

Definition at line 426 of file `locale_facets_nonio.h`.

**5.702.3.11** `template<typename _CharT, typename _InIter> iter_type  
std::time_get<_CharT, _InIter>::get_weekday(iter_type __beg,  
iter_type __end, ios_base & __io, ios_base::iostate & __err, tm *  
__tm) const [inline, inherited]`

Parse input weekday string. This function parses a weekday name and puts the results into a user-supplied struct *tm*. The result is returned by calling `time_get::do_get_weekday()`.

Parsing starts by parsing an abbreviated weekday name. If a valid abbreviation is followed by a character that would lead to the full weekday name, parsing continues until the full name is found or an error occurs. Otherwise parsing finishes at the end of the abbreviated name.

If an error occurs before the end, `err` |= `ios_base::failbit`. If parsing reads all the characters, `err` |= `ios_base::eofbit`.

### Parameters:

- beg* Start of string to parse.

*end* End of string to parse.  
*io* Source of the [locale](#).  
*err* Error flags to [set](#).  
*tm* Pointer to struct tm to fill in.

**Returns:**

Iterator to first char beyond weekday name.

Definition at line 479 of file locale\_facets\_nonio.h.

**5.702.3.12** `template<typename _CharT, typename _InIter > iter_type  
std::time_get< _CharT, _InIter >::get_year (iter_type __beg,  
iter_type __end, ios_base & __io, ios_base::iostate & __err, tm *  
__tm) const [inline, inherited]`

Parse input year string. This function reads up to 4 characters to parse a year string and puts the results into a user-supplied struct tm. The result is returned by calling [time\\_get::do\\_get\\_year\(\)](#).

4 consecutive digits are interpreted as a full year. If there are exactly 2 consecutive digits, the library interprets this as the number of years since 1900.

If an error occurs before the end, err |= [ios\\_base::failbit](#). If parsing reads all the characters, err |= [ios\\_base::eofbit](#).

**Parameters:**

*beg* Start of string to parse.  
*end* End of string to parse.  
*io* Source of the [locale](#).  
*err* Error flags to [set](#).  
*tm* Pointer to struct tm to fill in.

**Returns:**

Iterator to first char beyond year.

Definition at line 534 of file locale\_facets\_nonio.h.

**5.702.4 Member Data Documentation**

**5.702.4.1** `template<typename _CharT, typename _InIter > locale::id  
std::time_get< _CharT, _InIter >::id [inline, static,  
inherited]`

Numpunct facet id.

## **5.702 std::time\_get\_byname<\_CharT, \_InIter > Class Template Reference 3311**

Definition at line 375 of file locale\_facets\_nonio.h.

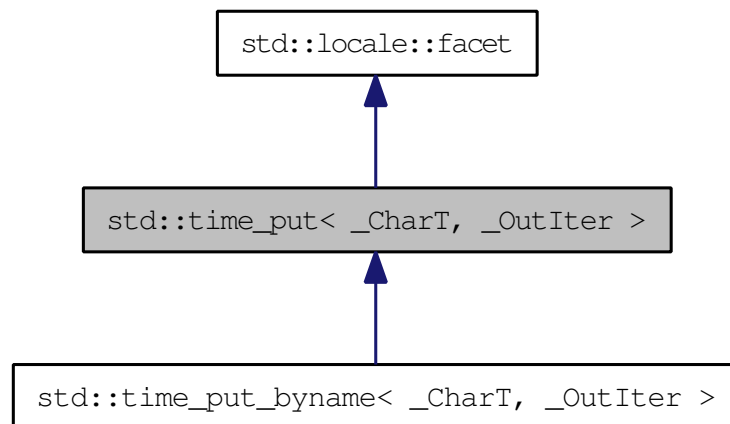

The documentation for this class was generated from the following file:

- [locale\\_facets\\_nonio.h](#)

## 5.703 `std::time_put< _CharT, _OutIter >` Class Template Reference

Primary class template [time\\_put](#).

This facet encapsulates the code to format and output dates and times according to formats used by `strftime()`. Inheritance diagram for `std::time_put< _CharT, _OutIter >`:

### Public Types

- typedef `_CharT` [char\\_type](#)
- typedef `_OutIter` [iter\\_type](#)

### Public Member Functions

- [time\\_put](#) (`size_t __refs=0`)
- [iter\\_type put](#) (`iter_type __s, ios_base &__io, char_type __fill, const tm * __tm, char __format, char __mod=0`) const
- [iter\\_type put](#) (`iter_type __s, ios_base &__io, char_type __fill, const tm * __tm, const _CharT * __beg, const _CharT * __end`) const

### Static Public Attributes

- static [locale::id](#) `id`

## Protected Member Functions

- virtual [~time\\_put](#) ()
- **\_\_attribute\_\_** ((\_\_const\_\_)) static const char \*\_S\_get\_c\_name() throw ()
- virtual [iter\\_type do\\_put](#) (iter\_type \_\_s, ios\_base &\_\_io, char\_type \_\_fill, const tm \*\_\_tm, char \_\_format, char \_\_mod) const

## Static Protected Member Functions

- static \_\_c\_locale [\\_S\\_lc\\_ctype\\_c\\_locale](#) (\_\_c\_locale \_\_cloc, const char \*\_\_s)

## Friends

- class [locale::\\_Impl](#)

### 5.703.1 Detailed Description

**template**<typename [\\_CharT](#), typename [\\_OutIter](#)> **class** [std::time\\_put](#)< [\\_CharT](#), [\\_OutIter](#) >

Primary class template [time\\_put](#).

This facet encapsulates the code to format and output dates and times according to formats used by `strftime()`. The [time\\_put](#) template uses protected virtual functions to provide the actual results. The public accessors forward the call to the virtual functions. These virtual functions are hooks for developers to implement the behavior they require from the [time\\_put](#) facet.

Definition at line 710 of file `locale_facets_nonio.h`.

### 5.703.2 Member Typedef Documentation

**5.703.2.1** **template**<typename [\\_CharT](#) , typename [\\_OutIter](#) > **typedef** [\\_CharT](#) [std::time\\_put](#)< [\\_CharT](#), [\\_OutIter](#) >::[char\\_type](#)

Public typedefs.

Reimplemented in [std::time\\_put\\_byname](#)< [\\_CharT](#), [\\_OutIter](#) >.

Definition at line 716 of file `locale_facets_nonio.h`.

### 5.703.2.2 `template<typename _CharT, typename _OutIter > typedef _OutIter std::time_put< _CharT, _OutIter >::iter_type`

Public typedefs.

Reimplemented in [std::time\\_put\\_byname< \\_CharT, \\_OutIter >](#).

Definition at line 717 of file locale\_facets\_nonio.h.

## 5.703.3 Constructor & Destructor Documentation

### 5.703.3.1 `template<typename _CharT, typename _OutIter > std::time_put< _CharT, _OutIter >::time_put (size_t __refs = 0) [inline, explicit]`

Constructor performs initialization. This is the constructor provided by the standard.

#### Parameters:

*refs* Passed to the base facet class.

Definition at line 731 of file locale\_facets\_nonio.h.

### 5.703.3.2 `template<typename _CharT, typename _OutIter > virtual std::time_put< _CharT, _OutIter >::~~time_put () [inline, protected, virtual]`

Destructor.

Definition at line 777 of file locale\_facets\_nonio.h.

## 5.703.4 Member Function Documentation

### 5.703.4.1 `template<typename _CharT, typename _OutIter > _OutIter std::time_put< _CharT, _OutIter >::do_put (iter_type __s, ios_base & __io, char_type __fill, const tm * __tm, char __format, char __mod) const [inline, protected, virtual]`

Format and output a time or date. This function formats the data in struct tm according to the provided format char and optional modifier. This function is a hook for derived classes to change the value returned.

#### See also:

[put\(\)](#) for more details.

**Parameters:**

- s* The stream to write to.
- io* Source of [locale](#).
- fill* char\_type to use for padding.
- tm* Struct tm with date and time info to format.
- format* Format char.
- mod* Optional modifier char.

**Returns:**

Iterator after writing.

Definition at line 1175 of file locale\_facets\_nonio.tcc.

References [std::ios\\_base::\\_M\\_getloc\(\)](#), and [std::\\_\\_ctype\\_abstract\\_base<\\_CharT>::widen\(\)](#).

Referenced by [std::time\\_put<\\_CharT, \\_OutIter >::put\(\)](#).

```
5.703.4.2 template<typename _CharT, typename _OutIter > iter_type
std::time_put<_CharT, _OutIter >::put (iter_type __s, ios_base &
__io, char_type __fill, const tm * __tm, char __format, char __mod =
0) const [inline]
```

Format and output a time or date. This function formats the data in struct tm according to the provided format char and optional modifier. The format and modifier are interpreted as by [strftime\(\)](#). It does so by returning [time\\_put::do\\_put\(\)](#).

**Parameters:**

- s* The stream to write to.
- io* Source of [locale](#).
- fill* char\_type to use for padding.
- tm* Struct tm with date and time info to format.
- format* Format char.
- mod* Optional modifier char.

**Returns:**

Iterator after writing.

Definition at line 770 of file locale\_facets\_nonio.h.

References [std::time\\_put<\\_CharT, \\_OutIter >::do\\_put\(\)](#).

**5.703.4.3** `template<typename _CharT, typename _OutIter > _OutIter  
std::time_put< _CharT, _OutIter >::put (iter_type __s, ios_base &  
__io, char_type __fill, const tm * __tm, const _CharT * __beg, const  
_CharT * __end) const [inline]`

Format and output a time or date. This function formats the data in struct tm according to the provided format string. The format string is interpreted as by strftime().

**Parameters:**

- s* The stream to write to.
- io* Source of [locale](#).
- fill* char\_type to use for padding.
- tm* Struct tm with date and time info to format.
- beg* Start of format string.
- end* End of format string.

**Returns:**

Iterator after writing.

Definition at line 1140 of file locale\_facets\_nonio.tcc.

References [std::ios\\_base::\\_M\\_getloc\(\)](#), [std::time\\_put< \\_CharT, \\_OutIter >::do\\_put\(\)](#), and [std::\\_\\_ctype\\_abstract\\_base< \\_CharT >::narrow\(\)](#).

## 5.703.5 Member Data Documentation

**5.703.5.1** `template<typename _CharT, typename _OutIter > locale::id  
std::time_put< _CharT, _OutIter >::id [inline, static]`

Numpunct facet id.

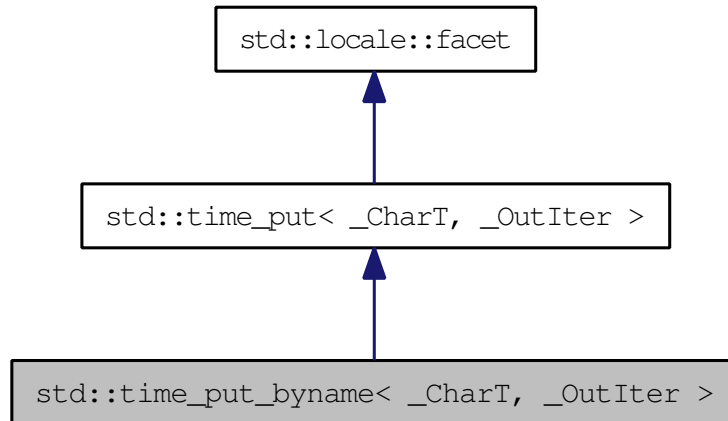

Definition at line 721 of file locale\_facets\_nonio.h.

The documentation for this class was generated from the following files:

- [locale\\_facets\\_nonio.h](#)
- [locale\\_facets\\_nonio.tcc](#)

## 5.704 `std::time_put_byname< _CharT, _OutIter >` Class Template Reference

class `time_put_byname` [22.2.5.4]. Inheritance diagram for `std::time_put_byname< _CharT, _OutIter >`:

### Public Types

- typedef `_CharT` `char_type`
- typedef `_OutIter` `iter_type`

### Public Member Functions

- `time_put_byname` (`const char *`, `size_t __refs=0`)
- `iter_type put` (`iter_type __s`, `ios_base &__io`, `char_type __fill`, `const tm * __tm`, `char __format`, `char __mod=0`) `const`
- `iter_type put` (`iter_type __s`, `ios_base &__io`, `char_type __fill`, `const tm * __tm`, `const _CharT * __beg`, `const _CharT * __end`) `const`

### Static Public Attributes

- static `locale::id` `id`

### Protected Member Functions

- `__attribute__` (`((__const__)) static const char * _S_get_c_name()` `throw ()`)

- virtual `iter_type do_put (iter_type __s, ios_base &__io, char_type __fill, const tm *__tm, char __format, char __mod) const`

### Static Protected Member Functions

- static `__c_locale _S_clone_c_locale (__c_locale &__cloc) throw ()`
- static `void _S_create_c_locale (__c_locale &__cloc, const char *__s, __c_locale __old=0)`
- static `void _S_destroy_c_locale (__c_locale &__cloc)`
- static `__c_locale _S_get_c_locale ()`
- static `__c_locale _S_lc_ctype_c_locale (__c_locale __cloc, const char *__s)`

### Friends

- class `locale::_Impl`

## 5.704.1 Detailed Description

`template<typename _CharT, typename _OutIter> class std::time_put_byname<_CharT, _OutIter >`

class [time\\_put\\_byname](#) [22.2.5.4].

Definition at line 806 of file `locale_facets_nonio.h`.

## 5.704.2 Member Typedef Documentation

**5.704.2.1** `template<typename _CharT, typename _OutIter > typedef _CharT std::time_put_byname<_CharT, _OutIter >::char_type`

Public typedefs.

Reimplemented from [std::time\\_put<\\_CharT, \\_OutIter >](#).

Definition at line 810 of file `locale_facets_nonio.h`.

**5.704.2.2** `template<typename _CharT, typename _OutIter > typedef _OutIter std::time_put_byname<_CharT, _OutIter >::iter_type`

Public typedefs.

Reimplemented from [std::time\\_put<\\_CharT, \\_OutIter >](#).

Definition at line 811 of file `locale_facets_nonio.h`.

### 5.704.3 Member Function Documentation

**5.704.3.1** `template<typename _CharT, typename _OutIter> _OutIter  
std::time_put<_CharT, _OutIter>::do_put(iter_type __s,  
ios_base & __io, char_type __fill, const tm * __tm, char __format,  
char __mod) const [inline, protected, virtual,  
inherited]`

Format and output a time or date. This function formats the data in struct `tm` according to the provided format char and optional modifier. This function is a hook for derived classes to change the value returned.

**See also:**

[put\(\)](#) for more details.

**Parameters:**

*s* The stream to write to.

*io* Source of [locale](#).

*fill* `char_type` to use for padding.

*tm* Struct `tm` with date and time info to format.

*format* Format char.

*mod* Optional modifier char.

**Returns:**

Iterator after writing.

Definition at line 1175 of file `locale_facets_nonio.tcc`.

References `std::ios_base::_M_getloc()`, and `std::__ctype_abstract_base<_CharT>::widen()`.

Referenced by `std::time_put<_CharT, _OutIter>::put()`.

**5.704.3.2** `template<typename _CharT, typename _OutIter> iter_type  
std::time_put<_CharT, _OutIter>::put(iter_type __s, ios_base &  
__io, char_type __fill, const tm * __tm, char __format, char __mod =  
0) const [inline, inherited]`

Format and output a time or date. This function formats the data in struct `tm` according to the provided format char and optional modifier. The format and modifier are interpreted as by `strftime()`. It does so by returning `time_put::do_put()`.

**Parameters:**

- s* The stream to write to.
- io* Source of [locale](#).
- fill* `char_type` to use for padding.
- tm* Struct `tm` with date and time info to format.
- format* Format char.
- mod* Optional modifier char.

**Returns:**

Iterator after writing.

Definition at line 770 of file `locale_facets_nonio.h`.

References `std::time_put<_CharT, _OutIter >::do_put()`.

**5.704.3.3** `template<typename _CharT, typename _OutIter > _OutIter  
std::time_put<_CharT, _OutIter >::put(iter_type __s, ios_base &  
__io, char_type __fill, const tm * __tm, const _CharT * __beg, const  
_CharT * __end) const [inline, inherited]`

Format and output a time or date. This function formats the data in struct `tm` according to the provided format string. The format string is interpreted as by `strftime()`.

**Parameters:**

- s* The stream to write to.
- io* Source of [locale](#).
- fill* `char_type` to use for padding.
- tm* Struct `tm` with date and time info to format.
- beg* Start of format string.
- end* End of format string.

**Returns:**

Iterator after writing.

Definition at line 1140 of file `locale_facets_nonio.tcc`.

References `std::ios_base::_M_getloc()`, `std::time_put<_CharT, _OutIter >::do_put()`, and `std::_ctype_abstract_base<_CharT >::narrow()`.

## 5.704 std::time\_put\_byname< \_CharT, \_OutIter > Class Template Reference 3321

### 5.704.4 Member Data Documentation

**5.704.4.1** `template<typename _CharT , typename _OutIter > locale::id  
std::time_put< _CharT, _OutIter >::id [inline, static,  
inherited]`

Numpunct facet id.

Definition at line 721 of file locale\_facets\_nonio.h.

The documentation for this class was generated from the following file:

- [locale\\_facets\\_nonio.h](#)

## 5.705 `std::timed_mutex` Class Reference

[timed\\_mutex](#)

### Public Types

- typedef `__native_type * native_handle_type`

### Public Member Functions

- `timed_mutex` (const [timed\\_mutex](#) &)
- void `lock` ()
- `native_handle_type native_handle` ()
- `timed_mutex & operator=` (const [timed\\_mutex](#) &)
- bool `try_lock` ()
- template<class `_Rep`, class `_Period` >  
bool `try_lock_for` (const [chrono::duration](#)< `_Rep`, `_Period` > &\_\_rtime)
- template<class `_Clock`, class `_Duration` >  
bool `try_lock_until` (const [chrono::time\\_point](#)< `_Clock`, `_Duration` > &\_\_-  
atime)
- void `unlock` ()

### 5.705.1 Detailed Description

[timed\\_mutex](#)

Definition at line 167 of file `mutex`.

The documentation for this class was generated from the following file:

- [mutex](#)

## 5.706 `std::try_to_lock_t` Struct Reference

Try to acquire ownership of the [mutex](#) without blocking.

### 5.706.1 Detailed Description

Try to acquire ownership of the [mutex](#) without blocking.

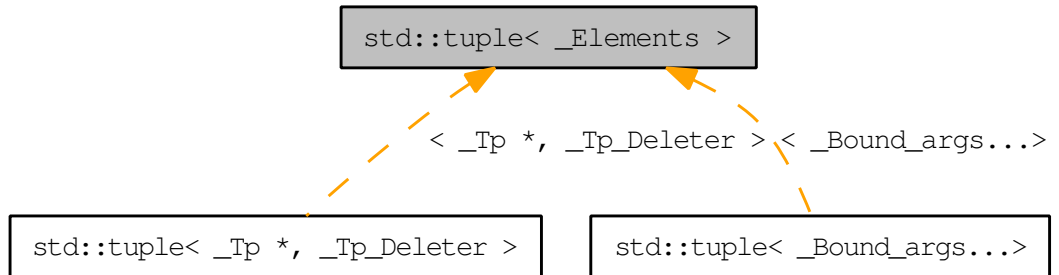

Definition at line 379 of file `mutex`.

The documentation for this struct was generated from the following file:

- [mutex](#)

## 5.707 `std::tuple< _Elements >` Class Template Reference

[tuple](#) Inheritance diagram for `std::tuple< _Elements >`:

### Public Member Functions

- `template<typename... _UElements>`  
**tuple** ([tuple](#)< \_UElements...> &\_\_in)
- `template<typename... _UElements>`  
**tuple** ([tuple](#)< \_UElements...> &&\_\_in)

`tuple & operator=` (`const pair< _U1, _U2 > &__in`)
- `template<typename _U1, typename _U2 >`  
`tuple & operator=` (`tuple< _U1, _U2 > &&__in`)
- `template<typename _U1, typename _U2 >`  
`tuple & operator=` (`const tuple< _U1, _U2 > &__in`)
- `tuple & operator=` (`tuple &&__in`)
- `tuple & operator=` (`const tuple &__in`)
- `void swap` (`tuple &__in`)

### 5.708.1 Detailed Description

`template<typename _T1, typename _T2> class std::tuple< _T1, _T2 >`

`tuple` (2-element), with construction and assignment from a `pair`.

Definition at line 307 of file `tuple`.

The documentation for this class was generated from the following file:

- [tuple](#)

## 5.709 `std::tuple_element< 0, tuple< _Head, _Tail...>` > Struct Template Reference

### Public Types

- `typedef _Head type`

### 5.709.1 Detailed Description

```
template<typename _Head, typename... _Tail> struct std::tuple_element< 0,
tuple< _Head, _Tail...> >
```

Basis case for `tuple_element`: The first element is the one we're seeking.

Definition at line 420 of file `tuple`.

The documentation for this struct was generated from the following file:

- [tuple](#)

## 5.710 `std::tuple_element< __i, tuple< _Head, _Tail...> >` Struct Template Reference

Inherits `tuple_element< __i-1, tuple< _Tail...> >`.

### 5.710.1 Detailed Description

`template<std::size_t __i, typename _Head, typename... _Tail> struct std::tuple_element< __i, tuple< _Head, _Tail...> >`

Recursive case for `tuple_element`: strip off the first element in the [tuple](#) and retrieve the (i-1)th element of the remaining [tuple](#).

Definition at line 413 of file `tuple`.

The documentation for this struct was generated from the following file:

- [tuple](#)

## 5.711 `std::tuple_size< tuple< _Elements...> >` Struct Template Reference

class `tuple_size`

### Static Public Attributes

- static const `std::size_t` value

### 5.711.1 Detailed Description

`template<typename... _Elements> struct std::tuple_size< tuple< _Elements...> >`

class `tuple_size`

Definition at line 431 of file `tuple`.

The documentation for this struct was generated from the following file:

- [tuple](#)

## 5.712 std::type\_info Class Reference

Part of RTTI.

Inherited by `__cxxabiv1::__array_type_info`, `__cxxabiv1::__class_type_info`, `__cxxabiv1::__enum_type_info`, `__cxxabiv1::__function_type_info`, `__cxxabiv1::__fundamental_type_info`, and `__cxxabiv1::__pbase_type_info`.

### Public Member Functions

- virtual `~type_info ()`
- virtual `bool __do_catch (const type_info * __thr_type, void ** __thr_obj, unsigned __outer) const`
- virtual `bool __do_upcast (const __cxxabiv1::__class_type_info * __target, void ** __obj_ptr) const`
- virtual `bool __is_function_p () const`
- virtual `bool __is_pointer_p () const`
- `bool before (const type_info & __arg) const`
- `const char * name () const`
- `bool operator!= (const type_info & __arg) const`
- `bool operator== (const type_info & __arg) const`

### Protected Member Functions

- `type_info (const char * __n)`

### Protected Attributes

- `const char * __name`

#### 5.712.1 Detailed Description

Part of RTTI. The `type_info` class describes type information generated by an implementation.

Definition at line 87 of file `typeinfo`.

#### 5.712.2 Constructor & Destructor Documentation

##### 5.712.2.1 virtual std::type\_info::~~type\_info () [virtual]

Destructor first. Being the first non-inline virtual function, this controls in which translation unit the vtable is emitted. The compiler makes use of that information to know

where to emit the runtime-mandated [type\\_info](#) structures in the new-abi.

### 5.712.3 Member Function Documentation

#### 5.712.3.1 `const char* std::type_info::name () const` [`inline`]

Returns an *implementation-defined* byte string; this is not portable between compilers!

Definition at line 98 of file `typeinfo`.

