1	Todo List	2
2	Module Documentation	9
2.1	Extensions	9
2.1.1	Detailed Description	10
2.2	SGI	10
2.2.1	Detailed Description	13
2.2.2	Function Documentation	14
2.3	Containers	24
2.3.1	Detailed Description	24
2.4	Sequences	25
2.4.1	Detailed Description	26
2.5	Associative	27
2.5.1	Detailed Description	27
2.6	Unordered Associative	28
2.6.1	Detailed Description	28
2.7	Diagnostics	29
2.7.1	Detailed Description	29
2.8	Concurrency	30
2.8.1	Detailed Description	30
2.9	Exceptions	31
2.9.1	Detailed Description	33
2.9.2	Typedef Documentation	33
2.9.3	Function Documentation	34
2.10	Time	37
2.10.1	Detailed Description	37
2.11	Complex Numbers	37
2.11.1	Detailed Description	42
2.11.2	Function Documentation	42
2.12	Condition Variables	55

2.12.1 Detailed Description	55
2.12.2 Enumeration Type Documentation	55
2.13 Futures	56
2.13.1 Detailed Description	58
2.13.2 Enumeration Type Documentation	58
2.13.3 Function Documentation	59
2.14 I/O	60
2.14.1 Detailed Description	63
2.14.2 Typedef Documentation	63
2.15 Memory	68
2.15.1 Detailed Description	68
2.16 Pointer Abstractions	68
2.16.1 Detailed Description	71
2.16.2 Function Documentation	71
2.17 Mutexes	73
2.17.1 Detailed Description	74
2.17.2 Function Documentation	74
2.18 Numerics	76
2.18.1 Detailed Description	77
2.19 Rational Arithmetic	77
2.19.1 Detailed Description	78
2.20 Threads	79
2.20.1 Detailed Description	79
2.21 Utilities	80
2.21.1 Detailed Description	80
2.22 Numeric Arrays	81
2.22.1 Detailed Description	91
2.22.2 Function Documentation	91
2.23 Mathematical Special Functions	116
2.23.1 Detailed Description	119
2.23.2 Function Documentation	120

2.24	Decimal Floating-Point Arithmetic	125
2.24.1	Detailed Description	125
2.25	Binder Classes	125
2.25.1	Detailed Description	126
2.25.2	Function Documentation	127
2.26	Algorithms	128
2.26.1	Detailed Description	128
2.27	Mutating	129
2.27.1	Function Documentation	132
2.28	Non-Mutating	153
2.28.1	Function Documentation	156
2.29	Sorting	170
2.29.1	Function Documentation	173
2.30	Set Operation	193
2.30.1	Detailed Description	194
2.30.2	Function Documentation	194
2.31	Binary Search	201
2.31.1	Detailed Description	202
2.31.2	Function Documentation	202
2.32	Allocators	207
2.32.1	Detailed Description	208
2.33	Atomics	208
2.33.1	Detailed Description	217
2.33.2	Define Documentation	217
2.33.3	Typedef Documentation	218
2.33.4	Enumeration Type Documentation	224
2.33.5	Function Documentation	224
2.34	Hashes	225
2.34.1	Detailed Description	225
2.35	Locales	225
2.35.1	Detailed Description	228

2.36	Random Number Generation	228
2.36.1	Detailed Description	229
2.36.2	Function Documentation	229
2.37	Regular Expressions	229
2.37.1	Detailed Description	235
2.37.2	Typedef Documentation	235
2.37.3	Function Documentation	237
2.38	Function Objects	268
2.38.1	Detailed Description	269
2.38.2	Function Documentation	270
2.39	Arithmetic Classes	270
2.39.1	Detailed Description	271
2.40	Comparison Classes	271
2.40.1	Detailed Description	272
2.41	Boolean Operations Classes	272
2.41.1	Detailed Description	272
2.42	Negators	273
2.42.1	Detailed Description	273
2.42.2	Function Documentation	274
2.43	Adaptors for pointers to functions	274
2.43.1	Detailed Description	275
2.43.2	Function Documentation	275
2.44	Adaptors for pointers to members	276
2.44.1	Detailed Description	277
2.45	Heap	277
2.45.1	Function Documentation	279
2.46	Iterators	284
2.46.1	Detailed Description	288
2.46.2	Function Documentation	288
2.47	Iterator Tags	291
2.47.1	Detailed Description	292

2.48	Strings	292
2.48.1	Typedef Documentation	293
2.49	Policy-Based Data Structures	293
2.49.1	Detailed Description	294
2.50	Metaprogramming	294
2.50.1	Define Documentation	300
2.50.2	Typedef Documentation	300
2.51	Random Number Generators	301
2.51.1	Detailed Description	303
2.51.2	Typedef Documentation	303
2.51.3	Function Documentation	304
2.52	Random Number Distributions	308
2.53	Uniform Distributions	308
2.53.1	Function Documentation	309
2.54	Normal Distributions	312
2.54.1	Function Documentation	314
2.55	Bernoulli Distributions	317
2.55.1	Function Documentation	318
2.56	Poisson Distributions	322
2.56.1	Function Documentation	324
2.57	Random Number Utilities	330

5.32.1	Detailed Description	923
5.33	<code>__gnu_cxx::condition_base</code> Struct Reference	923
5.33.1	Detailed Description	923
5.34	<code>__gnu_cxx::constant_binary_fun< _Result, _Arg1, _Arg2 ></code> Struct Template Reference	924
5.34.1	Detailed Description	924
5.35	<code>__gnu_cxx::constant_unary_fun< _Result, _Argument ></code> Struct Template Reference	924
5.35.1	Detailed Description	925
5.36	<code>__gnu_cxx::constant_void_fun< _Result ></code> Struct Template Reference	925
5.36.1	Detailed Description	926
5.37	<code>__gnu_cxx::debug_allocator< _Alloc ></code> Class Template Reference . .	926
5.37.1	Detailed Description	927
5.38	<code>__gnu_cxx::enc_filebuf< _CharT ></code> Class Template Reference	927
5.38.1	Detailed Description	931
5.38.2	Member Typedef Documentation	931
5.38.3	Member Function Documentation	932
5.38.4	Member Data Documentation	950
5.39	<code>__gnu_cxx::encoding_char_traits< _CharT ></code> Struct Template Reference	955
5.39.1	Detailed Description	956
5.40	<code>__gnu_cxx::encoding_state</code> Class Reference	957
5.40.1	Detailed Description	958
5.41	<code>__gnu_cxx::forced_error</code> Struct Reference	958
5.41.1	Detailed Description	958
5.41.2	Member Function Documentation	959
5.42	<code>__gnu_cxx::free_list</code> Class Reference	959

5.42.1 Detailed Description	960
5.42.2 Member Function Documentation	960
5.43 <code>__gnu_cxx::hash_map< _Key, _Tp, _HashFn, _EqualKey, _Alloc ></code> Class Template Reference	961
5.43.1 Detailed Description	963
5.44 <code>__gnu_cxx::hash_multimap< _Key, _Tp, _HashFn, _EqualKey, _-</code> <code>Alloc ></code> Class Template Reference	963
5.44.1 Detailed Description	965
5.45 <code>__gnu_cxx::hash_multiset< _Value, _HashFcn, _EqualKey, _Alloc ></code> Class Template Reference	965
5.45.1 Detailed Description	967
5.46 <code>__gnu_cxx::hash_set< _Value, _HashFcn, _EqualKey, _Alloc ></code> Class Template Reference	967
5.46.1 Detailed Description	969
5.47 <code>__gnu_cxx::limit_condition</code> Struct Reference	969
5.47.1 Detailed Description	970
5.48 <code>__gnu_cxx::limit_condition::always_adjustor</code> Struct Reference	970
5.48.1 Detailed Description	970
5.49 <code>__gnu_cxx::limit_condition::limit_adjustor</code> Struct Reference	970
5.49.1 Detailed Description	971
5.50 <code>__gnu_cxx::limit_condition::never_adjustor</code> Struct Reference	971
5.50.1 Detailed Description	971
5.51 <code>__gnu_cxx::malloc_allocator< _Tp ></code> Class Template Reference	971
5.51.1 Detailed Description	972
5.52 <code>__gnu_cxx::new_allocator< _Tp ></code> Class Template Reference	973
5.52.1 Detailed Description	974
5.53 <code>__gnu_cxx::project1st< _Arg1, _Arg2 ></code> Struct Template Reference	974
5.53.1 Detailed Description	975
5.53.2 Member Typedef Documentation	975
5.54 <code>__gnu_cxx::project2nd< _Arg1, _Arg2 ></code> Struct Template Reference	976
5.54.1 Detailed Description	976
5.54.2 Member Typedef Documentation	976

5.55	<code>__gnu_cxx::random_condition</code> Struct Reference	977
5.55.1	Detailed Description	978
5.56	<code>__gnu_cxx::random_condition::always_adjustor</code> Struct Reference . . .	978
5.56.1	Detailed Description	978
5.57	<code>__gnu_cxx::random_condition::group_adjustor</code> Struct Reference . . .	978
5.57.1	Detailed Description	979
5.58	<code>__gnu_cxx::random_condition::never_adjustor</code> Struct Reference . . .	979
5.58.1	Detailed Description	979
5.59	<code>__gnu_cxx::rb_tree< _Key, _Value, _KeyOfValue, _Compare, _Alloc ></code> Struct Template Reference	979
5.59.1	Detailed Description	982
5.60	<code>__gnu_cxx::recursive_init_error</code> Class Reference	983
5.60.1	Detailed Description	983
5.60.2	Member Function Documentation	983
5.61	<code>__gnu_cxx::rope< _CharT, _Alloc ></code> Class Template Reference . . .	984
5.61.1	Detailed Description	990
5.62	<code>__gnu_cxx::select1st< _Pair ></code> Struct Template Reference	990
5.62.1	Detailed Description	991
5.62.2	Member Typedef Documentation	991
5.63	<code>__gnu_cxx::select2nd< _Pair ></code> Struct Template Reference	991
5.63.1	Detailed Description	992
5.63.2	Member Typedef Documentation	992
5.64	<code>__gnu_cxx::slist< _Tp, _Alloc ></code> Class Template Reference	992
5.64.1	Detailed Description	995
5.65	<code>__gnu_cxx::stdio_filebuf< _CharT, _Traits ></code> Class Template Reference	995
5.65.1	Detailed Description	1000
5.65.2	Member Typedef Documentation	1000
5.65.3	Constructor & Destructor Documentation	1001
5.65.4	Member Function Documentation	1003
5.65.5	Member Data Documentation	1026
5.66	<code>__gnu_cxx::stdio_sync_filebuf< _CharT, _Traits ></code> Class Template Reference	1033

5.66.1 Detailed Description	1036
5.66.2 Member Typedef Documentation	1037
5.66.3 Member Function Documentation	1038
5.66.4 Member Data Documentation	1057
5.67 <code>__gnu_cxx::subtractive_rng</code> Class Reference	1061

1 Todo List

Member `__glibcxx_check_insert_range(_Position, _First, _Last)` We would like to be able to check for noninterference of `_Position` and the range `[_First, _Last)`, but that can't (in general) be done.

Member `__glibcxx_check_insert_range_after(_Position, _First, _Last)` We would like to be able to check for noninterference of `_Position` and the range `[_First, _Last)`, but that can't (in general) be done.

Member `__gnu_cxx::distance(_InputIterator __first, _InputIterator __last, _Distance &__n)`
Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html

Class `__gnu_cxx::hash_map<_Key, _Tp, _HashFn, _EqualKey, _Alloc>`
Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html

Class `__gnu_cxx::hash_multimap<_Key, _Tp, _HashFn, _EqualKey, _Alloc>`
Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html

Class `__gnu_cxx::hash_multiset<_Value, _HashFcn, _EqualKey, _Alloc>`
Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html

Class `__gnu_cxx::hash_set<_Value, _HashFcn, _EqualKey, _Alloc>` Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html

Member `__gnu_cxx::iota(_ForwardIter __first, _ForwardIter __last, _Tp __value)`
Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html

Member `__gnu_cxx::is_heap(_RandomAccessIterator __first, _RandomAccessIterator __last)`
Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html

Member [`__gnu_cxx::is_heap`](#)(`_RandomAccessIterator __first`, `_RandomAccessIterator __last`, `_StrictWeakOrdering __comp`)

Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_10.html

Member [`__gnu_cxx::is_sorted`](#)(`_ForwardIterator __first`, `_ForwardIterator __last`)

Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_10.html

Member [`__gnu_cxx::is_sorted`](#)(`_ForwardIterator __first`, `_ForwardIterator __last`, `_StrictWeakOrdering __comp`)

Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_10.html

Member [`__gnu_cxx::power`](#)(`_Tp __x`, `_Integer __n`, `_MonoidOperation __monoid_op`)

Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_10.html

Member [`__gnu_cxx::power`](#)(`_Tp __x`, `_Integer __n`) Needs documentation! See

http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_10.html

Member [`__gnu_cxx::random_sample`](#)(`_InputIterator __first`, `_InputIterator __last`, `_RandomAccessIterator __out`)

Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_10.html

Member [`__gnu_cxx::random_sample`](#)(`_InputIterator __first`, `_InputIterator __last`, `_RandomAccessIterator __out`)

Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_10.html

Member [`__gnu_cxx::random_sample_n`](#)(`_ForwardIterator __first`, `_ForwardIterator __last`, `_OutputIterator __out`)

Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_10.html

Member [`__gnu_cxx::random_sample_n`](#)(`_ForwardIterator __first`, `_ForwardIterator __last`, `_OutputIterator __out`)

Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_10.html

Class `__gnu_cxx::rb_tree<_Key, _Value, _KeyOfValue, _Compare, _Alloc>`

Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html

Class `__gnu_cxx::rope<_CharT, _Alloc>` Needs documentation! See

http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html

Class `__gnu_cxx::slist<_Tp, _Alloc>` Needs documentation! See

http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html

Member `__gnu_debug::_Safe_iterator::operator->() const` Make this correct

w.r.t. iterators that return proxies

Use `addressof()` instead of `&` operator

Class `std::basic_string<_CharT, _Traits, _Alloc>` Needs documentation! See

http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html

Member `std::match_results::format(_Out_iter __out, const string_type &__fmt, regex_constants::match_flag_type __flags=regex_constants::match_default)`

Implement this function.

Member `std::match_results::format(const string_type &__fmt, regex_constants::match_flag_type __flags=regex_constants::match_default)`

Implement this function.

Member `std::operator==(const match_results<_Bi_iter, _Allocator> &__m1, const match_results<_Bi_iter, _Allocator> &__m2)`

Implement this function.

Member `std::regex_iterator::operator!=(const regex_iterator &__rhs)`

Implement this function.

Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html

Member `std::regex_iterator::operator*()` Implement this function.

Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html

Member **`std::regex_iterator::operator++()`** Implement this function.

Needs documentation! See [http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentati
style.html](http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentati
style.html)

Member **`std::regex_iterator::operator++(int)`** Implement this function.

Needs documentation! See [http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentati
style.html](http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentati
style.html)

Member **`std::regex_iterator::operator->()`** Implement this function.

Needs documentation! See [http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentati
style.html](http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentati
style.html)

Member **`std::regex_iterator::operator=(const regex_iterator &__rhs)`**

Implement this function.

Needs documentation! See [http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentati
style.html](http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentati
style.html)

Member **`std::regex_iterator::operator==(const regex_iterator &__rhs)`**

Implement this function.

Needs documentation! See [http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentati
style.html](http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentati
style.html)

Member **`std::regex_iterator::regex_iterator()`** Implement this function.

Needs documentation! See [http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentati
style.html](http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentati
style.html)

Member **`std::regex_iterator::regex_iterator(_Bi_iter __a, _Bi_iter __b, const regex_type &__re, regex_constants::`**

Implement this function.

Needs documentation! See [http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentati
style.html](http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentati
style.html)

Member **`std::regex_iterator::regex_iterator(const regex_iterator &__rhs)`**

Implement this function.

Needs documentation! See [http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentati
style.html](http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentati
style.html)

Member **std::regex_match**(_Bi_iter __s, _Bi_iter __e, match_results< _Bi_iter, _Allocator > &__m, const basic_regex< _Ch_type, _Rx_traits > &__re, const basic_string< _Ch_type, _String_allocator > &__s, const basic_regex_constants< _Ch_type, _Rx_traits > &__c)
Implement this function.

Member **std::regex_replace**(_Out_iter __out, _Bi_iter __first, _Bi_iter __last, const basic_regex< _Ch_type, _Rx_traits > &__re, const basic_string< _Ch_type, _String_allocator > &__s, const basic_regex_constants< _Ch_type, _Rx_traits > &__c)
Needs documentation! See <http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentati.html>
style.html
Implement this function.
Implement this function.

Member **std::regex_replace**(const basic_string< _Ch_type > &__s, const basic_regex< _Ch_type, _Rx_traits > &__re, const basic_string< _Ch_type, _String_allocator > &__s, const basic_regex_constants< _Ch_type, _Rx_traits > &__c)
Needs documentation! See <http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentati.html>
style.html

Member **std::regex_search**(_Bi_iter __first, _Bi_iter __last, const basic_regex< _Ch_type, _Rx_traits > &__re, match_results< _Bi_iter, _Allocator > &__m, const basic_string< _Ch_type, _String_allocator > &__s, const basic_regex_constants< _Ch_type, _Rx_traits > &__c)

2 Module Documentation

2.1 Extensions

Collaboration diagram for Extensions:

Classes

- class `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>`
*Template class `__versa_string`.
 Data structure managing sequences of characters and character-like objects.*

Modules

- [SGI](#)
- [Policy-Based Data Structures](#)

2.1.1 Detailed Description

Components generally useful that are not part of any standard.

2.2 SGI

Collaboration diagram for SGI:

Classes

- class `__gnu_cxx::binary_compose< _Operation1, _Operation2, _Operation3 >`
An SGI extension .
- struct `__gnu_cxx::constant_binary_fun< _Result, _Arg1, _Arg2 >`
An SGI extension .
- struct `__gnu_cxx::constant_unary_fun< _Result, _Argument >`
An SGI extension .
- struct `__gnu_cxx::constant_void_fun< _Result >`
An SGI extension .
- class `__gnu_cxx::hash_map< _Key, _Tp, _HashFn, _EqualKey, _Alloc >`
- class `__gnu_cxx::hash_multimap< _Key, _Tp, _HashFn, _EqualKey, _Alloc >`
- class `__gnu_cxx::hash_multiset< _Value, _HashFcn, _EqualKey, _Alloc >`
- class `__gnu_cxx::hash_set< _Value, _HashFcn, _EqualKey, _Alloc >`
- struct `__gnu_cxx::project1st< _Arg1, _Arg2 >`
An SGI extension .
- struct `__gnu_cxx::project2nd< _Arg1, _Arg2 >`
An SGI extension .

- struct `__gnu_cxx::rb_tree< _Key, _Value, _KeyOfValue, _Compare, _Alloc >`
- class `__gnu_cxx::rope< _CharT, _Alloc >`
- struct `__gnu_cxx::select1st< _Pair >`
An SGI extension .
- struct `__gnu_cxx::select2nd< _Pair >`
An SGI extension .
- class `__gnu_cxx::slist< _Tp, _Alloc >`
- class `__gnu_cxx::subtractive_rng`
- struct `__gnu_cxx::temporary_buffer< _ForwardIterator, _Tp >`
- class `__gnu_cxx::unary_compose< _Operation1, _Operation2 >`
An SGI extension .

Functions

- template<typename _Tp >
const _Tp & `__gnu_cxx::__median` (const _Tp &__a, const _Tp &__b, const _Tp &__c)
- template<typename _Tp, typename _Compare >

2.2.1 Detailed Description

Because libstdc++ based its implementation of the STL subsections of the library on the SGI 3.3 implementation, we inherited their extensions as well.

They are additionally documented in the [online documentation](#), a copy of which is also shipped with the library source code (in `.../docs/html/documentation.html`). You can also read the documentation [on SGI's site](#), which is still running even though the code is not maintained.

NB that the following notes are pulled from various comments all over the place, so they may seem stilted.

The `identity_element` functions are not part of the C++ standard; SGI provided them as an extension. Its argument is an operation, and its return value is the identity element for that operation. It is overloaded for addition and multiplication, and you can overload it for your own nefarious operations.

As an extension to the binders, SGI provided composition functors and wrapper functions to aid in their creation. The `unary_compose` functor is constructed from two functions/functors, `f` and `g`. Calling `operator()` with a single argument `x` returns `f(g(x))`. The function `compose1` takes the two functions and constructs a `unary_compose` variable for you.

`binary_compose` is constructed from three functors, `f`, `g1`, and `g2`. Its `operator()` returns `f(g1(x),g2(x))`. The function takes `f`, `g1`, and `g2`, and constructs the `binary_compose` instance for you. For example, if `f` returns an `int`, then

```
int answer = (compose2(f,g1,g2))(x);
```

is equivalent to

```
int temp1 = g1(x);
int temp2 = g2(x);
int answer = f(temp1,temp2);
```

But the first form is more compact, and can be passed around as a functor to other algorithms.

As an extension, SGI provided a functor called `identity`. When a functor is required but no operations are desired, this can be used as a pass-through. Its `operator()` returns its argument unchanged.

`select1st` and `select2nd` are extensions provided by SGI. Their `operator()`s take a `std::pair` as an argument, and return either the first member or the second member, respectively. They can be used (especially with the composition functors) to *strip* data from a sequence before performing the remainder of an algorithm.

The `operator()` of the `project1st` functor takes two arbitrary arguments and returns the first one, while `project2nd` returns the second one. They are extensions provided by SGI.

These three functors are each constructed from a single arbitrary variable/value. Later, their `operator()`s completely ignore any arguments passed, and return the stored value.

- `constant_void_fun`'s `operator()` takes no arguments
- `constant_unary_fun`'s `operator()` takes one argument (ignored)
- `constant_binary_fun`'s `operator()` takes two arguments (ignored)

The helper creator functions `constant0`, `constant1`, and `constant2` each take a *result* argument and construct variables of the appropriate functor type.

2.2.2 Function Documentation

2.2.2.1 `template<typename _Tp> const _Tp& __gnu_cxx::__median (const _Tp & __a, const _Tp & __b, const _Tp & __c)`

Find the median of three values.

Parameters

- a* A value.
- b* A value.
- c* A value.

Returns

One of *a*, *b* or *c*.

If $\{1, m, n\}$ is some convolution of $\{a, b, c\}$ such that $1 \leq m \leq n$ then the value returned will be *m*. This is an SGI extension.

Definition at line 539 of file `ext/algorithm`.

2.2.2.2 `template<typename _Tp , typename _Compare > const _Tp&
 __gnu_cxx::__median (const _Tp & __a, const _Tp & __b, const _Tp
 & __c, _Compare __comp)`

Find the median of three values using a predicate for comparison.

Parameters

a A value.
b A value.
c A value.
comp A binary predicate.

Returns

One of *a*, *b* or *c*.

If { *l*, *m*, *n* } is some convolution of { *a*, *b*, *c* } such that `comp (l, m)` and `comp (m, n)` are both true then the value returned will be *m*. This is an SGI extension.

Definition at line 573 of file `ext/algorithm`.

2.2.2.3 `template<size_t _Nb> size_t std::bitset< _Nb >::_Find_first () const
 [inline, inherited]`

Finds the index of the first "on" bit.

Returns

The index of the first bit set, or `size()` if not found.

See also

`_Find_next`

Definition at line 1327 of file `bitset`.

2.2.2.4 `template<size_t _Nb> size_t std::bitset< _Nb >::_Find_next (size_t
 __prev) const [inline, inherited]`

Finds the index of the next "on" bit after *prev*.

Returns

The index of the next bit set, or [size\(\)](#) if not found.

Parameters

prev Where to start searching.

See also

[_Find_first](#)

Definition at line 1338 of file `bitset`.

2.2.2.5 `template<size_t _Nb> bitset<_Nb>& std::bitset< _Nb
>::_Unchecked_flip (size_t __pos) [inline, inherited]`

These versions of single-bit set, reset, flip, and test are extensions from the SGI version. They do no range checking.

Definition at line 1010 of file `bitset`.

2.2.2.6 `template<size_t _Nb> bitset<_Nb>& std::bitset< _Nb
>::_Unchecked_reset (size_t __pos) [inline, inherited]`

These versions of single-bit set, reset, flip, and test are extensions from the SGI version. They do no range checking.

Definition at line 1003 of file `bitset`.

2.2.2.7 `template<size_t _Nb> bitset<_Nb>& std::bitset< _Nb
>::_Unchecked_set (size_t __pos) [inline, inherited]`

These versions of single-bit set, reset, flip, and test are extensions from the SGI version. They do no range checking.

Definition at line 986 of file `bitset`.

2.2.2.8 `template<size_t _Nb> bitset<_Nb>& std::bitset< _Nb
>::_Unchecked_set (size_t __pos, int __val) [inline,
inherited]`

These versions of single-bit set, reset, flip, and test are extensions from the SGI version. They do no range checking.

Definition at line 993 of file `bitset`.

2.2.2.9 `template<size_t _Nb> bool std::bitset<_Nb>::_Unchecked_test (`
`size_t __pos) const [inline, inherited]`

These versions of single-bit set, reset, flip, and test are extensions from the SGI version. They do no range checking.

Definition at line 1017 of file `bitset`.

2.2.2.10 `template<class _Operation1 , class _Operation2 >`
`unary_compose<_Operation1, _Operation2> __gnu_cxx::compose1`
`(const _Operation1 & __fn1, const _Operation2 & __fn2)`
`[inline]`

An [SGI extension](#) .

Definition at line 146 of file `ext/functional`.

2.2.2.11 `template<class _Operation1 , class _Operation2 , class _Operation3`
`> binary_compose<_Operation1, _Operation2, _Operation3>`
`__gnu_cxx::compose2 (const _Operation1 & __fn1, const`
`_Operation2 & __fn2, const _Operation3 & __fn3) [inline]`

An [SGI extension](#) .

Definition at line 173 of file `ext/functional`.

2.2.2.12 `template<class _Result > constant_void_fun<_Result>`
`__gnu_cxx::constant0 (const _Result & __val) [inline]`

An [SGI extension](#) .

Definition at line 327 of file `ext/functional`.

2.2.2.13 `template<class _Result > constant_unary_fun<_Result, _Result>`
`__gnu_cxx::constant1 (const _Result & __val) [inline]`

An [SGI extension](#) .

Definition at line 333 of file `ext/functional`.

2.2.2.14 `template<class _Result > constant_binary_fun<_Result, _Result, _Result> __gnu_cxx::constant2 (const _Result & __val)
[inline]`

An [SGI extension](#).

Definition at line 339 of file ext/functional.

2.2.2.15 `template<typename _InputIterator , typename _Size , typename _OutputIterator > pair<_InputIterator, _OutputIterator>
__gnu_cxx::copy_n (_InputIterator __first, _Size __count,
_OutputIterator __result) [inline]`

Copies the range [first,first+count) into [result,result+count).

Parameters

first An input iterator.

count The number of elements to copy.

result An output iterator.

Returns

A [std::pair](#) composed of first+count and result+count.

This is an SGI extension. This inline function will boil down to a call to `memmove` whenever possible. Failing that, if random access iterators are passed, then the loop count will be known (and therefore a candidate for compiler optimizations such as unrolling).

Definition at line 121 of file ext/algorithm.

References `std::__iterator_category()`.

2.2.2.16 `template<typename _InputIterator , typename _Distance > void
__gnu_cxx::distance (_InputIterator __first, _InputIterator __last,
_Distance & __n) [inline]`

This is an SGI extension.

Todo

Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html

Definition at line 105 of file ext/iterator.

References `std::__iterator_category()`.

Referenced by `__gnu_parallel::multiseq_partition()`, `__gnu_parallel::multiseq_selection()`, and `__gnu_cxx::random_sample_n()`.

2.2.2.17 `template<class _Tp > _Tp __gnu_cxx::identity_element (std::plus<_Tp >) [inline]`

An [SGI extension](#) .

Definition at line 88 of file ext/functional.

2.2.2.18 `template<class _Tp > _Tp __gnu_cxx::identity_element (std::multiplies<_Tp >) [inline]`

An [SGI extension](#) .

Definition at line 94 of file ext/functional.

2.2.2.19 `template<typename _ForwardIter , typename _Tp > void
__gnu_cxx::iota (_ForwardIter __first, _ForwardIter __last, _Tp
__value)`

This is an SGI extension.

Todo

Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html

Definition at line 134 of file ext/numeric.

2.2.2.20 `template<typename _RandomAccessIterator , typename
_StrictWeakOrdering > bool __gnu_cxx::is_heap (
_RandomAccessIterator __first, _RandomAccessIterator __last,
_StrictWeakOrdering __comp) [inline]`

This is an SGI extension.

Todo

Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html

Definition at line 455 of file ext/algorithm.

```
2.2.2.21  template<typename _RandomAccessIterator > bool
           __gnu_cxx::is_heap ( _RandomAccessIterator __first,
                               _RandomAccessIterator __last ) [inline]
```

This is an SGI extension.

Todo

Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html

Definition at line 436 of file ext/algorithm.

```
2.2.2.22  template<typename _ForwardIterator > bool __gnu_cxx::is_sorted (
           _ForwardIterator __first, _ForwardIterator __last )
```

This is an SGI extension.

Todo

Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html

Definition at line 480 of file ext/algorithm.

```
2.2.2.23  template<typename _ForwardIterator , typename
           _StrictWeakOrdering > bool __gnu_cxx::is_sorted (
           _ForwardIterator __first, _ForwardIterator __last,
           _StrictWeakOrdering __comp )
```

This is an SGI extension.

Todo

Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html

Definition at line 505 of file ext/algorithm.

2.2.2.24 `template<typename _InputIterator1, typename _InputIterator2 >
 int __gnu_cxx::lexicographical_compare_3way (_InputIterator1
 __first1, _InputIterator1 __last1, _InputIterator2 __first2,
 _InputIterator2 __last2)`

memcmp on steroids.

Parameters

first1 An input iterator.

last1 An input iterator.

first2 An input iterator.

last2 An input iterator.

Returns

An int, as with memcmp.

The return value will be less than zero if the first range is *lexigraphically less than* the second, greater than zero if the second range is *lexigraphically less than* the first, and zero otherwise. This is an SGI extension.

Definition at line 202 of file ext/algorithm.

2.2.2.25 `template<typename _Tp, typename _Integer > _Tp
 __gnu_cxx::power (_Tp __x, _Integer __n) [inline]`

This is an SGI extension.

Todo

Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html

Definition at line 123 of file ext/numeric.

2.2.2.26 `template<typename _Tp, typename _Integer, typename
 _MonoidOperation > _Tp __gnu_cxx::power (_Tp __x, _Integer
 __n, _MonoidOperation __monoid_op) [inline]`

This is an SGI extension.

Todo

Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html

Definition at line 113 of file ext/numeric.

```
2.2.2.27 template<typename _InputIterator , typename
    _RandomAccessIterator , typename _RandomNumberGenerator >
    _RandomAccessIterator __gnu_cxx::random_sample ( _InputIterator

Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html

Definition at line 302 of file ext/algorithm.

References `__gnu_cxx::distance()`, and `std::min()`.

```
2.2.2.30  template<typename _ForwardIterator , typename _OutputIterator ,
            typename _Distance > _OutputIterator __gnu_cxx::random_sample_n
            ( _ForwardIterator __first, _ForwardIterator __last,
              _OutputIterator __out, const _Distance __n )
```

This is an SGI extension.

Todo

Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html

Definition at line 268 of file ext/algorithm.

References `__gnu_cxx::distance()`, and `std::min()`.

```
2.2.2.31  template<typename _InputIter , typename _Size ,
            typename _ForwardIter > pair<_InputIter, _ForwardIter>
            __gnu_cxx::uninitialized_copy_n ( _InputIter __first, _Size __count,
              _ForwardIter __result ) [inline]
```

Copies the range `[first,last)` into `result`.

Parameters

first An input iterator.

last An input iterator.

result An output iterator.

Returns

`result + (first - last)`

Like `copy()`, but does not require an initialized output range.

Definition at line 123 of file ext/memory.

References `std::__iterator_category()`.

2.3 Containers

Collaboration diagram for Containers:

Classes

- class `std::bitset<_Nb>`

The `bitset` class represents a fixed-size sequence of bits.

Modules

- `Sequences`
- `Associative`
- `Unordered Associative`

2.3.1 Detailed Description

Containers are collections of objects.

A container may hold any type which meets certain requirements, but the type of contained object is chosen at compile time, and all objects in a given container must be of the same type. (Polymorphism is possible by declaring a container of pointers to a base class and then populating it with pointers to instances of derived classes. Variant value types such as the `any` class from `Boost` can also be used.

All contained types must be `Assignable` and `CopyConstructible`. Specific containers may place additional requirements on the types of their contained objects.

Containers manage memory allocation and deallocation themselves when storing your objects. The objects are destroyed when the container is itself destroyed. Note that if you are storing pointers in a container, `delete` is *not* automatically called on the pointers before destroying them.

All containers must meet certain requirements, summarized in [tables](#).

The standard containers are further refined into [Sequences](#) and [Associative Containers](#). [Unordered Associative Containers](#).

2.4 Sequences

Collaboration diagram for Sequences:

Classes

- struct `std::array<_Tp, _Nm>`
A standard container for storing a fixed size sequence of elements.
- class `std::basic_string<_CharT, _Traits, _Alloc>`
Managing sequences of characters and character-like objects.
- class `std::deque<_Tp, _Alloc>`
A standard container using fixed-size memory allocation and constant-time manipulation of elements at either end.
- class `std::forward_list<_Tp, _Alloc>`
A standard container with linear time access to elements, and fixed time insertion/deletion at any point in the sequence.
- class `std::list<_Tp, _Alloc>`
A standard container with linear time access to elements, and fixed time insertion/deletion at any point in the sequence.

- class `std::priority_queue<_Tp, _Sequence, _Compare>`
A standard container automatically sorting its contents.
- class `std::queue<_Tp, _Sequence>`
A standard container giving FIFO behavior.
- class `std::stack<_Tp, _Sequence>`
A standard container giving FILO behavior.
- class `std::vector<_Tp, _Alloc>`
A standard container which offers fixed time access to individual elements in any order.
- class `std::vector<bool, _Alloc>`
A specialization of vector for booleans which offers fixed time access to individual elements in any order.

2.4.1 Detailed Description

Sequences arrange a collection of objects into a strictly linear order.

The differences between sequences are usually due to one or both of the following:

- memory management
- algorithmic complexity

As an example of the first case, `vector` is required to use a contiguous memory layout, while other sequences such as `deque` are not.

The prime reason for choosing one sequence over another should be based on the second category of differences, algorithmic complexity. For example, if you need to perform many inserts and removals from the middle of a sequence, `list` would be ideal. But if you need to perform constant-time access to random elements of the sequence, then `list` should not be used.

All sequences must meet certain requirements, summarized in [tables](#).

2.5 Associative

Collaboration diagram for Associative:

Classes

- class `std::map< _Key, _Tp, _Compare, _Alloc >`
A standard container made up of (key,value) pairs, which can be retrieved based on a key, in logarithmic time.
- class `std::multimap< _Key, _Tp, _Compare, _Alloc >`
A standard container made up of (key,value) pairs, which can be retrieved based on a key, in logarithmic time.
- class `std::multiset< _Key, _Compare, _Alloc >`
A standard container made up of elements, which can be retrieved in logarithmic time.
- class `std::set< _Key, _Compare, _Alloc >`
A standard container made up of unique keys, which can be retrieved in logarithmic time.

2.5.1 Detailed Description

Associative containers allow fast retrieval of data based on keys.

Each container type is parameterized on a `Key` type, and an ordering relation used to sort the elements of the container.

All associative containers must meet certain requirements, summarized in [tables](#).

2.6 Unordered Associative

Collaboration diagram for Unordered Associative:

Classes

- class `std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >`
A standard container composed of unique keys (containing at most one of each key value) that associates values of another type with the keys.
- class `std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >`
A standard container composed of equivalent keys (possibly containing multiple of each key value) that associates values of another type with the keys.
- class `std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >`
A standard container composed of equivalent keys (possibly containing multiple of each key value) in which the elements' keys are the elements themselves.
- class `std::unordered_set< _Value, _Hash, _Pred, _Alloc >`
A standard container composed of unique keys (containing at most one of each key value) in which the elements' keys are the elements themselves.

2.6.1 Detailed Description

Unordered associative containers allow fast retrieval of data based on keys.

Each container type is parameterized on a `Key` type, a `Hash` type providing a hashing functor, and an ordering relation used to sort the elements of the container.

All unordered associative containers must meet certain requirements, summarized in [tables](#).

2.7 Diagnostics

Collaboration diagram for Diagnostics:

Modules

- [Exceptions](#)

2.7.1 Detailed Description

Components for error handling, reporting, and diagnostic operations.

2.8 Concurrency

Collaboration diagram for Concurrency:

Modules

- [Condition Variables](#)
- [Futures](#)
- [Mutexes](#)
- [Threads](#)

2.8.1 Detailed Description

Components for concurrent operations, including threads, mutexes, and condition variables.

2.9 Exceptions

Collaboration diagram for Exceptions:

Classes

- class `__cxxabiv1::__forced_unwind`
*Thrown as part of forced unwinding.
 A magic placeholder class that can be caught by reference to recognize forced unwinding.*
- struct `__gnu_cxx::forced_error`
Thrown by exception safety machinery.
- class `__gnu_cxx::recursive_init_error`
*Exception thrown by `__cxa_guard_acquire`.
 6.7[stmt.dcl]/4: If control re-enters the declaration (recursively) while the object is being initialized, the behavior is undefined.*
- class `std::__exception_ptr::exception_ptr`
An opaque pointer to an arbitrary exception.
- class `std::bad_alloc`
*Exception possibly thrown by `new`.
`bad_alloc` (or classes derived from it) is used to report allocation errors from the throwing forms of `new`.*
- class `std::bad_cast`
*Thrown during incorrect typecasting.
 If you attempt an invalid `dynamic_cast` expression, an instance of this class (or something derived from this class) is thrown.*
- class `std::bad_exception`
- class `std::bad_function_call`

Exception class thrown when class template function's operator() is called with an empty target.

- class `std::bad_typeid`
Thrown when a NULL pointer in a typeid expression is used.
- class `std::bad_weak_ptr`
Exception possibly thrown by `shared_ptr`.
- class `std::domain_error`
- class `std::exception`
Base class for all library exceptions.
- class `std::future_error`
Exception type thrown by futures.
- class `std::invalid_argument`
- class `std::ios_base::failure`
*These are thrown to indicate problems with io.
27.4.2.1.1 Class `ios_base::failure`.*
- class `std::length_error`
- class `std::logic_error`
One of two subclasses of exception.
- class `std::nested_exception`
Exception class with `exception_ptr` data member.
- class `std::out_of_range`
- class `std::overflow_error`
- class `std::range_error`
- class `std::regex_error`
*A regular expression exception class.
The regular expression library throws objects of this class on error.*
- class `std::runtime_error`
One of two subclasses of exception.
- class `std::system_error`
Thrown to indicate error code of underlying system.
- class `std::underflow_error`

Typedefs

- typedef void(* [std::terminate_handler](#))()
- typedef void(* [std::unexpected_handler](#))()

Functions

- template<typename _Ex >
const nested_exception * [std::__get_nested_exception](#) (const _Ex &__ex)
- template<typename _Ex >
void [std::__throw_with_nested](#) (_Ex &&, const nested_exception *__ex) __attribute__((__noreturn__))
- template<typename _Ex >
void [std::__throw_with_nested](#) (_Ex &&, ...) __attribute__((__noreturn__))
- void [__gnu_cxx::__verbose_terminate_handler](#) ()
- template<typename _Ex >
exception_ptr [std::copy_exception](#) (_Ex __ex) throw ()
- exception_ptr [std::current_exception](#) () throw ()
- template<typename _Ex >
exception_ptr [std::make_exception_ptr](#) (_Ex __ex) throw ()
- void [std::rethrow_exception](#) (exception_ptr) __attribute__((__noreturn__))
- void [std::rethrow_if_nested](#) (const nested_exception &__ex)
- template<typename _Ex >
void [std::rethrow_if_nested](#) (const _Ex &__ex)
- terminate_handler [std::set_terminate](#) (terminate_handler) throw ()
- unexpected_handler [std::set_unexpected](#) (unexpected_handler) throw ()
- void [std::terminate](#) () __attribute__((__noreturn__)) throw ()
- template<typename _Ex >
void [std::throw_with_nested](#) (_Ex __ex)
- bool [std::uncaught_exception](#) () __attribute__((__pure__)) throw ()
- void [std::unexpected](#) () __attribute__((__noreturn__))

2.9.1 Detailed Description

Classes and functions for reporting errors via exception classes.

2.9.2 Typedef Documentation

2.9.2.1 typedef void(* [std::terminate_handler](#))()

If you write a replacement terminate handler, it must be of this type.

Definition at line 88 of file exception.

2.9.2.2 typedef void(* std::unexpected_handler)()

If you write a replacement unexpected handler, it must be of this type.

Definition at line 91 of file exception.

2.9.3 Function Documentation

2.9.3.1 void __gnu_cxx::__verbose_terminate_handler ()

A replacement for the standard terminate_handler which prints more information about the terminating exception (if any) on stderr.

Call

```
std::set_terminate(__gnu_cxx::__verbose_terminate_handler)
```

to use. For more info, see <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt02ch06s02>.

In 3.4 and later, this is on by default.

2.9.3.2 template<typename _Ex > exception_ptr std::copy_exception (_Ex __ex) throw ()

Obtain an exception_ptr pointing to a copy of the supplied object.

Definition at line 162 of file exception_ptr.h.

References std::current_exception().

2.9.3.3 exception_ptr std::current_exception () throw ()

Obtain an exception_ptr to the currently handled exception. If there is none, or the currently handled exception is foreign, return the null value.

Referenced by std::copy_exception().

2.9.3.4 template<typename _Ex > exception_ptr std::make_exception_ptr (_Ex __ex) throw ()

Obtain an `exception_ptr` pointing to a copy of the supplied object.

Definition at line 181 of file `exception_ptr.h`.

2.9.3.5 `void std::rethrow_exception (exception_ptr)`

Throw the object pointed to by the `exception_ptr`.

Referenced by `std::__basic_future<_Res &>::M_get_result()`.

2.9.3.6 `void std::rethrow_if_nested (const nested_exception & __ex)` `[inline]`

Overload, See N2619.

Definition at line 156 of file `nested_exception.h`.

2.9.3.7 `template<typename _Ex> void std::rethrow_if_nested (const _Ex & __ex)` `[inline]`

If `__ex` is derived from [nested_exception](#), `__ex.rethrow_nested()`.

Definition at line 148 of file `nested_exception.h`.

2.9.3.8 `terminate_handler std::set_terminate (terminate_handler) throw ()`

Takes a new handler function as an argument, returns the old function.

2.9.3.9 `unexpected_handler std::set_unexpected (unexpected_handler)` `throw ()`

Takes a new handler function as an argument, returns the old function.

2.9.3.10 void std::terminate () throw ()

The runtime will call this function if exception handling must be abandoned for any reason. It can also be called by the user.

**2.9.3.11 template<typename _Ex> void std::throw_with_nested (_Ex __ex)
[inline]**

If __ex is derived from [nested_exception](#), __ex. // Else, an implementation-defined object derived from both.

Definition at line 138 of file nested_exception.h.

2.9.3.12 bool std::uncaught_exception () throw ()

[18.6.4]/1: 'Returns true after completing evaluation of a throw-expression until either completing initialization of the exception-declaration in the matching handler or entering [unexpected\(\)](#) due to the throw; or after entering [terminate\(\)](#) for any reason other than an explicit call to [terminate\(\)](#). [Note: This includes stack unwinding [15.2]. end note]'

2: 'When [uncaught_exception\(\)](#) is true, throwing an exception can result in a call of [terminate\(\)](#) (15.5.1).'

Referenced by std::basic_ostream<_CharT, _Traits>::sentry::~sentry().

2.9.3.13 void std::unexpected ()

The runtime will call this function if an exception is thrown which violates the function's exception specification.

2.10 Time

Collaboration diagram for Time:

2.11.1 Detailed Description

Classes and functions for complex numbers.

2.11.2 Function Documentation

2.11.2.1 `template<typename _Tp > _Tp std::abs (const complex< _Tp > &__z) [inline]`

Return magnitude of z .

Definition at line 596 of file `complex`.

Referenced by `std::tr1::fabs()`, `std::fabs()`, `std::binomial_distribution< _IntType >::operator()()`, and `std::poisson_distribution< _IntType >::operator()()`.

2.11.2.2 `template<typename _Tp> std::complex<_Tp> std::tr1::acos (`
`const std::complex<_Tp> & __z) [inline]`

`acos(__z)` [8.1.2].

Definition at line 89 of file `tr1/complex`.

2.11.2.3 `template<typename _Tp> std::complex<_Tp> std::tr1::acosh (`
`const std::complex<_Tp> & __z) [inline]`

`acosh(__z)` [8.1.5].

Definition at line 208 of file `tr1/complex`.

2.11.2.4 `template<typename _Tp> _Tp std::arg (const complex<_Tp> &`
`__z) [inline]`

Return phase angle of z .

Definition at line 623 of file `complex`.

Referenced by `std::arg()`.

2.11.2.5 `template<typename _Tp> std::complex<_Tp> std::tr1::asin (`
`const std::complex<_Tp> & __z) [inline]`

`asin(__z)` [8.1.3].

Definition at line 125 of file `tr1/complex`.

2.11.2.6 `template<typename _Tp> std::complex<_Tp> std::tr1::asinh (`
`const std::complex<_Tp> & __z) [inline]`

`asinh(__z)` [8.1.6].

Definition at line 247 of file `tr1/complex`.

2.11.2.7 `template<typename _Tp> std::complex<_Tp> std::tr1::atan (`
`const std::complex<_Tp> & __z) [inline]`

`atan(__z)` [8.1.4].

Definition at line 169 of file `tr1/complex`.

2.11.2.8 `template<typename _Tp> std::complex<_Tp> std::tr1::atanh (`
`const std::complex<_Tp> & __z) [inline]`

`atanh(__z)` [8.1.7].

Definition at line 291 of file `tr1/complex`.

2.11.2.9 `template<typename _Tp> complex<_Tp> std::conj (const`
`complex<_Tp> & __z) [inline]`

Return complex conjugate of z .

Definition at line 368 of file `tr1/complex`.

References `std::conj()`.

Referenced by `std::conj()`.

2.11.2.10 `template<typename _Tp> complex<_Tp> std::cos (const`
`complex<_Tp> & __z) [inline]`

Return complex cosine of z .

Definition at line 701 of file `complex`.

Referenced by `std::polar()`.

2.11.2.11 `template<typename _Tp> complex<_Tp> std::cosh (const`
`complex<_Tp> & __z) [inline]`

Return complex hyperbolic cosine of z .

Definition at line 731 of file `complex`.

2.11.2.12 `template<typename _Tp> complex<_Tp> std::exp (const
complex<_Tp> & __z) [inline]`

Return complex base e exponential of z .

Definition at line 757 of file `complex`.

2.11.2.13 `template<typename _Tp> std::complex<_Tp> std::tr1::fabs (const
std::complex<_Tp> & __z) [inline]`

`fabs(__z)` [8.1.8].

Definition at line 300 of file `tr1/complex`.

References `std::abs()`.

2.11.2.14 `template<typename _Tp> complex<_Tp> std::log (const
complex<_Tp> & __z) [inline]`

Return complex natural logarithm of z .

Definition at line 784 of file `complex`.

Referenced by `std::generate_canonical()`, `std::log10()`, `std::gamma_distribution<_RealType>::operator()`, `std::normal_distribution<_RealType>::operator()`, `std::binomial_distribution<_IntType>::operator()`, `std::poisson_distribution<_IntType>::operator()`, and `std::independent_bits_engine<_RandomNumberEngine, __w, _UIntType>::operator()`.

2.11.2.15 `template<typename _Tp> complex<_Tp> std::log10 (const
complex<_Tp> & __z) [inline]`

Return complex base 10 logarithm of z .

Definition at line 789 of file `complex`.

References `std::log()`.

2.11.2.16 `template<typename _Tp > _Tp std::norm (const complex< _Tp > & __z) [inline]`

Return z magnitude squared.

Definition at line 656 of file complex.

Referenced by `std::complex< _Tp >::operator/=()`.

2.11.2.17 `template<typename _Tp > constexpr bool std::operator!= (const complex< _Tp > & __x, const complex< _Tp > & __y) [inline]`

Return false if x is equal to y .

Definition at line 471 of file complex.

2.11.2.18 `template<typename _Tp > constexpr bool std::operator!= (const complex< _Tp > & __x, const _Tp & __y) [inline]`

Return false if x is equal to y .

Definition at line 476 of file complex.

2.11.2.19 `template<typename _Tp > constexpr bool std::operator!= (const _Tp & __x, const complex< _Tp > & __y) [inline]`

Return false if x is equal to y .

Definition at line 481 of file complex.

2.11.2.20 `template<typename _Tp > complex<_Tp> std::operator* (const complex< _Tp > & __x, const complex< _Tp > & __y) [inline]`

Return new complex value x times y .

Definition at line 381 of file complex.

2.11.2.21 `template<typename _Tp> complex<_Tp> std::operator*(const
complex<_Tp> & __x, const _Tp & __y) [inline]`

Return new complex value x times y .

Definition at line 390 of file complex.

2.11.2.22 `template<typename _Tp> complex<_Tp> std::operator*(const
_Tp & __x, const complex<_Tp> & __y) [inline]`

Return new complex value x times y .

Definition at line 399 of file complex.

2.11.2.23 `template<typename _Tp> template<typename _Up> complex<
_Tp> & std::complex<_Tp>::operator*=(const complex<_Up>
& __z) [inherited]`

Multiply this complex number by z .

Definition at line 294 of file complex.

2.11.2.24 `template<typename _Tp> complex<_Tp> & std::complex<_Tp>
>::operator*=(const _Tp & __t) [inherited]`

Multiply this complex number by t .

Definition at line 240 of file complex.

2.11.2.25 `template<typename _Tp> complex<_Tp> std::operator+(
const complex<_Tp> & __x, const complex<_Tp> & __y)
[inline]`

Return new complex value x plus y .

Definition at line 321 of file complex.

2.11.2.26 `template<typename _Tp> complex<_Tp> std::operator+ (const
_Tp & __x, const complex<_Tp> & __y) [inline]`

Return new complex value x plus y .

Definition at line 339 of file complex.

2.11.2.27 `template<typename _Tp> complex<_Tp> std::operator+ (const
complex<_Tp> & __x, const _Tp & __y) [inline]`

Return new complex value x plus y .

Definition at line 330 of file complex.

2.11.2.28 `template<typename _Tp> complex<_Tp> std::operator+ (const
complex<_Tp> & __x) [inline]`

Return x .

Definition at line 440 of file complex.

2.11.2.29 `template<typename _Tp> template<typename _Up> complex<
_Tp> & std::complex<_Tp>::operator+=(const complex<_Up>
& __z) [inherited]`

Add z to this complex number.

Definition at line 271 of file complex.

2.11.2.30 `template<typename _Tp> complex<_Tp> std::operator- (const
complex<_Tp> & __x) [inline]`

Return complex negation of x .

Definition at line 446 of file complex.

2.11.2.31 `template<typename _Tp> complex<_Tp> std::operator- (`
`const complex<_Tp> & __x, const complex<_Tp> & __y)`
`[inline]`

Return new complex value x minus y .

Definition at line 351 of file complex.

2.11.2.32 `template<typename _Tp> complex<_Tp> std::operator- (const`
`complex<_Tp> & __x, const _Tp & __y) [inline]`

Return new complex value x minus y .

Definition at line 360 of file complex.

2.11.2.33 `template<typename _Tp> complex<_Tp> std::operator- (const`
`_Tp & __x, const complex<_Tp> & __y) [inline]`

Return new complex value x minus y .

Definition at line 369 of file complex.

2.11.2.34 `template<typename _Tp> template<typename _Up> complex<`
`_Tp> & std::complex<_Tp>::operator-= (const complex<_Up>`
`& __z) [inherited]`

Subtract z from this complex number.

Definition at line 282 of file complex.

2.11.2.35 `template<typename _Tp> complex<_Tp> std::operator/ (const`
`_Tp & __x, const complex<_Tp> & __y) [inline]`

Return new complex value x divided by y .

Definition at line 429 of file complex.

2.11.2.36 `template<typename _Tp > complex<_Tp> std::operator/ (`
`const complex<_Tp > & __x, const complex<_Tp > & __y)`
`[inline]`

Return new complex value x divided by y .

Definition at line 411 of file complex.

2.11.2.37 `template<typename _Tp > complex<_Tp> std::operator/ (const`
`complex<_Tp > & __x, const _Tp & __y) [inline]`

Return new complex value x divided by y .

Definition at line 420 of file complex.

2.11.2.38 `template<typename _Tp > complex<_Tp > & std::complex<_Tp`
`>::operator/=(const _Tp & __t) [inherited]`

Divide this complex number by t .

Definition at line 250 of file complex.

2.11.2.39 `template<typename _Tp > template<typename _Up > complex<`
`_Tp > & std::complex<_Tp >::operator/=(const complex<_Up >`
`& __z) [inherited]`

Divide this complex number by z .

Definition at line 307 of file complex.

References `std::norm()`.

2.11.2.40 `template<typename _Tp , typename _CharT , class _Traits`
`> basic_ostream<_CharT, _Traits> & std::operator<< (`
`basic_ostream<_CharT, _Traits > & __os, const complex<_Tp >`
`& __x)`

Insertion operator for complex values.

Definition at line 521 of file complex.

References `std::ios_base::flags()`, `std::basic_ios< _CharT, _Traits >::imbue()`, `std::ios_base::precision()`, and `std::basic_ostringstream< _CharT, _Traits, _Alloc >::str()`.

2.11.2.41 `template<typename _Tp> complex< _Tp > & std::complex< _Tp >::operator=(const _Tp & __t) [inherited]`

Assign this complex number to scalar t .

Definition at line 230 of file complex.

2.11.2.42 `template<typename _Tp> template<typename _Up> complex< _Tp > & std::complex< _Tp >::operator=(const complex< _Up > & __z) [inherited]`

Assign this complex number to complex z .

Definition at line 260 of file complex.

2.11.2.43 `template<typename _Tp> constexpr bool std::operator==(const complex< _Tp > & __x, const _Tp & __y) [inline]`

Return true if x is equal to y .

Definition at line 458 of file complex.

2.11.2.44 `template<typename _Tp> constexpr bool std::operator==(const complex< _Tp > & __x, const complex< _Tp > & __y) [inline]`

Return true if x is equal to y .

Definition at line 453 of file complex.

2.11.2.45 `template<typename _Tp > constexpr bool std::operator==(const
_Tp & __x, const complex<_Tp> & __y) [inline]`

Return true if x is equal to y .

Definition at line 463 of file `complex`.

2.11.2.46 `template<typename _Tp , typename _CharT , class _Traits
> basic_istream<_CharT, _Traits>& std::operator>> (
basic_istream<_CharT, _Traits> & __is, complex<_Tp> & __x)`

Extraction operator for complex values.

Definition at line 488 of file `complex`.

References `std::ios_base::failbit`, `std::basic_istream<_CharT, _Traits>::putback()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

2.11.2.47 `template<typename _Tp > complex<_Tp> std::polar (const _Tp
& __rho, const _Tp & __theta = 0) [inline]`

Return complex with magnitude ρ and angle θ .

Definition at line 664 of file `complex`.

References `std::cos()`, and `std::sin()`.

2.11.2.48 `template<typename _Tp > complex<_Tp> std::pow (const
complex<_Tp> & __x, const _Tp & __y)`

Return x to the y 'th power.

Definition at line 392 of file `tr1/complex`.

References `std::pow()`.

Referenced by `std::gamma_distribution<_RealType>::operator()()`, `std::pow()`, and `std::tr1::pow()`.

2.11.2.49 `template<typename _Tp , typename _Up > std::complex<typename
__gnu_cxx::__promote_2<_Tp, _Up>::__type> std::tr1::pow (
const std::complex< _Tp > & __x, const _Up & __y) [inline]`

Additional overloads [8.1.9].

Definition at line 341 of file tr1/complex.

References std::pow().

2.11.2.50 `template<typename _Tp > complex< _Tp > std::pow (const
complex< _Tp > & __x, const complex< _Tp > & __y)
[inline]`

Return x to the y 'th power.

Definition at line 402 of file tr1/complex.

References std::pow().

2.11.2.51 `template<typename _Tp > complex< _Tp > std::pow (const _Tp &
__x, const complex< _Tp > & __y) [inline]`

Return x to the y 'th power.

Definition at line 397 of file tr1/complex.

References std::pow().

2.11.2.52 `template<typename _Tp > complex< _Tp > std::sin (const
complex< _Tp > & __z) [inline]`

Return complex sine of z .

Definition at line 819 of file complex.

Referenced by std::polar().

2.11.2.53 `template<typename _Tp> complex<_Tp> std::sinh (const
complex<_Tp> & __z) [inline]`

Return complex hyperbolic sine of z .

Definition at line 849 of file `complex`.

2.11.2.54 `template<typename _Tp> complex<_Tp> std::sqrt (const
complex<_Tp> & __z) [inline]`

Return complex square root of z .

Definition at line 893 of file `complex`.

Referenced by `std::normal_distribution<_RealType>::operator()()`, and
`std::student_t_distribution<_RealType>::operator()()`.

2.11.2.55 `template<typename _Tp> complex<_Tp> std::tan (const
complex<_Tp> & __z) [inline]`

Return complex tangent of z .

Definition at line 920 of file `complex`.

2.11.2.56 `template<typename _Tp> complex<_Tp> std::tanh (const
complex<_Tp> & __z) [inline]`

Return complex hyperbolic tangent of z .

Definition at line 948 of file `complex`.

2.12 Condition Variables

Collaboration diagram for Condition Variables:

Classes

- class `std::condition_variable`
condition_variable
- class `std::condition_variable_any`
condition_variable_any

Enumerations

- enum `std::cv_status` { `no_timeout`, `timeout` }

2.12.1 Detailed Description

Classes for `condition_variable` support.

2.12.2 Enumeration Type Documentation

2.12.2.1 enum `std::cv_status`

`cv_status`

Definition at line 56 of file `condition_variable`.

2.13 Futures

Collaboration diagram for Futures:

Classes

- class `std::__basic_future< _Res >`
Common implementation for future and `shared_future`.
- struct `std::__future_base`
Base class and enclosing scope.
- struct `std::__future_base::_Result< _Res & >`
Partial specialization for reference types.
- struct `std::__future_base::_Result< void >`
Explicit specialization for void.
- class `std::future< _Res >`
Primary template for future.
- class `std::future< _Res & >`
Partial specialization for `future<R&>`
- class `std::future< void >`
Explicit specialization for `future<void>`
- class `std::future_error`
Exception type thrown by futures.
- struct `std::is_error_code_enum< future_errc >`
Specialization.

- class `std::packaged_task<_Res(_ArgTypes...)>`
packaged_task
- class `std::promise<_Res>`
Primary template for promise.
- class `std::promise<_Res &>`
Partial specialization for promise<R&>
- class `std::promise<void>`
Explicit specialization for promise<void>
- class `std::shared_future<_Res>`
Primary template for shared_future.
- class `std::shared_future<_Res &>`
Partial specialization for shared_future<R&>
- class `std::shared_future<void>`
Explicit specialization for shared_future<void>

Enumerations

- enum `std::future_errc` { `broken_promise`, `future_already_retrieved`, `promise_already_satisfied`, `no_state` }
- enum `std::future_status` { `ready`, `timeout`, `deferred` }
- enum `std::launch` { `any`, `async`, `sync` }

Functions

- `std::__basic_future::__basic_future` (const shared_future<_Res> &)
- `std::__basic_future::__basic_future` (shared_future<_Res> &&)
- `std::__basic_future::__basic_future` (future<_Res> &&)
- static _Setter<void, void> `std::__future_base::State::__setter` (promise<void> * __prom)
- template<typename _Fn, typename... _Args>
future<typename result_of<_Fn(_Args...)>::type> `std::async` (launch __policy, _Fn && __fn, _Args &&... __args)
- template<typename _Fn, typename... _Args>
enable_if<!is_same<typename decay<_Fn>::type, launch>::value, future<decltype(std::declval<_Fn>)(std::declval<_Args>)...)>::type> `std::async` (_Fn && __fn, _Args &&... __args)

- `const error_category & std::future_category ()`
- `error_code std::make_error_code (future_errc __errc)`
- `error_condition std::make_error_condition (future_errc __errc)`
- `void std::promise< void >::set_value ()`
- `template<typename _Res >
void std::swap (promise< _Res > &__x, promise< _Res > &__y)`
- `template<typename _Res, typename... _ArgTypes>
void std::swap (packaged_task< _Res(_ArgTypes...)> &__x, packaged_task< _Res(_ArgTypes...)> &__y)`

2.13.1 Detailed Description

Classes for futures support.

2.13.2 Enumeration Type Documentation

2.13.2.1 `enum std::future_errc`

Error code for futures.

Definition at line 61 of file future.

2.13.2.2 `enum std::future_status`

Status code for futures.

Definition at line 134 of file future.

2.13.2.3 `enum std::launch`

Launch code for futures.

Definition at line 126 of file future.

2.13.3 Function Documentation

2.13.3.1 `template<typename _Fn , typename... _Args> future< typename
result_of< _Fn(_Args...)>::type > std::async (launch __policy, _Fn
&& __fn, _Args &&... __args)`

async

Definition at line 1345 of file future.

2.13.3.2 `template<typename _Fn , typename... _Args> enable_if<!is_same<
typename decay< _Fn >::type, launch >::value, future<
decltype(std::declval< _Fn >)(std::declval< _Args >)...)> >::type
std::async (_Fn && __fn, _Args &&... __args) [inline]`

async, potential overload

Definition at line 1370 of file future.

2.13.3.3 `const error_category& std::future_category ()`

Points to a statically-allocated object derived from [error_category](#).

Referenced by `std::make_error_code()`, and `std::make_error_condition()`.

2.13.3.4 `error_code std::make_error_code (future_errc __errc) [inline]`

Overload for `make_error_code`.

Definition at line 79 of file future.

References `std::future_category()`.

2.13.3.5 `error_condition std::make_error_condition (future_errc __errc)
[inline]`

Overload for `make_error_condition`.

Definition at line 84 of file future.

References `std::future_category()`.

2.13.3.6 `template<typename _Res , typename... _ArgTypes> void std::swap
(packaged_task< _Res(_ArgTypes...)> & __x, packaged_task<
_Res(_ArgTypes...)> & __y) [inline]`

swap

Definition at line 1279 of file future.

2.14 I/O

Classes

- class `__gnu_cxx::stdio_filebuf< _CharT, _Traits >`
*Provides a layer of compatibility for C/POSIX.
This GNU extension provides extensions for working with standard C FILE*'s and POSIX file descriptors. It must be instantiated by the user with the type of character used in the file stream, e.g., `stdio_filebuf<char>`.*
- class `__gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >`
*Provides a layer of compatibility for C.
This GNU extension provides extensions for working with standard C FILE*'s. It must be instantiated by the user with the type of character used in the file stream, e.g., `stdio_filebuf<char>`.*
- class `std::basic_filebuf< _CharT, _Traits >`
*The actual work of input and output (for files).
This class associates both its input and output sequence with an external disk file, and maintains a joint file position for both sequences. Many of its semantics are described in terms of similar behavior in the Standard C Library's FILE streams.*
- class `std::basic_fstream< _CharT, _Traits >`
*Controlling input and output for files.
This class supports reading from and writing to named files, using the inherited functions from `std::basic_istream`. To control the associated sequence, an instance of `std::basic_filebuf` is used, which this page refers to as *sb*.*
- class `std::basic_ifstream< _CharT, _Traits >`
Controlling input for files.

This class supports reading from named files, using the inherited functions from `std::basic_istream`. To control the associated sequence, an instance of `std::basic_filebuf` is used, which this page refers to as `sb`.

- class `std::basic_ios< _CharT, _Traits >`
*Virtual base class for all stream classes.
 Most of the member functions called dispatched on stream objects (e.g., `std::cout.foo(bar);`) are consolidated in this class.*
- class `std::basic_iostream< _CharT, _Traits >`
*Merging istream and ostream capabilities.
 This class multiply inherits from the input and output stream classes simply to provide a single interface.*
- class `std::basic_istream< _CharT, _Traits >`
*Controlling input.
 This is the base class for all input streams. It provides text formatting of all builtin types, and communicates with any class derived from `basic_streambuf` to do the actual input.*
- class `std::basic_istreamstream< _CharT, _Traits, _Alloc >`
*Controlling input for `std::string`.
 This class supports reading from objects of type `std::basic_string`, using the inherited functions from `std::basic_istream`. To control the associated sequence, an instance of `std::basic_stringbuf` is used, which this page refers to as `sb`.*
- class `std::basic_ofstream< _CharT, _Traits >`
*Controlling output for files.
 This class supports reading from named files, using the inherited functions from `std::basic_ostream`. To control the associated sequence, an instance of `std::basic_filebuf` is used, which this page refers to as `sb`.*
- class `std::basic_ostream< _CharT, _Traits >`
*Controlling output.
 This is the base class for all output streams. It provides text formatting of all builtin types, and communicates with any class derived from `basic_streambuf` to do the actual output.*
- class `std::basic_ostreamstream< _CharT, _Traits, _Alloc >`
*Controlling output for `std::string`.
 This class supports writing to objects of type `std::basic_string`, using the inherited functions from `std::basic_ostream`. To control the associated sequence, an instance of `std::basic_stringbuf` is used, which this page refers to as `sb`.*
- class `std::basic_streambuf< _CharT, _Traits >`

The actual work of input and output (interface).

This is a base class. Derived stream buffers each control a pair of character sequences: one for input, and one for output.

- class `std::basic_stringbuf< _CharT, _Traits, _Alloc >`

The actual work of input and output (for `std::string`).

This class associates either or both of its input and output sequences with a sequence of characters, which can be initialized from, or made available as, a `std::basic_string`. (Paraphrased from [27.7.1]/1.).

- class `std::basic_stringstream< _CharT, _Traits, _Alloc >`

Controlling input and output for `std::string`.

This class supports reading from and writing to objects of type `std::basic_string`, using the inherited functions from `std::basic_istream`. To control the associated sequence, an instance of `std::basic_stringbuf` is used, which this page refers to as `sb`.

- class `std::ios_base`

The base of the I/O class hierarchy.

This class defines everything that can be defined about I/O that does not depend on the type of characters being input or output. Most people will only see `ios_base` when they need to specify the full name of the various I/O flags (e.g., the openmodes).

Typedefs

- `typedef basic_filebuf< char > std::filebuf`
- `typedef basic_fstream< char > std::fstream`
- `typedef basic_ifstream< char > std::ifstream`
- `typedef basic_ios< char > std::ios`
- `typedef basic_istream< char > std::istream`
- `typedef basic_istream< char > std::istream`
- `typedef basic_istreamstream< char > std::istreamstream`
- `typedef basic_ofstream< char > std::ofstream`
- `typedef basic_ostream< char > std::ostream`
- `typedef basic_ostreamstream< char > std::ostreamstream`
- `typedef basic_streambuf< char > std::streambuf`
- `typedef basic_stringbuf< char > std::stringbuf`
- `typedef basic_stringstream< char > std::stringstream`
- `typedef basic_filebuf< wchar_t > std::wfilebuf`
- `typedef basic_fstream< wchar_t > std::wfstream`
- `typedef basic_ifstream< wchar_t > std::wifstream`
- `typedef basic_ios< wchar_t > std::wios`
- `typedef basic_istream< wchar_t > std::wistream`
- `typedef basic_istream< wchar_t > std::wistream`

- `typedef basic_istream< wchar_t > std::wistream`
- `typedef basic_ofstream< wchar_t > std::wofstream`
- `typedef basic_ostream< wchar_t > std::wostream`
- `typedef basic_ostringstream< wchar_t > std::wostringstream`
- `typedef basic_streambuf< wchar_t > std::wstreambuf`
- `typedef basic_stringbuf< wchar_t > std::wstringbuf`
- `typedef basic_stringstream< wchar_t > std::wstringstream`

2.14.1 Detailed Description

Nearly all of the I/O classes are parameterized on the type of characters they read and write. (The major exception is `ios_base` at the top of the hierarchy.) This is a change from pre-Standard streams, which were not templates.

For ease of use and compatibility, all of the `basic_*` I/O-related classes are given typedef names for both of the builtin character widths (wide and narrow). The typedefs are the same as the pre-Standard names, for example:

```
typedef basic_ifstream<char> ifstream;
```

Because properly forward-declaring these classes can be difficult, you should not do it yourself. Instead, include the `<iosfwd>` header, which contains only declarations of all the I/O classes as well as the typedefs. Trying to forward-declare the typedefs themselves (e.g., `class ostream;`) is not valid ISO C++.

For more specific declarations, see <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch>

2.14.2 Typedef Documentation

2.14.2.1 `typedef basic_filebuf<char> std::filebuf`

Class for `char` file buffers.

Definition at line 156 of file `iosfwd`.

2.14.2.2 `typedef basic_fstream<char> std::fstream`

Class for `char` mixed input and output file streams.

Definition at line 165 of file `iosfwd`.

2.14.2.3 typedef basic_ifstream<char> std::ifstream

Class for `char` input file streams.

Definition at line 159 of file `iosfwd`.

2.14.2.4 typedef basic_ios<char> std::ios

Base class for `char` streams.

Definition at line 125 of file `iosfwd`.

2.14.2.5 typedef basic_iostream<char> std::iostream

Base class for `char` mixed input and output streams.

Definition at line 141 of file `iosfwd`.

2.14.2.6 typedef basic_istream<char> std::istream

Base class for `char` input streams.

Definition at line 135 of file `iosfwd`.

2.14.2.7 typedef basic_istream<char> std::istream

Class for `char` input memory streams.

Definition at line 147 of file `iosfwd`.

2.14.2.8 typedef basic_ofstream<char> std::ofstream

Class for `char` output file streams.

Definition at line 162 of file `iosfwd`.

2.14.2.9 typedef basic_ostream<char> std::ostream

Base class for `char` output streams.

Definition at line 138 of file `iosfwd`.

2.14.2.10 typedef basic_ostringstream<char> std::ostringstream

Class for `char` output memory streams.

Definition at line 150 of file `iosfwd`.

2.14.2.11 typedef basic_streambuf<char> std::streambuf

Base class for `char` buffers.

Definition at line 132 of file `iosfwd`.

2.14.2.12 typedef basic_stringbuf<char> std::stringbuf

Class for `char` memory buffers.

Definition at line 144 of file `iosfwd`.

2.14.2.13 typedef basic_stringstream<char> std::stringstream

Class for `char` mixed input and output memory streams.

Definition at line 153 of file `iosfwd`.

2.14.2.14 typedef basic_filebuf<wchar_t> std::wfilebuf

Class for `wchar_t` file buffers.

Definition at line 196 of file `iosfwd`.

2.14.2.15 typedef basic_fstream<wchar_t> std::wfstream

Class for `wchar_t` mixed input and output file streams.

Definition at line 205 of file `iosfwd`.

2.14.2.16 typedef basic_ifstream<wchar_t> std::wifstream

Class for `wchar_t` input file streams.

Definition at line 199 of file `iosfwd`.

2.14.2.17 typedef basic_ios<wchar_t> std::wios

Base class for `wchar_t` streams.

Definition at line 169 of file `iosfwd`.

2.14.2.18 typedef basic_iostream<wchar_t> std::wiostream

Base class for `wchar_t` mixed input and output streams.

Definition at line 181 of file `iosfwd`.

2.14.2.19 typedef basic_istream<wchar_t> std::wistream

Base class for `wchar_t` input streams.

Definition at line 175 of file `iosfwd`.

2.14.2.20 typedef basic_istringstream<wchar_t> std::wistringstream

Class for `wchar_t` input memory streams.

Definition at line 187 of file `iosfwd`.

2.14.2.21 typedef basic_ofstream<wchar_t> std::wofstream

Class for `wchar_t` output file streams.

Definition at line 202 of file `iosfwd`.

2.14.2.22 typedef basic_ostream<wchar_t> std::wostream

Base class for `wchar_t` output streams.

Definition at line 178 of file `iosfwd`.

2.14.2.23 typedef basic_ostringstream<wchar_t> std::wostringstream

Class for `wchar_t` output memory streams.

Definition at line 190 of file `iosfwd`.

2.14.2.24 typedef basic_streambuf<wchar_t> std::wstreambuf

Base class for `wchar_t` buffers.

Definition at line 172 of file `iosfwd`.

2.14.2.25 typedef basic_stringbuf<wchar_t> std::wstringbuf

Class for `wchar_t` memory buffers.

Definition at line 184 of file `iosfwd`.

2.14.2.26 typedef basic_stringstream<wchar_t> std::wstringstream

Class for `wchar_t` mixed input and output memory streams.

Definition at line 193 of file `iosfwd`.

2.15 Memory

Collaboration diagram for Memory:

Modules

- [Pointer Abstractions](#)
- [Allocators](#)

2.15.1 Detailed Description

Components for memory allocation, deallocation, and management.

2.16 Pointer Abstractions

Collaboration diagram for Pointer Abstractions:

Classes

- struct `std::default_delete< _Tp >`
Primary template, `default_delete`.
- struct `std::default_delete< _Tp[]>`
Specialization, `default_delete`.
- class `std::enable_shared_from_this< _Tp >`
Base class allowing use of member function `shared_from_this`.
- struct `std::hash< shared_ptr< _Tp > >`
`std::hash` specialization for `shared_ptr`.
- struct `std::hash< unique_ptr< _Tp, _Dp > >`
`std::hash` specialization for `unique_ptr`.
- struct `std::owner_less< shared_ptr< _Tp > >`
Partial specialization of `owner_less` for `shared_ptr`.
- struct `std::owner_less< weak_ptr< _Tp > >`
Partial specialization of `owner_less` for `weak_ptr`.
- class `std::shared_ptr< _Tp >`
A smart pointer with reference-counted copy semantics.
- class `std::unique_ptr< _Tp, _Dp >`
20.7.12.2 `unique_ptr` for single objects.
- class `std::unique_ptr< _Tp[], _Dp >`
20.7.12.3 `unique_ptr` for array objects with a runtime length
- class `std::weak_ptr< _Tp >`
A smart pointer with weak semantics.

Functions

- template<typename _Tp, typename _Alloc, typename... _Args>
shared_ptr< _Tp > `std::allocate_shared` (const _Alloc &__a, _Args &&...__args)

- `template<typename _Tp, typename _Tp1 >`
`shared_ptr< _Tp > std::const_pointer_cast (const shared_ptr< _Tp1 > &__r)`

`bool std::operator== (const unique_ptr< _Tp, _Dp > &__x, nullptr_t)`
- `template<typename _Tp, typename _Dp, typename _Up, typename _Ep >`
`bool std::operator> (const unique_ptr< _Tp, _Dp > &__x, const unique_ptr< _Up, _Ep > &__y)`
- `template<typename _Tp, typename _Dp, typename _Up, typename _Ep >`
`bool std::operator>= (const unique_ptr< _Tp, _Dp > &__x, const unique_ptr< _Up, _Ep > &__y)`
- `template<typename _Tp, typename _Tp1 >`
`shared_ptr< _Tp > std::static_pointer_cast (const shared_ptr< _Tp1 > &__r)`
- `template<typename _Tp, typename _Dp >`
`void std::swap (unique_ptr< _Tp, _Dp > &__x, unique_ptr< _Tp, _Dp > &__y)`
- `template<typename _Tp >`
`void std::swap (weak_ptr< _Tp > &__a, weak_ptr< _Tp > &__b)`
- `template<typename _Tp >`
`void std::swap (shared_ptr< _Tp > &__a, shared_ptr< _Tp > &__b)`

2.16.1 Detailed Description

Smart pointers, etc.

2.16.2 Function Documentation

- #### 2.16.2.1 `template<typename _Tp, typename _Alloc, typename... _Args>` `shared_ptr<_Tp> std::allocate_shared (const _Alloc & __a, _Args` `&&... __args) [inline]`

Create an object that is owned by a [shared_ptr](#).

Parameters

- `__a` An allocator.
- `__args` Arguments for the `_Tp` object's constructor.

Returns

A [shared_ptr](#) that owns the newly created object.

Exceptions

An exception thrown from `_Alloc::allocate` or from the constructor of `_Tp`.

A copy of `__a` will be used to allocate memory for the `shared_ptr` and the new object.

Definition at line 528 of file `shared_ptr.h`.