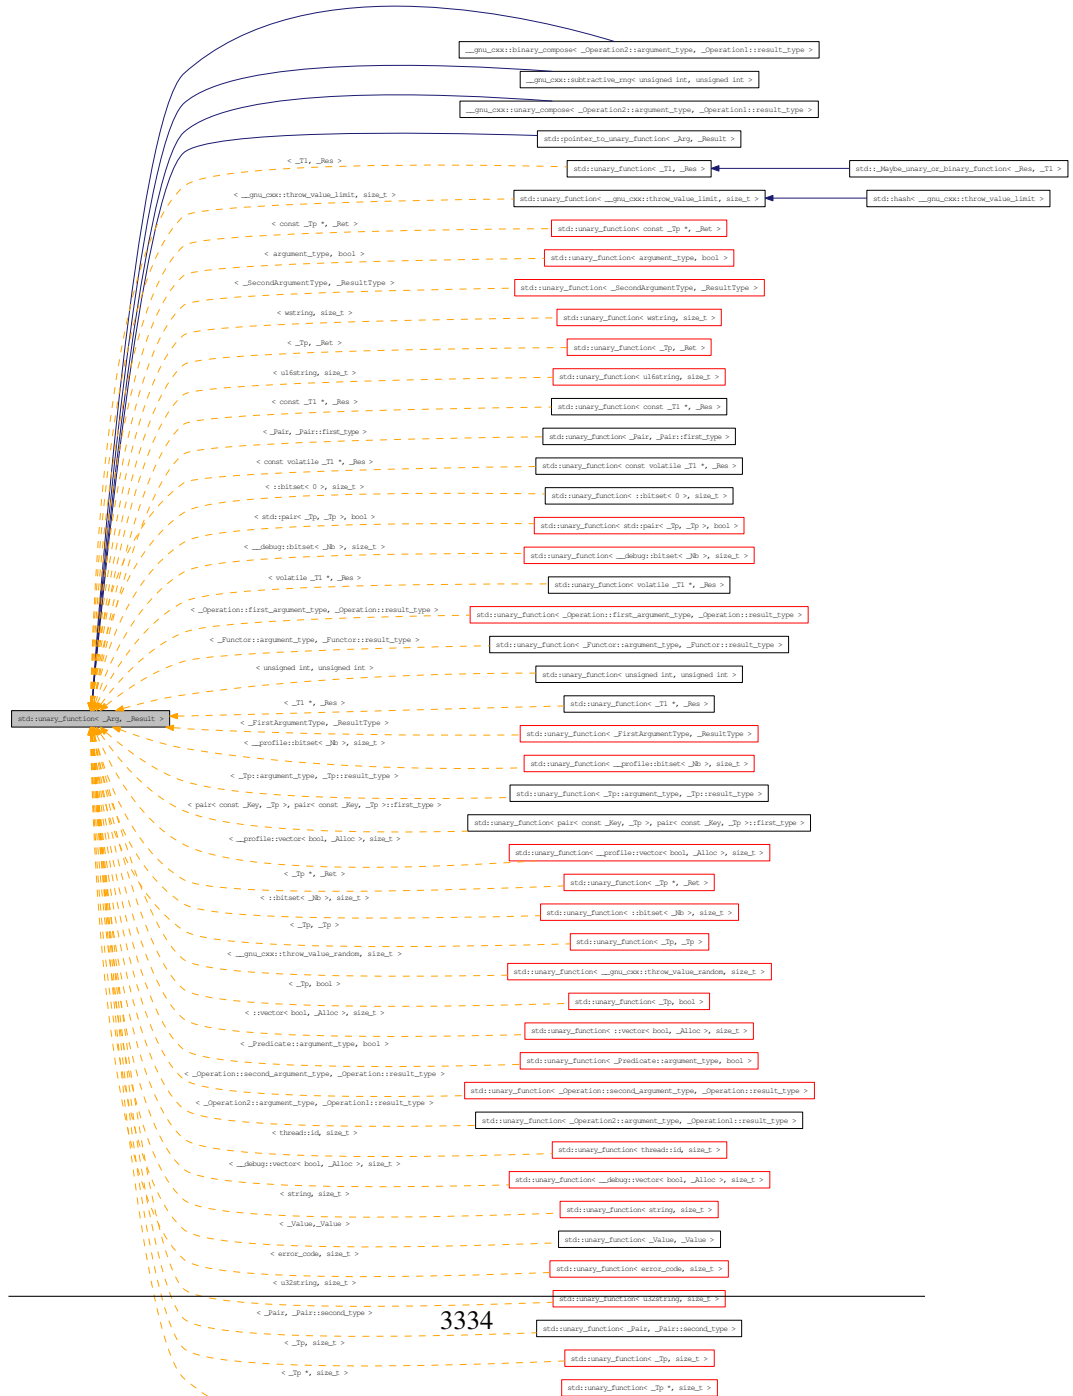

The documentation for this class was generated from the following file:

- [typeinfo](#)

## 5.713 std::unary\_function< \_Arg, \_Result > Struct Template Reference

Inheritance diagram for std::unary\_function< \_Arg, \_Result >:

## Public Types

- typedef `_Arg` [argument\\_type](#)
- typedef `_Result` [result\\_type](#)

### 5.713.1 Detailed Description

`template<typename _Arg, typename _Result> struct std::unary_function< _Arg, _Result >`

This is one of the [functor base classes](#).

Definition at line 100 of file `stl_function.h`.

### 5.713.2 Member Typedef Documentation

**5.713.2.1** `template<typename _Arg, typename _Result> typedef _Arg std::unary_function< _Arg, _Result >::argument_type`

`argument_type` is the type of the argument (no surprises here)

Definition at line 102 of file `stl_function.h`.

**5.713.2.2** `template<typename _Arg, typename _Result> typedef _Result std::unary_function< _Arg, _Result >::result_type`

`result_type` is the return type

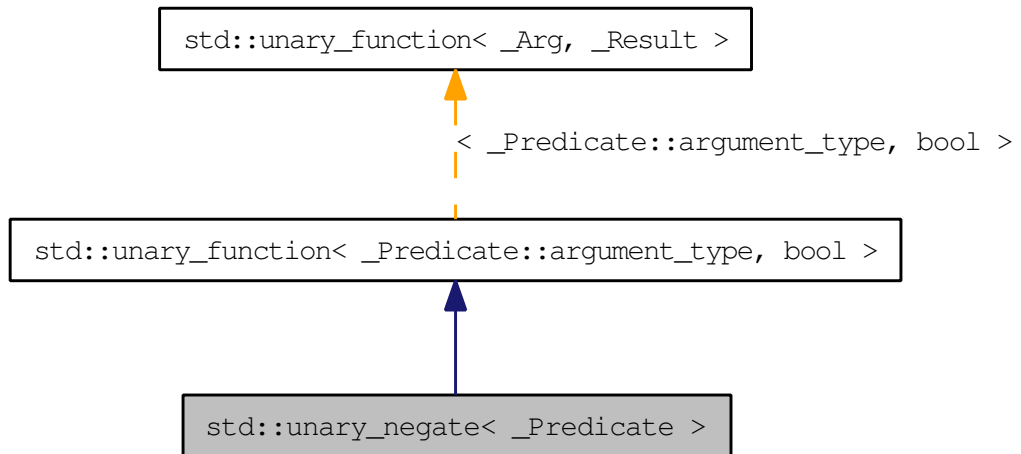

Definition at line 105 of file `stl_function.h`.

The documentation for this struct was generated from the following file:

- [stl\\_function.h](#)

## 5.714 `std::unary_negate< _Predicate >` Class Template Reference

One of the [negation functors](#). Inheritance diagram for `std::unary_negate< _Predicate >`:

### Public Types

- typedef `_Predicate::argument_type` [argument\\_type](#)
- typedef `bool` [result\\_type](#)

### Public Member Functions

- `unary_negate` (`const _Predicate &__x`)
- `operator()` (`const typename _Predicate::argument_type &__x`) `const`

### Protected Attributes

- `_Predicate _M_pred`

#### 5.714.1 Detailed Description

```
template<typename _Predicate> class std::unary_negate< _Predicate >
```

One of the [negation functors](#).

Definition at line 346 of file `stl_function.h`.

## 5.714.2 Member Typedef Documentation

### 5.714.2.1 `typedef _Predicate::argument_type std::unary_function<_Predicate::argument_type, bool >::argument_type` [`inherited`]

`argument_type` is the type of the argument (no surprises here)

Definition at line 102 of file `stl_function.h`.

### 5.714.2.2 `typedef bool std::unary_function<_Predicate::argument_type, bool >::result_type` [`inherited`]

`result_type` is the return type

Definition at line 105 of file `stl_function.h`.

The documentation for this class was generated from the following file:

- [stl\\_function.h](#)

## 5.715 `std::underflow_error` Class Reference

Inheritance diagram for `std::underflow_error`:

### Public Member Functions

- `underflow_error` (const `string` &\_\_arg)
- virtual const char \* `what` () const throw ()

#### 5.715.1 Detailed Description

Thrown to indicate arithmetic underflow.

Definition at line 140 of file `stdexcept`.

#### 5.715.2 Member Function Documentation

##### 5.715.2.1 virtual const char\* `std::runtime_error::what` () const throw () [virtual, inherited]

Returns a C-style character string describing the general cause of the current error (the same string passed to the ctor).

Reimplemented from [std::exception](#).

The documentation for this class was generated from the following file:

- [stdexcept](#)

## 5.716 `std::uniform_int_distribution< _IntType >` Class Template Reference

Uniform discrete distribution for random numbers. A discrete random distribution on the range  $[min, max]$  with equal probability throughout the range.

### Classes

- struct [param\\_type](#)

### Public Types

- typedef `_IntType` [result\\_type](#)

### Public Member Functions

- **uniform\_int\_distribution** (const [param\\_type](#) &\_\_p)
- **uniform\_int\_distribution** (`_IntType` \_\_a=0, `_IntType` \_\_b=`std::numeric_limits<_IntType >::max()`)
- **result\_type a** () const
- **result\_type b** () const
- **result\_type max** () const
- **result\_type min** () const
- `template<typename _UniformRandomNumberGenerator >`  
**result\_type operator()** (`_UniformRandomNumberGenerator` &\_\_urng, const [param\\_type](#) &\_\_p)
- `template<typename _UniformRandomNumberGenerator >`  
**result\_type operator()** (`_UniformRandomNumberGenerator` &\_\_urng)

## 5.716 std::uniform\_int\_distribution< \_IntType > Class Template Reference 3341

### 5.716.1 Detailed Description

```
template<typename _IntType = int> class std::uniform_int_distribution< _-
_IntType >
```

Uniform discrete distribution for random numbers. A discrete random distribution on the range  $[min, max]$  with equal probability throughout the range.

Definition at line 1496 of file random.h.

### 5.716.2 Member Typedef Documentation

**5.716.2.1** `template<typename _IntType = int> typedef _IntType  
std::uniform_int_distribution< _IntType >::result_type`

The type of the range of the distribution.

Definition at line 1503 of file random.h.

### 5.716.3 Constructor & Destructor Documentation

**5.716.3.1** `template<typename _IntType = int> std::uniform_int_distribution<  
_IntType >::uniform_int_distribution (_IntType __a = 0, _IntType  
__b = std::numeric_limits<_IntType>::max ()) [inline,  
explicit]`

Constructs a uniform distribution object.

Definition at line 1535 of file random.h.

### 5.716.4 Member Function Documentation

**5.716.4.1** `template<typename _IntType = int> result_type  
std::uniform_int_distribution< _IntType >::max () const  
[inline]`

Returns the inclusive upper bound of the distribution range.

Definition at line 1572 of file random.h.

**5.716.4.2** `template<typename _IntType = int> result_type  
std::uniform_int_distribution< _IntType >::min () const  
[inline]`

Returns the inclusive lower bound of the distribution range.

Definition at line 1565 of file random.h.

**5.716.4.3** `template<typename _IntType > template<typename  
_UniformRandomNumberGenerator > uniform_int_distribution<  
_IntType >::result_type std::uniform_int_distribution< _IntType  
>::operator() (_UniformRandomNumberGenerator & __urng, const  
param_type & __p) [inline]`

Gets a uniform random number in the range  $[0, n)$ .

This function is aimed at use with `std::random_shuffle`.

Definition at line 818 of file random.tcc.

**5.716.4.4** `template<typename _IntType = int> template<typename  
_UniformRandomNumberGenerator > result_type  
std::uniform_int_distribution< _IntType >::operator()  
(_UniformRandomNumberGenerator & __urng) [inline]`

Gets a uniformly distributed random number in the range  $(min, max)$ .

Definition at line 1596 of file random.h.

References `std::uniform_int_distribution< _IntType >::operator()`, and `std::uniform_int_distribution< _IntType >::param()`.

Referenced by `std::uniform_int_distribution< _IntType >::operator()`.

**5.716.4.5** `template<typename _IntType = int> void std::uniform_int_  
distribution< _IntType >::param (const param_type & __param)  
[inline]`

Sets the parameter `set` of the distribution.

**Parameters:**

`__param` The new parameter `set` of the distribution.

Definition at line 1587 of file random.h.

## 5.716 std::uniform\_int\_distribution< \_IntType > Class Template Reference 3343

**5.716.4.6** `template<typename _IntType = int> param_type  
std::uniform_int_distribution< _IntType >::param () const  
[inline]`

Returns the parameter [set](#) of the distribution.

Definition at line 1579 of file random.h.

Referenced by `std::uniform_int_distribution< _IntType >::operator()()`, and `std::operator>>()`.

**5.716.4.7** `template<typename _IntType = int> void  
std::uniform_int_distribution< _IntType >::reset () [inline]`

Resets the distribution state. Does nothing for the uniform integer distribution.

Definition at line 1551 of file random.h.

The documentation for this class was generated from the following files:

- [random.h](#)
- [random.tcc](#)

## 5.717 `std::uniform_int_distribution< _IntType >::param_type` Struct Reference

### Public Types

- typedef [uniform\\_int\\_distribution< \\_IntType >](#) `distribution_type`

### Public Member Functions

- void **reset** ()

### 5.718.1 Detailed Description

```
template<typename _RealType = double> class std::uniform_real_distribution<
_RealType >
```

Uniform continuous distribution for random numbers. A continuous random distribution on the range [min, max) with equal probability throughout the range. The URNG should be real-valued and deliver number in the range [0, 1).

Definition at line 1650 of file random.h.

## 5.718.2 Member Typedef Documentation

**5.718.2.1** `template<typename _RealType = double> typedef _RealType  
std::uniform_real_distribution< _RealType >::result_type`

The type of the range of the distribution.

Definition at line 1657 of file random.h.

## 5.718.3 Constructor & Destructor Documentation

**5.718.3.1** `template<typename _RealType = double> std::uniform_real_  
distribution< _RealType >::uniform_real_distribution ( _RealType  
__a = _RealType(0), _RealType __b = _RealType(1))  
[inline, explicit]`

Constructs a [uniform\\_real\\_distribution](#) object.

### Parameters:

`__min` [IN] The lower bound of the distribution.

`__max` [IN] The upper bound of the distribution.

Definition at line 1692 of file random.h.

## 5.718.4 Member Function Documentation

**5.718.4.1** `template<typename _RealType = double> result_type  
std::uniform_real_distribution< _RealType >::max () const  
[inline]`

Returns the inclusive upper bound of the distribution range.

Definition at line 1729 of file random.h.

**5.718.4.2** `template<typename _RealType = double> result_type  
std::uniform_real_distribution< _RealType >::min () const  
[inline]`

Returns the inclusive lower bound of the distribution range.

Definition at line 1722 of file random.h.

## 5.718 std::uniform\_real\_distribution<\_RealType> Class Template Reference

**5.718.4.3** `template<typename _RealType = double> void  
std::uniform_real_distribution<_RealType>::param (const  
param_type & __param) [inline]`

Sets the parameter `set` of the distribution.

### Parameters:

`__param` The new parameter `set` of the distribution.

Definition at line 1744 of file `random.h`.

**5.718.4.4** `template<typename _RealType = double> param_type  
std::uniform_real_distribution<_RealType>::param () const  
[inline]`

Returns the parameter `set` of the distribution.

Definition at line 1736 of file `random.h`.

Referenced by `std::operator>>()`.

**5.718.4.5** `template<typename _RealType = double> void  
std::uniform_real_distribution<_RealType>::reset () [inline]`

Resets the distribution state. Does nothing for the uniform real distribution.

Definition at line 1708 of file `random.h`.

The documentation for this class was generated from the following file:

- [random.h](#)

## 5.719 `std::uniform_real_distribution< _RealType >::param_type` Struct Reference

- `unordered_map` & `operator=` ([initializer\\_list](#)< value\_type > \_\_l)
- `unordered_map` & `operator=` ([unordered\\_map](#) &&\_\_x)

### 5.723.1 Detailed Description

```
template<class _Key, class _Tp, class _Hash = hash<_Key>, class _Pred =
std::equal_to<_Key>, class _Alloc = std::allocator<std::pair<const _Key, _Tp>
>> class std::unordered_map<_Key, _Tp, _Hash, _Pred, _Alloc >
```

A standard container composed of unique keys (containing at most one of each key value) that associates values of another type with the keys. Meets the requirements of a [container](#), and [unordered associative container](#)

#### Parameters:

*Key* Type of key objects.

***Tp*** Type of mapped objects.

***Hash*** Hashing function object type, defaults to `hash<Value>`.

***Pred*** Predicate function object type, defaults to `equal_to<Value>`.

***Alloc*** Allocator type, defaults to `allocator<Key>`.

The resulting value type of the container is `std::pair<const Key, Tp>`.

Definition at line 185 of file `unordered_map.h`.

The documentation for this class was generated from the following file:

- [unordered\\_map.h](#)

## 5.724 `std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >` Class Template Reference

A standard container composed of equivalent keys (possibly containing multiple of each key value) that associates values of another type with the keys.

Inherits `std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >`.

### Public Types

- `typedef _Base::allocator_type allocator_type`
- `typedef _Base::hasher hasher`
- `typedef _Base::key_equal key_equal`
- `typedef _Base::size_type size_type`
- `typedef _Base::value_type value_type`

### Public Member Functions

- `unordered_multimap` ([initializer\\_list](#)< value\_type > \_\_l, size\_type \_\_n=10, const hasher &\_\_hf=hasher(), const key\_equal &\_\_eq=key\_equal(), const allocator\_type &\_\_a=allocator\_type())
- `unordered_multimap` ([unordered\\_multimap](#) &&\_\_x)

`unordered_multimap` (\_InputIterator \_\_f, \_InputIterator \_\_l, typename \_Base::size\_type \_\_n=0, const hasher &\_\_hf=hasher(), const key\_equal &\_\_eq=key\_equal(), const allocator\_type &\_\_a=allocator\_type())
- `unordered_multimap` (size\_type \_\_n=10, const hasher &\_\_hf=hasher(), const key\_equal &\_\_eq=key\_equal(), const allocator\_type &\_\_a=allocator\_type())
- `unordered_multimap` & `operator=` ([initializer\\_list](#)< value\_type > \_\_l)
- `unordered_multimap` & `operator=` ([unordered\\_multimap](#) &&\_\_x)

### 5.724.1 Detailed Description

```
template<class _Key, class _Tp, class _Hash = hash<_Key>, class _Pred =
std::equal_to<_Key>, class _Alloc = std::allocator<std::pair<const _Key, _Tp>
>> class std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >
```

A standard container composed of equivalent keys (possibly containing multiple of each key value) that associates values of another type with the keys. Meets the requirements of a [container](#), and [unordered associative container](#)

#### Parameters:

*Key* Type of key objects.

***Tp*** Type of mapped objects.

***Hash*** Hashing function object type, defaults to `hash<Value>`.

***Pred*** Predicate function object type, defaults to `equal_to<Value>`.

***Alloc*** Allocator type, defaults to `allocator<Key>`.

The resulting value type of the container is `std::pair<const Key, Tp>`.

Definition at line 266 of file `unordered_map.h`.

The documentation for this class was generated from the following file:

- [unordered\\_map.h](#)

## 5.725 `std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >` Class Template Reference

A standard container composed of equivalent keys (possibly containing multiple of each key value) in which the elements' keys are the elements themselves.

Inherits `std::__unordered_multiset< _Value, _Hash, _Pred, _Alloc >`.

### Public Types

- `typedef _Base::allocator_type allocator_type`
- `typedef _Base::hasher hasher`
- `typedef _Base::key_equal key_equal`
- `typedef _Base::size_type size_type`
- `typedef _Base::value_type value_type`

### Public Member Functions

## Friends

- `class _Array<_Tp>`

### 5.727.1 Detailed Description

`template<class _Tp> class std::valarray<_Tp>`

Smart [array](#) designed to support numeric processing. A `valarray` is an [array](#) that provides constraints intended to allow for effective optimization of numeric [array](#) processing by reducing the aliasing that can result from pointer representations. It represents a one-dimensional [array](#) from which different multidimensional subsets can be accessed and modified.

#### Parameters:

- *`Tp`* Type of object in the [array](#).

Definition at line 112 of file `valarray`.

## 5.727.2 Constructor & Destructor Documentation

### 5.727.2.1 `template<class _Tp> std::valarray<_Tp>::valarray (const _Tp * __restrict__, size_t)`

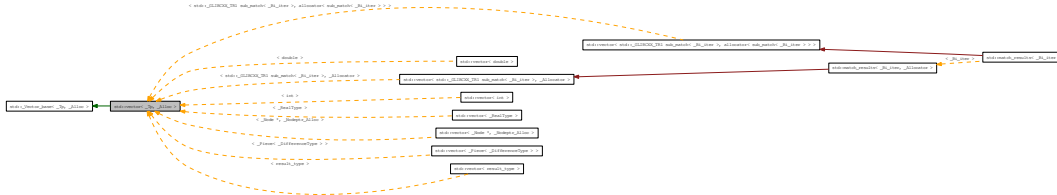

Construct an [array](#) initialized to the first  $n$  elements of  $t$ .

The documentation for this class was generated from the following file:

- [valarray](#)

## 5.728 std::vector< \_Tp, \_Alloc > Class Template Reference

A standard container which offers fixed time access to individual elements in any order.

### 5.728.1 Detailed Description

`template<typename _Tp, typename _Alloc = std::allocator<\_Tp>>> class std::vector<\_Tp, \_Alloc>`

A standard container which offers fixed time access to individual elements in any order. Meets the requirements of a [container](#), a [reversible container](#), and a [sequence](#), including the [optional sequence requirements](#) with the exception of `push_front` and `pop_front`.

In some terminology a vector can be described as a dynamic C-style [array](#), it offers fast and efficient access to individual elements in any order and saves the user from worrying about memory and size allocation. Subscripting ( `[]` ) access is also provided as with C-style arrays.

Definition at line 170 of file `stl_vector.h`.

## 5.728.2 Constructor & Destructor Documentation

**5.728.2.1** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
std::vector<_Tp, _Alloc>::vector () [inline]`

Default constructor creates no elements.

Definition at line 207 of file stl\_vector.h.

**5.728.2.2** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
std::vector<_Tp, _Alloc>::vector (const allocator_type & __a)  
[inline, explicit]`

Creates a vector with no elements.

### Parameters:

*a* An [allocator](#) object.

Definition at line 215 of file stl\_vector.h.

**5.728.2.3** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
std::vector<_Tp, _Alloc>::vector (size_type __n, const value_type  
& __value = value_type (), const allocator_type & __a =  
allocator_type ()) [inline, explicit]`

Creates a vector with copies of an exemplar element.

### Parameters:

*n* The number of elements to initially create.

*value* An element to copy.

*a* An [allocator](#).

This constructor fills the vector with *n* copies of *value*.

Definition at line 227 of file stl\_vector.h.

**5.728.2.4** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
std::vector<_Tp, _Alloc>::vector (const vector<_Tp, _Alloc> &  
__x) [inline]`

Vector copy constructor.

### Parameters:

*x* A vector of identical element and [allocator](#) types.

The newly-created vector uses a copy of the allocation object used by *x*. All the elements of *x* are copied, but any extra memory in *x* (for fast expansion) will not be copied.

Definition at line 241 of file `stl_vector.h`.

```
5.728.2.5 template<typename Tp, typename Alloc = std::allocator<Tp>>
std::vector< Tp, Alloc >::vector (vector< Tp, Alloc > && x)
[inline]
```

Vector move constructor.

**Parameters:**

*x* A vector of identical element and `allocator` types.

The newly-created vector contains the exact contents of *x*. The contents of *x* are a valid, but unspecified vector.

Definition at line 257 of file `stl_vector.h`.

```
5.728.2.6 template<typename Tp, typename Alloc = std::allocator<Tp>>
std::vector< Tp, Alloc >::vector (initializer_list< value_type > l,
const allocator_type & a = allocator_type ()) [inline]
```

Builds a vector from an initializer `list`.

**Parameters:**

*l* An `initializer_list`.

*a* An `allocator`.

Create a vector consisting of copies of the elements in the `initializer_list` *l*.

This will call the element type's copy constructor *N* times (where *N* is *l.size()*) and do no memory reallocation.

Definition at line 271 of file `stl_vector.h`.

```
5.728.2.7 template<typename Tp, typename Alloc = std::allocator<Tp>>
template<typename InputIterator > std::vector< Tp, Alloc
>::vector (InputIterator first, InputIterator last, const
allocator_type & a = allocator_type ()) [inline]
```

Builds a vector from a range.

**Parameters:**

*first* An input [iterator](#).

*last* An input [iterator](#).

*a* An [allocator](#).

Create a vector consisting of copies of the elements from [first,last).

If the iterators are forward, bidirectional, or random-access, then this will call the elements' copy constructor  $N$  times (where  $N$  is `distance(first,last)`) and do no memory reallocation. But if only input iterators are used, then this will do at most  $2N$  calls to the copy constructor, and  $\log N$  memory reallocations.

Definition at line 297 of file `stl_vector.h`.

**5.728.2.8** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
std::vector<_Tp, _Alloc >::~~vector() [inline]`

The dtor only erases the elements, and note that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 312 of file `stl_vector.h`.

### 5.728.3 Member Function Documentation

**5.728.3.1** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
template<typename _ForwardIterator > pointer std::vector<_Tp,  
_Alloc >::_M_allocate_and_copy (size_type __n, _ForwardIterator  
__first, _ForwardIterator __last) [inline, protected]`

Memory expansion handler. Uses the member allocation function to obtain  $n$  bytes of memory, and then copies [first,last) into it.

Definition at line 964 of file `stl_vector.h`.

Referenced by `std::vector<_Tp, _Alloc >::operator=()`.

**5.728.3.2** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
void std::vector<_Tp, _Alloc >::_M_range_check (size_type __n)  
const [inline, protected]`

Safety check used only from `at()`.

Definition at line 639 of file `stl_vector.h`.

```
5.728.3.3 template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
void std::vector<_Tp, _Alloc >::assign (initializer_list< value_type
> __l) [inline]
```

Assigns an initializer [list](#) to a vector.

**Parameters:**

*l* An [initializer\\_list](#).

This function fills a vector with copies of the elements in the initializer [list](#) *l*.

Note that the assignment completely changes the vector and that the resulting vector's size is the same as the number of elements assigned. Old data may be lost.

Definition at line 412 of file `stl_vector.h`.

Referenced by `std::vector< result_type >::assign()`.

```
5.728.3.4 template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
template<typename _InputIterator > void std::vector<_Tp, _Alloc
>::assign (_InputIterator __first, _InputIterator __last) [inline]
```

Assigns a range to a vector.

**Parameters:**

*first* An input [iterator](#).

*last* An input [iterator](#).

This function fills a vector with copies of the elements in the range `[first,last)`.

Note that the assignment completely changes the vector and that the resulting vector's size is the same as the number of elements assigned. Old data may be lost.

Definition at line 392 of file `stl_vector.h`.

```
5.728.3.5 template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
void std::vector<_Tp, _Alloc >::assign (size_type __n, const
value_type & __val) [inline]
```

Assigns a given value to a vector.

**Parameters:**

*n* Number of elements to be assigned.

*val* Value to be assigned.

This function fills a vector with  $n$  copies of the given value. Note that the assignment completely changes the vector and that the resulting vector's size is the same as the number of elements assigned. Old data may be lost.

Definition at line 375 of file `stl_vector.h`.

```
5.728.3.6 template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
 const_reference std::vector<_Tp, _Alloc>::at (size_type __n) const
 [inline]
```

Provides access to the data contained in the vector.

**Parameters:**

$n$  The index of the element for which data should be accessed.

**Returns:**

Read-only (constant) reference to data.