```
2.16.2.2 template<typename _Del , typename _Tp , _Lock_policy _Lp>
        _Del* std::get_deleter ( const __shared_ptr< _Tp, _Lp > & __p )
        [inline]
```

2.2.3.10 `shared_ptr` `get_deleter` (experimental)

Definition at line 76 of file `shared_ptr.h`.

```
2.16.2.3 template<typename _Tp , typename... _Args> shared_ptr<_Tp>
        std::make_shared ( _Args &&... __args ) [inline]
```

Create an object that is owned by a `shared_ptr`.

Parameters

`__args` Arguments for the `_Tp` object's constructor.

Returns

A `shared_ptr` that owns the newly created object.

Exceptions

`std::bad_alloc`, or an exception thrown from the constructor of `_Tp`.

Definition at line 543 of file `shared_ptr.h`.

```
2.16.2.4 template<typename _Ch , typename _Tr , typename _Tp
        , _Lock_policy _Lp> std::basic_ostream<_Ch, _Tr>&
        std::operator<< ( std::basic_ostream<_Ch, _Tr> & __os, const
        __shared_ptr< _Tp, _Lp > & __p ) [inline]
```

2.2.3.7 `shared_ptr` I/O

Definition at line 66 of file `shared_ptr.h`.

2.17 Mutexes

Collaboration diagram for Mutexes:

Classes

- struct `std::adopt_lock_t`
Assume the calling thread has already obtained mutex ownership /// and manage it.
- struct `std::defer_lock_t`
Do not acquire ownership of the mutex.
- class `std::lock_guard< _Mutex >`
Scoped lock idiom.
- class `std::mutex`
mutex
- struct `std::once_flag`
once_flag
- class `std::recursive_mutex`
recursive_mutex
- class `std::recursive_timed_mutex`
recursive_timed_mutex
- class `std::timed_mutex`
timed_mutex
- struct `std::try_to_lock_t`
Try to acquire ownership of the mutex without blocking.

- class `std::unique_lock<_Mutex>`
unique_lock

Functions

- `mutex & std::__get_once_mutex()`
- `void std::__once_proxy()`
- `void std::__set_once_functor_lock_ptr(unique_lock<mutex> *)`
- `template<typename _Lock>`
`unique_lock<_Lock> std::__try_to_lock(_Lock &__l)`
- `template<typename _Callable, typename... _Args>`
`void std::call_once(once_flag &__once, _Callable &&__f, _Args &&...__args)`
- `template<typename _L1, typename _L2, typename... _L3>`
`void std::lock(_L1 &__l1, _L2 &__l2, _L3 &...__l3)`
- `template<typename _Mutex>`
`void std::swap(unique_lock<_Mutex> &__x, unique_lock<_Mutex> &__y)`
- `template<typename _Lock1, typename _Lock2, typename... _Lock3>`
`int std::try_lock(_Lock1 &__l1, _Lock2 &__l2, _Lock3 &...__l3)`

Variables

- `function<void()> std::__once_functor`

2.17.1 Detailed Description

Classes for mutex support.

2.17.2 Function Documentation

- 2.17.2.1** `template<typename _Callable, typename... _Args> void`
`std::call_once(once_flag & __once, _Callable && __f, _Args &&...`
`__args)`

`call_once`

Definition at line 797 of file mutex.

2.17.2.2 `template<typename _L1 , typename _L2 , typename... _L3> void
std::lock (_L1 & __l1, _L2 & __l2, _L3 &... __l3)`

Generic lock.

Parameters

`__l1` Meets Mutex requirements ([try_lock\(\)](#) may throw).

`__l2` Meets Mutex requirements ([try_lock\(\)](#) may throw).

`__l3` Meets Mutex requirements ([try_lock\(\)](#) may throw).

Exceptions

An exception thrown by an argument's [lock\(\)](#) or [try_lock\(\)](#) member.

Postcondition

All arguments are locked.

All arguments are locked via a sequence of calls to [lock\(\)](#), [try_lock\(\)](#) and [unlock\(\)](#). If the call exits via an exception any locks that were obtained will be released.

Definition at line 738 of file mutex.

References [std::lock\(\)](#).

Referenced by [std::lock\(\)](#).

2.17.2.3 `template<typename _Lock1 , typename _Lock2 , typename... _Lock3>
int std::try_lock (_Lock1 & __l1, _Lock2 & __l2, _Lock3 &... __l3
)`

Generic try_lock.

Parameters

`__l1` Meets Mutex requirements ([try_lock\(\)](#) may throw).

`__l2` Meets Mutex requirements ([try_lock\(\)](#) may throw).

`__l3` Meets Mutex requirements ([try_lock\(\)](#) may throw).

Returns

Returns -1 if all [try_lock\(\)](#) calls return true. Otherwise returns a 0-based index corresponding to the argument that returned false.

Postcondition

Either all arguments are locked, or none will be.

Sequentially calls [try_lock\(\)](#) on each argument.

Definition at line 714 of file mutex.

References `std::try_lock()`.

Referenced by `std::try_lock()`.

2.18 Numerics

Collaboration diagram for Numerics:

**Modules**

- [Complex Numbers](#)
- [Numeric Arrays](#)
- [Mathematical Special Functions](#)
- [Decimal Floating-Point Arithmetic](#)
- [Random Number Generation](#)

2.18.1 Detailed Description

Components for performing numeric operations. Includes support for complex number types, random number generation, numeric (n-at-a-time) arrays, generalized numeric algorithms, and special math functions.

2.19 Rational Arithmetic

Collaboration diagram for Rational Arithmetic:

Classes

- struct `std::ratio< _Num, _Den >`
Provides compile-time rational arithmetic.
- struct `std::ratio_add< _R1, _R2 >`
ratio_add
- struct `std::ratio_divide< _R1, _R2 >`
ratio_divide
- struct `std::ratio_equal< _R1, _R2 >`
ratio_equal
- struct `std::ratio_multiply< _R1, _R2 >`
ratio_multiply
- struct `std::ratio_not_equal< _R1, _R2 >`
ratio_not_equal
- struct `std::ratio_subtract< _R1, _R2 >`
ratio_subtract

Typedefs

- typedef ratio< num, den > **std::ratio::type**
- typedef ratio_multiply< _R1, ratio< _R2::den, _R2::num > >::type **std::ratio_divide::type**
- typedef ratio< __safe_multiply<(_R1::num/__gcd1),(_R2::num/_-gcd2)>::value, __safe_multiply<(_R1::den/__gcd2),(_R2::den/_-gcd1)>::value > **std::ratio_multiply::type**
- typedef ratio< __safe_add< __safe_multiply< _R1::num,(_R2::den/_-gcd)>::value, __safe_multiply< _R2::num,(_R1::den/_-gcd)>::value >::value, __safe_multiply< _R1::den,(_R2::den/_-gcd)>::value > **std::ratio_add::type**

Functions

- **std::ratio::static_assert** (_Num >= __INTMAX_MAX__ && _Den >= __INTMAX_MAX__, "out of range")

Variables

- static constexpr intmax_t **std::ratio_divide::den**
- static constexpr intmax_t **std::ratio::den**
- static constexpr intmax_t **std::ratio_add::den**
- static constexpr intmax_t **std::ratio_subtract::den**
- static constexpr intmax_t **std::ratio_multiply::den**
- static constexpr intmax_t **std::ratio_divide::num**
- static constexpr intmax_t **std::ratio::num**
- static constexpr intmax_t **std::ratio_multiply::num**
- static constexpr intmax_t **std::ratio_subtract::num**
- static constexpr intmax_t **std::ratio_add::num**
- static const intmax_t **std::__safe_add::value**
- static const intmax_t **std::__safe_multiply::value**

2.19.1 Detailed Description

Compile time representation of finite rational numbers.

2.20 Threads

Collaboration diagram for Threads:

Classes

- struct `std::hash< thread::id >`
std::hash specialization for thread::id.
- class `std::thread`
thread

Namespaces

- namespace `std::this_thread`

Functions

- bool **std::operator!=** (thread::id __x, thread::id __y)
- template<class _CharT, class _Traits >
 basic_ostream< _CharT, _Traits > & **std::operator<<** (basic_ostream< _CharT, _Traits > &__out, thread::id __id)
- bool **std::operator<=** (thread::id __x, thread::id __y)
- bool **std::operator>** (thread::id __x, thread::id __y)
- bool **std::operator>=** (thread::id __x, thread::id __y)
- void **std::swap** (thread &__x, thread &__y)

2.20.1 Detailed Description

Classes for thread support.

2.21 Utilities

Collaboration diagram for Utilities:

Modules

- [Time](#)
- [Memory](#)
- [Rational Arithmetic](#)
- [Function Objects](#)

2.21.1 Detailed Description

Components deemed generally useful. Includes pair, tuple, forward/move helpers, ratio, function object, metaprogramming and type traits, time, date, and memory functions.

2.22 Numeric Arrays

Collaboration diagram for Numeric Arrays:

Classes

- class `std::gslice`
Class defining multi-dimensional subset of an array.
- class `std::gslice_array< _Tp >`
Reference to multi-dimensional subset of an array.
- class `std::indirect_array< _Tp >`
Reference to arbitrary subset of an array.
- class `std::mask_array< _Tp >`
Reference to selected subset of an array.
- class `std::slice`
Class defining one-dimensional subset of an array.
- class `std::slice_array< _Tp >`
Reference to one-dimensional subset of an array.
- class `std::valarray< _Tp >`
Smart array designed to support numeric processing.

Defines

- `#define _DEFINE_BINARY_OPERATOR(_Op, _Name)`
- `#define _DEFINE_VALARRAY_AUGMENTED_ASSIGNMENT(_Op, _Name)`

- `#define _DEFINE_VALARRAY_EXPR_AUGMENTED_-
ASSIGNMENT(_Op, _Name)`
- `#define _DEFINE_VALARRAY_OPERATOR(_Op, _Name)`
- `#define _DEFINE_VALARRAY_OPERATOR(_Op, _Name)`
- `#define _DEFINE_VALARRAY_OPERATOR(_Op, _Name)`
- `#define _DEFINE_VALARRAY_OPERATOR(_Op, _Name)`
- `#define _DEFINE_VALARRAY_UNARY_OPERATOR(_Op, _Name)`

Functions

- `std::gslice::gslice ()`
- `std::gslice::gslice (size_t, const valarray< size_t > &, const valarray< size_t > &)`
- `std::gslice::gslice (const gslice &)`
- `std::gslice_array::gslice_array (const gslice_array &)`
- `std::indirect_array::indirect_array (const indirect_array &)`
- `std::mask_array::mask_array (const mask_array &)`
- `std::slice::slice ()`

2.22.1 Detailed Description

Classes and functions for representing and manipulating arrays of elements.

2.22.2 Function Documentation

2.22.2.1 `std::gslice::gslice () [inline, inherited]`

Construct an empty slice.

Definition at line 149 of file `gslice.h`.

2.22.2.2 `std::gslice::gslice (size_t __o, const valarray< size_t > & __l, const valarray< size_t > & __s) [inline, inherited]`

Construct a slice.

Constructs a slice with as many dimensions as the length of the *l* and *s* arrays.

Parameters

- o* Offset in array of first element.
- l* Array of dimension lengths.
- s* Array of dimension strides between array elements.

Definition at line 153 of file `gslice.h`.

2.22.2.3 `std::gslice::gslice (const gslice & __g) [inline, inherited]`

Copy constructor.

Definition at line 158 of file `gslice.h`.

2.22.2.4 `template<typename _Tp> std::gslice_array<_Tp>::gslice_array (`
`const gslice_array<_Tp> & __a) [inline, inherited]`

Copy constructor. Both slices refer to the same underlying array.

Definition at line 144 of file gslice_array.h.

2.22.2.5 `template<typename _Tp> std::indirect_array<_Tp`
`>::indirect_array (const indirect_array<_Tp> & __a)`
`[inline, inherited]`

Copy constructor. Both slices refer to the same underlying array.

Definition at line 144 of file indirect_array.h.

2.22.2.6 `template<typename _Tp> std::mask_array<_Tp>::mask_array (`
`const mask_array<_Tp> & a) [inline, inherited]`

Copy constructor. Both slices refer to the same underlying array.

Definition at line 140 of file mask_array.h.

2.22.2.7 `std::slice::slice () [inline, inherited]`

Construct an empty slice.

Definition at line 91 of file slice_array.h.

2.22.2.8 `std::slice::slice (size_t __o, size_t __d, size_t __s) [inline,`
`inherited]`

Construct a slice.

Parameters

- o* Offset in array of first element.
- d* Number of elements in slice.
- s* Stride between array elements.

Definition at line 95 of file slice_array.h.

2.22.2.9 `template<typename _Tp> std::slice_array<_Tp>::slice_array (const slice_array<_Tp> & a) [inline, inherited]`

Copy constructor. Both slices refer to the same underlying array.

Definition at line 208 of file slice_array.h.

2.22.2.10 `template<typename _Tp> std::valarray<_Tp>::valarray (const slice_array<_Tp> & __sa) [inline, inherited]`

Construct an array with the same size and values in *sa*.

Definition at line 617 of file valarray.

2.22.2.11 `template<typename _Tp> std::valarray<_Tp>::valarray (const gslice_array<_Tp> & __ga) [inline, inherited]`

Construct an array with the same size and values in *ga*.

Definition at line 626 of file valarray.

2.22.2.12 `template<typename _Tp> std::valarray<_Tp>::valarray (const valarray<_Tp> & __v) [inline, inherited]`

Copy constructor.

Definition at line 610 of file valarray.

2.22.2.13 `template<typename _Tp> std::valarray<_Tp>::valarray (const mask_array<_Tp> & __ma) [inline, inherited]`

Construct an array with the same size and values in *ma*.

Definition at line 637 of file valarray.

2.22.2.14 `template<typename _Tp> std::valarray<_Tp>::valarray (const indirect_array<_Tp> & __ia) [inline, inherited]`

Construct an array with the same size and values in *ia*.

Definition at line 646 of file valarray.

2.22.2.15 `template<typename _Tp> std::valarray<_Tp>::valarray () [inline, inherited]`

Construct an empty array.

Definition at line 585 of file valarray.

2.22.2.16 `template<typename _Tp> std::valarray<_Tp>::valarray (initializer_list<_Tp> __l) [inline, inherited]`

Construct an array with an [initializer_list](#) of values.

Definition at line 656 of file valarray.

2.22.2.17 `template<typename _Tp> std::valarray<_Tp>::valarray (size_t __n) [inline, explicit, inherited]`

Construct an array with *n* elements.

Definition at line 589 of file valarray.

2.22.2.18 `template<typename _Tp> std::valarray<_Tp>::valarray (const _Tp & __t, size_t __n) [inline, inherited]`

Construct an array with *n* elements initialized to *t*.

Definition at line 595 of file valarray.

2.22.2.19 `std::gslice::~~gslice () [inline, inherited]`

Destructor.

Definition at line 163 of file gslice.h.

2.22.2.20 `template<class _Tp> _Expr< _ValFunClos< _ValArray, _Tp >, _Tp > std::valarray< _Tp >::apply (_Tp func_Tp) const [inline, inherited]`

Apply a function to the array.

Returns a new valarray with elements assigned to the result of applying func to the corresponding element of this array. The new array has the same size as this one.

Parameters

func Function of Tp returning Tp to apply.

Returns

New valarray with transformed elements.

Definition at line 979 of file valarray.

2.22.2.21 `template<class _Tp> _Expr< _RefFunClos< _ValArray, _Tp >, _Tp > std::valarray< _Tp >::apply (_Tp funcconst_Tp &) const [inline, inherited]`

Apply a function to the array.

Returns a new valarray with elements assigned to the result of applying func to the corresponding element of this array. The new array has the same size as this one.

Parameters

func Function of const Tp& returning Tp to apply.

Returns

New valarray with transformed elements.

Definition at line 987 of file valarray.

2.22.2.22 `template<class _Tp> _Tp* std::begin (valarray<_Tp> & __va)
[inline]`

Return an iterator pointing to the first element of the valarray.

Parameters

va valarray.

Definition at line 1126 of file valarray.

2.22.2.23 `template<class _Tp> const _Tp* std::begin (const valarray<_Tp>
& __va) [inline]`

Return an iterator pointing to the first element of the const valarray.

Parameters

va valarray.

Definition at line 1136 of file valarray.

2.22.2.24 `template<class _Tp> valarray<_Tp> std::valarray<_Tp>::cshift
(int __n) const [inline, inherited]`

Return a rotated array.

A new valarray is constructed as a copy of this array with elements in shifted positions. For an element with index *i*, the new position is $(i - n) \% \text{size}()$. The new valarray has the same size as the current one. Elements that are shifted beyond the array bounds are shifted into the other end of the array. No elements are lost.

Positive arguments shift toward index 0, wrapping around the top. Negative arguments shift towards the top, wrapping around to 0.

Parameters

n Number of element positions to rotate.

Returns

New valarray with elements in shifted positions.

Definition at line 905 of file valarray.

2.22.2.25 `template<class _Tp > const _Tp* std::end (const valarray<_Tp > & __va) [inline]`

Return an iterator pointing to one past the last element of the const valarray.

Parameters

va valarray.

Definition at line 1156 of file valarray.

References `std::valarray<_Tp>::size()`.

2.22.2.26 `template<class _Tp > _Tp* std::end (valarray<_Tp > & __va) [inline]`

Return an iterator pointing to one past the last element of the valarray.

Parameters

va valarray.

Definition at line 1146 of file valarray.

References `std::valarray<_Tp>::size()`.

2.22.2.27 `template<typename _Tp > _Tp std::valarray<_Tp>::max () const [inline, inherited]`

Return the maximum element using operator<().

Definition at line 971 of file valarray.

References `std::max_element()`.

2.22.2.28 `template<typename _Tp > _Tp std::valarray<_Tp>::min () const [inline, inherited]`

Return the minimum element using operator<().

Definition at line 963 of file valarray.

References `std::min_element()`.

2.22.2.29 `template<typename _Tp> valarray<_Tp>::template _UnaryOp<
__logical_not>::Rt std::valarray<_Tp>::operator! () const
[inline, inherited]`

Return a new valarray by applying unary ! to each element.

Definition at line 1006 of file valarray.

2.22.2.30 `template<typename _Tp> void std::gslice_array<_Tp
>::operator%=(const valarray<_Tp> & __v) const [inline,
inherited]`

Modulo slice elements by corresponding elements of *v*.

Definition at line 203 of file gslice_array.h.

2.22.2.31 `template<class _Tp> valarray<_Tp> & std::valarray<_Tp
>::operator%=(const _Tp & __t) [inline, inherited]`

Set each element *e* of array to *e % t*.

Definition at line 1033 of file valarray.

2.22.2.32 `template<class _Tp> valarray<_Tp> & std::valarray<_Tp
>::operator%=(const valarray<_Tp> & __v) [inline,
inherited]`

Modulo elements of array by corresponding elements of *v*.

Definition at line 1033 of file valarray.

2.22.2.33 `template<typename _Tp> void std::gslice_array<_Tp
>::operator&=(const valarray<_Tp> & __v) const [inline,
inherited]`

Logical and slice elements with corresponding elements of v .

Definition at line 207 of file `gslice_array.h`.

2.22.2.34 `template<class _Tp> valarray<_Tp> & std::valarray<_Tp>
>::operator&= (const _Tp & __t) [inline, inherited]`

Set each element e of array to $e \& t$.

Definition at line 1035 of file `valarray`.

2.22.2.35 `template<class _Tp> valarray<_Tp> & std::valarray<_Tp>
>::operator&= (const valarray<_Tp> & __v) [inline,
inherited]`

Logical and corresponding elements of v with elements of array.

Definition at line 1035 of file `valarray`.

2.22.2.36 `template<typename _Tp> void std::gslice_array<_Tp>
>::operator*= (const valarray<_Tp> & __v) const [inline,
inherited]`

Multiply slice elements by corresponding elements of v .

Definition at line 201 of file `gslice_array.h`.

2.22.2.37 `template<class _Tp> valarray<_Tp> & std::valarray<_Tp>
>::operator*= (const valarray<_Tp> & __v) [inline,
inherited]`

Multiply elements of array by corresponding elements of v .

Definition at line 1031 of file `valarray`.

2.22.2.38 `template<class _Tp> valarray<_Tp> & std::valarray<_Tp>
>::operator*= (const _Tp & __t) [inline, inherited]`

Multiply each element of array by t .

Definition at line 1031 of file valarray.

2.22.2.39 `template<typename _Tp> valarray<_Tp>::template _UnaryOp<
__unary_plus>::_Rt std::valarray<_Tp>::operator+ () const
[inline, inherited]`

Return a new valarray by applying unary + to each element.

Definition at line 1003 of file valarray.

2.22.2.40 `template<typename _Tp> void std::gslice_array<_Tp
>::operator+=(const valarray<_Tp> & __v) const [inline,
inherited]`

Add corresponding elements of v to slice elements.

Definition at line 204 of file gslice_array.h.

2.22.2.41 `template<class _Tp> valarray<_Tp> & std::valarray<_Tp
>::operator+=(const _Tp & __t) [inline, inherited]`

Add t to each element of array.

Definition at line 1029 of file valarray.

2.22.2.42 `template<class _Tp> valarray<_Tp> & std::valarray<_Tp
>::operator+=(const valarray<_Tp> & __v) [inline,
inherited]`

Add corresponding elements of v to elements of array.

Definition at line 1029 of file valarray.

2.22.2.43 `template<typename _Tp > valarray< _Tp >::template _UnaryOp<
__negate >::_Rt std::valarray< _Tp >::operator- () const
[inline, inherited]`

Return a new valarray by applying unary - to each element.

Definition at line 1004 of file valarray.

2.22.2.44 `template<typename _Tp > void std::gslice_array< _Tp
>::operator-= (const valarray< _Tp > & __v) const [inline,
inherited]`

Subtract corresponding elements of *v* from slice elements.

Definition at line 205 of file gslice_array.h.

2.22.2.45 `template<class _Tp> valarray< _Tp > & std::valarray< _Tp
>::operator-= (const valarray< _Tp > & __v) [inline,
inherited]`

Subtract corresponding elements of *v* from elements of array.

Definition at line 1030 of file valarray.

2.22.2.46 `template<class _Tp> valarray< _Tp > & std::valarray< _Tp
>::operator-= (const _Tp & __t) [inline, inherited]`

Subtract *t* to each element of array.

Definition at line 1030 of file valarray.

2.22.2.47 `template<typename _Tp > void std::gslice_array< _Tp
>::operator/= (const valarray< _Tp > & __v) const [inline,
inherited]`

Divide slice elements by corresponding elements of *v*.

Definition at line 202 of file gslice_array.h.

2.22.2.48 `template<class _Tp> valarray< _Tp > & std::valarray< _Tp
>::operator/=(const _Tp & __t) [inline, inherited]`

Divide each element of array by *t*.

Definition at line 1032 of file valarray.

2.22.2.49 `template<class _Tp> valarray< _Tp > & std::valarray< _Tp
>::operator/=(const valarray< _Tp > & __v) [inline,
inherited]`

Divide elements of array by corresponding elements of *v*.

Definition at line 1032 of file valarray.

2.22.2.50 `template<typename _Tp > void std::gslice_array< _Tp
>::operator<<=(const valarray< _Tp > & __v) const
[inline, inherited]`

Left shift slice elements by corresponding elements of *v*.

Definition at line 209 of file gslice_array.h.

2.22.2.51 `template<class _Tp> valarray< _Tp > & std::valarray< _Tp
>::operator<<=(const _Tp & __t) [inline, inherited]`

Left shift each element *e* of array by *t* bits.

Definition at line 1037 of file valarray.

2.22.2.52 `template<class _Tp> valarray< _Tp > & std::valarray< _Tp
>::operator<<=(const valarray< _Tp > & __v) [inline,
inherited]`

Left shift elements of array by corresponding elements of *v*.

Definition at line 1037 of file valarray.

2.22.2.53 `template<typename _Tp> void std::indirect_array< _Tp
>::operator=(const _Tp & __t) const [inline, inherited]`

Assign all slice elements to *t*.

Definition at line 164 of file indirect_array.h.

2.22.2.54 `template<typename _Tp> valarray< _Tp > & std::valarray< _Tp
>::operator=(const valarray< _Tp > & __v) [inline,
inherited]`

Assign elements to an array.

Assign elements of array to values in *v*. Results are undefined if *v* does not have the same size as this array.

Parameters

v Valarray to get values from.

Definition at line 677 of file valarray.

2.22.2.55 `template<typename _Tp> void std::slice_array< _Tp >::operator=
(const valarray< _Tp > & __v) const [inline, inherited]`

Assign slice elements to corresponding elements of *v*.

Definition at line 230 of file slice_array.h.

2.22.2.56 `gslice & std::gslice::operator=(const gslice & __g) [inline,
inherited]`

Assignment operator.

Definition at line 170 of file gslice.h.

2.22.2.57 `template<typename _Tp> void std::mask_array< _Tp >::operator=
(const _Tp & __t) const [inline, inherited]`

Assign all slice elements to *t*.

Definition at line 159 of file mask_array.h.

2.22.2.58 `template<typename _Tp > gslice_array< _Tp > &
std::gslice_array< _Tp >::operator= (const gslice_array< _Tp > &
__a) [inline, inherited]`

Assignment operator. Assigns slice elements to corresponding /// elements of *a*.

Definition at line 149 of file gslice_array.h.

References `std::valarray< _Tp >::size()`.

2.22.2.59 `template<typename _Tp > void std::gslice_array< _Tp >::operator=
(const valarray< _Tp > & __v) const [inline, inherited]`

Assign slice elements to corresponding elements of *v*.

Definition at line 167 of file gslice_array.h.

References `std::valarray< _Tp >::size()`.

2.22.2.60 `template<typename _Tp> valarray< _Tp > & std::valarray< _Tp
>::operator= (const _Tp & __t) [inline, inherited]`

Assign elements to a value.

Assign all elements of array to *t*.

Parameters

t Value for elements.

Definition at line 725 of file valarray.

2.22.2.61 `template<typename _Tp> valarray< _Tp > & std::valarray< _Tp
>::operator= (const slice_array< _Tp > & __sa) [inline,
inherited]`

Assign elements to an array subset.

Assign elements of array to values in *sa*. Results are undefined if *sa* does not have the same size as this array.

Parameters

sa Array slice to get values from.

Definition at line 733 of file valarray.

2.22.2.62 `template<typename _Tp > indirect_array< _Tp > &
std::indirect_array< _Tp >::operator= (const indirect_array< _Tp
> & __a) [inline, inherited]`

Assignment operator. Assigns elements to corresponding elements /// of *a*.

Definition at line 155 of file indirect_array.h.

2.22.2.63 `template<typename _Tp > void std::indirect_array< _Tp
>::operator= (const valarray< _Tp > & __v) const [inline,
inherited]`

Assign slice elements to corresponding elements of *v*.

Definition at line 169 of file indirect_array.h.

2.22.2.64 `template<typename _Tp > mask_array< _Tp > &
std::mask_array< _Tp >::operator= (const mask_array< _Tp > &
__a) [inline, inherited]`

Assignment operator. Assigns elements to corresponding elements /// of *a*.

Definition at line 150 of file mask_array.h.

2.22.2.65 `template<typename _Tp > slice_array< _Tp > & std::slice_array<
_Tp >::operator= (const slice_array< _Tp > & __a) [inline,
inherited]`

Assignment operator. Assigns slice elements to corresponding *///* elements of *a*.

Definition at line 216 of file slice_array.h.

2.22.2.66 `template<typename _Tp> void std::slice_array<_Tp>::operator=
(const _Tp & __t) const [inline, inherited]`

Assign all slice elements to *t*.

Definition at line 225 of file slice_array.h.

2.22.2.67 `template<typename _Tp> valarray<_Tp> & std::valarray<_Tp>
>::operator= (const mask_array<_Tp> & __ma) [inline,
inherited]`

Assign elements to an array subset.

Assign elements of array to values in *ma*. Results are undefined if *ma* does not have the same size as this array.

Parameters

ma Array slice to get values from.

Definition at line 753 of file valarray.

2.22.2.68 `template<typename _Tp> valarray<_Tp> & std::valarray<_Tp>
>::operator= (const indirect_array<_Tp> & __ia) [inline,
inherited]`

Assign elements to an array subset.

Assign elements of array to values in *ia*. Results are undefined if *ia* does not have the same size as this array.

Parameters

ia Array slice to get values from.

Definition at line 763 of file valarray.

2.22.2.69 `template<typename _Tp> void std::gslice_array<_Tp>::operator=(const _Tp & __t) const [inline, inherited]`

Assign all slice elements to *t*.

Definition at line 159 of file `gslice_array.h`.

References `std::valarray<_Tp>::size()`.

2.22.2.70 `template<typename _Tp> valarray<_Tp> & std::valarray<_Tp>::operator=(const gslice_array<_Tp> & __ga) [inline, inherited]`

Assign elements to an array subset.

Assign elements of array to values in *ga*. Results are undefined if *ga* does not have the same size as this array.

Parameters

ga Array slice to get values from.

Definition at line 743 of file `valarray`.

References `std::valarray<_Tp>::size()`.

2.22.2.71 `template<typename _Tp> valarray<_Tp> & std::valarray<_Tp>::operator=(initializer_list<_Tp> __l) [inline, inherited]`

Assign elements to an [initializer_list](#).

Assign elements of array to values in *l*. Results are undefined if *l* does not have the same size as this array.

Parameters

l [initializer_list](#) to get values from.

Definition at line 701 of file `valarray`.

2.22.2.72 `template<typename _Tp> void std::gslice_array< _Tp
>::operator>>= (const valarray< _Tp> & __v) const
[inline, inherited]`

Right shift slice elements by corresponding elements of *v*.

Definition at line 210 of file `gslice_array.h`.

2.22.2.73 `template<class _Tp> valarray< _Tp> & std::valarray< _Tp
>::operator>>= (const valarray< _Tp> & __v) [inline,
inherited]`

Right shift elements of array by corresponding elements of *v*.

Definition at line 1038 of file `valarray`.

2.22.2.74 `template<class _Tp> valarray< _Tp> & std::valarray< _Tp
>::operator>>= (const _Tp & __t) [inline, inherited]`

Right shift each element *e* of array by *t* bits.

Definition at line 1038 of file `valarray`.

2.22.2.75 `template<typename _Tp> slice_array< _Tp> std::valarray< _Tp
>::operator[] (slice __s) [inline, inherited]`

Return a reference to an array subset.

Returns a new `valarray` containing the elements of the array indicated by the slice argument. The new `valarray` has the same size as the input slice.

See also

[slice](#).

Parameters

s The source slice.

Returns

New `valarray` containing elements in *s*.

Definition at line 790 of file valarray.

2.22.2.76 `template<typename _Tp > _Expr< _GClos< _ValArray, _Tp >, _Tp
> std::valarray< _Tp >::operator[] (const gslice & __gs) const
[inline, inherited]`

Return an array subset.

Returns a [slice_array](#) referencing the elements of the array indicated by the slice argument.

See also

[gslice](#).

Parameters

s The source slice.

Returns

[Slice_array](#) referencing elements indicated by *s*.

Definition at line 795 of file valarray.

2.22.2.77 `template<typename _Tp > valarray< _Tp > std::valarray< _Tp
>::operator[] (const valarray< bool > & __m) const [inline,
inherited]`

Return an array subset.

Returns a new valarray containing the elements of the array indicated by the argument. The input is a valarray of bool which represents a bitmask indicating which elements should be copied into the new valarray. Each element of the array is added to the return valarray if the corresponding element of the argument is true.

Parameters

m The valarray bitmask.

Returns

New valarray containing elements indicated by *m*.

Definition at line 812 of file valarray.

References `std::valarray< _Tp >::size()`.

2.22.2.78 `template<typename _Tp > mask_array< _Tp > std::valarray< _Tp >::operator[] (const valarray< bool > & __m) [inline, inherited]`

Return a reference to an array subset.

Returns a new `mask_array` referencing the elements of the array indicated by the argument. The input is a valarray of bool which represents a bitmask indicating which elements are part of the subset. Elements of the array are part of the subset if the corresponding element of the argument is true.

Parameters

m The valarray bitmask.

Returns

New valarray containing elements indicated by *m*.

Definition at line 824 of file valarray.

References `std::valarray< _Tp >::size()`.

2.22.2.79 `template<typename _Tp > _Expr< _IClos< _ValArray, _Tp >, _Tp > std::valarray< _Tp >::operator[] (const valarray< size_t > & __i) const [inline, inherited]`

Return an array subset.

Returns a new valarray containing the elements of the array indicated by the argument. The elements in the argument are interpreted as the indices of elements of this valarray to copy to the return valarray.

Parameters

i The valarray element index list.

Returns

New valarray containing elements in *s*.

Definition at line 835 of file valarray.

2.22.2.80 `template<typename _Tp> indirect_array<_Tp> std::valarray<_Tp>::operator[] (const valarray<size_t> & __i) [inline, inherited]`

Return a reference to an array subset.

Returns an [indirect_array](#) referencing the elements of the array indicated by the argument. The elements in the argument are interpreted as the indices of elements of this valarray to include in the subset. The returned [indirect_array](#) refers to these elements.

Parameters

i The valarray element index list.

Returns

Indirect_array referencing elements in *i*.

Definition at line 843 of file valarray.

References std::valarray<_Tp>::size().

2.22.2.81 `template<typename _Tp> _Tp & std::valarray<_Tp>::operator[] (size_t __i) [inline, inherited]`

Return a reference to the *i*'th array element.

Parameters

i Index of element to return.

Returns

Reference to the *i*'th element.

Definition at line 556 of file valarray.

2.22.2.82 `template<typename _Tp> gslice_array<_Tp> std::valarray<_Tp>::operator[] (const gslice & __gs) [inline, inherited]`

Return a reference to an array subset.

Returns a new valarray containing the elements of the array indicated by the gslice argument. The new valarray has the same size as the input gslice.

See also

[gslice](#).

Parameters

s The source gslice.

Returns

New valarray containing elements in *s*.

Definition at line 804 of file valarray.

2.22.2.83 `template<typename _Tp> _Expr<_SClos<_ValArray, _Tp>, _Tp> std::valarray<_Tp>::operator[](slice __s) const [inline, inherited]`

Return an array subset.

Returns a new valarray containing the elements of the array indicated by the slice argument. The new valarray has the same size as the input slice.

See also

[slice](#).

Parameters

s The source slice.

Returns

New valarray containing elements in *s*.

Definition at line 782 of file valarray.

2.22.2.84 `template<class _Tp> valarray<_Tp> & std::valarray<_Tp>::operator^=(const _Tp & __t) [inline, inherited]`

Set each element *e* of array to $e \wedge t$.

Definition at line 1034 of file valarray.

2.22.2.85 `template<class _Tp> valarray<_Tp> & std::valarray<_Tp>::operator^= (const valarray<_Tp> & __v) [inline, inherited]`

Logical xor corresponding elements of v with elements of array.

Definition at line 1034 of file valarray.

2.22.2.86 `template<typename _Tp> void std::gslice_array<_Tp>::operator^= (const valarray<_Tp> & __v) const [inline, inherited]`

Logical xor slice elements with corresponding elements of v .

Definition at line 206 of file gslice_array.h.

2.22.2.87 `template<class _Tp> valarray<_Tp> & std::valarray<_Tp>::operator|= (const valarray<_Tp> & __v) [inline, inherited]`

Logical or corresponding elements of v with elements of array.

Definition at line 1036 of file valarray.

2.22.2.88 `template<typename _Tp> void std::gslice_array<_Tp>::operator|= (const valarray<_Tp> & __v) const [inline, inherited]`

Logical or slice elements with corresponding elements of v .

Definition at line 208 of file gslice_array.h.

2.22.2.89 `template<class _Tp> valarray<_Tp> & std::valarray<_Tp>::operator|= (const _Tp & __t) [inline, inherited]`

Set each element e of array to $e \mid t$.

Definition at line 1036 of file valarray.

2.22.2.90 `template<typename _Tp> valarray<_Tp>::template _UnaryOp<
__bitwise_not>::_Rt std::valarray<_Tp>::operator~() const
[inline, inherited]`

Return a new valarray by applying unary ~ to each element.

Definition at line 1005 of file valarray.

2.22.2.91 `template<class _Tp> void std::valarray<_Tp>::resize (size_t
__size, _Tp __c = _Tp()) [inline, inherited]`

Resize array.

Resize this array to *size* and set all elements to *c*. All references and iterators are invalidated.

Parameters

size New array size.

c New value for all elements.

Definition at line 946 of file valarray.

2.22.2.92 `template<class _Tp> valarray<_Tp> std::valarray<_Tp>::shift
(int __n) const [inline, inherited]`

Return a shifted array.

A new valarray is constructed as a copy of this array with elements in shifted positions. For an element with index *i*, the new position is *i* - *n*. The new valarray has the same size as the current one. New elements without a value are set to 0. Elements whose new position is outside the bounds of the array are discarded.

Positive arguments shift toward index 0, discarding elements [0, *n*). Negative arguments discard elements from the top of the array.

Parameters

n Number of element positions to shift.

Returns

New valarray with elements in shifted positions.

Definition at line 864 of file valarray.

2.22.2.93 `size_t std::slice::size () const [inline, inherited]`

Return size of slice.

Definition at line 103 of file slice_array.h.

2.22.2.94 `valarray< size_t > std::gslice::size () const [inline, inherited]`

Return array of sizes of slice dimensions.

Definition at line 139 of file gslice.h.

2.22.2.95 `template<class _Tp > size_t std::valarray< _Tp >::size () const [inline, inherited]`

Return the number of elements in array.

Definition at line 851 of file valarray.

Referenced by `std::end()`, `std::valarray< _Tp >::operator=()`, `std::gslice_array< _Tp >::operator=()`, and `std::valarray< _Tp >::operator[]()`.

2.22.2.96 `size_t std::gslice::start () const [inline, inherited]`

Return array offset of first slice element.

Definition at line 135 of file gslice.h.

2.22.2.97 `size_t std::slice::start () const [inline, inherited]`

Return array offset of first slice element.

Definition at line 99 of file slice_array.h.

2.22.2.98 `size_t std::slice::stride () const [inline, inherited]`

Return array stride of slice.

Definition at line 107 of file slice_array.h.

2.22.2.99 `valarray< size_t > std::gslice::stride () const [inline, inherited]`

Return array of array strides for each dimension.

Definition at line 143 of file gslice.h.

2.22.2.100 `template<class _Tp > _Tp std::valarray< _Tp >::sum () const [inline, inherited]`

Return the sum of all elements in the array.

Accumulates the sum of all elements into a `Tp` using `+=`. The order of adding the elements is unspecified.

Definition at line 856 of file valarray.

2.23 Mathematical Special Functions

Collaboration diagram for Mathematical Special Functions:

Functions

- `template<typename _Tp >`
`__gnu_cxx::__promote< _Tp >::__type std::tr1::assoc_laguerre` (unsigned int __n, unsigned int __m, _Tp __x)
- `float std::tr1::assoc_laguerref` (unsigned int __n, unsigned int __m, float __x)

2.24 Decimal Floating-Point Arithmetic

Collaboration diagram for Decimal Floating-Point Arithmetic:

Namespaces

- namespace `std::decimal`

2.24.1 Detailed Description

Classes and functions for decimal floating-point arithmetic.

2.25 Binder Classes

Collaboration diagram for Binder Classes:

Classes

- class `std::binder1st<_Operation>`
One of the `binder` functors.
- class `std::binder2nd<_Operation>`

One of the *binder functors*.

- struct `std::is_bind_expression< _Tp >`
Determines if the given type `_Tp` is a function object should be treated as a subexpression when evaluating calls to function objects returned by `bind()`. [TR1 3.6.1].
- struct `std::is_bind_expression< _Bind< _Signature > >`
Class template `_Bind` is always a bind expression.
- struct `std::is_bind_expression< _Bind_result< _Result, _Signature > >`
Class template `_Bind` is always a bind expression.
- struct `std::is_placeholder< _Tp >`
Determines if the given type `_Tp` is a placeholder in a `bind()` expression and, if so, which placeholder it is. [TR1 3.6.2].
- struct `std::is_placeholder< _Placeholder< _Num > >`

Namespaces

- namespace `std::placeholders`

Functions

- template<typename _Functor, typename... _ArgTypes>
`_Bind_helper< _Functor, _ArgTypes...>::type` `std::bind` (`_Functor &&__f, _ArgTypes &&...__args`)
- template<typename _Operation, typename _Tp >
`binder1st< _Operation >` `std::bind1st` (`const _Operation &__fn, const _Tp &__x`)
- template<typename _Operation, typename _Tp >
`binder2nd< _Operation >` `std::bind2nd` (`const _Operation &__fn, const _Tp &__x`)

2.25.1 Detailed Description

Binders turn functions/functors with two arguments into functors with a single argument, storing an argument to be applied later. For example, a variable `B` of type `binder1st` is constructed from a functor `f` and an argument `x`. Later, `B's operator()` is called with a single argument `y`. The return value is the value of `f(x, y)`. `B` can be *called* with various arguments (`y1, y2, ...`) and will in turn call `f(x, y1), f(x, y2), ...`

The function `bind1st` is provided to save some typing. It takes the function and an argument as parameters, and returns an instance of `binder1st`.

The type `binder2nd` and its creator function `bind2nd` do the same thing, but the stored argument is passed as the second parameter instead of the first, e.g., `bind2nd(std::minus<float>, 1.3)` will create a functor whose `operator()` accepts a floating-point number, subtracts 1.3 from it, and returns the result. (If `bind1st` had been used, the functor would perform $1.3 - x$ instead.

Creator-wrapper functions like `bind1st` are intended to be used in calling algorithms. Their return values will be temporary objects. (The goal is to not require you to type names like `std::binder1st<std::plus<int>>` for declaring a variable to hold the return value from `bind1st(std::plus<int>, 5)`).

These become more useful when combined with the composition functions.

2.25.2 Function Documentation

2.25.2.1 `template<typename _Function , typename... _ArgTypes>
_Bind_helper<_Function, _ArgTypes...>::type std::bind (_Function
&& __f, _ArgTypes &&... __args) [inline]`

Function template for `std::bind`.

Definition at line 1435 of file `functional`.

Referenced by `std::is_permutation()`.

2.25.2.2 `template<typename _Operation , typename _Tp >
binder1st<_Operation> std::bind1st (const _Operation & __fn,
const _Tp & __x) [inline]`

One of the [binder functors](#).

Definition at line 127 of file `binders.h`.

2.25.2.3 `template<typename _Operation , typename _Tp >
binder2nd<_Operation> std::bind2nd (const _Operation & __fn,
const _Tp & __x) [inline]`

One of the [binder functors](#).

Definition at line 162 of file `binders.h`.

2.26 Algorithms

Collaboration diagram for Algorithms:

Modules

- [Mutating](#)
- [Non-Mutating](#)
- [Sorting](#)

2.26.1 Detailed Description

Components for performing algorithmic operations. Includes non-modifying sequence, modifying (mutating) sequence, sorting, searching, merge, partition, heap, set, minima, maxima, and permutation operations.

2.27 Mutating

Collaboration diagram for Mutating:

2.27.1 Function Documentation

2.27.1.1 `template<typename _II , typename _OI > _OI std::copy (_II __first,
_II __last, _OI __result) [inline]`

Copies the range [first,last) into result.

Parameters

first An input iterator.

last An input iterator.

result An output iterator.

Returns

result + (first - last)

This inline function will boil down to a call to `memmove` whenever possible. Failing that, if random access iterators are passed, then the loop count will be known (and therefore a candidate for compiler optimizations such as unrolling). Result may not be contained within [first,last); the `copy_backward` function should be used instead.

Note that the end of the output range is permitted to be contained within [first,last).

Definition at line 444 of file `stl_algobase.h`.

2.27.1.2 `template<typename _BI1 , typename _BI2 > _BI2
std::copy_backward (_BI1 __first, _BI1 __last, _BI2 __result)
[inline]`

Copies the range [first,last) into result.

Parameters

first A bidirectional iterator.

last A bidirectional iterator.

result A bidirectional iterator.

Returns

result - (first - last)

The function has the same effect as `copy`, but starts at the end of the range and works its way to the start, returning the start of the result. This inline function will boil down

to a call to `memmove` whenever possible. Failing that, if random access iterators are passed, then the loop count will be known (and therefore a candidate for compiler optimizations such as unrolling).

Result may not be in the range `[first,last)`. Use `copy` instead. Note that the start of the output range may overlap `[first,last)`.

Definition at line 613 of file `stl_algobase.h`.

2.27.1.3 `template<typename _InputIterator , typename _OutputIterator ,
typename _Predicate > _OutputIterator std::copy_if (_InputIterator
__first, _InputIterator __last, _OutputIterator __result, _Predicate
__pred)`

Copy the elements of a sequence for which a predicate is true.

Parameters

first An input iterator.

last An input iterator.

result An output iterator.

pred A predicate.

Returns

An iterator designating the end of the resulting sequence.

Copies each element in the range `[first,last)` for which `pred` returns true to the range beginning at `result`.

`copy_if()` is stable, so the relative order of elements that are copied is unchanged.

Definition at line 953 of file `stl_algo.h`.

2.27.1.4 `template<typename _InputIterator , typename _Size , typename
_OutputIterator > _OutputIterator std::copy_n (_InputIterator
__first, _Size __n, _OutputIterator __result) [inline]`

Copies the range `[first,first+n)` into `[result,result+n)`.

Parameters

first An input iterator.

n The number of elements to copy.

result An output iterator.

Returns

result+n.

This inline function will boil down to a call to `memmove` whenever possible. Failing that, if random access iterators are passed, then the loop count will be known (and therefore a candidate for compiler optimizations such as unrolling).

Definition at line 1010 of file `stl_algo.h`.

References `std::__iterator_category()`.

```
2.27.1.5  template<typename _ForwardIterator , typename _Tp > void std::fill
           ( _ForwardIterator __first, _ForwardIterator __last, const _Tp &
             __value ) [inline]
```

Fills the range [first,last) with copies of value.

Parameters

first A forward iterator.

last A forward iterator.

value A reference-to-const of arbitrary type.

Returns

Nothing.

This function fills a range with copies of the same value. For char types filling contiguous areas of memory, this becomes an inline call to `memset` or `wmemset`.

Definition at line 715 of file `stl_algobase.h`.

```
2.27.1.6  template<typename _OI , typename _Size , typename _Tp > _OI
           std::fill_n ( _OI __first, _Size __n, const _Tp & __value )
           [inline]
```

Fills the range [first,first+n) with copies of value.

Parameters

- first* An output iterator.
n The count of copies to perform.
value A reference-to-const of arbitrary type.

Returns

The iterator at first+n.

This function fills a range with copies of the same value. For char types filling contiguous areas of memory, this becomes an inline call to `memset` or `@ wmemset`.

`_GLIBCXX_RESOLVE_LIB_DEFECTS` DR 865. More algorithms that throw away information

Definition at line 775 of file `stl_algobase.h`.

2.27.1.7 `template<typename _ForwardIterator , typename _Generator > void
 std::generate (_ForwardIterator __first, _ForwardIterator __last,
 _Generator __gen)`

Assign the result of a function object to each value in a sequence.

Parameters

- first* A forward iterator.
last A forward iterator.
gen A function object taking no arguments and returning `std::iterator_traits<_ForwardIterator>::value_type`

Returns

`generate()` returns no value.

Performs the assignment `*i = gen ()` for each `i` in the range `[first,last)`.

Definition at line 4899 of file `stl_algo.h`.

2.27.1.8 `template<typename _OutputIterator , typename _Size , typename
 _Generator > _OutputIterator std::generate_n (_OutputIterator
 __first, _Size __n, _Generator __gen)`

Assign the result of a function object to each value in a sequence.

Parameters

first A forward iterator.

n The length of the sequence.

gen A function object taking no arguments and returning `std::iterator_traits<_ForwardIterator>::value_type`

Returns

The end of the sequence, `first+n`

Performs the assignment `*i = gen()` for each `i` in the range `[first,first+n)`.

`_GLIBCXX_RESOLVE_LIB_DEFECTS` DR 865. More algorithms that throw away information

Definition at line 4930 of file `stl_algo.h`.

2.27.1.9 `template<typename _InputIterator , typename _Predicate > bool
std::is_partitioned (_InputIterator __first, _InputIterator __last,
_Predicate __pred) [inline]`

Checks whether the sequence is partitioned.

Parameters

first An input iterator.

last An input iterator.

pred A predicate.

Returns

True if the range `[first,last)` is partitioned by `pred`, i.e. if all elements that satisfy `pred` appear before those that do not.

Definition at line 805 of file `stl_algo.h`.

References `std::find_if_not()`, and `std::none_of()`.

2.27.1.10 `template<typename _ForwardIterator1 , typename
_ForwardIterator2 > void std::iter_swap (_ForwardIterator1 __a,
_ForwardIterator2 __b) [inline]`

Swaps the contents of two iterators.

Parameters

- a* An iterator.
- b* Another iterator.

Returns

Nothing.

This function swaps the values pointed to by two iterators, not the iterators themselves.

Definition at line 118 of file `stl_algobase.h`.

Referenced by `std::__merge_without_buffer()`, `std::__move_median_first()`, `std::__partition()`, `std::__reverse()`, `std::__rotate()`, `std::__unguarded_partition()`, `std::next_permutation()`, `std::prev_permutation()`, `std::random_shuffle()`, `std::shuffle()`, and `std::swap_ranges()`.

2.27.1.11 `template<typename _II, typename _OI> _OI std::move (_II
_first, _II _last, _OI _result) [inline]`

Moves the range `[first,last)` into `result`.

Parameters

- first* An input iterator.
- last* An input iterator.
- result* An output iterator.

Returns

`result + (first - last)`

This inline function will boil down to a call to `memmove` whenever possible. Failing that, if random access iterators are passed, then the loop count will be known (and therefore a candidate for compiler optimizations such as unrolling). Result may not be contained within `[first,last)`; the `move_backward` function should be used instead.

Note that the end of the output range is permitted to be contained within `[first,last)`.

Definition at line 477 of file `stl_algobase.h`.

2.27.1.12 `template<typename _Tp> std::remove_reference<_Tp>::type&&
std::move (_Tp && __t) [inline]`

Move a value.

Parameters

__t A thing of arbitrary type.

Returns

Same, moved.

Definition at line 82 of file move.h.

2.27.1.13 `template<typename _BI1 , typename _BI2 > _BI2
std::move_backward (_BI1 __first, _BI1 __last, _BI2 __result)
[inline]`

Moves the range [first,last) into result.

Parameters

first A bidirectional iterator.

last A bidirectional iterator.

result A bidirectional iterator.

Returns

result - (first - last)

The function has the same effect as move, but starts at the end of the range and works its way to the start, returning the start of the result. This inline function will boil down to a call to memmove whenever possible. Failing that, if random access iterators are passed, then the loop count will be known (and therefore a candidate for compiler optimizations such as unrolling).

Result may not be in the range [first,last). Use move instead. Note that the start of the output range may overlap [first,last).

Definition at line 649 of file stl_algobase.h.

2.27.1.14 `template<typename _ForwardIterator , typename _Predicate
> _ForwardIterator std::partition (_ForwardIterator __first,
_ForwardIterator __last, _Predicate __pred) [inline]`

Move elements for which a predicate is true to the beginning of a sequence.

Parameters

first A forward iterator.
last A forward iterator.
pred A predicate functor.

Returns

An iterator `middle` such that `pred(i)` is true for each iterator `i` in the range `[first,middle)` and false for each `i` in the range `[middle,last)`.

`pred` must not modify its operand. `partition()` does not preserve the relative ordering of elements in each group, use `stable_partition()` if this is needed.

Definition at line 5102 of file `stl_algo.h`.

References `std::__iterator_category()`, and `std::__partition()`.

2.27.1.15 `template<typename _InputIterator , typename _OutputIterator1
, typename _OutputIterator2 , typename _Predicate >
pair<_OutputIterator1, _OutputIterator2> std::partition_copy (
_InputIterator __first, _InputIterator __last, _OutputIterator1
__out_true, _OutputIterator2 __out_false, _Predicate __pred)`

Copy the elements of a sequence to separate output sequences depending on the truth value of a predicate.

Parameters

first An input iterator.
last An input iterator.
out_true An output iterator.
out_false An output iterator.
pred A predicate.

Returns

A pair designating the ends of the resulting sequences.

Copies each element in the range `[first,last)` for which `pred` returns true to the range beginning at `out_true` and each element for which `pred` returns false to `out_false`.

Definition at line 1039 of file `stl_algo.h`.

2.27.1.16 `template<typename _ForwardIterator, typename _Predicate >
_ForwardIterator std::partition_point (_ForwardIterator __first,
_ForwardIterator __last, _Predicate __pred)`

Find the partition point of a partitioned range.

Parameters

first An iterator.

last Another iterator.

pred A predicate.

Returns

An iterator *mid* such that `all_of(first, mid, pred)` and `none_of(mid, last, pred)` are both true.

Definition at line 823 of file `stl_algo.h`.

References `std::advance()`, and `std::distance()`.

2.27.1.17 `template<typename _RandomAccessIterator > void
std::random_shuffle (_RandomAccessIterator __first,
_RandomAccessIterator __last) [inline]`

Randomly shuffle the elements of a sequence.

Parameters

first A forward iterator.

last A forward iterator.

Returns

Nothing.

Reorder the elements in the range `[first,last)` using a random distribution, so that every possible ordering of the sequence is equally likely.

Definition at line 5038 of file `stl_algo.h`.

References `std::iter_swap()`.

2.27.1.18 `template<typename _RandomAccessIterator, typename
_RandomNumberGenerator > void std::random_shuffle (
_RandomAccessIterator __first, _RandomAccessIterator __last,
_RandomNumberGenerator && __rand)`

Shuffle the elements of a sequence using a random number generator.

Parameters

first A forward iterator.

last A forward iterator.

rand The RNG functor or function.

Returns

Nothing.

Reorders the elements in the range [first,last) using *rand* to provide a random distribution. Calling *rand*(N) for a positive integer N should return a randomly chosen integer from the range [0,N).

Definition at line 5066 of file stl_algo.h.

References std::iter_swap().

2.27.1.19 `template<typename _ForwardIterator, typename _Tp >
_ForwardIterator std::remove (_ForwardIterator __first,
_ForwardIterator __last, const _Tp & __value)`

Remove elements from a sequence.

Parameters

first An input iterator.

last An input iterator.

value The value to be removed.

Returns

An iterator designating the end of the resulting sequence.

All elements equal to *value* are removed from the range [first,last).

remove() is stable, so the relative order of elements that are not removed is unchanged.

Elements between the end of the resulting sequence and `last` are still present, but their value is unspecified.

Definition at line 1088 of file `stl_algo.h`.

2.27.1.20 `template<typename _InputIterator, typename _OutputIterator, typename _Tp> _OutputIterator std::remove_copy (_InputIterator __first, _InputIterator __last, _OutputIterator __result, const _Tp & __value)`

Copy a sequence, removing elements of a given value.

Parameters

first An input iterator.
last An input iterator.
result An output iterator.
value The value to be removed.

Returns

An iterator designating the end of the resulting sequence.

Copies each element in the range `[first,last)` not equal to `value` to the range beginning at `result`. `remove_copy()` is stable, so the relative order of elements that are copied is unchanged.

Definition at line 876 of file `stl_algo.h`.

2.27.1.21 `template<typename _InputIterator, typename _OutputIterator, typename _Predicate> _OutputIterator std::remove_copy_if (_InputIterator __first, _InputIterator __last, _OutputIterator __result, _Predicate __pred)`

Copy a sequence, removing elements for which a predicate is true.

Parameters

first An input iterator.
last An input iterator.
result An output iterator.
pred A predicate.

Returns

An iterator designating the end of the resulting sequence.

Copies each element in the range `[first,last)` for which `pred` returns false to the range beginning at `result`.

`remove_copy_if()` is stable, so the relative order of elements that are copied is unchanged.

Definition at line 914 of file `stl_algo.h`.

```
2.27.1.22  template<typename _ForwardIterator , typename _Predicate >
             _ForwardIterator std::remove_if ( _ForwardIterator __first,
             _ForwardIterator __last, _Predicate __pred )
```

Remove elements from a sequence using a predicate.

Parameters

first A forward iterator.

last A forward iterator.

pred A predicate.

Returns

An iterator designating the end of the resulting sequence.

All elements for which `pred` returns true are removed from the range `[first,last)`.

`remove_if()` is stable, so the relative order of elements that are not removed is unchanged.

Elements between the end of the resulting sequence and `last` are still present, but their value is unspecified.

Definition at line 1131 of file `stl_algo.h`.