**Exceptions:**

[\*`std::out\_of\_range`\*](#) If  $n$  is an invalid index.

This function provides for safer data access. The parameter is first checked that it is in the range of the [vector](#). The function throws [out\\_of\\_range](#) if the check fails.

Definition at line 676 of file `stl_vector.h`.

```
5.728.3.7 template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
 reference std::vector<_Tp, _Alloc>::at (size_type __n) [inline]
```

Provides access to the data contained in the vector.

**Parameters:**

$n$  The index of the element for which data should be accessed.

**Returns:**

Read/write reference to data.

**Exceptions:**

[\*`std::out\_of\_range`\*](#) If  $n$  is an invalid index.

This function provides for safer data access. The parameter is first checked that it is in the range of the [vector](#). The function throws [out\\_of\\_range](#) if the check fails.

Definition at line 658 of file `stl_vector.h`.

**5.728.3.8** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
const_reference std::vector<_Tp, _Alloc >::back () const  
[inline]`

Returns a read-only (constant) reference to the data at the last element of the vector.

Definition at line 711 of file `stl_vector.h`.

**5.728.3.9** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
reference std::vector<_Tp, _Alloc >::back () [inline]`

Returns a read/write reference to the data at the last element of the vector.

Definition at line 703 of file `stl_vector.h`.

Referenced by `std::piecewise_linear_distribution<_RealType >::max()`, and `std::piecewise_constant_distribution<_RealType >::max()`.

**5.728.3.10** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
const_iterator std::vector<_Tp, _Alloc >::begin () const  
[inline]`

Returns a read-only (constant) [iterator](#) that points to the first element in the vector. Iteration is done in ordinary element order.

Reimplemented in `std::match_results<_Bi_iter, _Allocator >`, and `std::match_results<_Bi_iter >`.

Definition at line 435 of file `stl_vector.h`.

**5.728.3.11** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
iterator std::vector<_Tp, _Alloc >::begin () [inline]`

Returns a read/write [iterator](#) that points to the first element in the vector. Iteration is done in ordinary element order.

Definition at line 426 of file `stl_vector.h`.

Referenced by `std::vector<_Tp, _Alloc >::emplace()`, `std::vector<_Tp, _Alloc >::insert()`, `__gnu_parallel::multiseq_partition()`, `__gnu_parallel::multiseq_selection()`, `__gnu_parallel::multiway_merge_exact_splitting()`, `std::vector<_Tp, _Alloc >::operator=()`, `std::operator==()`, and `std::vector<result_type >::vector()`.

**5.728.3.12** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
size_type std::vector<_Tp, _Alloc>::capacity() const [inline]`

Returns the total number of elements that the vector can hold before needing to allocate more memory.

Definition at line 573 of file `stl_vector.h`.

Referenced by `std::vector<_Tp, _Alloc>::operator=()`.

**5.728.3.13** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
const_iterator std::vector<_Tp, _Alloc>::cbegin() const  
[inline]`

Returns a read-only (constant) [iterator](#) that points to the first element in the vector. Iteration is done in ordinary element order.

Reimplemented in [std::match\\_results<\\_Bi\\_iter, \\_Allocator>](#), and [std::match\\_results<\\_Bi\\_iter>](#).

Definition at line 499 of file `stl_vector.h`.

**5.728.3.14** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
const_iterator std::vector<_Tp, _Alloc>::cend() const  
[inline]`

Returns a read-only (constant) [iterator](#) that points one past the last element in the vector. Iteration is done in ordinary element order.

Reimplemented in [std::match\\_results<\\_Bi\\_iter, \\_Allocator>](#), and [std::match\\_results<\\_Bi\\_iter>](#).

Definition at line 508 of file `stl_vector.h`.

**5.728.3.15** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
void std::vector<_Tp, _Alloc>::clear() [inline]`

Erases all the elements. Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 954 of file `stl_vector.h`.

**5.728.3.16** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
const_reverse_iterator std::vector<_Tp, _Alloc>::crbegin() const  
[inline]`

Returns a read-only (constant) reverse [iterator](#) that points to the last element in the vector. Iteration is done in reverse element order.

Definition at line 517 of file `stl_vector.h`.

**5.728.3.17** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
const_reverse_iterator std::vector<_Tp, _Alloc>::crend() const  
[inline]`

Returns a read-only (constant) reverse [iterator](#) that points to one before the first element in the vector. Iteration is done in reverse element order.

Definition at line 526 of file `stl_vector.h`.

**5.728.3.18** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
pointer std::vector<_Tp, _Alloc>::data() [inline]`

Returns a pointer such that `[data(), data() + size())` is a valid range. For a non-empty vector, `data() == &front()`.

Definition at line 722 of file `stl_vector.h`.

**5.728.3.19** `template<typename _Tp, typename _Alloc> template<typename...  
_Args> vector<_Tp, _Alloc>::iterator vector::emplace(iterator  
_position, _Args&&... _args) [inline]`

Inserts an object in vector before specified [iterator](#).

**Parameters:**

*position* An [iterator](#) into the vector.

*args* Arguments.

**Returns:**

An [iterator](#) that points to the inserted data.

This function will insert an object of type `T` constructed with `T(std::forward<Args>(args)...) before the specified location. Note that this kind of operation could be expensive for a vector and if it is frequently used the user should consider using std::list.`

Definition at line 272 of file `vector.tcc`.

References `std::vector<_Tp, _Alloc >::begin()`, and `std::vector<_Tp, _Alloc >::end()`.

**5.728.3.20** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
bool std::vector<_Tp, _Alloc >::empty () const [inline]`

Returns true if the vector is empty. (Thus `begin()` would equal `end()`.)

Reimplemented in `std::match_results<_Bi_iter, _Allocator >`, and `std::match_results<_Bi_iter >`.

Definition at line 582 of file `stl_vector.h`.

**5.728.3.21** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
const_iterator std::vector<_Tp, _Alloc >::end () const [inline]`

Returns a read-only (constant) `iterator` that points one past the last element in the vector. Iteration is done in ordinary element order.

Reimplemented in `std::match_results<_Bi_iter, _Allocator >`, and `std::match_results<_Bi_iter >`.

Definition at line 453 of file `stl_vector.h`.

**5.728.3.22** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
iterator std::vector<_Tp, _Alloc >::end () [inline]`

Returns a read/write `iterator` that points one past the last element in the vector. Iteration is done in ordinary element order.

Definition at line 444 of file `stl_vector.h`.

Referenced by `std::vector<_Tp, _Alloc >::emplace()`, `std::vector<_Tp, _Alloc >::erase()`, `std::vector<_Tp, _Alloc >::insert()`, `__gnu_parallel::multiseq_partition()`, `__gnu_parallel::multiseq_selection()`, `__gnu_parallel::multiway_merge_exact_splitting()`, `std::vector<_Tp, _Alloc >::operator=()`, `std::operator==()`, and `std::vector<result_type >::vector()`.

**5.728.3.23** `template<typename _Tp, typename _Alloc > vector<_Tp,  
_Alloc >::iterator vector::erase (iterator __first, iterator __last)  
[inline]`

Remove a range of elements.

**Parameters:**

*first* Iterator pointing to the first element to be erased.

*last* Iterator pointing to one past the last element to be erased.

**Returns:**

An [iterator](#) pointing to the element pointed to by *last* prior to erasing (or [end\(\)](#)).

This function will erase the elements in the range [first,last) and shorten the vector accordingly.

Note This operation could be expensive and if it is frequently used the user should consider using [std::list](#). The user is also cautioned that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 146 of file vector.tcc.

References [std::vector<\\_Tp, \\_Alloc >::end\(\)](#).

**5.728.3.24** `template<typename _Tp, typename _Alloc > vector<_Tp, _Alloc >::iterator vector::erase (iterator __position) [inline]`

Remove element at given position.

**Parameters:**

*position* Iterator pointing to element to be erased.

**Returns:**

An [iterator](#) pointing to the next element (or [end\(\)](#)).

This function will erase the element at the given position and thus shorten the vector by one.

Note This operation could be expensive and if it is frequently used the user should consider using [std::list](#). The user is also cautioned that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 134 of file vector.tcc.

References [std::vector<\\_Tp, \\_Alloc >::end\(\)](#).

**5.728.3.25** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> const_reference std::vector<_Tp, _Alloc >::front () const [inline]`

Returns a read-only (constant) reference to the data at the first element of the vector.

Definition at line 695 of file stl\_vector.h.

**5.728.3.26** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
reference std::vector< _Tp, _Alloc >::front () [inline]`

Returns a read/write reference to the data at the first element of the vector.

Definition at line 687 of file stl\_vector.h.

Referenced by `std::piecewise_linear_distribution< _RealType >::min()`, and `std::piecewise_constant_distribution< _RealType >::min()`.

**5.728.3.27** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
template<typename _InputIterator > void std::vector< _Tp, _Alloc  
>::insert (iterator __position, _InputIterator __first, _InputIterator  
__last) [inline]`

Inserts a range into the vector.

**Parameters:**

*position* An [iterator](#) into the vector.

*first* An input [iterator](#).

*last* An input [iterator](#).

This function will insert copies of the data in the range [first,last) into the vector before the location specified by *pos*.

Note that this kind of operation could be expensive for a vector and if it is frequently used the user should consider using [std::list](#).

Definition at line 877 of file stl\_vector.h.

**5.728.3.28** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
void std::vector< _Tp, _Alloc >::insert (iterator __position,  
size_type __n, const value_type & __x) [inline]`

Inserts a number of copies of given data into the vector.

**Parameters:**

*position* An [iterator](#) into the vector.

*n* Number of elements to be inserted.

*x* Data to be inserted.

This function will insert a specified number of copies of the given data before the location specified by *position*.

Note that this kind of operation could be expensive for a vector and if it is frequently used the user should consider using [std::list](#).

Definition at line 858 of file `stl_vector.h`.

```
5.728.3.29 template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
void std::vector<_Tp, _Alloc >::insert (iterator __position,
initializer_list< value_type > __l) [inline]
```

Inserts an [initializer\\_list](#) into the vector.

**Parameters:**

*position* An [iterator](#) into the vector.

*l* An [initializer\\_list](#).

This function will insert copies of the data in the [initializer\\_list](#) *l* into the vector before the location specified by *position*.

Note that this kind of operation could be expensive for a vector and if it is frequently used the user should consider using [std::list](#).

Definition at line 840 of file `stl_vector.h`.

Referenced by `std::vector< result_type >::insert()`.

```
5.728.3.30 template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
iterator std::vector<_Tp, _Alloc >::insert (iterator __position,
value_type && __x) [inline]
```

Inserts given rvalue into vector before specified [iterator](#).

**Parameters:**

*position* An [iterator](#) into the vector.

*x* Data to be inserted.

**Returns:**

An [iterator](#) that points to the inserted data.

This function will insert a copy of the given rvalue before the specified location. Note that this kind of operation could be expensive for a vector and if it is frequently used the user should consider using [std::list](#).

Definition at line 823 of file `stl_vector.h`.

**5.728.3.31** `template<typename _Tp, typename _Alloc > vector< _Tp, _Alloc >::iterator vector::insert (iterator __position, const value_type & __x) [inline]`

Inserts given value into vector before specified [iterator](#).

**Parameters:**

*position* An [iterator](#) into the vector.

*x* Data to be inserted.

**Returns:**

An [iterator](#) that points to the inserted data.

This function will insert a copy of the given value before the specified location. Note that this kind of operation could be expensive for a vector and if it is frequently used the user should consider using [std::list](#).

Definition at line 107 of file vector.tcc.

References [std::vector< \\_Tp, \\_Alloc >::begin\(\)](#), and [std::vector< \\_Tp, \\_Alloc >::end\(\)](#).

**5.728.3.32** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> size_type std::vector< _Tp, _Alloc >::max_size () const [inline]`

Returns the [size\(\)](#) of the largest possible vector.

Definition at line 538 of file stl\_vector.h.

**5.728.3.33** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> vector& std::vector< _Tp, _Alloc >::operator= (initializer_list< value_type > l) [inline]`

Vector [list](#) assignment operator.

**Parameters:**

*l* An [initializer\\_list](#).

This function fills a vector with copies of the elements in the initializer [list l](#).

Note that the assignment completely changes the vector and that the resulting vector's size is the same as the number of elements assigned. Old data may be lost.

Definition at line 357 of file stl\_vector.h.

**5.728.3.34** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
vector& std::vector<_Tp, _Alloc >::operator= (vector<_Tp,  
_Alloc > && _x) [inline]`

Vector move assignment operator.

**Parameters:**

*x* A vector of identical element and [allocator](#) types.

The contents of *x* are moved into this vector (without copying). *x* is a valid, but unspecified vector.

Definition at line 336 of file `stl_vector.h`.

**5.728.3.35** `template<typename _Tp, typename _Alloc > vector<_Tp, _Alloc  
> & vector::operator= (const vector<_Tp, _Alloc > & _x)  
[inline]`

Vector assignment operator.

**Parameters:**

*x* A vector of identical element and [allocator](#) types.

All the elements of *x* are copied, but any extra memory in *x* (for fast expansion) will not be copied. Unlike the copy constructor, the [allocator](#) object is not copied.

Definition at line 157 of file `vector.tcc`.

References `std::_Destroy()`, `std::vector<_Tp, _Alloc >::_M_allocate_and_copy()`, `std::vector<_Tp, _Alloc >::begin()`, `std::vector<_Tp, _Alloc >::capacity()`, `std::vector<_Tp, _Alloc >::end()`, and `std::vector<_Tp, _Alloc >::size()`.

**5.728.3.36** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
const_reference std::vector<_Tp, _Alloc >::operator[] (size_type  
__n) const [inline]`

Subscript access to the data contained in the vector.

**Parameters:**

*n* The index of the element for which data should be accessed.

**Returns:**

Read-only (constant) reference to data.

This operator allows for easy, array-style, data access. Note that data access with this operator is unchecked and [out\\_of\\_range](#) lookups are not defined. (For checked lookups see [at\(\)](#).)

Reimplemented in [std::match\\_results<\\_Bi\\_iter>](#).

Definition at line 633 of file `stl_vector.h`.

**5.728.3.37** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
reference std::vector<_Tp, _Alloc>::operator[] (size_type __n)  
[inline]`

Subscript access to the data contained in the vector.

**Parameters:**

*n* The index of the element for which data should be accessed.

**Returns:**

Read/write reference to data.

This operator allows for easy, array-style, data access. Note that data access with this operator is unchecked and [out\\_of\\_range](#) lookups are not defined. (For checked lookups see [at\(\)](#).)

Definition at line 618 of file `stl_vector.h`.

**5.728.3.38** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
void std::vector<_Tp, _Alloc>::pop_back () [inline]`

Removes last element. This is a typical [stack](#) operation. It shrinks the vector by one.

Note that no data is returned, and if the last element's data is needed, it should be retrieved before [pop\\_back\(\)](#) is called.

Definition at line 772 of file `stl_vector.h`.

**5.728.3.39** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
void std::vector<_Tp, _Alloc>::push_back (const value_type &  
__x) [inline]`

Add data to the end of the vector.

**Parameters:**

*x* Data to be added.

This is a typical [stack](#) operation. The function creates an element at the end of the vector and assigns the given data to it. Due to the nature of a vector this operation can be done in constant time if the vector has preallocated space available.

Definition at line 741 of file `stl_vector.h`.

Referenced by `__gnu_parallel::multiseq_partition()`, and `__gnu_parallel::multiseq_selection()`.

**5.728.3.40** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
const_reverse_iterator std::vector<_Tp, _Alloc>::rbegin() const  
[inline]`

Returns a read-only (constant) reverse [iterator](#) that points to the last element in the vector. Iteration is done in reverse element order.

Definition at line 471 of file `stl_vector.h`.

**5.728.3.41** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
reverse_iterator std::vector<_Tp, _Alloc>::rbegin() [inline]`

Returns a read/write reverse [iterator](#) that points to the last element in the vector. Iteration is done in reverse element order.

Definition at line 462 of file `stl_vector.h`.

**5.728.3.42** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
const_reverse_iterator std::vector<_Tp, _Alloc>::rend() const  
[inline]`

Returns a read-only (constant) reverse [iterator](#) that points to one before the first element in the vector. Iteration is done in reverse element order.

Definition at line 489 of file `stl_vector.h`.

**5.728.3.43** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
reverse_iterator std::vector<_Tp, _Alloc>::rend() [inline]`

Returns a read/write reverse [iterator](#) that points to one before the first element in the vector. Iteration is done in reverse element order.

Definition at line 480 of file `stl_vector.h`.

**5.728.3.44** `template<typename _Tp, typename _Alloc> void vector::reserve`  
`(size_type __n) [inline]`

Attempt to preallocate enough memory for specified number of elements.

**Parameters:**

*n* Number of elements required.

**Exceptions:**

*std::length\_error* If *n* exceeds `max_size()`.

This function attempts to reserve enough memory for the vector to hold the specified number of elements. If the number requested is more than `max_size()`, `length_error` is thrown.

The advantage of this function is that if optimal code is a necessity and the user can determine the number of elements that will be required, the user can reserve the memory in advance, and thus prevent a possible reallocation of memory and copying of vector data.

Definition at line 65 of file `vector.tcc`.

References `std::_Destroy()`.

**5.728.3.45** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>`  
`void std::vector<_Tp, _Alloc>::resize (size_type __new_size,`  
`value_type __x = value_type()) [inline]`

Resizes the vector to the specified number of elements.

**Parameters:**

*new\_size* Number of elements the vector should contain.

*x* Data with which new elements should be populated.

This function will resize the vector to the specified number of elements. If the number is smaller than the vector's current size the vector is truncated, otherwise the vector is extended and new elements are populated with given data.

Definition at line 553 of file `stl_vector.h`.

Referenced by `__gnu_parallel::_shrink_and_double()`, `__gnu_parallel::multiway_merge_exact_splitting()`, and `__gnu_parallel::parallel_sort_mwms()`.

**5.728.3.46** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
void std::vector<_Tp, _Alloc>::shrink_to_fit() [inline]`

A non-binding request to reduce `capacity()` to `size()`.

Definition at line 564 of file `stl_vector.h`.

**5.728.3.47** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
size_type std::vector<_Tp, _Alloc>::size() const [inline]`

Returns the number of elements in the vector.

Reimplemented in `std::match_results<_Bi_iter, _Allocator>`, and `std::match_results<_Bi_iter>`.

Definition at line 533 of file `stl_vector.h`.

Referenced by `__gnu_parallel::__shrink()`, `__gnu_parallel::__shrink_and_double()`, `__gnu_parallel::list_partition()`, `std::discrete_distribution<_IntType>::max()`, `std::vector<_Tp, _Alloc>::operator=()`, and `std::operator==(())`.

**5.728.3.48** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
void std::vector<_Tp, _Alloc>::swap(vector<_Tp, _Alloc> &  
_x) [inline]`

Swaps data with another vector.

#### Parameters:

*x* A vector of the same element and `allocator` types.

This exchanges the elements between two vectors in constant time. (Three pointers, so it should be quite fast.) Note that the global `std::swap()` function is specialized such that `std::swap(v1,v2)` will feed to this function.

Definition at line 934 of file `stl_vector.h`.

Referenced by `std::swap()`.

The documentation for this class was generated from the following files:

- [stl\\_vector.h](#)
- [vector.tcc](#)

## 5.729 `std::vector< bool, _Alloc >` Class Template Reference

A specialization of `vector` for booleans which offers fixed time access to individual elements in any order.

Inherits `std::_Bvector_base< _Alloc >`.

### 5.729.1 Detailed Description

**template<typename \_Alloc> class `std::vector`< `bool`, `_Alloc` >**

A specialization of [vector](#) for booleans which offers fixed time access to individual elements in any order. Note that `vector<bool>` does not actually meet the requirements for being a container. This is because the reference and pointer types are not really references and pointers to `bool`. See DR96 for details.

#### See also:

[vector](#) for function documentation.

In some terminology a vector can be described as a dynamic C-style [array](#), it offers fast and efficient access to individual elements in any order and saves the user from worrying about memory and size allocation. Subscripting ( `[]` ) access is also provided as with C-style arrays.

Definition at line 474 of file `stl_bvector.h`.

The documentation for this class was generated from the following files:

- [stl\\_bvector.h](#)
- [vector.tcc](#)

## 5.730 `std::weak_ptr<_Tp>` Class Template Reference

A smart pointer with weak semantics.

Inherits `__weak_ptr<_Tp>`.

### Public Member Functions

- `template<typename _Tp1 > weak_ptr (const shared\_ptr<_Tp1 > &__r)`
- `template<typename _Tp1 > weak_ptr (const weak\_ptr<_Tp1 > &__r)`

### 5.731.1 Detailed Description

`template<typename _RealType = double> class std::weibull_distribution<_RealType>`

A `weibull_distribution` random number distribution. The formula for the normal probability density function is:

$$p(x|\alpha, \beta) = \frac{\alpha}{\beta} \left(\frac{x}{\beta}\right)^{\alpha-1} \exp\left(-\left(\frac{x}{\beta}\right)^\alpha\right)$$

Definition at line 3796 of file `random.h`.

## 5.731.2 Member Typedef Documentation

### 5.731.2.1 `template<typename _RealType = double> typedef _RealType std::weibull_distribution< _RealType >::result_type`

The type of the range of the distribution.

Definition at line 3803 of file random.h.

## 5.731.3 Member Function Documentation

### 5.731.3.1 `template<typename _RealType = double> _RealType std::weibull_distribution< _RealType >::a () const [inline]`

Return the  $a$  parameter of the distribution.

Definition at line 3850 of file random.h.

### 5.731.3.2 `template<typename _RealType = double> _RealType std::weibull_distribution< _RealType >::b () const [inline]`

Return the  $b$  parameter of the distribution.

Definition at line 3857 of file random.h.

### 5.731.3.3 `template<typename _RealType = double> result_type std::weibull_distribution< _RealType >::max () const [inline]`

Returns the least upper bound value of the distribution.

Definition at line 3886 of file random.h.

### 5.731.3.4 `template<typename _RealType = double> result_type std::weibull_distribution< _RealType >::min () const [inline]`

Returns the greatest lower bound value of the distribution.

Definition at line 3879 of file random.h.

### 5.731.3.5 `template<typename _RealType = double> void std::weibull_distribution< _RealType >::param (const param_type & __param) [inline]`

Sets the parameter `set` of the distribution.

## 5.731 std::weibull\_distribution<\_RealType> Class Template Reference 3397

### Parameters:

*\_\_param* The new parameter [set](#) of the distribution.

Definition at line 3872 of file random.h.

**5.731.3.6** `template<typename _RealType = double> param_type  
std::weibull_distribution<_RealType>::param() const [inline]`

Returns the parameter [set](#) of the distribution.

Definition at line 3864 of file random.h.

Referenced by `std::operator>>()`.

**5.731.3.7** `template<typename _RealType = double> void  
std::weibull_distribution<_RealType>::reset() [inline]`

Resets the distribution state.

Definition at line 3843 of file random.h.

The documentation for this class was generated from the following files:

- [random.h](#)
- [random.tcc](#)

## 5.732 `std::weibull_distribution<_RealType>::param_type` Struct Reference

### Public Types

- typedef `weibull_distribution<_RealType>` `distribution_type`

### Public Member Functions

- `param_type` (`_RealType __a=_RealType(1), _RealType __b=_RealType(1)`)
- `_RealType a` () const
- `_RealType b` () const

### 5.732.1 Detailed Description

`template<typename _RealType = double> struct std::weibull_distribution<_RealType>::param_type`

Parameter type.

Definition at line 3805 of file `random.h`.

The documentation for this struct was generated from the following file:

- [random.h](#)

# Chapter 6

## File Documentation

### 6.1 algo.h File Reference

Parallel STL function calls corresponding to the [stl\\_algo.h](#) header.

#### Classes

- struct [std::\\_\\_parallel::\\_CRandNumber<\\_MustBeInt >](#)  
*Functor wrapper for std::rand().*

### 6.1.1 Detailed Description

Parallel STL function calls corresponding to the [stl\\_algo.h](#) header. The functions defined here mainly do case switches and call the actual parallelized versions in other files. Inlining policy: Functions that basically only contain one function call, are declared inline. This file is a GNU parallel extension to the Standard C++ Library.

Definition in file [algo.h](#).

## 6.2 `algbase.h` File Reference

Parallel STL function calls corresponding to the [stl\\_algbase.h](#) header. The functions defined here mainly do case switches and call the actual parallelized versions in other files. Inlining policy: Functions that basically only contain one function call, are declared inline. This file is a GNU parallel extension to the Standard C++ Library.

### 6.7.1 Detailed Description

This file is a GNU parallel extension to the Standard C++ Library.

Definition in file [parallel/algorithmfwd.h](#).

## 6.8 allocator.h File Reference

### Classes

- class `std::allocator<_Tp>`  
*The standard allocator, as per [20.4].*  
Further details: <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt04ch11.html>.
- class `std::allocator<void>`  
*allocator<void> specialization.*

### Namespaces

- namespace `std`

### Defines

- `#define _ALLOCATOR_H`

### Functions

- `template<typename _Tp>`  
`bool std::operator!=(const allocator<_Tp> &, const allocator<_Tp> &)`
- `template<typename _T1, typename _T2>`  
`bool std::operator!=(const allocator<_T1> &, const allocator<_T2> &)`
- `template<typename _Tp>`  
`bool std::operator==(const allocator<_Tp> &, const allocator<_Tp> &)`
- `template<typename _T1, typename _T2>`  
`bool std::operator==(const allocator<_T1> &, const allocator<_T2> &)`

#### 6.8.1 Detailed Description

This is an internal header file, included by other library headers. You should not attempt to use it directly.

Definition in file [allocator.h](#).

## 6.9 array File Reference

### Defines

- `#define _GLIBCXX_ARRAY`

### 6.9.1 Detailed Description

This is a Standard C++ Library header.

Definition in file [array](#).