```
2.27.1.23  template<typename _ForwardIterator , typename _Tp > void
             std::replace ( _ForwardIterator __first, _ForwardIterator __last,
             const _Tp & __old_value, const _Tp & __new_value )
```

Replace each occurrence of one value in a sequence with another value.

Parameters

first A forward iterator.
last A forward iterator.
old_value The value to be replaced.
new_value The replacement value.

Returns

replace() returns no value.

For each iterator *i* in the range [first,last) if **i == old_value* then the assignment **i = new_value* is performed.

Definition at line 4835 of file stl_algo.h.

2.27.1.24 `template<typename _InputIterator, typename _OutputIterator
, typename _Predicate, typename _Tp > _OutputIterator
std::replace_copy_if (_InputIterator __first, _InputIterator
__last, _OutputIterator __result, _Predicate __pred, const _Tp &
__new_value)`

Copy a sequence, replacing each value for which a predicate returns true with another value.

Parameters

first An input iterator.
last An input iterator.
result An output iterator.
pred A predicate.
new_value The replacement value.

Returns

The end of the output sequence, *result+(last-first)*.

Copies each element in the range [first,last) to the range [result,result+(last-first)) replacing elements for which *pred* returns true with *new_value*.

Definition at line 3783 of file stl_algo.h.

2.27.1.25 `template<typename _ForwardIterator, typename _Predicate, typename _Tp> void std::replace_if (_ForwardIterator __first, _ForwardIterator __last, _Predicate __pred, const _Tp & __new_value)`

Replace each value in a sequence for which a predicate returns true with another value.

Parameters

first A forward iterator.

last A forward iterator.

pred A predicate.

new_value The replacement value.

Returns

`replace_if()` returns no value.

For each iterator *i* in the range `[first,last)` if `pred(*i)` is true then the assignment `*i = new_value` is performed.

Definition at line 4867 of file `stl_algo.h`.

2.27.1.26 `template<typename _BidirectionalIterator> void std::reverse (_BidirectionalIterator __first, _BidirectionalIterator __last) [inline]`

Reverse a sequence.

Parameters

first A bidirectional iterator.

last A bidirectional iterator.

Returns

`reverse()` returns no value.

Reverses the order of the elements in the range `[first,last)`, so that the first element becomes the last etc. For every *i* such that $0 \leq i \leq (\text{last} - \text{first})/2$, `reverse()` swaps `*(first+i)` and `*(last-(i+1))`.

Definition at line 1439 of file `stl_algo.h`.

References `std::__iterator_category()`, and `std::__reverse()`.

Referenced by `std::next_permutation()`, and `std::prev_permutation()`.

2.27.1.27 `template<typename _BidirectionalIterator , typename
_OutputIterator > _OutputIterator std::reverse_copy (
_BidirectionalIterator __first, _BidirectionalIterator __last,
_OutputIterator __result)`

Copy a sequence, reversing its elements.

Parameters

first A bidirectional iterator.

last A bidirectional iterator.

result An output iterator.

Returns

An iterator designating the end of the resulting sequence.

Copies the elements in the range `[first,last)` to the range `[result,result+(last-first))` such that the order of the elements is reversed. For every `i` such that $0 \leq i < (last - first)$, `reverse_copy()` performs the assignment `*(result+(last-first)-i) = *(first+i)`. The ranges `[first,last)` and `[result,result+(last-first))` must not overlap.

Definition at line 1466 of file `stl_algo.h`.

2.27.1.28 `template<typename _ForwardIterator > void std::rotate
(_ForwardIterator __first, _ForwardIterator __middle,
_ForwardIterator __last) [inline]`

Rotate the elements of a sequence.

Parameters

first A forward iterator.

middle A forward iterator.

last A forward iterator.

Returns

Nothing.

Rotates the elements of the range `[first,last)` by `(middle-first)` positions so that the element at `middle` is moved to `first`, the element at `middle+1` is moved to `+1` and so on for each element in the range `[first,last)`.

This effectively swaps the ranges `[first,middle)` and `[middle,last)`.

Performs $*(first+(n+(last-middle))\%(last-first))=*(first+n)$ for each `n` in the range `[0,last-first)`.

Definition at line 1670 of file `stl_algo.h`.

References `std::__rotate()`.

Referenced by `std::__inplace_stable_partition()`, `std::__merge_without_buffer()`, `std::__rotate_adaptive()`, and `std::__stable_partition_adaptive()`.

2.27.1.29 `template<typename _ForwardIterator, typename _OutputIterator
> _OutputIterator std::rotate_copy (_ForwardIterator
__first, _ForwardIterator __middle, _ForwardIterator __last,
_OutputIterator __result)`

Copy a sequence, rotating its elements.

Parameters

first A forward iterator.

middle A forward iterator.

last A forward iterator.

result An output iterator.

Returns

An iterator designating the end of the resulting sequence.

Copies the elements of the range `[first,last)` to the range beginning at

Returns

, rotating the copied elements by `(middle-first)` positions so that the element at `middle` is moved to `result`, the element at `middle+1` is moved to `+1` and so on for each element in the range `[first,last)`.

Performs $*(result+(n+(last-middle))\%(last-first))=*(first+n)$ for each `n` in the range `[0,last-first)`.

Definition at line 1704 of file `stl_algo.h`.

2.27.1.30 `template<typename _RandomAccessIterator, typename
_UniformRandomNumberGenerator > void std::shuffle (`
 `_RandomAccessIterator __first, _RandomAccessIterator __last,`
 `_UniformRandomNumberGenerator && __g)`

Shuffle the elements of a sequence using a uniform random number generator.

Parameters

first A forward iterator.

last A forward iterator.

g A UniformRandomNumberGenerator (26.5.1.3).

Returns

Nothing.

Reorders the elements in the range [first,last) using *g* to provide random numbers.

Definition at line 4225 of file stl_algo.h.

References std::iter_swap().

2.27.1.31 `template<typename _ForwardIterator, typename _Predicate >`
 `_ForwardIterator std::stable_partition (_ForwardIterator __first,`
 `_ForwardIterator __last, _Predicate __pred)`

Move elements for which a predicate is true to the beginning of a sequence, preserving relative ordering.

Parameters

first A forward iterator.

last A forward iterator.

pred A predicate functor.

Returns

An iterator `middle` such that `pred(i)` is true for each iterator *i* in the range [first,middle) and false for each *i* in the range [middle,last).

Performs the same function as `partition()` with the additional guarantee that the relative ordering of elements in each group is preserved, so any two elements *x* and

y in the range $[first, last)$ such that $pred(x) == pred(y)$ will have the same relative ordering after calling `stable_partition()`.

Definition at line 1862 of file `stl_algo.h`.

References `std::__inplace_stable_partition()`, `std::__stable_partition_adaptive()`, `std::_Temporary_buffer<_ForwardIterator, _Tp>::begin()`, `std::_Temporary_buffer<_ForwardIterator, _Tp>::requested_size()`, and `std::_Temporary_buffer<_ForwardIterator, _Tp>::size()`.

2.27.1.32 `template<typename _Tp> void std::swap (_Tp & __a, _Tp & __b) [inline]`

Swaps two values.

Parameters

- `__a` A thing of arbitrary type.
- `__b` Another thing of arbitrary type.

Returns

Nothing.

Definition at line 122 of file `move.h`.

2.27.1.33 `template<typename _ForwardIterator1, typename _ForwardIterator2> _ForwardIterator2 std::swap_ranges (_ForwardIterator1 __first1, _ForwardIterator1 __last1, _ForwardIterator2 __first2)`

Swap the elements of two sequences.

Parameters

- first1* A forward iterator.
- last1* A forward iterator.
- first2* A forward iterator.

Returns

An iterator equal to `first2+(last1-first1)`.

Swaps each element in the range `[first1,last1)` with the corresponding element in the range `[first2,(last1-first1))`. The ranges must not overlap.

Definition at line 159 of file `stl_algo.h`.

References `std::iter_swap()`.

Referenced by `std::__rotate()`.

2.27.1.34 `template<typename _InputIterator1, typename _InputIterator2
, typename _OutputIterator, typename _BinaryOperation
> _OutputIterator std::transform (_InputIterator1 __first1,
_InputIterator1 __last1, _InputIterator2 __first2, _OutputIterator
__result, _BinaryOperation __binary_op)`

Perform an operation on corresponding elements of two sequences.

Parameters

first1 An input iterator.

last1 An input iterator.

first2 An input iterator.

result An output iterator.

binary_op A binary operator.

Returns

An output iterator equal to `result+(last-first)`.

Applies the operator to the corresponding elements in the two input ranges and assigns the results to successive elements of the output sequence. Evaluates `*(result+N)=binary_op(*(first1+N),*(first2+N))` for each `N` in the range `[0,last1-first1)`.

`binary_op` must not alter either of its arguments.

Definition at line 4803 of file `stl_algo.h`.

2.27.1.35 `template<typename _InputIterator, typename _OutputIterator,
typename _UnaryOperation > _OutputIterator std::transform (_InputIterator
__first, _InputIterator __last, _OutputIterator
__result, _UnaryOperation __unary_op)`

Perform an operation on a sequence.

Parameters

first An input iterator.
last An input iterator.
result An output iterator.
unary_op A unary operator.

Returns

An output iterator equal to `result+(last-first)`.

Applies the operator to each element in the input range and assigns the results to successive elements of the output sequence. Evaluates `*(result+N)=unary_op(*(first+N))` for each `N` in the range `[0,last-first)`.

`unary_op` must not alter its argument.

Definition at line 4767 of file `stl_algo.h`.

2.27.1.36 `template<typename _ForwardIterator, typename _BinaryPredicate
 > _ForwardIterator std::unique (_ForwardIterator __first,
 _ForwardIterator __last, _BinaryPredicate __binary_pred)`

Remove consecutive values from a sequence using a predicate.

Parameters

first A forward iterator.
last A forward iterator.
binary_pred A binary predicate.

Returns

An iterator designating the end of the resulting sequence.

Removes all but the first element from each group of consecutive values for which `binary_pred` returns true. `unique()` is stable, so the relative order of elements that are not removed is unchanged. Elements between the end of the resulting sequence and `last` are still present, but their value is unspecified.

Definition at line 1211 of file `stl_algo.h`.

2.27.1.37 `template<typename _ForwardIterator > _ForwardIterator
 std::unique (_ForwardIterator __first, _ForwardIterator __last)`

Remove consecutive duplicate values from a sequence.

Parameters

first A forward iterator.

last A forward iterator.

Returns

An iterator designating the end of the resulting sequence.

Removes all but the first element from each group of consecutive values that compare equal. `unique()` is stable, so the relative order of elements that are not removed is unchanged. Elements between the end of the resulting sequence and `last` are still present, but their value is unspecified.

Definition at line 1171 of file `stl_algo.h`.

2.27.1.38 `template<typename _InputIterator, typename _OutputIterator
> _OutputIterator std::unique_copy (_InputIterator __first,
_InputIterator __last, _OutputIterator __result) [inline]`

Copy a sequence, removing consecutive duplicate values.

Parameters

first An input iterator.

last An input iterator.

result An output iterator.

Returns

An iterator designating the end of the resulting sequence.

Copies each element in the range `[first,last)` to the range beginning at `result`, except that only the first element is copied from groups of consecutive elements that compare equal. `unique_copy()` is stable, so the relative order of elements that are copied is unchanged.

`_GLIBCXX_RESOLVE_LIB_DEFECTS` DR 241. Does `unique_copy()` require Copy-Constructible and Assignable?

`_GLIBCXX_RESOLVE_LIB_DEFECTS` DR 538. 241 again: Does `unique_copy()` require CopyConstructible and Assignable?

Definition at line 4967 of file `stl_algo.h`.

References `std::__iterator_category()`, and `std::__unique_copy()`.

2.27.1.39 `template<typename _InputIterator, typename _OutputIterator,
typename _BinaryPredicate > _OutputIterator std::unique_copy(
_InputIterator __first, _InputIterator __last, _OutputIterator
__result, _BinaryPredicate __binary_pred) [inline]`

Copy a sequence, removing consecutive values using a predicate.

Parameters

first An input iterator.
last An input iterator.
result An output iterator.
binary_pred A binary predicate.

Returns

An iterator designating the end of the resulting sequence.

Copies each element in the range `[first,last)` to the range beginning at `result`, except that only the first element is copied from groups of consecutive elements for which `binary_pred` returns true. `unique_copy()` is stable, so the relative order of elements that are copied is unchanged.

`_GLIBCXX_RESOLVE_LIB_DEFECTS` DR 241. Does `unique_copy()` require Copy-Constructible and Assignable?

Definition at line 5007 of file `stl_algo.h`.

References `std::__iterator_category()`, and `std::__unique_copy()`.

2.28.1 Function Documentation

2.28.1.1 `template<typename _ForwardIterator > _ForwardIterator
std::adjacent_find (_ForwardIterator __first, _ForwardIterator
__last)`

Find two adjacent values in a sequence that are equal.

Parameters

first A forward iterator.

last A forward iterator.

Returns

The first iterator *i* such that *i* and *i*+1 are both valid iterators in [*first*,*last*) and such that `*i == *(i+1)`, or *last* if no such iterator exists.

Definition at line 4414 of file `stl_algo.h`.

2.28.1.2 `template<typename _ForwardIterator , typename _BinaryPredicate >
_ForwardIterator std::adjacent_find (_ForwardIterator __first,
_ForwardIterator __last, _BinaryPredicate __binary_pred)`

Find two adjacent values in a sequence using a predicate.

Parameters

first A forward iterator.

last A forward iterator.

binary_pred A binary predicate.

Returns

The first iterator *i* such that *i* and *i*+1 are both valid iterators in [*first*,*last*) and such that `binary_pred(*i,*i+1)` is true, or *last* if no such iterator exists.

Definition at line 4446 of file `stl_algo.h`.

2.28.1.3 `template<typename _InputIterator , typename _Predicate > bool
std::all_of (_InputIterator __first, _InputIterator __last, _Predicate
__pred) [inline]`

Checks that a predicate is true for all the elements of a sequence.

Parameters

first An input iterator.

last An input iterator.

pred A predicate.

Returns

True if the check is true, false otherwise.

Returns true if `pred` is true for each element in the range `[first,last)`, and false otherwise.

Definition at line 732 of file `stl_algo.h`.

References `std::find_if_not()`.

```
2.28.1.4 template<typename _InputIterator , typename _Predicate >
        bool std::any_of ( _InputIterator __first, _InputIterator __last,
                          _Predicate __pred ) [inline]
```

Checks that a predicate is false for at least an element of a sequence.

Parameters

first An input iterator.

last An input iterator.

pred A predicate.

Returns

True if the check is true, false otherwise.

Returns true if an element exists in the range `[first,last)` such that `pred` is true, and false otherwise.

Definition at line 766 of file `stl_algo.h`.

References `std::none_of()`.

```
2.28.1.5 template<typename _InputIterator , typename _Tp >
        iterator_traits<_InputIterator>::difference_type std::count (
        _InputIterator __first, _InputIterator __last, const _Tp & __value )
```

Count the number of copies of a value in a sequence.

Parameters

first An input iterator.
last An input iterator.
value The value to be counted.

Returns

The number of iterators *i* in the range [first,last) for which `*i == value`

Definition at line 4478 of file `stl_algo.h`.

Referenced by `std::is_permutation()`.

2.28.1.6 `template<typename _InputIterator , typename _Predicate >
 iterator_traits<_InputIterator>::difference_type std::count_if (
 _InputIterator __first, _InputIterator __last, _Predicate __pred)`

Count the elements of a sequence for which a predicate is true.

Parameters

first An input iterator.
last An input iterator.
pred A predicate.

Returns

The number of iterators *i* in the range [first,last) for which `pred(*i)` is true.

Definition at line 4503 of file `stl_algo.h`.

Referenced by `std::is_permutation()`.

2.28.1.7 `template<typename _II1 , typename _II2 > bool std::equal (_II1
 __first1, _II1 __last1, _II2 __first2) [inline]`

Tests a range for element-wise equality.

Parameters

first1 An input iterator.

last1 An input iterator.

first2 An input iterator.

Returns

A boolean true or false.

This compares the elements of two ranges using == and returns true or false depending on whether all of the corresponding elements of the ranges are equal.

Definition at line 1010 of file stl_algobase.h.

Referenced by std::operator==().

2.28.1.8 `template<typename _Iter1 , typename _Iter2 , typename
_BinaryPredicate > bool std::equal (_Iter1 __first1, _Iter1 __last1,
_Iter2 __first2, _BinaryPredicate __binary_pred) [inline]`

Tests a range for element-wise equality.

Parameters

first1 An input iterator.

last1 An input iterator.

first2 An input iterator.

binary_pred A binary predicate [functor](#).

Returns

A boolean true or false.

This compares the elements of two ranges using the `binary_pred` parameter, and returns true or false depending on whether all of the corresponding elements of the ranges are equal.

Definition at line 1042 of file stl_algobase.h.

2.28.1.9 `template<typename _InputIterator , typename _Tp > _InputIterator
std::find (_InputIterator __first, _InputIterator __last, const _Tp &
__val) [inline]`

Find the first occurrence of a value in a sequence.

Parameters

first An input iterator.

last An input iterator.

val The value to find.

Returns

The first iterator *i* in the range `[first,last)` such that `*i == val`, or `last` if no such iterator exists.

Definition at line 4290 of file `stl_algo.h`.

References `std::__find()`, and `std::__iterator_category()`.

```
2.28.1.10 template<typename _ForwardIterator1 , typename
               _ForwardIterator2 , typename _BinaryPredicate >
               _ForwardIterator1 std::find_end ( _ForwardIterator1 __first1,
               _ForwardIterator1 __last1, _ForwardIterator2 __first2,
               _ForwardIterator2 __last2, _BinaryPredicate __comp )
               [inline]
```

Find last matching subsequence in a sequence using a predicate.

Parameters

first1 Start of range to search.

last1 End of range to search.

first2 Start of sequence to match.

last2 End of sequence to match.

comp The predicate to use.

Returns

The last iterator *i* in the range `[first1,last1-(last2-first2))` such that `predicate(*(i+N), (first2+N))` is true for each *N* in the range `[0,last2-first2)`, or `last1` if no such iterator exists.

Searches the range `[first1,last1)` for a sub-sequence that compares equal value-by-value with the sequence given by `[first2,last2)` using `comp` as a predicate and returns an iterator to the first element of the sub-sequence, or `last1` if the sub-sequence is not found. The sub-sequence will be the last such subsequence contained in `[first,last1)`.

Because the sub-sequence must lie completely within the range `[first1,last1)` it must start at a position less than `last1-(last2-first2)` where `last2-first2` is the length

of the sub-sequence. This means that the returned iterator `i` will be in the range `[first1, last1 - (last2 - first2))`

Definition at line 698 of file `stl_algo.h`.

References `std::__iterator_category()`.

```
2.28.1.11  template<typename _ForwardIterator1 , typename
              _ForwardIterator2 > _ForwardIterator1 std::find_end (
              _ForwardIterator1 __first1, _ForwardIterator1 __last1,
              _ForwardIterator2 __first2, _ForwardIterator2 __last2 )
              [inline]
```

Find last matching subsequence in a sequence.

Parameters

first1 Start of range to search.

last1 End of range to search.

first2 Start of sequence to match.

last2 End of sequence to match.

Returns

The last iterator `i` in the range `[first1, last1 - (last2 - first2))` such that `*(i+N) == *(first2+N)` for each `N` in the range `[0, last2 - first2)`, or `last1` if no such iterator exists.

Searches the range `[first1, last1)` for a sub-sequence that compares equal value-by-value with the sequence given by `[first2, last2)` and returns an iterator to the first element of the sub-sequence, or `last1` if the sub-sequence is not found. The sub-sequence will be the last such subsequence contained in `[first, last1)`.

Because the sub-sequence must lie completely within the range `[first1, last1)` it must start at a position less than `last1 - (last2 - first2)` where `last2 - first2` is the length of the sub-sequence. This means that the returned iterator `i` will be in the range `[first1, last1 - (last2 - first2))`

Definition at line 651 of file `stl_algo.h`.

References `std::__iterator_category()`.

2.28.1.12 `template<typename _InputIterator, typename _ForwardIterator
> _InputIterator std::find_first_of (_InputIterator
__first1, _InputIterator __last1, _ForwardIterator __first2,
_ForwardIterator __last2)`

Find element from a set in a sequence.

Parameters

first1 Start of range to search.

last1 End of range to search.

first2 Start of match candidates.

last2 End of match candidates.

Returns

The first iterator *i* in the range [*first1*,*last1*) such that **i* == **(i2)* such that *i2* is an iterator in [*first2*,*last2*), or *last1* if no such iterator exists.

Searches the range [*first1*,*last1*) for an element that is equal to some element in the range [*first2*,*last2*). If found, returns an iterator in the range [*first1*,*last1*), otherwise returns *last1*.

Definition at line 4343 of file `stl_algo.h`.

2.28.1.13 `template<typename _InputIterator, typename _ForwardIterator ,
typename _BinaryPredicate > _InputIterator std::find_first_of (
_InputIterator __first1, _InputIterator __last1, _ForwardIterator
__first2, _ForwardIterator __last2, _BinaryPredicate __comp)`

Find element from a set in a sequence using a predicate.

Parameters

first1 Start of range to search.

last1 End of range to search.

first2 Start of match candidates.

last2 End of match candidates.

comp Predicate to use.

Returns

The first iterator *i* in the range [*first1*,*last1*) such that *comp(*i, *(i2))* is true and *i2* is an iterator in [*first2*,*last2*), or *last1* if no such iterator exists.

Searches the range `[first1,last1)` for an element that is equal to some element in the range `[first2,last2)`. If found, returns an iterator in the range `[first1,last1)`, otherwise returns `last1`.

Definition at line 4383 of file `stl_algo.h`.

2.28.1.14 `template<typename _InputIterator, typename _Predicate >
_InputIterator std::find_if (_InputIterator __first, _InputIterator
__last, _Predicate __pred) [inline]`

Find the first element in a sequence for which a predicate is true.

Parameters

first An input iterator.

last An input iterator.

pred A predicate.

Returns

The first iterator `i` in the range `[first,last)` such that `pred(*i)` is true, or `last` if no such iterator exists.

Definition at line 4314 of file `stl_algo.h`.

References `std::__find_if()`, and `std::__iterator_category()`.

2.28.1.15 `template<typename _InputIterator, typename _Predicate
> _InputIterator std::find_if_not (_InputIterator __first,
_InputIterator __last, _Predicate __pred) [inline]`

Find the first element in a sequence for which a predicate is false.

Parameters

first An input iterator.

last An input iterator.

pred A predicate.

Returns

The first iterator `i` in the range `[first,last)` such that `pred(*i)` is false, or `last` if no such iterator exists.

Definition at line 781 of file `stl_algo.h`.

References `std::__find_if_not()`, and `std::__iterator_category()`.

Referenced by `std::all_of()`, and `std::is_partitioned()`.

2.28.1.16 `template<typename _InputIterator, typename _Function >
_Function std::for_each (_InputIterator __first, _InputIterator
__last, _Function __f)`

Apply a function to every element of a sequence.

Parameters

first An input iterator.

last An input iterator.

f A unary function object.

Returns

f (`std::move(f)` in C++0x).

Applies the function object *f* to each element in the range `[first,last)`. *f* must not modify the order of the sequence. If *f* has a return value it is ignored.

Definition at line 4269 of file `stl_algo.h`.

2.28.1.17 `template<typename _ForwardIterator1, typename
_ForwardIterator2, typename _BinaryPredicate >
bool std::is_permutation (_ForwardIterator1 __first1,
_ForwardIterator1 __last1, _ForwardIterator2 __first2,
_BinaryPredicate __pred)`

Checks whether a permutation of the second sequence is equal to the first sequence.

Parameters

first1 Start of first range.

last1 End of first range.

first2 Start of second range.

pred A binary predicate.

Returns

true if there exists a permutation of the elements in the range [first2, first2 + (last1 - first1)), beginning with ForwardIterator2 begin, such that equal(first1, last1, begin, pred) returns true; otherwise, returns false.

Definition at line 4175 of file stl_algo.h.

References std::advance(), std::bind(), std::count_if(), and std::distance().

2.28.1.18 `template<typename _ForwardIterator1 , typename
_ForwardIterator2 > bool std::is_permutation (_ForwardIterator1
__first1, _ForwardIterator1 __last1, _ForwardIterator2 __first2)`

Checks whether a permutaion of the second sequence is equal to the first sequence.

Parameters

first1 Start of first range.

last1 End of first range.

first2 Start of second range.

Returns

true if there exists a permutation of the elements in the range [first2, first2 + (last1 - first1)), beginning with ForwardIterator2 begin, such that equal(first1, last1, begin) returns true; otherwise, returns false.

Definition at line 4130 of file stl_algo.h.

References std::advance(), std::count(), and std::distance().

2.28.1.19 `template<typename _InputIterator1 , typename _InputIterator2
> pair<_InputIterator1, _InputIterator2> std::mismatch (
_InputIterator1 __first1, _InputIterator1 __last1, _InputIterator2
__first2)`

Finds the places in ranges which don't match.

Parameters

first1 An input iterator.

last1 An input iterator.

first2 An input iterator.

Returns

A pair of iterators pointing to the first mismatch.

This compares the elements of two ranges using == and returns a pair of iterators. The first iterator points into the first range, the second iterator points into the second range, and the elements pointed to by the iterators are not equal.

Definition at line 1147 of file stl_algobase.h.

```
2.28.1.20  template<typename _InputIterator1 , typename _InputIterator2
            , typename _BinaryPredicate > pair<_InputIterator1,
            _InputIterator2> std::mismatch ( _InputIterator1 __first1,
            _InputIterator1 __last1, _InputIterator2 __first2, _BinaryPredicate
            __binary_pred )
```

Finds the places in ranges which don't match.

Parameters

first1 An input iterator.

last1 An input iterator.

first2 An input iterator.

binary_pred A binary predicate [functor](#).

Returns

A pair of iterators pointing to the first mismatch.

This compares the elements of two ranges using the *binary_pred* parameter, and returns a pair of iterators. The first iterator points into the first range, the second iterator points into the second range, and the elements pointed to by the iterators are not equal.

Definition at line 1185 of file stl_algobase.h.

```
2.28.1.21  template<typename _InputIterator , typename _Predicate > bool
            std::none_of ( _InputIterator __first, _InputIterator __last,
            _Predicate __pred ) [inline]
```

Checks that a predicate is false for all the elements of a sequence.

Parameters

first An input iterator.

last An input iterator.

pred A predicate.

Returns

True if the check is true, false otherwise.

Returns true if *pred* is false for each element in the range `[first,last)`, and false otherwise.

Definition at line 749 of file `stl_algo.h`.

Referenced by `std::any_of()`, and `std::is_partitioned()`.

2.28.1.22 `template<typename _ForwardIterator1 , typename
_ForwardIterator2 > _ForwardIterator1 std::search (
_ForwardIterator1 __first1, _ForwardIterator1 __last1,
_ForwardIterator2 __first2, _ForwardIterator2 __last2)`

Search a sequence for a matching sub-sequence.

Parameters

first1 A forward iterator.

last1 A forward iterator.

first2 A forward iterator.

last2 A forward iterator.

Returns

The first iterator *i* in the range `[first1,last1-(last2-first2))` such that `*(i+N) == *(first2+N)` for each *N* in the range `[0,last2-first2)`, or *last1* if no such iterator exists.

Searches the range `[first1,last1)` for a sub-sequence that compares equal value-by-value with the sequence given by `[first2,last2)` and returns an iterator to the first element of the sub-sequence, or *last1* if the sub-sequence is not found.

Because the sub-sequence must lie completely within the range `[first1,last1)` it must start at a position less than `last1-(last2-first2)` where `last2-first2` is the length of the sub-sequence. This means that the returned iterator *i* will be in the range `[first1,last1-(last2-first2))`

Definition at line 4543 of file `stl_algo.h`.

2.28.1.23 `template<typename _ForwardIterator1 , typename
_ForwardIterator2 , typename _BinaryPredicate >
_ForwardIterator1 std::search (_ForwardIterator1 __first1,
_ForwardIterator1 __last1, _ForwardIterator2 __first2,
_ForwardIterator2 __last2, _BinaryPredicate __predicate)`

Search a sequence for a matching sub-sequence using a predicate.

Parameters

first1 A forward iterator.
last1 A forward iterator.
first2 A forward iterator.
last2 A forward iterator.
predicate A binary predicate.

Returns

The first iterator *i* in the range `[first1,last1-(last2-first2))` such that `predicate(*(i+N),*(first2+N))` is true for each *N* in the range `[0,last2-first2)`, or *last1* if no such iterator exists.

Searches the range `[first1,last1)` for a sub-sequence that compares equal value-by-value with the sequence given by `[first2,last2)`, using `predicate` to determine equality, and returns an iterator to the first element of the sub-sequence, or *last1* if no such iterator exists.

See also

`search(_ForwardIter1, _ForwardIter1, _ForwardIter2, _ForwardIter2)`

Definition at line 4615 of file `stl_algo.h`.

2.28.1.24 `template<typename _ForwardIterator , typename _Integer ,
typename _Tp , typename _BinaryPredicate > _ForwardIterator
std::search_n (_ForwardIterator __first, _ForwardIterator
__last, _Integer __count, const _Tp & __val, _BinaryPredicate
__binary_pred)`

Search a sequence for a number of consecutive values using a predicate.

Parameters

first A forward iterator.
last A forward iterator.
count The number of consecutive values.
val The value to find.
binary_pred A binary predicate.

Returns

The first iterator *i* in the range `[first,last-count)` such that `binary_pred(*(i+N),val)` is true for each *N* in the range `[0,count)`, or *last* if no such iterator exists.

Searches the range `[first,last)` for `count` consecutive elements for which the predicate returns true.

Definition at line 4725 of file `stl_algo.h`.

References `std::__iterator_category()`, and `std::__search_n()`.

2.28.1.25 `template<typename _ForwardIterator , typename _Integer ,
 typename _Tp > _ForwardIterator std::search_n (_ForwardIterator
 __first, _ForwardIterator __last, _Integer __count, const _Tp &
 __val)`

Search a sequence for a number of consecutive values.

Parameters

first A forward iterator.
last A forward iterator.
count The number of consecutive values.
val The value to find.

Returns

The first iterator *i* in the range `[first,last-count)` such that `*(i+N) == val` for each *N* in the range `[0,count)`, or *last* if no such iterator exists.

Searches the range `[first,last)` for `count` consecutive elements equal to `val`.

Definition at line 4688 of file `stl_algo.h`.

References `std::__iterator_category()`, and `std::__search_n()`.

2.29.1 Function Documentation

2.29.1.1 `template<typename _BidirectionalIterator > void std::inplace_merge`
`(_BidirectionalIterator __first, _BidirectionalIterator __middle,`
`_BidirectionalIterator __last)`

Merges two sorted ranges in place.

Parameters

first An iterator.

middle Another iterator.

last Another iterator.

Returns

Nothing.

Merges two sorted and consecutive ranges, [first,middle) and [middle,last), and puts the result in [first,last). The output will be sorted. The sort is *stable*, that is, for equivalent elements in the two ranges, elements from the first range will always come before elements from the second.

If enough additional memory is available, this takes (last-first)-1 comparisons. Otherwise an NlogN algorithm is used, where N is distance(first,last).

Definition at line 3058 of file stl_algo.h.

References `std::__merge_adaptive()`, `std::__merge_without_buffer()`, `std::_Temporary_buffer< _ForwardIterator, _Tp >::begin()`, `std::distance()`, and `std::_Temporary_buffer< _ForwardIterator, _Tp >::size()`.

2.29.1.2 `template<typename _BidirectionalIterator, typename _Compare`
`> void std::inplace_merge (_BidirectionalIterator __first,`
`_BidirectionalIterator __middle, _BidirectionalIterator __last,`
`_Compare __comp)`

Merges two sorted ranges in place.

Parameters

first An iterator.
middle Another iterator.
last Another iterator.
comp A functor to use for comparisons.

Returns

Nothing.

Merges two sorted and consecutive ranges, [first,middle) and [middle,last), and puts the result in [first,last). The output will be sorted. The sort is *stable*, that is, for equivalent elements in the two ranges, elements from the first range will always come before elements from the second.

If enough additional memory is available, this takes (last-first)-1 comparisons. Otherwise an NlogN algorithm is used, where N is distance(first,last).

The comparison function should have the same effects on ordering as the function used for the initial sort.

Definition at line 3113 of file stl_algo.h.

References std::__merge_adaptive(), std::__merge_without_buffer(), std::_Temporary_buffer< _ForwardIterator, _Tp >::begin(), std::distance(), and std::_Temporary_buffer< _ForwardIterator, _Tp >::size().

2.29.1.3 `template<typename _ForwardIterator> bool std::is_sorted (_ForwardIterator __first, _ForwardIterator __last) [inline]`

Determines whether the elements of a sequence are sorted.

Parameters

first An iterator.
last Another iterator.

Returns

True if the elements are sorted, false otherwise.

Definition at line 3813 of file stl_algo.h.

References std::is_sorted_until().

2.29.1.4 `template<typename _ForwardIterator, typename _Compare> bool
std::is_sorted (_ForwardIterator __first, _ForwardIterator __last,
_Compare __comp) [inline]`

Determines whether the elements of a sequence are sorted according to a comparison functor.

Parameters

first An iterator.
last Another iterator.
comp A comparison functor.

Returns

True if the elements are sorted, false otherwise.

Definition at line 3827 of file `stl_algo.h`.

References `std::is_sorted_until()`.

2.29.1.5 `template<typename _ForwardIterator> _ForwardIterator
std::is_sorted_until (_ForwardIterator __first, _ForwardIterator
__last)`

Determines the end of a sorted sequence.

Parameters

first An iterator.
last Another iterator.

Returns

An iterator pointing to the last iterator *i* in `[first, last)` for which the range `[first, i)` is sorted.

Definition at line 3841 of file `stl_algo.h`.

2.29.1.6 `template<typename _ForwardIterator, typename _Compare>
_ForwardIterator std::is_sorted_until (_ForwardIterator __first,
_ForwardIterator __last, _Compare __comp)`

Determines the end of a sorted sequence using comparison functor.

Parameters

first An iterator.

last Another iterator.

comp A comparison functor.

Returns

An iterator pointing to the last iterator *i* in [*first*, *last*) for which the range [*first*, *i*) is sorted.

Definition at line 3870 of file `stl_algo.h`.

Referenced by `std::is_sorted()`.

```
2.29.1.7  template<typename _II1 , typename _II2 > bool  
           std::lexicographical_compare ( _II1 __first1, _II1 __last1, _II2  
           __first2, _II2 __last2 ) [inline]
```

Performs **dictionary** comparison on ranges.

Parameters

first1 An input iterator.

last1 An input iterator.

first2 An input iterator.

last2 An input iterator.

Returns

A boolean true or false.

*Returns true if the sequence of elements defined by the range [*first1*,*last1*) is lexicographically less than the sequence of elements defined by the range [*first2*,*last2*). Returns false otherwise.* (Quoted from [25.3.8]/1.) If the iterators are all character pointers, then this is an inline call to `memcmp`.

Definition at line 1073 of file `stl_algobase.h`.

```
2.29.1.8 template<typename _II1 , typename _II2 , typename _Compare >
        bool std::lexicographical_compare ( _II1 __first1, _II1 __last1, _II2
        __first2, _II2 __last2, _Compare __comp )
```

Performs **dictionary** comparison on ranges.

Parameters

first1 An input iterator.
last1 An input iterator.
first2 An input iterator.
last2 An input iterator.
comp A [comparison functor](#).

Returns

A boolean true or false.

The same as the four-parameter `lexicographical_compare`, but uses the `comp` parameter instead of `<`.

Definition at line 1107 of file `stl_algobase.h`.

Referenced by `std::operator<()`.

```
2.29.1.9 template<typename _Tp > const _Tp & std::max ( const _Tp & __a,
        const _Tp & __b ) [inline]
```

This does what you think it does.

Parameters

a A thing of arbitrary type.
b Another thing of arbitrary type.

Returns

The greater of the parameters.

This is the simple classic generic implementation. It will work on temporary expressions, since they are only evaluated once, unlike a preprocessor macro.

Definition at line 210 of file `stl_algobase.h`.

Referenced by `std::_Deque_base<_Tp, _Alloc>::_M_initialize_map()`, `std::deque<_Tp, _Alloc>::_M_reallocate_map()`, and `std::basic_stringbuf<_CharT, _Traits, _Alloc>::overflow()`.

2.29.1.10 `template<typename _Tp, typename _Compare> const _Tp &
std::max (const _Tp & __a, const _Tp & __b, _Compare __comp
) [inline]`

This does what you think it does.

Parameters

- a* A thing of arbitrary type.
- b* Another thing of arbitrary type.
- comp* A [comparison functor](#).

Returns

The greater of the parameters.

This will work on temporary expressions, since they are only evaluated once, unlike a preprocessor macro.

Definition at line 254 of file `stl_algobase.h`.

2.29.1.11 `template<typename _ForwardIterator> _ForwardIterator
std::max_element (_ForwardIterator __first, _ForwardIterator
__last)`

Return the maximum element in a range.

Parameters

- first* Start of range.
- last* End of range.

Returns

Iterator referencing the first instance of the largest value.

Definition at line 6125 of file `stl_algo.h`.

2.29.1.12 `template<typename _ForwardIterator, typename _Compare >
_ForwardIterator std::max_element (_ForwardIterator __first,
_ForwardIterator __last, _Compare __comp)`

Return the maximum element in a range using comparison functor.

Parameters

first Start of range.
last End of range.
comp Comparison functor.

Returns

Iterator referencing the first instance of the largest value according to comp.

Definition at line 6153 of file `stl_algo.h`.

Referenced by `std::valarray<_Tp>::max()`.

2.29.1.13 `template<typename _InputIterator1, typename _InputIterator2
, typename _OutputIterator > _OutputIterator std::merge (
_InputIterator1 __first1, _InputIterator1 __last1, _InputIterator2
__first2, _InputIterator2 __last2, _OutputIterator __result)`

Merges two sorted ranges.

Parameters

first1 An iterator.
first2 Another iterator.
last1 Another iterator.
last2 Another iterator.
result An iterator pointing to the end of the merged range.

Returns

An iterator pointing to the first element *not less than val*.

Merges the ranges `[first1,last1)` and `[first2,last2)` into the sorted range `[result, result + (last1-first1) + (last2-first2))`. Both input ranges must be sorted, and the output range must not overlap with either of the input ranges. The sort is *stable*, that is, for equivalent

elements in the two ranges, elements from the first range will always come before elements from the second.

Definition at line 5368 of file `stl_algo.h`.

```
2.29.1.14  template<typename _InputIterator1 , typename _InputIterator2 ,
            typename _OutputIterator , typename _Compare > _OutputIterator
std::merge ( _InputIterator1 __first1, _InputIterator1 __last1,
            _InputIterator2 __first2, _InputIterator2 __last2, _OutputIterator
            __result, _Compare __comp )
```

Merges two sorted ranges.

Parameters

first1 An iterator.

first2 Another iterator.

last1 Another iterator.

last2 Another iterator.

result An iterator pointing to the end of the merged range.

comp A functor to use for comparisons.

Returns

An iterator pointing to the first element "not less than" *val*.

Merges the ranges `[first1,last1)` and `[first2,last2)` into the sorted range `[result, result + (last1-first1) + (last2-first2))`. Both input ranges must be sorted, and the output range must not overlap with either of the input ranges. The sort is *stable*, that is, for equivalent elements in the two ranges, elements from the first range will always come before elements from the second.

The comparison function should have the same effects on ordering as the function used for the initial sort.

Definition at line 5431 of file `stl_algo.h`.

```
2.29.1.15  template<typename _Tp , typename _Compare > const _Tp &
std::min ( const _Tp & __a, const _Tp & __b, _Compare __comp )
[inline]
```

This does what you think it does.

Parameters

- a* A thing of arbitrary type.
- b* Another thing of arbitrary type.
- comp* A [comparison functor](#).

Returns

The lesser of the parameters.

This will work on temporary expressions, since they are only evaluated once, unlike a preprocessor macro.

Definition at line 233 of file `stl_algobase.h`.

2.29.1.16 `template<typename _Tp> const _Tp & std::min (const _Tp & __a,
const _Tp & __b) [inline]`

This does what you think it does.

Parameters

- a* A thing of arbitrary type.
- b* Another thing of arbitrary type.

Returns

The lesser of the parameters.

This is the simple classic generic implementation. It will work on temporary expressions, since they are only evaluated once, unlike a preprocessor macro.

Definition at line 187 of file `stl_algobase.h`.

Referenced by `__gnu_parallel::__parallel_random_shuffle_drs()`, `__gnu_profile::__report()`, `__gnu_parallel::__sequential_random_shuffle()`, `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::compare()`, `std::basic_string< _CharT, _Traits, _Alloc >::compare()`, `std::basic_string< char >::compare()`, `std::generate_canonical()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow()`, `__gnu_cxx::random_sample_n()`, `std::basic_istream< _CharT, _Traits >::readsome()`, `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::rfind()`, `std::basic_string< _CharT, _Traits, _Alloc >::rfind()`, `std::basic_filebuf< _CharT, _Traits >::underflow()`, `std::basic_streambuf< _CharT, _Traits >::xsgetn()`, `std::basic_streambuf< _CharT, _Traits >::xsputn()`, and `std::basic_filebuf< _CharT, _Traits >::xsputn()`.

2.29.1.17 `template<typename _ForwardIterator > _ForwardIterator
std::min_element (_ForwardIterator __first, _ForwardIterator
__last)`

Return the minimum element in a range.

Parameters

first Start of range.

last End of range.

Returns

Iterator referencing the first instance of the smallest value.

Definition at line 6069 of file stl_algo.h.

2.29.1.18 `template<typename _ForwardIterator , typename _Compare >
_ForwardIterator std::min_element (_ForwardIterator __first,
_ForwardIterator __last, _Compare __comp)`

Return the minimum element in a range using comparison functor.

Parameters

first Start of range.

last End of range.

comp Comparison functor.

Returns

Iterator referencing the first instance of the smallest value according to comp.

Definition at line 6097 of file stl_algo.h.

Referenced by std::valarray< _Tp >::min().

2.29.1.19 `template<typename _Tp , typename _Compare > pair< const _Tp
&, const _Tp & > std::minmax (const _Tp & __a, const _Tp &
__b, _Compare __comp) [inline]`

Determines min and max at once as an ordered pair.

Parameters

- a* A thing of arbitrary type.
- b* Another thing of arbitrary type.
- comp* A [comparison functor](#).

Returns

A pair(b, a) if b is smaller than a, pair(a, b) otherwise.

Definition at line 3918 of file `stl_algo.h`.

2.29.1.20 `template<typename _Tp > pair< const _Tp &, const _Tp & >
std::minmax (const _Tp & __a, const _Tp & __b) [inline]`

Determines min and max at once as an ordered pair.

Parameters

- a* A thing of arbitrary type.
- b* Another thing of arbitrary type.

Returns

A pair(b, a) if b is smaller than a, pair(a, b) otherwise.

Definition at line 3899 of file `stl_algo.h`.

2.29.1.21 `template<typename _ForwardIterator > pair<_ForwardIterator,
_ForwardIterator> std::minmax_element (_ForwardIterator
__first, _ForwardIterator __last)`

Return a pair of iterators pointing to the minimum and maximum elements in a range.

Parameters

- first* Start of range.
- last* End of range.

Returns

make_pair(m, M), where m is the first iterator i in [first, last) such that no other element in the range is smaller, and where M is the last iterator i in [first, last) such that no other element in the range is larger.

Definition at line 3937 of file stl_algo.h.

References std::make_pair().

2.29.1.22 `template<typename _ForwardIterator, typename _Compare >
pair<_ForwardIterator, _ForwardIterator> std::minmax_element (
_ForwardIterator __first, _ForwardIterator __last, _Compare
__comp)`

Return a pair of iterators pointing to the minimum and maximum elements in a range.

Parameters

first Start of range.

last End of range.

comp Comparison functor.

Returns

make_pair(m, M), where m is the first iterator i in [first, last) such that no other element in the range is smaller, and where M is the last iterator i in [first, last) such that no other element in the range is larger.

Definition at line 4013 of file stl_algo.h.

References std::make_pair().

2.29.1.23 `template<typename _BidirectionalIterator > bool
std::next_permutation (_BidirectionalIterator __first,
_BidirectionalIterator __last)`

Permute range into the next *dictionary* ordering.

Parameters

first Start of range.

last End of range.

Returns

False if wrapped to first permutation, true otherwise.

Treats all permutations of the range as a set of *dictionary* sorted sequences. Permutes the current sequence into the next one of this set. Returns true if there are more sequences to generate. If the sequence is the largest of the set, the smallest is generated and false returned.

Definition at line 3515 of file stl_algo.h.

References std::iter_swap(), and std::reverse().

2.29.1.24 `template<typename _BidirectionalIterator, typename _Compare>
> bool std::next_permutation (_BidirectionalIterator __first,
_BidirectionalIterator __last, _Compare __comp)`

Permute range into the next *dictionary* ordering using comparison functor.

Parameters

first Start of range.

last End of range.

comp A comparison functor.

Returns

False if wrapped to first permutation, true otherwise.

Treats all permutations of the range [first,last) as a set of *dictionary* sorted sequences ordered by *comp*. Permutes the current sequence into the next one of this set. Returns true if there are more sequences to generate. If the sequence is the largest of the set, the smallest is generated and false returned.

Definition at line 3572 of file stl_algo.h.

References std::iter_swap(), and std::reverse().

2.29.1.25 `template<typename _RandomAccessIterator> void std::nth_element
(_RandomAccessIterator __first, _RandomAccessIterator __nth,
_RandomAccessIterator __last) [inline]`

Sort a sequence just enough to find a particular position.

Parameters

first An iterator.

nth Another iterator.

last Another iterator.

Returns

Nothing.

Rearranges the elements in the range `[first,last)` so that `*nth` is the same element that would have been in that position had the whole sequence been sorted. whole sequence been sorted. The elements either side of `*nth` are not completely sorted, but for any iterator in the range `[first,nth)` and any iterator in the range `[nth,last)` it holds that `*j < *i` is false.

Definition at line 5213 of file `stl_algo.h`.

References `std::__lg()`.

```
2.29.1.26  template<typename _RandomAccessIterator , typename _Compare
> void std::nth_element ( _RandomAccessIterator __first,
    _RandomAccessIterator __nth, _RandomAccessIterator __last,
    _Compare __comp ) [inline]
```

Sort a sequence just enough to find a particular position using a predicate for comparison.

Parameters

first An iterator.

nth Another iterator.

last Another iterator.

comp A comparison functor.

Returns

Nothing.

Rearranges the elements in the range `[first,last)` so that `*nth` is the same element that would have been in that position had the whole sequence been sorted. The elements either side of `*nth` are not completely sorted, but for any iterator in the range `[first,nth)` and any iterator in the range `[nth,last)` it holds that `comp(*j, *i)` is false.

Definition at line 5252 of file `stl_algo.h`.

References `std::__lg()`.

2.29.1.27 `template<typename _RandomAccessIterator > void std::partial_sort
(_RandomAccessIterator __first, _RandomAccessIterator
__middle, _RandomAccessIterator __last) [inline]`

Sort the smallest elements of a sequence.

Parameters

first An iterator.

middle Another iterator.

last Another iterator.

Returns

Nothing.

Sorts the smallest (middle-first) elements in the range [first,last) and moves them to the range [first,middle). The order of the remaining elements in the range [middle,last) is undefined. After the sort if *i* and *j* are iterators in the range [first,middle) such that *j* precedes *i* and *k* is an iterator in the range [middle,last) then **j* < **i* and **k* < **i* are both false.

Definition at line 5136 of file stl_algo.h.

References std::__heap_select(), and std::sort_heap().

2.29.1.28 `template<typename _RandomAccessIterator , typename _Compare
> void std::partial_sort (_RandomAccessIterator __first,
_RandomAccessIterator __middle, _RandomAccessIterator __last,
_Compare __comp) [inline]`

Sort the smallest elements of a sequence using a predicate for comparison.

Parameters

first An iterator.

middle Another iterator.

last Another iterator.

comp A comparison functor.

Returns

Nothing.

Sorts the smallest (middle-first) elements in the range `[first,last)` and moves them to the range `[first,middle)`. The order of the remaining elements in the range `[middle,last)` is undefined. After the sort if `i` and `j` are iterators in the range `[first,middle)` such that `i` precedes `j` and `i` is an iterator in the range `[middle,last)` then `*comp(j,*i)` and `comp(*j,*i)` are both false.

Definition at line 5175 of file `stl_algo.h`.

References `std::__heap_select()`, and `std::sort_heap()`.

2.29.1.29 `template<typename _InputIterator , typename
_RandomAccessIterator , typename _Compare >
_RandomAccessIterator std::partial_sort_copy (_InputIterator
__first, _InputIterator __last, _RandomAccessIterator __result_first,
_RandomAccessIterator __result_last, _Compare __comp)`

Copy the smallest elements of a sequence using a predicate for comparison.

Parameters

first An input iterator.

last Another input iterator.

result_first A random-access iterator.

result_last Another random-access iterator.

comp A comparison functor.

Returns

An iterator indicating the end of the resulting sequence.

Copies and sorts the smallest `N` values from the range `[first,last)` to the range beginning at `result_first`, where the number of elements to be copied, `N`, is the smaller of `(last-first)` and `(result_last-result_first)`. After the sort if `i` and `j` are iterators in the range `[result_first,result_first+N)` such that `i` precedes `j` then `comp(*j,*i)` is false. The value returned is `result_first+N`.

Definition at line 2010 of file `stl_algo.h`.

References `std::make_heap()`, and `std::sort_heap()`.

2.29.1.30 `template<typename _InputIterator , typename
_RandomAccessIterator > _RandomAccessIterator
std::partial_sort_copy (_InputIterator __first,
_InputIterator __last, _RandomAccessIterator __result_first,
_RandomAccessIterator __result_last)`

Copy the smallest elements of a sequence.

Parameters

first An iterator.

last Another iterator.

result_first A random-access iterator.

result_last Another random-access iterator.

Returns

An iterator indicating the end of the resulting sequence.

Copies and sorts the smallest N values from the range [first,last) to the range beginning at result_first, where the number of elements to be copied, N, is the smaller of (last-first) and (result_last-result_first). After the sort if i and are iterators in the range [result_first,result_first+N) such that precedes then *j<*i is false. The value returned is result_first+N.

Definition at line 1944 of file stl_algo.h.

References std::make_heap(), and std::sort_heap().

2.29.1.31 `template<typename _BidirectionalIterator , typename _Compare
> bool std::prev_permutation (_BidirectionalIterator __first,
_BidirectionalIterator __last, _Compare __comp)`

Permute range into the previous *dictionary* ordering using comparison functor.

Parameters

first Start of range.

last End of range.

comp A comparison functor.

Returns

False if wrapped to last permutation, true otherwise.

Treats all permutations of the range `[first,last)` as a set of *dictionary* sorted sequences ordered by *comp*. Permutes the current sequence into the previous one of this set. Returns true if there are more sequences to generate. If the sequence is the smallest of the set, the largest is generated and false returned.

Definition at line 3685 of file `stl_algo.h`.

References `std::iter_swap()`, and `std::reverse()`.

2.29.1.32 `template<typename _BidirectionalIterator > bool
std::prev_permutation (_BidirectionalIterator __first,
_BidirectionalIterator __last)`

Permute range into the previous *dictionary* ordering.

Parameters

first Start of range.

last End of range.

Returns

False if wrapped to last permutation, true otherwise.

Treats all permutations of the range as a set of *dictionary* sorted sequences. Permutes the current sequence into the previous one of this set. Returns true if there are more sequences to generate. If the sequence is the smallest of the set, the largest is generated and false returned.

Definition at line 3628 of file `stl_algo.h`.

References `std::iter_swap()`, and `std::reverse()`.

2.29.1.33 `template<typename _RandomAccessIterator , typename
_Compare > void std::sort (_RandomAccessIterator __first,
_RandomAccessIterator __last, _Compare __comp) [inline]`

Sort the elements of a sequence using a predicate for comparison.

Parameters

first An iterator.

last Another iterator.

comp A comparison functor.

Returns

Nothing.

Sorts the elements in the range `[first,last)` in ascending order, such that `comp(*(i+1),*i)` is false for every iterator `i` in the range `[first,last-1)`.

The relative ordering of equivalent elements is not preserved, use `stable_sort()` if this is needed.

Definition at line 5326 of file `stl_algo.h`.

References `std::__final_insertion_sort()`, `std::__introsort_loop()`, and `std::__lg()`.

2.29.1.34 `template<typename _RandomAccessIterator > void std::sort (`
`_RandomAccessIterator __first, _RandomAccessIterator __last)`
`[inline]`

Sort the elements of a sequence.

Parameters

first An iterator.

last Another iterator.

Returns

Nothing.

Sorts the elements in the range `[first,last)` in ascending order, such that `*(i+1) < *i` is false for each iterator `i` in the range `[first,last-1)`.

The relative ordering of equivalent elements is not preserved, use `stable_sort()` if this is needed.

Definition at line 5290 of file `stl_algo.h`.

References `std::__final_insertion_sort()`, `std::__introsort_loop()`, and `std::__lg()`.

2.29.1.35 `template<typename _RandomAccessIterator , typename _Compare`
`> void std::stable_sort (_RandomAccessIterator __first,`
`_RandomAccessIterator __last, _Compare __comp) [inline]`

Sort the elements of a sequence using a predicate for comparison, preserving the relative order of equivalent elements.

Parameters

first An iterator.
last Another iterator.
comp A comparison functor.

Returns

Nothing.

Sorts the elements in the range `[first,last)` in ascending order, such that `comp(*(i+1),*i)` is false for each iterator `i` in the range `[first,last-1)`.

The relative ordering of equivalent elements is preserved, so any two elements `x` and `y` in the range `[first,last)` such that `comp(x,y)` is false and `comp(y,x)` is false will have the same relative ordering after calling `stable_sort()`.

Definition at line 5532 of file `stl_algo.h`.

References `std::__inplace_stable_sort()`, `std::_Temporary_buffer<_ForwardIterator, _Tp>::begin()`, and `std::_Temporary_buffer<_ForwardIterator, _Tp>::size()`.

2.29.1.36 `template<typename _RandomAccessIterator> void std::stable_sort
 (_RandomAccessIterator __first, _RandomAccessIterator __last)
 [inline]`

Sort the elements of a sequence, preserving the relative order of equivalent elements.

Parameters

first An iterator.
last Another iterator.

Returns

Nothing.

Sorts the elements in the range `[first,last)` in ascending order, such that `*(i+1)<*i` is false for each iterator `i` in the range `[first,last-1)`.

The relative ordering of equivalent elements is preserved, so any two elements `x` and `y` in the range `[first,last)` such that `x<y` is false and `y<x` is false will have the same relative ordering after calling `stable_sort()`.

Definition at line 5490 of file `stl_algo.h`.

References `std::__inplace_stable_sort()`, `std::_Temporary_buffer<_ForwardIterator, _Tp>::begin()`, and `std::_Temporary_buffer<_ForwardIterator, _Tp>::size()`.

2.30.1 Detailed Description

These algorithms are common set operations performed on sequences that are already sorted. The number of comparisons will be linear.

2.30.2 Function Documentation

2.30.2.1 `template<typename _InputIterator1, typename _InputIterator2 >`
`bool std::includes (_InputIterator1 __first1, _InputIterator1 __last1,`
`_InputIterator2 __first2, _InputIterator2 __last2)`

Determines whether all elements of a sequence exists in a range.

Parameters

first1 Start of search range.

last1 End of search range.

first2 Start of sequence

last2 End of sequence.

Returns

True if each element in [first2,last2) is contained in order within [first1,last1). False otherwise.

This operation expects both [first1,last1) and [first2,last2) to be sorted. Searches for the presence of each element in [first2,last2) within [first1,last1). The iterators over each range only move forward, so this is a linear algorithm. If an element in [first2,last2) is not found before the search iterator reaches *last2*, false is returned.

Definition at line 3411 of file stl_algo.h.

```
2.30.2.2  template<typename _InputIterator1 , typename _InputIterator2 ,
            typename _Compare > bool std::includes ( _InputIterator1 __first1,
            _InputIterator1 __last1, _InputIterator2 __first2, _InputIterator2
            __last2, _Compare __comp )
```

Determines whether all elements of a sequence exists in a range using comparison.

Parameters

first1 Start of search range.
last1 End of search range.
first2 Start of sequence
last2 End of sequence.
comp Comparison function to use.

Returns

True if each element in [first2,last2) is contained in order within [first1,last1) according to comp. False otherwise.

This operation expects both [first1,last1) and [first2,last2) to be sorted. Searches for the presence of each element in [first2,last2) within [first1,last1), using comp to decide. The iterators over each range only move forward, so this is a linear algorithm. If an element in [first2,last2) is not found before the search iterator reaches *last2*, false is returned.

Definition at line 3461 of file stl_algo.h.

```
2.30.2.3  template<typename _InputIterator1 , typename _InputIterator2 ,
            typename _OutputIterator , typename _Compare > _OutputIterator
            std::set_difference ( _InputIterator1 __first1, _InputIterator1
            __last1, _InputIterator2 __first2, _InputIterator2 __last2,
            _OutputIterator __result, _Compare __comp )
```

Return the difference of two sorted ranges using comparison functor.

Parameters

first1 Start of first range.

last1 End of first range.
first2 Start of second range.
last2 End of second range.
comp The comparison functor.

Returns

End of the output range.

This operation iterates over both ranges, copying elements present in the first range but not the second in order to the output range. Iterators increment for each range. When the current element of the first range is less than the second according to *comp*, that element is copied and the iterator advances. If the current element of the second range is less, no element is copied and the iterator advances. If an element is contained in both ranges according to *comp*, no elements are copied and both ranges advance. The output range may not overlap either input range.

Definition at line 5889 of file `stl_algo.h`.

2.30.2.4 `template<typename _InputIterator1, typename _InputIterator2 ,
typename _OutputIterator > _OutputIterator std::set_difference (
_InputIterator1 __first1, _InputIterator1 __last1, _InputIterator2
__first2, _InputIterator2 __last2, _OutputIterator __result)`

Return the difference of two sorted ranges.

Parameters

first1 Start of first range.
last1 End of first range.
first2 Start of second range.
last2 End of second range.

Returns

End of the output range.

This operation iterates over both ranges, copying elements present in the first range but not the second in order to the output range. Iterators increment for each range. When the current element of the first range is less than the second, that element is copied and the iterator advances. If the current element of the second range is less, the iterator advances, but no element is copied. If an element is contained in both ranges, no elements are copied and both ranges advance. The output range may not overlap either input range.

Definition at line 5828 of file `stl_algo.h`.

2.30.2.5 `template<typename _InputIterator1, typename _InputIterator2 ,
typename _OutputIterator > _OutputIterator std::set_intersection (`
 `_InputIterator1 __first1, _InputIterator1 __last1, _InputIterator2`
 `__first2, _InputIterator2 __last2, _OutputIterator __result)`

Return the intersection of two sorted ranges.

Parameters

first1 Start of first range.

last1 End of first range.

first2 Start of second range.

last2 End of second range.

Returns

End of the output range.

This operation iterates over both ranges, copying elements present in both ranges in order to the output range. Iterators increment for each range. When the current element of one range is less than the other, that iterator advances. If an element is contained in both ranges, the element from the first range is copied and both ranges advance. The output range may not overlap either input range.

Definition at line 5713 of file `stl_algo.h`.

2.30.2.6 `template<typename _InputIterator1, typename _InputIterator2 ,`
 `typename _OutputIterator, typename _Compare > _OutputIterator`
 `std::set_intersection (_InputIterator1 __first1, _InputIterator1`
 `__last1, _InputIterator2 __first2, _InputIterator2 __last2,`
 `_OutputIterator __result, _Compare __comp)`

Return the intersection of two sorted ranges using comparison functor.

Parameters

first1 Start of first range.

last1 End of first range.

first2 Start of second range.

last2 End of second range.

comp The comparison functor.

Returns

End of the output range.

This operation iterates over both ranges, copying elements present in both ranges in order to the output range. Iterators increment for each range. When the current element of one range is less than the other according to *comp*, that iterator advances. If an element is contained in both ranges according to *comp*, the element from the first range is copied and both ranges advance. The output range may not overlap either input range.

Definition at line 5770 of file `stl_algo.h`.

```
2.30.2.7  template<typename _InputIterator1 , typename  
           _InputIterator2 , typename _OutputIterator > _OutputIterator  
           std::set_symmetric_difference ( _InputIterator1 __first1,  
           _InputIterator1 __last1, _InputIterator2 __first2, _InputIterator2  
           __last2, _OutputIterator __result )
```

Return the symmetric difference of two sorted ranges.

Parameters

first1 Start of first range.

last1 End of first range.

first2 Start of second range.

last2 End of second range.

Returns

End of the output range.

This operation iterates over both ranges, copying elements present in one range but not the other in order to the output range. Iterators increment for each range. When the current element of one range is less than the other, that element is copied and the iterator advances. If an element is contained in both ranges, no elements are copied and both ranges advance. The output range may not overlap either input range.

Definition at line 5947 of file `stl_algo.h`.

2.30.2.8 `template<typename _InputIterator1, typename _InputIterator2 ,
 typename _OutputIterator, typename _Compare > _OutputIterator
 std::set_symmetric_difference (_InputIterator1 __first1,
 _InputIterator1 __last1, _InputIterator2 __first2, _InputIterator2
 __last2, _OutputIterator __result, _Compare __comp)`

Return the symmetric difference of two sorted ranges using comparison functor.

Parameters

first1 Start of first range.
last1 End of first range.
first2 Start of second range.
last2 End of second range.
comp The comparison functor.

Returns

End of the output range.

This operation iterates over both ranges, copying elements present in one range but not the other in order to the output range. Iterators increment for each range. When the current element of one range is less than the other according to *comp*, that element is copied and the iterator advances. If an element is contained in both ranges according to *comp*, no elements are copied and both ranges advance. The output range may not overlap either input range.

Definition at line 6013 of file `stl_algo.h`.

2.30.2.9 `template<typename _InputIterator1, typename _InputIterator2 ,
 typename _OutputIterator > _OutputIterator std::set_union (`
`_InputIterator1 __first1, _InputIterator1 __last1, _InputIterator2`
`__first2, _InputIterator2 __last2, _OutputIterator __result)`

Return the union of two sorted ranges.

Parameters

first1 Start of first range.
last1 End of first range.
first2 Start of second range.

last2 End of second range.

Returns

End of the output range.

This operation iterates over both ranges, copying elements present in each range in order to the output range. Iterators increment for each range. When the current element of one range is less than the other, that element is copied and the iterator advanced. If an element is contained in both ranges, the element from the first range is copied and both ranges advance. The output range may not overlap either input range.

Definition at line 5579 of file `stl_algo.h`.