## 6.10 array File Reference

### Classes

- struct `std::array<_Tp, _Nm >`  
*A standard container for storing a fixed size sequence of elements.*

### Namespaces

- namespace `std`

### Functions

- `template<std::size_t _Int, typename _Tp, std::size_t _Nm>`  
`const _Tp & std::get (const array< _Tp, _Nm > &__arr)`
- `template<std::size_t _Int, typename _Tp, std::size_t _Nm>`  
`_Tp & std::get (array< _Tp, _Nm > &__arr)`
- `template<typename _Tp, std::size_t _Nm>`  
`bool std::operator!= (const array< _Tp, _Nm > &__one, const array< _Tp, _Nm > &__two)`
- `template<typename _Tp, std::size_t _Nm>`  
`bool std::operator< (const array< _Tp, _Nm > &__a, const array< _Tp, _Nm > &__b)`
- `template<typename _Tp, std::size_t _Nm>`  
`bool std::operator<= (const array< _Tp, _Nm > &__one, const array< _Tp, _Nm > &__two)`
- `template<typename _Tp, std::size_t _Nm>`  
`bool std::operator== (const array< _Tp, _Nm > &__one, const array< _Tp, _Nm > &__two)`
- `template<typename _Tp, std::size_t _Nm>`  
`bool std::operator> (const array< _Tp, _Nm > &__one, const array< _Tp, _Nm > &__two)`
- `template<typename _Tp, std::size_t _Nm>`  
`bool std::operator>= (const array< _Tp, _Nm > &__one, const array< _Tp, _Nm > &__two)`
- `template<typename _Tp, std::size_t _Nm>`  
`void std::swap (array< _Tp, _Nm > &__one, array< _Tp, _Nm > &__two)`

#### 6.10.1 Detailed Description

This is an internal header file, included by other library headers. You should not attempt to use it directly.

Definition in file [tr1\\_impl/array](#).

## 6.11 array\_allocator.h File Reference

### Classes

- class [\\_\\_gnu\\_cxx::array\\_allocator< \\_Tp, \\_Array >](#)  
*An allocator that uses previously allocated memory. This memory can be externally, globally, or otherwise allocated.*
- class [\\_\\_gnu\\_cxx::array\\_allocator\\_base< \\_Tp >](#)  
*Base class.*

### Namespaces

- namespace [\\_\\_gnu\\_cxx](#)

### Defines

- `#define \_ARRAY\_ALLOCATOR\_H`

### Functions

- `template<typename _Tp, typename _Array >`  
`bool \_\_gnu\_cxx::operator!= (const array_allocator< _Tp, _Array > &, const array_allocator< _Tp, _Array > &)`
- `template<typename _Tp, typename _Array >`  
`bool \_\_gnu\_cxx::operator== (const array_allocator< _Tp, _Array > &, const array_allocator< _Tp, _Array > &)`

#### 6.11.1 Detailed Description

This file is a GNU extension to the Standard C++ Library.

Definition in file [array\\_allocator.h](#).

## 6.12 assoc\_container.hpp File Reference

### Classes

- class [\\_\\_gnu\\_pbds::basic\\_hash\\_table](#)< Key, Mapped, Hash\_Fn, Eq\_Fn, Resize\_Policy, Store\_Hash, Tag, Policy\_TL, Allocator >  
*An abstract basic hash-based associative container.*

`void __gnu_parallel::__qsb_local_sort_with_helping (_QSBThreadLocal<_-`  
`RAIter > **__tls, _Compare &__comp, _ThreadIndex __iam, bool __wait)`

#### 6.22.1 Detailed Description

Implementation of a dynamically load-balanced parallel quicksort. It works in-place and needs only logarithmic extra memory. The algorithm is similar to the one proposed in

P. Tsigas and Y. Zhang. A simple, fast parallel implementation of quicksort and its performance evaluation on SUN enterprise 10000. In 11th Euromicro Conference on Parallel, Distributed and Network-Based Processing, page 372, 2003.

This file is a GNU parallel extension to the Standard C++ Library.

Definition in file [balanced\\_quicksort.h](#).

## 6.23 base.h File Reference

Sequential helper functions. This file is a GNU parallel extension to the Standard C++ Library.

### Classes

- class `__gnu_parallel::__binder1st< _Operation, _FirstArgumentType, _SecondArgumentType, _ResultType >`  
*Similar to `std::binder1st`, but giving the argument types explicitly.*
- class `__gnu_parallel::__binder2nd< _Operation, _FirstArgumentType, _SecondArgumentType, _ResultType >`  
*Similar to `std::binder2nd`, but giving the argument types explicitly.*
- class `__gnu_parallel::__unary_negate< _Predicate, argument_type >`  
*Similar to `std::unary_negate`, but giving the argument types explicitly.*
- class `__gnu_parallel::_EqualFromLess< _T1, _T2, _Compare >`  
*Constructs predicate for equality from strict weak ordering predicate.*
- struct `__gnu_parallel::_EqualTo< _T1, _T2 >`  
*Similar to `std::equal_to`, but allows two different types.*
- struct `__gnu_parallel::_Less< _T1, _T2 >`  
*Similar to `std::less`, but allows two different types.*
- struct `__gnu_parallel::_Multiplies< _Tp1, _Tp2 >`  
*Similar to `std::multiplies`, but allows two different types.*
- struct `__gnu_parallel::_Plus< _Tp1, _Tp2 >`  
*Similar to `std::plus`, but allows two different types.*
- class `__gnu_parallel::_PseudoSequence< _Tp, _DifferenceTp >`  
*Sequence that conceptually consists of multiple copies of the same element. The copies are not stored explicitly, of course.*
- class `__gnu_parallel::_PseudoSequenceIterator< _Tp, _DifferenceTp >`  
*Iterator associated with `__gnu_parallel::_PseudoSequence`. It features the usual random-access iterator functionality.*
- class `__gnu_parallel::_VoidFunctor< _ValueTp >`  
*Functor that does nothing.*

#### 6.32.1 Detailed Description

This is an internal header file, included by other library headers. You should not attempt to use it directly.

Definition in file [binders.h](#).

## 6.33 bitmap\_allocator.h File Reference

### Classes

- class [\\_\\_gnu\\_cxx::\\_\\_detail::\\_\\_mini\\_vector< \\_Tp >](#)  
*\_\_mini\_vector<> is a stripped down version of the full-fledged std::vector<>.*
- class [\\_\\_gnu\\_cxx::\\_\\_detail::\\_\\_Bitmap\\_counter< \\_Tp >](#)  
*The bitmap counter which acts as the bitmap manipulator, and manages the bit-manipulation functions and the searching and identification functions on the bit-map.*
- class [\\_\\_gnu\\_cxx::\\_\\_detail::\\_\\_Ffit\\_finder< \\_Tp >](#)  
*The class which acts as a predicate for applying the first-fit memory allocation policy for the bitmap allocator.*
- class [\\_\\_gnu\\_cxx::bitmap\\_allocator< \\_Tp >](#)  
*Bitmap Allocator, primary template.*
- class [\\_\\_gnu\\_cxx::free\\_list](#)  
*The free list class for managing chunks of memory to be given to and returned by the bitmap\_allocator.*

### Namespaces

- namespace [\\_\\_gnu\\_cxx](#)
- namespace [\\_\\_gnu\\_cxx::\\_\\_detail](#)

### Defines

- #define [\\_BALLOC\\_ALIGN\\_BYTES](#)
- #define [\\_BITMAP\\_ALLOCATOR\\_H](#)

### Enumerations

- enum { [bits\\_per\\_byte](#), [bits\\_per\\_block](#) }

### Functions

- void [\\_\\_gnu\\_cxx::\\_\\_detail::\\_\\_bit\\_allocate](#) (size\_t \* \_\_pbitmap, size\_t \_\_pos) throw ()

- void [\\_\\_gnu\\_cxx::\\_\\_detail::\\_\\_bit\\_free](#) (size\_t \*\_\_pbmap, size\_t \_\_pos) throw ()
- template<typename \_ForwardIterator, typename \_Tp, typename \_Compare >  
\_ForwardIterator [\\_\\_gnu\\_cxx::\\_\\_detail::\\_\\_lower\\_bound](#) (\_ForwardIterator \_\_first, \_ForwardIterator \_\_last, const \_Tp &\_\_val, \_Compare \_\_comp)
- template<typename \_AddrPair >  
size\_t [\\_\\_gnu\\_cxx::\\_\\_detail::\\_\\_num\\_bitmaps](#) (\_AddrPair \_\_ap)
- template<typename \_AddrPair >  
size\_t [\\_\\_gnu\\_cxx::\\_\\_detail::\\_\\_num\\_blocks](#) (\_AddrPair \_\_ap)
- size\_t [\\_\\_gnu\\_cxx::\\_\\_Bit\\_scan\\_forward](#) (size\_t \_\_num)
- template<typename \_Tp1, typename \_Tp2 >  
bool [\\_\\_gnu\\_cxx::operator!=](#) (const bitmap\_allocator< \_Tp1 > &, const bitmap\_allocator< \_Tp2 > &) throw ()
- template<typename \_Tp1, typename \_Tp2 >  
bool [\\_\\_gnu\\_cxx::operator==](#) (const bitmap\_allocator< \_Tp1 > &, const bitmap\_allocator< \_Tp2 > &) throw ()

### 6.33.1 Detailed Description

This file is a GNU extension to the Standard C++ Library.

Definition in file [bitmap\\_allocator.h](#).

### 6.33.2 Define Documentation

#### 6.33.2.1 #define \_BALLOC\_ALIGN\_BYTES

The constant in the expression below is the alignment required in bytes.

Definition at line 45 of file [bitmap\\_allocator.h](#).

## 6.34 bitset File Reference

### Classes

- struct `std::_Base_bitset<_Nw >`
- struct `std::_Base_bitset< 0 >`
- struct `std::_Base_bitset< 1 >`
- class `std::bitset<_Nb >`

*The bitset class represents a fixed-size sequence of bits.*

- class `std::bitset<_Nb >::reference`
- struct `std::hash< ::bitset<_Nb > >`

*std::hash specialization for bitset.*

### Namespaces

- namespace `std`

### Defines

- `#define _GLIBCXX_BITSET`
- `#define _GLIBCXX_BITSET_BITS_PER_WORD`
- `#define _GLIBCXX_BITSET_WORDS(__n)`

### Functions

- `template<size_t _Nb>`  
`bitset<_Nb > std::operator& (const bitset<_Nb > &__x, const bitset<_Nb > &__y)`
- `template<class _CharT, class _Traits, size_t _Nb>`  
`std::basic_ostream<_CharT, _Traits > & std::operator<< (std::basic_ostream<_CharT, _Traits > &__os, const bitset<_Nb > &__x)`
- `template<class _CharT, class _Traits, size_t _Nb>`  
`std::basic_istream<_CharT, _Traits > & std::operator>> (std::basic_istream<_CharT, _Traits > &__is, bitset<_Nb > &__x)`
- `template<size_t _Nb>`  
`bitset<_Nb > std::operator^ (const bitset<_Nb > &__x, const bitset<_Nb > &__y)`
- `template<size_t _Nb>`  
`bitset<_Nb > std::operator| (const bitset<_Nb > &__x, const bitset<_Nb > &__y)`

### 6.34.1 Detailed Description

This is a Standard C++ Library header.

Definition in file [bitset](#).

## 6.35 bitset File Reference

### Classes

- class `std::__debug::bitset<_Nb>`  
*Class [std::bitset](#) with additional safety/checking/debug instrumentation.*
- struct `std::hash<__debug::bitset<_Nb>>`  
*[std::hash](#) specialization for [bitset](#).*

### Namespaces

- namespace `std`
- namespace `std::__debug`

### Functions

- `template<size_t _Nb>`  
`bitset<_Nb> std::__debug::operator& (const bitset<_Nb> &__x, const bitset<_Nb> &__y)`
- `template<typename _CharT, typename _Traits, size_t _Nb>`  
`std::basic_ostream<_CharT, _Traits> & std::__debug::operator<< (std::basic_ostream<_CharT, _Traits> &__os, const bitset<_Nb> &__x)`
- `template<typename _CharT, typename _Traits, size_t _Nb>`  
`std::basic_istream<_CharT, _Traits> & std::__debug::operator>> (std::basic_istream<_CharT, _Traits> &__is, bitset<_Nb> &__x)`
- `template<size_t _Nb>`  
`bitset<_Nb> std::__debug::operator^ (const bitset<_Nb> &__x, const bitset<_Nb> &__y)`
- `template<size_t _Nb>`  
`bitset<_Nb> std::__debug::operator| (const bitset<_Nb> &__x, const bitset<_Nb> &__y)`

#### 6.35.1 Detailed Description

This file is a GNU debug extension to the Standard C++ Library.

Definition in file [debug/bitset](#).

## 6.36 bitset File Reference

### Classes

- class `std::__profile::bitset<_Nb>`  
*Class `std::bitset` wrapper with performance instrumentation.*
- struct `std::hash<__profile::bitset<_Nb>>`  
*`std::hash` specialization for `bitset`.*

### Namespaces

- namespace `std`
- namespace `std::__profile`

### Functions

- `template<size_t _Nb>`  
`bitset<_Nb> std::__profile::operator& (const bitset<_Nb> &__x, const bitset<_Nb> &__y)`
- `template<typename _CharT, typename _Traits, size_t _Nb>`  
`std::basic_ostream<_CharT, _Traits> & std::__profile::operator<< (std::basic_ostream<_CharT, _Traits> &__os, const bitset<_Nb> &__x)`
- `template<typename _CharT, typename _Traits, size_t _Nb>`  
`std::basic_istream<_CharT, _Traits> & std::__profile::operator>> (std::basic_istream<_CharT, _Traits> &__is, bitset<_Nb> &__x)`
- `template<size_t _Nb>`  
`bitset<_Nb> std::__profile::operator^ (const bitset<_Nb> &__x, const bitset<_Nb> &__y)`
- `template<size_t _Nb>`  
`bitset<_Nb> std::__profile::operator| (const bitset<_Nb> &__x, const bitset<_Nb> &__y)`

#### 6.36.1 Detailed Description

This file is a GNU profile extension to the Standard C++ Library.

Definition in file [profile/bitset](#).

## 6.37 boost\_concept\_check.h File Reference

### Namespaces

- namespace [\\_\\_gnu\\_cxx](#)

### Defines

- #define **\_BOOST\_CONCEPT\_CHECK\_H**
- #define **\_GLIBCXX\_CLASS\_REQUIRES**(\_type\_var, \_ns, \_concept)
- #define **\_GLIBCXX\_CLASS\_REQUIRES2**(\_type\_var1, \_type\_var2, \_ns, \_concept)
- #define **\_GLIBCXX\_CLASS\_REQUIRES3**(\_type\_var1, \_type\_var2, \_type\_var3, \_ns, \_concept)

- #define **\_GLIBCXX\_DEFINE\_BINARY\_PREDICATE\_OPERATOR\_CONSTRAINT**(\_OP, \_NAME)
- #define **\_IsUnused**

### Functions

- template<class \_Tp >  
void **\_\_gnu\_cxx::\_\_aux\_require\_boolean\_expr** (const \_Tp &\_\_t)
- void **\_\_gnu\_cxx::\_\_error\_type\_must\_be\_a\_signed\_integer\_type** ()
- void **\_\_gnu\_cxx::\_\_error\_type\_must\_be\_an\_integer\_type** ()
- void **\_\_gnu\_cxx::\_\_error\_type\_must\_be\_an\_unsigned\_integer\_type** ()
- template<class \_Concept >  
void **\_\_gnu\_cxx::\_\_function\_requires** ()

#### 6.37.1 Detailed Description

This is an internal header file, included by other library headers. You should not attempt to use it directly.

Definition in file [boost\\_concept\\_check.h](#).

## 6.38 boost\_sp\_counted\_base.h File Reference

### Classes

- class [std::bad\\_weak\\_ptr](#)  
*Exception possibly thrown by [shared\\_ptr](#).*

### Namespaces

- namespace [std](#)

### Functions

- void [std::\\_\\_throw\\_bad\\_weak\\_ptr\(\)](#)

#### 6.38.1 Detailed Description

This is an internal header file, included by other library headers. You should not attempt to use it directly.

Definition in file [boost\\_sp\\_counted\\_base.h](#).

## 6.39 `++0x_warning.h` File Reference

### Defines

- `#define _CXX0X_WARNING_H`

### 6.39.1 Detailed Description

This is a Standard C++ Library header.

Definition in file [++0x\\_warning.h](#).

## 6.40 `cplusplus/allocator.h` File Reference

### Defines

- `#define __glibcxx_base_allocator`
- `#define _GLIBCXX_CXX_ALLOCATOR_H`

### 6.40.1 Detailed Description

This is an internal header file, included by other library headers. You should not attempt to use it directly.

Definition in file [cplusplus/allocator.h](#).

## 6.41 c++config.h File Reference

### 6.41.1 Detailed Description

This is an internal header file, included by other library headers. You should not attempt to use it directly.

Definition in file [c++config.h](#).

## 6.42 c++io.h File Reference

### Namespaces

- namespace [std](#)

### Defines

- #define `_GLIBCXX_CXX_IO_H`

### Typedefs

- typedef FILE `std::__c_file`
- typedef `__gthread_mutex_t` `std::__c_lock`

### 6.42.1 Detailed Description

This is an internal header file, included by other library headers. You should not attempt to use it directly.

Definition in file [c++io.h](#).

## 6.43 c++locale.h File Reference

### Namespaces

- namespace [std](#)

### Defines

- #define `_GLIBCXX_C_LOCALE_GNU`
- #define `_GLIBCXX_CXX_LOCALE_H`
- #define `_GLIBCXX_NUM_CATEGORIES`

### Typedefs

- typedef `__locale_t` `std::__c_locale`

### Functions

- int `std::__convert_from_v` (const `__c_locale` &`__cloc` `__attribute__((__unused__))`), char \*`__out`, const int `__size` `__attribute__((__unused__))`), const char \*`__fmt`,...)

#### 6.43.1 Detailed Description

This is an internal header file, included by other library headers. You should not attempt to use it directly.

Definition in file [c++locale.h](#).

## 6.44 `c++locale_internal.h` File Reference

### 6.44.1 Detailed Description

This is an internal header file, included by other library headers. You should not attempt to use it directly.

Definition in file [c++locale\\_internal.h](#).

## 6.45 `cassert` File Reference

### 6.45.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `assert.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace `std` (except for names which are defined as macros in C).

Definition in file [`cassert`](#).

## 6.46 ccomplex File Reference

### Defines

- #define `_GLIBCXX_CCOMPLEX`

### 6.46.1 Detailed Description

This is a Standard C++ Library header.

Definition in file [ccomplex](#).

## 6.47 ccomplex File Reference

### Defines

- #define `_GLIBCXX_TR1_CCOMPLEX`

### 6.47.1 Detailed Description

This is a TR1 C++ Library header.

Definition in file [tr1/ccomplex](#).

## 6.48 cctype File Reference

### Namespaces

- namespace [std](#)

### Defines

- `#define _GLIBCXX_CCTYPE`

#### 6.48.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `cctype.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace [std](#) (except for names which are defined as macros in C).

Definition in file [cctype](#).

## 6.49 ctype File Reference

### Defines

- `#define _GLIBCXX_BEGIN_NAMESPACE_TR1`
- `#define _GLIBCXX_END_NAMESPACE_TR1`
- `#define _GLIBCXX_INCLUDE_AS_TR1`
- `#define _GLIBCXX_TR1`
- `#define _GLIBCXX_TR1_CCTYPE`

### 6.49.1 Detailed Description

This is a TR1 C++ Library header.

Definition in file [tr1/ctype](#).

## 6.50 cctype File Reference

### 6.50.1 Detailed Description

This is an internal header file, included by other library headers. You should not attempt to use it directly.

Definition in file [tr1\\_impl/cctype](#).

## 6.51 `cerrno` File Reference

### Defines

- `#define _GLIBCXX_CERRNO`
- `#define errno`

### 6.51.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `errno.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace `std` (except for names which are defined as macros in C).

Definition in file [`cerrno`](#).

## 6.52 cfenv File Reference

### Defines

- `#define _GLIBCXX_CFENV`

### 6.52.1 Detailed Description

This is a Standard C++ Library header.

Definition in file [cfenv](#).

## 6.53 cfenv File Reference

### Defines

- `#define _GLIBCXX_BEGIN_NAMESPACE_TR1`
- `#define _GLIBCXX_END_NAMESPACE_TR1`
- `#define _GLIBCXX_INCLUDE_AS_TR1`
- `#define _GLIBCXX_TR1`
- `#define _GLIBCXX_TR1_CFENV`

### 6.53.1 Detailed Description

This is a TR1 C++ Library header.

Definition in file [tr1/cfenv](#).

## 6.54 cfenv File Reference

### 6.54.1 Detailed Description

This is an internal header file, included by other library headers. You should not attempt to use it directly.

Definition in file [tr1\\_impl/cfenv](#).

## 6.55 cfloat File Reference

### Defines

- `#define _GLIBCXX_CFLOAT`
- `#define DECIMAL_DIG`
- `#define FLT_EVAL_METHOD`

### 6.55.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `float.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace `std` (except for names which are defined as macros in C).

Definition in file [cfloat](#).

### 6.68.1 Detailed Description

This is a TR1 C++ Library header.

Definition in file [tr1/cmath](#).

## 6.69 cmath File Reference

### Namespaces

- namespace [std](#)

### 6.69.1 Detailed Description

This is an internal header file, included by other library headers. You should not attempt to use it directly.

Definition in file [tr1\\_impl/cmath](#).

## 6.70 `cmath.tcc` File Reference

### Namespaces

- namespace [std](#)

### Defines

- `#define _GLIBCXX_CMATH_TCC`

### Functions

- `template<typename _Tp >`  
`_Tp std::__cmath_power (_Tp, unsigned int)`

#### 6.70.1 Detailed Description

This is a Standard C++ Library file.

Definition in file [`cmath.tcc`](#).

## 6.71 codecvt.h File Reference

### Classes

- class `std::__codecvt_abstract_base< _InternT, _ExternT, _StateT >`  
*Common base for `codecvt` functions.*
- class `std::codecvt< _InternT, _ExternT, _StateT >`  
*Primary class template `codecvt`.  
NB: Generic, mostly useless implementation.*
- class `std::codecvt< char, char, mbstate_t >`  
*class `codecvt<char, char, mbstate_t>` specialization.*
- class `std::codecvt< wchar_t, char, mbstate_t >`  
*class `codecvt<wchar_t, char, mbstate_t>` specialization.*
- class `std::codecvt_base`  
*Empty base class for `codecvt` facet [22.2.1.5].*
- class `std::codecvt_byname< _InternT, _ExternT, _StateT >`  
*class `codecvt_byname` [22.2.1.6].*

### Namespaces

- namespace `std`

### Defines

- `#define _CODECVT_H`

### Functions

- template bool `std::has_facet< codecvt< char, char, mbstate_t > >` (const locale &)
- template bool `std::has_facet< codecvt< wchar_t, char, mbstate_t > >` (const locale &)
- template const `codecvt< char, char, mbstate_t > & std::use_facet< codecvt< char, char, mbstate_t > >` (const locale &)
- template const `codecvt< wchar_t, char, mbstate_t > & std::use_facet< codecvt< wchar_t, char, mbstate_t > >` (const locale &)

**6.71.1 Detailed Description**

This is an internal header file, included by other library headers. You should not attempt to use it directly.

Definition in file [codecvt.h](#).

## 6.72 `codecvt_specializations.h` File Reference

### Classes

- struct `__gnu_cxx::encoding_char_traits<_CharT>`  
*encoding\_char\_traits*
- class `__gnu_cxx::encoding_state`  
*Extension to use iconv for dealing with character encodings.*
- class `std::codecvt<_InternT, _ExternT, encoding_state>`  
*codecvt<InternT, \_ExternT, encoding\_state> specialization.*

### Namespaces

- namespace `__gnu_cxx`
- namespace `std`

### Defines

- `#define _EXT_CODECVT_SPECIALIZATIONS_H`

### Functions

- `template<typename _Tp>`  
`size_t std::__iconv_adaptor (size_t(*__func)(iconv_t, _Tp, size_t *, char **, size_t *), iconv_t __cd, char **__inbuf, size_t *__inbytes, char **__outbuf, size_t *__outbytes)`

#### 6.72.1 Detailed Description

This file is a GNU extension to the Standard C++ Library.

Definition in file [codecvt\\_specializations.h](#).

## 6.73 compatibility.h File Reference

### 6.73.1 Detailed Description

This is an internal header file, included by other library sources. You should not attempt to use it directly.

Definition in file [x86\\_64-unknown-linux-gnu/bits/compatibility.h](#).

## 6.74 compatibility.h File Reference

Compatibility layer, mostly concerned with atomic operations. This file is a GNU parallel extension to the Standard C++ Library.

### Namespaces

- namespace [\\_\\_gnu\\_parallel](#)

### Defines

- #define `_GLIBCXX_PARALLEL_COMPATIBILITY_H`

### Functions

- `template<typename _Tp >`  
`bool __gnu_parallel::__compare_and_swap` (volatile `_Tp *__ptr`, `_Tp __comparand`, `_Tp __replacement`)
- `bool __gnu_parallel::__compare_and_swap_32` (volatile `int32_t *__ptr`, `int32_t __comparand`, `int32_t __replacement`)
- `bool __gnu_parallel::__compare_and_swap_64` (volatile `int64_t *__ptr`, `int64_t __comparand`, `int64_t __replacement`)
- `template<typename _Tp >`  
`_Tp __gnu_parallel::__fetch_and_add` (volatile `_Tp *__ptr`, `_Tp __addend`)
- `int32_t __gnu_parallel::__fetch_and_add_32` (volatile `int32_t *__ptr`, `int32_t __addend`)
- `int64_t __gnu_parallel::__fetch_and_add_64` (volatile `int64_t *__ptr`, `int64_t __addend`)
- `void __gnu_parallel::__yield ()`

#### 6.74.1 Detailed Description

Compatibility layer, mostly concerned with atomic operations. This file is a GNU parallel extension to the Standard C++ Library.

Definition in file [parallel/compatibility.h](#).

## 6.75 compiletime\_settings.h File Reference

Defines on options concerning debugging and performance, at compile-time. This file is a GNU parallel extension to the Standard C++ Library.