```
2.30.2.10  template<typename _InputIterator1 , typename _InputIterator2 ,
              typename _OutputIterator , typename _Compare > _OutputIterator
              std::set_union ( _InputIterator1 __first1, _InputIterator1 __last1,
                              _InputIterator2 __first2, _InputIterator2 __last2, _OutputIterator
                              __result, _Compare __comp )
```

Return the union of two sorted ranges using a comparison functor.

Parameters

first1 Start of first range.

last1 End of first range.

first2 Start of second range.

last2 End of second range.

comp The comparison functor.

Returns

End of the output range.

This operation iterates over both ranges, copying elements present in each range in order to the output range. Iterators increment for each range. When the current element of one range is less than the other according to *comp*, that element is copied and the iterator advanced. If an equivalent element according to *comp* is contained in both ranges, the element from the first range is copied and both ranges advance. The output range may not overlap either input range.

Definition at line 5646 of file `stl_algo.h`.

2.31 Binary Search

Collaboration diagram for Binary Search:

`_ForwardIterator std::upper_bound (_ForwardIterator __first, _ForwardIterator`
`__last, const _Tp &__val, _Compare __comp)`
- `template<typename _ForwardIterator, typename _Tp >`
`_ForwardIterator std::upper_bound (_ForwardIterator __first, _ForwardIterator`
`__last, const _Tp &__val)`

2.31.1 Detailed Description

These algorithms are variations of a classic binary search, and all assume that the sequence being searched is already sorted.

The number of comparisons will be logarithmic (and as few as possible). The number of steps through the sequence will be logarithmic for random-access iterators (e.g., pointers), and linear otherwise.

The LWG has passed Defect Report 270, which notes: *The proposed resolution reinterprets binary search. Instead of thinking about searching for a value in a sorted range, we view that as an important special case of a more general algorithm: searching for the partition point in a partitioned range. We also add a guarantee that the old wording did not: we ensure that the upper bound is no earlier than the lower bound, that the pair returned by equal_range is a valid range, and that the first part of that pair is the lower bound.*

The actual effect of the first sentence is that a comparison functor passed by the user doesn't necessarily need to induce a strict weak ordering relation. Rather, it partitions the range.

2.31.2 Function Documentation

2.31.2.1 `template<typename _ForwardIterator, typename _Tp> bool
std::binary_search (_ForwardIterator __first, _ForwardIterator
__last, const _Tp & __val)`

Determines whether an element exists in a range.

Parameters

first An iterator.

last Another iterator.

val The search term.

Returns

True if *val* (or its equivalent) is in [*first*,*last*].

Note that this does not actually return an iterator to *val*. For that, use `std::find` or a container's specialized find member functions.

Definition at line 2665 of file `stl_algo.h`.

References `std::lower_bound()`.

2.31.2.2 `template<typename _ForwardIterator , typename _Tp , typename
_Compare > bool std::binary_search (_ForwardIterator __first,
_ForwardIterator __last, const _Tp & __val, _Compare __comp)`

Determines whether an element exists in a range.

Parameters

first An iterator.

last Another iterator.

val The search term.

comp A functor to use for comparisons.

Returns

True if *val* (or its equivalent) is in [*first*,*last*].

Note that this does not actually return an iterator to *val*. For that, use `std::find` or a container's specialized find member functions.

The comparison function should have the same effects on ordering as the function used for the initial sort.

Definition at line 2698 of file `stl_algo.h`.

References `std::lower_bound()`.

2.31.2.3 `template<typename _ForwardIterator , typename _Tp , typename
_Compare > pair<_ForwardIterator, _ForwardIterator>
std::equal_range (_ForwardIterator __first, _ForwardIterator
__last, const _Tp & __val, _Compare __comp)`

Finds the largest subrange in which *val* could be inserted at any place in it without changing the ordering.

Parameters

first An iterator.

last Another iterator.

val The search term.

comp A functor to use for comparisons.

Returns

An pair of iterators defining the subrange.

This is equivalent to

```
std::make_pair(lower_bound(first, last, val, comp),
               upper_bound(first, last, val, comp))
```

but does not actually call those functions.

Definition at line 2605 of file `stl_algo.h`.

References `std::advance()`, `std::distance()`, `std::lower_bound()`, and `std::upper_bound()`.

2.31.2.4 `template<typename _ForwardIterator, typename _Tp >`
`pair<_ForwardIterator, _ForwardIterator> std::equal_range (`
 `_ForwardIterator __first, _ForwardIterator __last, const _Tp &`
 `__val)`

Finds the largest subrange in which *val* could be inserted at any place in it without changing the ordering.

Parameters

first An iterator.

last Another iterator.

val The search term.

Returns

An pair of iterators defining the subrange.

This is equivalent to

```
std::make_pair(lower_bound(first, last, val),
               upper_bound(first, last, val))
```

but does not actually call those functions.

Definition at line 2543 of file `stl_algo.h`.

References `std::advance()`, `std::distance()`, `std::lower_bound()`, and `std::upper_bound()`.

2.31.2.5 `template<typename _ForwardIterator , typename _Tp , typename
_Compare > _ForwardIterator std::lower_bound (_ForwardIterator
__first, _ForwardIterator __last, const _Tp & __val, _Compare
__comp)`

Finds the first position in which *val* could be inserted without changing the ordering.

Parameters

first An iterator.

last Another iterator.

val The search term.

comp A functor to use for comparisons.

Returns

An iterator pointing to the first element *not less than val*, or `end()` if every element is less than *val*.

The comparison function should have the same effects on ordering as the function used for the initial sort.

Definition at line 2394 of file `stl_algo.h`.

References `std::advance()`, and `std::distance()`.

2.31.2.6 `template<typename _ForwardIterator , typename _Tp >
_ForwardIterator std::lower_bound (_ForwardIterator __first,
_ForwardIterator __last, const _Tp & __val)`

Finds the first position in which *val* could be inserted without changing the ordering.

Parameters

first An iterator.

last Another iterator.

val The search term.

Returns

An iterator pointing to the first element *not less than val*, or `end()` if every element is less than *val*.

Definition at line 936 of file `stl_algobase.h`.

References `std::advance()`, and `std::distance()`.

Referenced by `std::__merge_adaptive()`, `std::__merge_without_buffer()`, `std::binary_search()`, and `std::equal_range()`.

2.31.2.7 `template<typename _ForwardIterator , typename _Tp , typename
_Compare > _ForwardIterator std::upper_bound (_ForwardIterator
__first, _ForwardIterator __last, const _Tp & __val, _Compare
__comp)`

Finds the last position in which *val* could be inserted without changing the ordering.

Parameters

first An iterator.

last Another iterator.

val The search term.

comp A functor to use for comparisons.

Returns

An iterator pointing to the first element greater than *val*, or `end()` if no elements are greater than *val*.

The comparison function should have the same effects on ordering as the function used for the initial sort.

Definition at line 2490 of file `stl_algo.h`.

References `std::advance()`, and `std::distance()`.

Referenced by `std::__merge_adaptive()`, `std::__merge_without_buffer()`, and `std::equal_range()`.

2.31.2.8 `template<typename _ForwardIterator , typename _Tp >
_ForwardIterator std::upper_bound (_ForwardIterator __first,
_ForwardIterator __last, const _Tp & __val)`

Finds the last position in which *val* could be inserted without changing the ordering.

Parameters

first An iterator.

last Another iterator.

val The search term.

Returns

An iterator pointing to the first element greater than *val*, or `end()` if no elements are greater than *val*.

Definition at line 2441 of file `stl_algo.h`.

References `std::advance()`, and `std::distance()`.

2.32 Allocators

Collaboration diagram for Allocators:

Classes

- class `__gnu_cxx::__mt_alloc< _Tp, _Poolp >`

This is a fixed size (power of 2) allocator which - when compiled with thread support - will maintain one freelist per size per thread plus a global one. Steps are taken to limit the per thread freelist sizes (by returning excess back to the global list).

Further details: <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt12ch32.html>.

- class `__gnu_cxx::__pool_alloc< _Tp >`

Allocator using a memory pool with a single lock.

- class `__gnu_cxx::_ExtPtr_allocator< _Tp >`

An example allocator which uses a non-standard pointer type.

This allocator specifies that containers use a 'relative pointer' as it's pointer type. (See [ext/pointer.h](#)) Memory allocation in this example is still performed using `std::allocator`.

- class `__gnu_cxx::array_allocator< _Tp, _Array >`

An allocator that uses previously allocated memory. This memory can be externally, globally, or otherwise allocated.

- class `__gnu_cxx::bitmap_allocator< _Tp >`
Bitmap Allocator, primary template.
- class `__gnu_cxx::debug_allocator< _Alloc >`
*A meta-allocator with debugging bits, as per [20.4].
This is precisely the allocator defined in the C++ Standard.*
 - all allocation calls operator new
 - all deallocation calls operator delete.
- class `__gnu_cxx::malloc_allocator< _Tp >`
*An allocator that uses malloc.
This is precisely the allocator defined in the C++ Standard.*
 - all allocation calls malloc
 - all deallocation calls free.
- class `__gnu_cxx::new_allocator< _Tp >`
*An allocator that uses global new, as per [20.4].
This is precisely the allocator defined in the C++ Standard.*
 - all allocation calls operator new
 - all deallocation calls operator delete.
- class `__gnu_cxx::throw_allocator_base< _Tp, _Cond >`
*Allocator class with logging and exception generation control. Intended to be used as an allocator_type in templated code.
Note: Deallocate not allowed to throw.*
- class `std::allocator< _Tp >`
*The standard allocator, as per [20.4].
Further details: <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt04ch11.html>.*

2.32.1 Detailed Description

Classes encapsulating memory operations.

2.33 Atomics

Classes

- struct `std::__atomic_flag_base`

Base type for atomic_flag.

- struct `std::atomic< _Tp >`
atomic /// 29.4.3, Generic atomic type, primary class template.
- struct `std::atomic< _Tp * >`
Partial specialization for pointer types.
- struct `std::atomic< bool >`
Explicit specialization for bool.
- struct `std::atomic< char >`
Explicit specialization for char.
- struct `std::atomic< char16_t >`
Explicit specialization for char16_t.
- struct `std::atomic< char32_t >`
Explicit specialization for char32_t.
- struct `std::atomic< int >`
Explicit specialization for int.
- struct `std::atomic< long >`
Explicit specialization for long.
- struct `std::atomic< long long >`
Explicit specialization for long long.
- struct `std::atomic< short >`
Explicit specialization for short.
- struct `std::atomic< signed char >`
Explicit specialization for signed char.
- struct `std::atomic< unsigned char >`
Explicit specialization for unsigned char.
- struct `std::atomic< unsigned int >`
Explicit specialization for unsigned int.
- struct `std::atomic< unsigned long >`

Explicit specialization for unsigned long.

- struct `std::atomic< unsigned long long >`
Explicit specialization for unsigned long long.
- struct `std::atomic< unsigned short >`
Explicit specialization for unsigned short.
- struct `std::atomic< wchar_t >`
Explicit specialization for wchar_t.
- struct `std::atomic_bool`
atomic_bool

2.33.1 Detailed Description

Components for performing atomic operations.

2.33.2 Define Documentation

2.33.2.1 #define _GLIBCXX_ATOMIC_PROPERTY

Lock-free Property.

Definition at line 142 of file atomic_base.h.

2.33.3 Typedef Documentation

2.33.3.1 typedef __atomic_base<char> std::atomic_char

atomic_char

Definition at line 166 of file atomic_base.h.

2.33.3.2 typedef __atomic_base<char16_t> std::atomic_char16_t

atomic_char16_t

Definition at line 202 of file atomic_base.h.

2.33.3.3 typedef __atomic_base< char32_t > std::atomic_char32_t

atomic_char32_t

Definition at line 205 of file atomic_base.h.

2.33.3.4 typedef __atomic_base<int> std::atomic_int

atomic_int

Definition at line 181 of file atomic_base.h.

2.33.3.5 typedef __atomic_base<int_fast16_t> std::atomic_int_fast16_t

atomic_int_fast16_t

Definition at line 243 of file atomic_base.h.

2.33.3.6 typedef __atomic_base<int_fast32_t> std::atomic_int_fast32_t

atomic_int_fast32_t

Definition at line 249 of file atomic_base.h.

2.33.3.7 typedef __atomic_base<int_fast64_t> std::atomic_int_fast64_t

atomic_int_fast64_t

Definition at line 255 of file atomic_base.h.

2.33.3.8 typedef __atomic_base<int_fast8_t> std::atomic_int_fast8_t

atomic_int_fast8_t

Definition at line 237 of file atomic_base.h.

2.33.3.9 typedef __atomic_base<int_least16_t> std::atomic_int_least16_t

atomic_int_least16_t

Definition at line 218 of file atomic_base.h.

2.33.3.10 typedef __atomic_base<int_least32_t> std::atomic_int_least32_t

atomic_int_least32_t

Definition at line 224 of file atomic_base.h.

2.33.3.11 typedef __atomic_base<int_least64_t> std::atomic_int_least64_t

atomic_int_least64_t

Definition at line 230 of file atomic_base.h.

2.33.3.12 typedef __atomic_base<int_least8_t> std::atomic_int_least8_t

atomic_int_least8_t

Definition at line 212 of file atomic_base.h.

2.33.3.13 typedef __atomic_base<intmax_t> std::atomic_intmax_t

atomic_intmax_t

Definition at line 271 of file atomic_base.h.

2.33.3.14 typedef __atomic_base<intptr_t> std::atomic_intptr_t

atomic_intptr_t

Definition at line 262 of file atomic_base.h.

2.33.3.15 typedef __atomic_base<long long> std::atomic_llong

atomic_llong

Definition at line 193 of file atomic_base.h.

2.33.3.16 typedef __atomic_base<long> std::atomic_long

atomic_long

Definition at line 187 of file atomic_base.h.

2.33.3.17 typedef __atomic_base<ptrdiff_t> std::atomic_ptrdiff_t

atomic_ptrdiff_t

Definition at line 277 of file atomic_base.h.

2.33.3.18 typedef __atomic_base<signed char> std::atomic_schar

atomic_schar

Definition at line 169 of file atomic_base.h.

2.33.3.19 typedef __atomic_base<short> std::atomic_short

atomic_short

Definition at line 175 of file atomic_base.h.

2.33.3.20 typedef __atomic_base<size_t> std::atomic_size_t

atomic_size_t

Definition at line 268 of file atomic_base.h.

2.33.3.21 typedef __atomic_base<unsigned char> std::atomic_uchar

atomic_uchar

Definition at line 172 of file atomic_base.h.

2.33.3.22 typedef __atomic_base<unsigned int> std::atomic_uint

atomic_uint

Definition at line 184 of file atomic_base.h.

2.33.3.23 typedef __atomic_base<uint_fast16_t> std::atomic_uint_fast16_t

atomic_uint_fast16_t

Definition at line 246 of file atomic_base.h.

2.33.3.24 `typedef __atomic_base<uint_fast32_t> std::atomic_uint_fast32_t`

`atomic_uint_fast32_t`

Definition at line 252 of file `atomic_base.h`.

2.33.3.25 `typedef __atomic_base<uint_fast64_t> std::atomic_uint_fast64_t`

`atomic_uint_fast64_t`

Definition at line 258 of file `atomic_base.h`.

2.33.3.26 `typedef __atomic_base<uint_fast8_t> std::atomic_uint_fast8_t`

`atomic_uint_fast8_t`

Definition at line 240 of file `atomic_base.h`.

2.33.3.27 `typedef __atomic_base<uint_least16_t> std::atomic_uint_least16_t`

`atomic_uint_least16_t`

Definition at line 221 of file `atomic_base.h`.

2.33.3.28 `typedef __atomic_base<uint_least32_t> std::atomic_uint_least32_t`

`atomic_uint_least32_t`

Definition at line 227 of file `atomic_base.h`.

2.33.3.29 `typedef __atomic_base<uint_least64_t> std::atomic_uint_least64_t`

`atomic_uint_least64_t`

Definition at line 233 of file `atomic_base.h`.

2.33.3.30 typedef __atomic_base<uint_least8_t> std::atomic_uint_least8_t

atomic_uint_least8_t

Definition at line 215 of file atomic_base.h.

2.33.3.31 typedef __atomic_base<uintmax_t> std::atomic_uintmax_t

atomic_uintmax_t

Definition at line 274 of file atomic_base.h.

2.33.3.32 typedef __atomic_base<uintptr_t> std::atomic_uintptr_t

atomic_uintptr_t

Definition at line 265 of file atomic_base.h.

2.33.3.33 typedef __atomic_base<unsigned long long> std::atomic_ullong

atomic_ullong

Definition at line 196 of file atomic_base.h.

2.33.3.34 typedef __atomic_base<unsigned long> std::atomic_ulong

atomic_ulong

Definition at line 190 of file atomic_base.h.

2.33.3.35 typedef __atomic_base<unsigned short> std::atomic_ushort

atomic_ushort

Definition at line 178 of file atomic_base.h.

2.33.3.36 typedef __atomic_base<wchar_t> std::atomic_wchar_t

atomic_wchar_t

Definition at line 199 of file atomic_base.h.

2.33.3.37 typedef enum std::memory_order std::memory_order

Enumeration for memory_order.

2.33.4 Enumeration Type Documentation**2.33.4.1 enum std::memory_order**

Enumeration for memory_order.

Definition at line 51 of file atomic_base.h.

2.33.5 Function Documentation**2.33.5.1 template<typename _Tp > _Tp std::kill_dependency (_Tp __y)
[inline]**

kill_dependency

Definition at line 74 of file atomic_base.h.

2.34 Hashes

Collaboration diagram for Hashes:

Classes

- struct `std::hash<_Tp>`
Primary class template hash.
- struct `std::hash<_Tp*>`
Partial specializations for pointer types.

Defines

- `#define _Cxx_hashtable_define_trivial_hash(_Tp)`

2.34.1 Detailed Description

Hashing functors taking a variable type and returning a `std::size_t`.

2.35 Locales

Classes

- class `std::codecvt<_InternT, _ExternT, _StateT>`
Primary class template codecvt.
NB: Generic, mostly useless implementation.
- class `std::ctype<_CharT>`

Primary class template ctype facet.

This template class defines classification and conversion functions for character sets.

It wraps ctype functionality. Ctype gets used by streams for many I/O operations.

- class `std::ctype< char >`

The `ctype<char>` specialization.

This class defines classification and conversion functions for the char type. It gets

used by char streams for many I/O operations. The char specialization provides a

number of optimizations as well.

- class `std::ctype< wchar_t >`

The `ctype<wchar_t>` specialization.

This class defines classification and conversion functions for the wchar_t type. It

gets used by wchar_t streams for many I/O operations. The wchar_t specialization

provides a number of optimizations as well.

- class `std::locale`

Container class for localization functionality.

The locale class is first a class wrapper for C library locales. It is also an exten-

sible container for user-defined localization. A locale is a collection of facets that

implement various localization features such as money, time, and number printing.

- class `std::locale::facet`

Localization functionality base class.

The facet class is the base class for a localization feature, such as money, time, and

number printing. It provides common support for facets and reference management.

- class `std::locale::id`

Facet ID class.

The ID class provides facets with an index used to identify them. Every facet class

must define a public static member `locale::id`, or be derived from a facet that provides

this member; otherwise the facet cannot be used in a locale. The `locale::id` ensures

that each class type gets a unique identifier.

- class `std::messages< _CharT >`

Primary class template messages.

This facet encapsulates the code to retrieve messages from message catalogs. The

only thing defined by the standard for this facet is the interface. All underlying func-

tionality is implementation-defined.

- struct `std::messages_base`

Messages facet base class providing catalog typedef.

- class `std::money_base`

Money format ordering data.

This class contains an ordered array of 4 fields to represent the pattern for formatting a money amount. Each field may contain one entry from the part enum. symbol, sign, and value must be present and the remaining field must contain either none or space.

- class `std::money_get< _CharT, _InIter >`

Primary class template `money_get`.

This facet encapsulates the code to parse and return a monetary amount from a string.

- class `std::money_put< _CharT, _OutIter >`

Primary class template `money_put`.

This facet encapsulates the code to format and output a monetary amount.

- class `std::moneypunct< _CharT, _Intl >`

Primary class template `moneypunct`.

This facet encapsulates the punctuation, grouping and other formatting features of money amount string representations.

- class `std::num_get< _CharT, _InIter >`

Primary class template `num_get`.

This facet encapsulates the code to parse and return a number from a string. It is used by the istream numeric extraction operators.

- class `std::num_put< _CharT, _OutIter >`

Primary class template `num_put`.

This facet encapsulates the code to convert a number to a string. It is used by the ostream numeric insertion operators.

- class `std::numpunct< _CharT >`

Primary class template `numpunct`.

This facet stores several pieces of information related to printing and scanning numbers, such as the decimal point character. It takes a template parameter specifying the char type. The numpunct facet is used by streams for many I/O operations involving numbers.

- class `std::time_base`

Time format ordering data.

This class provides an enum representing different orderings of time: day, month, and year.

- class `std::time_get< _CharT, _InIter >`

Primary class template `time_get`.

This facet encapsulates the code to parse and return a date or time from a string. It is used by the istream numeric extraction operators.

- class [std::time_put<_CharT, _OutIter>](#)

Primary class template [time_put](#).

This facet encapsulates the code to format and output dates and times according to formats used by [strftime\(\)](#).

2.35.1 Detailed Description

Classes and functions for internationalization and localization.

2.36 Random Number Generation

Collaboration diagram for Random Number Generation:

Namespaces

- namespace [std::__detail](#)

Modules

- [Random Number Generators](#)
- [Random Number Distributions](#)
- [Random Number Utilities](#)

Functions

- template<typename [_RealType](#) , size_t [__bits](#), typename [_UniformRandomNumberGenerator](#) >
[_RealType](#) [std::generate_canonical](#) ([_UniformRandomNumberGenerator](#) &[__g](#))

2.36.1 Detailed Description

A facility for generating random numbers on selected distributions.

2.36.2 Function Documentation

2.36.2.1 `template<typename _RealType , size_t __bits, typename
_UniformRandomNumberGenerator > _RealType
std::generate_canonical (_UniformRandomNumberGenerator & __g
)`

A function template for converting the output of a (integral) uniform random number generator to a floating point result in the range [0-1).

Definition at line 2808 of file random.tcc.

References `std::log()`, and `std::min()`.

2.37 Regular Expressions

Classes

- class `std::basic_regex< _Ch_type, _Rx_traits >`
- class `std::match_results< _Bi_iter, _Allocator >`
The results of a match or search operation.
- class `std::regex_iterator< _Bi_iter, _Ch_type, _Rx_traits >`
- class `std::regex_token_iterator< _Bi_iter, _Ch_type, _Rx_traits >`
- struct `std::regex_traits< _Ch_type >`
Describes aspects of a regular expression.
- class `std::sub_match< _BiIter >`

Typedefs

- typedef `match_results< const char * >` `std::cmatch`
- typedef `regex_iterator< const char * >` `std::cregex_iterator`
- typedef `regex_token_iterator< const char * >` `std::cregex_token_iterator`
- typedef `sub_match< const char * >` `std::csub_match`
- typedef `basic_regex< char >` `std::regex`
- typedef `match_results< string::const_iterator >` `std::smatch`
- typedef `regex_iterator< string::const_iterator >` `std::sregex_iterator`

- `typedef regex_token_iterator< string::const_iterator > std::sregex_token_iterator`
- `typedef sub_match< string::const_iterator > std::ssub_match`
- `typedef match_results< const wchar_t * > std::wcmatch`
- `typedef regex_iterator< const wchar_t * > std::wcregex_iterator`
- `typedef regex_token_iterator< const wchar_t * > std::wcregex_token_iterator`
- `typedef sub_match< const wchar_t * > std::wcsub_match`
- `typedef basic_regex< wchar_t > std::wregex`
- `typedef match_results< wstring::const_iterator > std::wsmatch`
- `typedef regex_iterator< wstring::const_iterator > std::wsregex_iterator`
- `typedef regex_token_iterator< wstring::const_iterator > std::wsregex_token_iterator`
- `typedef sub_match< wstring::const_iterator > std::wssub_match`

Functions

- `template<typename _Bi_iter >
const sub_match< _Bi_iter > & std::__unmatched_sub ()`
- `bool std::regex_traits::isctype (_Ch_type __c, char_class_type __f) const`

2.37.1 Detailed Description

A facility for performing regular expression pattern matching.

2.37.2 Typedef Documentation

2.37.2.1 `typedef regex_token_iterator<const char*> std::cregex_token_iterator`

Token iterator for C-style NULL-terminated strings.

Definition at line 2415 of file `regex.h`.

2.37.2.2 `typedef sub_match<const char*> std::csub_match`

Standard regex submatch over a C-style null-terminated string.

Definition at line 847 of file regex.h.

2.37.2.3 `typedef basic_regex<char> std::regex`

Standard regular expressions.

Definition at line 722 of file regex.h.

2.37.2.4 `typedef regex_token_iterator<string::const_iterator> std::sregex_token_iterator`

Token iterator for standard strings.

Definition at line 2417 of file regex.h.

2.37.2.5 `typedef sub_match<string::const_iterator> std::ssub_match`

Standard regex submatch over a standard string.

Definition at line 849 of file regex.h.

2.37.2.6 `typedef regex_token_iterator<const wchar_t*> std::wregex_token_iterator`

Token iterator for C-style NULL-terminated wide strings.

Definition at line 2420 of file regex.h.

2.37.2.7 `typedef sub_match<const wchar_t*> std::wsub_match`

Regex submatch over a C-style null-terminated wide string.

Definition at line 852 of file regex.h.

2.37.2.8 `typedef basic_regex<wchar_t> std::wregex`

Standard wide-character regular expressions.

Definition at line 725 of file regex.h.

2.37.2.9 `typedef regex_token_iterator<wstring::const_iterator>
std::wsregex_token_iterator`

Token iterator for standard wide-character strings.

Definition at line 2422 of file regex.h.

2.37.2.10 `typedef sub_match<wstring::const_iterator> std::wssub_match`

Regex submatch over a standard wide string.

Definition at line 854 of file regex.h.

2.37.3 Function Documentation

2.37.3.1 `template<typename _Ch_type > bool std::regex_traits<_Ch_type
>::isctype (_Ch_type __c, char_class_type __f) const
[inherited]`

Determines if *c* is a member of an identified class.

Parameters

c a character.

f a class type (as returned from lookup_classname).

Returns

true if the character *c* is a member of the classification represented by *f*, false otherwise.

Exceptions

[*std::bad_cast*](#) if the current locale does not have a ctype facet.

Definition at line 284 of file regex.h.

References `std::__ctype_abstract_base<_CharT >::is()`, `std::regex_traits<_Ch_type >::lookup_classname()`, `std::use_facet()`, and `std::__ctype_abstract_base<_CharT >::widen()`.

```
2.37.3.2 template<typename _Bilter > bool std::operator!= ( const  
    sub_match< _Bilter > & __lhs, const sub_match< _Bilter > &  
    __rhs ) [inline]
```

Tests the inequivalence of two regular expression submatches.

Parameters

lhs First regular expression submatch.

rhs Second regular expression submatch.

Returns

true if *lhs* is not equivalent to *rhs*, false otherwise.

Definition at line 879 of file regex.h.

References std::sub_match< _Bilter >::compare().

```
2.37.3.3 template<typename _Bi_iter > bool std::operator!= ( typename  
    iterator_traits< _Bi_iter >::value_type const & __lhs, const  
    sub_match< _Bi_iter > & __rhs ) [inline]
```

Tests the inequivalence of a string and a regular expression submatch.

Parameters

lhs A string.

rhs A regular expression submatch.

Returns

true if *lhs* is not equivalent to *rhs*, false otherwise.

Definition at line 1268 of file regex.h.

References std::sub_match< _Bilter >::str().

```
2.37.3.4 template<typename _Bi_iter > bool std::operator!= ( const  
    sub_match< _Bi_iter > & __lhs, typename iterator_traits< _Bi_iter  
    >::value_type const & __rhs ) [inline]
```

Tests the inequivalence of a regular expression submatch and a string.

Parameters

lhs A regular expression submatch.

rhs A const string reference.

Returns

true if *lhs* is not equivalent to *rhs*, false otherwise.

Definition at line 1342 of file regex.h.

References `std::sub_match<_BiIter>::str()`.

2.37.3.5 `template<typename _Bi_iter , typename _Ch_traits , typename
_Ch_alloc > bool std::operator!=(const basic_string< typename
iterator_traits< _Bi_iter >::value_type, _Ch_traits, _Ch_alloc > &
__lhs, const sub_match< _Bi_iter > & __rhs) [inline]`

Tests the inequivalence of a string and a regular expression submatch.

Parameters

lhs A string.

rhs A regular expression submatch.

Returns

true if *lhs* is not equivalent to *rhs*, false otherwise.

Definition at line 955 of file regex.h.

References `std::sub_match<_BiIter>::str()`.

2.37.3.6 `template<typename _Bi_iter > bool std::operator!=(typename
iterator_traits< _Bi_iter >::value_type const * __lhs, const
sub_match< _Bi_iter > & __rhs) [inline]`

Tests the inequivalence of an iterator value and a regular expression submatch.

Parameters

lhs A regular expression submatch.

rhs A string.

Returns

true if *lhs* is not equivalent to *rhs*, false otherwise.

Definition at line 1120 of file regex.h.

References `std::sub_match<_BiIter>::str()`.

2.37.3.7 `template<typename _Bi_iter, class _Allocator> bool std::operator!=(
const match_results<_Bi_iter, _Allocator> & __m1, const
match_results<_Bi_iter, _Allocator> & __m2) [inline]`

Compares two [match_results](#) for inequality.

Returns

true if the two objects do not refer to the same match, false otherwise.

Definition at line 1779 of file regex.h.

2.37.3.8 `template<typename _Bi_iter> bool std::operator!=(const
sub_match<_Bi_iter> & __lhs, typename iterator_traits<_Bi_iter>
::value_type const * __rhs) [inline]`

Tests the inequivalence of a regular expression submatch and a string.

Parameters

lhs A regular expression submatch.

rhs A pointer to a string.

Returns

true if *lhs* is not equivalent to *rhs*, false otherwise.

Definition at line 1194 of file regex.h.

References `std::sub_match<_BiIter>::str()`.

2.37.3.9 `template<typename _Bi_iter, typename _Ch_traits, typename
_Ch_alloc> bool std::operator!=(const sub_match<_Bi_iter>
& __lhs, const basic_string<typename iterator_traits<_Bi_iter>
::value_type, _Ch_traits, _Ch_alloc> & __rhs) [inline]`

Tests the inequivalence of a regular expression submatch and a string.

Parameters

lhs A regular expression submatch.

rhs A string.

Returns

true if *lhs* is not equivalent to *rhs*, false otherwise.

Definition at line 1036 of file regex.h.

References `std::sub_match<_BiIter>::str()`.

2.37.3.10 `template<typename _BiIter > bool std::operator< (const
sub_match<_BiIter> & __lhs, const sub_match<_BiIter> &
__rhs) [inline]`

Tests the ordering of two regular expression submatches.

Parameters

lhs First regular expression submatch.

rhs Second regular expression submatch.

Returns

true if *lhs* precedes *rhs*, false otherwise.

Definition at line 891 of file regex.h.

2.37.3.11 `template<typename _Bi_iter , class _Ch_traits , class _Ch_alloc >
bool std::operator< (const sub_match<_Bi_iter> & __lhs, const
basic_string< typename iterator_traits<_Bi_iter>::value_type,
_Ch_traits, _Ch_alloc > & __rhs) [inline]`

Tests the ordering of a regular expression submatch and a string.

Parameters

lhs A regular expression submatch.

rhs A string.

Returns

true if *lhs* precedes *rhs*, false otherwise.

Definition at line 1050 of file regex.h.

2.37.3.12 `template<typename _Bi_iter > bool std::operator< (typename
iterator_traits<_Bi_iter>::value_type const & __lhs, const
sub_match<_Bi_iter> & __rhs) [inline]`

Tests the ordering of a string and a regular expression submatch.

Parameters

lhs A string.

rhs A regular expression submatch.

Returns

true if *lhs* precedes *rhs*, false otherwise.

Definition at line 1280 of file regex.h.

2.37.3.13 `template<typename _Bi_iter , typename _Ch_traits , typename
_Ch_alloc > bool std::operator< (const basic_string< typename
iterator_traits<_Bi_iter>::value_type, _Ch_traits, _Ch_alloc > &
__lhs, const sub_match<_Bi_iter> & __rhs) [inline]`

Tests the ordering of a string and a regular expression submatch.

Parameters

lhs A string.

rhs A regular expression submatch.

Returns

true if *lhs* precedes *rhs*, false otherwise.

Definition at line 968 of file regex.h.

References `std::sub_match<_BiIter>::str()`.

2.37.3.14 `template<typename _Bi_iter > bool std::operator< (const
sub_match< _Bi_iter > & __lhs, typename iterator_traits< _Bi_iter
>::value_type const & __rhs) [inline]`

Tests the ordering of a regular expression submatch and a string.

Parameters

lhs A regular expression submatch.

rhs A const string reference.

Returns

true if *lhs* precedes *rhs*, false otherwise.

Definition at line 1354 of file regex.h.

2.37.3.15 `template<typename _Bi_iter > bool std::operator< (typename
iterator_traits< _Bi_iter >::value_type const * __lhs, const
sub_match< _Bi_iter > & __rhs) [inline]`

Tests the ordering of a string and a regular expression submatch.

Parameters

lhs A string.

rhs A regular expression submatch.

Returns

true if *lhs* precedes *rhs*, false otherwise.

Definition at line 1132 of file regex.h.

2.37.3.16 `template<typename _Bi_iter > bool std::operator< (const
sub_match< _Bi_iter > & __lhs, typename iterator_traits< _Bi_iter
>::value_type const * __rhs) [inline]`

Tests the ordering of a regular expression submatch and a string.

Parameters

lhs A regular expression submatch.

rhs A string.

Returns

true if *lhs* precedes *rhs*, false otherwise.

Definition at line 1206 of file regex.h.

2.37.3.17 `template<typename _Ch_type , typename _Ch_traits , typename
_Bi_iter > basic_ostream<_Ch_type, _Ch_traits>& std::operator<<
(basic_ostream<_Ch_type, _Ch_traits > & __os, const
sub_match<_Bi_iter > & __m) [inline]`

Inserts a matched string into an output stream.

Parameters

os The output stream.

m A submatch string.

Returns

the output stream with the submatch string inserted.

Definition at line 1405 of file regex.h.

2.37.3.18 `template<typename _Bi_iter > bool std::operator<= (typename
iterator_traits<_Bi_iter >::value_type const & __lhs, const
sub_match<_Bi_iter > & __rhs) [inline]`

Tests the ordering of a string and a regular expression submatch.

Parameters

lhs A string.

rhs A regular expression submatch.

Returns

true if *lhs* does not succeed *rhs*, false otherwise.

Definition at line 1316 of file regex.h.

2.37.3.19 `template<typename _Bi_iter , class _Ch_traits , class _Ch_alloc >
bool std::operator<= (const sub_match< _Bi_iter > & __lhs, const
basic_string< typename iterator_traits< _Bi_iter >::value_type,
_Ch_traits, _Ch_alloc > & __rhs) [inline]`

Tests the ordering of a regular expression submatch and a string.

Parameters

lhs A regular expression submatch.

rhs A string.

Returns

true if *lhs* does not succeed *rhs*, false otherwise.

Definition at line 1092 of file regex.h.

2.37.3.20 `template<typename _BiIter > bool std::operator<= (const
sub_match< _BiIter > & __lhs, const sub_match< _BiIter > &
__rhs) [inline]`

Tests the ordering of two regular expression submatches.

Parameters

lhs First regular expression submatch.

rhs Second regular expression submatch.

Returns

true if *lhs* does not succeed *rhs*, false otherwise.

Definition at line 903 of file regex.h.

2.37.3.21 `template<typename _Bi_iter > bool std::operator<= (const
sub_match< _Bi_iter > & __lhs, typename iterator_traits< _Bi_iter
>::value_type const & __rhs) [inline]`

Tests the ordering of a regular expression submatch and a string.

Parameters

lhs A regular expression submatch.

rhs A const string reference.

Returns

true if *lhs* does not succeed *rhs*, false otherwise.

Definition at line 1390 of file regex.h.

2.37.3.22 `template<typename _Bi_iter > bool std::operator<= (typename
iterator_traits< _Bi_iter >::value_type const * __lhs, const
sub_match< _Bi_iter > & __rhs) [inline]`

Tests the ordering of a string and a regular expression submatch.

Parameters

lhs A string.

rhs A regular expression submatch.

Returns

true if *lhs* does not succeed *rhs*, false otherwise.

Definition at line 1168 of file regex.h.

2.37.3.23 `template<typename _Bi_iter , typename _Ch_traits , typename
_Ch_alloc > bool std::operator<= (const basic_string< typename
iterator_traits< _Bi_iter >::value_type, _Ch_traits, _Ch_alloc > &
__lhs, const sub_match< _Bi_iter > & __rhs) [inline]`

Tests the ordering of a string and a regular expression submatch.

Parameters

lhs A string.

rhs A regular expression submatch.

Returns

true if *lhs* does not succeed *rhs*, false otherwise.

Definition at line 1007 of file `regex.h`.

References `std::sub_match<_BiIter>::str()`.

2.37.3.24 `template<typename _Bi_iter> bool std::operator<= (const
sub_match<_Bi_iter> & __lhs, typename iterator_traits<_Bi_iter>
>::value_type const * __rhs) [inline]`

Tests the ordering of a regular expression submatch and a string.

Parameters

lhs A regular expression submatch.

rhs A string.

Returns

true if *lhs* does not succeed *rhs*, false otherwise.

Definition at line 1242 of file `regex.h`.

2.37.3.25 `template<typename _Bi_iter> bool std::operator== (typename
iterator_traits<_Bi_iter>::value_type const & __lhs, const
sub_match<_Bi_iter> & __rhs) [inline]`

Tests the equivalence of a string and a regular expression submatch.

Parameters

lhs A string.

rhs A regular expression submatch.

Returns

true if *lhs* is equivalent to *rhs*, false otherwise.

Definition at line 1255 of file `regex.h`.

References `std::sub_match<_BiIter>::str()`.

2.37.3.26 `template<typename _Bi_iter , typename _Ch_traits , typename
_Ch_alloc > bool std::operator==(const sub_match< _Bi_iter >
& __lhs, const basic_string< typename iterator_traits< _Bi_iter
>::value_type, _Ch_traits, _Ch_alloc > & __rhs) [inline]`

Tests the equivalence of a regular expression submatch and a string.

Parameters

lhs A regular expression submatch.

rhs A string.

Returns

true if *lhs* is equivalent to *rhs*, false otherwise.

Definition at line 1021 of file regex.h.

References `std::sub_match< _BiIter >::str()`.

2.37.3.27 `template<typename _Bi_iter > bool std::operator==(const
sub_match< _Bi_iter > & __lhs, typename iterator_traits< _Bi_iter
>::value_type const & __rhs) [inline]`

Tests the equivalence of a regular expression submatch and a string.

Parameters

lhs A regular expression submatch.

rhs A const string reference.

Returns

true if *lhs* is equivalent to *rhs*, false otherwise.

Definition at line 1329 of file regex.h.

References `std::sub_match< _BiIter >::str()`.

2.37.3.28 `template<typename _Bi_iter , typename _Ch_traits , typename
_Ch_alloc > bool std::operator==(const basic_string< typename
iterator_traits< _Bi_iter >::value_type, _Ch_traits, _Ch_alloc > &
__lhs, const sub_match< _Bi_iter > & __rhs) [inline]`

Tests the equivalence of a string and a regular expression submatch.

Parameters

lhs A string.

rhs A regular expression submatch.

Returns

true if *lhs* is equivalent to *rhs*, false otherwise.

Definition at line 940 of file regex.h.

References `std::sub_match<_BiIter>::str()`.

2.37.3.29 `template<typename _Bi_iter > bool std::operator==(typename
iterator_traits<_Bi_iter>::value_type const * __lhs, const
sub_match<_Bi_iter> & __rhs) [inline]`

Tests the equivalence of a C string and a regular expression submatch.

Parameters

lhs A C string.

rhs A regular expression submatch.

Returns

true if *lhs* is equivalent to *rhs*, false otherwise.

Definition at line 1107 of file regex.h.

References `std::sub_match<_BiIter>::str()`.

2.37.3.30 `template<typename _Bi_iter, typename _Allocator > bool
std::operator==(const match_results<_Bi_iter, _Allocator> &
__m1, const match_results<_Bi_iter, _Allocator> & __m2)
[inline]`

Compares two [match_results](#) for equality.

Returns

true if the two objects refer to the same match, false otherwise.

Todo

Implement this function.

2.37.3.31 `template<typename _BiIter > bool std::operator==(const
sub_match<_BiIter > & __lhs, const sub_match<_BiIter > &
__rhs) [inline]`

Tests the equivalence of two regular expression submatches.

Parameters

lhs First regular expression submatch.

rhs Second regular expression submatch.

Returns

true if *lhs* is equivalent to *rhs*, false otherwise.

Definition at line 867 of file regex.h.

References `std::sub_match<_BiIter >::compare()`.

2.37.3.32 `template<typename _Bi_iter > bool std::operator==(const
sub_match<_Bi_iter > & __lhs, typename iterator_traits<_Bi_iter
>::value_type const * __rhs) [inline]`

Tests the equivalence of a regular expression submatch and a string.

Parameters

lhs A regular expression submatch.

rhs A pointer to a string?

Returns

true if *lhs* is equivalent to *rhs*, false otherwise.

Definition at line 1181 of file regex.h.

References `std::sub_match<_BiIter >::str()`.

2.37.3.33 `template<typename _Bi_iter , class _Ch_traits , class _Ch_alloc >
bool std::operator> (const sub_match< _Bi_iter > & __lhs, const
basic_string< typename iterator_traits< _Bi_iter >::value_type,
_Ch_traits, _Ch_alloc > & __rhs) [inline]`

Tests the ordering of a regular expression submatch and a string.

Parameters

lhs A regular expression submatch.

rhs A string.

Returns

true if *lhs* succeeds *rhs*, false otherwise.

Definition at line 1064 of file regex.h.

References `std::sub_match< _BiIter >::str()`.

2.37.3.34 `template<typename _Bi_iter > bool std::operator> (typename
iterator_traits< _Bi_iter >::value_type const & __lhs, const
sub_match< _Bi_iter > & __rhs) [inline]`

Tests the ordering of a string and a regular expression submatch.

Parameters

lhs A string.

rhs A regular expression submatch.

Returns

true if *lhs* succeeds *rhs*, false otherwise.

Definition at line 1292 of file regex.h.

References `std::sub_match< _BiIter >::str()`.

2.37.3.35 `template<typename _Bi_iter > bool std::operator> (const
sub_match< _Bi_iter > & __lhs, typename iterator_traits< _Bi_iter
>::value_type const & __rhs) [inline]`

Tests the ordering of a regular expression submatch and a string.

Parameters

lhs A regular expression submatch.

rhs A const string reference.

Returns

true if *lhs* succeeds *rhs*, false otherwise.

Definition at line 1366 of file regex.h.

References `std::sub_match<_BiIter>::str()`.

2.37.3.36 `template<typename _Bi_iter , typename _Ch_traits , typename
_Ch_alloc > bool std::operator> (const basic_string< typename
iterator_traits< _Bi_iter >::value_type, _Ch_traits, _Ch_alloc > &
__lhs, const sub_match< _Bi_iter > & __rhs) [inline]`

Tests the ordering of a string and a regular expression submatch.

Parameters

lhs A string.

rhs A regular expression submatch.

Returns

true if *lhs* succeeds *rhs*, false otherwise.

Definition at line 981 of file regex.h.

References `std::sub_match<_BiIter>::str()`.

2.37.3.37 `template<typename _Bi_iter > bool std::operator> (typename
iterator_traits< _Bi_iter >::value_type const * __lhs, const
sub_match< _Bi_iter > & __rhs) [inline]`

Tests the ordering of a string and a regular expression submatch.

Parameters

lhs A string.

rhs A regular expression submatch.

Returns

true if *lhs* succeeds *rhs*, false otherwise.

Definition at line 1144 of file regex.h.

References std::sub_match<_BiIter>::str().

2.37.3.38 `template<typename _BiIter> bool std::operator> (const
sub_match<_BiIter> & __lhs, const sub_match<_BiIter> &
__rhs) [inline]`

Tests the ordering of two regular expression submatches.

Parameters

lhs First regular expression submatch.

rhs Second regular expression submatch.

Returns

true if *lhs* succeeds *rhs*, false otherwise.

Definition at line 927 of file regex.h.

References std::sub_match<_BiIter>::compare().

2.37.3.39 `template<typename _Bi_iter> bool std::operator> (const
sub_match<_Bi_iter> & __lhs, typename iterator_traits<_Bi_iter
>::value_type const * __rhs) [inline]`

Tests the ordering of a regular expression submatch and a string.

Parameters

lhs A regular expression submatch.

rhs A string.

Returns

true if *lhs* succeeds *rhs*, false otherwise.

Definition at line 1218 of file regex.h.

References std::sub_match<_BiIter>::str().

2.37.3.40 `template<typename _Bi_iter > bool std::operator>= (typename
iterator_traits< _Bi_iter >::value_type const & __lhs, const
sub_match< _Bi_iter > & __rhs) [inline]`

Tests the ordering of a string and a regular expression submatch.

Parameters

lhs A string.

rhs A regular expression submatch.

Returns

true if *lhs* does not precede *rhs*, false otherwise.

Definition at line 1304 of file regex.h.

References `std::sub_match< _BiIter >::str()`.

2.37.3.41 `template<typename _Bi_iter , class _Ch_traits , class _Ch_alloc >
bool std::operator>= (const sub_match< _Bi_iter > & __lhs, const
basic_string< typename iterator_traits< _Bi_iter >::value_type,
_Ch_traits, _Ch_alloc > & __rhs) [inline]`

Tests the ordering of a regular expression submatch and a string.

Parameters

lhs A regular expression submatch.

rhs A string.

Returns

true if *lhs* does not precede *rhs*, false otherwise.

Definition at line 1078 of file regex.h.

References `std::sub_match< _BiIter >::str()`.

2.37.3.42 `template<typename _Bi_iter > bool std::operator>= (const
sub_match< _Bi_iter > & __lhs, typename iterator_traits< _Bi_iter
>::value_type const & __rhs) [inline]`

Tests the ordering of a regular expression submatch and a string.

Parameters

lhs A regular expression submatch.

rhs A const string reference.

Returns

true if *lhs* does not precede *rhs*, false otherwise.

Definition at line 1378 of file regex.h.

References `std::sub_match<_BiIter>::str()`.

2.37.3.43 `template<typename _Bi_iter> bool std::operator>= (typename
iterator_traits<_Bi_iter>::value_type const * __lhs, const
sub_match<_Bi_iter> & __rhs) [inline]`

Tests the ordering of a string and a regular expression submatch.

Parameters

lhs A string.

rhs A regular expression submatch.

Returns

true if *lhs* does not precede *rhs*, false otherwise.

Definition at line 1156 of file regex.h.

References `std::sub_match<_BiIter>::str()`.

2.37.3.44 `template<typename _Bi_iter, typename _Ch_traits, typename
_Ch_alloc> bool std::operator>= (const basic_string< typename
iterator_traits<_Bi_iter>::value_type, _Ch_traits, _Ch_alloc> &
__lhs, const sub_match<_Bi_iter> & __rhs) [inline]`

Tests the ordering of a string and a regular expression submatch.

Parameters

lhs A string.

rhs A regular expression submatch.

Returns

true if *lhs* does not precede *rhs*, false otherwise.

Definition at line 994 of file regex.h.

References `std::sub_match<_BiIter>::str()`.

2.37.3.45 `template<typename _BiIter> bool std::operator>= (const
sub_match<_BiIter> & __lhs, const sub_match<_BiIter> &
__rhs) [inline]`

Tests the ordering of two regular expression submatches.

Parameters

lhs First regular expression submatch.

rhs Second regular expression submatch.

Returns

true if *lhs* does not precede *rhs*, false otherwise.

Definition at line 915 of file regex.h.

References `std::sub_match<_BiIter>::compare()`.

2.37.3.46 `template<typename _Bi_iter> bool std::operator>= (const
sub_match<_Bi_iter> & __lhs, typename iterator_traits<_Bi_iter
>::value_type const * __rhs) [inline]`

Tests the ordering of a regular expression submatch and a string.

Parameters

lhs A regular expression submatch.

rhs A string.

Returns

true if *lhs* does not precede *rhs*, false otherwise.

Definition at line 1230 of file regex.h.

References `std::sub_match<_BiIter>::str()`.

```

2.37.3.47 template<typename _Ch_traits , typename _Ch_alloc , typename
        _Allocator , typename _Ch_type , typename _Rx_traits >
        bool std::regex_match ( const basic_string< _Ch_type,
        _Ch_traits, _Ch_alloc > & __s, match_results< typename
        basic_string< _Ch_type, _Ch_traits, _Ch_alloc >::const_iterator,
        _Allocator > & __m, const basic_regex< _Ch_type, _Rx_traits
        > & __re, regex_constants::match_flag_type __flags =
        regex_constants::match_default ) [inline]

```

Determines if there is a match between the regular expression *e* and a string.

Parameters

- s* The string to match.
- m* The match results.
- re* The regular expression.
- flags* Controls how the regular expression is matched.

Return values

- true* A match exists.
- false* Otherwise.

Exceptions

- an* exception of type [regex_error](#).

Definition at line 1903 of file `regex.h`.

References `std::basic_string< _CharT, _Traits, _Alloc >::begin()`, `std::basic_string< _CharT, _Traits, _Alloc >::end()`, and `std::regex_match()`.

```

2.37.3.48 template<typename _Ch_type , typename _Allocator ,

        > & __re, regex_constants::match_flag_type __f =
        regex_constants::match_default ) [inline]

```

Determines if there is a match between the regular expression *e* and a C-style null-terminated string.

Parameters

- s* The C-style null-terminated string to match.
- m* The match results.
- re* The regular expression.
- f* Controls how the regular expression is matched.

Return values

- true* A match exists.
- false* Otherwise.

Exceptions

- an* exception of type `regex_error`.

Definition at line 1879 of file `regex.h`.

References `std::regex_match()`.

    _Rx_traits > & __e, regex_constants::match_flag_type __f =
    regex_constants::match_default ) [inline]
```

Searches for a regular expression within a string.

Parameters

s [IN] A C++ string to search for the regex.

m [OUT] The set of regex matches.

e [IN] The regex to search for in *s*.

f [IN] The search flags.

Return values

true A match was found within the string.

false No match was found within the string, the content of *m* is undefined.

Exceptions

an exception of type [regex_error](#).

Definition at line 2081 of file `regex.h`.

    > & __re, regex_constants::match_flag_type __flags =
    regex_constants::match_default ) [inline]
```

Searches for a regular expression within a range.

Parameters

first [IN] The start of the string to search.

last [IN] One-past-the-end of the string to search.

m [OUT] The match results.

re [IN] The regular expression to search for.

flags [IN] Search policy flags.

Return values

true A match was found within the string.

false No match was found within the string, the content of *m* is undefined.

Exceptions

an exception of type [regex_error](#).

Todo

Implement this function.

Definition at line 1973 of file regex.h.

Referenced by std::regex_search().

```
2.37.3.57  template<typename _Ch_type , typename _Rx_traits > bool
            std::regex_search ( const _Ch_type * __s, const basic_regex<
            _Ch_type, _Rx_traits > & __e, regex_constants::match_flag_type
            __f= regex_constants::match_default ) [inline]
```

Searches for a regular expression within a C-string.

Parameters

- s* [IN] The C-string to search.
- e* [IN] The regular expression to search for.
- f* [IN] Search policy flags.

Return values

- true* A match was found within the string.
- false* No match was found within the string.

Todo

Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html

Exceptions

2.37.3.58  template<typename _Ch_type , class _Allocator , class _Rx_traits >
            bool std::regex_search ( const _Ch_type * __s, match_results< const
            _Ch_type *, _Allocator > & __m, const basic_regex< _Ch_type,
            _Rx_traits > & __e, regex_constants::match_flag_type __f=
            regex_constants::match_default ) [inline]
```

Searches for a regular expression within a C-string.

Parameters

s [IN] A C-string to search for the regex.

m [OUT] The set of regex matches.

e [IN] The regex to search for in *s*.

f [IN] The search flags.

Return values

true A match was found within the string.

false No match was found within the string, the content of *m* is undefined.

Todo

Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html

_Bi_iter __last, const basic_regex< _Ch_type, _Rx_traits
> & __re, regex_constants::match_flag_type __flags =
regex_constants::match_default) [inline]`

Searches for a regular expression within a range.

Parameters

first [IN] The start of the string to search.

last [IN] One-past-the-end of the string to search.

re [IN] The regular expression to search for.

flags [IN] Search policy flags.

Return values

true A match was found within the string.

false No match was found within the string.

Todo

Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html

Exceptions

an exception of type `regex_error`.

2.37.3.61 `template<typename _Ch_type , typename _Rx_traits > void
std::swap (basic_regex< _Ch_type, _Rx_traits > & __lhs,
basic_regex< _Ch_type, _Rx_traits > & __rhs) [inline]`

Swaps the contents of two regular expression objects.

Parameters

lhs First regular expression.

rhs Second regular expression.

Definition at line 737 of file regex.h.

References `std::basic_regex< _Ch_type, _Rx_traits >::swap()`.

2.37.3.62 `template<typename _Bi_iter , typename _Allocator > void std::swap
(match_results< _Bi_iter, _Allocator > & __lhs, match_results<
_Bi_iter, _Allocator > & __rhs) [inline]`

Swaps two match results.

Parameters

lhs A match result.

rhs A match result.

The contents of the two [match_results](#) objects are swapped.

Definition at line 1793 of file regex.h.

References `std::match_results< _Bi_iter, _Allocator >::swap()`.

2.37.3.63 `template<typename _Ch_type > int std::regex_traits< _Ch_type
>::value (_Ch_type __ch, int __radix) const [inherited]`

Converts a digit to an int.

Parameters

ch a character representing a digit.

radix the radix if the numeric conversion (limited to 8, 10, or 16).

Returns

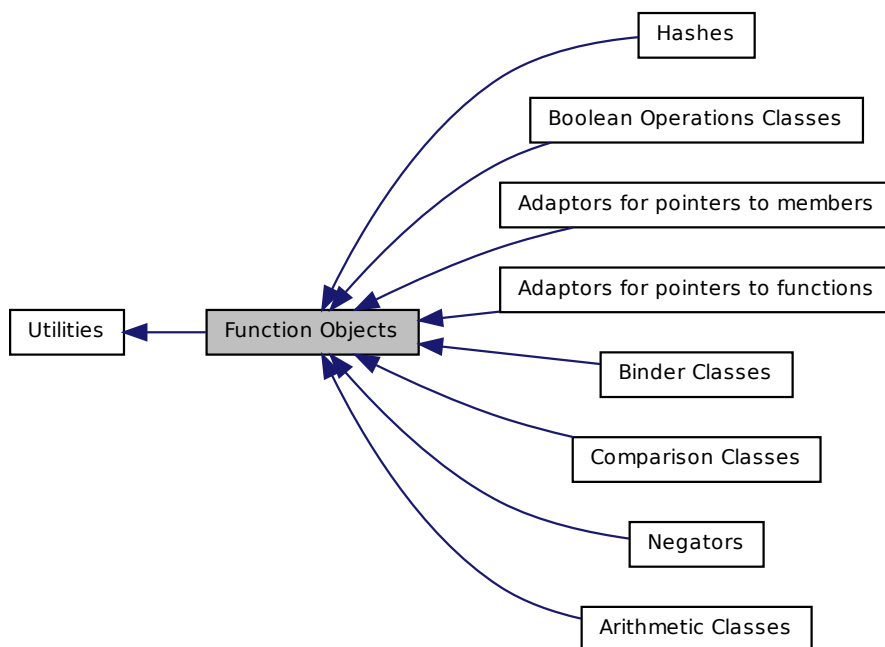

the value represented by the digit `ch` in base `radix` if the character `ch` is a valid digit in base `radix`; otherwise returns `-1`.

Definition at line 320 of file `regex.h`.

References `std::basic_ios<_CharT, _Traits>::fail()`.

2.38 Function Objects

Collaboration diagram for Function Objects:

**Classes**

- `struct std::binary_function<_Arg1, _Arg2, _Result>`
- `class std::function<_Res(_ArgTypes...)>`

*Primary class template for `std::function`.
Polymorphic function wrapper.*

- class `std::reference_wrapper<_Tp>`
Primary class template for `reference_wrapper`.
- struct `std::unary_function<_Arg, _Result>`

Modules

- Binder Classes
- Hashes
- Arithmetic Classes
- Comparison Classes
- Boolean Operations Classes
- Negators
- Adaptors for pointers to functions
- Adaptors for pointers to members

Functions

- template<typename _Tp, typename _Class>
_Mem_fn<_Tp _Class::*> `std::mem_fn` (_Tp _Class::*__pm)

2.38.1 Detailed Description

Function objects, or *functors*, are objects with an `operator()` defined and accessible. They can be passed as arguments to algorithm templates and used in place of a function pointer. Not only is the resulting expressiveness of the library increased, but the generated code can be more efficient than what you might write by hand. When we refer to *functors*, then, generally we include function pointers in the description as well.

Often, functors are only created as temporaries passed to algorithm calls, rather than being created as named variables.

Two examples taken from the standard itself follow. To perform a by-element addition of two vectors `a` and `b` containing `double`, and put the result in `a`, use

```
transform (a.begin(), a.end(), b.begin(), a.begin(), plus<double>());
```

To negate every element in `a`, use

```
transform(a.begin(), a.end(), a.begin(), negate<double>());
```

The addition and negation functions will be inlined directly.

The standard functors are derived from structs named `unary_function` and `binary_function`. These two classes contain nothing but typedefs, to aid in generic (template) programming. If you write your own functors, you might consider doing the same.

2.38.2 Function Documentation

2.38.2.1 `template<typename _Tp , typename _Class > _Mem_fn<_Tp
_Class::*> std::mem_fn (_Tp _Class::* __pm) [inline]`

Returns a function object that forwards to the member pointer *pm*.

Definition at line 812 of file functional.

2.39 Arithmetic Classes

Collaboration diagram for Arithmetic Classes:

Classes

- struct `std::divides<_Tp>`
One of the math functors.
- struct `std::minus<_Tp>`
One of the math functors.
- struct `std::modulus<_Tp>`
One of the math functors.
- struct `std::multiplies<_Tp>`

One of the *math functors*.

- struct `std::negate<_Tp>`

One of the *math functors*.

- struct `std::plus<_Tp>`

One of the *math functors*.

2.39.1 Detailed Description

Because basic math often needs to be done during an algorithm, the library provides functors for those operations. See the documentation for [the base classes](#) for examples of their use.

2.40 Comparison Classes

Collaboration diagram for Comparison Classes:

Classes

- struct `std::equal_to<_Tp>`

One of the *comparison functors*.

- struct `std::greater<_Tp>`

One of the *comparison functors*.

- struct `std::greater_equal<_Tp>`

One of the *comparison functors*.

- struct `std::less<_Tp>`

One of the *comparison functors*.

- struct `std::less_equal<_Tp>`
One of the [comparison functors](#).
- struct `std::not_equal_to<_Tp>`
One of the [comparison functors](#).

2.40.1 Detailed Description

The library provides six wrapper functors for all the basic comparisons in C++, like `<`.

2.41 Boolean Operations Classes

Collaboration diagram for Boolean Operations Classes:

Classes

- struct `std::logical_and<_Tp>`
One of the [Boolean operations functors](#).
- struct `std::logical_not<_Tp>`
One of the [Boolean operations functors](#).
- struct `std::logical_or<_Tp>`
One of the [Boolean operations functors](#).

2.41.1 Detailed Description

Here are wrapper functors for Boolean operations: `&&`, `||`, and `!`.

2.42 Negators

Collaboration diagram for Negators:

Classes

- class `std::binary_negate<_Predicate>`
One of the [negation functors](#).
- class `std::unary_negate<_Predicate>`
One of the [negation functors](#).

Functions

- `template<typename _Predicate>`
`unary_negate<_Predicate> std::not1 (const _Predicate &__pred)`
- `template<typename _Predicate>`
`binary_negate<_Predicate> std::not2 (const _Predicate &__pred)`

2.42.1 Detailed Description

The functions `not1` and `not2` each take a predicate functor and return an instance of `unary_negate` or `binary_negate`, respectively. These classes are functors whose `operator()` performs the stored predicate function and then returns the negation of the result.

For example, given a vector of integers and a trivial predicate,

```

struct IntGreaterThanThree
: public std::unary_function<int, bool>
{
    bool operator() (int x) { return x > 3; }
};

std::find_if (v.begin(), v.end(), not1(IntGreaterThanThree()));
  
```

The call to `find_if` will locate the first index (i) of `v` for which `!(v[i] > 3)` is true.

The `not1/unary_negate` combination works on predicates taking a single argument. The `not2/binary_negate` combination works on predicates which take two arguments.

2.42.2 Function Documentation

2.42.2.1 `template<typename _Predicate > unary_negate<_Predicate>
std::not1 (const _Predicate & __pred) [inline]`

One of the [negation functors](#).

Definition at line 370 of file `stl_function.h`.

2.42.2.2 `template<typename _Predicate > binary_negate<_Predicate>
std::not2 (const _Predicate & __pred) [inline]`

One of the [negation functors](#).

Definition at line 395 of file `stl_function.h`.

2.43 Adaptors for pointers to functions

Collaboration diagram for Adaptors for pointers to functions:

Classes

- class `std::pointer_to_binary_function< _Arg1, _Arg2, _Result >`
One of the [adaptors for function pointers](#).

- class `std::pointer_to_unary_function<_Arg, _Result>`

One of the [adaptors for function pointers](#).

Functions

- `template<typename _Arg, typename _Result>`
`pointer_to_unary_function<_Arg, _Result> std::ptr_fun (_Result(*)(__x)(-`
`Arg))`
- `template<typename _Arg1, typename _Arg2, typename _Result>`
`pointer_to_binary_function<_Arg1, _Arg2, _Result> std::ptr_fun (-`
`Result(*)(__x)(_Arg1, _Arg2))`

2.43.1 Detailed Description

The advantage of function objects over pointers to functions is that the objects in the standard library declare nested typedefs describing their argument and result types with uniform names (e.g., `result_type` from the base classes [unary_function](#) and [binary_function](#)). Sometimes those typedefs are required, not just optional.

Adaptors are provided to turn pointers to unary (single-argument) and binary (double-argument) functions into function objects. The long-winded functor [pointer_to_unary_function](#) is constructed with a function pointer `f`, and its `operator()` called with argument `x` returns `f(x)`. The functor [pointer_to_binary_function](#) does the same thing, but with a double-argument `f` and `operator()`.

The function `ptr_fun` takes a pointer-to-function `f` and constructs an instance of the appropriate functor.

2.43.2 Function Documentation

2.43.2.1 `template<typename _Arg, typename _Result>`
`pointer_to_unary_function<_Arg, _Result> std::ptr_fun (`
`_Result(*)(_Arg) __x) [inline]`

One of the [adaptors for function pointers](#).

Definition at line 443 of file `stl_function.h`.

```
2.43.2.2  template<typename _Arg1, typename _Arg2, typename _Result >
           pointer_to_binary_function<_Arg1, _Arg2, _Result> std::ptr_fun (
           _Result(*)(_Arg1, _Arg2) __x )  [inline]
```

One of the [adaptors for function pointers](#).

Definition at line 469 of file stl_function.h.

2.44 Adaptors for pointers to members

Collaboration diagram for Adaptors for pointers to members:

Classes

- class `std::const_mem_fun1_ref_t<_Ret, _Tp, _Arg >`
One of the [adaptors for member /// pointers](#).
- class `std::const_mem_fun1_t<_Ret, _Tp, _Arg >`
One of the [adaptors for member /// pointers](#).
- class `std::const_mem_fun_ref_t<_Ret, _Tp >`
One of the [adaptors for member /// pointers](#).
- class `std::const_mem_fun_t<_Ret, _Tp >`
One of the [adaptors for member /// pointers](#).
- class `std::mem_fun1_ref_t<_Ret, _Tp, _Arg >`
One of the [adaptors for member /// pointers](#).
- class `std::mem_fun1_t<_Ret, _Tp, _Arg >`
One of the [adaptors for member /// pointers](#).

- class `std::mem_fun_ref_t<_Ret, _Tp>`
One of the adaptors for member /// pointers.
- class `std::mem_fun_t<_Ret, _Tp>`
One of the adaptors for member /// pointers.

Functions

- `template<typename _Ret, typename _Tp>`
`mem_fun_t<_Ret, _Tp> std::mem_fun (_Ret(_Tp::*__f)())`
- `template<typename _Ret, typename _Tp, typename _Arg>`
`mem_fun1_t<_Ret, _Tp, _Arg> std::mem_fun (_Ret(_Tp::*__f)(_Arg))`
- `template<typename _Ret, typename _Tp, typename _Arg>`
`mem_fun1_ref_t<_Ret, _Tp, _Arg> std::mem_fun_ref (_Ret(_Tp::*__f)(-Arg))`
- `template<typename _Ret, typename _Tp>`
`mem_fun_ref_t<_Ret, _Tp> std::mem_fun_ref (_Ret(_Tp::*__f)())`

2.44.1 Detailed Description

There are a total of $8 = 2^3$ function objects in this family. (1) Member functions taking no arguments vs member functions taking one argument. (2) Call through pointer vs call through reference. (3) Const vs non-const member function.

All of this complexity is in the function objects themselves. You can ignore it by using the helper function `mem_fun` and `mem_fun_ref`, which create whichever type of adaptor is appropriate.

2.45 Heap

Collaboration diagram for Heap:

Functions

- `template<typename _RandomAccessIterator >`
`bool std::is_heap (_RandomAccessIterator __first, _RandomAccessIterator __-`
`last)`
- `template<typename _RandomAccessIterator, typename _Compare >`
`bool std::is_heap (_RandomAccessIterator __first, _RandomAccessIterator __-`
`last, _Compare __comp)`
- `template<typename _RandomAccessIterator >`
`_RandomAccessIterator std::is_heap_until (_RandomAccessIterator __first, _-`
`RandomAccessIterator __last)`
- `template<typename _RandomAccessIterator, typename _Compare >`
`_RandomAccessIterator std::is_heap_until (_RandomAccessIterator __first, _-`
`RandomAccessIterator __last, _Compare __comp)`
- `template<typename _RandomAccessIterator >`
`void std::make_heap (_RandomAccessIterator __first, _RandomAccessIterator`
`__last)`
- `template<typename _RandomAccessIterator, typename _Compare >`
`void std::make_heap (_RandomAccessIterator __first, _RandomAccessIterator`
`__last, _Compare __comp)`
- `template<typename _RandomAccessIterator >`
`void std::pop_heap (_RandomAccessIterator __first, _RandomAccessIterator _-`
`__last)`
- `template<typename _RandomAccessIterator, typename _Compare >`
`void std::pop_heap (_RandomAccessIterator __first, _RandomAccessIterator _-`
`__last, _Compare __comp)`
- `template<typename _RandomAccessIterator, typename _Compare >`
`void std::push_heap (_RandomAccessIterator __first, _RandomAccessIterator`
`__last, _Compare __comp)`
- `template<typename _RandomAccessIterator >`
`void std::push_heap (_RandomAccessIterator __first, _RandomAccessIterator`
`__last)`
- `template<typename _RandomAccessIterator, typename _Compare >`
`void std::sort_heap (_RandomAccessIterator __first, _RandomAccessIterator _-`
`__last, _Compare __comp)`
- `template<typename _RandomAccessIterator >`
`void std::sort_heap (_RandomAccessIterator __first, _RandomAccessIterator _-`
`__last)`

2.45.1 Function Documentation

2.45.1.1 `template<typename _RandomAccessIterator > bool std::is_heap (`
 `_RandomAccessIterator __first, _RandomAccessIterator __last)`
 `[inline]`

Determines whether a range is a heap.

Parameters

first Start of range.

last End of range.

Returns

True if range is a heap, false otherwise.

Definition at line 560 of file `stl_heap.h`.

References `std::is_heap_until()`.

2.45.1.2 `template<typename _RandomAccessIterator , typename`
 `_Compare > bool std::is_heap (_RandomAccessIterator __first,`
 `_RandomAccessIterator __last, _Compare __comp) [inline]`

Determines whether a range is a heap using comparison functor.

Parameters

first Start of range.

last End of range.

comp Comparison functor to use.

Returns

True if range is a heap, false otherwise.

Definition at line 573 of file `stl_heap.h`.

References `std::is_heap_until()`.

2.45.1.3 `template<typename _RandomAccessIterator >
_RandomAccessIterator std::is_heap_until (_RandomAccessIterator
__first, _RandomAccessIterator __last) [inline]`

Search the end of a heap.

Parameters

first Start of range.

last End of range.

Returns

An iterator pointing to the first element not in the heap.

This operation returns the last iterator *i* in [*first*, *last*) for which the range [*first*, *i*) is a heap.

Definition at line 512 of file `stl_heap.h`.

References `std::distance()`.

2.45.1.4 `template<typename _RandomAccessIterator , typename _Compare >
_RandomAccessIterator std::is_heap_until (_RandomAccessIterator
__first, _RandomAccessIterator __last, _Compare __comp)
[inline]`

Search the end of a heap using comparison functor.

Parameters

first Start of range.

last End of range.

comp Comparison functor to use.

Returns

An iterator pointing to the first element not in the heap.

This operation returns the last iterator *i* in [*first*, *last*) for which the range [*first*, *i*) is a heap. Comparisons are made using *comp*.

Definition at line 538 of file `stl_heap.h`.

References `std::distance()`.

Referenced by `std::is_heap()`.

2.45.1.5 `template<typename _RandomAccessIterator > void std::make_heap (`
`_RandomAccessIterator __first, _RandomAccessIterator __last)`

Construct a heap over a range.

Parameters

first Start of heap.

last End of heap.

This operation makes the elements in [first,last) into a heap.

Definition at line 375 of file stl_heap.h.

2.45.1.6 `template<typename _RandomAccessIterator , typename _Compare`
`> void std::make_heap (_RandomAccessIterator __first,`
`_RandomAccessIterator __last, _Compare __comp)`

Construct a heap over a range using comparison functor.

Parameters

first Start of heap.

last End of heap.

comp Comparison functor to use.

This operation makes the elements in [first,last) into a heap. Comparisons are made using comp.

Definition at line 415 of file stl_heap.h.

Referenced by std::__heap_select(), std::partial_sort_copy(), and std::priority_queue<_Tp, _Sequence, _Compare >::priority_queue().

2.45.1.7 `template<typename _RandomAccessIterator > void std::pop_heap (`
`_RandomAccessIterator __first, _RandomAccessIterator __last)`
`[inline]`

Pop an element off a heap.

Parameters

first Start of heap.

last End of heap.

This operation pops the top of the heap. The elements first and last-1 are swapped and [first,last-1) is made into a heap.

Definition at line 278 of file stl_heap.h.

```
2.45.1.8 template<typename _RandomAccessIterator, typename _Compare  
            > void std::pop_heap ( _RandomAccessIterator __first,  
                                _RandomAccessIterator __last, _Compare __comp ) [inline]
```

Pop an element off a heap using comparison functor.

Parameters

first Start of heap.

last End of heap.

comp Comparison functor to use.

This operation pops the top of the heap. The elements first and last-1 are swapped and [first,last-1) is made into a heap. Comparisons are made using comp.

Definition at line 352 of file stl_heap.h.

Referenced by std::priority_queue< _Tp, _Sequence, _Compare >::pop().

```
2.45.1.9 template<typename _RandomAccessIterator, typename _Compare  
            > void std::push_heap ( _RandomAccessIterator __first,  
                                _RandomAccessIterator __last, _Compare __comp ) [inline]
```

Push an element onto a heap using comparison functor.

Parameters

first Start of heap.

last End of heap + element.

comp Comparison functor.

This operation pushes the element at last-1 onto the valid heap over the range [first,last-1). After completion, [first,last) is a valid heap. Compare operations are performed using comp.

Definition at line 205 of file stl_heap.h.

Referenced by std::priority_queue< _Tp, _Sequence, _Compare >::push().

2.45.1.10 `template<typename _RandomAccessIterator > void std::push_heap (`
 `_RandomAccessIterator __first, _RandomAccessIterator __last)`
 `[inline]`

Push an element onto a heap.

Parameters

first Start of heap.

last End of heap + element.

This operation pushes the element at last-1 onto the valid heap over the range [first,last-1). After completion, [first,last) is a valid heap.

Definition at line 156 of file stl_heap.h.

2.45.1.11 `template<typename _RandomAccessIterator , typename _Compare`
 `> void std::sort_heap (_RandomAccessIterator __first,`
 `_RandomAccessIterator __last, _Compare __comp)`

Sort a heap using comparison functor.

Parameters

first Start of heap.

last End of heap.

comp Comparison functor to use.

This operation sorts the valid heap in the range [first,last). Comparisons are made using comp.

Definition at line 483 of file stl_heap.h.

Referenced by std::partial_sort(), and std::partial_sort_copy().

2.45.1.12 `template<typename _RandomAccessIterator > void std::sort_heap (`
 `_RandomAccessIterator __first, _RandomAccessIterator __last)`

Sort a heap.

Parameters

first Start of heap.

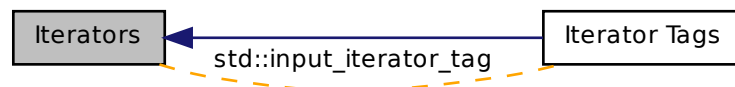

last End of heap.

This operation sorts the valid heap in the range [first,last).

Definition at line 454 of file stl_heap.h.

2.46 Iterators

Collaboration diagram for Iterators:

Classes

- class `std::__has_iterator_category_helper< _Tp >`
Traits class for iterators.
- class `std::back_insert_iterator< _Container >`
Turns assignment into insertion.
- class `std::front_insert_iterator< _Container >`
Turns assignment into insertion.
- struct `std::input_iterator_tag`
Marking input iterators.
- class `std::insert_iterator< _Container >`
Turns assignment into insertion.
- class `std::istream_iterator< _Tp, _CharT, _Traits, _Dist >`
Provides input iterator semantics for streams.
- class `std::istreambuf_iterator< _CharT, _Traits >`
Provides input iterator semantics for streambufs.

- struct `std::iterator<_Category, _Tp, _Distance, _Pointer, _Reference >`
Common iterator class.
- struct `std::iterator_traits<_Tp * >`
Partial specialization for pointer types.
- struct `std::iterator_traits<const _Tp * >`
Partial specialization for const pointer types.
- class `std::move_iterator<_Iterator >`
- class `std::ostream_iterator<_Tp, _CharT, _Traits >`
Provides output iterator semantics for streams.
- class `std::ostreambuf_iterator<_CharT, _Traits >`
Provides output iterator semantics for streambufs.
- class `std::reverse_iterator<_Iterator >`

2.46.1 Detailed Description

Abstractions for uniform iterating through various underlying types.

2.46.2 Function Documentation

2.46.2.1 `template<typename _Iter > iterator_traits<_Iter>::iterator_category` `std::__iterator_category (const _Iter &) [inline]`

This function is not a part of the C++ standard but is syntactic sugar for internal library use only.

Definition at line 202 of file `stl_iterator_base_types.h`.

Referenced by `std::advance()`, `std::copy_n()`, `__gnu_cxx::copy_n()`, `std::distance()`, `__gnu_cxx::distance()`, `std::find()`, `std::find_end()`, `std::find_if()`, `std::find_if_not()`,

`std::partition()`, `std::reverse()`, `std::search_n()`, `std::uninitialized_copy_n()`, `__gnu_cxx::uninitialized_copy_n()`, and `std::unique_copy()`.

2.46.2.2 `template<typename _Container > back_insert_iterator<_Container>
std::back_inserter (_Container & __x) [inline]`

Parameters

x A container of arbitrary type.

Returns

An instance of `back_insert_iterator` working on *x*.

This wrapper function helps in creating `back_insert_iterator` instances. Typing the name of the iterator requires knowing the precise full type of the container, which can be tedious and impedes generic programming. Using this function lets you take advantage of automatic template parameter deduction, making the compiler match the correct types for you.

Definition at line 473 of file `stl_iterator.h`.

Referenced by `std::regex_replace()`.