### Defines

- `#define _GLIBCXX_ASSERTIONS`
- `#define _GLIBCXX_CALL(__n)`
- `#define _GLIBCXX_RANDOM_SHUFFLE_CONSIDER_L1`
- `#define _GLIBCXX_RANDOM_SHUFFLE_CONSIDER_TLB`
- `#define _GLIBCXX_SCALE_DOWN_FPU`
- `#define _GLIBCXX_VERBOSE_LEVEL`

### 6.75.1 Detailed Description

Defines on options concerning debugging and performance, at compile-time. This file is a GNU parallel extension to the Standard C++ Library.

Definition in file [compiletime\\_settings.h](#).

### 6.75.2 Define Documentation

#### 6.75.2.1 `#define _GLIBCXX_ASSERTIONS`

Switch on many `_GLIBCXX_PARALLEL_ASSERTIONS` in parallel code. Should be switched on only locally.

Definition at line 61 of file `compiletime_settings.h`.

Referenced by `__gnu_parallel::__qsb_local_sort_with_helping()`.

#### 6.75.2.2 `#define _GLIBCXX_CALL(__n)`

Macro to produce log message when entering a function.

#### Parameters:

`__n` Input size.

#### See also:

[\\_GLIBCXX\\_VERBOSE\\_LEVEL](#)

Definition at line 44 of file `completetime_settings.h`.

Referenced by `__gnu_parallel::__find_template()`, `__gnu_parallel::__for_each_template_random_access_workstealing()`, `__gnu_parallel::__merge_advance()`, `__gnu_parallel::__parallel_nth_element()`, `__gnu_parallel::__parallel_partial_sum()`, `__gnu_parallel::__parallel_partition()`, `__gnu_parallel::__parallel_random_shuffle_drs()`, `__gnu_parallel::__parallel_sort()`, `__gnu_parallel::__parallel_sort_qs()`, `__gnu_parallel::__parallel_sort_qsb()`, `__gnu_parallel::__parallel_unique_copy()`, `__gnu_parallel::__search_template()`, `__gnu_parallel::__sequential_multiway_merge()`, `__gnu_parallel::multiseq_partition()`, `__gnu_parallel::multiseq_selection()`, `__gnu_parallel::multiway_merge()`, `__gnu_parallel::multiway_merge_3_variant()`, `__gnu_parallel::multiway_merge_4_variant()`, `__gnu_parallel::multiway_merge_loser_tree()`, `__gnu_parallel::multiway_merge_loser_tree_sentinel()`, `__gnu_parallel::multiway_merge_loser_tree_unguarded()`, `__gnu_parallel::multiway_merge_sentinels()`, `__gnu_parallel::parallel_multiway_merge()`, and `__gnu_parallel::parallel_sort_mwms()`.

### 6.75.2.3 `#define _GLIBCXX_RANDOM_SHUFFLE_CONSIDER_L1`

Switch on many `_GLIBCXX_PARALLEL_ASSERTions` in parallel code. Consider the size of the L1 cache for `gnu_parallel::__parallel_random_shuffle()`.

Definition at line 68 of file `completetime_settings.h`.

### 6.75.2.4 `#define _GLIBCXX_RANDOM_SHUFFLE_CONSIDER_TLB`

Switch on many `_GLIBCXX_PARALLEL_ASSERTions` in parallel code. Consider the size of the TLB for `gnu_parallel::__parallel_random_shuffle()`.

Definition at line 74 of file `completetime_settings.h`.

### 6.75.2.5 `#define _GLIBCXX_SCALE_DOWN_FPU`

Use floating-point scaling instead of modulo for mapping random numbers to a range. This can be faster on certain CPUs.

Definition at line 55 of file `completetime_settings.h`.

### 6.75.2.6 `#define _GLIBCXX_VERBOSE_LEVEL`

Determine verbosity level of the parallel mode. Level 1 prints a message each time a parallel-mode function is entered.

Definition at line 37 of file `completetime_settings.h`.

## 6.76 complex File Reference

- static const `_Lock_policy` `__gnu_cxx::__default_lock_policy`

#### 6.81.1 Detailed Description

This is an internal header file, included by other library headers. You should not attempt to use it directly.

Definition in file [concurrency.h](#).

## 6.82 cond\_dealtor.hpp File Reference

### Namespaces

- namespace [\\_\\_gnu\\_pbds](#)

### Defines

- #define `PB_DS_COND_DEALTOR_CLASS_C_DEC`
- #define `PB_DS_COND_DEALTOR_CLASS_T_DEC`

#### 6.82.1 Detailed Description

Contains a conditional deallocator.

Definition in file [cond\\_dealtor.hpp](#).

## 6.83 `condition_variable` File Reference

### Classes

- class `std::condition_variable`  
*`condition_variable`*
- class `std::condition_variable_any`  
*`condition_variable_any`*

### Namespaces

- namespace `std`

### Defines

- `#define _GLIBCXX_CONDITION_VARIABLE`

### Enumerations

- enum `std::cv_status` { `no_timeout`, `timeout` }

#### 6.83.1 Detailed Description

This is a Standard C++ Library header.

Definition in file `condition_variable`.

## 6.84 constructors\_destructor\_fn\_imps.hpp File Reference

### Functions

- `template<typename T0, typename T1, typename T2, typename T3, typename T4, typename T5, typename T6, typename T7, typename T8 >`  
`PB_DS_CLASS_NAME (T0 t0, T1 t1, T2 t2, T3 t3, T4 t4, T5 t5, T6 t6, T7 t7, T8 t8)`
- `template<typename T0, typename T1, typename T2, typename T3, typename T4, typename T5, typename T6, typename T7 >`  
`PB_DS_CLASS_NAME (T0 t0, T1 t1, T2 t2, T3 t3, T4 t4, T5 t5, T6 t6, T7 t7)`
- `template<typename T0, typename T1, typename T2, typename T3, typename T4, typename T5, typename T6 >`  
`PB_DS_CLASS_NAME (T0 t0, T1 t1, T2 t2, T3 t3, T4 t4, T5 t5, T6 t6)`
- `template<typename T0, typename T1, typename T2, typename T3, typename T4, typename T5 >`  
`PB_DS_CLASS_NAME (T0 t0, T1 t1, T2 t2, T3 t3, T4 t4, T5 t5)`
- `template<typename T0, typename T1, typename T2, typename T3, typename T4 >`  
`PB_DS_CLASS_NAME (T0 t0, T1 t1, T2 t2, T3 t3, T4 t4)`
- `template<typename T0, typename T1, typename T2, typename T3 >`  
`PB_DS_CLASS_NAME (T0 t0, T1 t1, T2 t2, T3 t3)`
- `template<typename T0, typename T1, typename T2 >`  
`PB_DS_CLASS_NAME (T0 t0, T1 t1, T2 t2)`
- `template<typename T0, typename T1 >`  
`PB_DS_CLASS_NAME (T0 t0, T1 t1)`
- `template<typename T0 >`  
`PB_DS_CLASS_NAME (T0 t0)`
- `PB_DS_CLASS_NAME (const PB_DS_CLASS_NAME &other)`
- `PB_DS_CLASS_NAME ()`

#### 6.84.1 Detailed Description

Contains `constructors_destructor_fn_imps` applicable to different containers.

Definition in file [constructors\\_destructor\\_fn\\_imps.hpp](#).

## 6.85 `container_base_dispatch.hpp` File Reference

### Namespaces

- namespace [\\_\\_gnu\\_pbds](#)

### 6.85.1 Detailed Description

Contains an associative container dispatching base.

Definition in file [container\\_base\\_dispatch.hpp](#).

## 6.86 `cpp_type_traits.h` File Reference

### Namespaces

- namespace [\\_\\_gnu\\_cxx](#)
- namespace [std](#)

### Defines

- `#define _CPP_TYPE_TRAITS_H`

#### 6.86.1 Detailed Description

This is an internal header file, included by other library headers. You should not attempt to use it directly.

Definition in file [cpp\\_type\\_traits.h](#).

## 6.87 `cpu_defines.h` File Reference

### Defines

- `#define _GLIBCXX_CPU_DEFINES`

### 6.87.1 Detailed Description

This is an internal header file, included by other library headers. You should not attempt to use it directly.

Definition in file [cpu\\_defines.h](#).

## 6.88 csetjmp File Reference

### Namespaces

- namespace [std](#)

### Defines

- `#define _GLIBCXX_CSETJMP`
- `#define setjmp(env)`

#### 6.88.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `setjmp.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace [std](#) (except for names which are defined as macros in C).

Definition in file [csetjmp](#).

## 6.89 csignal File Reference

### Namespaces

- namespace [std](#)

### Defines

- `#define _GLIBCXX_CSIGNAL`

#### 6.89.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `signal.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace [std](#) (except for names which are defined as macros in C).

Definition in file [csignal](#).

## 6.90 cstdarg File Reference

### Namespaces

- namespace [std](#)

### Defines

- `#define _GLIBCXX_CSTDARG`
- `#define va_end(ap)`

#### 6.90.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `stdarg.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace [std](#) (except for names which are defined as macros in C).

Definition in file [cstdarg](#).

## 6.91 cstdarg File Reference

### Defines

- `#define _GLIBCXX_TR1_CSTDARG`

### 6.91.1 Detailed Description

This is a TR1 C++ Library header.

Definition in file [tr1/cstdarg](#).

## 6.92 cstdlib File Reference

### Defines

- `#define _GLIBCXX_CSTDBOOL`

### 6.92.1 Detailed Description

This is a Standard C++ Library header.

Definition in file [cstdlib](#).

## 6.93 cstdint File Reference

### Defines

- `#define _GLIBCXX_TR1_CSTDBOOL`

### 6.93.1 Detailed Description

This is a TR1 C++ Library header.

Definition in file [tr1/cstdint](#).

## 6.94 cstdint File Reference

### Namespaces

- namespace [std](#)

### Defines

- `#define _GLIBCXX_CSTDDEF`

#### 6.94.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `stdint.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace [std](#) (except for names which are defined as macros in C).

Definition in file [cstdint](#).

## 6.95 cstdint File Reference

### Defines

- `#define _GLIBCXX_CSTDINT`

### 6.95.1 Detailed Description

This is a Standard C++ Library header.

Definition in file [cstdint](#).

## 6.96 cstdint File Reference

### Defines

- `#define _GLIBCXX_BEGIN_NAMESPACE_TR1`
- `#define _GLIBCXX_END_NAMESPACE_TR1`
- `#define _GLIBCXX_INCLUDE_AS_TR1`
- `#define _GLIBCXX_TR1`
- `#define _GLIBCXX_TR1_CSTDINT`

### 6.96.1 Detailed Description

This is a TR1 C++ Library header.

Definition in file [tr1/cstdint](#).

## 6.97 cstdint File Reference

### Namespaces

- namespace [std](#)

### 6.97.1 Detailed Description

This is an internal header file, included by other library headers. You should not attempt to use it directly.

Definition in file [tr1\\_impl/cstdint](#).

## 6.98 cstdio File Reference

### Namespaces

- namespace [std](#)

### Defines

- `#define _GLIBCXX_CSTDIO`

#### 6.98.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `stdio.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace [std](#) (except for names which are defined as macros in C).

Definition in file [csdio](#).

## 6.99 cstdio File Reference

### Defines

- #define `_GLIBCXX_BEGIN_NAMESPACE_TR1`
- #define `_GLIBCXX_END_NAMESPACE_TR1`
- #define `_GLIBCXX_INCLUDE_AS_TR1`
- #define `_GLIBCXX_TR1`
- #define `_GLIBCXX_TR1_CSTDIO`

### 6.99.1 Detailed Description

This is a TR1 C++ Library header.

Definition in file [tr1/cstdio](#).

## 6.100 cstdio File Reference

### Namespaces

- namespace [std](#)

### 6.100.1 Detailed Description

This is an internal header file, included by other library headers. You should not attempt to use it directly.

Definition in file [tr1\\_impl/cstdio](#).

## 6.101 cstdlib File Reference

### Namespaces

- namespace [std](#)

### Defines

- #define `_GLIBCXX_CSTDLIB`
- #define `EXIT_FAILURE`
- #define `EXIT_SUCCESS`

### Functions

- void `std::abort` (void) `_GLIBC_NORETURN` throw ()
- int `std::atexit` (void(\*)()) throw ()
- void `std::exit` (int) `_GLIBC_NORETURN` throw ()

#### 6.101.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `stdlib.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace [std](#) (except for names which are defined as macros in C).

Definition in file [cstdlib](#).

## 6.102 cstdlib File Reference

### Defines

- #define `_GLIBCXX_BEGIN_NAMESPACE_TR1`
- #define `_GLIBCXX_END_NAMESPACE_TR1`
- #define `_GLIBCXX_INCLUDE_AS_TR1`
- #define `_GLIBCXX_TR1`
- #define `_GLIBCXX_TR1_CSTDLIB`

### 6.102.1 Detailed Description

This is a TR1 C++ Library header.

Definition in file [tr1/cstdlib](#).

## 6.103 `cstdlib` File Reference

### 6.103.1 Detailed Description

This is an internal header file, included by other library headers. You should not attempt to use it directly.

Definition in file [tr1\\_impl/cstdlib](#).

## 6.104 cstring File Reference

### Namespaces

- namespace [std](#)

### Defines

- `#define _GLIBCXX_CSTRING`

### Functions

- `void * std::memchr (void *__s, int __c, size_t __n)`
- `char * std::strchr (char *__s, int __n)`
- `char * std::strpbrk (char *__s1, const char *__s2)`
- `char * std::strrchr (char *__s, int __n)`
- `char * std::strstr (char *__s1, const char *__s2)`

#### 6.104.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `string.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace [std](#) (except for names which are defined as macros in C).

Definition in file [cstring](#).

## 6.105 `ctgmath` File Reference

### Defines

- `#define _GLIBCXX_CTGMATH`

### 6.105.1 Detailed Description

This is a Standard C++ Library header.

Definition in file [ctgmath](#).

## 6.106 ctgmath File Reference

### Defines

- #define `_GLIBCXX_TR1_CTGMATH`

### 6.106.1 Detailed Description

This is a TR1 C++ Library header.

Definition in file [tr1/ctgmath](#).

## 6.107 ctime File Reference

### Namespaces

- namespace [std](#)

### Defines

- `#define _GLIBCXX_CTIME`

#### 6.107.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `time.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace [std](#) (except for names which are defined as macros in C).

Definition in file [ctime](#).

## 6.108 ctime File Reference

### Defines

- `#define _GLIBCXX_TR1_CTIME`

### 6.108.1 Detailed Description

This is a TR1 C++ Library header.

Definition in file [tr1/ctime](#).

## 6.109 ctype\_base.h File Reference

### Classes

- struct [std::ctype\\_base](#)  
*Base class for `ctype`.*

### Namespaces

- namespace [std](#)

#### 6.109.1 Detailed Description

This is an internal header file, included by other library headers. You should not attempt to use it directly.

Definition in file [ctype\\_base.h](#).

## 6.110 ctype\_inline.h File Reference

### Namespaces

- namespace [std](#)

### 6.110.1 Detailed Description

This is an internal header file, included by other library headers. You should not attempt to use it directly.

Definition in file [ctype\\_inline.h](#).

## 6.111 ctype\_noninline.h File Reference

### 6.111.1 Detailed Description

This is an internal header file, included by other library headers. You should not attempt to use it directly.

Definition in file [ctype\\_noninline.h](#).

## 6.112 `cwchar` File Reference

### Namespaces

- namespace [std](#)

### Defines

- `#define _GLIBCXX_CWCHAR`

### Functions

- `wchar_t * std::wcschr` (`wchar_t *__p`, `wchar_t __c`)
- `wchar_t * std::wspbrk` (`wchar_t *__s1`, `const wchar_t *__s2`)
- `wchar_t * std::wcsrchr` (`wchar_t *__p`, `wchar_t __c`)
- `wchar_t * std::wcsstr` (`wchar_t *__s1`, `const wchar_t *__s2`)
- `wchar_t * std::wmemchr` (`wchar_t *__p`, `wchar_t __c`, `size_t __n`)

#### 6.112.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `wchar.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace [std](#) (except for names which are defined as macros in C).

Definition in file [cwchar](#).

## 6.113 cwchar File Reference

### Defines

- `#define _GLIBCXX_BEGIN_NAMESPACE_TR1`
- `#define _GLIBCXX_END_NAMESPACE_TR1`
- `#define _GLIBCXX_INCLUDE_AS_TR1`
- `#define _GLIBCXX_TR1`
- `#define _GLIBCXX_TR1_CWCHAR`

### 6.113.1 Detailed Description

This is a TR1 C++ Library header.

Definition in file [tr1/cwchar](#).

## 6.114 `cwchar` File Reference

### Namespaces

- namespace [std](#)

### 6.114.1 Detailed Description

This is an internal header file, included by other library headers. You should not attempt to use it directly.

Definition in file [tr1\\_impl/cwchar](#).

## 6.115 `cwctype` File Reference

### Namespaces

- namespace [std](#)

### Defines

- `#define _GLIBCXX_CWCTYPE`

#### 6.115.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `wctype.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace [std](#) (except for names which are defined as macros in C).

Definition in file [cwctype](#).

## 6.116 `cwctype` File Reference

### Defines

- `#define _GLIBCXX_BEGIN_NAMESPACE_TR1`
- `#define _GLIBCXX_END_NAMESPACE_TR1`
- `#define _GLIBCXX_INCLUDE_AS_TR1`
- `#define _GLIBCXX_TR1`
- `#define _GLIBCXX_TR1_CWCTYPE`

### 6.116.1 Detailed Description

This is a TR1 C++ Library header.

Definition in file [tr1/cwctype](#).

## 6.117 cwctype File Reference

### Namespaces

- namespace [std](#)

### 6.117.1 Detailed Description

This is an internal header file, included by other library headers. You should not attempt to use it directly.

Definition in file [tr1\\_impl/cwctype](#).

## 6.118 cxxabi-forced.h File Reference

### Classes

- class `__cxxabiv1::__forced_unwind`  
*Thrown as part of forced unwinding.  
A magic placeholder class that can be caught by reference to recognize forced unwinding.*

### Defines

- `#define _CXXABI_FORCED_H`

#### 6.118.1 Detailed Description

The header provides an interface to the C++ ABI.

Definition in file [cxxabi-forced.h](#).

## 6.119 cxxabi.h File Reference

### Classes

- class [\\_\\_gnu\\_cxx::recursive\\_init\\_error](#)  
*Exception thrown by `__cxa_guard_acquire`.  
6.7[stmt.dcl]/4: If control re-enters the declaration (recursively) while the object is being initialized, the behavior is undefined.*

### Namespaces

- namespace [\\_\\_gnu\\_cxx](#)
- namespace [abi](#)

### Defines

- `#define CXXABI_H`
- `#define GLIBCXX_NOTHROW`

### Typedefs

- typedef `__cxa_ctor_return_type(* __cxxabiv1::__cxa_ctor_type)(void *)`

### Functions

- `int __cxxabiv1::__cxa_atexit (void(*)(void *), void *, void *) throw ()`
- `void __cxxabiv1::__cxa_bad_cast ()`
- `void __cxxabiv1::__cxa_bad_typeid ()`
- `std::type_info * __cxxabiv1::__cxa_current_exception_type () __attribute__((__pure__)) throw ()`
- `char * __cxxabiv1::__cxa_demangle (const char *__mangled_name, char *__output_buffer, size_t *__length, int *__status)`
- `int __cxxabiv1::__cxa_finalize (void *)`
- `void __cxxabiv1::__cxa_guard_abort (__guard *) throw ()`
- `int __cxxabiv1::__cxa_guard_acquire (__guard *)`
- `void __cxxabiv1::__cxa_guard_release (__guard *) throw ()`
- `void __cxxabiv1::__cxa_pure_virtual (void) __attribute__((__noreturn__))`
- `__cxa_vec_ctor_return_type __cxxabiv1::__cxa_vec_ctor (void *dest_array, void *src_array, size_t element_count, size_t element_size, __cxa_ctor_return_type(*constructor)(void *, void *), __cxa_ctor_type destructor)`

- void **\_\_cxxabiv1::\_\_cxa\_vec\_cleanup** (void \*\_\_array\_address, size\_t \_\_element\_count, size\_t \_\_s, \_\_cxa\_ctor\_type destructor) throw ()
- **\_\_cxa\_vec\_ctor\_return\_type \_\_cxxabiv1::\_\_cxa\_vec\_ctor** (void \*\_\_array\_address, size\_t \_\_element\_count, size\_t \_\_element\_size, \_\_cxa\_ctor\_type constructor, \_\_cxa\_ctor\_type destructor)
- void **\_\_cxxabiv1::\_\_cxa\_vec\_delete** (void \*\_\_array\_address, size\_t \_\_element\_size, size\_t \_\_padding\_size, \_\_cxa\_ctor\_type destructor)
- void **\_\_cxxabiv1::\_\_cxa\_vec\_delete2** (void \*\_\_array\_address, size\_t \_\_element\_size, size\_t \_\_padding\_size, \_\_cxa\_ctor\_type destructor, void(\*\_\_dealloc)(void\*))
- void **\_\_cxxabiv1::\_\_cxa\_vec\_delete3** (void \*\_\_array\_address, size\_t \_\_element\_size, size\_t \_\_padding\_size, \_\_cxa\_ctor\_type destructor, void(\*\_\_dealloc)(void \*, size\_t))

- void \* **\_\_cxxabiv1::\_\_cxa\_vec\_new2** (size\_t \_\_element\_count, size\_t \_\_element\_size, size\_t \_\_padding\_size, \_\_cxa\_ctor\_type constructor, \_\_cxa\_ctor\_type destructor, void(\*\_\_alloc)(size\_t), void(\*\_\_dealloc)(void\*))
- void \* **\_\_cxxabiv1::\_\_cxa\_vec\_new3** (size\_t \_\_element\_count, size\_t \_\_element\_size, size\_t \_\_padding\_size, \_\_cxa\_ctor\_type constructor, \_\_cxa\_ctor\_type destructor, void(\*\_\_alloc)(size\_t), void(\*\_\_dealloc)(void \*, size\_t))
  
- void \* **\_\_cxxabiv1::\_\_dynamic\_cast** (const void \*\_\_src\_ptr, const \_\_class\_type\_info \*\_\_src\_type, const \_\_class\_type\_info \*\_\_dst\_type, ptrdiff\_t \_\_src2dst)

### 6.119.1 Detailed Description

The header provides an interface to the C++ ABI.

Definition in file [cxxabi.h](#).

## 6.120 cxxabi\_tweaks.h File Reference

### Defines

- #define `_CXXABI_TWEAKS_H`
- #define `_GLIBCXX_CXA_VEC_CTOR_RETURN(x)`
- #define `_GLIBCXX_GUARD_BIT`
- #define `_GLIBCXX_GUARD_PENDING_BIT`
- #define `_GLIBCXX_GUARD_SET(x)`
- #define `_GLIBCXX_GUARD_TEST(x)`
- #define `_GLIBCXX_GUARD_WAITING_BIT`

### Typedefs

- typedef void `__cxxabiv1::__cxa_ctor_return_type`
- typedef void `__cxxabiv1::__cxa_vec_ctor_return_type`

### Functions

- `__extension__` typedef int `__guard __cxxabiv1::__attribute__` ((mode(\_\_DI\_ -  
\_)))

#### 6.120.1 Detailed Description

The header provides an CPU-variable interface to the C++ ABI.

Definition in file [cxxabi\\_tweaks.h](#).

## 6.121 debug.h File Reference

### Namespaces

- namespace [\\_\\_gnu\\_debug](#)

### 6.121.1 Detailed Description

This file is a GNU debug extension to the Standard C++ Library.

Definition in file [debug.h](#).

## 6.122 debug\_allocator.h File Reference

### Classes

- class `__gnu_cxx::debug_allocator<_Alloc>`  
*A meta-allocator with debugging bits, as per [20.4].  
This is precisely the allocator defined in the C++ Standard.*
  - all allocation calls operator `new`
  - all deallocation calls operator `delete`.

### Namespaces

- namespace `__gnu_cxx`

### Defines

- `#define _DEBUG_ALLOCATOR_H`

#### 6.122.1 Detailed Description

This file is a GNU extension to the Standard C++ Library. You should only include this header if you are using GCC 3 or later.

Definition in file [debug\\_allocator.h](#).

## 6.123 `debug_map_base.hpp` File Reference

### 6.123.1 Detailed Description

Contains a debug-mode base for all maps.

Definition in file [debug\\_map\\_base.hpp](#).

## 6.124 decimal File Reference

### Classes

- class `std::decimal::decimal128`  
*3.2.4 Class `decimal128`.*
- class `std::decimal::decimal32`  
*3.2.2 Class `decimal32`.*
- class `std::decimal::decimal64`  
*3.2.3 Class `decimal64`.*

### Namespaces

- namespace `std`
- namespace `std::decimal`

### Defines

- `#define _DECLARE_DECIMAL128_COMPOUND_ASSIGNMENT(_Op)`
- `#define _DECLARE_DECIMAL32_COMPOUND_ASSIGNMENT(_Op)`
- `#define _DECLARE_DECIMAL64_COMPOUND_ASSIGNMENT(_Op)`
- `#define _DECLARE_DECIMAL_BINARY_OP_WITH_DEC(_Op, _T1, _T2, _T3)`
- `#define _DECLARE_DECIMAL_BINARY_OP_WITH_INT(_Op, _Tp)`
- `#define _DECLARE_DECIMAL_COMPARISON(_Op, _Tp)`
- `#define _GLIBCXX_DECIMAL`
- `#define _GLIBCXX_USE_DECIMAL_`

### Functions

- double `std::decimal::decimal128_to_double` (decimal128 \_\_d)
- float `std::decimal::decimal128_to_float` (decimal128 \_\_d)
- long double `std::decimal::decimal128_to_long_double` (decimal128 \_\_d)

- void [std::unexpected](#) () \_\_attribute\_\_((\_\_noreturn\_\_))

#### 6.132.1 Detailed Description

This is a Standard C++ Library header.

Definition in file [exception](#).

## 6.133 exception.hpp File Reference

### Namespaces

- namespace [\\_\\_gnu\\_pbds](#)

### Functions

- void [\\_\\_gnu\\_pbds::\\_\\_throw\\_container\\_error](#) (void)
- void [\\_\\_gnu\\_pbds::\\_\\_throw\\_insert\\_error](#) (void)
- void [\\_\\_gnu\\_pbds::\\_\\_throw\\_join\\_error](#) (void)
- void [\\_\\_gnu\\_pbds::\\_\\_throw\\_resize\\_error](#) (void)

#### 6.133.1 Detailed Description

Contains exception classes.

Definition in file [exception.hpp](#).

## 6.134 `exception_ptr.h` File Reference

### Classes

- class `std::__exception_ptr::exception_ptr`  
*An opaque pointer to an arbitrary [exception](#).*

### Namespaces

- namespace `std`

### Functions

- `template<typename _Ex >`  
`exception_ptr std::copy\_exception (_Ex __ex) throw ()`
- `exception_ptr std::current\_exception () throw ()`
- `bool std::\_\_exception\_ptr::operator!= (const exception_ptr &, const exception_ptr &) \_\_attribute\_\_\(\(\_\_pure\_\_\)\) throw ()`
- `bool std::\_\_exception\_ptr::operator== (const exception_ptr &, const exception_ptr &) \_\_attribute\_\_\(\(\_\_pure\_\_\)\) throw ()`
- `void std::rethrow\_exception (exception_ptr) \_\_attribute\_\_\(\(\_\_noreturn\_\_\)\)`

#### 6.134.1 Detailed Description

This is an internal header file, included by other headers and the implementation. You should not attempt to use it directly.

Definition in file [exception\\_ptr.h](#).

## 6.135 extptr\_allocator.h File Reference

### Classes

- class `__gnu_cxx::_ExtPtr_allocator<_Tp>`  
*An example allocator which uses a non-standard pointer type. This allocator specifies that containers use a 'relative pointer' as it's pointer type. (See [ext/pointer.h](#)) Memory allocation in this example is still performed using [std::allocator](#).*

### Namespaces

- namespace `__gnu_cxx`

### Defines

- `#define _EXTPTR_ALLOCATOR_H`

### Functions

- `template<typename _Tp>`  
`void __gnu_cxx::swap (_ExtPtr_allocator<_Tp> &__larg, _ExtPtr_allocator<_Tp> &__rarg)`

#### 6.135.1 Detailed Description

##### Author:

Bob Walters

An example allocator which uses an alternative pointer type from `bits/pointer.h`. Supports test cases which confirm container support for alternative pointers.

Definition in file [extptr\\_allocator.h](#).

## 6.136 features.h File Reference

Defines on whether to include algorithm variants.

### Defines

- `#define _GLIBCXX_BAL_QUICKSORT`
- `#define _GLIBCXX_FIND_CONSTANT_SIZE_BLOCKS`
- `#define _GLIBCXX_FIND_EQUAL_SPLIT`
- `#define _GLIBCXX_FIND_GROWING_BLOCKS`
- `#define _GLIBCXX_MERGESORT`
- `#define _GLIBCXX_PARALLEL_FEATURES_H`
- `#define _GLIBCXX_QUICKSORT`
- `#define _GLIBCXX_TREE_DYNAMIC_BALANCING`
- `#define _GLIBCXX_TREE_FULL_COPY`
- `#define _GLIBCXX_TREE_INITIAL_SPLITTING`

### 6.136.1 Detailed Description

Defines on whether to include algorithm variants. Less variants reduce executable size and compile time. This file is a GNU parallel extension to the Standard C++ Library.

Definition in file [features.h](#).

### 6.136.2 Define Documentation

#### 6.136.2.1 `#define _GLIBCXX_BAL_QUICKSORT`

Include parallel dynamically load-balanced quicksort.

**See also:**

`__gnu_parallel::_Settings::sort_algorithm`

Definition at line 55 of file [features.h](#).

#### 6.136.2.2 `#define _GLIBCXX_FIND_CONSTANT_SIZE_BLOCKS`

Include the equal-sized blocks variant for `std::find`.

**See also:**

`__gnu_parallel::_Settings::find_algorithm`

Definition at line 67 of file [features.h](#).

**6.136.2.3 #define \_GLIBCXX\_FIND\_EQUAL\_SPLIT**

Include the equal splitting variant for `std::find`.

**See also:**

`__gnu_parallel::_Settings::find_algorithm`

Definition at line 74 of file `features.h`.

**6.136.2.4 #define \_GLIBCXX\_FIND\_GROWING\_BLOCKS**

Include the growing blocks variant for `std::find`.

**See also:**

`__gnu_parallel::_Settings::find_algorithm`

Definition at line 61 of file `features.h`.

**6.136.2.5 #define \_GLIBCXX\_MERGESORT**

Include parallel multi-way mergesort.

**See also:**

`__gnu_parallel::_Settings::sort_algorithm`

Definition at line 41 of file `features.h`.

**6.136.2.6 #define \_GLIBCXX\_QUICKSORT**

Include parallel unbalanced quicksort.

**See also:**

`__gnu_parallel::_Settings::sort_algorithm`

Definition at line 48 of file `features.h`.

**6.136.2.7 #define \_GLIBCXX\_TREE\_DYNAMIC\_BALANCING**

Include the dynamic balancing variant for `_Rb_tree::insert_unique(_Iiter beg, _Iiter __end)`.

**See also:**

`__gnu_parallel::_Rb_tree`

Definition at line 91 of file features.h.

**6.136.2.8 #define \_GLIBCXX\_TREE\_FULL\_COPY**

In order to sort the input sequence of `_Rb_tree::insert_unique(_Iter beg, _Iter __end)` a full copy of the input elements is done.

**See also:**

`__gnu_parallel::_Rb_tree`

Definition at line 100 of file features.h.

**6.136.2.9 #define \_GLIBCXX\_TREE\_INITIAL\_SPLITTING**

Include the initial splitting variant for `_Rb_tree::insert_unique(_Iter beg, _Iter __end)`.

**See also:**

`__gnu_parallel::_Rb_tree`

Definition at line 83 of file features.h.

## 6.137 fenv.h File Reference

### Defines

- #define `_GLIBCXX_FENV_H`

### 6.137.1 Detailed Description

This is a Standard C++ Library header.

Definition in file [fenv.h](#).

## 6.138 find.h File Reference

Parallel implementation base for `std::find()`, `std::equal()` and related functions. This file is a GNU parallel extension to the Standard C++ Library.

### Namespaces

- namespace [\\_\\_gnu\\_parallel](#)

### Defines

- `#define _GLIBCXX_PARALLEL_FIND_H`

### Functions

- `template<typename _RAIter1, typename _RAIter2, typename _Pred, typename _Selector > std::pair< _RAIter1, _RAIter2 > \_\_gnu\_parallel::\_\_find\_template (_RAIter1 __begin1, _RAIter1 __end1, _RAIter2 __begin2, _Pred __pred, _Selector __selector, constant_size_blocks_tag)`
- `template<typename _RAIter1, typename _RAIter2, typename _Pred, typename _Selector > std::pair< _RAIter1, _RAIter2 > \_\_gnu\_parallel::\_\_find\_template (_RAIter1 __begin1, _RAIter1 __end1, _RAIter2 __begin2, _Pred __pred, _Selector __selector, growing_blocks_tag)`
- `template<typename _RAIter1, typename _RAIter2, typename _Pred, typename _Selector > std::pair< _RAIter1, _RAIter2 > \_\_gnu\_parallel::\_\_find\_template (_RAIter1 __begin1, _RAIter1 __end1, _RAIter2 __begin2, _Pred __pred, _Selector __selector, equal_split_tag)`
- `template<typename _RAIter1, typename _RAIter2, typename _Pred, typename _Selector > std::pair< _RAIter1, _RAIter2 > \_\_gnu\_parallel::\_\_find\_template (_RAIter1 __begin1, _RAIter1 __end1, _RAIter2 __begin2, _Pred __pred, _Selector __selector)`

#### 6.138.1 Detailed Description

Parallel implementation base for `std::find()`, `std::equal()` and related functions. This file is a GNU parallel extension to the Standard C++ Library.

Definition in file [find.h](#).

## 6.139 `find_selectors.h` File Reference

`_Function` objects representing different tasks to be plugged into the parallel find algorithm. This file is a GNU parallel extension to the Standard C++ Library.

### Classes

- struct `__gnu_parallel::__adjacent_find_selector`  
*Test predicate on two adjacent elements.*
- struct `__gnu_parallel::__find_first_of_selector<_FIterator >`  
*Test predicate on several elements.*
- struct `__gnu_parallel::__find_if_selector`  
*Test predicate on a single element, used for `std::find()` and `std::find_if()`.*
- struct `__gnu_parallel::__generic_find_selector`  
*Base class of all `__gnu_parallel::__find_template` selectors.*
- struct `__gnu_parallel::__mismatch_selector`  
*Test inverted predicate on a single element.*

### Namespaces

- namespace `__gnu_parallel`

### Defines

- `#define _GLIBCXX_PARALLEL_FIND_SELECTORS_H`

#### 6.139.1 Detailed Description

`_Function` objects representing different tasks to be plugged into the parallel find algorithm. This file is a GNU parallel extension to the Standard C++ Library.

Definition in file [find\\_selectors.h](#).

## 6.140 for\_each.h File Reference

Main interface for embarrassingly parallel functions.

### Namespaces

- namespace [\\_\\_gnu\\_parallel](#)

### Defines

- #define `_GLIBCXX_PARALLEL_FOR_EACH_H`

### Functions

- `template<typename _Iter , typename _UserOp , typename _Functionality , typename _Red , typename _Result >`  
`_UserOp \_\_gnu\_parallel::\_\_for\_each\_template\_random\_access (_Iter __begin,`  
`_Iter __end, _UserOp __user_op, _Functionality &__functionality, _`  
`Red __reduction, _Result __reduction_start, _Result &__output, typename`  
`std::iterator\_traits< _Iter >::difference_type __bound, _Parallelism __`  
`parallelism_tag)`

#### 6.140.1 Detailed Description

Main interface for embarrassingly parallel functions. The explicit implementation are in other header files, like [workstealing.h](#), [par\\_loop.h](#), [omp\\_loop.h](#), and [omp\\_loop\\_static.h](#). This file is a GNU parallel extension to the Standard C++ Library.

Definition in file [for\\_each.h](#).

## 6.141 for\_each\_selectors.h File Reference

Functors representing different tasks to be plugged into the generic parallelization methods for embarrassingly parallel functions. This file is a GNU parallel extension to the Standard C++ Library.

### Classes

- struct [\\_\\_gnu\\_parallel::\\_\\_accumulate\\_binop\\_reduct<\\_BinOp>](#)  
*General reduction, using a binary operator.*
- struct [\\_\\_gnu\\_parallel::\\_\\_accumulate\\_selector<\\_It>](#)  
*std::accumulate() selector.*
- struct [\\_\\_gnu\\_parallel::\\_\\_adjacent\\_difference\\_selector<\\_It>](#)  
*Selector that returns the difference between two adjacent \_\_elements.*
- struct [\\_\\_gnu\\_parallel::\\_\\_count\\_if\\_selector<\\_It, \\_Diff>](#)  
*std::count\_if() selector.*
- struct [\\_\\_gnu\\_parallel::\\_\\_count\\_selector<\\_It, \\_Diff>](#)  
*std::count() selector.*
- struct [\\_\\_gnu\\_parallel::\\_\\_fill\\_selector<\\_It>](#)  
*std::fill() selector.*
- struct [\\_\\_gnu\\_parallel::\\_\\_for\\_each\\_selector<\\_It>](#)  
*std::for\_each() selector.*
- struct [\\_\\_gnu\\_parallel::\\_\\_generate\\_selector<\\_It>](#)  
*std::generate() selector.*
- struct [\\_\\_gnu\\_parallel::\\_\\_generic\\_for\\_each\\_selector<\\_It>](#)  
*Generic \_\_selector for embarrassingly parallel functions.*
- struct [\\_\\_gnu\\_parallel::\\_\\_identity\\_selector<\\_It>](#)  
*Selector that just returns the passed iterator.*
- struct [\\_\\_gnu\\_parallel::\\_\\_inner\\_product\\_selector<\\_It, \\_It2, \\_Tp>](#)  
*std::inner\_product() selector.*
- struct [\\_\\_gnu\\_parallel::\\_\\_max\\_element\\_reduct<\\_Compare, \\_It>](#)

*Reduction for finding the maximum element, using a comparator:*

- struct [\\_\\_gnu\\_parallel::\\_\\_min\\_element\\_reduct<\\_Compare, \\_It >](#)  
*Reduction for finding the maximum element, using a comparator.*
- struct [\\_\\_gnu\\_parallel::\\_\\_replace\\_if\\_selector<\\_It, \\_Op, \\_Tp >](#)  
*std::replace() selector.*
- struct [\\_\\_gnu\\_parallel::\\_\\_replace\\_selector<\\_It, \\_Tp >](#)  
*std::replace() selector.*
- struct [\\_\\_gnu\\_parallel::\\_\\_transform1\\_selector<\\_It >](#)  
*std::transform() \_\_selector, one input sequence variant.*
- struct [\\_\\_gnu\\_parallel::\\_\\_transform2\\_selector<\\_It >](#)  
*std::transform() \_\_selector, two input sequences variant.*
- struct [\\_\\_gnu\\_parallel::\\_DummyReduct](#)  
*Reduction function doing nothing.*
- struct [\\_\\_gnu\\_parallel::\\_Nothing](#)  
*Functor doing nothing.*

### 6.164.1 Detailed Description

This is a Standard C++ Library header.

Definition in file [iomanip](#).

## 6.165 ios File Reference

### Defines

- `#define _GLIBCXX_IOS`

### 6.165.1 Detailed Description

This is a Standard C++ Library header.

Definition in file [ios](#).

## 6.166 ios\_base.h File Reference

### Classes

- class [std::ios\\_base](#)  
*The base of the I/O class hierarchy.  
This class defines everything that can be defined about I/O that does not depend on the type of characters being input or output. Most people will only see [ios\\_base](#) when they need to specify the full name of the various I/O flags (e.g., the openmodes).*
- class [std::ios\\_base::failure](#)  
*These are thrown to indicate problems with io.  
27.4.2.1.1 Class [ios\\_base::failure](#).*

### Namespaces

- namespace [std](#)

### Defines

- `#define _IOS_BASE_H`
- `#define _IOS_BASE_SEEK_CUR`
- `#define _IOS_BASE_SEEK_END`

### Enumerations

- enum `_Ios_Fmtflags` {  
`_S_boolalpha, _S_dec, _S_fixed, _S_hex,`  
`_S_internal, _S_left, _S_oct, _S_right,`  
`_S_scientific, _S_showbase, _S_showpoint, _S_showpos,`  
`_S_skipws, _S_unitbuf, _S_uppercase, _S_adjustfield,`  
`_S_basefield, _S_floatfield, _S_ios_fmtflags_end }`
- enum `_Ios_Iostate` {  
`_S_goodbit, _S_badbit, _S_eofbit, _S_failbit,`  
`_S_ios_iostate_end }`
- enum `_Ios_Openmode` {  
`_S_app, _S_ate, _S_bin, _S_in,`

### 6.167.1 Detailed Description

This is a Standard C++ Library header.

Definition in file [iosfwd](#).

## 6.168 iostream File Reference

### Namespaces

- namespace [std](#)

### Defines

- #define `_GLIBCXX_IOSTREAM`

### Variables

- static ios\_base::Init `std::__ioinit`

#### Standard Stream Objects

The `<iostream>` header declares the eight standard stream objects. For other declarations, see <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch24.html> and the *I/O forward declarations*

They are required by default to cooperate with the global C library's `FILE` streams, and to be available during program startup and termination. For more information, see the *HOWTO* linked to above.

- ostream [std::cerr](#)
- istream [std::cin](#)
- ostream [std::clog](#)
- ostream [std::cout](#)
- wostream [std::wcerr](#)
- wistream [std::wcin](#)
- wostream [std::wclog](#)
- wostream [std::wcout](#)

### 6.168.1 Detailed Description

This is a Standard C++ Library header.

Definition in file [iostream](#).

## 6.169 istream File Reference

### Classes

- class [std::basic\\_iostream< \\_CharT, \\_Traits >](#)  
*Merging istream and ostream capabilities. This class multiply inherits from the input and output stream classes simply to provide a single interface.*
- class [std::basic\\_istream< \\_CharT, \\_Traits >](#)  
*Controlling input. This is the base class for all input streams. It provides text formatting of all builtin types, and communicates with any class derived from [basic\\_streambuf](#) to do the actual input.*
- class [std::basic\\_istream< \\_CharT, \\_Traits >::sentry](#)  
*Performs setup work for input streams.*

### Namespaces

- namespace [std](#)

### Defines

- `#define \_GLIBCXX\_ISTREAM`

### Functions

- `template<typename _CharT, typename _Traits, typename _Tp >  
basic\_istream< \_CharT, \_Traits > & std::operator>> (basic\_istream< \_CharT, \_Traits > &&__is, _Tp &__x)`
- `template<typename _CharT, typename _Traits >

### 6.181.1 Detailed Description

Contains policies for list update containers.

Definition in file [list\\_update\\_policy.hpp](#).

## 6.182 locale File Reference

### Defines

- `#define _GLIBCXX_LOCALE`

### 6.182.1 Detailed Description

This is a Standard C++ Library header.

Definition in file [locale](#).

## 6.183 locale\_classes.h File Reference

### Classes

- class `std::collate<_CharT >`  
*Facet for localized string comparison.*
- class `std::collate_byname<_CharT >`  
*class `collate_byname` [22.2.4.2].*
- class `std::locale`  
*Container class for localization functionality.  
The `locale` class is first a class wrapper for C library locales. It is also an extensible container for user-defined localization. A `locale` is a collection of facets that implement various localization features such as money, time, and number printing.*
- class `std::locale::facet`  
*Localization functionality base class.  
The `facet` class is the base class for a localization feature, such as money, time, and number printing. It provides common support for facets and reference management.*
- class `std::locale::id`  
*Facet ID class.  
The `ID` class provides facets with an index used to identify them. Every `facet` class must define a public static member `locale::id`, or be derived from a `facet` that provides this member, otherwise the `facet` cannot be used in a `locale`. The `locale::id` ensures that each class type gets a unique identifier.*

### Namespaces

- namespace `std`

### Defines

- `#define _LOCALE_CLASSES_H`

### Functions

Definition in file [locale\\_classes.tcc](#).

## 6.185 locale\_facets.h File Reference

### Classes

- class `std::__ctype_abstract_base<_CharT>`  
*Common base for ctype facet.*
- class `std::ctype<_CharT>`  
*Primary class template ctype facet.  
This template class defines classification and conversion functions for character sets.  
It wraps ctype functionality. Ctype gets used by streams for many I/O operations.*
- class `std::ctype<char>`  
*The ctype<char> specialization.  
This class defines classification and conversion functions for the char type. It gets used by char streams for many I/O operations. The char specialization provides a number of optimizations as well.*
- class `std::ctype<wchar_t>`  
*The ctype<wchar\_t> specialization.  
This class defines classification and conversion functions for the wchar\_t type. It gets used by wchar\_t streams for many I/O operations. The wchar\_t specialization provides a number of optimizations as well.*
- class `std::ctype_byname<_CharT>`  
*class ctype\_byname [22.2.1.2].*
- class `std::ctype_byname<char>`  
*22.2.1.4 Class ctype\_byname specializations.*
- class `std::num_get<_CharT, _InIter>`  
*Primary class template num\_get.  
This facet encapsulates the code to parse and return a number from a string. It is used by the istream numeric extraction operators.*
- class `std::num_put<_CharT, _OutIter>`  
*Primary class template num\_put.  
This facet encapsulates the code to convert a number to a string. It is used by the ostream numeric insertion operators.*
- class `std::numpunct<_CharT>`  
*Primary class template numpunct.  
This facet stores several pieces of information related to printing and scanning numbers, such as the decimal point character. It takes a template parameter specifying the*

*char* type. The *numpunct* facet is used by streams for many I/O operations involving numbers.

- class `std::numpunct_byname<_CharT>`  
class *numpunct\_byname* [22.2.3.2].

### 6.186.1 Detailed Description

This is an internal header file, included by other library headers. You should not attempt to use it directly.

Definition in file [locale\\_facets.tcc](#).

## 6.187 locale\_facets\_nonio.h File Reference

### Classes

- class `std::messages<_CharT>`  
*Primary class template `messages`.  
This facet encapsulates the code to retrieve `messages` from message catalogs. The only thing defined by the standard for this facet is the interface. All underlying functionality is implementation-defined.*
- struct `std::messages_base`  
*Messages facet base class providing catalog typedef.*
- class `std::messages_byname<_CharT>`  
*class `messages_byname` [22.2.7.2].*
- class `std::money_base`  
*Money format ordering data.  
This class contains an ordered `array` of 4 fields to represent the pattern for formatting a money amount. Each field may contain one entry from the part enum. `symbol`, `sign`, and `value` must be present and the remaining field must contain either `none` or `space`.*
- class `std::money_get<_CharT, _InIter>`  
*Primary class template `money_get`.  
This facet encapsulates the code to parse and return a monetary amount from a string.*
- class `std::money_put<_CharT, _OutIter>`  
*Primary class template `money_put`.  
This facet encapsulates the code to format and output a monetary amount.*
- class `std::moneypunct<_CharT, _Intl>`  
*Primary class template `moneypunct`.  
This facet encapsulates the punctuation, grouping and other formatting features of money amount string representations.*
- class `std::moneypunct_byname<_CharT, _Intl>`  
*class `moneypunct_byname` [22.2.6.4].*
- class `std::time_base`  
*Time format ordering data.  
This class provides an enum representing different orderings of time: `day`, `month`, and `year`.*
- class `std::time_get<_CharT, _InIter>`

Primary class template [time\\_get](#).

This facet encapsulates the code to parse and return a date or time from a string. It is used by the istream numeric extraction operators.

- class [std::time\\_get\\_byname](#)< [\\_CharT](#), [\\_InIter](#) >

class [time\\_get\\_byname](#) [22.2.5.2].

- class [std::time\\_put](#)< [\\_CharT](#), [\\_OutIter](#) >

Primary class template [time\\_put](#).

This facet encapsulates the code to format and output dates and times according to formats used by [strftime\(\)](#).

- class [std::time\\_put\\_byname](#)< [\\_CharT](#), [\\_OutIter](#) >

class [time\\_put\\_byname](#) [22.2.5.4].

This file is a GNU debug extension to the Standard C++ Library.

Definition in file [macros.h](#).

### 6.191.2 Define Documentation

#### 6.191.2.1 #define `__glibcxx_check_erase`(\_Position)

Verify that we can erase the element referenced by the iterator `_Position`. We can erase the element if the `_Position` iterator is dereferenceable and references this sequence.

Definition at line 102 of file `macros.h`.

**6.191.2.2 #define \_\_glibcxx\_check\_erase\_range(\_First, \_Last)**

Verify that we can erase the elements in the iterator range [\_First, \_Last). We can erase the elements if [\_First, \_Last) is a valid iterator range within this sequence.

Definition at line 116 of file macros.h.

**6.191.2.3 #define \_\_glibcxx\_check\_heap\_pred(\_First, \_Last, \_Pred)**

Verify that the iterator range [\_First, \_Last) is a heap w.r.t. the predicate \_Pred.

Definition at line 229 of file macros.h.

**6.191.2.4 #define \_\_glibcxx\_check\_insert(\_Position)**

Verify that we can insert into \*this with the iterator \_Position. Insertion into a container at a specific position requires that the iterator be nonsingular (i.e., either dereferenceable or past-the-end) and that it reference the sequence we are inserting into. Note that this macro is only valid when the container is a \_Safe\_sequence and the iterator is a \_Safe\_iterator.

Definition at line 64 of file macros.h.

**6.191.2.5 #define \_\_glibcxx\_check\_insert\_range(\_Position, \_First, \_Last)**

Verify that we can insert the values in the iterator range [\_First, \_Last) into \*this with the iterator \_Position. Insertion into a container at a specific position requires that the iterator be nonsingular (i.e., either dereferenceable or past-the-end), that it reference the sequence we are inserting into, and that the iterator range [\_First, Last) is a valid (possibly empty) range. Note that this macro is only valid when the container is a \_Safe\_sequence and the iterator is a \_Safe\_iterator.

**Todo**

We would like to be able to check for noninterference of \_Position and the range [\_First, \_Last), but that can't (in general) be done.

Definition at line 87 of file macros.h.

**6.191.2.6 #define \_\_glibcxx\_check\_partitioned\_lower(\_First, \_Last, \_Value)**

Verify that the iterator range [\_First, \_Last) is partitioned w.r.t. the value \_Value.

Definition at line 177 of file macros.h.

**6.191.2.7 #define \_\_glibcxx\_check\_partitioned\_lower\_pred(\_First, \_Last, \_Value, \_Pred)**

Verify that the iterator range [\_First, \_Last) is partitioned w.r.t. the value \_Value and predicate \_Pred.

Definition at line 197 of file macros.h.

**6.191.2.8 #define \_\_glibcxx\_check\_partitioned\_upper\_pred(\_First, \_Last, \_Value, \_Pred)**

Verify that the iterator range [\_First, \_Last) is partitioned w.r.t. the value \_Value and predicate \_Pred.

Definition at line 209 of file macros.h.

**6.191.2.9 #define \_\_glibcxx\_check\_sorted\_pred(\_First, \_Last, \_Pred)**

Verify that the iterator range [\_First, \_Last) is sorted by the predicate \_Pred.

Definition at line 148 of file macros.h.

**6.191.2.10 #define \_GLIBCXX\_DEBUG\_VERIFY(\_Condition, \_ErrorMessage)**

Macros used by the implementation to verify certain properties. These macros may only be used directly by the debug wrappers. Note that these are macros (instead of the more obviously *correct* choice of making them functions) because we need line and file information at the call site, to minimize the distance between the user error and where the error is reported.

Definition at line 42 of file macros.h.

### 6.214.1 Detailed Description

This is a Standard C++ Library header.