2.46.2.3 `template<typename _Container > front_insert_iterator<_Container>
std::front_inserter (_Container & __x) [inline]`

Parameters

x A container of arbitrary type.

Returns

An instance of `front_insert_iterator` working on *x*.

This wrapper function helps in creating `front_insert_iterator` instances. Typing the name of the iterator requires knowing the precise full type of the container, which can be tedious and impedes generic programming. Using this function lets you take advantage of automatic template parameter deduction, making the compiler match the correct types for you.

Definition at line 563 of file `stl_iterator.h`.

```
2.46.2.4 template<typename _Container , typename _Iterator >
insert_iterator<_Container> std::inserter ( _Container & __x,
    _Iterator __i ) [inline]
```

Parameters

x A container of arbitrary type.

Returns

An instance of [insert_iterator](#) working on *x*.

This wrapper function helps in creating [insert_iterator](#) instances. Typing the name of the iterator requires knowing the precise full type of the container, which can be tedious and impedes generic programming. Using this function lets you take advantage of automatic template parameter deduction, making the compiler match the correct types for you.

Definition at line 677 of file `stl_iterator.h`.

```
2.46.2.5 template<class _Tp , class _CharT , class _Traits , class _Dist > bool
std::operator!=( const istream_iterator< _Tp, _CharT, _Traits, _Dist
    > & __x, const istream_iterator< _Tp, _CharT, _Traits, _Dist > &
    __y ) [inline]
```

Return false if *x* and *y* are both end or not end, or *x* and *y* are the same.

Definition at line 137 of file `stream_iterator.h`.

```
2.46.2.6 template<typename _Iterator > bool std::operator==( const
reverse_iterator< _Iterator > & __x, const reverse_iterator<
    _Iterator > & __y ) [inline]
```

Parameters

x A `reverse_iterator`.

y A `reverse_iterator`.

Returns

A simple bool.

Reverse iterators forward many operations to their underlying base() iterators. Others are implemented in terms of one another.

Definition at line 285 of file `stl_iterator.h`.

References `std::reverse_iterator< _Iterator >::base()`.

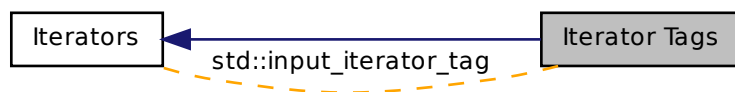

2.46.2.7 `template<typename _Tp, typename _CharT, typename _Traits, typename _Dist > bool std::operator==(const istream_iterator< _Tp, _CharT, _Traits, _Dist > & __x, const istream_iterator< _Tp, _CharT, _Traits, _Dist > & __y) [inline]`

Return true if x and y are both end or not end, or x and y are the same.

Definition at line 130 of file `stream_iterator.h`.

2.47 Iterator Tags

Collaboration diagram for Iterator Tags:

Classes

- struct `std::bidirectional_iterator_tag`
Bidirectional iterators support a superset of forward iterator /// operations.
- struct `std::forward_iterator_tag`
Forward iterators support a superset of input iterator operations.
- struct `std::input_iterator_tag`
Marking input iterators.
- struct `std::output_iterator_tag`

Marking output iterators.

- struct `std::random_access_iterator_tag`

Random-access iterators support a superset of bidirectional /// iterator operations.

2.47.1 Detailed Description

These are empty types, used to distinguish different iterators. The distinction is not made by what they contain, but simply by what they are. Different underlying algorithms can then be used based on the different operations supported by different iterator types.

2.48 Strings

Collaboration diagram for Strings:

Classes

- class `std::basic_string< _CharT, _Traits, _Alloc >`

Managing sequences of characters and character-like objects.

Typedefs

- typedef `basic_string< char >` **`std::string`**
- typedef `basic_string< char16_t >` **`std::u16string`**
- typedef `basic_string< char32_t >` **`std::u32string`**
- typedef `basic_string< wchar_t >` **`std::wstring`**

2.48.1 Typedef Documentation

2.48.1.1 typedef basic_string<char32_t> std::u32string

A string of `char16_t`.

Definition at line 80 of file `stringfwd.h`.

2.49 Policy-Based Data Structures

Collaboration diagram for Policy-Based Data Structures:

Classes

- class `__gnu_pbds::basic_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Resize_Policy, Store_Hash, Tag, Policy_Tl, Allocator >`
An abstract basic hash-based associative container.
- class `__gnu_pbds::basic_tree< Key, Mapped, Tag, Node_Update, Policy_Tl, Allocator >`
An abstract basic tree-like (tree, trie) associative container.
- class `__gnu_pbds::cc_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash, Allocator >`
A concrete collision-chaining hash-based associative container.
- class `__gnu_pbds::container_base< Key, Mapped, Tag, Policy_Tl, Allocator >`
An abstract basic associative container.
- class `__gnu_pbds::gp_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Probe_Fn, Probe_Fn, Resize_Policy, Store_Hash, Allocator >`

A concrete general-probing hash-based associative container.

- `class __gnu_pbds::list_update< Key, Mapped, Eq_Fn, Update_Policy, Allocator >`

A list-update based associative container.

- `class __gnu_pbds::tree< Key, Mapped, Cmp_Fn, Tag, Node_Update, Allocator >`

A concrete basic tree-based associative container.

- `class __gnu_pbds::trie< Key, Mapped, E_Access_Traits, Tag, Node_Update, Allocator >`

A concrete basic trie-based associative container.

Defines

- `#define PB_DS_BASE_C_DEC`
- `#define PB_DS_BASE_C_DEC`
- `#define PB_DS_BASE_C_DEC`
- `#define PB_DS_BASE_C_DEC`
- `#define PB_DS_BASE_C_DEC`
- `#define PB_DS_BASE_C_DEC`
- `#define PB_DS_BASE_C_DEC`
- `#define PB_DS_BASE_C_DEC`
- `#define PB_DS_TREE_NODE_AND_IT_TRAITS_C_DEC`
- `#define PB_DS_TRIE_NODE_AND_ITS_TRAITS`

2.49.1 Detailed Description

This is a library of policy-based elementary data structures: associative containers and priority queues. It is designed for high-performance, flexibility, semantic safety, and conformance to the corresponding containers in std (except for some points where it differs by design).

For details, see: http://gcc.gnu.org/onlinedocs/libstdc++/ext/pb_ds/index.html

2.50 Metaprogramming

Classes

- `struct std::__declval_protector< _Tp >`

declval

- struct `std::__is_member_pointer_helper< _Tp >`
is_member_pointer
- struct `std::add_const< _Tp >`
add_const
- struct `std::add_cv< _Tp >`
add_cv
- struct `std::add_lvalue_reference< _Tp >`
add_lvalue_reference
- struct `std::add_pointer< _Tp >`
add_pointer
- struct `std::add_rvalue_reference< _Tp >`
add_rvalue_reference
- struct `std::add_volatile< _Tp >`
add_volatile
- struct `std::aligned_storage< _Len, _Align >`
Alignment type.
- struct `std::alignment_of< _Tp >`
alignment_of
- struct `std::conditional< _Cond, _Iftrue, _Iffalse >`
conditional
- class `std::decay< _Tp >`
decay
- struct `std::enable_if< bool, _Tp >`
enable_if
- struct `std::extent< typename, _Uint >`
extent
- struct `std::has_nothrow_copy_assign< _Tp >`

has_nothrow_copy_assign

- struct `std::has_nothrow_copy_constructor< _Tp >`
has_nothrow_copy_constructor
- struct `std::has_nothrow_default_constructor< _Tp >`
has_nothrow_default_constructor
- struct `std::has_trivial_copy_assign< _Tp >`
has_trivial_copy_assign
- struct `std::has_trivial_copy_constructor< _Tp >`
has_trivial_copy_constructor
- struct `std::has_trivial_default_constructor< _Tp >`
has_trivial_default_constructor
- struct `std::has_trivial_destructor< _Tp >`
has_trivial_destructor
- struct `std::has_virtual_destructor< _Tp >`
has_virtual_destructor
- struct `std::integral_constant< _Tp, __v >`
integral_constant
- struct `std::is_abstract< _Tp >`
is_abstract
- struct `std::is_arithmetic< _Tp >`
is_arithmetic
- struct `std::is_array< typename >`
is_array
- struct `std::is_base_of< _Base, _Derived >`
is_base_of
- struct `std::is_class< _Tp >`
is_class
- struct `std::is_compound< _Tp >`

is_compound

- struct `std::is_const< typename >`
is_const
- struct `std::is_constructible< _Tp, _Args >`
is_constructible
- struct `std::is_convertible< _From, _To >`
is_convertible
- struct `std::is_empty< _Tp >`
is_empty
- struct `std::is_enum< _Tp >`
is_enum
- struct `std::is_explicitly_convertible< _From, _To >`
is_explicitly_convertible
- struct `std::is_floating_point< _Tp >`
is_floating_point
- struct `std::is_function< typename >`
is_function
- struct `std::is_fundamental< _Tp >`
is_fundamental
- struct `std::is_integral< _Tp >`
is_integral
- struct `std::is_literal_type< _Tp >`
is_literal_type
- struct `std::is_lvalue_reference< typename >`
is_lvalue_reference
- struct `std::is_member_function_pointer< _Tp >`
is_member_function_pointer
- struct `std::is_member_object_pointer< _Tp >`

is_member_object_pointer

- struct `std::is_nothrow_constructible< _Tp, _Args >`
is_nothrow_constructible
- struct `std::is_object< _Tp >`
is_object
- struct `std::is_pod< _Tp >`
is_pod
- struct `std::is_pointer< _Tp >`
is_pointer
- struct `std::is_polymorphic< _Tp >`
is_polymorphic
- struct `std::is_reference< _Tp >`
is_reference
- struct `std::is_rvalue_reference< typename >`
is_rvalue_reference
- struct `std::is_same< typename, typename >`
is_same
- struct `std::is_scalar< _Tp >`
is_scalar
- struct `std::is_signed< _Tp >`
is_signed
- struct `std::is_standard_layout< _Tp >`
is_standard_layout
- struct `std::is_trivial< _Tp >`
is_trivial
- struct `std::is_union< _Tp >`
is_union
- struct `std::is_unsigned< _Tp >`

is_unsigned

- struct `std::is_void< _Tp >`
is_void
- struct `std::is_volatile< typename >`
is_volatile
- struct `std::make_signed< _Tp >`
make_signed
- struct `std::make_unsigned< _Tp >`
make_unsigned
- struct `std::rank< typename >`
rank
- struct `std::remove_all_extents< _Tp >`
remove_all_extents
- struct `std::remove_const< _Tp >`
remove_const
- struct `std::remove_cv< _Tp >`
remove_cv
- struct `std::remove_extent< _Tp >`
remove_extent
- struct `std::remove_pointer< _Tp >`
remove_pointer
- struct `std::remove_reference< _Tp >`
remove_reference
- struct `std::remove_volatile< _Tp >`
remove_volatile

Defines

2.50.1 Define Documentation**2.50.1.1 `#define _GLIBCXX_HAS_NESTED_TYPE(_NTYPE)`**

Use SFINAE to determine if the type `_Tp` has a publicly-accessible member type `_NTYPE`.

Definition at line 1155 of file `type_traits`.

2.50.2 Typedef Documentation**2.50.2.1 `typedef integral_constant<bool, false> std::false_type`**

typedef for `false_type`

Definition at line 84 of file `type_traits`.

2.50.2.2 typedef integral_constant<bool, true> std::true_type

typedef for true_type

Definition at line 81 of file type_traits.

2.51 Random Number Generators

Collaboration diagram for Random Number Generators:

Classes

- class [std::discard_block_engine<_RandomNumberEngine, __p, __r>](#)
- class [std::independent_bits_engine<_RandomNumberEngine, __w, _UIntType>](#)
- class [std::linear_congruential_engine<_UIntType, __a, __c, __m>](#)
A model of a linear congruential random number generator.
- class [std::random_device](#)
- class [std::shuffle_order_engine<_RandomNumberEngine, __k>](#)
Produces random numbers by combining random numbers from some base engine to produce random numbers with a specifies number of bits __w.

Typedefs

- typedef minstd_rand0 [std::default_random_engine](#)
- typedef shuffle_order_engine< minstd_rand0, 256 > [std::knuth_b](#)
- typedef linear_congruential_engine< uint_fast32_t, 48271UL, 0UL, 2147483647UL > [std::minstd_rand](#)
- typedef linear_congruential_engine< uint_fast32_t, 16807UL, 0UL, 2147483647UL > [std::minstd_rand0](#)

- `typedef mersenne_twister_engine< uint_fast32_t, 32, 624, 397, 31, 0x9908b0dfUL, 11, 0xffffffffUL, 7, 0x9d2c5680UL, 15, 0xefc60000UL, 18, 1812433253UL > std::mt19937`
- `typedef mersenne_twister_engine< uint_fast64_t, 64, 312, 156, 31, 0xb5026f5aa96619e9ULL, 29, 0x5555555555555555ULL, 17, 0x71d67ffeda60000ULL, 37, 0xfff7eee000000000ULL, 43, 6364136223846793005ULL > std::mt19937_64`

- `template<typename _RandomNumberEngine, size_t __p, size_t __r>
bool std::operator!= (const std::discard_block_engine< _RandomNumberEngine, __p, __r > &__lhs, const std::discard_block_engine< _RandomNumberEngine, __p, __r > &__rhs)`
- `template<typename _UIntType, size_t __w, size_t __s, size_t __r>
bool std::operator!= (const std::subtract_with_carry_engine< _UIntType, __w, __s, __r > &__lhs, const std::subtract_with_carry_engine< _UIntType, __w, __s, __r > &__rhs)`

- `template<typename _RandomNumberEngine, size_t __w, typename _UIntType, typename _CharT, typename _Traits >`
`std::basic_ostream< _CharT, _Traits > & std::operator<< (std::basic_ostream< _CharT, _Traits > &__os, const std::independent_bits_engine< _RandomNumberEngine, __w, _UIntType > &__x)`

2.51.1 Detailed Description

These classes define objects which provide random or pseudorandom numbers, either from a discrete or a continuous interval. The random number generator supplied as a part of this library are all uniform random number generators which provide a sequence of random number uniformly distributed over their range.

A number generator is a function object with an `operator()` that takes zero arguments and returns a number.

A compliant random number generator must satisfy the following requirements.

To be documented.

Table 1: Random Number Generator Requirements

2.51.2 Typedef Documentation

2.51.2.1 `typedef linear_congruential_engine<uint_fast32_t, 48271UL, 0UL, 2147483647UL> std::minstd_rand`

An alternative LCR (Lehmer Generator function).

Definition at line 1450 of file `random.h`.

2.51.2.2 `typedef linear_congruential_engine<uint_fast32_t, 16807UL, 0UL, 2147483647UL> std::minstd_rand0`

The classic Minimum Standard `rand0` of Lewis, Goodman, and Miller.

Definition at line 1444 of file `random.h`.

2.51.2.3 `typedef mersenne_twister_engine< uint_fast32_t, 32, 624, 397, 31, 0x9908b0dfUL, 11, 0xffffffffUL, 7, 0x9d2c5680UL, 15, 0xefc60000UL, 18, 1812433253UL> std::mt19937`

The classic Mersenne Twister.

Reference: M. Matsumoto and T. Nishimura, Mersenne Twister: A 623-Dimensionally Equidistributed Uniform Pseudo-Random Number Generator, ACM Transactions on Modeling and Computer Simulation, Vol. 8, No. 1, January 1998, pp 3-30.

Definition at line 1466 of file random.h.

```
2.51.2.4  typedef mersenne_twister_engine< uint_fast64_t, 64, 312, 156,
        31, 0xb5026f5aa96619e9ULL, 29, 0x5555555555555555ULL,
        17, 0x71d67ffeda60000ULL, 37, 0xfff7eee000000000ULL, 43,
        6364136223846793005ULL> std::mt19937_64
```

An alternative Mersenne Twister.

Definition at line 1478 of file random.h.

2.51.3 Function Documentation

```
2.51.3.1  template<typename _UIntType , _UIntType __a, _UIntType
        __c, _UIntType __m> bool std::operator!= ( const
        std::linear_congruential_engine< _UIntType, __a, __c, __m > &
        __lhs, const std::linear_congruential_engine< _UIntType, __a, __c,
        __m > & __rhs ) [inline]
```

Compares two linear congruential random number generator objects of the same type for inequality.

Parameters

__lhs A linear congruential random number generator object.

__rhs Another linear congruential random number generator object.

Returns

true if the infinite sequences of generated values would be different, false otherwise.

Definition at line 338 of file random.h.

```

2.51.3.2 template<typename _RandomNumberEngine , size_t __k>
bool std::operator!= ( const std::shuffle_order_engine<
    _RandomNumberEngine, __k > & __lhs, const
    std::shuffle_order_engine< _RandomNumberEngine, __k > & __rhs
    ) [inline]

```

Compares two `shuffle_order_engine` random number generator objects of the same type for inequality.

Parameters

__lhs A `shuffle_order_engine` random number generator object.

__rhs Another `shuffle_order_engine` random number generator object.

Returns

true if the infinite sequences of generated values would be different, false otherwise.

Definition at line 1433 of file `random.h`.

```

2.51.3.3 template<typename _UIntType , size_t __w, size_t __n, size_t __m,
    size_t __r, _UIntType __a, size_t __u, _UIntType __d, size_t __s,
    _UIntType __b, size_t __t, _UIntType __c, size_t __l, _UIntType
    __f> bool std::operator!= ( const std::mersenne_twister_engine<
    _UIntType, __w, __n, __m, __r, __a, __u, __d, __s, __b, __t, __c, __l,
    __f > & __lhs, const std::mersenne_twister_engine< _UIntType, __w,
    __n, __m, __r, __a, __u, __d, __s, __b, __t, __c, __l, __f > & __rhs )
    [inline]

```

Compares two `% mersenne_twister_engine` random number generator objects of the same type for inequality.

Parameters

__lhs A `% mersenne_twister_engine` random number generator object.

__rhs Another `% mersenne_twister_engine` random number generator object.

Returns

true if the infinite sequences of generated values would be different, false otherwise.

Definition at line 568 of file `random.h`.

```

2.51.3.4 template<typename _RandomNumberEngine , size_t
        __w, typename _UIntType > bool std::operator!= ( const
        std::independent_bits_engine< _RandomNumberEngine, __w,
        _UIntType > & __lhs, const std::independent_bits_engine<
        _RandomNumberEngine, __w, _UIntType > & __rhs ) [inline]

```

Compares two `independent_bits_engine` random number generator objects of the same type for inequality.

Parameters

`__lhs` A `independent_bits_engine` random number generator object.
`__rhs` Another `independent_bits_engine` random number generator object.

Returns

true if the infinite sequences of generated values would be different, false otherwise.

Definition at line 1183 of file `random.h`.

```

2.51.3.5 template<typename _RandomNumberEngine , size_t __p, size_t
        __r> bool std::operator!= ( const std::discard_block_engine<
        _RandomNumberEngine, __p, __r > & __lhs, const
        std::discard_block_engine< _RandomNumberEngine, __p, __r > &
        __rhs ) [inline]

```

Compares two `discard_block_engine` random number generator objects of the same type for inequality.

Parameters

`__lhs` A `discard_block_engine` random number generator object.
`__rhs` Another `discard_block_engine` random number generator object.

Returns

true if the infinite sequences of generated values would be different, false otherwise.

Definition at line 987 of file `random.h`.

2.51.3.6 `template<typename _UIntType, size_t __w, size_t __s, size_t __r> bool
std::operator!=(const std::subtract_with_carry_engine< _UIntType,
__w, __s, __r > & __lhs, const std::subtract_with_carry_engine<
_UIntType, __w, __s, __r > & __rhs) [inline]`

Compares two % `subtract_with_carry_engine` random number generator objects of the same type for inequality.

Parameters

`__lhs` A % `subtract_with_carry_engine` random number generator object.

`__rhs` Another % `subtract_with_carry_engine` random number generator object.

Returns

true if the infinite sequences of generated values would be different, false otherwise.

Definition at line 765 of file `random.h`.

2.51.3.7 `template<typename _RandomNumberEngine, size_t __w,
typename _UIntType, typename _CharT, typename _Traits
> std::basic_ostream<_CharT, _Traits>& std::operator<<
(std::basic_ostream<_CharT, _Traits> & __os, const
std::independent_bits_engine<_RandomNumberEngine, __w,
_UIntType> & __x)`

Inserts the current state of a `independent_bits_engine` random number generator engine `__x` into the output stream `__os`.

Parameters

`__os` An output stream.

`__x` A `independent_bits_engine` random number generator engine.

Returns

The output stream with the state of `__x` inserted or in an error state.

Definition at line 1202 of file `random.h`.

2.52 Random Number Distributions

Collaboration diagram for Random Number Distributions:

Modules

- [Uniform Distributions](#)
- [Normal Distributions](#)
- [Bernoulli Distributions](#)
- [Poisson Distributions](#)

2.53 Uniform Distributions

Collaboration diagram for Uniform Distributions:

Classes

- class [std::uniform_int_distribution< _IntType >](#)

Uniform discrete distribution for random numbers. A discrete random distribution on the range $[min, max]$ with equal probability throughout the range.

- class `std::uniform_real_distribution<_RealType>`

Uniform continuous distribution for random numbers.

Functions

- `template<typename _IntType>`
`bool std::operator!= (const std::uniform_int_distribution<_IntType> &__d1,`
`const std::uniform_int_distribution<_IntType> &__d2)`
- `template<typename _IntType>`
`bool std::operator!= (const std::uniform_real_distribution<_IntType> &__d1,`
`const std::uniform_real_distribution<_IntType> &__d2)`
- `template<typename _RealType, typename _CharT, typename _Traits>`
`std::basic_ostream<_CharT, _Traits> & std::operator<< (std::basic_`
`ostream<_CharT, _Traits> &, const std::uniform_real_distribution<_`
`RealType> &)`
- `template<typename _IntType, typename _CharT, typename _Traits>`
`std::basic_ostream<_CharT, _Traits> & std::operator<< (std::basic_`
`ostream<_CharT, _Traits> &, const std::uniform_int_distribution<_IntType`
`> &)`
- `template<typename _IntType>`
`bool std::operator== (const std::uniform_real_distribution<_IntType> &__d1,`
`const std::uniform_real_distribution<_IntType> &__d2)`
- `template<typename _IntType>`
`bool std::operator== (const std::uniform_int_distribution<_IntType> &__d1,`
`const std::uniform_int_distribution<_IntType> &__d2)`
- `template<typename _RealType, typename _CharT, typename _Traits>`
`std::basic_istream<_CharT, _Traits> & std::operator>> (std::basic_istream<`
`_CharT, _Traits> &, std::uniform_real_distribution<_RealType> &)`
- `template<typename _IntType, typename _CharT, typename _Traits>`
`std::basic_istream<_CharT, _Traits> & std::operator>> (std::basic_istream<`
`_CharT, _Traits> &, std::uniform_int_distribution<_IntType> &)`

2.53.1 Function Documentation

- 2.53.1.1** `template<typename _IntType> bool std::operator!= (const`
`std::uniform_int_distribution<_IntType> & __d1, const`
`std::uniform_int_distribution<_IntType> & __d2) [inline]`

Return true if two uniform integer distributions have different parameters.

Definition at line 1735 of file random.h.

2.53.1.2 `template<typename _IntType > bool std::operator!=(const
std::uniform_real_distribution< _IntType > & __d1, const
std::uniform_real_distribution< _IntType > & __d2) [inline]`

Return true if two uniform real distributions have different parameters.

Definition at line 1916 of file random.h.

2.53.1.3 `template<typename _RealType, typename _CharT, typename _Traits
> std::basic_ostream< _CharT, _Traits > & std::operator<<
(std::basic_ostream< _CharT, _Traits > & __os, const
std::uniform_real_distribution< _RealType > & __x)`

Inserts a `uniform_real_distribution` random number distribution `__x` into the output stream `__os`.

Parameters

`__os` An output stream.

`__x` A `uniform_real_distribution` random number distribution.

Returns

The output stream with the state of `__x` inserted or in an error state.

Definition at line 942 of file random.tcc.

References `std::ios_base::flags()`, `std::left()`, and `std::scientific()`.

2.53.1.4 `template<typename _IntType, typename _CharT, typename _Traits
> std::basic_ostream< _CharT, _Traits > & std::operator<<
(std::basic_ostream< _CharT, _Traits > & __os, const
std::uniform_int_distribution< _IntType > & __x)`

Inserts a `uniform_int_distribution` random number distribution `__x` into the output stream `os`.

Parameters

`__os` An output stream.
`__x` A `uniform_int_distribution` random number distribution.

Returns

The output stream with the state of `__x` inserted or in an error state.

Definition at line 900 of file `random.tcc`.

References `std::left()`, and `std::scientific()`.

2.53.1.5 `template<typename _IntType > bool std::operator==(const
std::uniform_real_distribution< _IntType > & __d1, const
std::uniform_real_distribution< _IntType > & __d2) [inline]`

Return true if two uniform real distributions have the same parameters.

Definition at line 1906 of file `random.h`.

References `std::uniform_real_distribution< _RealType >::param()`.

2.53.1.6 `template<typename _IntType > bool std::operator==(const
std::uniform_int_distribution< _IntType > & __d1, const
std::uniform_int_distribution< _IntType > & __d2) [inline]`

Return true if two uniform integer distributions have the same parameters.

Definition at line 1725 of file `random.h`.

References `std::uniform_int_distribution< _IntType >::param()`.

2.53.1.7 `template<typename _RealType , typename _CharT ,
typename _Traits > std::basic_istream< _CharT, _Traits > &
std::operator>> (std::basic_istream< _CharT, _Traits > & __is,
std::uniform_real_distribution< _RealType > & __x)`

Extracts a `uniform_real_distribution` random number distribution `__x` from the input stream `__is`.

Parameters

`__is` An input stream.

`__x` A `uniform_real_distribution` random number generator engine.

Returns

The input stream with `__x` extracted or in an error state.

Definition at line 966 of file `random.tcc`.

References `std::ios_base::flags()`, `std::uniform_real_distribution< _RealType >::param()`, and `std::skipws()`.

2.53.1.8 `template<typename _IntType , typename _CharT , typename _Traits > std::basic_istream< _CharT, _Traits > & std::operator>> (std::basic_istream< _CharT, _Traits > & __is, std::uniform_int_distribution< _IntType > & __x)`

Extracts a `uniform_int_distribution` random number distribution `__x` from the input stream `__is`.

Parameters

`__is` An input stream.

`__x` A `uniform_int_distribution` random number generator engine.

Returns

The input stream with `__x` extracted or in an error state.

Definition at line 921 of file `random.tcc`.

References `std::dec()`, `std::ios_base::flags()`, `std::uniform_int_distribution< _IntType >::param()`, and `std::skipws()`.

2.54 Normal Distributions

Collaboration diagram for Normal Distributions:

Classes

- class `std::cauchy_distribution<_RealType>`
A *cauchy_distribution* random number distribution.
- class `std::chi_squared_distribution<_RealType>`
A *chi_squared_distribution* random number distribution.
- class `std::fisher_f_distribution<_RealType>`
A *fisher_f_distribution* random number distribution.
- class `std::gamma_distribution<_RealType>`
A *gamma* continuous distribution for random numbers.
- class `std::lognormal_distribution<_RealType>`
A *lognormal_distribution* random number distribution.
- class `std::normal_distribution<_RealType>`
A *normal* continuous distribution for random numbers.
- class `std::student_t_distribution<_RealType>`
A *student_t_distribution* random number distribution.

Functions

- `template<typename _RealType>`
`bool std::operator!= (const std::normal_distribution<_RealType> &__d1,`
`const std::normal_distribution<_RealType> &__d2)`
- `template<typename _RealType>`
`bool std::operator!= (const std::lognormal_distribution<_RealType> &__d1,`
`const std::lognormal_distribution<_RealType> &__d2)`
- `template<typename _RealType>`
`bool std::operator!= (const std::chi_squared_distribution<_RealType> &__d1,`
`const std::chi_squared_distribution<_RealType> &__d2)`
- `template<typename _RealType>`
`bool std::operator!= (const std::fisher_f_distribution<_RealType> &__d1,`
`const std::fisher_f_distribution<_RealType> &__d2)`
- `template<typename _RealType>`
`bool std::operator!= (const std::student_t_distribution<_RealType> &__d1,`
`const std::student_t_distribution<_RealType> &__d2)`
- `template<typename _RealType>`
`bool std::operator!= (const std::cauchy_distribution<_RealType> &__d1,`
`const std::cauchy_distribution<_RealType> &__d2)`

- `template<typename _RealType >`
`bool std::operator!= (const std::gamma_distribution< _RealType > &__d1,`
`const std::gamma_distribution< _RealType > &__d2)`
- `template<typename _RealType , typename _CharT , typename _Traits >`
`std::basic_ostream< _CharT, _Traits > & std::operator<< (std::basic_`
`ostream< _CharT, _Traits > &, const std::cauchy_distribution< _RealType >`
`&)`
- `template<typename _RealType >`
`bool std::operator== (const std::cauchy_distribution< _RealType > &__d1,`
`const std::cauchy_distribution< _RealType > &__d2)`
- `template<typename _RealType , typename _CharT , typename _Traits >`
`std::basic_istream< _CharT, _Traits > & std::operator>> (std::basic_istream<`
`_CharT, _Traits > &, std::cauchy_distribution< _RealType > &)`

2.54.1 Function Documentation

2.54.1.1 `template<typename _RealType > bool std::operator!= (const`
`std::normal_distribution< _RealType > & __d1, const`
`std::normal_distribution< _RealType > & __d2) [inline]`

Return true if two normal distributions are different.

Definition at line 2136 of file random.h.

2.54.1.2 `template<typename _RealType > bool std::operator!= (const`
`std::lognormal_distribution< _RealType > & __d1, const`
`std::lognormal_distribution< _RealType > & __d2) [inline]`

Return true if two lognormal distributions are different.

Definition at line 2312 of file random.h.

2.54.1.3 `template<typename _RealType > bool std::operator!= (const`
`std::chi_squared_distribution< _RealType > & __d1, const`
`std::chi_squared_distribution< _RealType > & __d2) [inline]`

Return true if two Chi-squared distributions are different.

Definition at line 2669 of file random.h.

2.54.1.4 `template<typename _RealType > bool std::operator!= (const
std::fisher_f_distribution< _RealType > & __d1, const
std::fisher_f_distribution< _RealType > & __d2) [inline]`

Return true if two Fisher f distributions are diferent.

Definition at line 3024 of file random.h.

2.54.1.5 `template<typename _RealType > bool std::operator!= (const
std::student_t_distribution< _RealType > & __d1, const
std::student_t_distribution< _RealType > & __d2) [inline]`

Return true if two Student t distributions are different.

Definition at line 3198 of file random.h.

2.54.1.6 `template<typename _RealType > bool std::operator!= (const
std::cauchy_distribution< _RealType > & __d1, const
std::cauchy_distribution< _RealType > & __d2) [inline]`

Return true if two Cauchy distributions have different parameters.

Definition at line 2808 of file random.h.

2.54.1.7 `template<typename _RealType > bool std::operator!= (const
std::gamma_distribution< _RealType > & __d1, const
std::gamma_distribution< _RealType > & __d2) [inline]`

Return true if two gamma distributions are different.

Definition at line 2504 of file random.h.

2.54.1.8 `template<typename _RealType , typename _CharT , typename _Traits
> std::basic_ostream< _CharT, _Traits > & std::operator<<
(std::basic_ostream< _CharT, _Traits > & __os, const
std::cauchy_distribution< _RealType > & __x)`

Inserts a `cauchy_distribution` random number distribution `__x` into the output stream `__os`.

Parameters

`__os` An output stream.
`__x` A `cauchy_distribution` random number distribution.

Returns

The output stream with the state of `__x` inserted or in an error state.

Definition at line 1864 of file `random.tcc`.

References `std::left()`, and `std::scientific()`.

2.54.1.9 `template<typename _RealType> bool std::operator==(const std::cauchy_distribution<_RealType> & __d1, const std::cauchy_distribution<_RealType> & __d2) [inline]`

Return true if two Cauchy distributions have the same parameters.

Definition at line 2798 of file `random.h`.

References `std::cauchy_distribution<_RealType>::param()`.

2.54.1.10 `template<typename _RealType, typename _CharT, typename _Traits> std::basic_istream<_CharT, _Traits> & std::operator>>(std::basic_istream<_CharT, _Traits> & __is, std::cauchy_distribution<_RealType> & __x)`

Extracts a `cauchy_distribution` random number distribution `__x` from the input stream `__is`.

Parameters

`__is` An input stream.
`__x` A `cauchy_distribution` random number generator engine.

Returns

The input stream with `__x` extracted or in an error state.

Definition at line 1888 of file random.tcc.

References `std::dec()`, `std::ios_base::flags()`, `std::cauchy_distribution< _RealType >::param()`, and `std::skipws()`.

2.55 Bernoulli Distributions

Collaboration diagram for Bernoulli Distributions:

Classes

- class [std::bernoulli_distribution](#)
A Bernoulli random number distribution.
- class [std::binomial_distribution< _IntType >](#)
A discrete binomial random number distribution.
- class [std::geometric_distribution< _IntType >](#)
A discrete geometric random number distribution.
- class [std::negative_binomial_distribution< _IntType >](#)
A [negative_binomial_distribution](#) random number distribution.

Functions

- `bool std::operator!= (const std::bernoulli_distribution &__d1, const std::bernoulli_distribution &__d2)`
- `template<typename _IntType >
bool std::operator!= (const std::binomial_distribution< _IntType > &__d1,
const std::binomial_distribution< _IntType > &__d2)`

- `template<typename _IntType >`
`bool std::operator!= (const std::negative_binomial_distribution< _IntType >`
`&__d1, const std::negative_binomial_distribution< _IntType > &__d2)`
- `template<typename _IntType >`
`bool std::operator!= (const std::geometric_distribution< _IntType > &__d1,`
`const std::geometric_distribution< _IntType > &__d2)`
- `template<typename _IntType, typename _CharT, typename _Traits >`
`std::basic_ostream< _CharT, _Traits > & std::operator<< (std::basic_-`
`ostream< _CharT, _Traits > &, const std::geometric_distribution< _IntType >`
`&)`
- `template<typename _CharT, typename _Traits >`
`std::basic_ostream< _CharT, _Traits > & std::operator<< (std::basic_-`
`ostream< _CharT, _Traits > &, const std::bernoulli_distribution &)`
- `bool std::operator== (const std::bernoulli_distribution &__d1, const`
`std::bernoulli_distribution &__d2)`
- `template<typename _IntType >`
`bool std::operator== (const std::geometric_distribution< _IntType > &__d1,`
`const std::geometric_distribution< _IntType > &__d2)`
- `template<typename _IntType, typename _CharT, typename _Traits >`
`std::basic_istream< _CharT, _Traits > & std::operator>> (std::basic_istream<`
`_CharT, _Traits > &, std::geometric_distribution< _IntType > &)`
- `template<typename _CharT, typename _Traits >`
`std::basic_istream< _CharT, _Traits > & std::operator>> (std::basic_istream<`
`_CharT, _Traits > &__is, std::bernoulli_distribution &__x)`

2.55.1 Function Documentation

2.55.1.1 `bool std::operator!= (const std::bernoulli_distribution & __d1, const
std::bernoulli_distribution & __d2) [inline]`

Return true if two Bernoulli distributions have different parameters.

Definition at line 3346 of file random.h.

2.55.1.2 `template<typename _IntType > bool std::operator!= (const
std::binomial_distribution< _IntType > & __d1, const
std::binomial_distribution< _IntType > & __d2) [inline]`

Return true if two binomial distributions are different.

Definition at line 3583 of file random.h.

2.55.1.3 `template<typename _IntType > bool std::operator!=(const
std::negative_binomial_distribution< _IntType > & __d1, const
std::negative_binomial_distribution< _IntType > & __d2)
[inline]`

Return true if two negative binomial distributions are different.

Definition at line 3929 of file random.h.

2.55.1.4 `template<typename _IntType > bool std::operator!=(const
std::geometric_distribution< _IntType > & __d1, const
std::geometric_distribution< _IntType > & __d2) [inline]`

Return true if two geometric distributions have different parameters.

Definition at line 3725 of file random.h.

2.55.1.5 `template<typename _IntType , typename _CharT , typename _Traits
> std::basic_ostream< _CharT, _Traits > & std::operator<<
(std::basic_ostream< _CharT, _Traits > & __os, const
std::geometric_distribution< _IntType > & __x)`

Inserts a `geometric_distribution` random number distribution `__x` into the output stream `__os`.

Parameters

`__os` An output stream.

`__x` A `geometric_distribution` random number distribution.

Returns

The output stream with the state of `__x` inserted or in an error state.

Definition at line 1037 of file random.tcc.

References `std::left()`, and `std::scientific()`.

2.55.1.6 `template<typename _CharT, typename _Traits >
 std::basic_ostream< _CharT, _Traits > & std::operator<<
 (std::basic_ostream< _CharT, _Traits > & __os, const
 std::bernoulli_distribution & __x)`

Inserts a `bernoulli_distribution` random number distribution `__x` into the output stream `__os`.

Parameters

`__os` An output stream.
`__x` A `bernoulli_distribution` random number distribution.

Returns

The output stream with the state of `__x` inserted or in an error state.

Definition at line 987 of file `random.tcc`.

References `std::ios_base::flags()`, `std::left()`, and `std::scientific()`.

2.55.1.7 `bool std::operator==(const std::bernoulli_distribution & __d1,
 const std::bernoulli_distribution & __d2) [inline]`

Return true if two Bernoulli distributions have the same parameters.

Definition at line 3337 of file `random.h`.

References `std::bernoulli_distribution::param()`.

2.55.1.8 `template<typename _IntType > bool std::operator==(const
 std::geometric_distribution< _IntType > & __d1, const
 std::geometric_distribution< _IntType > & __d2) [inline]`

Return true if two geometric distributions have the same parameters.

Definition at line 3715 of file `random.h`.

References `std::geometric_distribution< _IntType >::param()`.

2.55.1.9 `template<typename _IntType , typename _CharT , typename
_Traits > std::basic_istream< _CharT, _Traits > &
std::operator>> (std::basic_istream< _CharT, _Traits > & __is,
std::geometric_distribution< _IntType > & __x)`

Extracts a `geometric_distribution` random number distribution `__x` from the input stream `__is`.

Parameters

`__is` An input stream.

`__x` A `geometric_distribution` random number generator engine.

Returns

The input stream with `__x` extracted or in an error state.

Definition at line 1061 of file `random.tcc`.

References `std::ios_base::flags()`, `std::geometric_distribution< _IntType >::param()`, and `std::skipws()`.

2.55.1.10 `template<typename _CharT , typename _Traits >
std::basic_istream< _CharT, _Traits> & std::operator>>
(std::basic_istream< _CharT, _Traits > & __is,
std::bernoulli_distribution & __x)`

Extracts a `bernoulli_distribution` random number distribution `__x` from the input stream `__is`.

Parameters

`__is` An input stream.

`__x` A `bernoulli_distribution` random number generator engine.

Returns

The input stream with `__x` extracted or in an error state.

Definition at line 3376 of file `random.h`.

References `std::bernoulli_distribution::param()`.

2.56 Poisson Distributions

Collaboration diagram for Poisson Distributions:

Classes

- class `std::discrete_distribution< _IntType >`
A *discrete_distribution* random number distribution.
- class `std::exponential_distribution< _RealType >`
An *exponential continuous distribution* for random numbers.
- class `std::extreme_value_distribution< _RealType >`
A *extreme_value_distribution* random number distribution.
- class `std::piecewise_constant_distribution< _RealType >`
A *piecewise_constant_distribution* random number distribution.
- class `std::piecewise_linear_distribution< _RealType >`
A *piecewise_linear_distribution* random number distribution.
- class `std::poisson_distribution< _IntType >`
A *discrete Poisson* random number distribution.
- class `std::weibull_distribution< _RealType >`
A *weibull_distribution* random number distribution.

Functions

- template<typename _IntType >
bool `std::operator!=` (const `std::poisson_distribution< _IntType >` &__d1, const `std::poisson_distribution< _IntType >` &__d2)

2.56.1 Function Documentation

2.56.1.1 `template<typename _IntType > bool std::operator!= (const`
`std::poisson_distribution< _IntType > & __d1, const`
`std::poisson_distribution< _IntType > & __d2) [inline]`

Return true if two Poisson distributions are different.

Definition at line 4117 of file random.h.

2.56.1.2 `template<typename _RealType > bool std::operator!= (const`
`std::extreme_value_distribution< _RealType > & __d1, const`
`std::extreme_value_distribution< _RealType > & __d2) [inline]`

Return true if two extreme value distributions have different parameters.

Definition at line 4617 of file random.h.

2.56.1.3 `template<typename _RealType > bool std::operator!= (const`
`std::piecewise_constant_distribution< _RealType > & __d1, const`
`std::piecewise_constant_distribution< _RealType > & __d2)`
`[inline]`

Return true if two piecewise constant distributions have different parameters.

Definition at line 5088 of file random.h.

2.56.1.4 `template<typename _RealType > bool std::operator!= (const
std::piecewise_linear_distribution< _RealType > & __d1, const
std::piecewise_linear_distribution< _RealType > & __d2)
[inline]`

Return true if two piecewise linear distributions have different parameters.

Definition at line 5330 of file random.h.

2.56.1.5 `template<typename _RealType > bool std::operator!= (const
std::exponential_distribution< _RealType > & __d1, const
std::exponential_distribution< _RealType > & __d2) [inline]`

Return true if two exponential distributions have different parameters.

Definition at line 4267 of file random.h.

2.56.1.6 `template<typename _RealType > bool std::operator!= (const
std::weibull_distribution< _RealType > & __d1, const
std::weibull_distribution< _RealType > & __d2) [inline]`

Return true if two Weibull distributions have different parameters.

Definition at line 4442 of file random.h.

2.56.1.7 `template<typename _IntType > bool std::operator!= (const
std::discrete_distribution< _IntType > & __d1, const
std::discrete_distribution< _IntType > & __d2) [inline]`

Return true if two discrete distributions have different parameters.

Definition at line 4849 of file random.h.

2.56.1.8 `template<typename _RealType , typename _CharT , typename _Traits
> std::basic_ostream< _CharT, _Traits > & std::operator<<
(std::basic_ostream< _CharT, _Traits > & __os, const
std::weibull_distribution< _RealType > & __x)`

Inserts a `weibull_distribution` random number distribution `__x` into the output stream `__os`.

Parameters

`__os` An output stream.
`__x` A `weibull_distribution` random number distribution.

Returns

The output stream with the state of `__x` inserted or in an error state.

Definition at line 2117 of file `random.tcc`.

References `std::left()`, and `std::scientific()`.

2.56.1.9 `template<typename _RealType , typename _CharT , typename _Traits
> std::basic_ostream< _CharT, _Traits > & std::operator<<
(std::basic_ostream< _CharT, _Traits > & __os, const
std::exponential_distribution< _RealType > & __x)`

Inserts a `exponential_distribution` random number distribution `__x` into the output stream `__os`.

Parameters

`__os` An output stream.
`__x` A `exponential_distribution` random number distribution.

Returns

The output stream with the state of `__x` inserted or in an error state.

Definition at line 1597 of file `random.tcc`.

References `std::ios_base::flags()`, `std::left()`, and `std::scientific()`.

2.56.1.10 `template<typename _RealType , typename _CharT , typename
_Traits > std::basic_ostream< _CharT, _Traits > & std::operator<<
(std::basic_ostream< _CharT, _Traits > & __os, const
std::extreme_value_distribution< _RealType > & __x)`

Inserts a `extreme_value_distribution` random number distribution `__x` into the output stream `__os`.

Parameters

- `__os` An output stream.
- `__x` A `extreme_value_distribution` random number distribution.

Returns

The output stream with the state of `__x` inserted or in an error state.

Definition at line 2174 of file `random.tcc`.

References `std::left()`, and `std::scientific()`.

2.56.1.11 `template<typename _RealType > bool std::operator==(const
std::exponential_distribution< _RealType > & __d1, const
std::exponential_distribution< _RealType > & __d2) [inline]`

Return true if two exponential distributions have the same parameters.

Definition at line 4257 of file `random.h`.

References `std::exponential_distribution< _RealType >::param()`.

2.56.1.12 `template<typename _RealType > bool std::operator==(const
std::piecewise_constant_distribution< _RealType > & __d1, const
std::piecewise_constant_distribution< _RealType > & __d2)
[inline]`

Return true if two piecewise constant distributions have the same parameters.

Definition at line 5078 of file `random.h`.

References `std::piecewise_constant_distribution< _RealType >::param()`.

2.56.1.13 `template<typename _RealType > bool std::operator==(const
std::piecewise_linear_distribution< _RealType > & __d1, const
std::piecewise_linear_distribution< _RealType > & __d2)
[inline]`

Return true if two piecewise linear distributions have the same parameters.

Definition at line 5320 of file `random.h`.

References `std::piecewise_linear_distribution< _RealType >::param()`.

2.56.1.14 `template<typename _IntType > bool std::operator==(const
std::discrete_distribution< _IntType > & __d1, const
std::discrete_distribution< _IntType > & __d2) [inline]`

Return true if two discrete distributions have the same parameters.

Definition at line 4839 of file random.h.

References `std::discrete_distribution< _IntType >::param()`.

2.56.1.15 `template<typename _RealType > bool std::operator==(const
std::extreme_value_distribution< _RealType > & __d1, const
std::extreme_value_distribution< _RealType > & __d2)
[inline]`

Return true if two extreme value distributions have the same parameters.

Definition at line 4607 of file random.h.

References `std::extreme_value_distribution< _RealType >::param()`.

2.56.1.16 `template<typename _RealType > bool std::operator==((const
std::weibull_distribution< _RealType > & __d1, const
std::weibull_distribution< _RealType > & __d2) [inline]`

Return true if two Weibull distributions have the same parameters.

Definition at line 4432 of file random.h.

References `std::weibull_distribution< _RealType >::param()`.

2.56.1.17 `template<typename _RealType , typename _CharT ,
typename _Traits > std::basic_istream< _CharT, _Traits > &
std::operator>> (std::basic_istream< _CharT, _Traits > & __is,
std::exponential_distribution< _RealType > & __x)`

Extracts a `exponential_distribution` random number distribution `__x` from the input stream `__is`.

Parameters

`__is` An input stream.

`__x` A exponential_distribution random number generator engine.

Returns

The input stream with `__x` extracted or in an error state.

Definition at line 1620 of file random.tcc.

References `std::dec()`, `std::ios_base::flags()`, `std::exponential_distribution<_RealType>::param()`, and `std::skipws()`.

2.56.1.18 `template<typename _RealType , typename _CharT ,
typename _Traits > std::basic_istream< _CharT, _Traits > &
std::operator>> (std::basic_istream< _CharT, _Traits > & __is,
std::weibull_distribution< _RealType > & __x)`

Extracts a weibull_distribution random number distribution `__x` from the input stream `__is`.

Parameters

`__is` An input stream.

`__x` A weibull_distribution random number generator engine.

Returns

The input stream with `__x` extracted or in an error state.

Definition at line 2141 of file random.tcc.

References `std::dec()`, `std::ios_base::flags()`, `std::weibull_distribution<_RealType>::param()`, and `std::skipws()`.

2.56.1.19 `template<typename _RealType , typename _CharT ,
typename _Traits > std::basic_istream< _CharT, _Traits > &
std::operator>> (std::basic_istream< _CharT, _Traits > & __is,
std::extreme_value_distribution< _RealType > & __x)`

Extracts a extreme_value_distribution random number distribution `__x` from the input stream `__is`.

Parameters

`__is` An input stream.

`__x` A `extreme_value_distribution` random number generator engine.

Returns

The input stream with `__x` extracted or in an error state.

Definition at line 2198 of file `random.tcc`.

References `std::dec()`, `std::ios_base::flags()`, `std::extreme_value_distribution< _RealType >::param()`, and `std::skipws()`.

2.57 Random Number Utilities

Collaboration diagram for Random Number Utilities:

Classes

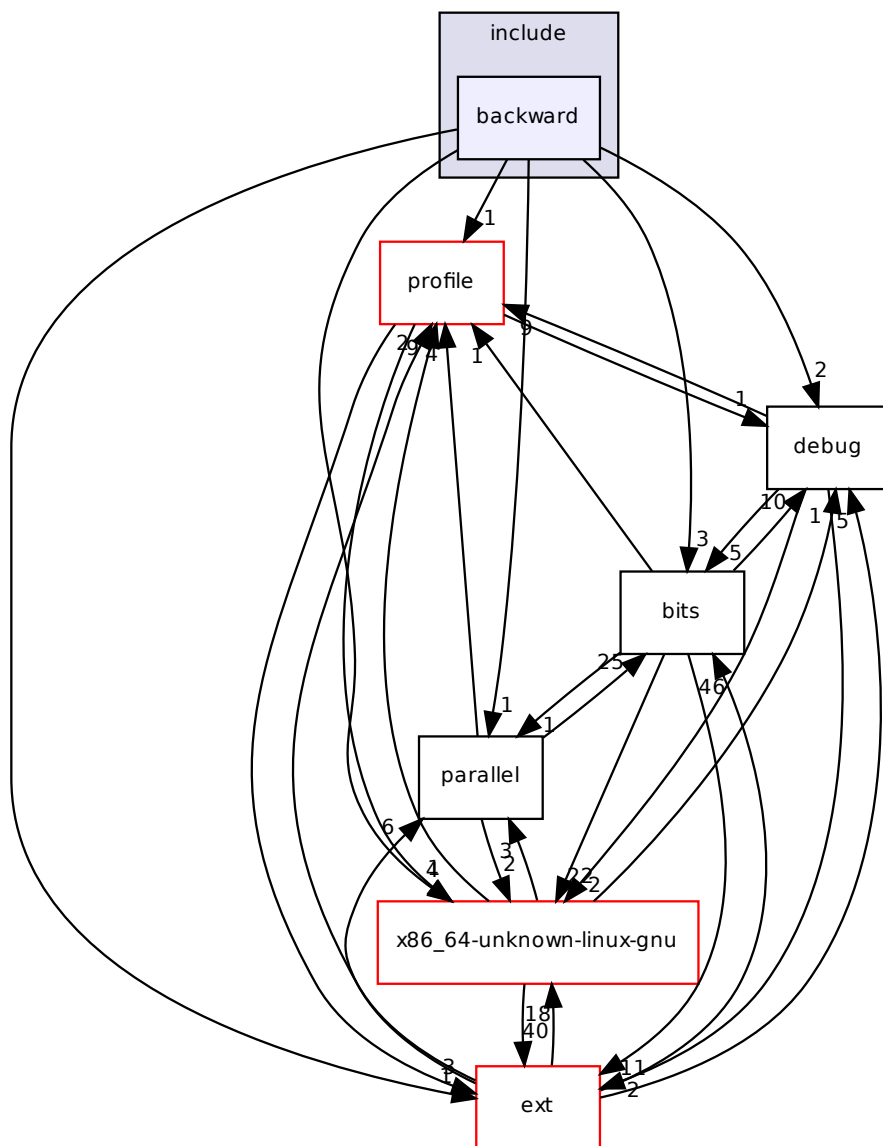

- class [std::seed_seq](#)

The [seed_seq](#) class generates sequences of seeds for random number generators.

4 Namespace Documentation

GNU extensions for public use.

Namespaces

- namespace [__detail](#)
- namespace [typelist](#)

Classes

- struct [__common_pool_policy](#)
Policy for shared __pool objects.
- class [__mt_alloc](#)
This is a fixed size (power of 2) allocator which - when compiled with thread support - will maintain one freelist per size per thread plus a global one. Steps are taken to limit the per thread freelist sizes (by returning excess back to the global list). Further details: <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt12ch32.html>.
- class [__mt_alloc_base](#)
Base class for _Tp dependent member functions.
- struct [__per_type_pool_policy](#)
Policy for individual __pool objects.
- class [__pool< false >](#)
Specialization for single thread.
- class [__pool< true >](#)
Specialization for thread enabled, via gthreads.h.
- class [__pool_alloc](#)
Allocator using a memory pool with a single lock.
- class [__pool_alloc_base](#)
Base class for __pool_alloc.
- struct [__pool_base](#)
Base class for pool object.
- class [__rc_string_base](#)
- class [__scoped_lock](#)
Scoped lock idiom.
- class [__versa_string](#)

Template class `__versa_string`.

Data structure managing sequences of characters and character-like objects.

- struct `_Caster`
- struct `_Char_types`

Mapping from character type to associated types.

- class `_ExtPtr_allocator`

An example allocator which uses a non-standard pointer type.

This allocator specifies that containers use a 'relative pointer' as it's pointer type. (See [ext/pointer.h](#)) Memory allocation in this example is still performed using `std::allocator`.

- struct `_Invalid_type`
- class `_Pointer_adapter`
- class `_Relative_pointer_impl`

A storage policy for use with `_Pointer_adapter<>` which stores the pointer's address as an offset value which is relative to its own address.

- class `_Relative_pointer_impl< const_Tp >`
- class `_Std_pointer_impl`

A storage policy for use with `_Pointer_adapter<>` which yields a standard pointer.

- struct `_Unqualified_type`
- struct `annotate_base`

Base class for checking address and label information about allocations. Create a [std::map](#) between the allocated address (`void*`) and a datum for annotations, which are a pair of numbers corresponding to label and allocated size.

- class `array_allocator`

An allocator that uses previously allocated memory. This memory can be externally, globally, or otherwise allocated.

- class `array_allocator_base`

Base class.

- class `binary_compose`

An *SGI extension*.

- class `bitmap_allocator`

Bitmap Allocator, primary template.

- struct `char_traits`

Base class used to implement `std::char_traits`.

- struct `character`
A POD class that serves as a character abstraction class.
- struct `condition_base`
Base struct for condition policy.
- struct `constant_binary_fun`
An SGI extension .
- struct `constant_unary_fun`
An SGI extension .
- struct `constant_void_fun`
An SGI extension .
- class `debug_allocator`
*A meta-allocator with debugging bits, as per [20.4].
This is precisely the allocator defined in the C++ Standard.*
 - all allocation calls operator new
 - all deallocation calls operator delete.
- class `enc_filebuf`
class `enc_filebuf`.
- struct `encoding_char_traits`
`encoding_char_traits`
- class `encoding_state`
Extension to use iconv for dealing with character encodings.
- struct `forced_error`
Thrown by exception safety machinery.
- class `free_list`
The free list class for managing chunks of memory to be given to and returned by the `bitmap_allocator`.
- class `hash_map`
- class `hash_multimap`
- class `hash_multiset`
- class `hash_set`
- struct `limit_condition`

Base class for incremental control and throw.

- class `malloc_allocator`

An allocator that uses malloc.

This is precisely the allocator defined in the C++ Standard.

- all allocation calls `malloc`
- all deallocation calls `free`.

- class `new_allocator`

An allocator that uses global new, as per [20.4].

This is precisely the allocator defined in the C++ Standard.

- all allocation calls operator `new`
- all deallocation calls operator `delete`.

- struct `project1st`

An SGI extension .

- struct `project2nd`

An SGI extension .

- struct `random_condition`

Base class for random probability control and throw.

- struct `rb_tree`

- class `recursive_init_error`

Exception thrown by `__cxa_guard_acquire`.

6.7[smt.dcl]/4: If control re-enters the declaration (recursively) while the object is being initialized, the behavior is undefined.

- class `rope`

- struct `select1st`

An SGI extension .

- struct `select2nd`

An SGI extension .

- class `slist`

- class `stdio_filebuf`

Provides a layer of compatibility for C/POSIX.

This GNU extension provides extensions for working with standard C `FILE`'s and POSIX file descriptors. It must be instantiated by the user with the type of character used in the file stream, e.g., `stdio_filebuf<char>`.*

- class `stdio_sync_filebuf`
*Provides a layer of compatibility for C.
This GNU extension provides extensions for working with standard C FILE*'s. It must be instantiated by the user with the type of character used in the file stream, e.g., `stdio_filebuf<char>`.*
- class `subtractive_rng`
- struct `temporary_buffer`
- class `throw_allocator_base`
*Allocator class with logging and exception generation control. Intended to be used as an `allocator_type` in templated code.
Note: Deallocate not allowed to throw.*
- struct `throw_allocator_limit`
Allocator throwing via limit condition.
- struct `throw_allocator_random`
Allocator throwing via random condition.
- struct `throw_value_base`
Class with exception generation control. Intended to be used as a `value_type` in templated code.
- struct `throw_value_limit`
Type throwing via limit condition.
- struct `throw_value_random`
Type throwing via random condition.
- class `unary_compose`
An SGI extension .

Typedefs

### 4.1.1 Detailed Description

GNU extensions for public use.

### 4.1.2 Function Documentation

#### 4.1.2.1 `template<typename _ToType, typename _FromType > _ToType` `__gnu_cxx::__static_pointer_cast` ( const `_FromType` & `__arg` ) `[inline]`

Casting operations for cases where `_FromType` is not a standard pointer. `_ToType` can be a standard or non-standard pointer. Given that `_FromType` is not a pointer, it must have a `get()` method that returns the standard pointer equivalent of the address it points to, and must have an `element_type` typedef which names the type it points to.

Definition at line 68 of file `cast.h`.

**4.1.2.2** `template<typename _ToType , typename _FromType > _ToType  
__gnu_cxx::__static_pointer_cast ( _FromType * __arg ) [inline]`

Casting operations for cases where \_FromType is a standard pointer. \_ToType can be a standard or non-standard pointer.

Definition at line 96 of file cast.h.

**4.1.2.3** `size_t __gnu_cxx::_Bit_scan_forward ( size_t __num ) [inline]`

Generic Version of the bsf instruction.

Definition at line 517 of file bitmap\_allocator.h.

Referenced by \_\_gnu\_cxx::bitmap\_allocator< \_Tp >::\_M\_allocate\_single\_object().

**4.1.2.4** `template<typename _CharT , typename _Traits , typename _Alloc ,  
template< typename, typename, typename > class _Base> bool  
__gnu_cxx::operator!=( const __versa_string< _CharT, _Traits,  
_Alloc, _Base > & __lhs, const _CharT * __rhs ) [inline]`

Test difference of string and C string.

#### Parameters

*\_\_lhs* String.

*\_\_rhs* C string.

#### Returns

True if *\_\_lhs.compare(\_\_rhs) != 0*. False otherwise.

Definition at line 2247 of file vstring.h.

**4.1.2.5** `template<typename _CharT , typename _Traits , typename _Alloc ,  
template< typename, typename, typename > class _Base> bool  
__gnu_cxx::operator!=( const __versa_string< _CharT, _Traits,  
_Alloc, _Base > & __lhs, const __versa_string< _CharT, _Traits,  
_Alloc, _Base > & __rhs ) [inline]`

Test difference of two strings.

**Parameters**

`__lhs` First string.  
`__rhs` Second string.

**Returns**

True if `__lhs.compare(__rhs) != 0`. False otherwise.

Definition at line 2221 of file `vstring.h`.

```
4.1.2.6 template<typename _CharT , typename _Traits , typename _Alloc ,
template< typename, typename, typename > class _Base> bool
__gnu_cxx::operator!=(const _CharT * __lhs, const __versa_string<
_CharT, _Traits, _Alloc, _Base > & __rhs) [inline]
```

Test difference of C string and string.

**Parameters**

`__lhs` C string.  
`__rhs` String.

**Returns**

True if `__rhs.compare(__lhs) != 0`. False otherwise.

Definition at line 2234 of file `vstring.h`.

```
4.1.2.7 template<typename _CharT , typename _Traits , typename
_Alloc , template< typename, typename, typename > class
_Base> __versa_string< _CharT, _Traits, _Alloc, _Base >
__gnu_cxx::operator+ (const __versa_string< _CharT, _Traits, _Alloc,
_Base > & __lhs, const __versa_string< _CharT, _Traits, _Alloc,
_Base > & __rhs)
```

Concatenate two strings.

**Parameters**

`__lhs` First string.  
`__rhs` Last string.

**Returns**

New string with value of `__lhs` followed by `__rhs`.

Definition at line 181 of file `vstring.tcc`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::append()`, `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::reserve()`, and `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::size()`.

**4.1.2.8** `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string<_CharT, _Traits, _Alloc, _Base> __gnu_cxx::operator+( const _CharT * __lhs, const __versa_string<_CharT, _Traits, _Alloc, _Base> & __rhs )`

Concatenate C string and string.

**Parameters**

`__lhs` First string.

`__rhs` Last string.

**Returns**

New string with value of `__lhs` followed by `__rhs`.

Definition at line 194 of file `vstring.tcc`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::size()`.

**4.1.2.9** `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string<_CharT, _Traits, _Alloc, _Base> __gnu_cxx::operator+( _CharT __lhs, const __versa_string<_CharT, _Traits, _Alloc, _Base> & __rhs )`

Concatenate character and string.

**Parameters**

`__lhs` First string.

`__rhs` Last string.

**Returns**

New string with `__lhs` followed by `__rhs`.

Definition at line 211 of file `vstring.tcc`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::append()`, `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::push_back()`, `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::reserve()`, and `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::size()`.

**4.1.2.10** `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string< _CharT, _Traits, _Alloc, _Base > __gnu_cxx::operator+ ( const __versa_string< _CharT, _Traits, _Alloc, _Base > & __lhs, const _CharT * __rhs )`

Concatenate string and C string.

**Parameters**

`__lhs` First string.

`__rhs` Last string.

**Returns**

New string with `__lhs` followed by `__rhs`.

Definition at line 224 of file `vstring.tcc`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::size()`.

**4.1.2.11** `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string< _CharT, _Traits, _Alloc, _Base > __gnu_cxx::operator+ ( const __versa_string< _CharT, _Traits, _Alloc, _Base > & __lhs, _CharT __rhs )`

Concatenate string and character.

**Parameters**

`__lhs` First string.

`__rhs` Last string.

### Returns

New string with `__lhs` followed by `__rhs`.

Definition at line 241 of file `vstring.tcc`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::append()`, `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::push_back()`, `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::reserve()`, and `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::size()`.

**4.1.2.12** `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> bool __gnu_cxx::operator< ( const __versa_string<_CharT, _Traits, _Alloc, _Base> & __lhs, const _CharT* __rhs ) [inline]`

Test if string precedes C string.

### Parameters

`__lhs` String.

`__rhs` C string.

### Returns

True if `__lhs` precedes `__rhs`. False otherwise.

Definition at line 2274 of file `vstring.h`.

**4.1.2.13** `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> bool __gnu_cxx::operator< ( const _CharT* __lhs, const __versa_string<_CharT, _Traits, _Alloc, _Base> & __rhs ) [inline]`

Test if C string precedes string.

### Parameters

`__lhs` C string.

`__rhs` String.

**Returns**

True if `__lhs` precedes `__rhs`. False otherwise.

Definition at line 2287 of file `vstring.h`.

References `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base>::compare()`.

**4.1.2.14** `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> bool __gnu_cxx::operator< ( const __versa_string< _CharT, _Traits, _Alloc, _Base > & __lhs, const __versa_string< _CharT, _Traits, _Alloc, _Base > & __rhs ) [inline]`

Test if string precedes string.

**Parameters**

`__lhs` First string.  
`__rhs` Second string.

**Returns**

True if `__lhs` precedes `__rhs`. False otherwise.

Definition at line 2261 of file `vstring.h`.

**4.1.2.15** `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> bool __gnu_cxx::operator<= ( const __versa_string< _CharT, _Traits, _Alloc, _Base > & __lhs, const _CharT * __rhs ) [inline]`

Test if string doesn't follow C string.

**Parameters**

`__lhs` String.  
`__rhs` C string.

**Returns**

True if `__lhs` doesn't follow `__rhs`. False otherwise.

Definition at line 2354 of file `vstring.h`.

**4.1.2.16** `template<typename _CharT, typename _Traits, typename _Alloc  
, template< typename, typename, typename > class _Base>  
bool __gnu_cxx::operator<= ( const _CharT * __lhs, const  
__versa_string< _CharT, _Traits, _Alloc, _Base > & __rhs )  
[inline]`

Test if C string doesn't follow string.

#### Parameters

`__lhs` C string.

`__rhs` String.

#### Returns

True if `__lhs` doesn't follow `__rhs`. False otherwise.

Definition at line 2367 of file `vstring.h`.

References `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base  
>::compare()`.

**4.1.2.17** `template<typename _CharT, typename _Traits, typename _Alloc  
, template< typename, typename, typename > class _Base> bool  
__gnu_cxx::operator<= ( const __versa_string< _CharT, _Traits,  
_Alloc, _Base > & __lhs, const __versa_string< _CharT, _Traits,  
_Alloc, _Base > & __rhs ) [inline]`

Test if string doesn't follow string.

#### Parameters

`__lhs` First string.

`__rhs` Second string.

#### Returns

True if `__lhs` doesn't follow `__rhs`. False otherwise.

Definition at line 2341 of file `vstring.h`.

**4.1.2.18** `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> bool  
__gnu_cxx::operator==( const __versa_string< _CharT, _Traits,  
_Alloc, _Base > & __lhs, const __versa_string< _CharT, _Traits,  
_Alloc, _Base > & __rhs ) [inline]`

Test equivalence of two strings.

#### Parameters

`__lhs` First string.  
`__rhs` Second string.

#### Returns

True if `__lhs.compare(__rhs) == 0`. False otherwise.

Definition at line 2170 of file `vstring.h`.

References `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::compare()`.

**4.1.2.19** `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> bool  
__gnu_cxx::operator==( const _CharT * __lhs, const  
__versa_string< _CharT, _Traits, _Alloc, _Base > & __rhs )  
[inline]`

Test equivalence of C string and string.

#### Parameters

`__lhs` C string.  
`__rhs` String.

#### Returns

True if `__rhs.compare(__lhs) == 0`. False otherwise.

Definition at line 2194 of file `vstring.h`.

References `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::compare()`.

**4.1.2.20** `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> bool  
__gnu_cxx::operator==( const __versa_string< _CharT, _Traits,  
_Alloc, _Base > & __lhs, const _CharT* __rhs ) [inline]`

Test equivalence of string and C string.

#### Parameters

`__lhs` String.

`__rhs` C string.

#### Returns

True if `__lhs.compare(__rhs) == 0`. False otherwise.

Definition at line 2207 of file `vstring.h`.

References `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::compare()`.

**4.1.2.21** `template<typename _Tp > bool __gnu_cxx::operator==( const  
_Pointer_adapter< _Tp > & __lhs, const _Pointer_adapter< _Tp >  
& __rhs ) [inline]`

Comparison operators for `_Pointer_adapter` defer to the base class's comparison operators, when possible.

Definition at line 533 of file `pointer.h`.

**4.1.2.22** `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> bool  
__gnu_cxx::operator>( const _CharT* __lhs, const __versa_string<  
_CharT, _Traits, _Alloc, _Base > & __rhs ) [inline]`

Test if C string follows string.

#### Parameters

`__lhs` C string.

`__rhs` String.

**Returns**

True if `__lhs` follows `__rhs`. False otherwise.

Definition at line 2327 of file `vstring.h`.

References `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base>::compare()`.

**4.1.2.23** `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> bool __gnu_cxx::operator> ( const __versa_string< _CharT, _Traits, _Alloc, _Base > & __lhs, const __versa_string< _CharT, _Traits, _Alloc, _Base > & __rhs ) [inline]`

Test if string follows string.

**Parameters**

`__lhs` First string.

`__rhs` Second string.

**Returns**

True if `__lhs` follows `__rhs`. False otherwise.

Definition at line 2301 of file `vstring.h`.

References `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base>::compare()`.

**4.1.2.24** `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> bool __gnu_cxx::operator> ( const __versa_string< _CharT, _Traits, _Alloc, _Base > & __lhs, const _CharT* __rhs ) [inline]`

Test if string follows C string.

**Parameters**

`__lhs` String.

`__rhs` C string.

**Returns**

True if `__lhs` follows `__rhs`. False otherwise.

Definition at line 2314 of file `vstring.h`.

References `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base>::compare()`.

**4.1.2.25** `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> bool  
__gnu_cxx::operator>= ( const __versa_string< _CharT, _Traits,  
_Alloc, _Base > & __lhs, const _CharT* __rhs ) [inline]`

Test if string doesn't precede C string.