The header `new` defines several functions to manage dynamic memory and handling memory allocation errors; see [http://gcc.gnu.org/onlinedocs/libstdc++/18\\_support/howto.html#4](http://gcc.gnu.org/onlinedocs/libstdc++/18_support/howto.html#4) for more.

Definition in file [new](#).

### 6.214.2 Function Documentation

#### 6.214.2.1 `void operator delete (void *, void *) throw () [inline]`

These are replaceable signatures:

- normal single new and delete (no arguments, throw `bad_alloc` on error)
- normal array new and delete (same)
- `nothrow` single new and delete (take a `nothrow` argument, return `NULL` on error)
- `nothrow` array new and delete (same)

Placement new and delete signatures (take a memory address argument, does nothing) may not be replaced by a user's program.

Definition at line 107 of file `new`.

#### 6.214.2.2 `void operator delete (void *, const std::nothrow_t &) throw ()`

These are replaceable signatures:

- normal single new and delete (no arguments, throw `bad_alloc` on error)
- normal array new and delete (same)
- `nothrow` single new and delete (take a `nothrow` argument, return `NULL` on error)
- `nothrow` array new and delete (same)

Placement new and delete signatures (take a memory address argument, does nothing) may not be replaced by a user's program.

**6.214.2.3 void operator delete (void \*) throw ()**

These are replaceable signatures:

- normal single new and delete (no arguments, throw `bad_alloc` on error)
- normal array new and delete (same)
- `nothrow` single new and delete (take a `nothrow` argument, return `NULL` on error)
- `nothrow` array new and delete (same)

Placement new and delete signatures (take a memory address argument, does nothing) may not be replaced by a user's program.

**6.214.2.4 void operator delete[] (void \*, void \*) throw () [inline]**

These are replaceable signatures:

- normal single new and delete (no arguments, throw `bad_alloc` on error)
- normal array new and delete (same)
- `nothrow` single new and delete (take a `nothrow` argument, return `NULL` on error)
- `nothrow` array new and delete (same)

Placement new and delete signatures (take a memory address argument, does nothing) may not be replaced by a user's program.

Definition at line 108 of file new.

**6.214.2.5 void operator delete[] (void \*, const std::nothrow\_t &) throw ()**

These are replaceable signatures:

- normal single new and delete (no arguments, throw `bad_alloc` on error)
- normal array new and delete (same)
- `nothrow` single new and delete (take a `nothrow` argument, return `NULL` on error)
- `nothrow` array new and delete (same)

Placement new and delete signatures (take a memory address argument, does nothing) may not be replaced by a user's program.

**6.214.2.6 void operator delete[] (void \*) throw ()**

These are replaceable signatures:

- normal single new and delete (no arguments, throw `bad_alloc` on error)
- normal array new and delete (same)
- `nothrow` single new and delete (take a `nothrow` argument, return `NULL` on error)
- `nothrow` array new and delete (same)

Placement new and delete signatures (take a memory address argument, does nothing) may not be replaced by a user's program.

**6.214.2.7 void\* operator new (std::size\_t, void \* \_\_p) throw () [inline]**

These are replaceable signatures:

- normal single new and delete (no arguments, throw `bad_alloc` on error)
- normal array new and delete (same)
- `nothrow` single new and delete (take a `nothrow` argument, return `NULL` on error)
- `nothrow` array new and delete (same)

Placement new and delete signatures (take a memory address argument, does nothing) may not be replaced by a user's program.

Definition at line 103 of file `new`.

**6.214.2.8 void\* operator new (std::size\_t, const std::nothrow\_t &) throw ()**

These are replaceable signatures:

- normal single new and delete (no arguments, throw `bad_alloc` on error)
- normal array new and delete (same)
- `nothrow` single new and delete (take a `nothrow` argument, return `NULL` on error)
- `nothrow` array new and delete (same)

Placement new and delete signatures (take a memory address argument, does nothing) may not be replaced by a user's program.

**6.214.2.9 void\* operator new (std::size\_t) throw (std::bad\_alloc)**

These are replaceable signatures:

- normal single new and delete (no arguments, throw `bad_alloc` on error)
- normal array new and delete (same)
- `nothrow` single new and delete (take a `nothrow` argument, return `NULL` on error)
- `nothrow` array new and delete (same)

Placement new and delete signatures (take a memory address argument, does nothing) may not be replaced by a user's program.

**6.214.2.10 void\* operator new[] (std::size\_t, void \* \_\_p) throw () [inline]**

These are replaceable signatures:

- normal single new and delete (no arguments, throw `bad_alloc` on error)
- normal array new and delete (same)
- `nothrow` single new and delete (take a `nothrow` argument, return `NULL` on error)
- `nothrow` array new and delete (same)

Placement new and delete signatures (take a memory address argument, does nothing) may not be replaced by a user's program.

Definition at line 104 of file `new`.

**6.214.2.11 void\* operator new[] (std::size\_t, const std::nothrow\_t &) throw ()**

These are replaceable signatures:

- normal single new and delete (no arguments, throw `bad_alloc` on error)
- normal array new and delete (same)
- `nothrow` single new and delete (take a `nothrow` argument, return `NULL` on error)
- `nothrow` array new and delete (same)

Placement new and delete signatures (take a memory address argument, does nothing) may not be replaced by a user's program.

**6.214.2.12 void\* operator new[] (std::size\_t) throw (std::bad\_alloc)**

These are replaceable signatures:

- normal single new and delete (no arguments, throw `bad_alloc` on error)
- normal array new and delete (same)
- `nothrow` single new and delete (take a `nothrow` argument, return `NULL` on error)
- `nothrow` array new and delete (same)

Placement new and delete signatures (take a memory address argument, does nothing) may not be replaced by a user's program.

## 6.215 new\_allocator.h File Reference

### Classes

- class [\\_\\_gnu\\_cxx::new\\_allocator<\\_Tp>](#)  
*An allocator that uses global new, as per [20.4].  
This is precisely the allocator defined in the C++ Standard.*
  - all allocation calls operator new
  - all deallocation calls operator delete.

### Namespaces

- namespace [\\_\\_gnu\\_cxx](#)

### Defines

`basic_ostream< _CharT, _Traits > & std::operator<< (basic_ostream< _-`
`CharT, _Traits > &__out, _CharT __c)`

6.224.1 Detailed Description

This is a Standard C++ Library header.

Definition in file [ostream](#).

6.225 ostream.tcc File Reference

Namespaces

- namespace [std](#)

Defines

- `#define _OSTREAM_TCC`

Functions

- template ostream & **std::endl** (ostream &)
- template ostream & **std::ends** (ostream &)
- template ostream & **std::flush** (ostream &)
- template wostream & **std::operator**<< (wostream &, const wchar_t *)
- template wostream & **std::operator**<< (wostream &, wchar_t)
- template ostream & **std::operator**<< (ostream &, const signed char *)
- template ostream & **std::operator**<< (ostream &, const unsigned char *)
- template ostream & **std::operator**<< (ostream &, const char *)
- template ostream & **std::operator**<< (ostream &, signed char)
- template ostream & **std::operator**<< (ostream &, unsigned char)
- template ostream & **std::operator**<< (ostream &, char)

- template<typename _CharT, typename _Traits >
basic_ostream< _CharT, _Traits > & **std::operator**<< (basic_ostream< _-
CharT, _Traits > &__out, const char *__s)

6.225.1 Detailed Description

This is an internal header file, included by other library headers. You should not attempt to use it directly.

Definition in file [ostream.tcc](#).

6.226 ostream_insert.h File Reference

Namespaces

- namespace [std](#)

Defines

- `#define _OSTREAM_INSERT_H`

Functions

- `template<typename _CharT, typename _Traits >`
`void std::__ostream_fill (basic_ostream< _CharT, _Traits > &__out, stream-`
`size __n)`
- `template wostream & std::__ostream_insert (wostream &, const wchar_t *,`
`streamsize)`
- `template ostream & std::__ostream_insert (ostream &, const char *, stream-`
`size)`
- `template<typename _CharT, typename _Traits >`
`basic_ostream< _CharT, _Traits > & std::__ostream_insert (basic_ostream<`
`_CharT, _Traits > &__out, const _CharT *__s, streamsize __n)`
- `template<typename _CharT, typename _Traits >`
`void std::__ostream_write (basic_ostream< _CharT, _Traits > &__out, const`
`_CharT *__s, streamsize __n)`

6.226.1 Detailed Description

This is an internal header file, included by other library headers. You should not attempt to use it directly.

Definition in file [ostream_insert.h](#).

6.227 par_loop.h File Reference

Parallelization of embarrassingly parallel execution by means of equal splitting. This file is a GNU parallel extension to the Standard C++ Library.

Namespaces

- namespace [__gnu_parallel](#)

Defines

- #define `_GLIBCXX_PARALLEL_PAR_LOOP_H`

Functions

- `template<typename _RAIter, typename _Op, typename _Fu, typename _Red, typename _Result>
>
_Op __gnu_parallel::__for_each_template_random_access_ed (_RAIter __begin, _RAIter __end, _Op __o, _Fu &__f, _Red __r, _Result __base, _Result &__output, typename std::iterator_traits<_RAIter>::difference_type __bound)`

6.227.1 Detailed Description

Parallelization of embarrassingly parallel execution by means of equal splitting. This file is a GNU parallel extension to the Standard C++ Library.

Definition in file [par_loop.h](#).

6.228 parallel.h File Reference

End-user include file. Provides advanced settings and tuning options. This file is a GNU parallel extension to the Standard C++ Library.

Defines

- #define `_GLIBCXX_PARALLEL_PARALLEL_H`

6.228.1 Detailed Description

End-user include file. Provides advanced settings and tuning options. This file is a GNU parallel extension to the Standard C++ Library.

Definition in file [parallel.h](#).

6.229 `partial_sum.h` File Reference

Parallel implementation of `std::partial_sum()`, i.e. prefix sums. This file is a GNU parallel extension to the Standard C++ Library.

Namespaces

- namespace `__gnu_parallel`

Defines

- `#define _GLIBCXX_PARALLEL_PARTIAL_SUM_H`

Functions

- `template<typename _Iter, typename _OutputIterator, typename _BinaryOperation > _OutputIterator __gnu_parallel::__parallel_partial_sum (_Iter __begin, _Iter __end, _OutputIterator __result, _BinaryOperation __bin_op)`
- `template<typename _Iter, typename _OutputIterator, typename _BinaryOperation > _OutputIterator __gnu_parallel::__parallel_partial_sum_basecase (_Iter __begin, _Iter __end, _OutputIterator __result, _BinaryOperation __bin_op, typename std::iterator_traits<_Iter>::value_type __value)`
- `template<typename _Iter, typename _OutputIterator, typename _BinaryOperation > _OutputIterator __gnu_parallel::__parallel_partial_sum_linear (_Iter __begin, _Iter __end, _OutputIterator __result, _BinaryOperation __bin_op, typename std::iterator_traits<_Iter>::difference_type __n)`

6.229.1 Detailed Description

Parallel implementation of `std::partial_sum()`, i.e. prefix sums. This file is a GNU parallel extension to the Standard C++ Library.

Definition in file `partial_sum.h`.

6.230 partition.h File Reference

Parallel implementation of `std::partition()`, `std::nth_element()`, and `std::partial_sort()`. This file is a GNU parallel extension to the Standard C++ Library.

Namespaces

- namespace [__gnu_parallel](#)

Defines

- `#define _GLIBCXX_PARALLEL_PARTITION_H`
- `#define _GLIBCXX_VOLATILE`

Functions

- `template<typename _RAIter, typename _Compare >`
`void __gnu_parallel::__parallel_nth_element (_RAIter __begin, _RAIter __nth, _RAIter __end, _Compare __comp)`
- `template<typename _RAIter, typename _Compare >`
`void __gnu_parallel::__parallel_partial_sort (_RAIter __begin, _RAIter __middle, _RAIter __end, _Compare __comp)`
- `template<typename _RAIter, typename _Predicate >`
`std::iterator_traits< _RAIter >::difference_type __gnu_parallel::__parallel_partition (_RAIter __begin, _RAIter __end, _Predicate __pred, _ThreadIndex __num_threads)`

6.230.1 Detailed Description

Parallel implementation of `std::partition()`, `std::nth_element()`, and `std::partial_sort()`. This file is a GNU parallel extension to the Standard C++ Library.

Definition in file [partition.h](#).

6.230.2 Define Documentation

6.230.2.1 `#define _GLIBCXX_VOLATILE`

Decide whether to declare certain variables volatile.

Definition at line 43 of file [partition.h](#).

Referenced by [__gnu_parallel::__parallel_partition\(\)](#).

6.231 pod_char_traits.h File Reference

Classes

- struct [__gnu_cxx::character< V, I, S >](#)
A POD class that serves as a [character](#) abstraction class.
- struct [std::char_traits< __gnu_cxx::character< V, I, S > >](#)
[char_traits<__gnu_cxx::character>](#) specialization.

Namespaces

- namespace [__gnu_cxx](#)

6.232.1 Detailed Description

Author:

Bob Walters

Provides reusable `_Pointer_adapter` for assisting in the development of custom pointer types that can be used with the standard containers via the `allocator::pointer` and `allocator::const_pointer` typedefs.

Definition in file [pointer.h](#).

6.233 pool_allocator.h File Reference

Classes

- class [__gnu_cxx::__pool_alloc< _Tp >](#)
Allocator using a memory pool with a single lock.
- class [__gnu_cxx::__pool_alloc_base](#)
Base class for [__pool_alloc](#).

Namespaces

- namespace [__gnu_cxx](#)

Defines

- `#define _POOL_ALLOCATOR_H`

Functions

- `template<typename _Tp >`
`bool __gnu_cxx::operator!= (const __pool_alloc< _Tp > &, const __pool_alloc< _Tp > &)`
- `template<typename _Tp >`
`bool __gnu_cxx::operator== (const __pool_alloc< _Tp > &, const __pool_alloc< _Tp > &)`

6.233.1 Detailed Description

This file is a GNU extension to the Standard C++ Library.

Definition in file [pool_allocator.h](#).

6.234 postypes.h File Reference

Classes

- class [std::fpos<_StateT>](#)
Class representing stream positions.

Namespaces

- namespace [std](#)

Defines

6.241.1 Detailed Description

Diagnostics for `map` to `unordered_map`.

Definition in file [profiler_map_to_unordered_map.h](#).

6.242 profiler_node.h File Reference

Data structures to represent a single profiling event.

Classes

- class `__gnu_profile::__object_info_base`
Base class for a line in the object table.
- class `__gnu_profile::__stack_hash`
Hash function for summary trace using call stack as index.
- class `__gnu_profile::__stack_info_base< __object_info >`
Base class for a line in the stack table.

Namespaces

- namespace `__gnu_profile`

Defines

- `#define _GLIBCXX_PROFILE_PROFILER_NODE_H`

Typedefs

- `typedef void * __gnu_profile::__instruction_address_t`
- `typedef const void * __gnu_profile::__object_t`
- `typedef std::vector< __instruction_address_t > __gnu_profile::__stack_npt`
- `typedef __stack_npt * __gnu_profile::__stack_t`

Functions

6.246.1 Detailed Description

diagnostics for vector to list.

Definition in file [profiler_vector_to_list.h](#).

6.247 queue File Reference

Defines

- `#define _GLIBCXX_QUEUE`

6.247.1 Detailed Description

This is a Standard C++ Library header.

Definition in file [queue](#).

6.248 queue.h File Reference

Lock-free double-ended queue. This file is a GNU parallel extension to the Standard C++ Library.

Classes

- class [__gnu_parallel::_RestrictedBoundedConcurrentQueue<_Tp>](#)
Double-ended queue of bounded size, allowing lock-free atomic access. [push_front\(\)](#) and [pop_front\(\)](#) must not be called concurrently to each other, while [pop_back\(\)](#) can be called concurrently at all times. [empty\(\)](#), [size\(\)](#), and [top\(\)](#) are intentionally not provided. Calling them would not make sense in a concurrent setting.

Namespaces

- namespace [__gnu_parallel](#)

Defines

- [#define _GLIBCXX_PARALLEL_QUEUE_H](#)
- [#define _GLIBCXX_VOLATILE](#)

6.248.1 Detailed Description

Lock-free double-ended queue. This file is a GNU parallel extension to the Standard C++ Library.

Definition in file [queue.h](#).

6.248.2 Define Documentation

6.248.2.1 [#define _GLIBCXX_VOLATILE](#)

Decide whether to declare certain variable volatile in this file.

Definition at line 40 of file [queue.h](#).

6.249 quicksort.h File Reference

Implementation of a unbalanced parallel quicksort (in-place). This file is a GNU parallel extension to the Standard C++ Library.

Namespaces

- namespace [__gnu_parallel](#)

Defines

- #define `_GLIBCXX_PARALLEL_QUICKSORT_H`

Functions

- `template<typename _RAIter, typename _Compare >`
`void __gnu_parallel::__parallel_sort_qs (_RAIter __begin, _RAIter __end, _Compare __comp, _ThreadIndex __num_threads)`
- `template<typename _RAIter, typename _Compare >`
`void __gnu_parallel::__parallel_sort_qs_conquer (_RAIter __begin, _RAIter __end, _Compare __comp, _ThreadIndex __num_threads)`
- `template<typename _RAIter, typename _Compare >`
`std::iterator_traits< _RAIter >::difference_type __gnu_parallel::__parallel_sort_qs_divide (_RAIter __begin, _RAIter __end, _Compare __comp, typename std::iterator_traits< _RAIter >::difference_type __pivot_rank, typename std::iterator_traits< _RAIter >::difference_type __num_samples, _ThreadIndex __num_threads)`

6.249.1 Detailed Description

Implementation of a unbalanced parallel quicksort (in-place). This file is a GNU parallel extension to the Standard C++ Library.

Definition in file [quicksort.h](#).

6.250 random File Reference

Defines

- `#define _GLIBCXX_RANDOM`

6.250.1 Detailed Description

This is a Standard C++ Library header.

Definition in file [random](#).

6.251 random.h File Reference

Classes

- class `std::bernoulli_distribution`
A Bernoulli random number distribution.
- struct `std::bernoulli_distribution::param_type`
- class `std::binomial_distribution<_IntType>`
A discrete binomial random number distribution.
- struct `std::binomial_distribution<_IntType>::param_type`
- class `std::cauchy_distribution<_RealType>`
A cauchy_distribution random number distribution.
- struct `std::cauchy_distribution<_RealType>::param_type`
- class `std::chi_squared_distribution<_RealType>`
A chi_squared_distribution random number distribution.
- struct `std::chi_squared_distribution<_RealType>::param_type`
- class `std::discard_block_engine<_RandomNumberEngine, __p, __r>`
- class `std::discrete_distribution<_IntType>`
A discrete_distribution random number distribution.
- struct `std::discrete_distribution<_IntType>::param_type`
- class `std::exponential_distribution<_RealType>`
An exponential continuous distribution for random numbers.
- struct `std::exponential_distribution<_RealType>::param_type`
- class `std::extreme_value_distribution<_RealType>`
A extreme_value_distribution random number distribution.
- struct `std::extreme_value_distribution<_RealType>::param_type`
- class `std::fisher_f_distribution<_RealType>`
A fisher_f_distribution random number distribution.
- struct `std::fisher_f_distribution<_RealType>::param_type`
- class `std::gamma_distribution<_RealType>`
A gamma continuous distribution for random numbers.
- struct `std::gamma_distribution<_RealType>::param_type`
- class `std::geometric_distribution<_IntType>`

A discrete geometric random number distribution.

- struct `std::geometric_distribution<_IntType>::param_type`
- class `std::independent_bits_engine<_RandomNumberEngine, __w, _UIntType>`
- class `std::linear_congruential_engine<_UIntType, __a, __c, __m>`

A model of a linear congruential random number generator.
- class `std::lognormal_distribution<_RealType>`

A lognormal distribution random number distribution.
- struct `std::lognormal_distribution<_RealType>::param_type`
- class `std::negative_binomial_distribution<_IntType>`

A negative binomial distribution random number distribution.
- struct `std::negative_binomial_distribution<_IntType>::param_type`
- class `std::normal_distribution<_RealType>`

A normal continuous distribution for random numbers.
- struct `std::normal_distribution<_RealType>::param_type`
- class `std::piecewise_constant_distribution<_RealType>`

A piecewise constant distribution random number distribution.
- struct `std::piecewise_constant_distribution<_RealType>::param_type`
- class `std::piecewise_linear_distribution<_RealType>`

A piecewise linear distribution random number distribution.
- struct `std::piecewise_linear_distribution<_RealType>::param_type`
- class `std::poisson_distribution<_IntType>`

A discrete Poisson random number distribution.
- struct `std::poisson_distribution<_IntType>::param_type`
- class `std::random_device`
- class `std::seed_seq`

The seed_seq class generates sequences of seeds for random number generators.
- class `std::shuffle_order_engine<_RandomNumberEngine, __k>`

Produces random numbers by combining random numbers from some base engine to produce random numbers with a specifies number of bits __w.
- class `std::student_t_distribution<_RealType>`

A student t distribution random number distribution.

- struct `std::student_t_distribution<_RealType>::param_type`
- class `std::uniform_int_distribution<_IntType>`
Uniform discrete distribution for random numbers. A discrete random distribution on the range $[min, max]$ with equal probability throughout the range.
- struct `std::uniform_int_distribution<_IntType>::param_type`
- class `std::uniform_real_distribution<_RealType>`
Uniform continuous distribution for random numbers.
- struct `std::uniform_real_distribution<_RealType>::param_type`
- class `std::weibull_distribution<_RealType>`
A weibull_distribution random number distribution.
- struct `std::weibull_distribution<_RealType>::param_type`

Namespaces

- namespace `std`
- namespace `std::__detail`

6.252.1 Detailed Description

This is an internal header file, included by other library headers. You should not attempt to use it directly.

Definition in file [random.tcc](#).

6.253 `random_number.h` File Reference

Random number generator based on the Mersenne twister. This file is a GNU parallel extension to the Standard C++ Library.

Classes

- class [__gnu_parallel::_RandomNumber](#)
Random number generator, based on the Mersenne twister.

Namespaces

- namespace [__gnu_parallel](#)

Defines

- `#define _GLIBCXX_PARALLEL_RANDOM_NUMBER_H`

6.253.1 Detailed Description

Random number generator based on the Mersenne twister. This file is a GNU parallel extension to the Standard C++ Library.

Definition in file [random_number.h](#).

6.254 random_shuffle.h File Reference

Parallel implementation of `std::random_shuffle()`. This file is a GNU parallel extension to the Standard C++ Library.

Classes

- struct `__gnu_parallel::_DRandomShufflingGlobalData<_RAIter >`
Data known to every thread participating in `__gnu_parallel::_parallel_random_shuffle()`.
- struct `__gnu_parallel::_DRSSorterPU<_RAIter, _RandomNumberGenerator >`
Local data for a thread participating in `__gnu_parallel::_parallel_random_shuffle()`.

Namespaces

- namespace `__gnu_parallel`

Defines

- `#define _GLIBCXX_PARALLEL_RANDOM_SHUFFLE_H`

Typedefs

- typedef unsigned short `__gnu_parallel::_BinIndex`

Functions

- `template<typename _RAIter, typename _RandomNumberGenerator >`
`void __gnu_parallel::_parallel_random_shuffle (_RAIter __begin, _RAIter __end, _RandomNumberGenerator __rng=_RandomNumber())`
- `template<typename _RAIter, typename _RandomNumberGenerator >`
`void __gnu_parallel::_parallel_random_shuffle_drs (_RAIter __begin, _RAIter __end, typename std::iterator_traits<_RAIter >::difference_type __n, ThreadIndex __num_threads, _RandomNumberGenerator &__rng)`
- `template<typename _RAIter, typename _RandomNumberGenerator >`
`void __gnu_parallel::_parallel_random_shuffle_drs_pu (_DRSSorterPU<_RAIter, _RandomNumberGenerator > *__pus)`

- `template<typename _RandomNumberGenerator >`
`int __gnu_parallel::__random_number_pow2 (int __logp, _-`
`RandomNumberGenerator &__rng)`
- `template<typename _Tp >`
`_Tp __gnu_parallel::__round_up_to_pow2 (_Tp __x)`
- `template<typename _RAIter, typename _RandomNumberGenerator >`
`void __gnu_parallel::__sequential_random_shuffle (_RAIter __begin, _RAIter`
`__end, _RandomNumberGenerator &__rng)`

6.254.1 Detailed Description

Parallel implementation of `std::random_shuffle()`. This file is a GNU parallel extension to the Standard C++ Library.

Definition in file [random_shuffle.h](#).

6.255 ratio File Reference

Classes

- struct `std::ratio< _Num, _Den >`
Provides compile-time rational arithmetic.
- struct `std::ratio_add< _R1, _R2 >`
ratio_add
- struct `std::ratio_divide< _R1, _R2 >`
ratio_divide
- struct `std::ratio_equal< _R1, _R2 >`
ratio_equal
- struct `std::ratio_greater< _R1, _R2 >`
ratio_greater
- struct `std::ratio_greater_equal< _R1, _R2 >`
ratio_greater_equal
- struct `std::ratio_less< _R1, _R2 >`
ratio_less
- struct `std::ratio_less_equal< _R1, _R2 >`
ratio_less_equal
- struct `std::ratio_multiply< _R1, _R2 >`
ratio_multiply
- struct `std::ratio_not_equal< _R1, _R2 >`
ratio_not_equal
- struct `std::ratio_subtract< _R1, _R2 >`
ratio_subtract

Namespaces

- namespace `std`

Defines

- `#define _GLIBCXX_RATIO`

Typedefs

- `typedef ratio< 1, 1000000000000000000 > std::atto`
- `typedef ratio< 1, 100 > std::centi`
- `typedef ratio< 10, 1 > std::deca`

- `typedef ratio< 1000000000000, 1 > std::tera`

6.255.1 Detailed Description

This is a Standard C++ Library header.

Definition in file [ratio](#).

6.256 rb_tree File Reference

Classes

- struct [__gnu_cxx::rb_tree< _Key, _Value, _KeyOfValue, _Compare, _Alloc >](#)

Namespaces

- namespace [__gnu_cxx](#)

Defines

- #define [_RB_TREE](#)

6.256.1 Detailed Description

This file is a GNU extension to the Standard C++ Library (possibly containing extensions from the HP/SGI STL subset).

Definition in file [rb_tree](#).

6.257 rc_string_base.h File Reference

Classes

- class [__gnu_cxx::__rc_string_base<_CharT, _Traits, _Alloc >](#)

Namespaces

- namespace [__gnu_cxx](#)

Defines

- `#define _RC_STRING_BASE_H`

6.257.1 Detailed Description

This file is a GNU extension to the Standard C++ Library. This is an internal header file, included by other library headers. You should not attempt to use it directly.

Definition in file [rc_string_base.h](#).

6.258 regex File Reference

Defines

- `#define _GLIBCXX_REGEX`

6.258.1 Detailed Description

This is a Standard C++ Library header.

Definition in file [regex](#).

6.259 regex File Reference

The common implementation file for `tr1` and `std` regular expressions.

Classes

- class `std::basic_regex< _Ch_type, _Rx_traits >`
- class `std::match_results< _Bi_iter, _Allocator >`
The results of a match or search operation.
- class `std::regex_error`
*A regular expression *exception* class.
 The regular expression library throws objects of this class on error.*
- class `std::regex_iterator< _Bi_iter, _Ch_type, _Rx_traits >`
- class `std::regex_token_iterator< _Bi_iter, _Ch_type, _Rx_traits >`
- struct `std::regex_traits< _Ch_type >`
Describes aspects of a regular expression.
- class `std::sub_match< _BiIter >`

Namespaces

- namespace `std`
- namespace `std::regex_constants`

Typedefs

- typedef `match_results< const char * >` **`std::cmatch`**
- typedef `regex_iterator< const char * >` **`std::cregex_iterator`**
- typedef `regex_token_iterator< const char * >` **`std::cregex_token_iterator`**

5.2 Matching Rules

Matching a regular expression against a sequence of characters (first, last) proceeds according to the rules of the grammar specified for the regular expression object, modified according to the effects listed below for any bitmask elements set.

- enum [std::regex_constants::_match_flag](#) {
 - [_S_not_bol](#), [_S_not_eol](#), [_S_not_bow](#), [_S_not_eow](#),
 - [_S_any](#), [_S_not_null](#), [_S_continuous](#), [_S_prev_avail](#),
 - [_S_sed](#), [_S_no_copy](#), [_S_first_only](#), [_S_match_flag_last](#) }
- typedef [std::bitset](#)< [_S_match_flag_last](#) > [std::regex_constants::match_flag_
type](#)
- static const match_flag_type [std::regex_constants::format_default](#)
- static const match_flag_type [std::regex_constants::format_first_only](#)
- static const match_flag_type [std::regex_constants::format_no_copy](#)
- static const match_flag_type [std::regex_constants::format_sed](#)
- static const match_flag_type [std::regex_constants::match_any](#)
- static const match_flag_type [std::regex_constants::match_continuous](#)
- static const match_flag_type [std::regex_constants::match_default](#)
- static const match_flag_type [std::regex_constants::match_not_bol](#)
- static const match_flag_type [std::regex_constants::match_not_bow](#)
- static const match_flag_type [std::regex_constants::match_not_eol](#)
- static const match_flag_type [std::regex_constants::match_not_eow](#)
- static const match_flag_type [std::regex_constants::match_not_null](#)
- static const match_flag_type [std::regex_constants::match_prev_avail](#)

5.1 Regular Expression Syntax Options

- enum `std::regex_constants::__syntax_option` {
`_S_icase`, `_S_nosubs`, `_S_optimize`, `_S_collate`,
`_S_ECMAScript`, `_S_basic`, `_S_extended`, `_S_awk`,
`_S_grep`, `_S_egrep`, `_S_syntax_last` }
- typedef unsigned int `std::regex_constants::syntax_option_type`
- static const `syntax_option_type` `std::regex_constants::awk`
- static const `syntax_option_type` `std::regex_constants::basic`
- static const `syntax_option_type` `std::regex_constants::collate`
- static const `syntax_option_type` `std::regex_constants::ECMAScript`
- static const `syntax_option_type` `std::regex_constants::egrep`
- static const `syntax_option_type` `std::regex_constants::extended`
- static const `syntax_option_type` `std::regex_constants::grep`
- static const `syntax_option_type` `std::regex_constants::icase`
- static const `syntax_option_type` `std::regex_constants::nosubs`
- static const `syntax_option_type` `std::regex_constants::optimize`

5.3 Error Types

- enum `std::regex_constants::error_type` {
`_S_error_collate`, `_S_error_ctype`, `_S_error_escape`, `_S_error_backref`,
`_S_error_brack`, `_S_error_paren`, `_S_error_brace`, `_S_error_badbrace`,
`_S_error_range`, `_S_error_space`, `_S_error_badrepeat`, `_S_error_-`
`complexity`,
`_S_error_stack`, `_S_error_last` }
- static const `error_type` `std::regex_constants::error_backref` (`_S_error_backref`)
- static const `error_type` `std::regex_constants::error_badbrace` (`_S_error_-`
`badbrace`)
- static const `error_type` `std::regex_constants::error_badrepeat` (`_S_error_-`
`badrepeat`)
- static const `error_type` `std::regex_constants::error_brace` (`_S_error_brace`)
- static const `error_type` `std::regex_constants::error_brack` (`_S_error_brack`)
- static const `error_type` `std::regex_constants::error_collate` (`_S_error_collate`)
- static const `error_type` `std::regex_constants::error_complexity` (`_S_error_-`
`complexity`)
- static const `error_type` `std::regex_constants::error_ctype` (`_S_error_ctype`)
- static const `error_type` `std::regex_constants::error_escape` (`_S_error_escape`)
- static const `error_type` `std::regex_constants::error_paren` (`_S_error_paren`)
- static const `error_type` `std::regex_constants::error_range` (`_S_error_range`)
- static const `error_type` `std::regex_constants::error_space` (`_S_error_space`)
- static const `error_type` `std::regex_constants::error_stack` (`_S_error_stack`)

6.259.1 Detailed Description

The common implementation file for `tr1` and `std` regular expressions. This is an internal header file, included by other library headers. You should not attempt to use it directly.

Definition in file [tr1_impl/regex](#).

6.260 rope File Reference

6.272.1 Detailed Description

Parallel implementations of set operations for random-access iterators. This file is a GNU parallel extension to the Standard C++ Library.

Definition in file [set_operations.h](#).

6.273 settings.h File Reference

Runtime settings and tuning parameters, heuristics to decide whether to use parallelized algorithms. This file is a GNU parallel extension to the Standard C++ Library.

Classes

- struct [__gnu_parallel::_Settings](#)
class [_Settings](#) Run-time settings for the parallel mode including all tunable parameters.

Namespaces

- namespace [__gnu_parallel](#)

Defines

- `#define _GLIBCXX_PARALLEL_CONDITION\(__c\)`
- `#define _GLIBCXX_PARALLEL_SETTINGS_H`

6.273.1 Detailed Description

Runtime settings and tuning parameters, heuristics to decide whether to use parallelized algorithms. This file is a GNU parallel extension to the Standard C++ Library.

6.273.2 parallelization_decision

The decision whether to run an algorithm in parallel.

There are several ways the user can switch on and `__off` the parallel execution of an algorithm, both at compile- and run-time.

Only sequential execution can be forced at compile-time. This reduces code size and protects code parts that have non-thread-safe side effects.

Ultimately, forcing parallel execution at compile-time makes sense. Often, the sequential algorithm implementation is used as a subroutine, so no reduction in code size can be achieved. Also, the machine the program is run on might have only one processor core, so to avoid overhead, the algorithm is executed sequentially.

To force sequential execution of an algorithm ultimately at compile-time, the user must add the tag `gnu_parallel::sequential_tag()` to the end of the parameter list, e. g.

```
std::sort(__v.begin(), __v.end(), __gnu_parallel::sequential_tag());
```

This is compatible with all overloaded algorithm variants. No additional code will be instantiated, at all. The same holds for most algorithm calls with iterators not providing random access.

If the algorithm call is not forced to be executed sequentially at compile-time, the decision is made at run-time. The global variable `__gnu_parallel::_Settings::algorithm_strategy` is checked. It is a tristate variable corresponding to:

a. `force_sequential`, meaning the sequential algorithm is executed. b. `force_parallel`, meaning the parallel algorithm is executed. c. `heuristic`

For `heuristic`, the parallel algorithm implementation is called only if the input size is sufficiently large. For most algorithms, the input size is the (combined) length of the input sequence(`__s`). The threshold can be set by the user, individually for each algorithm. The according variables are called `gnu_parallel::_Settings::[algorithm]_minimal_n`.

For some of the algorithms, there are even more tuning options, e. g. the ability to choose from multiple algorithm variants. See below for details.

Definition in file [settings.h](#).

6.273.3 Define Documentation

6.273.3.1 `#define _GLIBCXX_PARALLEL_CONDITION(__c)`

Determine at compile(?)-time if the parallel variant of an algorithm should be called.

Parameters:

`__c` A condition that is convertible to `bool` that is overruled by `__gnu_parallel::_Settings::algorithm_strategy`. Usually a decision based on the input size.

Definition at line 95 of file [settings.h](#).

6.274 `shared_ptr.h` File Reference

Classes

- class `std::enable_shared_from_this<_Tp>`
Base class allowing use of member function `shared_from_this`.
- struct `std::owner_less<shared_ptr<_Tp>>`
Partial specialization of `owner_less` for `shared_ptr`.
- struct `std::owner_less<weak_ptr<_Tp>>`
Partial specialization of `owner_less` for `weak_ptr`.
- class `std::shared_ptr<_Tp>`
A smart pointer with reference-counted copy semantics.
- class `std::weak_ptr<_Tp>`
A smart pointer with weak semantics.

Classes

- class `std::basic_istream<_CharT, _Traits, _Alloc >`
Controlling input for `std::string`.
This class supports reading from objects of type `std::basic_string`, using the inherited functions from `std::basic_istream`. To control the associated sequence, an instance of `std::basic_stringbuf` is used, which this page refers to as `sb`.
- class `std::basic_ostringstream<_CharT, _Traits, _Alloc >`
Controlling output for `std::string`.
This class supports writing to objects of type `std::basic_string`, using the inherited functions from `std::basic_ostream`. To control the associated sequence, an instance of `std::basic_stringbuf` is used, which this page refers to as `sb`.
- class `std::basic_stringbuf<_CharT, _Traits, _Alloc >`
The actual work of input and output (for `std::string`).
This class associates either or both of its input and output sequences with a sequence of characters, which can be initialized from, or made available as, a `std::basic_string`. (Paraphrased from [27.7.1]/1.).
- class `std::basic_stringstream<_CharT, _Traits, _Alloc >`
Controlling input and output for `std::string`.
This class supports reading from and writing to objects of type `std::basic_string`, using the inherited functions from `std::basic_iostream`. To control the associated sequence, an instance of `std::basic_stringbuf` is used, which this page refers to as `sb`.

6.292.1 Detailed Description

This is an internal header file, included by other library headers. You should not attempt to use it directly.

Definition in file [stl_deque.h](#).

6.292.2 Define Documentation

6.292.2.1 `#define _GLIBCXX_DEQUE_BUF_SIZE`

This function controls the size of memory nodes.

Parameters:

size The size of an element.

Returns:

The number (not byte size) of elements per node.

This function started off as a compiler kludge from SGI, but seems to be a useful wrapper around a repeated constant expression. The **512** is tunable (and no other code needs to change), but no investigation has been done since inheriting the SGI code. Touch `_GLIBCXX_DEQUE_BUF_SIZE` only if you know what you are doing, however: changing it breaks the binary compatibility!!

Definition at line 82 of file `stl_deque.h`.

6.293 `std_function.h` File Reference

Classes

- struct `std::binary_function< _Arg1, _Arg2, _Result >`
- class `std::binary_negate< _Predicate >`
One of the negation functors.
- class `std::const_mem_fun1_ref_t< _Ret, _Tp, _Arg >`
One of the adaptors for member pointers.
- class `std::const_mem_fun1_t< _Ret, _Tp, _Arg >`
One of the adaptors for member pointers.
- class `std::const_mem_fun_ref_t< _Ret, _Tp >`
One of the adaptors for member pointers.
- class `std::const_mem_fun_t< _Ret, _Tp >`
One of the adaptors for member pointers.
- struct `std::divides< _Tp >`
One of the math functors.
- struct `std::equal_to< _Tp >`
One of the comparison functors.
- struct `std::greater< _Tp >`
One of the comparison functors.
- struct `std::greater_equal< _Tp >`
One of the comparison functors.
- struct `std::less< _Tp >`
One of the comparison functors.
- struct `std::less_equal< _Tp >`
One of the comparison functors.
- struct `std::logical_and< _Tp >`
One of the Boolean operations functors.
- struct `std::logical_not< _Tp >`

One of the Boolean operations functors.

- struct `std::logical_or< _Tp >`
One of the Boolean operations functors.
- class `std::mem_fun1_ref_t< _Ret, _Tp, _Arg >`
One of the adaptors for member pointers.
- class `std::mem_fun1_t< _Ret, _Tp, _Arg >`
One of the adaptors for member pointers.
- class `std::mem_fun_ref_t< _Ret, _Tp >`
One of the adaptors for member pointers.
- class `std::mem_fun_t< _Ret, _Tp >`
One of the adaptors for member pointers.
- struct `std::minus< _Tp >`
One of the math functors.
- struct `std::modulus< _Tp >`
One of the math functors.
- struct `std::multiplies< _Tp >`
One of the math functors.
- struct `std::negate< _Tp >`
One of the math functors.
- struct `std::not_equal_to< _Tp >`
One of the comparison functors.
- struct `std::plus< _Tp >`
One of the math functors.
- class `std::pointer_to_binary_function< _Arg1, _Arg2, _Result >`
One of the adaptors for function pointers.
- class `std::pointer_to_unary_function< _Arg, _Result >`
One of the adaptors for function pointers.
- struct `std::unary_function< _Arg, _Result >`
- class `std::unary_negate< _Predicate >`

One of the *negation functors*.

Namespaces

6.296.1 Detailed Description

This is an internal header file, included by other library headers. You should not attempt to use it directly.

This file contains all of the general iterator-related utility functions, such as [distance\(\)](#) and [advance\(\)](#).

Definition in file [stl_iterator_base_funcs.h](#).

6.297 `std_iterator_base_types.h` File Reference

Classes

- struct `std::bidirectional_iterator_tag`
Bidirectional iterators support a superset of forward `iterator` operations.
- struct `std::forward_iterator_tag`
Forward iterators support a superset of input `iterator` operations.
- struct `std::input_iterator_tag`
Marking input iterators.
- struct `std::iterator< _Category, _Tp, _Distance, _Pointer, _Reference >`
Common iterator class.
- struct `std::iterator_traits< _Iterator >`
Traits class for iterators.
- struct `std::iterator_traits< _Tp * >`
Partial specialization for pointer types.
- struct `std::iterator_traits< const _Tp * >`
Partial specialization for const pointer types.
- struct `std::output_iterator_tag`
Marking output iterators.
- struct `std::random_access_iterator_tag`
Random-access iterators support a superset of bidirectional `iterator` operations.

Namespaces

- namespace `std`

Defines

6.297.1 Detailed Description

This is an internal header file, included by other library headers. You should not attempt to use it directly.

This file contains all of the general iterator-related utility types, such as `iterator_traits` and `struct iterator`.

Definition in file [stl_iterator_base_types.h](#).

6.298 `std_list.h` File Reference

Classes

- class `std::_List_base<_Tp, _Alloc >`
See `bits/stl_deque.h`'s `_Deque_base` for an explanation.
- struct `std::_List_const_iterator<_Tp >`
A `list::const_iterator`.
- struct `std::_List_iterator<_Tp >`
A `list::iterator`.
- struct `std::_List_node<_Tp >`
An actual node in the list.
- struct `std::_List_node_base`
Common part of a node in the list.
- class `std::list<_Tp, _Alloc >`
A standard container with linear time access to elements, and fixed time insertion/deletion at any point in the sequence.

Namespaces

- namespace `std`

Defines

- `#define _STL_LIST_H`

Functions

6.304.1 Detailed Description

This is an internal header file, included by other library headers. You should not attempt to use it directly.

Definition in file [stl_queue.h](#).

6.305 `stl_raw_storage_iter.h` File Reference

Classes

- class `std::raw_storage_iterator<_OutputIterator, _Tp>`

Namespaces

- namespace `std`

Defines

- `#define _STL_RAW_STORAGE_ITERATOR_H`

6.305.1 Detailed Description

This is an internal header file, included by other library headers. You should not attempt to use it directly.

Definition in file `stl_raw_storage_iter.h`.

6.306 stl_relops.h File Reference

Namespaces

- namespace [std](#)
- namespace [std::rel_ops](#)

Defines

- `#define _STL_RELOPS_H`

Functions

- `template<class _Tp >`
`bool std::rel_ops::operator!= (const _Tp &__x, const _Tp &__y)`
- `template<class _Tp >`
`bool std::rel_ops::operator<= (const _Tp &__x, const _Tp &__y)`
- `template<class _Tp >`
`bool std::rel_ops::operator> (const _Tp &__x, const _Tp &__y)`
- `template<class _Tp >`
`bool std::rel_ops::operator>= (const _Tp &__x, const _Tp &__y)`

6.306.1 Detailed Description

This is an internal header file, included by other library headers. You should not attempt to use it directly.

Inclusion of this file has been removed from all of the other STL headers for safety reasons, except `std_utility.h`. For more information, see the thread of about twenty messages starting with <http://gcc.gnu.org/ml/libstdc++/2001-01/msg00223.html>, or http://gcc.gnu.org/onlinedocs/libstdc++/faq.html#faq.ambiguous_overloads

Short summary: the `rel_ops` operators should be avoided for the present.

Definition in file [stl_relops.h](#).

6.307 `std_set.h` File Reference

Classes

- class `std::set<_Key, _Compare, _Alloc >`

A standard container made up of unique keys, which can be retrieved in logarithmic time.

Namespaces

- namespace `std`

Defines

- `#define _STL_SET_H`

Functions

- `template<typename _Key, typename _Compare, typename _Alloc >`
`bool std::operator!= (const set< _Key, _Compare, _Alloc > &__x, const set< _Key, _Compare, _Alloc > &__y)`

6.320.1 Detailed Description

This is a Standard C++ Library header.

Definition in file [system_error](#).

6.321 tag_and_trait.hpp File Reference

Classes

- struct [__gnu_pbds::associative_container_tag](#)
Basic associative-container.
- struct [__gnu_pbds::basic_hash_tag](#)
Basic hash.
- struct [__gnu_pbds::basic_tree_tag](#)
Basic tree.
- struct [__gnu_pbds::binary_heap_tag](#)
Binary-heap (array-based).
- struct [__gnu_pbds::binomial_heap_tag](#)
Binomial-heap.
- struct [__gnu_pbds::cc_hash_tag](#)
Collision-chaining hash.
- struct [__gnu_pbds::container_tag](#)
Base data structure tag.
- struct [__gnu_pbds::container_traits< Cntnr >](#)
container_traits
- struct [__gnu_pbds::gp_hash_tag](#)
General-probing hash.
- struct [__gnu_pbds::list_update_tag](#)
List-update.
- struct [__gnu_pbds::null_mapped_type](#)
A mapped-policy indicating that an associative container is a set.
- struct [__gnu_pbds::ov_tree_tag](#)
Ordered-vector tree.
- struct [__gnu_pbds::pairing_heap_tag](#)
Pairing-heap.

- struct `__gnu_pbds::pat_trie_tag`
PATRICIA trie.
- struct `__gnu_pbds::priority_queue_tag`
Basic priority-queue.
- struct `__gnu_pbds::rb_tree_tag`
Red-black tree.
- struct `__gnu_pbds::rc_binomial_heap_tag`
Redundant-counter binomial-heap.
- struct `__gnu_pbds::sequence_tag`
Basic sequence.
- struct `__gnu_pbds::splay_tree_tag`
Splay tree.
- struct `__gnu_pbds::string_tag`
Basic string container, inclusive of strings, ropes, etc.
- struct `__gnu_pbds::thin_heap_tag`
Thin heap.
- struct `__gnu_pbds::tree_tag`
tree.
- struct `__gnu_pbds::trie_tag`
trie.

Namespaces

6.321.1 Detailed Description

Contains tags and traits, e.g., ones describing underlying data structures.

Definition in file [tag_and_trait.hpp](#).

6.322 tags.h File Reference

Tags for compile-time selection. This file is a GNU parallel extension to the Standard C++ Library.

Classes

- struct [__gnu_parallel::balanced_quicksort_tag](#)
Forces parallel sorting using balanced quicksort at compile time.
- struct [__gnu_parallel::balanced_tag](#)
Recommends parallel execution using dynamic load-balancing at compile time.
- struct [__gnu_parallel::constant_size_blocks_tag](#)
Selects the constant block size variant for `std::find()`.
- struct [__gnu_parallel::default_parallel_tag](#)
Recommends parallel execution using the default parallel algorithm.
- struct [__gnu_parallel::equal_split_tag](#)
Selects the equal splitting variant for `std::find()`.
- struct [__gnu_parallel::exact_tag](#)
Forces parallel merging with exact splitting, at compile time.
- struct [__gnu_parallel::find_tag](#)
Base class for `std::find()` variants.
- struct [__gnu_parallel::growing_blocks_tag](#)
Selects the growing block size variant for `std::find()`.
- struct [__gnu_parallel::multiway_mergesort_exact_tag](#)
Forces parallel sorting using multiway mergesort with exact splitting at compile time.
- struct [__gnu_parallel::multiway_mergesort_sampling_tag](#)
Forces parallel sorting using multiway mergesort with splitting by sampling at compile time.
- struct [__gnu_parallel::multiway_mergesort_tag](#)
Forces parallel sorting using multiway mergesort at compile time.
- struct [__gnu_parallel::omp_loop_static_tag](#)

Recommends parallel execution using OpenMP static load-balancing at compile time.

- struct [__gnu_parallel::omp_loop_tag](#)
Recommends parallel execution using OpenMP dynamic load-balancing at compile time.
- struct [__gnu_parallel::parallel_tag](#)
Recommends parallel execution at compile time, optionally using a user-specified number of threads.
- struct [__gnu_parallel::quicksort_tag](#)
Forces parallel sorting using unbalanced quicksort at compile time.
- struct [__gnu_parallel::sampling_tag](#)
Forces parallel merging with exact splitting, at compile time.
- struct [__gnu_parallel::sequential_tag](#)
Forces sequential execution at compile time.
- struct [__gnu_parallel::unbalanced_tag](#)
Recommends parallel execution using static load-balancing at compile time.

Namespaces

- namespace [__gnu_parallel](#)

- `void std::swap (thread &__x, thread &__y)`
- `void std::this_thread::yield ()`

6.324.1 Detailed Description

This is a Standard C++ Library header.

Definition in file [thread](#).

6.325 `throw_allocator.h` File Reference

Classes

- struct `__gnu_cxx::annotate_base`
Base class for checking address and label information about allocations. Create a `std::map` between the allocated address (`void`) and a datum for annotations, which are a pair of numbers corresponding to label and allocated size.*
- struct `__gnu_cxx::condition_base`
Base struct for condition policy.
- struct `__gnu_cxx::forced_error`
Thrown by exception safety machinery.
- struct `__gnu_cxx::limit_condition`
Base class for incremental control and throw.
- struct `__gnu_cxx::limit_condition::always_adjustor`
Always enter the condition.
- struct `__gnu_cxx::limit_condition::limit_adjustor`
*Enter the *n*th condition.*
- struct `__gnu_cxx::limit_condition::never_adjustor`
Never enter the condition.
- struct `__gnu_cxx::random_condition`
Base class for random probability control and throw.
- struct `__gnu_cxx::random_condition::always_adjustor`
Always enter the condition.
- struct `__gnu_cxx::random_condition::group_adjustor`
Group condition.
- struct `__gnu_cxx::random_condition::never_adjustor`
Never enter the condition.
- class `__gnu_cxx::throw_allocator_base<_Tp, _Cond>`
*Allocator class with logging and exception generation control. Intended to be used as an `allocator_type` in templated code.
Note: Deallocate not allowed to throw.*

- struct `__gnu_cxx::throw_allocator_limit< _Tp >`
Allocator throwing via limit condition.
- struct `__gnu_cxx::throw_allocator_random< _Tp >`
Allocator throwing via random condition.
- struct `__gnu_cxx::throw_value_base< _Cond >`
Class with exception generation control. Intended to be used as a value_type in templated code.
- struct `__gnu_cxx::throw_value_limit`
Type throwing via limit condition.
- struct `__gnu_cxx::throw_value_random`
Type throwing via random condition.
- struct `std::hash< __gnu_cxx::throw_value_limit >`
Explicit specialization of std::hash for __gnu_cxx::throw_value_limit.
- struct `std::hash< __gnu_cxx::throw_value_random >`
Explicit specialization of std::hash for __gnu_cxx::throw_value_limit.

Namespaces

`base< _Cond > &__b)`

6.325.1 Detailed Description

This file is a GNU extension to the Standard C++ Library.

Contains two exception-generating types (`throw_value`, `throw_allocator`) intended to be used as value and allocator types while testing exception safety in templated containers and algorithms. The allocator has additional log and debug features. The exception generated is of type `forced_exception_error`.

Definition in file [throw_allocator.h](#).

6.351.1 Detailed Description

This is a Standard C++ Library header.

Definition in file [valarray](#).

6.352 valarray_after.h File Reference

Namespaces

- namespace [std](#)

Defines

- #define **_DEFINE_EXPR_BINARY_FUNCTION**(_Fun, _UFun)

`_Result &__output, typename std::iterator_traits< _RAIter >::difference_type`
`__bound`)

6.364.1 Detailed Description

Parallelization of embarrassingly parallel execution by means of work-stealing. Work stealing is described in

R. D. Blumofe and C. E. Leiserson. Scheduling multithreaded computations by work stealing. *Journal of the ACM*, 46(5):720–748, 1999.

This file is a GNU parallel extension to the Standard C++ Library.

Definition in file [workstealing.h](#).