**Parameters**

`__lhs` String.

`__rhs` C string.

**Returns**

True if `__lhs` doesn't precede `__rhs`. False otherwise.

Definition at line 2394 of file `vstring.h`.

References `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base>::compare()`.

**4.1.2.26** `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> bool

_Alloc, _Base > & __lhs, const __versa_string< _CharT, _Traits,  
_Alloc, _Base > & __rhs ) [inline]`

Test if string doesn't precede string.

**Parameters**

`__lhs` First string.

`__rhs` Second string.

**Returns**

True if `__lhs` doesn't precede `__rhs`. False otherwise.

Definition at line 2381 of file `vstring.h`.

References `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::compare()`.

```
4.1.2.27 template<typename _CharT , typename _Traits , typename _Alloc
, template< typename, typename, typename > class _Base>
bool __gnu_cxx::operator>= (const _CharT * __lhs, const
__versa_string< _CharT, _Traits, _Alloc, _Base > & __rhs)
[inline]
```

Test if C string doesn't precede string.

**Parameters**

`__lhs` C string.

`__rhs` String.

**Returns**

True if `__lhs` doesn't precede `__rhs`. False otherwise.

Definition at line 2407 of file `vstring.h`.

References `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::compare()`.

```
4.1.2.28 template<typename _CharT , typename _Traits , typename _Alloc
, template< typename, typename, typename > class _Base> void
__gnu_cxx::swap (__versa_string< _CharT, _Traits, _Alloc, _Base >
& __lhs, __versa_string< _CharT, _Traits, _Alloc, _Base > & __rhs
) [inline]
```

Swap contents of two strings.

**Parameters**

`__lhs` First string.

`__rhs` Second string.

Exchanges the contents of `__lhs` and `__rhs` in constant time.

Definition at line 2421 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::swap()`.

## 4.2 `__gnu_cxx::__detail` Namespace Reference

Implementation details not part of the namespace `__gnu_cxx` interface.

### Classes

- class `__mini_vector`  
*`__mini_vector<>` is a stripped down version of the full-fledged `std::vector<>`.*
- class `__Bitmap_counter`  
*The bitmap counter which acts as the bitmap manipulator, and manages the bit-manipulation functions and the searching and identification functions on the bit-map.*
- class `__Ffit_finder`  
*The class which acts as a predicate for applying the first-fit memory allocation policy for the bitmap allocator.*

### Enumerations

- enum { `_S_max_rope_depth` }
- enum { `bits_per_byte`, `bits_per_block` }
- enum `_Tag` { `_S_leaf`, `_S_concat`, `_S_substringfn`, `_S_function` }

### Functions

- void `__bit_allocate` (size\_t \* \_\_pmap, size\_t \_\_pos) throw ()
- void `__bit_free` (size\_t \* \_\_pmap, size\_t \_\_pos) throw ()
- template<typename \_ForwardIterator, typename \_Tp, typename \_Compare>  
\_ForwardIterator `__lower_bound` (\_ForwardIterator \_\_first, \_ForwardIterator \_\_last, const \_Tp & \_\_val, \_Compare \_\_comp)
- template<typename \_AddrPair>  
size\_t `__num_bitmaps` (\_AddrPair \_\_ap)
- template<typename \_AddrPair>  
size\_t `__num_blocks` (\_AddrPair \_\_ap)

### 4.2.1 Detailed Description

Implementation details not part of the namespace `__gnu_cxx` interface.

### 4.2.2 Function Documentation

**4.2.2.1** `void __gnu_cxx::__detail::__bit_allocate ( size_t * __pbmap, size_t __pos ) throw () [inline]`

Mark a memory address as allocated by re-setting the corresponding bit in the bit-map.

Definition at line 492 of file `bitmap_allocator.h`.

Referenced by `__gnu_cxx::bitmap_allocator< _Tp >::_M_allocate_single_object()`.

**4.2.2.2** `void __gnu_cxx::__detail::__bit_free ( size_t * __pbmap, size_t __pos ) throw () [inline]`

Mark a memory address as free by setting the corresponding bit in the bit-map.

Definition at line 503 of file `bitmap_allocator.h`.

Referenced by `__gnu_cxx::bitmap_allocator< _Tp >::_M_deallocate_single_object()`.

**4.2.2.3** `template<typename _AddrPair > size_t __gnu_cxx::__detail::__num_bitmaps ( _AddrPair __ap ) [inline]`

The number of Bit-maps pointed to by the address pair passed to the function.

Definition at line 280 of file `bitmap_allocator.h`.

References `__num_blocks()`.

Referenced by `__gnu_cxx::bitmap_allocator< _Tp >::_M_allocate_single_object()`, and `__gnu_cxx::bitmap_allocator< _Tp >::_M_deallocate_single_object()`.

**4.2.2.4** `template<typename _AddrPair > size_t __gnu_cxx::__detail::__num_blocks ( _AddrPair __ap )  
[inline]`

The number of Blocks pointed to by the address pair passed to the function.

Definition at line 272 of file bitmap\_allocator.h.

Referenced by \_\_num\_bitmaps().

## 4.3 \_\_gnu\_cxx::typelist Namespace Reference

GNU typelist extensions for public compile-time use.

### Functions

- `template<typename Fn , typename Typelist >  
void apply (Fn &, Typelist)`
- `template<typename Fn , typename TypelistT , typename TypelistV >  
void apply_generator (Fn &fn, TypelistT, TypelistV)`
- `template<typename Fn , typename Typelist >  
void apply_generator (Fn &fn, Typelist)`
- `template<typename Gn , typename TypelistT , typename TypelistV >  
void apply_generator (Gn &, TypelistT, TypelistV)`
- `template<typename Gn , typename Typelist >  
void apply\_generator (Gn &, Typelist)`

### 4.3.1 Detailed Description

GNU typelist extensions for public compile-time use.

### 4.3.2 Function Documentation

**4.3.2.1** `template<typename Gn , typename Typelist > void  
__gnu_cxx::typelist::apply_generator ( Gn &, Typelist )`

Apply all typelist types to generator functor.

## 4.4 \_\_gnu\_debug Namespace Reference

GNU debug classes for public use.

### Classes

- class [\\_After\\_nth\\_from](#)
- struct [\\_BeforeBeginHelper](#)
- class [\\_Equal\\_to](#)
- class [\\_Not\\_equal\\_to](#)
- class [\\_Safe\\_iterator](#)  
*Safe iterator wrapper.*
- class [\\_Safe\\_iterator\\_base](#)  
*Basic functionality for a safe iterator.*
- class [\\_Safe\\_sequence](#)  
*Base class for constructing a safe sequence type that tracks iterators that reference it.*
- class [\\_Safe\\_sequence\\_base](#)  
*Base class that supports tracking of iterators that reference a sequence.*
- class [basic\\_string](#)  
*Class `std::basic_string` with safety/checking/debug instrumentation.*

### Typedefs

- typedef [basic\\_string](#)< char > **string**
- typedef [basic\\_string](#)< wchar\_t > **wstring**

### Enumerations

- enum **\_Debug\_msg\_id** {  
    \_\_msg\_valid\_range, \_\_msg\_insert\_singular, \_\_msg\_insert\_different, \_\_-  
    msg\_erase\_bad,  
    \_\_msg\_erase\_different, \_\_msg\_subscript\_oob, \_\_msg\_empty, \_\_msg\_-  
    unpartitioned,  
    \_\_msg\_unpartitioned\_pred, \_\_msg\_unsorted, \_\_msg\_unsorted\_pred, \_\_-  
    msg\_not\_heap,

```

__msg_not_heap_pred, __msg_bad_bitset_write, __msg_bad_bitset_read,
__msg_bad_bitset_flip,
__msg_self_splice, __msg_splice_alloc, __msg_splice_bad, __msg_splice_
other,
__msg_splice_overlap, __msg_init_singular, __msg_init_copy_singular, __
msg_init_const_singular,
__msg_copy_singular, __msg_bad_deref, __msg_bad_inc, __msg_bad_dec,
__msg_iter_subscript_oob, __msg_advance_oob, __msg_retreat_oob, __
msg_iter_compare_bad,
__msg_compare_different, __msg_iter_order_bad, __msg_order_different,
__msg_distance_bad,
__msg_distance_different, __msg_deref_istream, __msg_inc_istream, __
msg_output_ostream,
__msg_deref_istreambuf, __msg_inc_istreambuf, __msg_insert_after_end,
__msg_erase_after_bad,
__msg_valid_range2 }

```

## Functions

- `template<typename _Iterator >`  
`_Siter_base< _Iterator >::iterator_type __base ( _Iterator __it)`
- `template<typename _Iterator >`

#### 4.4.1 Detailed Description

GNU debug classes for public use.

#### 4.4.2 Function Documentation

##### 4.4.2.1 `template<typename _Iterator > _Siter_base<_Iterator>::iterator_type` `__gnu_debug::__base ( _Iterator __it ) [inline]`

Helper function to extract base iterator of random access safe iterator in order to reduce performance impact of debug mode. Limited to random access iterator because it is the only category for which it is possible to check for correct iterators order in the `__valid_range` function thanks to the `<` operator.

Definition at line 683 of file `safe_iterator.h`.

Referenced by `std::internal()`.

**4.4.2.2** `template<typename _Iterator > bool __gnu_debug::__check_dereferenceable ( _Iterator & )  
[inline]`

Assume that some arbitrary iterator is dereferenceable, because we can't prove that it isn't.

Definition at line 70 of file functions.h.

**4.4.2.3** `template<typename _Tp > bool __gnu_debug::__check_dereferenceable ( const _Tp * __ptr )  
[inline]`

Non-NULL pointers are dereferenceable.

Definition at line 76 of file functions.h.

**4.4.2.4** `template<typename _Iterator , typename _Sequence > bool  
__gnu_debug::__check_dereferenceable ( const _Safe_iterator<  
_Iterator, _Sequence > & __x ) [inline]`

Safe iterators know if they are singular.

Definition at line 82 of file functions.h.

References `__gnu_debug::_Safe_iterator< _Iterator, _Sequence >::_M_dereferenceable()`.

**4.4.2.5** `template<typename _Iterator , typename _Sequence > bool  
__gnu_debug::__check_singular ( const _Safe_iterator< _Iterator,  
_Sequence > & __x ) [inline]`

Safe iterators know if they are singular.

Definition at line 63 of file functions.h.

References `__gnu_debug::_Safe_iterator_base::_M_singular()`.

**4.4.2.6** `template<typename _Tp > bool __gnu_debug::__check_singular ( const _Tp * __ptr ) [inline]`

Non-NULL pointers are nonsingular.

Definition at line 57 of file functions.h.

**4.4.2.7** `bool __gnu_debug::__check_singular_aux ( const _Safe_iterator_base *  
__x ) [inline]`

Iterators that derive from `_Safe_iterator_base` but that aren't `_Safe_iterators` can be determined singular or non-singular via `_Safe_iterator_base`.

Definition at line 62 of file `safe_iterator.h`.

References `__gnu_debug::_Safe_iterator_base::M_singular()`.

**4.4.2.8** `template<typename _CharT > const _CharT*  
__gnu_debug::__check_string ( const _CharT * __s ) [inline]`

Checks that `__s` is non-NULL and then returns `__s`.

Definition at line 176 of file `functions.h`.

**4.4.2.9** `template<typename _CharT , typename _Integer > const _CharT*  
__gnu_debug::__check_string ( const _CharT * __s, const _Integer  
&__n __attribute__((unused)) ) [inline]`

Checks that `__s` is non-NULL or `__n == 0`, and then returns `__s`.

Definition at line 164 of file `functions.h`.

**4.4.2.10** `template<typename _InputIterator > bool __gnu_debug::__valid_  
range ( const _InputIterator & __first, const _InputIterator & __last  
) [inline]`

Don't know what these iterators are, or if they are even iterators (we may get an integral type for `InputIterator`), so see if they are integral and pass them on to the next phase otherwise.

Definition at line 134 of file `functions.h`.

References `__valid_range_aux()`.

**4.4.2.11** `template<typename _Iterator , typename _Sequence > bool  
__gnu_debug::__valid_range ( const _Safe_iterator< _Iterator,  
_Sequence > & __first, const _Safe_iterator< _Iterator, _Sequence >  
& __last ) [inline]`

Safe iterators know how to check if they form a valid range.

Definition at line 143 of file `functions.h`.

**4.4.2.12** `template<typename _Integral > bool __gnu_debug::__valid_range_ -  
aux ( const _Integral &, const _Integral &, std::__true_type )  
[inline]`

We say that integral types for a valid range, and defer to other routines to realize what to do with integral types instead of iterators.

Definition at line 111 of file functions.h.

Referenced by \_\_valid\_range().

**4.4.2.13** `template<typename _InputIterator > bool __gnu_debug::__valid_ -  
range_aux ( const _InputIterator & __first, const _InputIterator &  
__last, std::__false_type ) [inline]`

We have iterators, so figure out what kind of iterators that are to see if we can check the range ahead of time.

Definition at line 119 of file functions.h.

References \_\_valid\_range\_aux2().

**4.4.2.14** `template<typename _InputIterator > bool __gnu_debug::__valid_ -  
range_aux2 ( const _InputIterator &, const _InputIterator & ,  
std::input_iterator_tag ) [inline]`

Can't test for a valid range with input iterators, because iteration may be destructive. So we just assume that the range is valid.

Definition at line 101 of file functions.h.

**4.4.2.15** `template<typename _RandomAccessIterator > bool  
__gnu_debug::__valid_range_aux2 ( const _RandomAccessIterator  
& __first, const _RandomAccessIterator & __last,  
std::random_access_iterator_tag ) [inline]`

If the distance between two random access iterators is nonnegative, assume the range is valid.

Definition at line 90 of file functions.h.

Referenced by \_\_valid\_range\_aux().

## 4.5 `__gnu_internal` Namespace Reference

GNU implementation details, not for public use or export. Used only when anonymous namespaces cannot be substituted.

### 4.5.1 Detailed Description

GNU implementation details, not for public use or export. Used only when anonymous namespaces cannot be substituted.

## 4.6 `__gnu_parallel` Namespace Reference

GNU parallel code for public use.

### Classes

- struct `__accumulate_binop_reduct`  
*General reduction, using a binary operator.*
- struct `__accumulate_selector`  
*`std::accumulate()` selector.*
- struct `__adjacent_difference_selector`  
*Selector that returns the difference between two adjacent `__elements`.*
- struct `__adjacent_find_selector`  
*Test predicate on two adjacent elements.*
- class `__binder1st`  
*Similar to `std::binder1st`, but giving the argument types explicitly.*
- class `__binder2nd`  
*Similar to `std::binder2nd`, but giving the argument types explicitly.*
- struct `__count_if_selector`  
*`std::count_if()` selector.*
- struct `__count_selector`  
*`std::count()` selector.*
- struct `__fill_selector`

*std::fill() selector.*

- struct `__find_first_of_selector`  
*Test predicate on several elements.*
- struct `__find_if_selector`  
*Test predicate on a single element, used for std::find() and std::find\_if().*
- struct `__for_each_selector`  
*std::for\_each() selector.*
- struct `__generate_selector`  
*std::generate() selector.*
- struct `__generic_find_selector`  
*Base class of all \_\_gnu\_parallel::\_\_find\_template selectors.*
- struct `__generic_for_each_selector`  
*Generic \_\_selector for embarrassingly parallel functions.*
- struct `__identity_selector`  
*Selector that just returns the passed iterator.*
- struct `__inner_product_selector`  
*std::inner\_product() selector.*
- struct `__max_element_reduct`  
*Reduction for finding the maximum element, using a comparator.*
- struct `__min_element_reduct`  
*Reduction for finding the maximum element, using a comparator.*
- struct `__mismatch_selector`  
*Test inverted predicate on a single element.*
- struct `__multiway_merge_3_variant_sentinel_switch`  
*Switch for 3-way merging with \_\_sentinels turned off.*
- struct `__multiway_merge_3_variant_sentinel_switch< true, _RAIterIterator, _RAIter3, _DifferenceTp, _Compare >`  
*Switch for 3-way merging with \_\_sentinels turned on.*
- struct `__multiway_merge_4_variant_sentinel_switch`

*Switch for 4-way merging with `__sentinels` turned off.*

- struct `__multiway_merge_4_variant_sentinel_switch`< `true`, `_RAIterIterator`, `_RAIter3`, `_DifferenceTp`, `_Compare` >

*Switch for 4-way merging with `__sentinels` turned on.*

- struct `__multiway_merge_k_variant_sentinel_switch`

*Switch for k-way merging with `__sentinels` turned on.*

- struct `__multiway_merge_k_variant_sentinel_switch`< `false`, `__stable`, `_RAIterIterator`, `_RAIter3`, `_DifferenceTp`, `_Compare` >

*Switch for k-way merging with `__sentinels` turned off.*

- struct `__replace_if_selector`

*`std::replace()` selector.*

- struct `__replace_selector`

*`std::replace()` selector.*

- struct `__transform1_selector`

*`std::transform()` `__selector`; one input sequence variant.*

- struct `__transform2_selector`

*`std::transform()` `__selector`; two input sequences variant.*

- class `__unary_negate`

*Similar to `std::unary_negate`, but giving the argument types explicitly.*

- struct `_DRandomShufflingGlobalData`

*Data known to every thread participating in `__gnu_parallel::__parallel_random_shuffle()`.*

- struct `_DRSSorterPU`

*Local data for a thread participating in `__gnu_parallel::__parallel_random_shuffle()`.*

- struct `_DummyReduct`

*Reduction function doing nothing.*

- class `_EqualFromLess`

*Constructs predicate for equality from strict weak ordering predicate.*

- struct `_EqualTo`

Similar to `std::equal_to`, but allows two different types.

- class `_GuardedIterator`  
*\_Iterator wrapper supporting an implicit supremum at the end of the sequence, dominating all comparisons.*
- class `_IteratorPair`  
*A pair of iterators. The usual iterator operations are applied to both child iterators.*
- class `_IteratorTriple`  
*A triple of iterators. The usual iterator operations are applied to all three child iterators.*
- struct `_Job`  
*One \_\_job for a certain thread.*
- struct `_Less`  
*Similar to `std::less`, but allows two different types.*
- class `_Lexicographic`  
*Compare \_\_a pair of types lexicographically, ascending.*
- class `_LexicographicReverse`  
*Compare \_\_a pair of types lexicographically, descending.*
- class `_LoserTree`  
*Stable `_LoserTree` variant.*
- class `_LoserTree< false, _Tp, _Compare >`  
*Unstable `_LoserTree` variant.*
- class `_LoserTreeBase`  
*Guarded loser/tournament tree.*
- class `_LoserTreePointer`  
*Stable `_LoserTree` implementation.*
- class `_LoserTreePointer< false, _Tp, _Compare >`  
*Unstable `_LoserTree` implementation.*
- class `_LoserTreePointerBase`  
*Base class of `_LoserTree` implementation using pointers.*

- class `_LoserTreePointerUnguarded`  
*Stable unguarded `_LoserTree` variant storing pointers.*
- class `_LoserTreePointerUnguarded< false, _Tp, _Compare >`  
*Unstable unguarded `_LoserTree` variant storing pointers.*
- class `_LoserTreePointerUnguardedBase`  
*Unguarded loser tree, keeping only pointers to the elements in the tree structure.*
- struct `_LoserTreeTraits`  
*Traits for determining whether the loser tree should use pointers or copies.*
- class `_LoserTreeUnguarded`  
*Stable implementation of unguarded `_LoserTree`.*
- class `_LoserTreeUnguarded< false, _Tp, _Compare >`  
*Non-Stable implementation of unguarded `_LoserTree`.*
- class `_LoserTreeUnguardedBase`  
*Base class for unguarded `_LoserTree` implementation.*
- struct `_Multiplies`  
*Similar to `std::multiplies`, but allows two different types.*
- struct `_Nothing`  
*Functor doing nothing.*
- struct `_Piece`  
*Subsequence description.*
- struct `_Plus`  
*Similar to `std::plus`, but allows two different types.*
- struct `_PMWMSortingData`  
*Data accessed by all threads.*
- class `_PseudoSequence`  
*Sequence that conceptually consists of multiple copies of the same element. The copies are not stored explicitly, of course.*
- class `_PseudoSequenceIterator`  
*Iterator associated with `__gnu_parallel::_PseudoSequence`. If features the usual random-access iterator functionality.*

- struct [\\_QSBThreadLocal](#)  
*Information local to one thread in the parallel quicksort run.*
- class [\\_RandomNumber](#)  
*Random number generator, based on the Mersenne twister.*
- class [\\_RestrictedBoundedConcurrentQueue](#)  
*Double-ended queue of bounded size, allowing lock-free atomic access. [push\\_front\(\)](#) and [pop\\_front\(\)](#) must not be called concurrently to each other, while [pop\\_back\(\)](#) can be called concurrently at all times. [empty\(\)](#), [size\(\)](#), and [top\(\)](#) are intentionally not provided. Calling them would not make sense in a concurrent setting.*
- struct [\\_SamplingSorter](#)  
*Stable sorting functor.*
- struct [\\_SamplingSorter< false, \\_RAIter, \\_StrictWeakOrdering >](#)  
*Non-\_\_stable sorting functor.*
- struct [\\_Settings](#)  
*class [\\_Settings](#) /// Run-time settings for the parallel mode including all tunable parameters.*
- struct [\\_SplitConsistently](#)  
*Split consistently.*
- struct [\\_SplitConsistently< false, \\_RAIter, \\_Compare, \\_SortingPlacesIterator >](#)  
*Split by sampling.*
- struct [\\_SplitConsistently< true, \\_RAIter, \\_Compare, \\_SortingPlacesIterator >](#)  
*Split by exact splitting.*
- struct [balanced\\_quicksort\\_tag](#)  
*Forces parallel sorting using balanced quicksort at compile time.*
- struct [balanced\\_tag](#)  
*Recommends parallel execution using dynamic load-balancing at compile time.*
- struct [constant\\_size\\_blocks\\_tag](#)  
*Selects the constant block size variant for `std::find()`.*
- struct [default\\_parallel\\_tag](#)

*Recommends parallel execution using the default parallel algorithm.*

- struct [equal\\_split\\_tag](#)  
*Selects the equal splitting variant for `std::find()`.*
- struct [exact\\_tag](#)  
*Forces parallel merging with exact splitting, at compile time.*
- struct [find\\_tag](#)  
*Base class for `std::find()` variants.*
- struct [growing\\_blocks\\_tag](#)  
*Selects the growing block size variant for `std::find()`.*
- struct [multiway\\_mergesort\\_exact\\_tag](#)  
*Forces parallel sorting using multiway mergesort with exact splitting at compile time.*
- struct [multiway\\_mergesort\\_sampling\\_tag](#)  
*Forces parallel sorting using multiway mergesort with splitting by sampling at compile time.*
- struct [multiway\\_mergesort\\_tag](#)  
*Forces parallel sorting using multiway mergesort at compile time.*
- struct [omp\\_loop\\_static\\_tag](#)  
*Recommends parallel execution using OpenMP static load-balancing at compile time.*
- struct [omp\\_loop\\_tag](#)  
*Recommends parallel execution using OpenMP dynamic load-balancing at compile time.*
- struct [parallel\\_tag](#)  
*Recommends parallel execution at compile time, optionally using a user-specified number of threads.*
- struct [quicksort\\_tag](#)  
*Forces parallel sorting using unbalanced quicksort at compile time.*
- struct [sampling\\_tag](#)  
*Forces parallel merging with exact splitting, at compile time.*
- struct [sequential\\_tag](#)  
*Forces sequential execution at compile time.*

- struct [unbalanced\\_tag](#)

*Recommends parallel execution using static load-balancing at compile time.*

## Typedefs

## Variables

- `static const int \_CASable\_bits`
- `static const \_CASable \_CASable\_mask`

### 4.6.1 Detailed Description

GNU parallel code for public use.

### 4.6.2 Typedef Documentation

#### 4.6.2.1 `typedef unsigned short __gnu_parallel::_BinIndex`

Type to hold the index of a bin.

Since many variables of this type are allocated, it should be chosen as small as possible.

Definition at line 47 of file `random_shuffle.h`.

#### 4.6.2.2 `typedef int64_t __gnu_parallel::_CASable`

Longest compare-and-swappable integer type on this platform.

Definition at line 127 of file `types.h`.

#### 4.6.2.3 `typedef uint64_t __gnu_parallel::_SequenceIndex`

Unsigned integer to index `__elements`. The total number of elements for each algorithm must fit into this type.

Definition at line 117 of file `types.h`.

#### 4.6.2.4 `typedef uint16_t __gnu_parallel::_ThreadIndex`

Unsigned integer to index a thread number. The maximum thread number (for each processor) must fit into this type.

Definition at line 123 of file `types.h`.

### 4.6.3 Enumeration Type Documentation

#### 4.6.3.1 `enum __gnu_parallel::_AlgorithmStrategy`

Strategies for run-time algorithm selection:

Definition at line 67 of file `types.h`.

#### 4.6.3.2 `enum __gnu_parallel::_FindAlgorithm`

Find algorithms:

Definition at line 106 of file `types.h`.

#### 4.6.3.3 `enum __gnu_parallel::_MultiwayMergeAlgorithm`

Merging algorithms:

Definition at line 85 of file `types.h`.

#### 4.6.3.4 `enum __gnu_parallel::_Parallelism`

Run-time equivalents for the compile-time tags.

**Enumerator:**

*sequential* Not parallel.

*parallel\_unbalanced* Parallel unbalanced (equal-sized chunks).

*parallel\_balanced* Parallel balanced (work-stealing).

*parallel\_omp\_loop* Parallel with OpenMP dynamic load-balancing.

*parallel\_omp\_loop\_static* Parallel with OpenMP static load-balancing.

*parallel\_taskqueue* Parallel with OpenMP taskqueue construct.

Definition at line 44 of file `types.h`.

#### 4.6.3.5 `enum __gnu_parallel::_PartialSumAlgorithm`

Partial sum algorithms: recursive, linear.

Definition at line 91 of file `types.h`.

#### 4.6.3.6 `enum __gnu_parallel::_SortAlgorithm`

Sorting algorithms:

Definition at line 76 of file `types.h`.

#### 4.6.3.7 `enum __gnu_parallel::_SplittingAlgorithm`

Sorting/merging algorithms: sampling, `__exact`.

Definition at line 98 of file `types.h`.

#### 4.6.4 Function Documentation

**4.6.4.1** `template<typename _RAIter, typename _DifferenceTp > void  
__gnu_parallel::__calc_borders ( _RAIter __elements, _DifferenceTp  
__length, _DifferenceTp * __off )`

Precalculate `__advances` for Knuth-Morris-Pratt algorithm.

##### Parameters

`__elements` Begin iterator of sequence to search for.

`__length` Length of sequence to search for.

`__advances` Returned `__offsets`.

Definition at line 51 of file `search.h`.

Referenced by `__search_template()`.

**4.6.4.2** `template<typename _Tp > bool __gnu_parallel::__compare_and_swap  
( volatile _Tp * __ptr, _Tp __comparand, _Tp __replacement )  
[inline]`

Compare `*__ptr` and `__comparand`. If equal, let `*__ptr=__replacement` and return `true`, return `false` otherwise.

Implementation is heavily platform-dependent.

##### Parameters

`__ptr` Pointer to signed integer.

`__comparand` Compare value.

`__replacement` Replacement value.

Definition at line 337 of file `parallel/compatibility.h`.

References `__compare_and_swap_32()`, and `__compare_and_swap_64()`.

Referenced by `__parallel_partition()`, `__gnu_parallel::-RestrictedBoundedConcurrentQueue< _Piece >::pop_back()`, and `__gnu_parallel::-RestrictedBoundedConcurrentQueue< _Piece >::pop_front()`.

**4.6.4.3** `bool __gnu_parallel::__compare_and_swap_32 ( volatile int32_t *  
__ptr, int32_t __comparand, int32_t __replacement ) [inline]`

Compare `*__ptr` and `__comparand`. If equal, let `*__ptr=__replacement` and return `true`, return `false` otherwise.

Implementation is heavily platform-dependent.

#### Parameters

`__ptr` Pointer to 32-bit signed integer.

`__comparand` Compare value.

`__replacement` Replacement value.

Definition at line 240 of file `parallel/compatibility.h`.

Referenced by `__compare_and_swap()`.

**4.6.4.4** `bool __gnu_parallel::__compare_and_swap_64 ( volatile int64_t *  
__ptr, int64_t __comparand, int64_t __replacement ) [inline]`

Compare `*__ptr` and `__comparand`. If equal, let `*__ptr=__replacement` and return `true`, return `false` otherwise.

Implementation is heavily platform-dependent.

#### Parameters

`__ptr` Pointer to 64-bit signed integer.

`__comparand` Compare value.

`__replacement` Replacement value.

Definition at line 283 of file `parallel/compatibility.h`.

Referenced by `__compare_and_swap()`.

**4.6.4.5** `void __gnu_parallel::__decode2 ( _CASable __x, int & __a, int &  
__b ) [inline]`

Decode two integers from one `gnu_parallel::_CASable`.

#### Parameters

`__x` [\\_\\_gnu\\_parallel::\\_CASable](#) to decode integers from.

`__a` First integer, to be decoded from the most-significant `_CASable_bits/2` bits of `__x`.

`__b` Second integer, to be encoded in the least-significant `_CASable_bits/2` bits of `__x`.

See also

[\\_\\_encode2](#)

Definition at line 133 of file `parallel/base.h`.

References `_CASable_bits`, and `_CASable_mask`.

Referenced by `__gnu_parallel::_RestrictedBoundedConcurrentQueue< _Piece >::pop_back()`, `__gnu_parallel::_RestrictedBoundedConcurrentQueue< _Piece >::pop_front()`, and `__gnu_parallel::_RestrictedBoundedConcurrentQueue< _Piece >::push_front()`.

**4.6.4.6** `template<typename _RAIter, typename _DifferenceTp> void  
__gnu_parallel::_determine_samples ( _PMWMSSortingData<  
_RAIter> * __sd, _DifferenceTp __num_samples )`

Select `_M_samples` from a sequence.

Parameters

`__sd` Pointer to algorithm data. Result will be placed in `__sd->_M_samples`.  
`__num_samples` Number of `_M_samples` to select.

Definition at line 97 of file `multiway_mergesort.h`.

References `__gnu_parallel::_PMWMSSortingData< _RAIter>::_M_samples`, `__gnu_parallel::_PMWMSSortingData< _RAIter>::_M_source`, `__gnu_parallel::_PMWMSSortingData< _RAIter>::_M_starts`, and `equally_split()`.

**4.6.4.7** `_CASable __gnu_parallel::_encode2 ( int __a, int __b ) [inline]`

Encode two integers into one `gnu_parallel::_CASable`.

Parameters

`__a` First integer, to be encoded in the most-significant `_CASable_bits/2` bits.  
`__b` Second integer, to be encoded in the least-significant `_CASable_bits/2` bits.

**Returns**

value encoding `__a` and `__b`.

**See also**

[\\_\\_decode2](#)

Definition at line 119 of file `parallel/base.h`.

References `_CASable_bits`.

Referenced by `__gnu_parallel::_RestrictedBoundedConcurrentQueue<_Piece>::_RestrictedBoundedConcurrentQueue()`, `__gnu_parallel::_RestrictedBoundedConcurrentQueue<_Piece>::pop_back()`, `__gnu_parallel::_RestrictedBoundedConcurrentQueue<_Piece>::pop_front()`, and `__gnu_parallel::_RestrictedBoundedConcurrentQueue<_Piece>::push_front()`.

#### 4.6.4.8 `template<typename _Tp> _Tp __gnu_parallel::__fetch_and_add ( volatile _Tp * __ptr, _Tp __addend ) [inline]`

Add a value to a variable, atomically.

Implementation is heavily platform-dependent.

**Parameters**

`__ptr` Pointer to a signed integer.

`__addend` Value to add.

Definition at line 186 of file `parallel/compatibility.h`.

References `__fetch_and_add_32()`, and `__fetch_and_add_64()`.

Referenced by `__parallel_partition()`, and `__gnu_parallel::_RestrictedBoundedConcurrentQueue<_Piece>::push_front()`.

#### 4.6.4.9 `int32_t __gnu_parallel::__fetch_and_add_32 ( volatile int32_t * __ptr, int32_t __addend ) [inline]`

Add a value to a variable, atomically.

Implementation is heavily platform-dependent.

**Parameters**

`__ptr` Pointer to a 32-bit signed integer.

`__addend` Value to add.

Definition at line 95 of file `parallel/compatibility.h`.

Referenced by `__fetch_and_add()`.

**4.6.4.10** `int64_t __gnu_parallel::__fetch_and_add_64 ( volatile int64_t * __ptr,  
int64_t __addend ) [inline]`

Add a value to a variable, atomically.

Implementation is heavily platform-dependent.

#### Parameters

`__ptr` Pointer to a 64-bit signed integer.

`__addend` Value to add.

Definition at line 134 of file `parallel/compatibility.h`.

Referenced by `__fetch_and_add()`.

**4.6.4.11** `template<typename _RAIter1 , typename _RAIter2 , typename  
_Pred , typename _Selector > std::pair<_RAIter1, _RAIter2>  
__gnu_parallel::__find_template ( _RAIter1 __begin1, _RAIter1  
__end1, _RAIter2 __begin2, _Pred __pred, _Selector __selector )  
[inline]`

Parallel `std::find`, switch for different algorithms.

#### Parameters

`__begin1` Begin iterator of first sequence.

`__end1` End iterator of first sequence.

`__begin2` Begin iterator of second sequence. Must have same length as first sequence.

`__pred` Find predicate.

`__selector` \_Functionality (e. g. `std::find_if()`, `std::equal()`,...)

#### Returns

Place of finding in both sequences.

Definition at line 60 of file `find.h`.

References `__gnu_parallel::_Settings::get()`, and `std::make_pair()`.

```
4.6.4.12 template<typename _RAIter1 , typename _RAIter2 , typename
 _Pred , typename _Selector > std::pair<_RAIter1, _RAIter2>
 __gnu_parallel::__find_template (_RAIter1 __begin1, _RAIter1
 __end1, _RAIter2 __begin2, _Pred __pred, _Selector __selector,
 equal_split_tag)
```

Parallel `std::find`, equal splitting variant.

#### Parameters

- `__begin1` Begin iterator of first sequence.
- `__end1` End iterator of first sequence.
- `__begin2` Begin iterator of second sequence. Second \_\_sequence must have same length as first sequence.
- `__pred` Find predicate.
- `__selector` \_Functionality (e. g. `std::find_if()`, `std::equal()`,...)

#### Returns

Place of finding in both sequences.

Definition at line 97 of file `find.h`.

References `_GLIBCXX_CALL`, and `equally_split()`.

```
4.6.4.13 template<typename _RAIter1 , typename _RAIter2 , typename
 _Pred , typename _Selector > std::pair<_RAIter1, _RAIter2>
 __gnu_parallel::__find_template (_RAIter1 __begin1, _RAIter1
 __end1, _RAIter2 __begin2, _Pred __pred, _Selector __selector,
 growing_blocks_tag)
```

Parallel `std::find`, growing block size variant.

#### Parameters

- `__begin1` Begin iterator of first sequence.
- `__end1` End iterator of first sequence.

`__begin2` Begin iterator of second sequence. Second `__sequence` must have same length as first sequence.

`__pred` Find predicate.

`__selector` \_Functionality (e. g. `std::find_if()`, `std::equal()`,...)

### Returns

Place of finding in both sequences.

### See also

[\\_\\_gnu\\_parallel::\\_\\_Settings::find\\_sequential\\_search\\_size](#)

[\\_\\_gnu\\_parallel::\\_\\_Settings::find\\_scale\\_factor](#)

There are two main differences between the growing blocks and the constant-size blocks variants. 1. For GB, the block size grows; for CSB, the block size is fixed. 2. For GB, the blocks are allocated dynamically; for CSB, the blocks are allocated in a predetermined manner, namely spacial round-robin.

Definition at line 185 of file `find.h`.

References `_GLIBCXX_CALL`, `__gnu_parallel::__Settings::find_scale_factor`, `__gnu_parallel::__Settings::find_sequential_search_size`, and `__gnu_parallel::__Settings::get()`.

**4.6.4.14** `template<typename _RAIter1 , typename _RAIter2 , typename _Pred , typename _Selector > std::pair<_RAIter1, _RAIter2> __gnu_parallel::__find_template ( _RAIter1 __begin1, _RAIter1 __end1, _RAIter2 __begin2, _Pred __pred, _Selector __selector, constant_size_blocks_tag )`

Parallel `std::find`, constant block size variant.

### Parameters

`__begin1` Begin iterator of first sequence.

`__end1` End iterator of first sequence.

`__begin2` Begin iterator of second sequence. Second `__sequence` must have same length as first sequence.

`__pred` Find predicate.

`__selector` \_Functionality (e. g. `std::find_if()`, `std::equal()`,...)

### Returns

Place of finding in both sequences.

**4.6.4.15** `template<typename _Iter , typename _UserOp , typename  
_Functionality , typename _Red , typename _Result > _UserOp  
__gnu_parallel::_for_each_template_random_access ( _Iter  
__begin, _Iter __end, _UserOp __user_op, _Functionality &  
__functionality, _Red __reduction, _Result __reduction_start, _Result  
& __output, typename std::iterator_traits< _Iter >::difference_type  
__bound, _Parallelism __parallelism_tag )`

Chose the desired algorithm by evaluating `__parallelism_tag`.

## Parameters

**`__begin`** Begin iterator of input sequence.  
**`__end`** End iterator of input sequence.  
**`__user_op`** A user-specified functor (comparator, predicate, associative operator,...)  
**`__functionality`** functor to *process* an element with `__user_op` (depends on desired functionality, e. g. accumulate, for\_each,...)  
**`__reduction`** Reduction functor.  
**`__reduction_start`** Initial value for reduction.  
**`__output`** Output iterator.  
**`__bound`** Maximum number of elements processed.  
**`__parallelism_tag`** Parallelization method

Definition at line 61 of file for\_each.h.

References [\\_\\_for\\_each\\_template\\_random\\_access\\_ed\(\)](#), [\\_\\_for\\_each\\_template\\_random\\_access\\_omp\\_loop\(\)](#), [\\_\\_for\\_each\\_template\\_random\\_access\\_workstealing\(\)](#), [parallel\\_omp\\_loop](#), [parallel\\_omp\\_loop\\_static](#), and [parallel\\_unbalanced](#).

**4.6.4.16** `template<typename _RAIter , typename _Op , typename  
_Fu , typename _Red , typename _Result > _Op  
__gnu_parallel::__for_each_template_random_access_ed ( _RAIter  
__begin, _RAIter __end, _Op __o, _Fu & __f, _Red __r, _Result  
__base, _Result & __output, typename std::iterator_traits< _RAIter  
>::difference_type __bound )`

Embarrassingly parallel algorithm for random access iterators, using hand-crafted parallelization by equal splitting the work.

#### Parameters

- `__begin` Begin iterator of element sequence.
- `__end` End iterator of element sequence.
- `__o` User-supplied functor (comparator, predicate, adding functor, ...)
- `__f` Functor to "process" an element with `__op` (depends on desired functionality, e. g. for `std::for_each()`, ...).
- `__r` Functor to "add" a single `__result` to the already processed elements (depends on functionality).
- `__base` Base value for reduction.
- `__output` Pointer to position where final result is written to
- `__bound` Maximum number of elements processed (e. g. for `std::count_n()`).

#### Returns

User-supplied functor (that may contain a part of the result).

Definition at line 67 of file `par_loop.h`.

References `equally_split_point()`.

Referenced by `__for_each_template_random_access()`.

**4.6.4.17** `template<typename _RAIter , typename _Op , typename  
_Fu , typename _Red , typename _Result > _Op  
__gnu_parallel::__for_each_template_random_access_omp_loop (   
_RAIter __begin, _RAIter __end, _Op __o, _Fu & __f, _Red __r,  
_Result __base, _Result & __output, typename std::iterator_traits<  
_RAIter >::difference_type __bound )`

Embarrassingly parallel algorithm for random access iterators, using an OpenMP for loop.

**Parameters**

- `__begin` Begin iterator of element sequence.
- `__end` End iterator of element sequence.
- `__o` User-supplied functor (comparator, predicate, adding functor, etc.).
- `__f` Functor to *process* an element with `__op` (depends on desired functionality, e. g. for `std::for_each()`, ...).
- `__r` Functor to *add* a single `__result` to the already processed elements (depends on functionality).
- `__base` Base value for reduction.
- `__output` Pointer to position where final result is written to
- `__bound` Maximum number of elements processed (e. g. for `std::count_n()`).

**Returns**

User-supplied functor (that may contain a part of the result).

Definition at line 67 of file `omp_loop.h`.

Referenced by `__for_each_template_random_access()`.

**4.6.4.18** `template<typename _RAIter , typename _Op , typename _Fu ,  
 typename _Red , typename _Result > _Op __gnu_parallel::__-  
 for_each_template_random_access_omp_loop_static ( _RAIter  
 __begin, _RAIter __end, _Op __o, _Fu & __f, _Red __r, _Result  
 __base, _Result & __output, typename std::iterator_traits< _RAIter  
 >::difference_type __bound )`

Embarrassingly parallel algorithm for random access iterators, using an OpenMP for loop with static scheduling.

**Parameters**

- `__begin` Begin iterator of element sequence.
- `__end` End iterator of element sequence.
- `__o` User-supplied functor (comparator, predicate, adding functor, ...).
- `__f` Functor to *process* an element with `__op` (depends on desired functionality, e. g. for `std::for_each()`, ...).
- `__r` Functor to *add* a single `__result` to the already processed `__elements` (depends on functionality).
- `__base` Base value for reduction.

`__output` Pointer to position where final result is written to  
`__bound` Maximum number of elements processed (e. g. for `std::count_n()`).

**Returns**

User-supplied functor (that may contain a part of the result).

Definition at line 66 of file `omp_loop_static.h`.

**4.6.4.19** `template<typename _RAIter, typename _Op, typename  
_Fu, typename _Red, typename _Result > _Op  
__gnu_parallel::__for_each_template_random_access_workstealing (

_Result __base, _Result & __output, typename std::iterator_traits<  
_RAIter >::difference_type __bound )`

Work stealing algorithm for random access iterators.

Uses O(1) additional memory. Synchronization at job lists is done with atomic operations.

**Parameters**

`__begin` Begin iterator of element sequence.  
`__end` End iterator of element sequence.  
`__op` User-supplied functor (comparator, predicate, adding functor, ...).  
`__f` Functor to *process* an element with `__op` (depends on desired functionality, e. g. for `std::for_each()`, ...).  
`__r` Functor to *add* a single `__result` to the already processed elements (depends on functionality).  
`__base` Base value for reduction.  
`__output` Pointer to position where final result is written to  
`__bound` Maximum number of elements processed (e. g. for `std::count_n()`).

**Returns**

User-supplied functor (that may contain a part of the result).

Definition at line 99 of file `workstealing.h`.

References `__yield()`, `_GLIBCXX_CALL`, `__gnu_parallel::Job< _DifferenceTp >::_M_first`, `__gnu_parallel::Job< _DifferenceTp >::_M_last`, `__gnu_parallel::Job< _DifferenceTp >::_M_load`, `__gnu_parallel::Settings::cache_line_size`, `__gnu_parallel::Settings::get()`, and `min()`.

**4.6.4.20** `template<typename _Iter , typename _Compare > bool  
__gnu_parallel::__is_sorted ( _Iter __begin, _Iter __end,  
_Compare __comp )`

Check whether [`__begin`, `__end`) is sorted according to `__comp`.

#### Parameters

`__begin` Begin iterator of sequence.  
`__end` End iterator of sequence.  
`__comp` Comparator.

#### Returns

`true` if sorted, `false` otherwise.

Definition at line 51 of file `checkers.h`.

Referenced by `__sequential_multiway_merge()`, `multiway_merge_loser_tree_sentinel()`, and `parallel_multiway_merge()`.

**4.6.4.21** `template<typename _RAIter , typename _Compare > _RAIter  
__gnu_parallel::__median_of_three_iterators ( _RAIter __a, _RAIter  
__b, _RAIter __c, _Compare __comp )`

Compute the median of three referenced elements, according to `__comp`.

#### Parameters

`__a` First iterator.  
`__b` Second iterator.  
`__c` Third iterator.  
`__comp` Comparator.

Definition at line 398 of file `parallel/base.h`.

Referenced by `__qsb_divide()`.

**4.6.4.22** `template<typename _RAIter1 , typename _RAIter2 , typename  
_OutputIterator , typename _DifferenceTp , typename _Compare  
> _OutputIterator __gnu_parallel::__merge_advance ( _RAIter1  
& __begin1, _RAIter1 __end1, _RAIter2 & __begin2, _RAIter2  
__end2, _OutputIterator __target, _DifferenceTp __max_length,  
_Compare __comp ) [inline]`

Merge routine being able to merge only the `__max_length` smallest elements.

The `__begin` iterators are advanced accordingly, they might not reach `__end`, in contrast to the usual variant. Static switch on whether to use the conditional-move variant.

#### Parameters

`__begin1` Begin iterator of first sequence.  
`__end1` End iterator of first sequence.  
`__begin2` Begin iterator of second sequence.  
`__end2` End iterator of second sequence.  
`__target` Target begin iterator.  
`__max_length` Maximum number of elements to merge.  
`__comp` Comparator.

#### Returns

Output end iterator.

Definition at line 171 of file `merge.h`.

References `__merge_advance_movc()`, and `_GLIBCXX_CALL`.

Referenced by `__parallel_merge_advance()`, and `__sequential_multiway_merge()`.

**4.6.4.23** `template<typename _RAIter1 , typename _RAIter2 , typename  
_OutputIterator , typename _DifferenceTp , typename _Compare >  
_OutputIterator __gnu_parallel::__merge_advance_movc ( _RAIter1  
& __begin1, _RAIter1 __end1, _RAIter2 & __begin2, _RAIter2  
__end2, _OutputIterator __target, _DifferenceTp __max_length,  
_Compare __comp )`

Merge routine being able to merge only the `__max_length` smallest elements.

The `__begin` iterators are advanced accordingly, they might not reach `__end`, in contrast to the usual variant. Specially designed code should allow the compiler to generate conditional moves instead of branches.

**Parameters**

- `__begin1` Begin iterator of first sequence.
- `__end1` End iterator of first sequence.
- `__begin2` Begin iterator of second sequence.
- `__end2` End iterator of second sequence.
- `__target` Target begin iterator.
- `__max_length` Maximum number of elements to merge.
- `__comp` Comparator.

**Returns**

Output end iterator.

Definition at line 105 of file `merge.h`.

Referenced by `__merge_advance()`.

**4.6.4.24** `template<typename _RAIter1 , typename _RAIter2 , typename  
_OutputIterator , typename _DifferenceTp , typename _Compare >  
_OutputIterator __gnu_parallel::__merge_advance_usual ( _RAIter1  
& __begin1, _RAIter1 __end1, _RAIter2 & __begin2, _RAIter2  
__end2, _OutputIterator __target, _DifferenceTp __max_length,  
_Compare __comp )`

Merge routine being able to merge only the `__max_length` smallest elements.

The `__begin` iterators are advanced accordingly, they might not reach `__end`, in contrast to the usual variant.

**Parameters**

- `__begin1` Begin iterator of first sequence.
- `__end1` End iterator of first sequence.
- `__begin2` Begin iterator of second sequence.
- `__end2` End iterator of second sequence.
- `__target` Target begin iterator.
- `__max_length` Maximum number of elements to merge.
- `__comp` Comparator.

**Returns**

Output end iterator.

Definition at line 57 of file `merge.h`.

```

4.6.4.25 template<typename _RAIter1 , typename _RAIter2 ,
 typename _RAIter3 , typename _Compare > _RAIter3
 __gnu_parallel::__parallel_merge_advance (_RAIter1 & __begin1,
 _RAIter1 __end1, _RAIter2 & __begin2, _RAIter2 __end2,
 _RAIter3 __target, typename std::iterator_traits< _RAIter1
 >::difference_type __max_length, _Compare __comp) [inline]

```

Merge routine fallback to sequential in case the iterators of the two input sequences are of different type.

#### Parameters

`__begin1` Begin iterator of first sequence.  
`__end1` End iterator of first sequence.  
`__begin2` Begin iterator of second sequence.  
`__end2` End iterator of second sequence.  
`__target` Target begin iterator.  
`__max_length` Maximum number of elements to merge.  
`__comp` Comparator.

#### Returns

Output end iterator.

Definition at line 195 of file `merge.h`.

References `__merge_advance()`.

```

4.6.4.26 template<typename _RAIter1 , typename _RAIter3 , typename
 _Compare > _RAIter3 __gnu_parallel::__parallel_merge_advance (
 _RAIter1 & __begin1, _RAIter1 __end1, _RAIter1 & __begin2,
 _RAIter1 __end2, _RAIter3 __target, typename std::iterator_traits<
 _RAIter1 >::difference_type __max_length, _Compare __comp)
 [inline]

```

Parallel merge routine being able to merge only the `__max_length` smallest elements.

The `__begin` iterators are advanced accordingly, they might not reach `__end`, in contrast to the usual variant. The functionality is projected onto `parallel_multiway_merge`.

**Parameters**

- `__begin1` Begin iterator of first sequence.
- `__end1` End iterator of first sequence.
- `__begin2` Begin iterator of second sequence.
- `__end2` End iterator of second sequence.
- `__target` Target begin iterator.
- `__max_length` Maximum number of elements to merge.
- `__comp` Comparator.

**Returns**

Output end iterator.

Definition at line 223 of file `merge.h`.

References `std::make_pair()`, `multiway_merge_exact_splitting()`, and `parallel_multiway_merge()`.

**4.6.4.27** `template<typename _RAIter, typename _Compare> void  
__gnu_parallel::__parallel_nth_element ( _RAIter __begin, _RAIter  
__nth, _RAIter __end, _Compare __comp )`

Parallel implementation of `std::nth_element()`.

**Parameters**

- `__begin` Begin iterator of input sequence.
- `__nth` Iterator of element that must be in position afterwards.
- `__end` End iterator of input sequence.
- `__comp` Comparator.

Definition at line 332 of file `partition.h`.

References `__parallel_partition()`, `_GLIBCXX_CALL`, `__gnu_parallel::_Settings::get()`, `max()`, `__gnu_parallel::_Settings::nth_element_minimal_n`, and `__gnu_parallel::_Settings::partition_minimal_n`.

 __gnu_parallel::__parallel_partial_sort ( _RAIter __begin, _RAIter  
 __middle, _RAIter __end, _Compare __comp )`

Parallel implementation of `std::partial_sort()`.

#### Parameters

`__begin` Begin iterator of input sequence.  
`__middle` Sort until this position.  
`__end` End iterator of input sequence.  
`__comp` Comparator.

Definition at line 422 of file `partition.h`.

References `__parallel_nth_element()`.

**4.6.4.29** `template<typename _IIter , typename _OutputIterator  
 , typename _BinaryOperation > _OutputIterator  
 __gnu_parallel::__parallel_partial_sum ( _IIter __begin, _IIter  
 __end, _OutputIterator __result, _BinaryOperation __bin_op )`

Parallel partial sum front-`__end`.

#### Parameters

`__begin` Begin iterator of input sequence.  
`__end` End iterator of input sequence.  
`__result` Begin iterator of output sequence.  
`__bin_op` Associative binary function.

#### Returns

End iterator of output sequence.

Definition at line 203 of file `partial_sum.h`.

References `__parallel_partial_sum_linear()`, `_GLIBCXX_CALL`, and `__gnu_parallel::_Settings::get()`.

**4.6.4.30** `template<typename _Iter , typename _OutputIterator  
, typename _BinaryOperation > _OutputIterator  
__gnu_parallel::__parallel_partial_sum_basecase ( _Iter __begin,  
_Iter __end, _OutputIterator __result, _BinaryOperation __bin_op,  
typename std::iterator_traits< _Iter >::value_type __value )`

Base case prefix sum routine.

#### Parameters

`__begin` Begin iterator of input sequence.  
`__end` End iterator of input sequence.  
`__result` Begin iterator of output sequence.  
`__bin_op` Associative binary function.  
`__value` Start value. Must be passed since the neutral element is unknown in general.

#### Returns

End iterator of output sequence.

Definition at line 58 of file `partial_sum.h`.

Referenced by `__parallel_partial_sum_linear()`.

**4.6.4.31** `template<typename _Iter , typename _OutputIterator

__gnu_parallel::__parallel_partial_sum_linear ( _Iter __begin,  
_Iter __end, _OutputIterator __result, _BinaryOperation __bin_op,  
typename std::iterator_traits< _Iter >::difference_type __n )`

Parallel partial sum implementation, two-phase approach, no recursion.

#### Parameters

`__begin` Begin iterator of input sequence.  
`__end` End iterator of input sequence.  
`__result` Begin iterator of output sequence.  
`__bin_op` Associative binary function.  
`__n` Length of sequence.  
`__num_threads` Number of threads to use.

**Returns**

End iterator of output sequence.

Definition at line 90 of file partial\_sum.h.

References \_\_parallel\_partial\_sum\_basecase(), equally\_split(), \_\_gnu\_parallel::\_Settings::get(), and \_\_gnu\_parallel::\_Settings::partial\_sum\_dilation.

Referenced by \_\_parallel\_partial\_sum().

> std::iterator_traits<_RAIter>::difference_type
 __gnu_parallel::__parallel_partition (_RAIter __begin, _RAIter
 __end, _Predicate __pred, _ThreadIndex __num_threads)
```

Parallel implementation of std::partition.

**Parameters**

*\_\_begin* Begin iterator of input sequence to split.

*\_\_end* End iterator of input sequence to split.

*\_\_pred* Partition predicate, possibly including some kind of pivot.

*\_\_num\_threads* Maximum number of threads to use for this task.

**Returns**

Number of elements not fulfilling the predicate.

Definition at line 56 of file partition.h.

References \_\_compare\_and\_swap(), \_\_fetch\_and\_add(), \_GLIBCXX\_CALL, \_GLIBCXX\_VOLATILE, \_\_gnu\_parallel::\_Settings::get(), \_\_gnu\_parallel::\_Settings::partition\_chunk\_share, and \_\_gnu\_parallel::\_Settings::partition\_chunk\_size.

 ** __tls, _RAIter __begin, _RAIter __end, _Compare __comp,  
 _ThreadIndex __iam, _ThreadIndex __num_threads, bool  
 __parent_wait )`

Quicksort conquer step.

**Parameters**

`__tls` Array of thread-local storages.  
`__begin` Begin iterator of subsequence.  
`__end` End iterator of subsequence.  
`__comp` Comparator.  
`__iam` Number of the thread processing this function.  
`__num_threads` Number of threads that are allowed to work on this part.

Definition at line 171 of file `balanced_quicksort.h`.

 > std::iterator_traits<_RAIter>::difference_type  
 __gnu_parallel::__qsb_divide ( _RAIter __begin, _RAIter __end,  
 _Compare __comp, _ThreadIndex __num_threads )`

Balanced quicksort divide step.

#### Parameters

- `__begin` Begin iterator of subsequence.
- `__end` End iterator of subsequence.
- `__comp` Comparator.
- `__num_threads` Number of threads that are allowed to work on this part.

#### Precondition

`(__end-__begin)>=1`

**4.6.4.52** `template<typename _RandomNumberGenerator > int  
__gnu_parallel::__random_number_pow2 ( int __logp,  
_RandomNumberGenerator & __rng ) [inline]`

Generate a random number in  $[0, 2^{\text{__logp}})$ .

#### Parameters

`__logp` Logarithm (basis 2) of the upper range `__bound`.  
`__rng` Random number generator to use.

Definition at line 115 of file `random_shuffle.h`.

Referenced by `__parallel_random_shuffle_drs_pu()`, and `__sequential_random_shuffle()`.

**4.6.4.53** `template<typename _Size > _Size __gnu_parallel::__rd_log2 ( _Size  
__n ) [inline]`

Calculates the rounded-down logarithm of `__n` for base 2.

#### Parameters

`__n` Argument.

#### Returns

Returns 0 for any argument  $< 1$ .

Definition at line 102 of file `parallel/base.h`.

Referenced by `__parallel_random_shuffle_drs()`, `__parallel_sort_qsb()`, `__round_up_to_pow2()`, `__sequential_random_shuffle()`, `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_LoserTreeBase()`, `multiseq_partition()`, and `multiseq_selection()`.

**4.6.4.54** `template<typename _Tp > _Tp __gnu_parallel::__round_up_to_pow2  
( _Tp __x )`

Round up to the next greater power of 2.

#### Parameters

`__x` Integer to round up

Definition at line 246 of file `random_shuffle.h`.

References `__rd_log2()`.

Referenced by `__parallel_random_shuffle_drs()`, `__sequential_random_shuffle()`, and `multiseq_selection()`.

__Pred > __RAIter1 __gnu_parallel::__search_template ( __RAIter1  
__begin1, __RAIter1 __end1, __RAIter2 __begin2, __RAIter2  
__end2, __Pred __pred )`

Parallel `std::search`.

#### Parameters

`__begin1` Begin iterator of first sequence.  
`__end1` End iterator of first sequence.  
`__begin2` Begin iterator of second sequence.  
`__end2` End iterator of second sequence.  
`__pred` Find predicate.

#### Returns

Place of finding in first sequences.

Definition at line 81 of file `search.h`.

References `__calc_borders()`, `_GLIBCXX_CALL`, `equally_split()`, and `min()`.

**4.6.4.56** `template<bool __stable, bool __sentinels, typename __RAIterIterator ,

std::iterator_traits< __RAIterIterator >::value_type::first_type  
>::value_type & __sentinel, __DifferenceTp __length, __Compare  
__comp )`

Sequential multi-way merging switch.

The `_GLIBCXX_PARALLEL_DECISION` is based on the branching factor and run-time settings.

**Parameters**

- `__seqs_begin` Begin iterator of iterator pair input sequence.
- `__seqs_end` End iterator of iterator pair input sequence.
- `__target` Begin iterator of output sequence.
- `__comp` Comparator.
- `__length` Maximum length to merge, possibly larger than the number of elements available.
- `__stable` Stable merging incurs a performance penalty.
- `__sentinel` The sequences have `__a` `__sentinel` element.

**Returns**

End iterator of output sequence.

Definition at line 917 of file `multiway_merge.h`.

`std::vector< _Iter > & __os_starts, size_t & __count_to_two, size_t`  
`& __range_length )`

Combines two ranges into one and thus halves the number of ranges.

#### Parameters

`__os_starts` Start positions worked on (oversampled).

`__count_to_two` Counts up to 2.

`__range_length` Current length of a chunk.

Definition at line 70 of file list\_partition.h.

References `std::vector< _Tp, _Alloc >::size()`.

Referenced by `__shrink_and_double()`.

**4.6.4.59** `template<typename _Iter > void __gnu_parallel::__shrink_-`  
`and_double ( std::vector< _Iter > & __os_starts, size_t &`  
`__count_to_two, size_t & __range_length, const bool __make_twice )`

Shrinks and doubles the ranges.

#### Parameters

`__os_starts` Start positions worked on (oversampled).

`__count_to_two` Counts up to 2.

`__range_length` Current length of a chunk.

`__make_twice` Whether the `__os_starts` is allowed to be grown or not

Definition at line 50 of file list\_partition.h.

References `__shrink()`, `std::vector< _Tp, _Alloc >::resize()`, and `std::vector< _Tp, _Alloc >::size()`.

Referenced by `list_partition()`.

**4.6.4.60** `void __gnu_parallel::__yield ( ) [inline]`

Yield the control to another thread, without waiting for the end to the time slice.

Definition at line 354 of file `parallel/compatibility.h`.

Referenced by `__for_each_template_random_access_workstealing()`, and `__qsb_local_sort_with_helping()`.

**4.6.4.61** `template<typename _DifferenceType , typename _OutputIterator >  
_OutputIterator __gnu_parallel::equally_split ( _DifferenceType __n,  
_ThreadIndex __num_threads, _OutputIterator __s )`

function to split a sequence into parts of almost equal size.

The resulting sequence `__s` of length `__num_threads+1` contains the splitting positions when splitting the range `[0,__n)` into parts of almost equal size (plus minus 1). The first entry is 0, the last one `n`. There may result empty parts.

#### Parameters

`__n` Number of elements  
`__num_threads` Number of parts  
`__s` Splitters

#### Returns

End of `__splitter` sequence, i.e. `__s+__num_threads+1`

Definition at line 48 of file `equally_split.h`.

Referenced by `__determine_samples()`, `__find_template()`, `__parallel_partial_sum_linear()`, `__parallel_unique_copy()`, `__search_template()`, and `multiway_merge_exact_splitting()`.

**4.6.4.62** `template<typename _DifferenceType > _DifferenceType  
__gnu_parallel::equally_split_point ( _DifferenceType __n,  
_ThreadIndex __num_threads, _ThreadIndex __thread_no )`

function to split a sequence into parts of almost equal size.

Returns the position of the splitting point between thread number `__thread_no` (included) and thread number `__thread_no+1` (excluded).

#### Parameters

`__n` Number of elements  
`__num_threads` Number of parts

**Returns**

splitting point

Definition at line 74 of file `equally_split.h`.

Referenced by `__for_each_template_random_access_ed()`.

**4.6.4.63** `template<typename _Iter, typename _FunctorType> size_t  
__gnu_parallel::list_partition ( const _Iter __begin, const _Iter  
__end, _Iter * __starts, size_t * __lengths, const int __num_parts,  
_FunctorType & __f, int __oversampling = 0 )`

Splits a sequence given by input iterators into parts of almost equal size.

The function needs only one pass over the sequence.

**Parameters**

`__begin` Begin iterator of input sequence.

`__end` End iterator of input sequence.

`__starts` Start iterators for the resulting parts, dimension `__num_parts+1`. For convenience, `__starts [ __num_parts ]` contains the end iterator of the sequence.

`__lengths` Length of the resulting parts.

`__num_parts` Number of parts to split the sequence into.

`__f` Functor to be applied to each element by traversing `__it`

`__oversampling` Oversampling factor. If 0, then the partitions will differ in at most  $\{ \{ \text{__end} \} - \{ \text{__begin} \} \}$  `__elements`. Otherwise, the ratio between the longest and the shortest part is bounded by  $1 / ( \{ \text{__oversampling} \} \{ \text{num} \} )$

**Returns**

Length of the whole sequence.

Definition at line 101 of file `list_partition.h`.

References `__shrink_and_double()`, and `std::vector<_Tp, _Alloc>::size()`.

**4.6.4.64** `template<typename _Tp> const _Tp& __gnu_parallel::max ( const

Referenced by `__for_each_template_random_access_workstealing()`, `__parallel_sort_qs_divide()`, `__search_template()`, `multiseq_partition()`, and `multiseq_selection()`.

**4.6.4.66** `template<typename _RanSeqs, typename _RankType,  
typename _RankIterator, typename _Compare> void __gnu_  
parallel::multiseq_partition ( _RanSeqs __begin_seqs, _RanSeqs  
__end_seqs, _RankType __rank, _RankIterator __begin_offsets,  
_Compare __comp = std::less< typename std::iterator_  
traits<typename std::iterator_traits<_  
_RanSeqs>::value_type:: first_type>::value_type> ()  
)`

Splits several sorted sequences at a certain global `__rank`, resulting in a splitting point for each sequence. The sequences are passed via a sequence of random-access iterator pairs, none of the sequences may be empty. If there are several equal elements across the split, the ones on the `__left` side will be chosen from sequences with smaller number.

#### Parameters

- `__begin_seqs` Begin of the sequence of iterator pairs.
- `__end_seqs` End of the sequence of iterator pairs.
- `__rank` The global rank to partition at.
- `__begin_offsets` A random-access `__sequence` `__begin` where the `__result` will be stored in. Each element of the sequence is an iterator that points to the first element on the greater part of the respective `__sequence`.
- `__comp` The ordering functor, defaults to `std::less<_Tp>`.

Definition at line 124 of file `multiseq_selection.h`.

References `__rd_log2()`, `_GLIBCXX_CALL`, `std::vector< _Tp, _Alloc >::begin()`, `std::distance()`, `__gnu_cxx::distance()`, `std::priority_queue< _Tp, _Sequence, _Compare >::empty()`, `std::vector< _Tp, _Alloc >::end()`, `std::make_pair()`, `max()`, `min()`, `std::priority_queue< _Tp, _Sequence, _Compare >::pop()`, `std::priority_queue< _Tp, _Sequence, _Compare >::push()`, `std::vector< _Tp, _Alloc >::push_back()`, and `std::priority_queue< _Tp, _Sequence, _Compare >::top()`.

Referenced by `multiway_merge_exact_splitting()`.

**4.6.4.67** `template<typename _Tp, typename _RanSeqs, typename _RankType, typename _Compare> _Tp __gnu_parallel::multiseq_selection ( _RanSeqs begin_seqs, _RanSeqs end_seqs, _RankType rank, _RankType & offset, _Compare comp = std::less<_Tp> () )`

Selects the element at a certain global `__rank` from several sorted sequences.

The sequences are passed via a sequence of random-access iterator pairs, none of the sequences may be empty.

#### Parameters

- `begin_seqs` Begin of the sequence of iterator pairs.
- `end_seqs` End of the sequence of iterator pairs.
- `rank` The global rank to partition at.
- `offset` The rank of the selected element in the global subsequence of elements equal to the selected element. If the selected element is unique, this number is 0.
- `comp` The ordering functor, defaults to `std::less`.

Definition at line 390 of file `multiseq_selection.h`.

References `__rd_log2()`, `__round_up_to_pow2()`, `_GLIBCXX_CALL`, `std::vector< _Tp, _Alloc >::begin()`, `std::distance()`, `__gnu_cxx::distance()`, `std::priority_queue< _Tp, _Sequence, _Compare >::empty()`, `std::vector< _Tp, _Alloc >::end()`, `std::make_pair()`, `max()`, `min()`, `std::priority_queue< _Tp, _Sequence, _Compare >::pop()`, `std::priority_queue< _Tp, _Sequence, _Compare >::push()`, `std::vector< _Tp, _Alloc >::push_back()`, and `std::priority_queue< _Tp, _Sequence, _Compare >::top()`.

**4.6.4.68** `template<typename _RAIterPairIterator, typename _RAIterOut,
typename _DifferenceTp, typename _Compare> _RAIterOut
__gnu_parallel::multiway_merge ( _RAIterPairIterator
__seqs_begin, _RAIterPairIterator __seqs_end, _RAIterOut
__target, _DifferenceTp __length, _Compare __comp,
__gnu_parallel::sequential_tag )`

Multiway Merge Frontend.

Merge the sequences specified by `seqs_begin` and `__seqs_end` into `__target`. `__seqs_begin` and `__seqs_end` must point to a sequence of pairs. These pairs must contain an iterator to the beginning of a sequence in their first entry and an iterator the `_M_end` of the same sequence in their second entry.

Ties are broken arbitrarily. See `stable_multiway_merge` for a variant that breaks ties by sequence number but is slower.

The first entries of the pairs (i.e. the begin iterators) will be moved forward.

The output sequence has to provide enough space for all elements that are written to it.

This function will merge the input sequences:

- not stable
- parallel, depending on the input size and Settings
- using sampling for splitting
- not using sentinels

Example:

```
int sequences[10][10];
for (int __i = 0; __i < 10; ++__i)
 for (int __j = 0; __j < 10; ++__j)
 sequences[__i][__j] = __j;

int __out[33];
std::vector<std::pair<int*>> > seqs;
for (int __i = 0; __i < 10; ++__i)
 { seqs.push(std::make_pair<int*>(sequences[__i],
 sequences[__i] + 10)) }

multiway_merge(seqs.begin(), seqs.end(), __target, std::less<int>(), 33);
```

**See also**

`stable_multiway_merge`

**Precondition**

All input sequences must be sorted.

Target must provide enough space to merge out length elements or the number of elements in all sequences, whichever is smaller.

**Postcondition**

[`__target`, return `__value`) contains merged `__elements` from the input sequences.  
return `__value` - `__target` = min(`__length`, number of elements in all sequences).

**Parameters**

`_RAIterPairIterator` iterator over sequence of pairs of iterators

`_RAIterOut` iterator over target sequence

`_DifferenceTp` difference type for the sequence

`_Compare` strict weak ordering type to compare elements in sequences

`__seqs_begin` `__begin` of sequence `__sequence`

`__seqs_end` `_M_end` of sequence `__sequence`

`__target` target sequence to merge to.

`__comp` strict weak ordering to use for element comparison.

`__length` Maximum length to merge, possibly larger than the number of elements available.

**Returns**

`_M_end` iterator of output sequence

Definition at line 1410 of file `multiway_merge.h`.

References `__sequential_multiway_merge()`, and `_GLIBCXX_CALL`.

```
4.6.4.69 template<template< typename RAI, typename C > class
 iterator, typename _RAIterIterator , typename _RAIter3 ,
 typename _DifferenceTp , typename _Compare > _RAIter3
 __gnu_parallel::multiway_merge_3_variant (_RAIterIterator
 __seqs_begin, _RAIterIterator __seqs_end, _RAIter3 __target,
 _DifferenceTp __length, _Compare __comp)
```

Highly efficient 3-way merging procedure.

Merging is done with the algorithm implementation described by Peter Sanders. Basically, the idea is to minimize the number of necessary comparison after merging an element. The implementation trick that makes this fast is that the order of the sequences is stored in the instruction pointer (translated into labels in C++).

This works well for merging up to 4 sequences.

Note that making the merging stable does *not* come at a performance hit.

Whether the merging is done guarded or unguarded is selected by the used iterator class.

#### Parameters

- `__seqs_begin` Begin iterator of iterator pair input sequence.
- `__seqs_end` End iterator of iterator pair input sequence.
- `__target` Begin iterator of output sequence.
- `__comp` Comparator.
- `__length` Maximum length to merge, less equal than the total number of elements available.

#### Returns

End iterator of output sequence.

Definition at line 234 of file `multiway_merge.h`.

References `_GLIBCXX_CALL`.

**4.6.4.70** `template<template< typename RAI, typename C > class  
iterator, typename _RAIterIterator , typename _RAIter3 ,

__gnu_parallel::multiway_merge_4_variant ( _RAIterIterator  
__seqs_begin, _RAIterIterator __seqs_end, _RAIter3 __target,  
_DifferenceTp __length, _Compare __comp )`

Highly efficient 4-way merging procedure.

Merging is done with the algorithm implementation described by Peter Sanders. Basically, the idea is to minimize the number of necessary comparison after merging an element. The implementation trick that makes this fast is that the order of the sequences is stored in the instruction pointer (translated into goto labels in C++).

This works well for merging up to 4 sequences.

Note that making the merging stable does *not* come at a performance hit.

Whether the merging is done guarded or unguarded is selected by the used iterator class.

**Parameters**

- `__seqs_begin` Begin iterator of iterator pair input sequence.
- `__seqs_end` End iterator of iterator pair input sequence.
- `__target` Begin iterator of output sequence.
- `__comp` Comparator.
- `__length` Maximum length to merge, less equal than the total number of elements available.

**Returns**

End iterator of output sequence.

Definition at line 353 of file `multiway_merge.h`.

References `_GLIBCXX_CALL`.

```
4.6.4.71 template<bool __stable, typename _RAIterIterator ,
 typename _Compare , typename _DifferenceType > void
 __gnu_parallel::multiway_merge_exact_splitting (_RAIterIterator
 __seqs_begin, _RAIterIterator __seqs_end, _DifferenceType
 __length, _DifferenceType __total_length, _Compare __comp,
 std::vector< std::pair< _DifferenceType, _DifferenceType > > *
 __pieces)
```

Exact splitting for parallel multiway-merge routine.

None of the passed sequences may be empty.

Definition at line 1112 of file `multiway_merge.h`.

References `_GLIBCXX_PARALLEL_LENGTH`, `std::vector< _Tp, _Alloc >::begin()`, `std::vector< _Tp, _Alloc >::end()`, `equally_split()`, `multiseq_partition()`, and `std::vector< _Tp, _Alloc >::resize()`.

Referenced by `__parallel_merge_advance()`.

```
4.6.4.72 template<typename _LT , typename _RAIterIterator , typename
 _RAIter3 , typename _DifferenceTp , typename _Compare > _RAIter3
 __gnu_parallel::multiway_merge_loser_tree (_RAIterIterator
 __seqs_begin, _RAIterIterator __seqs_end, _RAIter3 __target,
 _DifferenceTp __length, _Compare __comp)
```

Multi-way merging procedure for a high branching factor, guarded case.

This merging variant uses a `LoserTree` class as selected by `__LT`.

Stability is selected through the used `LoserTree` class `__LT`.

At least one non-empty sequence is required.

#### Parameters

`__seqs_begin` Begin iterator of iterator pair input sequence.

`__seqs_end` End iterator of iterator pair input sequence.

`__target` Begin iterator of output sequence.

`__comp` Comparator.

`__length` Maximum length to merge, less equal than the total number of elements available.

#### Returns

End iterator of output sequence.

Definition at line 484 of file `multiway_merge.h`.

References `_GLIBCXX_CALL`, and `_GLIBCXX_PARALLEL_LENGTH`.

**4.6.4.73** `template<typename UnguardedLoserTree, typename _RAIterIterator, typename _RAIter3, typename _DifferenceTp, typename _Compare > _RAIter3 __gnu_parallel::multiway_merge_loser_tree_sentinel ( _RAIterIterator __seqs_begin, _RAIterIterator __seqs_end, _RAIter3 __target, const typename std::iterator_traits< typename std::iterator_traits< _RAIterIterator >::value_type::first_type >::value_type & __sentinel, _DifferenceTp __length, _Compare __comp )`

Multi-way merging procedure for a high branching factor, requiring sentinels to exist.

#### Parameters

`__stable` The value must be the same as for the used `LoserTrees`.

***UnguardedLoserTree*** `_LoserTree` variant to use for the unguarded merging.

***GuardedLoserTree*** `_LoserTree` variant to use for the guarded merging.

`__seqs_begin` Begin iterator of iterator pair input sequence.

`__seqs_end` End iterator of iterator pair input sequence.

`__target` Begin iterator of output sequence.

`__comp` Comparator.

`__length` Maximum length to merge, less equal than the total number of elements available.

### Returns

End iterator of output sequence.

Definition at line 658 of file `multiway_merge.h`.

References `__is_sorted()`, and `_GLIBCXX_CALL`.

**4.6.4.74** `template<typename _LT , typename _RAIterIterator , typename _RAIter3 , typename _DifferenceTp , typename _Compare > _RAIter3 __gnu_parallel::multiway_merge_loser_tree_unguarded ( _RAIterIterator __seqs_begin, _RAIterIterator __seqs_end, _RAIter3 __target, const typename std::iterator_traits< typename std::iterator_traits< _RAIterIterator >::value_type::first_type >::value_type & __sentinel, _DifferenceTp __length, _Compare __comp )`

Multi-way merging procedure for a high branching factor, unguarded case.

Merging is done using the `LoserTree` class `_LT`.

Stability is selected by the used `LoserTrees`.

### Precondition

No input will run out of elements during the merge.

### Parameters

`__seqs_begin` Begin iterator of iterator pair input sequence.

`__seqs_end` End iterator of iterator pair input sequence.

`__target` Begin iterator of output sequence.

`__comp` Comparator.

`__length` Maximum length to merge, less equal than the total number of elements available.

### Returns

End iterator of output sequence.

Definition at line 567 of file `multiway_merge.h`.

References `_GLIBCXX_CALL`.

 __seqs_begin, _RAIterPairIterator __seqs_end, _RAIterOut  
 __target, _DifferenceTp __length, _Compare __comp,  
 __gnu_parallel::sequential_tag )`

Multiway Merge Frontend.

Merge the sequences specified by `seqs_begin` and `__seqs_end` into `__target`. `__seqs_begin` and `__seqs_end` must point to a sequence of pairs. These pairs must contain an iterator to the beginning of a sequence in their first entry and an iterator the `_M_end` of the same sequence in their second entry.

Ties are broken arbitrarily. See `stable_multiway_merge` for a variant that breaks ties by sequence number but is slower.

The first entries of the pairs (i.e. the begin iterators) will be moved forward accordingly.

The output sequence has to provide enough space for all elements that are written to it.

This function will merge the input sequences:

- not stable
- parallel, depending on the input size and Settings
- using sampling for splitting
- using sentinels

You have to take care that the element the `_M_end` iterator points to is readable and contains a value that is greater than any other non-sentinel value in all sequences.

Example:

```
int sequences[10][11];
for (int __i = 0; __i < 10; ++__i)
 for (int __j = 0; __i < 11; ++__j)
 sequences[__i][__j] = __j; // __last one is sentinel!

int __out[33];
std::vector<std::pair<int*> > seqs;
for (int __i = 0; __i < 10; ++__i)
 { seqs.push(std::make_pair<int*>(sequences[__i],
 sequences[__i] + 10)) }

multiway_merge(seqs.begin(), seqs.end(), __target, std::less<int>(), 33);
```

### Precondition

All input sequences must be sorted.

Target must provide enough space to merge out length elements or the number of elements in all sequences, whichever is smaller.

For each `__i`, `__seqs_begin[__i].second` must be the end marker of the sequence, but also reference the one more `__sentinel` element.

### Postcondition

`[__target, return __value)` contains merged `__elements` from the input sequences.  
`return __value - __target = min(__length, number of elements in all sequences).`

### See also

`stable_multiway_merge_sentinels`

### Parameters

**`_RAIterPairIterator`** iterator over sequence of pairs of iterators

**`_RAIterOut`** iterator over target sequence

**`_DifferenceTp`** difference type for the sequence

**`_Compare`** strict weak ordering type to compare elements in sequences

**`__seqs_begin`** `__begin` of sequence `__sequence`

**`__seqs_end`** `_M_end` of sequence `__sequence`

**`__target`** target sequence to merge to.

**`__comp`** strict weak ordering to use for element comparison.

`__length` Maximum length to merge, possibly larger than the number of elements available.

### Returns

`_M_end` iterator of output sequence

Definition at line 1774 of file `multiway_merge.h`.

References `__sequential_multiway_merge()`, and `_GLIBCXX_CALL`.

```
4.6.4.77 template<bool __stable, bool __sentinels, typename
 _RAIterIterator, typename _RAIter3, typename _DifferenceTp,
 typename _Splitter, typename _Compare > _RAIter3
 __gnu_parallel::parallel_multiway_merge (_RAIterIterator
 __seqs_begin, _RAIterIterator __seqs_end, _RAIter3 __target,
 _Splitter __splitter, _DifferenceTp __length, _Compare __comp,
 _ThreadIndex __num_threads)
```

Parallel multi-way merge routine.

The `_GLIBCXX_PARALLEL_DECISION` is based on the branching factor and run-time settings.

Must not be called if the number of sequences is 1.

### Parameters

`__Splitter` functor to split input (either `__exact` or sampling based)

`__seqs_begin` Begin iterator of iterator pair input sequence.

`__seqs_end` End iterator of iterator pair input sequence.

`__target` Begin iterator of output sequence.

`__comp` Comparator.

`__length` Maximum length to merge, possibly larger than the number of elements available.

`__stable` Stable merging incurs a performance penalty.

`__sentinel` Ignored.

### Returns

End iterator of output sequence.

Definition at line 1217 of file `multiway_merge.h`.

References `__is_sorted()`, `_GLIBCXX_CALL`, `_GLIBCXX_PARALLEL_LENGTH`, `__gnu_parallel::Settings::get()`, `std::make_pair()`, and `__gnu_parallel::Settings::merge_oversampling`.

Referenced by `__parallel_merge_advance()`.

**4.6.4.78** `template<bool __stable, bool __exact, typename _RAIter, typename _Compare> void __gnu_parallel::parallel_sort_mwms ( _RAIter __begin, _RAIter __end, _Compare __comp, _ThreadIndex __num_threads )`

PMWMS main call.

#### Parameters

- `__begin` Begin iterator of sequence.
- `__end` End iterator of sequence.
- `__comp` Comparator.
- `__n` Length of sequence.
- `__num_threads` Number of threads to use.

Definition at line 394 of file `multiway_mergesort.h`.

References `_GLIBCXX_CALL`, `__gnu_parallel::PMWMSortingData< _RAIter >::M_num_threads`, `__gnu_parallel::PMWMSortingData< _RAIter >::M_offsets`, `__gnu_parallel::PMWMSortingData< _RAIter >::M_pieces`, `__gnu_parallel::PMWMSortingData< _RAIter >::M_samples`, `__gnu_parallel::PMWMSortingData< _RAIter >::M_source`, `__gnu_parallel::PMWMSortingData< _RAIter >::M_starts`, `__gnu_parallel::PMWMSortingData< _RAIter >::M_temporary`, `__gnu_parallel::Settings::get()`, `std::vector< _Tp, _Alloc >::resize()`, and `__gnu_parallel::Settings::sort_mwms_oversampling`.

**4.6.4.79** `template<bool __stable, bool __exact, typename _RAIter, typename _Compare> void __gnu_parallel::parallel_sort_mwms_pu ( _PMWMSortingData< _RAIter > * __sd, _Compare & __comp )`

PMWMS code executed by each thread.

#### Parameters

- `__sd` Pointer to algorithm data.

`__comp` Comparator.

Definition at line 308 of file `multiway_mergesort.h`.

References `__gnu_parallel::PMWMSortingData< _RAIter >::_M_num_threads`, `__gnu_parallel::PMWMSortingData< _RAIter >::_M_pieces`, `__gnu_parallel::PMWMSortingData< _RAIter >::_M_source`, `__gnu_parallel::PMWMSortingData< _RAIter >::_M_starts`, `__gnu_parallel::PMWMSortingData< _RAIter >::_M_temporary`, `__gnu_parallel::Settings::get()`, `std::make_pair()`, `__gnu_parallel::Settings::sort_mwms_oversampling`, and `std::uninitialized_copy()`.

#### 4.6.5 Variable Documentation

##### 4.6.5.1 `const int __gnu_parallel::_CASable_bits` `[static]`

Number of bits of `_CASable`.

Definition at line 130 of file `types.h`.

Referenced by `__decode2()`, and `__encode2()`.

##### 4.6.5.2 `const _CASable __gnu_parallel::_CASable_mask` `[static]`

`_CASable` with the right half of bits set to 1.

Definition at line 133 of file `types.h`.

Referenced by `__decode2()`.

#### 4.8.1 Detailed Description

GNU profile code for public use.

#### 4.8.2 Typedef Documentation

##### 4.8.2.1 `typedef std:: ::unordered_map<std::string, std::string> __gnu_profile::__env_t`

Internal environment. Values can be set one of two ways: 1. In config file "var = value". The default config file path is libstdcxx-profile.conf. 2. By setting process environment variables. For instance, in a Bash shell you can set the unit cost of iterating through a

map like this: `export __map_iterate_cost_factor=5.0`. If a value is set both in the input file and through an environment variable, the environment value takes precedence.

Definition at line 72 of file `profiler_trace.h`.

### 4.8.3 Function Documentation

#### 4.8.3.1 `__gnu_cxx::__mutex& __gnu_profile::__get__global_lock ( )` `[inline]`

Master lock.

Definition at line 77 of file `profiler_trace.h`.

#### 4.8.3.2 `bool __gnu_profile::__profcxx_init ( )` `[inline]`

This function must be called by each instrumentation point.

The common path is inlined fully.

Definition at line 656 of file `profiler_trace.h`.

#### 4.8.3.3 `void __gnu_profile::__report ( void )` `[inline]`

Final report method, registered with `atexit`.

This can also be called directly by user code, including signal handlers. It is protected against deadlocks by the reentrance guard in [profiler.h](#). However, when called from a signal handler that triggers while within `__gnu_profile` (under the guarded zone), no output will be produced.

Definition at line 447 of file `profiler_trace.h`.

References `std::min()`.

## 4.9 `__gnu_sequential` Namespace Reference

GNU sequential classes for public use.

### 4.9.1 Detailed Description

GNU sequential classes for public use.

## 4.10 abi Namespace Reference

The cross-vendor C++ Application Binary Interface. A namespace alias to `__cxxabiv1`, but user programs should use the alias `'abi'`.

### 4.10.1 Detailed Description

The cross-vendor C++ Application Binary Interface. A namespace alias to `__cxxabiv1`, but user programs should use the alias `'abi'`. A brief overview of an ABI is given in the `libstdc++` FAQ, question 5.8 (you may have a copy of the FAQ locally, or you can view the online version at <http://gcc.gnu.org/onlinedocs/libstdc++/faq/index.html#5-8>).

GCC subscribes to a cross-vendor ABI for C++, sometimes called the IA64 ABI because it happens to be the native ABI for that platform. It is summarized at <http://www.codesourcery.com/cxx-abi/> along with the current specification.

For users of GCC greater than or equal to 3.x, entry points are available in `<cxxabi.h>`, which notes, *'It is not normally necessary for user programs to include this header, or use the entry points directly. However, this header is available should that be needed.'*

## 4.11 std Namespace Reference

ISO C++ entities toplevel namespace is `std`.

*add\_lvalue\_reference*
- struct `add_pointer`  
*add\_pointer*
- struct `add_rvalue_reference`  
*add\_rvalue\_reference*
- struct `add_volatile`  
*add\_volatile*
- struct `adopt_lock_t`

*Assume the calling thread has already obtained mutex ownership /// and manage it.*

- struct `aligned_storage`

*Alignment type.*

- struct `alignment_of`  
`alignment_of`

- class `allocator`

*The standard allocator, as per [20.4].*

*Further details: <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt04ch11.html>.*

- class `allocator< void >`

*allocator<void> specialization.*

- struct `allocator_arg_t`

*[allocator.tag]*

- struct `array`

*A standard container for storing a fixed size sequence of elements.*

- struct `atomic`

*atomic /// 29.4.3, Generic atomic type, primary class template.*

- struct `atomic< _Tp * >`

*Partial specialization for pointer types.*

- struct `atomic< bool >`

*Explicit specialization for bool.*

- struct `atomic< char >`

*Explicit specialization for char.*

- struct `atomic< char16_t >`

*Explicit specialization for char16\_t.*

- struct `atomic< char32_t >`

*Explicit specialization for char32\_t.*

- struct `atomic< int >`

*Explicit specialization for int.*

- struct `atomic< long >`

*Explicit specialization for long.*

- struct `atomic< long long >`

*Explicit specialization for long long.*

- struct `atomic< short >`

*Explicit specialization for short.*

- struct `atomic< signed char >`

*Explicit specialization for signed char.*

- struct `atomic< unsigned char >`

*Explicit specialization for unsigned char.*

- struct `atomic< unsigned int >`

*Explicit specialization for unsigned int.*

- struct `atomic< unsigned long >`

*Explicit specialization for unsigned long.*

- struct `atomic< unsigned long long >`

*Explicit specialization for unsigned long long.*

- struct `atomic< unsigned short >`

*Explicit specialization for unsigned short.*

- struct `atomic< wchar_t >`

*Explicit specialization for wchar\_t.*

- struct `atomic_bool`

*atomic\_bool*

- class `auto_ptr`

*A simple smart pointer providing strict ownership semantics.*

- struct `auto_ptr_ref`

- class `back_insert_iterator`

*Turns assignment into insertion.*

- class `bad_alloc`

*Exception possibly thrown by new.*

*bad\_alloc (or classes derived from it) is used to report allocation errors from the throwing forms of new.*

- class `bad_cast`  
*Thrown during incorrect typecasting.  
If you attempt an invalid `dynamic_cast` expression, an instance of this class (or something derived from this class) is thrown.*
- class `bad_exception`
- class `bad_function_call`  
*Exception class thrown when class template function's `operator()` is called with an empty target.*
- class `bad_typeid`  
*Thrown when a `NULL` pointer in a `typeid` expression is used.*
- class `bad_weak_ptr`  
*Exception possibly thrown by `shared_ptr`.*
- class `basic_filebuf`  
*The actual work of input and output (for files).  
This class associates both its input and output sequence with an external disk file, and maintains a joint file position for both sequences. Many of its semantics are described in terms of similar behavior in the Standard C Library's `FILE` streams.*
- class `basic_fstream`  
*Controlling input and output for files.  
This class supports reading from and writing to named files, using the inherited functions from `std::basic_istream`. To control the associated sequence, an instance of `std::basic_filebuf` is used, which this page refers to as `sb`.*
- class `basic_ifstream`  
*Controlling input for files.  
This class supports reading from named files, using the inherited functions from `std::basic_istream`. To control the associated sequence, an instance of `std::basic_filebuf` is used, which this page refers to as `sb`.*
- class `basic_ios`  
*Virtual base class for all stream classes.  
Most of the member functions called dispatched on stream objects (e.g., `std::cout.foo(bar);`) are consolidated in this class.*
- class `basic_istream`  
*Merging `istream` and `ostream` capabilities.  
This class multiply inherits from the input and output stream classes simply to provide a single interface.*

- class `basic_istream`  
*Controlling input.*  
*This is the base class for all input streams. It provides text formatting of all builtin types, and communicates with any class derived from `basic_streambuf` to do the actual input.*
- class `basic_istreamstream`  
*Controlling input for `std::string`.*  
*This class supports reading from objects of type `std::basic_string`, using the inherited functions from `std::basic_istream`. To control the associated sequence, an instance of `std::basic_stringbuf` is used, which this page refers to as `sb`.*
- class `basic_ofstream`  
*Controlling output for files.*  
*This class supports reading from named files, using the inherited functions from `std::basic_ostream`. To control the associated sequence, an instance of `std::basic_filebuf` is used, which this page refers to as `sb`.*
- class `basic_ostream`  
*Controlling output.*  
*This is the base class for all output streams. It provides text formatting of all builtin types, and communicates with any class derived from `basic_streambuf` to do the actual output.*
- class `basic_ostreamstream`  
*Controlling output for `std::string`.*  
*This class supports writing to objects of type `std::basic_string`, using the inherited functions from `std::basic_ostream`. To control the associated sequence, an instance of `std::basic_stringbuf` is used, which this page refers to as `sb`.*
- class `basic_regex`
- class `basic_streambuf`  
*The actual work of input and output (interface).*  
*This is a base class. Derived stream buffers each control a pair of character sequences: one for input, and one for output.*
- class `basic_string`  
*Managing sequences of characters and character-like objects.*
- class `basic_stringbuf`  
*The actual work of input and output (for `std::string`).*  
*This class associates either or both of its input and output sequences with a sequence of characters, which can be initialized from, or made available as, a `std::basic_string`. (Paraphrased from [27.7.1]/1.).*

- class [basic\\_stringstream](#)  
*Controlling input and output for `std::string`.  
This class supports reading from and writing to objects of type `std::basic_string`, using the inherited functions from `std::basic_istream`. To control the associated sequence, an instance of `std::basic_stringbuf` is used, which this page refers to as `sb`.*
- class [bernoulli\\_distribution](#)  
*A Bernoulli random number distribution.*
- struct [bidirectional\\_iterator\\_tag](#)  
*Bidirectional iterators support a superset of forward iterator /// operations.*
- struct [binary\\_function](#)
- class [binary\\_negate](#)  
*One of the *negation functors*.*
- class [binder1st](#)  
*One of the *binder functors*.*
- class [binder2nd](#)  
*One of the *binder functors*.*
- class [binomial\\_distribution](#)  
*A discrete binomial random number distribution.*
- class [bitset](#)  
*The `bitset` class represents a fixed-size sequence of bits.*
- class [cauchy\\_distribution](#)  
*A *cauchy\_distribution* random number distribution.*
- struct [char\\_traits](#)  
*Basis for explicit traits specializations.*
- struct [char\\_traits< \\_\\_gnu\\_cxx::character< V, I, S > >](#)  
*`char_traits<__gnu_cxx::character>` specialization.*
- struct [char\\_traits< char >](#)  
*21.1.3.1 *char\_traits* specializations*
- struct [char\\_traits< wchar\\_t >](#)  
*21.1.3.2 *char\_traits* specializations*

- class [chi\\_squared\\_distribution](#)  
*A [chi\\_squared\\_distribution](#) random number distribution.*
- class [codecvt](#)  
*Primary class template [codecvt](#).  
NB: Generic, mostly useless implementation.*
- class [codecvt<\\_InternT, \\_ExternT, encoding\\_state >](#)  
*[codecvt<InternT, \\_ExternT, encoding\\_state>](#) specialization.*
- class [codecvt<char, char, mbstate\\_t >](#)  
*class [codecvt<char, char, mbstate\\_t>](#) specialization.*
- class [codecvt<wchar\\_t, char, mbstate\\_t >](#)  
*class [codecvt<wchar\\_t, char, mbstate\\_t>](#) specialization.*
- class [codecvt\\_base](#)  
*Empty base class for [codecvt](#) facet [22.2.1.5].*
- class [codecvt\\_byname](#)  
*class [codecvt\\_byname](#) [22.2.1.6].*
- class [collate](#)  
*Facet for localized string comparison.*
- class [collate\\_byname](#)  
*class [collate\\_byname](#) [22.2.4.2].*
- struct [complex](#)
- class [condition\\_variable](#)  
*[condition\\_variable](#)*
- class [condition\\_variable\\_any](#)  
*[condition\\_variable\\_any](#)*
- struct [conditional](#)  
*[conditional](#)*
- class [const\\_mem\\_fun1\\_ref\\_t](#)  
*One of the [adaptors](#) for member /// pointers.*
- class [const\\_mem\\_fun1\\_t](#)

One of the *adaptors for member /// pointers*.

- class `const_mem_fun_ref_t`

One of the *adaptors for member /// pointers*.

- class `const_mem_fun_t`

One of the *adaptors for member /// pointers*.

- class `ctype`

Primary class template `ctype` facet.

This template class defines classification and conversion functions for character sets.

It wraps `cctype` functionality. `Ctype` gets used by streams for many I/O operations.

- class `ctype< char >`

The `ctype<char>` specialization.

This class defines classification and conversion functions for the `char` type. It gets used by `char` streams for many I/O operations. The `char` specialization provides a number of optimizations as well.

- class `ctype< wchar_t >`

The `ctype<wchar_t>` specialization.

This class defines classification and conversion functions for the `wchar_t` type. It gets used by `wchar_t` streams for many I/O operations. The `wchar_t` specialization provides a number of optimizations as well.

- struct `ctype_base`

Base class for `ctype`.

- class `ctype_byname`

class `ctype_byname` [22.2.1.2].

- class `ctype_byname< char >`

22.2.1.4 Class `ctype_byname` specializations.

- class `decay`

*decay*

- struct `default_delete`

Primary template, *default\_delete*.

- struct `default_delete< _Tp[ ]>`

Specialization, *default\_delete*.

- struct `defer_lock_t`

*Do not acquire ownership of the mutex.*

- class `deque`  
*A standard container using fixed-size memory allocation and constant-time manipulation of elements at either end.*
- class `discard_block_engine`
- class `discrete_distribution`  
*A `discrete_distribution` random number distribution.*
- struct `divides`  
*One of the `math functors`.*
- class `domain_error`
- struct `enable_if`  
*`enable_if`*
- class `enable_shared_from_this`  
*Base class allowing use of member function `shared_from_this`.*
- struct `equal_to`  
*One of the `comparison functors`.*
- class `error_category`  
*`error_category`*
- struct `error_code`  
*`error_code`*
- struct `error_condition`  
*`error_condition`*
- class `exception`  
*Base class for all library exceptions.*
- class `exponential_distribution`  
*An exponential continuous distribution for random numbers.*
- struct `extent`  
*`extent`*
- class `extreme_value_distribution`  
*A `extreme_value_distribution` random number distribution.*

- class [fisher\\_f\\_distribution](#)  
*A [fisher\\_f\\_distribution](#) random number distribution.*
- struct [forward\\_iterator\\_tag](#)  
*Forward iterators support a superset of input iterator operations.*
- class [forward\\_list](#)  
*A standard container with linear time access to elements, and fixed time insertion/deletion at any point in the sequence.*
- class [fpos](#)  
*Class representing stream positions.*
- class [front\\_insert\\_iterator](#)  
*Turns assignment into insertion.*
- class [function< \\_Res\(\\_ArgTypes...\)>](#)  
*Primary class template for `std::function`.  
Polymorphic function wrapper.*
- class [future](#)  
*Primary template for future.*
- class [future< \\_Res & >](#)  
*Partial specialization for `future<R&>`*
- class [future< void >](#)  
*Explicit specialization for `future<void>`*
- class [future\\_error](#)  
*Exception type thrown by futures.*
- class [gamma\\_distribution](#)  
*A gamma continuous distribution for random numbers.*
- class [geometric\\_distribution](#)  
*A discrete geometric random number distribution.*
- struct [greater](#)  
*One of the [comparison functors](#).*
- struct [greater\\_equal](#)

One of the *comparison functors*.

- class [gslice](#)  
*Class defining multi-dimensional subset of an array.*
- class [gslice\\_array](#)  
*Reference to multi-dimensional subset of an array.*
- struct [has\\_nothrow\\_copy\\_assign](#)  
*has\_nothrow\_copy\_assign*
- struct [has\\_nothrow\\_copy\\_constructor](#)  
*has\_nothrow\_copy\_constructor*
- struct [has\\_nothrow\\_default\\_constructor](#)  
*has\_nothrow\_default\_constructor*
- struct [has\\_trivial\\_copy\\_assign](#)  
*has\_trivial\_copy\_assign*
- struct [has\\_trivial\\_copy\\_constructor](#)  
*has\_trivial\_copy\_constructor*
- struct [has\\_trivial\\_default\\_constructor](#)  
*has\_trivial\_default\_constructor*
- struct [has\\_trivial\\_destructor](#)  
*has\_trivial\_destructor*
- struct [has\\_virtual\\_destructor](#)  
*has\_virtual\_destructor*
- struct [hash](#)  
*Primary class template hash.*
- struct [hash< \\_\\_debug::bitset< \\_Nb > >](#)  
*std::hash specialization for bitset.*
- struct [hash< \\_\\_debug::vector< bool, \\_Alloc > >](#)  
*std::hash specialization for vector<bool>.*
- struct [hash< \\_\\_gnu\\_cxx::throw\\_value\\_limit >](#)

Explicit specialization of `std::hash` for `__gnu_cxx::throw_value_limit`.

- struct `hash< __gnu_cxx::throw_value_random >`  
*Explicit specialization of `std::hash` for `__gnu_cxx::throw_value_limit`.*
- struct `hash< __profile::bitset< _Nb > >`  
*`std::hash` specialization for `bitset`.*
- struct `hash< __profile::vector< bool, _Alloc > >`  
*`std::hash` specialization for `vector<bool>`.*
- struct `hash< __shared_ptr< _Tp, _Lp > >`  
*`std::hash` specialization for `__shared_ptr`.*
- struct `hash< _Tp * >`  
*Partial specializations for pointer types.*
- struct `hash< error_code >`  
*`std::hash` specialization for `error_code`.*
- struct `hash< shared_ptr< _Tp > >`  
*`std::hash` specialization for `shared_ptr`.*
- struct `hash< string >`  
*`std::hash` specialization for `string`.*
- struct `hash< thread::id >`  
*`std::hash` specialization for `thread::id`.*
- struct `hash< type_index >`  
*`std::hash` specialization for `type_index`.*
- struct `hash< u16string >`  
*`std::hash` specialization for `u16string`.*
- struct `hash< u32string >`  
*`std::hash` specialization for `u32string`.*
- struct `hash< unique_ptr< _Tp, _Dp > >`  
*`std::hash` specialization for `unique_ptr`.*
- struct `hash< wstring >`

*std::hash specialization for wstring.*

- struct `hash<::bitset< _Nb > >`

*std::hash specialization for bitset.*

- struct `hash<::vector< bool, _Alloc > >`

*std::hash specialization for vector<bool>.*

- class `independent_bits_engine`

- class `indirect_array`

*Reference to arbitrary subset of an array.*

- class `initializer_list`

*initializer\_list*

- struct `input_iterator_tag`

*Marking input iterators.*

- class `insert_iterator`

*Turns assignment into insertion.*

- struct `integral_constant`

*integral\_constant*

- class `invalid_argument`

- class `ios_base`

*The base of the I/O class hierarchy.*

*This class defines everything that can be defined about I/O that does not depend on the type of characters being input or output. Most people will only see `ios_base` when they need to specify the full name of the various I/O flags (e.g., the openmodes).*

- struct `is_abstract`

*is\_abstract*

- struct `is_arithmetic`

*is\_arithmetic*

- struct `is_array`

*is\_array*

- struct `is_base_of`

*is\_base\_of*

- struct [is\\_bind\\_expression](#)  
*Determines if the given type `_Tp` is a function object should be treated as a subexpression when evaluating calls to function objects returned by [bind\(\)](#). [TR1 3.6.1].*
- struct [is\\_bind\\_expression< \\_Bind< \\_Signature > >](#)  
*Class template `_Bind` is always a bind expression.*

*is\_void*

- struct `is_volatile`

*is\_volatile*

- class `istream_iterator`

*Provides input iterator semantics for streams.*

- class `istreambuf_iterator`

*Provides input iterator semantics for streambufs.*

- struct `iterator`

*Common iterator class.*

- struct `iterator_traits< _Tp * >`

*Partial specialization for pointer types.*

- struct `iterator_traits< const _Tp * >`

*Partial specialization for const pointer types.*

- class `length_error`

- struct `less`

*One of the [comparison functors](#).*

- struct `less_equal`

*One of the [comparison functors](#).*

- class `linear_congruential_engine`

*A model of a linear congruential random number generator.*

- class `list`

*A standard container with linear time access to elements, and fixed time insertion/deletion at any point in the sequence.*

- class `locale`

*Container class for localization functionality.*

*The locale class is first a class wrapper for C library locales. It is also an extensible container for user-defined localization. A locale is a collection of facets that implement various localization features such as money, time, and number printing.*

- class `lock_guard`

*Scoped lock idiom.*

- class `logic_error`

*One of two subclasses of exception.*

- struct `logical_and`

*One of the [Boolean operations functors](#).*

- struct `logical_not`

*One of the [Boolean operations functors](#).*

- struct `logical_or`

*One of the [Boolean operations functors](#).*

- class [lognormal\\_distribution](#)  
*A [lognormal\\_distribution](#) random number distribution.*
- struct [make\\_signed](#)  
*[make\\_signed](#)*
- struct [make\\_unsigned](#)  
*[make\\_unsigned](#)*
- class [map](#)  
*A standard container made up of (key,value) pairs, which can be retrieved based on a key, in logarithmic time.*
- class [mask\\_array](#)  
*Reference to selected subset of an array.*
- class [match\\_results](#)  
*The results of a match or search operation.*
- class [mem\\_fun1\\_ref\\_t](#)  
*One of the [adaptors](#) for member /// pointers.*
- class [mem\\_fun1\\_t](#)

*A normal continuous distribution for random numbers.*
- struct [not\\_equal\\_to](#)  
*One of the [comparison functors](#).*
- class [num\\_get](#)  
*Primary class template [num\\_get](#).  
This facet encapsulates the code to parse and return a number from a string. It is used by the istream numeric extraction operators.*
- class [num\\_put](#)  
*Primary class template [num\\_put](#).  
This facet encapsulates the code to convert a number to a string. It is used by the ostream numeric insertion operators.*
- struct [numeric\\_limits](#)  
*Properties of fundamental types.*
- struct [numeric\\_limits< bool >](#)  
*[numeric\\_limits<bool>](#) specialization.*
- struct [numeric\\_limits< char >](#)  
*[numeric\\_limits<char>](#) specialization.*
- struct [numeric\\_limits< char16\\_t >](#)  
*[numeric\\_limits<char16\\_t>](#) specialization.*
- struct [numeric\\_limits< char32\\_t >](#)  
*[numeric\\_limits<char32\\_t>](#) specialization.*
- struct [numeric\\_limits< double >](#)  
*[numeric\\_limits<double>](#) specialization.*
- struct [numeric\\_limits< float >](#)  
*[numeric\\_limits<float>](#) specialization.*

- struct `numeric_limits< int >`  
*`numeric_limits<int>` specialization.*
- struct `numeric_limits< long >`  
*`numeric_limits<long>` specialization.*
- struct `numeric_limits< long double >`  
*`numeric_limits<long double>` specialization.*
- struct `numeric_limits< long long >`  
*`numeric_limits<long long>` specialization.*
- struct `numeric_limits< short >`  
*`numeric_limits<short>` specialization.*
- struct `numeric_limits< signed char >`  
*`numeric_limits<signed char>` specialization.*
- struct `numeric_limits< unsigned char >`  
*`numeric_limits<unsigned char>` specialization.*
- struct `numeric_limits< unsigned int >`  
*`numeric_limits<unsigned int>` specialization.*
- struct `numeric_limits< unsigned long >`  
*`numeric_limits<unsigned long>` specialization.*
- struct `numeric_limits< unsigned long long >`  
*`numeric_limits<unsigned long long>` specialization.*
- struct `numeric_limits< unsigned short >`  
*`numeric_limits<unsigned short>` specialization.*
- struct `numeric_limits< wchar_t >`  
*`numeric_limits<wchar_t>` specialization.*
- class `numpunct`  
*Primary class template `numpunct`.  
This facet stores several pieces of information related to printing and scanning numbers, such as the decimal point character. It takes a template parameter specifying the char type. The `numpunct` facet is used by streams for many I/O operations involving numbers.*

- class `numpunct_byname`  
*class `numpunct_byname` [22.2.3.2].*
- struct `once_flag`  
*`once_flag`*
- class `ostream_iterator`  
*Provides output iterator semantics for streams.*
- class `ostreambuf_iterator`  
*Provides output iterator semantics for streambufs.*
- class `out_of_range`
- struct `output_iterator_tag`  
*Marking output iterators.*
- class `overflow_error`
- struct `owner_less< shared_ptr< _Tp > >`  
*Partial specialization of `owner_less` for `shared_ptr`.*
- struct `owner_less< weak_ptr< _Tp > >`  
*Partial specialization of `owner_less` for `weak_ptr`.*
- class `packaged_task< _Res(_ArgTypes...)>`  
*`packaged_task`*
- struct `pair`  
*Struct holding two objects of arbitrary type.*
- class `piecewise_constant_distribution`  
*A `piecewise_constant_distribution` random number distribution.*
- struct `piecewise_construct_t`  
*`piecewise_construct_t`*
- class `piecewise_linear_distribution`  
*A `piecewise_linear_distribution` random number distribution.*
- struct `plus`  
*One of the `math` functors.*

- class `pointer_to_binary_function`  
*One of the [adaptors for function pointers](#).*
- class `pointer_to_unary_function`  
*One of the [adaptors for function pointers](#).*
- class `poisson_distribution`  
*A discrete Poisson random number distribution.*
- class `priority_queue`  
*A standard container automatically sorting its contents.*
- class `promise`  
*Primary template for promise.*
- class `promise< _Res & >`  
*Partial specialization for `promise<R&>`*
- class `promise< void >`  
*Explicit specialization for `promise<void>`*
- class `queue`  
*A standard container giving FIFO behavior.*
- struct `random_access_iterator_tag`  
*Random-access iterators support a superset of bidirectional /// iterator operations.*
- class `random_device`
- class `range_error`
- struct `rank`  
*rank*
- struct `ratio`  
*Provides compile-time rational arithmetic.*
- struct `ratio_add`  
*ratio\_add*
- struct `ratio_divide`  
*ratio\_divide*
- struct `ratio_equal`

*ratio\_equal*

- struct `ratio_multiply`

*ratio\_multiply*

- struct `ratio_not_equal`

*ratio\_not\_equal*

- struct `ratio_subtract`

*ratio\_subtract*

- class `raw_storage_iterator`

- class `recursive_mutex`

*recursive\_mutex*

- class `recursive_timed_mutex`

*recursive\_timed\_mutex*

- class `reference_wrapper`

*Primary class template for `reference_wrapper`.*

- class `regex_error`

*A regular expression exception class.*

*The regular expression library throws objects of this class on error.*

- class `regex_iterator`

- class `regex_token_iterator`

- struct `regex_traits`

*Describes aspects of a regular expression.*

- struct `remove_all_extents`

*remove\_all\_extents*

- struct `remove_const`

*remove\_const*

- struct `remove_cv`

*remove\_cv*

- struct `remove_extent`

*remove\_extent*

- struct `remove_pointer`

*remove\_pointer*

- struct `remove_reference`

*remove\_reference*

- struct `remove_volatile`

*remove\_volatile*

- class `reverse_iterator`

- class `runtime_error`

*One of two subclasses of exception.*

- class `seed_seq`

*The `seed_seq` class generates sequences of seeds for random number generators.*

- class `set`

*A standard container made up of unique keys, which can be retrieved in logarithmic time.*

- class `shared_future`

*Primary template for `shared_future`.*

- class `shared_future< _Res & >`

*Partial specialization for `shared_future<R&>`*

- class `shared_future< void >`

*Explicit specialization for `shared_future<void>`*

- class `shared_ptr`

*A smart pointer with reference-counted copy semantics.*

- class `shuffle_order_engine`

*Produces random numbers by combining random numbers from some base engine to produce random numbers with a specifies number of bits `___w`.*

- class `slice`

*Class defining one-dimensional subset of an array.*

- class `slice_array`

*Reference to one-dimensional subset of an array.*

- class `stack`

*A standard container giving FILO behavior.*

- class `student_t_distribution`  
*A `student_t_distribution` random number distribution.*
- class `sub_match`
- class `system_error`  
*Thrown to indicate error code of underlying system.*
- class `thread`  
*thread*
- class `time_base`  
*Time format ordering data.  
This class provides an enum representing different orderings of time: day, month, and year.*
- class `time_get`  
*Primary class template `time_get`.  
This facet encapsulates the code to parse and return a date or time from a string. It is used by the istream numeric extraction operators.*
- class `time_get_byname`  
*class `time_get_byname` [22.2.5.2].*
- class `time_put`  
*Primary class template `time_put`.  
This facet encapsulates the code to format and output dates and times according to formats used by `strftime()`.*
- class `time_put_byname`  
*class `time_put_byname` [22.2.5.4].*
- class `timed_mutex`  
*timed\_mutex*
- struct `try_to_lock_t`  
*Try to acquire ownership of the mutex without blocking.*
- class `tuple`  
*tuple*
- class `tuple<_T1>`  
*tuple (1-element).*

- class `tuple< _T1, _T2 >`  
*tuple (2-element), with construction and assignment from a pair.*
- struct `tuple_element< 0, tuple< _Head, _Tail...> >`
- struct `tuple_element< __i, tuple< _Head, _Tail...> >`
- struct `tuple_size< tuple< _Elements...> >`  
*class tuple\_size*
- struct `type_index`  
*The class `type_index` provides a simple wrapper for `type_info` which can be used as an index type in associative containers (23.6) and in unordered associative containers (23.7).*
- class `type_info`  
*Part of RTTI.*
- struct `unary_function`
- class `unary_negate`  
*One of the *negation functors*.*
- class `underflow_error`
- class `uniform_int_distribution`  
*Uniform discrete distribution for random numbers. A discrete random distribution on the range  $[min, max]$  with equal probability throughout the range.*
- class `uniform_real_distribution`  
*Uniform continuous distribution for random numbers.*
- class `unique_lock`  
*unique\_lock*
- class `unique_ptr`  
*20.7.12.2 `unique_ptr` for single objects.*
- class `unique_ptr< _Tp[ ], _Dp >`  
*20.7.12.3 `unique_ptr` for array objects with a runtime length*
- class `unordered_map`  
*A standard container composed of unique keys (containing at most one of each key value) that associates values of another type with the keys.*
- class `unordered_multimap`

*A standard container composed of equivalent keys (possibly containing multiple of each key value) that associates values of another type with the keys.*

- class [unordered\\_multiset](#)

*A standard container composed of equivalent keys (possibly containing multiple of each key value) in which the elements' keys are the elements themselves.*

- class [unordered\\_set](#)

*A standard container composed of unique keys (containing at most one of each key value) in which the elements' keys are the elements themselves.*

- struct [uses\\_allocator](#)

*[allocator.uses.trait]*

- class [valarray](#)

*Smart array designed to support numeric processing.*

- class [vector](#)

*A standard container which offers fixed time access to individual elements in any order.*

- class [vector< bool, \\_Alloc >](#)

*A specialization of vector for booleans which offers fixed time access to individual elements in any order.*

- class [weak\\_ptr](#)

*A smart pointer with weak semantics.*

- class [weibull\\_distribution](#)

*A [weibull\\_distribution](#) random number distribution.*

Standard Stream Objects

The `<iostream>` header declares the eight standard stream objects. For other declarations, see <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch24.html> and the *I/O forward declarations*

They are required by default to cooperate with the global C library's `FILE` streams, and to be available during program startup and termination. For more information, see the *HOWTO* linked to above.

4.11.1 Detailed Description

ISO C++ entities toplevel namespace is std.

4.11.2 Typedef Documentation

4.11.2.1 typedef void(* std::new_handler)()

If you write your own error handler to be called by `new`, it must be of this type.
Definition at line 75 of file `new`.

4.11.2.2 typedef long long std::streamoff

Type used by `fpos`, [char_traits<char>](#), and [char_traits<wchar_t>](#).

In clauses 21.1.3.1 and 27.4.1 `streamoff` is described as an implementation defined type. Note: In versions of GCC up to and including GCC 3.3, `streamoff` was typedef `long`.

Definition at line 96 of file `postypes.h`.

4.11.2.3 typedef fpos<mbstate_t> std::streampos

File position for char streams.

Definition at line 230 of file postypes.h.

4.11.2.4 typedef ptrdiff_t std::streamsize

Integral type for I/O operation counts and buffer sizes.

Definition at line 100 of file postypes.h.

4.11.2.5 typedef fpos<mbstate_t> std::u16streampos

File position for char16_t streams.

Definition at line 236 of file postypes.h.

4.11.2.6 typedef fpos<mbstate_t> std::u32streampos

File position for char32_t streams.

Definition at line 238 of file postypes.h.

4.11.2.7 typedef fpos<mbstate_t> std::wstreampos

File position for wchar_t streams.

Definition at line 232 of file postypes.h.

4.11.3 Enumeration Type Documentation

4.11.3.1 anonymous enum

Todo

Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html This controls some aspect of the sort routines.

Definition at line 2171 of file stl_algo.h.

4.11.3.2 enum std::float_denorm_style

Describes the denormalization for floating-point types.

These values represent the presence or absence of a variable number of exponent bits. This type is used in the [std::numeric_limits](#) class.

Enumerator:

denorm_indeterminate Indeterminate at compile time whether denormalized values are allowed.

denorm_absent The type does not allow denormalized values.

denorm_present The type allows denormalized values.

Definition at line 172 of file limits.

4.11.3.3 enum std::float_round_style

Describes the rounding style for floating-point types.

This is used in the [std::numeric_limits](#) class.

Enumerator:

round_toward_zero Intermediate.

round_to_nearest To zero.

round_toward_infinity To the nearest representable value.

round_toward_neg_infinity To infinity.

Definition at line 157 of file limits.

4.11.4 Function Documentation

4.11.4.1 template<typename _RandomAccessIterator > void std::__final_insertion_sort (_RandomAccessIterator __first, _RandomAccessIterator __last)

This is a helper function for the sort routine.

Definition at line 2176 of file stl_algo.h.

References [__insertion_sort\(\)](#), and [__unguarded_insertion_sort\(\)](#).

Referenced by [sort\(\)](#).

4.11.4.2 `template<typename _RandomAccessIterator, typename _Compare >
void std::__final_insertion_sort (_RandomAccessIterator __first,
_RandomAccessIterator __last, _Compare __comp)`

This is a helper function for the sort routine.

Definition at line 2191 of file `stl_algo.h`.

References `__insertion_sort()`, and `__unguarded_insertion_sort()`.

4.11.4.3 `template<typename _InputIterator, typename _Tp > _InputIterator
std::__find (_InputIterator __first, _InputIterator __last, const _Tp
& __val, input_iterator_tag) [inline]`

This is an overload used by `find()` for the Input Iterator case.

Definition at line 132 of file `stl_algo.h`.

Referenced by `find()`.

4.11.4.4 `template<typename _RandomAccessIterator, typename _Tp >
_RandomAccessIterator std::__find (_RandomAccessIterator
__first, _RandomAccessIterator __last, const _Tp & __val,
random_access_iterator_tag)`

This is an overload used by `find()` for the RAI case.

Definition at line 154 of file `stl_algo.h`.

4.11.4.5 `template<typename _InputIterator, typename _Predicate >
_InputIterator std::__find_if (_InputIterator __first, _InputIterator
__last, _Predicate __pred, input_iterator_tag) [inline]`

This is an overload used by `find_if()` for the Input Iterator case.

Definition at line 143 of file `stl_algo.h`.

Referenced by `find_if()`.

4.11.4.6 `template<typename _RandomAccessIterator, typename _Predicate >
_RandomAccessIterator std::__find_if (_RandomAccessIterator
__first, _RandomAccessIterator __last, _Predicate __pred,
random_access_iterator_tag)`

This is an overload used by `find_if()` for the RAI case.

Definition at line 202 of file `stl_algo.h`.

4.11.4.7 `template<typename _InputIterator, typename _Predicate >
_InputIterator std::__find_if_not (_InputIterator __first,
_InputIterator __last, _Predicate __pred, input_iterator_tag)
[inline]`

This is an overload used by `find_if_not()` for the Input Iterator case.

Definition at line 251 of file `stl_algo.h`.

Referenced by `find_if_not()`.

4.11.4.8 `template<typename _RandomAccessIterator, typename _Predicate >
_RandomAccessIterator std::__find_if_not (_RandomAccessIterator
__first, _RandomAccessIterator __last, _Predicate __pred,
random_access_iterator_tag)`

This is an overload used by `find_if_not()` for the RAI case.

Definition at line 262 of file `stl_algo.h`.

4.11.4.9 `template<typename _EuclideanRingElement >
_EuclideanRingElement std::__gcd (_EuclideanRingElement __m,
_EuclideanRingElement __n)`

This is a helper function for the rotate algorithm specialized on RAIs. It returns the greatest common divisor of two integer values.

Definition at line 1491 of file `stl_algo.h`.

4.11.4.10 `template<typename _RandomAccessIterator > void
std::__heap_select (_RandomAccessIterator __first,
_RandomAccessIterator __middle, _RandomAccessIterator __last)`

This is a helper function for the sort routines.

Definition at line 1899 of file `stl_algo.h`.

References `make_heap()`.

Referenced by `partial_sort()`.

4.11.4.11 `template<typename _RandomAccessIterator , typename _Compare
> void std::__heap_select (_RandomAccessIterator __first,
_RandomAccessIterator __middle, _RandomAccessIterator __last,
_Compare __comp)`

This is a helper function for the sort routines.

Definition at line 1912 of file `stl_algo.h`.

References `make_heap()`.

4.11.4.12 `template<typename _ForwardIterator , typename
_Predicate , typename _Distance > _ForwardIterator
std::__inplace_stable_partition (_ForwardIterator __first,
_ForwardIterator __last, _Predicate __pred, _Distance __len)`

This is a helper function...

Definition at line 1776 of file `stl_algo.h`.

References `advance()`, `distance()`, and `rotate()`.

Referenced by `stable_partition()`.

4.11.4.13 `template<typename _RandomAccessIterator > void
std::__inplace_stable_sort (_RandomAccessIterator __first,
_RandomAccessIterator __last)`

This is a helper function for the stable sorting routines.

Definition at line 3350 of file `stl_algo.h`.

References `__insetion_sort()`, and `__merge_without_buffer()`.

Referenced by `__inplace_stable_sort()`, and `stable_sort()`.

4.11.4.14 `template<typename _RandomAccessIterator, typename _Compare
> void std::__inplace_stable_sort (_RandomAccessIterator __first,
_RandomAccessIterator __last, _Compare __comp)`

This is a helper function for the stable sorting routines.

Definition at line 3369 of file `stl_algo.h`.

References `__inplace_stable_sort()`, `__insetion_sort()`, and `__merge_without_buffer()`.

4.11.4.15 `template<typename _RandomAccessIterator > void
std::__insetion_sort (_RandomAccessIterator __first,
_RandomAccessIterator __last)`

This is a helper function for the sort routine.

Definition at line 2099 of file `stl_algo.h`.

References `__unguarded_linear_insert()`.

Referenced by `__final_insetion_sort()`, and `__inplace_stable_sort()`.

4.11.4.16 `template<typename _RandomAccessIterator, typename _Compare
> void std::__insetion_sort (_RandomAccessIterator __first,
_RandomAccessIterator __last, _Compare __comp)`

This is a helper function for the sort routine.

Definition at line 2122 of file `stl_algo.h`.

References `__unguarded_linear_insert()`.

4.11.4.17 `template<typename _RandomAccessIterator , typename _Size
> void std::__introsort_loop (_RandomAccessIterator __first,
_RandomAccessIterator __last, _Size __depth_limit)`

This is a helper function for the sort routine.

Definition at line 2271 of file `stl_algo.h`.

References `__unguarded_partition_pivot()`.

Referenced by `__introsort_loop()`, and `sort()`.

4.11.4.18 `template<typename _RandomAccessIterator , typename
_Size , typename _Compare > void std::__introsort_loop (
_RandomAccessIterator __first, _RandomAccessIterator __last,
_Size __depth_limit, _Compare __comp)`

This is a helper function for the sort routine.

Definition at line 2293 of file `stl_algo.h`.

References `__introsort_loop()`, and `__unguarded_partition_pivot()`.

4.11.4.19 `template<typename _Size > _Size std::__lg (_Size __n)
[inline]`

This is a helper function for the sort routines and for [random.tcc](#).

Definition at line 972 of file `stl_algbase.h`.

Referenced by `nth_element()`, `std::linear_congruential_engine< _UIntType, __a, __c, __m >::seed()`, and `sort()`.

4.11.4.20 `template<typename _BidirectionalIterator , typename
_Distance , typename _Pointer > void std::__merge_adaptive (
_BidirectionalIterator __first, _BidirectionalIterator __middle,
_BidirectionalIterator __last, _Distance __len1, _Distance __len2,
_Pointer __buffer, _Distance __buffer_size)`

This is a helper function for the merge routines.

Definition at line 2826 of file `stl_algo.h`.

References `__merge_backward()`, `__rotate_adaptive()`, `advance()`, `distance()`, `lower_bound()`, and `upper_bound()`.

Referenced by `__merge_adaptive()`, and `inplace_merge()`.

4.11.4.21 `template<typename _BidirectionalIterator , typename
_Distance , typename _Pointer , typename _Compare >
void std::__merge_adaptive (_BidirectionalIterator __first,
_BidirectionalIterator __middle, _BidirectionalIterator __last,
_Distance __len1, _Distance __len2, _Pointer __buffer, _Distance
__buffer_size, _Compare __comp)`

This is a helper function for the merge routines.

Definition at line 2888 of file `stl_algo.h`.

References `__merge_adaptive()`, `__merge_backward()`, `__rotate_adaptive()`, `advance()`, `distance()`, `lower_bound()`, and `upper_bound()`.

4.11.4.22 `template<typename _BidirectionalIterator1 , typename
_BidirectionalIterator2 , typename _BidirectionalIterator3
> _BidirectionalIterator3 std::__merge_backward (
_BidirectionalIterator1 __first1, _BidirectionalIterator1 __last1,
_BidirectionalIterator2 __first2, _BidirectionalIterator2 __last2,
_BidirectionalIterator3 __result)`

This is a helper function for the merge routines.

Definition at line 2723 of file `stl_algo.h`.

Referenced by `__merge_adaptive()`.

4.11.4.23 `template<typename _BidirectionalIterator1 , typename
_BidirectionalIterator2 , typename _BidirectionalIterator3
, typename _Compare > _BidirectionalIterator3
std::__merge_backward (_BidirectionalIterator1 __first1,
_BidirectionalIterator1 __last1, _BidirectionalIterator2 __first2,
_BidirectionalIterator2 __last2, _BidirectionalIterator3 __result,
_Compare __comp)`

This is a helper function for the merge routines.

Definition at line 2758 of file stl_algo.h.

4.11.4.24 `template<typename _BidirectionalIterator , typename _Distance >
void std::__merge_without_buffer (_BidirectionalIterator __first,
_BidirectionalIterator __middle, _BidirectionalIterator __last,
_Distance __len1, _Distance __len2)`

This is a helper function for the merge routines.

Definition at line 2951 of file stl_algo.h.

References `advance()`, `distance()`, `iter_swap()`, `lower_bound()`, `rotate()`, and `upper_bound()`.

Referenced by `__inplace_stable_sort()`, `__merge_without_buffer()`, and `inplace_merge()`.

4.11.4.25 `template<typename _BidirectionalIterator , typename _Distance
, typename _Compare > void std::__merge_without_buffer (
_BidirectionalIterator __first, _BidirectionalIterator __middle,
_BidirectionalIterator __last, _Distance __len1, _Distance __len2,
_Compare __comp)`

This is a helper function for the merge routines.

Definition at line 2995 of file stl_algo.h.

References `__merge_without_buffer()`, `advance()`, `distance()`, `iter_swap()`, `lower_bound()`, `rotate()`, and `upper_bound()`.

4.11.4.26 `template<typename _Iterator > void std::__move_median_first (
_Iterator __a, _Iterator __b, _Iterator __c)`

Swaps the median value of `*__a`, `*__b` and `*__c` to `*__a`.

Definition at line 80 of file stl_algo.h.

References `iter_swap()`.

Referenced by `__unguarded_partition_pivot()`.

4.11.4.27 `template<typename _Iterator , typename _Compare > void
std::__move_median_first (_Iterator __a, _Iterator __b, _Iterator
__c, _Compare __comp)`

Swaps the median value of *__a, *__b and *__c under __comp to *__a.

Definition at line 104 of file stl_algo.h.

References iter_swap().

4.11.4.28 `template<typename _ForwardIterator , typename _Predicate >
_ForwardIterator std::__partition (_ForwardIterator __first,
_ForwardIterator __last, _Predicate __pred, forward_iterator_tag
)`

This is a helper function...

Definition at line 1721 of file stl_algo.h.

References iter_swap().

Referenced by partition().

4.11.4.29 `template<typename _BidirectionalIterator , typename _Predicate
> _BidirectionalIterator std::__partition (_BidirectionalIterator
__first, _BidirectionalIterator __last, _Predicate __pred,
bidirectional_iterator_tag)`

This is a helper function...

Definition at line 1746 of file stl_algo.h.

References iter_swap().

4.11.4.30 `template<typename _BidirectionalIterator > void std::__reverse
(_BidirectionalIterator __first, _BidirectionalIterator __last,
bidirectional_iterator_tag)`

This is an uglified reverse(_BidirectionalIterator, _BidirectionalIterator) overloaded for bidirectional iterators.

Definition at line 1391 of file stl_algo.h.

References iter_swap().

Referenced by `__rotate()`, and `reverse()`.

4.11.4.31 `template<typename _RandomAccessIterator > void std::__reverse (`
`_RandomAccessIterator __first, _RandomAccessIterator __last,`
`random_access_iterator_tag)`

This is an uglified `reverse(_BidirectionalIterator, _BidirectionalIterator)` overloaded for random access iterators.

Definition at line 1411 of file `stl_algo.h`.

References `iter_swap()`.

4.11.4.32 `template<typename _ForwardIterator > void std::__rotate`
`(_ForwardIterator __first, _ForwardIterator __middle,`
`_FowardIterator __last, forward_iterator_tag)`

This is a helper function for the rotate algorithm.

Definition at line 1505 of file `stl_algo.h`.

References `iter_swap()`.

Referenced by `__gnu_cxx::bitmap_allocator< _Tp >::_M_deallocate_single_object()`, and `rotate()`.

4.11.4.33 `template<typename _BidirectionalIterator > void std::__rotate (`
`_BidirectionalIterator __first, _BidirectionalIterator __middle,`
`_BidirectionalIterator __last, bidirectional_iterator_tag)`

This is a helper function for the rotate algorithm.

Definition at line 1541 of file `stl_algo.h`.

References `__reverse()`, and `iter_swap()`.

4.11.4.34 `template<typename _RandomAccessIterator > void std::__rotate (`
`_RandomAccessIterator __first, _RandomAccessIterator __middle,`
`_RandomAccessIterator __last, random_access_iterator_tag)`

This is a helper function for the rotate algorithm.

Definition at line 1571 of file `stl_algo.h`.

References `iter_swap()`, and `swap_ranges()`.

4.11.4.35 `template<typename _BidirectionalIterator1 , typename
_BidirectionalIterator2 , typename _Distance >
_BidirectionalIterator1 std::__rotate_adaptive (
_BidirectionalIterator1 __first, _BidirectionalIterator1 __middle,
_BidirectionalIterator1 __last, _Distance __len1, _Distance __len2,
_BidirectionalIterator2 __buffer, _Distance __buffer_size)`

This is a helper function for the merge routines.

Definition at line 2794 of file `stl_algo.h`.

References `advance()`, `distance()`, and `rotate()`.

Referenced by `__merge_adaptive()`.

4.11.4.36 `template<typename _ForwardIterator , typename _Integer ,
typename _Tp , typename _BinaryPredicate > _ForwardIterator
std::__search_n (_ForwardIterator __first, _ForwardIterator
__last, _Integer __count, const _Tp & __val, _BinaryPredicate
__binary_pred, std::forward_iterator_tag)`

This is an uglified `search_n(_ForwardIterator, _ForwardIterator, _Integer, const
_Tp&, _BinaryPredicate)` overloaded for forward iterators.

Definition at line 414 of file `stl_algo.h`.

4.11.4.37 `template<typename _RandomAccessIter , typename _Integer ,
typename _Tp , typename _BinaryPredicate > _RandomAccessIter
std::__search_n (_RandomAccessIter __first, _RandomAccessIter
__last, _Integer __count, const _Tp & __val, _BinaryPredicate
__binary_pred, std::random_access_iterator_tag)`

This is an uglified `search_n(_ForwardIterator, _ForwardIterator, _Integer, const
_Tp&, _BinaryPredicate)` overloaded for random access iterators.

Definition at line 453 of file `stl_algo.h`.

4.11.4.38 `template<typename _RandomAccessIter , typename _Integer
, typename _Tp > _RandomAccessIter std::__search_n (`
`_RandomAccessIter __first, _RandomAccessIter __last, _Integer`
`__count, const _Tp & __val, std::random_access_iterator_tag)`

This is an uglified `search_n(_ForwardIterator, _ForwardIterator, _Integer, const _Tp&)` overloaded for random access iterators.

Definition at line 360 of file `stl_algo.h`.

4.11.4.39 `template<typename _ForwardIterator , typename _Integer
, typename _Tp > _ForwardIterator std::__search_n (`
`_ForwardIterator __first, _ForwardIterator __last, _Integer`
`__count, const _Tp & __val, std::forward_iterator_tag)`

This is an uglified `search_n(_ForwardIterator, _ForwardIterator, _Integer, const _Tp&)` overloaded for forward iterators.

Definition at line 328 of file `stl_algo.h`.

Referenced by `search_n()`.

4.11.4.40 `template<typename _ForwardIterator , typename _Pointer ,

Definition at line 1339 of file `stl_algo.h`.

4.11.4.54 `template<typename _InputIterator, typename _ForwardIterator,
typename _BinaryPredicate > _ForwardIterator std::__unique_copy
(_InputIterator __first, _InputIterator __last, _ForwardIterator
 __result, _BinaryPredicate __binary_pred, input_iterator_tag,
 forward_iterator_tag)`

This is an uglified `unique_copy(_InputIterator, _InputIterator, _OutputIterator, _BinaryPredicate)` overloaded for input iterators and forward iterator as result.

Definition at line 1368 of file `stl_algo.h`.

4.11.4.55 `template<typename _T1, typename... _Args> void std::_Construct (
 _T1 * __p, _Args &&... __args) [inline]`

Constructs an object in existing memory by invoking an allocated object's constructor with an initializer.

Definition at line 75 of file `stl_construct.h`.

4.11.4.56 `template<typename _Tp > void std::_Destroy (_Tp * __pointer)
[inline]`

Destroy the object pointed to by a pointer type.

Definition at line 93 of file `stl_construct.h`.

Referenced by `std::deque< _Tp, _Alloc >::_M_fill_initialize()`, `std::deque< _Tp, _Alloc >::_M_range_initialize()`, `std::vector< _Tp, _Alloc >::operator=()`, `std::vector< _Tp, _Alloc >::reserve()`, and `std::vector< std::sub_match< _Bi_iter >, _Allocator >::~~vector()`.

4.11.4.57 `template<typename _ForwardIterator > void std::_Destroy (`
`_FowardIterator __first, _ForwardIterator __last) [inline]`

Destroy a range of objects. If the value_type of the object has a trivial destructor, the compiler should optimize all of this away, otherwise the objects' destructors must be invoked.

Definition at line 123 of file stl_construct.h.

4.11.4.58 `template<typename _InputIterator , typename _Tp > _Tp`
`std::accumulate (_InputIterator __first, _InputIterator __last, _Tp`
`__init) [inline]`

Accumulate values in a range.

Accumulates the values in the range [first,last) using operator+(). The initial value is *init*. The values are processed in order.

Parameters

first Start of range.

last End of range.

init Starting value to add other values to.

Returns

The final sum.

Definition at line 121 of file stl_numeric.h.

4.11.4.59 `template<typename _InputIterator , typename _Tp , typename`
`_BinaryOperation > _Tp std::accumulate (_InputIterator __first,`
`_InputIterator __last, _Tp __init, _BinaryOperation __binary_op)`
`[inline]`

Accumulate values in a range with operation.

Accumulates the values in the range [first,last) using the function object *binary_op*. The initial value is *init*. The values are processed in order.

Parameters

first Start of range.

last End of range.

init Starting value to add other values to.

binary_op Function object to accumulate with.

Returns

The final sum.

Definition at line 147 of file `std_numeric.h`.

4.11.4.60 `template<typename _Tp> std::complex<_Tp> std::acos (const
std::complex<_Tp> & __z) [inline]`

`acos(__z)` [8.1.2].

Definition at line 1580 of file `complex`.

4.11.4.61 `template<typename _Tp> std::complex<_Tp> std::acosh (const
std::complex<_Tp> & __z) [inline]`

`acosh(__z)` [8.1.5].

Definition at line 1699 of file `complex`.

4.11.4.62 `template<typename _Tp> _Tp* std::addressof (_Tp & __r)
[inline]`

`declval`, from `type_traits`.

Returns the actual address of the object or function referenced by `r`, even in the presence of an overloaded operator`&`.

Parameters

`__r` Reference to an object or function.

Returns

The actual address.

Definition at line 96 of file `move.h`.

4.11.4.63 `template<typename _InputIterator, typename _OutputIterator >
_OutputIterator std::adjacent_difference (_InputIterator __first,
_InputIterator __last, _OutputIterator __result)`

Return differences between adjacent values.

Computes the difference between adjacent values in the range [first,last) using operator-() and writes the result to *result*.

Parameters

first Start of input range.

last End of input range.

result Output to write sums to.

Returns

Iterator pointing just beyond the values written to result.

`_GLIBCXX_RESOLVE_LIB_DEFECTS` DR 539. `partial_sum` and `adjacent_difference` should mention requirements

Definition at line 317 of file `std_numeric.h`.

4.11.4.64 `template<typename _InputIterator, typename _OutputIterator
, typename _BinaryOperation > _OutputIterator
std::adjacent_difference (_InputIterator __first, _InputIterator
__last, _OutputIterator __result, _BinaryOperation __binary_op)`

Return differences between adjacent values.

Computes the difference between adjacent values in the range [first,last) using the function object *binary_op* and writes the result to *result*.

Parameters

first Start of input range.

last End of input range.

result Output to write sums to.

Returns

Iterator pointing just beyond the values written to result.

`_GLIBCXX_RESOLVE_LIB_DEFECTS` DR 539. `partial_sum` and `adjacent_difference` should mention requirements

Definition at line 359 of file `stl_numeric.h`.

4.11.4.65 `template<typename _InputIterator, typename _Distance> void
std::advance(_InputIterator & __i, _Distance __n) [inline]`

A generalization of pointer arithmetic.

Parameters

- i* An input iterator.
- n* The *delta* by which to change *i*.

Returns

Nothing.

This increments *i* by *n*. For bidirectional and random access iterators, *n* may be negative, in which case *i* is decremented.

For random access iterators, this uses their `+` and `-` operations and are constant time. For other iterator classes they are linear time.

Definition at line 171 of file `stl_iterator_base_funcs.h`.

References `__iterator_category()`.

std::complex<_Tp> & __z) [inline]`

`asinh(__z)` [8.1.6].

Definition at line 1738 of file `complex`.

4.11.4.69 `template<typename _Tp> std::complex<_Tp> std::atan (const
std::complex<_Tp> & __z) [inline]`

`atan(__z)` [8.1.4].

Definition at line 1660 of file `complex`.

4.11.4.70 `template<typename _Tp> std::complex<_Tp> std::atanh (const
std::complex<_Tp> & __z) [inline]`

`atanh(__z)` [8.1.7].

Definition at line 1782 of file `complex`.

4.11.4.71 `template<class _Tp> constexpr const _Tp* std::begin (
initializer_list<_Tp> __ils)`

Return an iterator pointing to the first element of the `initilizer_list`.

Parameters

il Initializer list.

Definition at line 86 of file `initializer_list`.

Referenced by `std::list<_Tp, _Alloc>::merge()`.

4.11.4.72 `template<class _Container > auto std::begin (_Container & __cont) [inline]`

Return an iterator pointing to the first element of the container.

Parameters

cont Container.

Definition at line 48 of file `range_access.h`.

4.11.4.73 `template<class _Container > auto std::begin (const _Container & __cont) [inline]`

Return an iterator pointing to the first element of the const container.

Parameters

cont Container.

Definition at line 58 of file `range_access.h`.

4.11.4.74 `template<class _Tp , size_t _Nm> _Tp* std::begin (_Tp(& __arr[_Nm]) [inline]`

Return an iterator pointing to the first element of the array.

Parameters

arr Array.

Definition at line 87 of file `range_access.h`.

4.11.4.75 `template<typename _Result , typename _Functor ,
typename... _ArgTypes> _Bindres_helper<_Result, _Functor,
_ArgTypes...>::type std::bind (_Functor && __f, _ArgTypes &&...
__args) [inline]`

Function template for `std::bind<R>`.

Definition at line 1462 of file `functional`.

4.11.4.76 `ios_base& std::boolalpha (ios_base & __base) [inline]`

Calls `base.setf(ios_base::boolalpha)`.

Definition at line 797 of file `ios_base.h`.

References `std::ios_base::boolalpha`.

4.11.4.77 `template<typename _Tp , typename _Tp1 , _Lock_policy _Lp> __shared_ptr<_Tp, _Lp> std::const_pointer_cast (const __shared_ptr<_Tp1, _Lp> & __r) [inline]`

`const_pointer_cast`

Definition at line 1129 of file `shared_ptr_base.h`.

4.11.4.78 `template<typename _Tp > reference_wrapper<const _Tp> std::cref (const _Tp & __t) [inline]`

Denotes a const reference should be taken to a variable.

Definition at line 476 of file `functional`.

Referenced by `cref()`.

4.11.4.79 `template<typename _Tp > reference_wrapper<const _Tp> std::cref (reference_wrapper<_Tp> __t) [inline]`

Partial specialization.

Definition at line 488 of file `functional`.

References `cref()`.

4.11.4.80 `ios_base& std::dec (ios_base & __base) [inline]`

Calls `base.setf(ios_base::dec, ios_base::basefield)`.

Definition at line 935 of file `ios_base.h`.

References `std::ios_base::basefield`, `std::ios_base::dec`, and `std::ios_base::setf()`.

Referenced by `operator>>()`.

4.11.4.81 `template<typename _InputIterator > iterator_traits<_
_InputIterator>::difference_type std::distance (_InputIterator
__first, _InputIterator __last) [inline]`

A generalization of pointer arithmetic.

Parameters

first An input iterator.

last An input iterator.

Returns

The distance between them.

Returns `n` such that `first + n == last`. This requires that `last` must be reachable from `first`. Note that `n` may be negative.

For random access iterators, this uses their `+` and `-` operations and are constant time. For other iterator classes they are linear time.

Definition at line 113 of file `stl_iterator_base_funcs.h`.

References `__iterator_category()`.

Referenced by `__inplace_stable_partition()`, `__merge_adaptive()`, `__merge_without_buffer()`, `__rotate_adaptive()`, `__stable_partition_adaptive()`, `std::deque<_Tp, _Alloc>::M_range_initialize()`, `equal_range()`, `inplace_merge()`, `is_heap_until()`, `is_permutation()`, `std::sub_match<_Bi_iter>::length()`, `lower_bound()`, `__gnu_parallel::multiseq_partition()`, `__gnu_parallel::multiseq_selection()`, `partition_point()`, `std::match_results<_FwdIterT, _Alloc>::position()`, `std::list<_Tp, _Alloc>::size()`, and `upper_bound()`.

4.11.4.82 `template<typename _Tp, typename _Tp1, _Lock_policy _Lp>
__shared_ptr<_Tp, _Lp> std::dynamic_pointer_cast (const
__shared_ptr<_Tp1, _Lp> & __r) [inline]`

`dynamic_pointer_cast`

Definition at line 1139 of file shared_ptr_base.h.

4.11.4.83 `template<class _Tp > constexpr const _Tp* std::end (`
`initializer_list< _Tp > __ils)`

Return an iterator pointing to one past the last element of the initializer_list.

Parameters

il Initializer list.

Definition at line 96 of file initializer_list.

Referenced by std::list< _Tp, _Alloc >::merge().

4.11.4.84 `template<class _Container > auto std::end (_Container & __cont)`
`[inline]`

Return an iterator pointing to one past the last element of the container.

Parameters

cont Container.

Definition at line 68 of file range_access.h.

4.11.4.85 `template<class _Container > auto std::end (const _Container &`
`__cont) [inline]`

Return an iterator pointing to one past the last element of the const container.

Parameters

cont Container.

Definition at line 78 of file range_access.h.

4.11.4.86 `template<class _Tp, size_t _Nm> _Tp* std::end (_Tp(&)
__arr[_Nm]) [inline]`

Return an iterator pointing to one past the last element of the array.

Parameters

arr Array.

Definition at line 97 of file range_access.h.

4.11.4.87 `template<typename _CharT, typename _Traits >
basic_ostream<_CharT, _Traits>& std::endl (basic_ostream<
_CharT, _Traits > & __os) [inline]`

Write a newline and flush the stream.

This manipulator is often mistakenly used when a simple new-line is desired, leading to poor buffering performance. See <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch25s02.html> for more on this subject.

Definition at line 543 of file ostream.

References flush(), std::basic_ostream< _CharT, _Traits >::put(), and std::basic_ios< _CharT, _Traits >::widen().

4.11.4.88 `template<typename _CharT, typename _Traits >
basic_ostream<_CharT, _Traits>& std::ends (basic_ostream<
_CharT, _Traits > & __os) [inline]`

Write a null character into the output sequence.

Null character is CharT() by definition. For CharT of char, this correctly writes the ASCII NUL character string terminator.

Definition at line 554 of file ostream.

References std::basic_ostream< _CharT, _Traits >::put().

4.11.4.89 `template<typename _Tp> _Tp std::fabs (const std::complex< _Tp
> & __z) [inline]`

`fabs(__z)` [8.1.8].

Definition at line 1791 of file `complex`.

References `abs()`.

4.11.4.90 `ios_base& std::fixed (ios_base & __base) [inline]`

Calls `base.setf(ios_base::fixed, ios_base::floatfield)`.

Definition at line 960 of file `ios_base.h`.

References `std::ios_base::fixed`, `std::ios_base::floatfield`, and `std::ios_base::setf()`.

4.11.4.91 `template<typename _CharT , typename _Traits >
basic_ostream<_CharT, _Traits>& std::flush (basic_ostream<
_CharT, _Traits > & __os) [inline]`

Flushes the output stream.

This manipulator simply calls the stream's `flush()` member function.

Definition at line 564 of file `ostream`.

References `std::basic_ostream< _CharT, _Traits >::flush()`.

Referenced by `endl()`.

4.11.4.92 `template<typename _Tp> _Tp&& std::forward (typename
std::remove_reference< _Tp >::type & __t) [inline]`

`forward` (as per N3143)

Definition at line 62 of file `move.h`.

4.11.4.93 `template<typename _MoneyT > _Get_money<_MoneyT>
std::get_money (_MoneyT & __mon, bool __intl = false)
[inline]`

Extended manipulator for extracting money.

Parameters

mon Either long double or a specialization of `basic_string`.

intl A bool indicating whether international format is to be used.

Sent to a stream object, this manipulator extracts *mon*.

Definition at line 258 of file `iomanip`.

4.11.4.94 `template<typename _Tp > pair<_Tp*, ptrdiff_t>
std::get_temporary_buffer (ptrdiff_t __len)`

Allocates a temporary buffer.

Parameters

len The number of objects of type `Tp`.

Returns

See full description.

Reinventing the wheel, but this time with prettier spokes!

This function tries to obtain storage for `len` adjacent `Tp` objects. The objects themselves are not constructed, of course. A `pair<>` is returned containing *the buffer's address and capacity (in the units of `sizeof(Tp)`)*, or a pair of 0 values if no storage can be obtained. Note that the capacity obtained may be less than that requested if the memory is unavailable; you should compare `len` with the `.second` return value.

Provides the nothrow exception guarantee.

Definition at line 86 of file `stl_tempbuf.h`.

Referenced by `std::_Temporary_buffer<_ForwardIterator, _Tp >::_Temporary_buffer()`.

4.11.4.95 `template<typename _CharT, typename _Traits, typename _Alloc >
 basic_istream< _CharT, _Traits > & std::getline (basic_istream<
 _CharT, _Traits > & __is, basic_string< _CharT, _Traits, _Alloc >
 & __str, _CharT __delim)`

Read a line from stream into a string.

Parameters

is Input stream.

str Buffer to store into.

delim Character marking end of line.

Returns

Reference to the input stream.

Stores characters from *is* into *str* until *delim* is found, the end of the stream is encountered, or *str.max_size()* is reached. If *is.width()* is non-zero, that is the limit on the number of characters stored into *str*. Any previous contents of *str* are erased. If *delim* was encountered, it is extracted but not stored into *str*.

Definition at line 1070 of file `basic_string.tcc`.

References `std::basic_string< _CharT, _Traits, _Alloc >::erase()`, `std::basic_string< _CharT, _Traits, _Alloc >::max_size()`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

Referenced by `getline()`.

4.11.4.96 `template<typename _CharT, typename _Traits, typename _Alloc >
 basic_istream< _CharT, _Traits>& std::getline (basic_istream<
 _CharT, _Traits > & __is, basic_string< _CharT, _Traits, _Alloc >
 & __str) [inline]`

Read a line from stream into a string.

Parameters

is Input stream.

str Buffer to store into.

Returns

Reference to the input stream.

Stores characters from *is* into *str* until ‘

’ is found, the end of the stream is encountered, or *str.max_size()* is reached. If *is.width()* is non-zero, that is the limit on the number of characters stored into *str*. Any previous contents of *str* are erased. If end of line was encountered, it is extracted but not stored into *str*.

Definition at line 2734 of file *basic_string.h*.

References *getline()*, and *std::basic_ios< _CharT, _Traits >::widen()*.

4.11.4.97 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> basic_istream< _CharT, _Traits > & std::getline (basic_istream< _CharT, _Traits > & __is, __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base > & __str, _CharT __delim)`

Read a line from stream into a string.

Parameters

- `__is` Input stream.
- `__str` Buffer to store into.
- `__delim` Character marking end of line.

Returns

Reference to the input stream.

Stores characters from `__is` into `__str` until `__delim` is found, the end of the stream is encountered, or *str.max_size()* is reached. If *is.width()* is non-zero, that is the limit on the number of characters stored into `__str`. Any previous contents of `__str` are erased. If *delim* was encountered, it is extracted but not stored into `__str`.

Definition at line 627 of file *vstring.tcc*.

References *__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::append()*, *__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::erase()*, *__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::max_size()*, *std::basic_ios< _CharT, _Traits >::rdbuf()*, and *std::basic_ios< _CharT, _Traits >::setstate()*.

4.11.4.98 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> basic_istream<_CharT, _Traits>& std::getline (basic_istream<_CharT, _Traits> & __is, __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base> & __str) [inline]`

Read a line from stream into a string.

Parameters

__is Input stream.

__str Buffer to store into.

Returns

Reference to the input stream.

Stores characters from *is* into *__str* until ' '

' ' is found, the end of the stream is encountered, or *str.max_size()* is reached. If *is.width()* is non-zero, that is the limit on the number of characters stored into *__str*. Any previous contents of *__str* are erased. If end of line was encountered, it is extracted but not stored into *__str*.

Definition at line 2509 of file *vstring.h*.

References *getline()*, and *std::basic_ios<_CharT, _Traits>::widen()*.

4.11.4.99 `template<typename _Facet> bool std::has_facet (const locale & __loc) throw ()`

Test for the presence of a facet.

has_facet tests the *locale* argument for the presence of the facet type provided as the template parameter. Facets derived from the facet parameter will also return true.

Parameters

Facet The facet type to test the presence of.

locale The locale to test.

Returns

true if *locale* contains a facet of type *Facet*, else false.

Definition at line 93 of file *locale_classes.tcc*.

4.11.4.100 ios_base& std::hex (ios_base & __base) [inline]

Calls base.setf(ios_base::hex, ios_base::basefield).

Definition at line 943 of file ios_base.h.

References std::ios_base::basefield, std::ios_base::hex, and std::ios_base::setf().

**4.11.4.101 template<typename _InputIterator1 , typename _InputIterator2 ,
 typename _Tp > _Tp std::inner_product (_InputIterator1 __first1,
 _InputIterator1 __last1, _InputIterator2 __first2, _Tp __init)
 [inline]**

Compute inner product of two ranges.

Starting with an initial value of *init*, multiplies successive elements from the two ranges and adds each product into the accumulated value using operator+(). The values in the ranges are processed in order.

Parameters

first1 Start of range 1.

last1 End of range 1.

first2 Start of range 2.

init Starting value to add other values to.

Returns

The final inner product.

Definition at line 175 of file stl_numeric.h.

**4.11.4.102 template<typename _InputIterator1 , typename _InputIterator2
 , typename _Tp , typename _BinaryOperation1 , typename
 _BinaryOperation2 > _Tp std::inner_product (_InputIterator1
 __first1, _InputIterator1 __last1, _InputIterator2 __first2, _Tp
 __init, _BinaryOperation1 __binary_op1, _BinaryOperation2
 __binary_op2) [inline]**

Compute inner product of two ranges.

Starting with an initial value of *init*, applies *binary_op2* to successive elements from the two ranges and accumulates each result into the accumulated value using *binary_op1*. The values in the ranges are processed in order.

Parameters

first1 Start of range 1.
last1 End of range 1.
first2 Start of range 2.
init Starting value to add other values to.
binary_op1 Function object to accumulate with.
binary_op2 Function object to apply to pairs of input values.

Returns

The final inner product.

Definition at line 207 of file `std_numeric.h`.

4.11.4.103 `ios_base& std::internal (ios_base & __base) [inline]`

Calls `base.setf(ios_base::internal, ios_base::adjustfield)`.

Definition at line 910 of file `ios_base.h`.

References `__gnu_debug::__base()`, `std::ios_base::adjustfield`, and `std::ios_base::internal`.

4.11.4.104 `template<typename _ForwardIterator, typename _Tp> void std::iota (_ForwardIterator __first, _ForwardIterator __last, _Tp __value)`

Create a range of sequentially increasing values.

For each element in the range `[first,last)` assigns `value` and increments `value` as if by `++value`.

Parameters

first Start of range.
last End of range.
value Starting value.

Returns

Nothing.

Definition at line 83 of file `std_numeric.h`.

4.11.4.105 `template<typename _CharT > bool std::isalnum (_CharT __c,
const locale & __loc) [inline]`

Convenience interface to `ctype.is(ctype_base::alnum, __c)`.

4.11.4.106 `template<typename _CharT > bool std::isalpha (_CharT __c,
const locale & __loc) [inline]`

Convenience interface to `ctype.is(ctype_base::alpha, __c)`.

Referenced by operator<<().

4.11.4.117 `template<class _T1 , class _T2 > pair<typename
__decay_and_strip<_T1>::__type, typename
__decay_and_strip<_T2>::__type> std::make_pair (_T1 && __x,
_T2 && __y) [inline]`

A convenience wrapper for creating a pair from two objects.

Parameters

- x* The first object.
- y* The second object.

Returns

A newly-constructed pair<> object of the appropriate type.

The standard requires that the objects be passed by reference-to-const, but LWG issue #181 says they should be passed by const value. We follow the LWG by default.

Definition at line 262 of file `std_pair.h`.

Based on `operator==`.

Definition at line 1943 of file `stl_deque.h`.

4.11.4.127 `template<typename _CharT, typename _Traits, typename _Alloc> bool std::operator!= (const basic_string<_CharT, _Traits, _Alloc> & __lhs, const basic_string<_CharT, _Traits, _Alloc> & __rhs) [inline]`

Test difference of two strings.

Parameters

lhs First string.

rhs Second string.

Returns

True if `lhs.compare(rhs) != 0`. False otherwise.

Definition at line 2473 of file `basic_string.h`.

4.11.4.128 `template<typename _CharT, typename _Traits, typename _Alloc
> bool std::operator!= (const _CharT * __lhs, const basic_string<
_CharT, _Traits, _Alloc > & __rhs) [inline]`

Test difference of C string and string.

Parameters

lhs C string.

rhs String.

Returns

True if *rhs.compare(lhs) != 0*. False otherwise.

Definition at line 2485 of file `basic_string.h`.

4.11.4.129 `template<typename _CharT, typename _Traits, typename _Alloc
> bool std::operator!= (const basic_string< _CharT, _Traits,
_Alloc > & __lhs, const _CharT * __rhs) [inline]`

Test difference of string and C string.

Parameters

lhs String.

rhs C string.

Returns

True if *lhs.compare(rhs) != 0*. False otherwise.

Definition at line 2497 of file `basic_string.h`.

4.11.4.130 `template<typename _Tp, typename _Alloc > bool std::operator!= (
const list< _Tp, _Alloc > & __x, const list< _Tp, _Alloc > & __y)
[inline]`

Based on `operator==`.

Definition at line 1600 of file `stl_list.h`.

4.11.4.131 `template<typename _Key , typename _Tp , typename _Compare ,
typename _Alloc > bool std::operator!=(const map< _Key, _Tp,
_Compare, _Alloc > & __x, const map< _Key, _Tp, _Compare,
_Alloc > & __y) [inline]`

Based on `operator==`.

Definition at line 901 of file `stl_map.h`.

4.11.4.132 `template<typename _Key , typename _Tp , typename _Compare ,
typename _Alloc > bool std::operator!=(const multimap< _Key,
_Tp, _Compare, _Alloc > & __x, const multimap< _Key, _Tp,
_Compare, _Alloc > & __y) [inline]`

Based on `operator==`.

Definition at line 819 of file `stl_multimap.h`.

4.11.4.133 `template<typename _Key , typename _Compare , typename _Alloc
> bool std::operator!=(const multiset< _Key, _Compare, _Alloc
> & __x, const multiset< _Key, _Compare, _Alloc > & __y)
[inline]`

Returns `!(x == y)`.

Definition at line 703 of file `stl_multiset.h`.

4.11.4.134 `template<class _T1 , class _T2 > constexpr bool std::operator!=(
const pair< _T1, _T2 > & __x, const pair< _T1, _T2 > & __y)
[inline]`

Uses `operator==` to find the result.

Definition at line 214 of file `stl_pair.h`.

4.11.4.135 `template<typename _Tp, typename _Seq > bool std::operator!=(
const queue< _Tp, _Seq > & __x, const queue< _Tp, _Seq > &
__y) [inline]`

Based on operator==.

Definition at line 290 of file stl_queue.h.

4.11.4.136 `template<typename _Key, typename _Compare, typename _Alloc
> bool std::operator!=(const set< _Key, _Compare, _Alloc > &
__x, const set< _Key, _Compare, _Alloc > & __y) [inline]`

Returns !(x == y).

Definition at line 720 of file stl_set.h.

4.11.4.137 `template<typename _Tp > bool std::operator!=(const
_Fwd_list_iterator< _Tp > & __x, const _Fwd_list_const_iterator<
_Tp > & __y) [inline]`

Forward list iterator inequality comparison.

Definition at line 265 of file forward_list.h.

4.11.4.138 `template<typename _Tp, typename _Alloc > bool std::operator!=(
const forward_list< _Tp, _Alloc > & __lx, const forward_list<
_Tp, _Alloc > & __ly) [inline]`

Based on operator==.

Definition at line 1268 of file forward_list.h.

4.11.4.139 `template<typename _Tp, typename _Alloc > bool std::operator!=(
const vector< _Tp, _Alloc > & __x, const vector< _Tp, _Alloc > &
__y) [inline]`

Based on operator==.

Definition at line 1297 of file `std_vector.h`.

4.11.4.140 `template<typename _Tp , typename _Seq > bool std::operator!= (`
`const stack< _Tp, _Seq > & __x, const stack< _Tp, _Seq > & __y`
`) [inline]`

Based on `operator==`.

Definition at line 265 of file `std_stack.h`.

4.11.4.141 `template<typename _Res , typename... _Args> bool std::operator!=`
`(const function< _Res(_Args...)> & __f, nullptr_t) [inline]`

Compares a polymorphic function object wrapper against 0 (the NULL pointer).

Returns

`false` if the wrapper has no target, `true` otherwise

This function will not throw an exception.

Definition at line 2232 of file `functional`.

4.11.4.142 `template<typename _Res , typename... _Args> bool std::operator!=`
`(nullptr_t, const function< _Res(_Args...)> & __f) [inline]`

This is an overloaded member function, provided for convenience. It differs from the above function only in what argument(s) it accepts.

Definition at line 2238 of file `functional`.

4.11.4.143 `template<size_t _Nb> bitset<_Nb> std::operator& (const bitset<`
`_Nb > & __x, const bitset< _Nb > & __y) [inline]`

Global bitwise operations on bitsets.

Parameters

x A bitset.

y A bitset of the same size as *x*.

Returns

A new bitset.

These should be self-explanatory.

Definition at line 1389 of file bitset.

4.11.4.144 `template<typename _CharT, typename _Traits, typename _Alloc
> basic_string< _CharT, _Traits, _Alloc > std::operator+ (_CharT
__lhs, const basic_string< _CharT, _Traits, _Alloc > & __rhs)`

Concatenate character and string.

Parameters

lhs First string.

rhs Last string.

Returns

New string with *lhs* followed by *rhs*.

Definition at line 710 of file basic_string.tcc.

References `std::basic_string< _CharT, _Traits, _Alloc >::size()`.

4.11.4.145 `template<typename _CharT, typename _Traits, typename _Alloc
> basic_string< _CharT, _Traits, _Alloc> std::operator+ (const
basic_string< _CharT, _Traits, _Alloc > & __lhs, const _CharT *
__rhs) [inline]`

Concatenate string and C string.

Parameters

lhs First string.

rhs Last string.

Returns

New string with *lhs* followed by *rhs*.

Definition at line 2343 of file basic_string.h.

References `std::basic_string< _CharT, _Traits, _Alloc >::append()`.

4.11.4.146 `template<typename _CharT, typename _Traits, typename _Alloc
> basic_string<_CharT, _Traits, _Alloc> std::operator+ (const
basic_string< _CharT, _Traits, _Alloc > & __lhs, _CharT __rhs)
[inline]`

Concatenate string and character.

Parameters

lhs First string.

rhs Last string.

Returns

New string with *lhs* followed by *rhs*.

Definition at line 2359 of file basic_string.h.

4.11.4.147 `template<typename _CharT, typename _Traits, typename _Alloc
> basic_string<_CharT, _Traits, _Alloc> std::operator+ (const
basic_string< _CharT, _Traits, _Alloc > & __lhs, const
basic_string< _CharT, _Traits, _Alloc > & __rhs)`

Concatenate two strings.

Parameters

lhs First string.

rhs Last string.

Returns

New string with value of *lhs* followed by *rhs*.

Definition at line 2306 of file basic_string.h.

References `std::basic_string< _CharT, _Traits, _Alloc >::append()`.

4.11.4.148 `template<typename _CharT, typename _Traits, typename _Alloc
> basic_string< _CharT, _Traits, _Alloc > std::operator+ (const
_CharT * __lhs, const basic_string< _CharT, _Traits, _Alloc > &
__rhs)`

Concatenate C string and string.

Parameters

lhs First string.

rhs Last string.

Returns

New string with value of *lhs* followed by *rhs*.

Definition at line 694 of file basic_string.tcc.

References std::basic_string<_CharT, _Traits, _Alloc>::size().

4.11.4.149 `template<typename _Tp, typename _Alloc> bool std::operator< (const deque<_Tp, _Alloc> & __x, const deque<_Tp, _Alloc> & __y) [inline]`

Deque ordering relation.

Parameters

x A deque.

y A deque of the same type as *x*.

Returns

True iff *x* is lexicographically less than *y*.

This is a total ordering relation. It is linear in the size of the deques. The elements must be comparable with <.

See std::lexicographical_compare() for how the determination is made.

Definition at line 1935 of file stl_deque.h.

References lexicographical_compare().

4.11.4.150 `template<typename _CharT, typename _Traits, typename _Alloc> bool std::operator< (const basic_string<_CharT, _Traits, _Alloc> & __lhs, const basic_string<_CharT, _Traits, _Alloc> & __rhs) [inline]`

Test if string precedes string.

Parameters

lhs First string.

rhs Second string.

Returns

True if *lhs* precedes *rhs*. False otherwise.

Definition at line 2510 of file basic_string.h.

```
4.11.4.151 template<typename _CharT, typename _Traits, typename _Alloc  
> bool std::operator< ( const basic_string< _CharT, _Traits, _Alloc  
> & __lhs, const _CharT * __rhs ) [inline]
```

Test if string precedes C string.

Parameters

lhs String.

rhs C string.

Returns

True if *lhs* precedes *rhs*. False otherwise.

Definition at line 2522 of file basic_string.h.

```
4.11.4.152 template<typename _Tp, typename _Alloc > bool std::operator< (   
const list< _Tp, _Alloc > & __x, const list< _Tp, _Alloc > & __y )   
[inline]
```

List ordering relation.

Parameters

x A list.

y A list of the same type as *x*.

Returns

True iff *x* is lexicographically less than *y*.

This is a total ordering relation. It is linear in the size of the lists. The elements must be comparable with <.

See `std::lexicographical_compare()` for how the determination is made.

Definition at line 1593 of file `stl_list.h`.

References `lexicographical_compare()`.

```
4.11.4.153 template<typename _Key , typename _Tp , typename _Compare ,  
                typename _Alloc > bool std::operator< ( const map< _Key, _Tp,  
                _Compare, _Alloc > & __x, const map< _Key, _Tp, _Compare,  
                _Alloc > & __y ) [inline]
```

Map ordering relation.

Parameters

x A map.

y A map of the same type as *x*.

Returns

True iff *x* is lexicographically less than *y*.

This is a total ordering relation. It is linear in the size of the maps. The elements must be comparable with <.

See `std::lexicographical_compare()` for how the determination is made.

Definition at line 894 of file `stl_map.h`.

```
4.11.4.154 template<typename _Key , typename _Compare , typename _Alloc  
                > bool std::operator< ( const multiset< _Key, _Compare, _Alloc  
                > & __x, const multiset< _Key, _Compare, _Alloc > & __y )  
                [inline]
```

Multiset ordering relation.

Parameters

x A multiset.

y A multiset of the same type as *x*.

Returns

True iff x is lexicographically less than y .

This is a total ordering relation. It is linear in the size of the maps. The elements must be comparable with $<$.

See `std::lexicographical_compare()` for how the determination is made.

Definition at line 696 of file `stl_multiset.h`.

4.11.4.155 `template<class _T1, class _T2> constexpr bool std::operator< (`
`const pair< _T1, _T2 > & __x, const pair< _T1, _T2 > & __y)`
`[inline]`

[<http://gcc.gnu.org/onlinedocs/libstdc++/manual/utilities.html>](http://gcc.gnu.org/onlinedocs/libstdc++/manual/utilities.html)

Definition at line 207 of file `stl_pair.h`.

4.11.4.156 `template<typename _Tp, typename _Seq> bool std::operator< (`
`const queue< _Tp, _Seq > & __x, const queue< _Tp, _Seq > &`
`__y) [inline]`

Queue ordering relation.

Parameters

x A queue.

y A queue of the same type as x .

Returns

True iff x is lexicographically less than y .

This is an total ordering relation. Complexity and semantics depend on the underlying sequence type, but the expected rules are: this relation is linear in the size of the sequences, the elements must be comparable with $<$, and `std::lexicographical_compare()` is usually used to make the determination.

Definition at line 284 of file `stl_queue.h`.

4.11.4.157 `template<typename _Key, typename _Compare, typename _Alloc
> bool std::operator< (const set< _Key, _Compare, _Alloc > &
__x, const set< _Key, _Compare, _Alloc > & __y) [inline]`

Set ordering relation.

Parameters

x A set.

y A set of the same type as *x*.

Returns

True iff *x* is lexicographically less than *y*.

This is a total ordering relation. It is linear in the size of the maps. The elements must be comparable with <.

See `std::lexicographical_compare()` for how the determination is made.

Definition at line 713 of file `stl_set.h`.

4.11.4.158 `template<typename _Tp, typename _Alloc > bool std::operator< (
const forward_list< _Tp, _Alloc > & __lx, const forward_list<
_Tp, _Alloc > & __ly) [inline]`

Forward list ordering relation.

Parameters

lx A `forward_list`.

ly A `forward_list` of the same type as *lx*.

Returns

True iff *lx* is lexicographically less than *ly*.

This is a total ordering relation. It is linear in the size of the forward lists. The elements must be comparable with <.

See `std::lexicographical_compare()` for how the determination is made.

Definition at line 1260 of file `forward_list.h`.

References `lexicographical_compare()`.

4.11.4.159 `template<typename _Tp, typename _Alloc> bool std::operator< (const vector< _Tp, _Alloc> & __x, const vector< _Tp, _Alloc> & __y) [inline]`

Vector ordering relation.

Parameters

- x* A vector.
- y* A vector of the same type as *x*.

Returns

True iff *x* is lexicographically less than *y*.

This is a total ordering relation. It is linear in the size of the vectors. The elements must be comparable with <.

See `std::lexicographical_compare()` for how the determination is made.

Definition at line 1290 of file `std_vector.h`.

References `lexicographical_compare()`.

4.11.4.160 `template<typename _Tp, typename _Seq> bool std::operator< (const stack< _Tp, _Seq> & __x, const stack< _Tp, _Seq> & __y) [inline]`

Stack ordering relation.

Parameters

- x* A stack.
- y* A stack of the same type as *x*.

Returns

True iff *x* is lexicographically less than *y*.

This is an total ordering relation. Complexity and semantics depend on the underlying sequence type, but the expected rules are: this relation is linear in the size of the sequences, the elements must be comparable with <, and `std::lexicographical_compare()` is usually used to make the determination.

Definition at line 259 of file `std_stack.h`.

4.11.4.161 `template<typename _CharT, typename _Traits, typename _Alloc
> bool std::operator< (const _CharT * __lhs, const basic_string<
_CharT, _Traits, _Alloc > & __rhs) [inline]`

Test if C string precedes string.

Parameters

lhs C string.

rhs String.

Returns

True if *lhs* precedes *rhs*. False otherwise.

Definition at line 2534 of file basic_string.h.

References std::basic_string< _CharT, _Traits, _Alloc >::compare().

4.11.4.162 `template<typename _Key, typename _Tp, typename _Compare,
typename _Alloc > bool std::operator< (const multimap< _Key,
_Tp, _Compare, _Alloc > & __x, const multimap< _Key, _Tp,
_Compare, _Alloc > & __y) [inline]`

Multimap ordering relation.

Parameters

x A multimap.

y A multimap of the same type as *x*.

Returns

True iff *x* is lexicographically less than *y*.

This is a total ordering relation. It is linear in the size of the multimaps. The elements must be comparable with <.

See std::lexicographical_compare() for how the determination is made.

Definition at line 812 of file stl_multimap.h.

4.11.4.163 `template<class _CharT , class _Traits , size_t _Nb>
 std::basic_ostream<_CharT, _Traits>& std::operator<< (
 std::basic_ostream<_CharT, _Traits> & __os, const bitset<_Nb
 > & __x)`

Global I/O operators for bitsets.

Direct I/O between streams and bitsets is supported. Output is straightforward. Input will skip whitespace, only accept *0* and *1* characters, and will only extract as many digits as the bitset will hold.

Definition at line 1494 of file `bitset`.

References `std::__ctype_abstract_base<_CharT>::widen()`.

4.11.4.164 `template<typename _CharT , typename _Traits >
 basic_ostream<_CharT, _Traits>& std::operator<< (
 basic_ostream<_CharT, _Traits> & __out, _CharT __c)
 [inline]`

Character inserters.

Parameters

out An output stream.

c A character.

Returns

out

Behaves like one of the formatted arithmetic inserters described in [std::basic_ostream](#). After constructing a sentry object with good status, this function inserts a single character and any required padding (as determined by [22.2.2.2]). `out.width(0)` is then called.

If *c* is of type `char` and the character type of the stream is not `char`, the character is widened before insertion.

Definition at line 451 of file `ostream`.

```
4.11.4.165 template<typename _CharT, typename _Traits >
    basic_ostream<_CharT, _Traits>& std::operator<< (
        basic_ostream<_CharT, _Traits> & __out, char __c )
    [inline]
```

Character inserters.

Parameters

out An output stream.

c A character.

Returns

out

Behaves like one of the formatted arithmetic inserters described in [std::basic_ostream](#). After constructing a sentry object with good status, this function inserts a single character and any required padding (as determined by [22.2.2.2.2]). `out.width(0)` is then called.

If *c* is of type `char` and the character type of the stream is not `char`, the character is widened before insertion.

Definition at line 456 of file `ostream`.

```
4.11.4.166 template<class _Traits > basic_ostream<char, _Traits>&
    std::operator<< ( basic_ostream< char, _Traits> & __out, char
        __c ) [inline]
```

Character inserters.

Parameters

out An output stream.

c A character.

Returns

out

Behaves like one of the formatted arithmetic inserters described in [std::basic_ostream](#). After constructing a sentry object with good status, this function inserts a single character and any required padding (as determined by [22.2.2.2.2]). `out.width(0)` is then called.

If *c* is of type `char` and the character type of the stream is not `char`, the character is widened before insertion.

Definition at line 462 of file `ostream`.

```
4.11.4.167 template<class _Traits > basic_ostream<char, _Traits>&  
std::operator<<( basic_ostream< char, _Traits > & __out, signed  
char __c ) [inline]
```

Character inserters.

Parameters

out An output stream.

c A character.

Returns

out

Behaves like one of the formatted arithmetic inserters described in [std::basic_ostream](#). After constructing a sentry object with good status, this function inserts a single character and any required padding (as determined by [22.2.2.2.2]). `out.width(0)` is then called.

If *c* is of type `char` and the character type of the stream is not `char`, the character is widened before insertion.

Definition at line 468 of file `ostream`.

```
4.11.4.168 template<class _Traits > basic_ostream<char, _Traits>&  
std::operator<<( basic_ostream< char, _Traits > & __out, const  
char * __s ) [inline]
```

String inserters.

Parameters

out An output stream.

s A character string.

Returns

out

Precondition

s must be a non-NULL pointer

Behaves like one of the formatted arithmetic inserters described in [std::basic_ostream](#). After constructing a sentry object with good status, this function inserts `traits::length(s)` characters starting at *s*, widened if necessary, followed by any required padding (as determined by [22.2.2.2.2]). `out.width(0)` is then called.

Definition at line 510 of file ostream.

References `std::ios_base::badbit`.

4.11.4.169 `template<class _Traits > basic_ostream<char, _Traits>&
std::operator<<(basic_ostream< char, _Traits > & __out, const
signed char * __s) [inline]`

String inserters.

Parameters

out An output stream.

s A character string.

Returns

out

Precondition

s must be a non-NULL pointer

Behaves like one of the formatted arithmetic inserters described in [std::basic_ostream](#). After constructing a sentry object with good status, this function inserts `traits::length(s)` characters starting at *s*, widened if necessary, followed by any required padding (as determined by [22.2.2.2.2]). `out.width(0)` is then called.

Definition at line 523 of file ostream.

4.11.4.170 `template<class _Traits > basic_ostream<char, _Traits>&
std::operator<<(basic_ostream< char, _Traits > & __out, const
unsigned char * __s) [inline]`

String inserters.

Parameters

out An output stream.
s A character string.

Returns

out

Precondition

s must be a non-NULL pointer

Behaves like one of the formatted arithmetic inserters described in [std::basic_ostream](#). After constructing a sentry object with good status, this function inserts `traits::length(s)` characters starting at *s*, widened if necessary, followed by any required padding (as determined by [22.2.2.2.2]). `out.width(0)` is then called.

Definition at line 528 of file ostream.

```
4.11.4.171 template<typename _CharT, typename _Traits >
    basic_ostream<_CharT, _Traits>& std::operator<< (
    basic_ostream<_CharT, _Traits> & __out, const _CharT * __s )
    [inline]
```

String inserters.

Parameters

out An output stream.
s A character string.

Returns

out

Precondition

s must be a non-NULL pointer

Behaves like one of the formatted arithmetic inserters described in [std::basic_ostream](#). After constructing a sentry object with good status, this function inserts `traits::length(s)` characters starting at *s*, widened if necessary, followed by any required padding (as determined by [22.2.2.2.2]). `out.width(0)` is then called.

Definition at line 493 of file ostream.

References `std::ios_base::badbit`.

4.11.4.172 `template<typename _CharT, typename _Traits > basic_ostream<_CharT, _Traits > & std::operator<< (basic_ostream< _CharT, _Traits > & __out, const char * __s)`

String inserters.

Parameters

out An output stream.

s A character string.

Returns

out

Precondition

s must be a non-NULL pointer

Behaves like one of the formatted arithmetic inserters described in [std::basic_ostream](#). After constructing a sentry object with good status, this function inserts `traits::length(s)` characters starting at *s*, widened if necessary, followed by any required padding (as determined by [22.2.2.2.2]). `out.width(0)` is then called.

References `std::ios_base::badbit`.

4.11.4.173 `template<typename _CharT, typename _Traits, typename _Tp > basic_ostream<_CharT, _Traits>& std::operator<< (basic_ostream< _CharT, _Traits > && __os, const _Tp & __x) [inline]`

Generic inserter for rvalue stream.

Parameters

os An input stream.

x A reference to the object being inserted.

Returns

os

This is just a forwarding function to allow insertion to rvalue streams since they won't bind to the inserter functions that take an lvalue reference.

Definition at line 581 of file ostream.

```
4.11.4.174 template<class _Traits > basic_ostream<char, _Traits>&  
std::operator<< ( basic_ostream< char, _Traits > & __out,  
unsigned char __c ) [inline]
```

Character inserters.

Parameters

out An output stream.

c A character.

Returns

out

Behaves like one of the formatted arithmetic inserters described in [std::basic_ostream](#). After constructing a sentry object with good status, this function inserts a single character and any required padding (as determined by [22.2.2.2.2]). `out.width(0)` is then called.

If *c* is of type `char` and the character type of the stream is not `char`, the character is widened before insertion.

Definition at line 473 of file ostream.

```
4.11.4.175 template<typename _CharT , typename _Traits , typename  
_Alloc > basic_ostream<_CharT, _Traits>& std::operator<< (  
basic_ostream< _CharT, _Traits > & __os, const basic_string<  
_CharT, _Traits, _Alloc > & __str ) [inline]
```

Write string to a stream.

Parameters

os Output stream.

str String to write out.

Returns

Reference to the output stream.

Output characters of *str* into *os* following the same rules as for writing a C string.

Definition at line 2693 of file `basic_string.h`.

```
4.11.4.176 template<typename _CharT, typename _Traits, typename
               _Alloc, template< typename, typename, typename > class

               ( basic_ostream<_CharT, _Traits> & __os, const
               __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base> &
               __str ) [inline]
```

Write string to a stream.

Parameters

__os Output stream.

__str String to write out.

Returns

Reference to the output stream.

Output characters of *__str* into *os* following the same rules as for writing a C string.

Definition at line 2463 of file `vstring.h`.

```
4.11.4.177 template<typename _Tp, typename _Alloc> bool std::operator<=
               ( const deque<_Tp, _Alloc> & __x, const deque<_Tp, _Alloc>
               & __y ) [inline]
```

Based on `operator<`.

Definition at line 1957 of file `stl_deque.h`.

```
4.11.4.178 template<typename _CharT, typename _Traits, typename _Alloc
               > bool std::operator<= ( const basic_string<_CharT, _Traits,
               _Alloc> & __lhs, const _CharT* __rhs ) [inline]
```

Test if string doesn't follow C string.

Parameters

lhs String.

rhs C string.

Returns

True if *lhs* doesn't follow *rhs*. False otherwise.

Definition at line 2596 of file basic_string.h.

4.11.4.179 `template<typename _CharT, typename _Traits, typename
_Alloc> bool std::operator<= (const _CharT * __lhs, const
basic_string< _CharT, _Traits, _Alloc> & __rhs) [inline]`

Test if C string doesn't follow string.

Parameters

lhs C string.

rhs String.

Returns

True if *lhs* doesn't follow *rhs*. False otherwise.

Definition at line 2608 of file basic_string.h.

References std::basic_string< _CharT, _Traits, _Alloc>::compare().

4.11.4.180 `template<typename _Tp, typename _Alloc> bool std::operator<= (const list< _Tp, _Alloc> & __x, const list< _Tp, _Alloc> & __y) [inline]`

Based on operator<.

Definition at line 1612 of file stl_list.h.

4.11.4.181 `template<typename _Key, typename _Tp, typename _Compare, typename _Alloc> bool std::operator<= (const map< _Key, _Tp, _Compare, _Alloc> & __x, const map< _Key, _Tp, _Compare, _Alloc> & __y) [inline]`

Based on operator<.

Definition at line 915 of file stl_map.h.

4.11.4.182 `template<typename _Key , typename _Tp , typename _Compare ,
typename _Alloc > bool std::operator<= (const multimap< _Key,
_Tp, _Compare, _Alloc > & __x, const multimap< _Key, _Tp,
_Compare, _Alloc > & __y) [inline]`

Based on operator<.

Definition at line 833 of file stl_multimap.h.

4.11.4.183 `template<typename _Key , typename _Compare , typename _Alloc
> bool std::operator<= (const multiset< _Key, _Compare, _Alloc
> & __x, const multiset< _Key, _Compare, _Alloc > & __y)
[inline]`

Returns !(y < x).

Definition at line 717 of file stl_multiset.h.

4.11.4.184 `template<class _T1 , class _T2 > constexpr bool std::operator<= (
const pair< _T1, _T2 > & __x, const pair< _T1, _T2 > & __y)
[inline]`

Uses operator< to find the result.

Definition at line 226 of file stl_pair.h.

4.11.4.185 `template<typename _Tp , typename _Seq > bool std::operator<= (
const queue< _Tp, _Seq > & __x, const queue< _Tp, _Seq > &
__y) [inline]`

Based on operator<.

Definition at line 302 of file stl_queue.h.

4.11.4.186 `template<typename _Key , typename _Compare , typename _Alloc
> bool std::operator<= (const set< _Key, _Compare, _Alloc > &
__x, const set< _Key, _Compare, _Alloc > & __y) [inline]`

Returns $!(y < x)$.

Definition at line 734 of file `stl_set.h`.

```
4.11.4.187  template<typename _CharT, typename _Traits, typename _Alloc
              > bool std::operator<= ( const basic_string< _CharT, _Traits,
              _Alloc > & __lhs, const basic_string< _CharT, _Traits, _Alloc > &
              __rhs ) [inline]
```

Test if string doesn't follow string.

Parameters

lhs First string.

rhs Second string.

Returns

True if *lhs* doesn't follow *rhs*. False otherwise.

Definition at line 2584 of file `basic_string.h`.

```
4.11.4.188  template<typename _Tp, typename _Seq > bool std::operator<= (
              const stack< _Tp, _Seq > & __x, const stack< _Tp, _Seq > & __y
              ) [inline]
```

Based on `operator<`.

Definition at line 277 of file `stl_stack.h`.

```
4.11.4.189  template<typename _Tp, typename _Alloc > bool std::operator<=
              ( const vector< _Tp, _Alloc > & __x, const vector< _Tp, _Alloc >
              & __y ) [inline]
```

Based on `operator<`.

Definition at line 1309 of file `stl_vector.h`.

4.11.4.190 `template<typename _Tp , typename _Alloc > bool std::operator<=`
`(const forward_list< _Tp, _Alloc > & __lx, const forward_list<`
`_Tp, _Alloc > & __ly) [inline]`

Based on operator<.

Definition at line 1289 of file forward_list.h.

4.11.4.191 `template<typename _Res , typename... _Args> bool`
`std::operator==(nullptr_t, const function< _Res(_Args...)> &`
`__f) [inline]`

This is an overloaded member function, provided for convenience. It differs from the above function only in what argument(s) it accepts.

Definition at line 2220 of file functional.

4.11.4.192 `template<typename _Res , typename... _Args> bool`
`std::operator==(const function< _Res(_Args...)> & __f, nullptr_t`
`) [inline]`

Compares a polymorphic function object wrapper against 0 (the NULL pointer).

Returns

`true` if the wrapper has no target, `false` otherwise

This function will not throw an exception.

Definition at line 2214 of file functional.

4.11.4.193 `template<typename _Key , typename _Compare , typename _Alloc`
`> bool std::operator==(const set< _Key, _Compare, _Alloc > &`
`__x, const set< _Key, _Compare, _Alloc > & __y) [inline]`

Set equality comparison.

Parameters

x A set.

y A set of the same type as *x*.

Returns

True iff the size and elements of the sets are equal.

This is an equivalence relation. It is linear in the size of the sets. Sets are considered equivalent if their sizes are equal, and if corresponding elements compare equal.

Definition at line 696 of file stl_set.h.

```
4.11.4.194 template<typename _Key , typename _Tp , typename _Compare ,  
                typename _Alloc > bool std::operator==( const map< _Key, _Tp,  
                _Compare, _Alloc > & __x, const map< _Key, _Tp, _Compare,  
                _Alloc > & __y ) [inline]
```

Map equality comparison.

Parameters

x A map.

y A map of the same type as *x*.

Returns

True iff the size and elements of the maps are equal.

This is an equivalence relation. It is linear in the size of the maps. Maps are considered equivalent if their sizes are equal, and if corresponding elements compare equal.

Definition at line 877 of file stl_map.h.

```
4.11.4.195 template<typename _Key , typename _Tp , typename _Compare ,  
                typename _Alloc > bool std::operator==( const multimap< _Key,  
                _Tp, _Compare, _Alloc > & __x, const multimap< _Key, _Tp,  
                _Compare, _Alloc > & __y ) [inline]
```

Multimap equality comparison.

Parameters

x A multimap.

y A multimap of the same type as *x*.

Returns

True iff the size and elements of the maps are equal.

This is an equivalence relation. It is linear in the size of the multimaps. Multimaps are considered equivalent if their sizes are equal, and if corresponding elements compare equal.

Definition at line 795 of file `std_multimap.h`.

4.11.4.196 `template<typename _Tp, typename _Alloc> bool std::operator==(const deque< _Tp, _Alloc> & __x, const deque< _Tp, _Alloc> & __y) [inline]`

Deque equality comparison.

Parameters

- x* A deque.
- y* A deque of the same type as *x*.

Returns

True iff the size and elements of the deques are equal.

This is an equivalence relation. It is linear in the size of the deques. Deques are considered equivalent if their sizes are equal, and if corresponding elements compare equal.

Definition at line 1917 of file `std_deque.h`.

References `std::deque< _Tp, _Alloc>::begin()`, `std::deque< _Tp, _Alloc>::end()`, `equal()`, and `std::deque< _Tp, _Alloc>::size()`.

4.11.4.197 `template<typename _Tp> bool std::operator==(const _Fwd_list_iterator< _Tp> & __x, const _Fwd_list_const_iterator< _Tp> & __y) [inline]`

Forward list iterator equality comparison.

Definition at line 256 of file `forward_list.h`.

4.11.4.198 `template<typename _Key, typename _Compare, typename _Alloc> bool std::operator==(const multiset< _Key, _Compare, _Alloc> & __x, const multiset< _Key, _Compare, _Alloc> & __y) [inline]`

Multiset equality comparison.

Parameters

- x* A multiset.
- y* A multiset of the same type as *x*.

Returns

True iff the size and elements of the multisets are equal.

This is an equivalence relation. It is linear in the size of the multisets. Multisets are considered equivalent if their sizes are equal, and if corresponding elements compare equal.

Definition at line 679 of file stl_multiset.h.

```
4.11.4.199 template<typename _Tp , typename _Seq > bool std::operator== (
    const stack< _Tp, _Seq > & __x, const stack< _Tp, _Seq > & __y
) [inline]
```

Stack equality comparison.

Parameters

- x* A stack.
- y* A stack of the same type as *x*.

Returns

True iff the size and elements of the stacks are equal.

This is an equivalence relation. Complexity and semantics depend on the underlying sequence type, but the expected rules are: this relation is linear in the size of the sequences, and stacks are considered equivalent if their sequences compare equal.

Definition at line 241 of file stl_stack.h.

```
4.11.4.200 template<class _T1 , class _T2 > constexpr bool std::operator== (
    const pair< _T1, _T2 > & __x, const pair< _T1, _T2 > & __y )
[inline]
```

Two pairs of the same type are equal iff their members are equal.

Definition at line 201 of file `std_pair.h`.

References `std::pair<_T1, _T2>::first`, and `std::pair<_T1, _T2>::second`.

4.11.4.201 `template<typename _Tp, typename _Alloc> bool std::operator==(const forward_list<_Tp, _Alloc> & __lx, const forward_list<_Tp, _Alloc> & __ly)`

Forward list equality comparison.

Parameters

lx A `forward_list`

ly A `forward_list` of the same type as *lx*.

Returns

True iff the size and elements of the forward lists are equal.

This is an equivalence relation. It is linear in the size of the forward lists. Deques are considered equivalent if corresponding elements compare equal.

Definition at line 379 of file `forward_list.tcc`.

References `std::forward_list<_Tp, _Alloc>::cbegin()`, and `std::forward_list<_Tp, _Alloc>::cend()`.

4.11.4.202 `template<typename _Tp, typename _Seq> bool std::operator==(const queue<_Tp, _Seq> & __x, const queue<_Tp, _Seq> & __y) [inline]`

Queue equality comparison.

Parameters

x A queue.

y A queue of the same type as *x*.

Returns

True iff the size and elements of the queues are equal.

This is an equivalence relation. Complexity and semantics depend on the underlying sequence type, but the expected rules are: this relation is linear in the size of the sequences, and queues are considered equivalent if their sequences compare equal.

Definition at line 266 of file `std_queue.h`.

References `std::queue<_Tp, _Sequence>::c`.

4.11.4.203 `template<typename _StateT> bool std::operator==(const fpos<_StateT> & __lhs, const fpos<_StateT> & __rhs) [inline]`

Test if equivalent to another position.

Definition at line 218 of file `postypes.h`.

4.11.4.204 `template<typename _Tp, typename _Alloc> bool std::operator==(const vector<_Tp, _Alloc> & __x, const vector<_Tp, _Alloc> & __y) [inline]`

Vector equality comparison.

Parameters

x A vector.

y A vector of the same type as *x*.

Returns

True iff the size and elements of the vectors are equal.

This is an equivalence relation. It is linear in the size of the vectors. Vectors are considered equivalent if their sizes are equal, and if corresponding elements compare equal.

Definition at line 1273 of file `std_vector.h`.

References `std::vector<_Tp, _Alloc>::begin()`, `std::vector<_Tp, _Alloc>::end()`, `equal()`, and `std::vector<_Tp, _Alloc>::size()`.

4.11.4.205 `template<typename _CharT, typename _Traits, typename _Alloc> bool std::operator==(const basic_string<_CharT, _Traits, _Alloc> & __lhs, const _CharT* __rhs) [inline]`

Test equivalence of string and C string.

Parameters

lhs String.
rhs C string.

Returns

True if *lhs.compare(rhs) == 0*. False otherwise.

Definition at line 2460 of file `basic_string.h`.

References `std::basic_string<_CharT, _Traits, _Alloc>::compare()`.

4.11.4.206 `template<typename _CharT, typename _Traits, typename _Alloc
> bool std::operator==(const basic_string< _CharT, _Traits,
_Alloc > & __lhs, const basic_string< _CharT, _Traits, _Alloc > &
__rhs) [inline]`

Test equivalence of two strings.

Parameters

lhs First string.
rhs Second string.

Returns

True if *lhs.compare(rhs) == 0*. False otherwise.

Definition at line 2427 of file `basic_string.h`.

References `std::basic_string<_CharT, _Traits, _Alloc>::compare()`.

4.11.4.207 `template<typename _Tp, typename _Alloc > bool std::operator==(
const list< _Tp, _Alloc > & __x, const list< _Tp, _Alloc > & __y)
[inline]`

List equality comparison.

Parameters

x A list.
y A list of the same type as *x*.

Returns

True iff the size and elements of the lists are equal.

This is an equivalence relation. It is linear in the size of the lists. Lists are considered equivalent if their sizes are equal, and if corresponding elements compare equal.

Definition at line 1564 of file `stl_list.h`.

References `std::list<_Tp, _Alloc>::begin()`, and `std::list<_Tp, _Alloc>::end()`.

4.11.4.208 `template<typename _CharT, typename _Traits, typename
_Alloc> bool std::operator==(const _CharT * __lhs, const
basic_string<_CharT, _Traits, _Alloc> & __rhs) [inline]`

Test equivalence of C string and string.

Parameters

lhs C string.

rhs String.

Returns

True if `rhs.compare(lhs) == 0`. False otherwise.

Definition at line 2448 of file `basic_string.h`.

References `std::basic_string<_CharT, _Traits, _Alloc>::compare()`.

4.11.4.209 `template<typename _Key, typename _Tp, typename _Compare,

4.11.4.237 `template<class _Traits > basic_istream<char, _Traits>&
 std::operator>> (basic_istream< char, _Traits > & __in,
 unsigned char & __c) [inline]`

Character extractors.

Parameters

in An input stream.

c A character reference.

Returns

in

Behaves like one of the formatted arithmetic extractors described in [std::basic_istream](#). After constructing a sentry object with good status, this function extracts a character (if one is available) and stores it in *c*. Otherwise, sets failbit in the input stream.

Definition at line 706 of file istream.

4.11.4.238 `template<class _CharT, class _Traits, size_t _Nb>
 std::basic_istream<_CharT, _Traits>& std::operator>> (
 std::basic_istream< _CharT, _Traits > & __is, bitset< _Nb > &
 __x)`

Global I/O operators for bitsets.

Direct I/O between streams and bitsets is supported. Output is straightforward. Input will skip whitespace, only accept *0* and *1* characters, and will only extract as many digits as the bitset will hold.

Definition at line 1426 of file bitset.

References `std::basic_string< _CharT, _Traits, _Alloc >::empty()`, `std::basic_string< _CharT, _Traits, _Alloc >::push_back()`, `std::basic_ios< _CharT, _Traits >::rdbuf()`,

4.11.4.239 `template<typename _CharT, typename _Traits > basic_istream< _CharT, _Traits > & std::operator>> (basic_istream< _CharT, _Traits > & __in, _CharT * __s)`

Character string extractors.

Parameters

- in* An input stream.
- s* A pointer to a character array.

Returns

in

Behaves like one of the formatted arithmetic extractors described in [std::basic_istream](#). After constructing a sentry object with good status, this function extracts up to *n* characters and stores them into the array starting at *s*. *n* is defined as:

- if `width()` is greater than zero, *n* is `width()` otherwise
- *n* is *the number of elements of the largest array of **
- *char_type that can store a terminating eos.*
- [27.6.1.2.3]/6

Characters are extracted and stored until one of the following happens:

- *n*-1 characters are stored
- EOF is reached
- the next character is whitespace according to the current locale
- the next character is a null byte (i.e., `charT()`)

`width(0)` is then called for the input stream.

If no characters are extracted, sets failbit.

Definition at line 957 of file `istream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::getloc()`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, `std::basic_ios< _CharT, _Traits >::setstate()`, and `std::ios_base::width()`.

4.11.4.240 `template<> basic_istream<char>& std::operator>> (`
`basic_istream< char > & __in, char * __s)`

Character string extractors.

Parameters

- in* An input stream.
- s* A pointer to a character array.

Returns

in

Behaves like one of the formatted arithmetic extractors described in [std::basic_istream](#). After constructing a sentry object with good status, this function extracts up to *n* characters and stores them into the array starting at *s*. *n* is defined as:

- if `width()` is greater than zero, *n* is `width()` otherwise
- *n* is *the number of elements of the largest array of **
- *char_type that can store a terminating eos.*
- [27.6.1.2.3]/6

Characters are extracted and stored until one of the following happens:

- *n*-1 characters are stored
- EOF is reached
- the next character is whitespace according to the current locale
- the next character is a null byte (i.e., `charT()`)

`width(0)` is then called for the input stream.

If no characters are extracted, sets failbit.

4.11.4.241 `template<class _Traits > basic_istream<char, _Traits>&`
`std::operator>> (basic_istream< char, _Traits > & __in,`
`unsigned char * __s) [inline]`

Character string extractors.

Parameters

- in* An input stream.
- s* A pointer to a character array.

Returns

in

Behaves like one of the formatted arithmetic extractors described in [std::basic_istream](#). After constructing a sentry object with good status, this function extracts up to *n* characters and stores them into the array starting at *s*. *n* is defined as:

- if `width()` is greater than zero, *n* is `width()` otherwise
- *n* is *the number of elements of the largest array of **
- *char_type* that can store a terminating *eos*.
- `[27.6.1.2.3]/6`

Characters are extracted and stored until one of the following happens:

- *n*-1 characters are stored
- EOF is reached
- the next character is whitespace according to the current locale
- the next character is a null byte (i.e., `charT()`)

`width(0)` is then called for the input stream.

If no characters are extracted, sets failbit.

Definition at line 753 of file `istream`.

4.11.4.242 `template<class _Traits> basic_istream<char, _Traits>&
std::operator>>(basic_istream< char, _Traits> & __in, signed
char * __s) [inline]`

Character string extractors.

Parameters

- in* An input stream.
- s* A pointer to a character array.

Returns

in

Behaves like one of the formatted arithmetic extractors described in [std::basic_istream](#). After constructing a sentry object with good status, this function extracts up to *n* characters and stores them into the array starting at *s*. *n* is defined as:

- if `width()` is greater than zero, *n* is `width()` otherwise
- *n* is *the number of elements of the largest array of **
- *char_type that can store a terminating eos.*
- [27.6.1.2.3]/6

Characters are extracted and stored until one of the following happens:

- *n*-1 characters are stored
- EOF is reached
- the next character is whitespace according to the current locale
- the next character is a null byte (i.e., `charT()`)

`width(0)` is then called for the input stream.

If no characters are extracted, sets failbit.

Definition at line 758 of file `istream`.

4.11.4.243 `template<typename _CharT, typename _Traits, typename
_Tp> basic_istream<_CharT, _Traits>& std::operator>>(
basic_istream<_CharT, _Traits> && __is, _Tp & __x)
[inline]`

Generic extractor for rvalue stream.

Parameters

is An input stream.

x A reference to the extraction target.

Returns

is

This is just a forwarding function to allow extraction from rvalue streams since they won't bind to the extractor functions that take an lvalue reference.

Definition at line 849 of file istream.

```
4.11.4.244 template<typename _CharT, typename _Traits, typename _Alloc
> basic_istream<_CharT, _Traits> & std::operator>> (
    basic_istream<_CharT, _Traits> & __is, basic_string<_CharT,
    _Traits, _Alloc> & __str )
```

Read stream into a string.

Parameters

is Input stream.

str Buffer to store into.

Returns

Reference to the input stream.

Stores characters from *is* into *str* until whitespace is found, the end of the stream is encountered, or *str.max_size()* is reached. If *is.width()* is non-zero, that is the limit on the number of characters stored into *str*. Any previous contents of *str* are erased.

Definition at line 998 of file basic_string.tcc.

References `std::basic_string<_CharT, _Traits, _Alloc>::append()`, `std::basic_string<_CharT, _Traits, _Alloc>::erase()`, `std::ios_base::getloc()`, `std::basic_string<_CharT, _Traits, _Alloc>::max_size()`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_ios<_CharT, _Traits>::setstate()`, and `std::ios_base::width()`.

```
4.11.4.245 template<class _Traits> basic_istream<char, _Traits>&
    std::operator>> ( basic_istream<char, _Traits> & __in, signed
    char & __c ) [inline]
```

Character extractors.

Parameters

in An input stream.

c A character reference.

Returns

in

Behaves like one of the formatted arithmetic extractors described in [std::basic_istream](#). After constructing a sentry object with good status, this function extracts a character (if one is available) and stores it in *c*. Otherwise, sets failbit in the input stream.

Definition at line 711 of file istream.

4.11.4.246 `template<typename _CharT, typename _Traits, typename
_Alloc, template< typename, typename, typename
> class _Base> basic_istream< _CharT, _Traits > &
std::operator>> (basic_istream< _CharT, _Traits > & __is,
__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base > &
__str)`

Read stream into a string.

Parameters

__is Input stream.

__str Buffer to store into.

Returns

Reference to the input stream.

Stores characters from *__is* into *__str* until whitespace is found, the end of the stream is encountered, or *str.max_size()* is reached. If *is.width()* is non-zero, that is the limit on the number of characters stored into *__str*. Any previous contents of *__str* are erased.

Definition at line 552 of file vstring.tcc.

References `std::ios_base::getloc()`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, `std::basic_ios< _CharT, _Traits >::setstate()`, and `std::ios_base::width()`.

4.11.4.247 `template<typename _CharT, typename _Traits > basic_istream<
_CharT, _Traits > & std::operator>> (basic_istream< _CharT,
_Traits > & __in, _CharT & __c)`

Character extractors.

Parameters

in An input stream.

c A character reference.

Returns

in

Behaves like one of the formatted arithmetic extractors described in [std::basic_istream](#). After constructing a sentry object with good status, this function extracts a character (if one is available) and stores it in *c*. Otherwise, sets failbit in the input stream.

Definition at line 925 of file istream.tcc.

References `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

4.11.4.248 `template<size_t _Nb> bitset<_Nb> std::operator^ (const bitset<_Nb> & __x, const bitset<_Nb> & __y) [inline]`

Global bitwise operations on bitsets.

Parameters

x A bitset.

y A bitset of the same size as *x*.

Returns

A new bitset.

These should be self-explanatory.

Definition at line 1407 of file bitset.

4.11.4.249 `template<size_t _Nb> bitset<_Nb> std::operator| (const bitset<_Nb> & __x, const bitset<_Nb> & __y) [inline]`

Global bitwise operations on bitsets.

Parameters

x A bitset.

y A bitset of the same size as *x*.

Returns

A new bitset.

These should be self-explanatory.

Definition at line 1398 of file bitset.

4.11.4.250 `template<typename _InputIterator , typename _OutputIterator
> _OutputIterator std::partial_sum (_InputIterator __first,
_InputIterator __last, _OutputIterator __result)`

Return list of partial sums.

Accumulates the values in the range [first,last) using operator+(). As each successive input value is added into the total, that partial sum is written to *result*. Therefore, the first value in result is the first value of the input, the second value in result is the sum of the first and second input values, and so on.

Parameters

first Start of input range.

last End of input range.

result Output to write sums to.

Returns

Iterator pointing just beyond the values written to result.

Definition at line 238 of file stl_numeric.h.

4.11.4.251 `template<typename _InputIterator , typename _OutputIterator ,
typename _BinaryOperation > _OutputIterator std::partial_sum (
_InputIterator __first, _InputIterator __last, _OutputIterator
__result, _BinaryOperation __binary_op)`

Return list of partial sums.

Accumulates the values in the range [first,last) using operator+(). As each successive input value is added into the total, that partial sum is written to *result*. Therefore, the first value in result is the first value of the input, the second value in result is the sum of the first and second input values, and so on.

Parameters

first Start of input range.
last End of input range.
result Output to write sums to.

Returns

Iterator pointing just beyond the values written to result.

Definition at line 278 of file stl_numeric.h.

```
4.11.4.252 template<typename _MoneyT > _Put_money<_MoneyT>  
std::put_money ( const _MoneyT & __mon, bool __intl = false )  
[inline]
```

Extended manipulator for inserting money.

Parameters

mon Either long double or a specialization of `basic_string`.
intl A bool indicating whether international format is to be used.

Sent to a stream object, this manipulator inserts *mon*.

Definition at line 294 of file iomanip.

```
4.11.4.253 template<typename _Tp > reference_wrapper<_Tp> std::ref (  
_Tp & __t ) [inline]
```

Denotes a reference should be taken to a variable.

Definition at line 470 of file functional.

Referenced by `ref()`.

```
4.11.4.254 template<typename _Tp > reference_wrapper<_Tp> std::ref (  
reference_wrapper<_Tp> __t ) [inline]
```

Partial specialization.

Definition at line 482 of file functional.

References `ref()`.

4.11.4.255 `template<typename _InputIterator , typename _OutputIterator
, typename _Tp > _OutputIterator std::replace_copy (`
 `_InputIterator __first, _InputIterator __last, _OutputIterator`
 `__result, const _Tp & __old_value, const _Tp & __new_value)`

Copy a sequence, replacing each element of one value with another value.

Parameters

first An input iterator.
last An input iterator.
result An output iterator.
old_value The value to be replaced.
new_value The replacement value.

Returns

The end of the output sequence, `result+(last-first)`.

Copies each element in the input range `[first,last)` to the output range `[result,result+(last-first))` replacing elements equal to `old_value` with `new_value`.

Definition at line 3745 of file `stl_algo.h`.

4.11.4.256 `_Resetiosflags std::resetiosflags (ios_base::fmtflags __mask)`
 `[inline]`

Manipulator for `setf`.

Parameters

mask A format flags mask.

Sent to a stream object, this manipulator resets the specified flags, via `stream.setf(0,mask)`.

Definition at line 65 of file `iomanip`.

4.11.4.257 `template<typename _Tp > void std::return_temporary_buffer (`
 `_Tp* __p) [inline]`

The companion to [get_temporary_buffer\(\)](#).

Parameters

p A buffer previously allocated by `get_temporary_buffer`.

Returns

None.

Frees the memory pointed to by *p*.

Definition at line 113 of file `std_tempbuf.h`.

Referenced by `std::_Temporary_buffer<_ForwardIterator, _Tp>::_Temporary_buffer()`.

4.11.4.258 ios_base& std::right (ios_base & __base) [inline]

Calls `base.setf(ios_base::right, ios_base::adjustfield)`.

Definition at line 926 of file `ios_base.h`.

References `std::ios_base::adjustfield`, `std::ios_base::right`, and `std::ios_base::setf()`.

4.11.4.259 ios_base& std::scientific (ios_base & __base) [inline]

Calls `base.setf(ios_base::scientific, ios_base::floatfield)`.

Definition at line 968 of file `ios_base.h`.

References `std::ios_base::floatfield`, `std::ios_base::scientific`, and `std::ios_base::setf()`.

Referenced by `operator<<()`.

4.11.4.260 new_handler std::set_new_handler (new_handler) throw ()

Takes a replacement handler as the argument, returns the previous handler.

4.11.4.261 _Setbase std::setbase (int __base) [inline]

Manipulator for `setf`.

Parameters

base A numeric base.

Sent to a stream object, this manipulator changes the `ios_base::basefield` flags to `oct`, `dec`, or `hex` when *base* is 8, 10, or 16, accordingly, and to 0 if *base* is any other value.

Definition at line 126 of file `iomanip`.

4.11.4.262 `template<typename _CharT> _Setfill<_CharT> std::setfill (`
`_CharT __c) [inline]`

Manipulator for `fill`.

Parameters

c The new fill character.

Sent to a stream object, this manipulator calls `fill(c)` for that object.

Definition at line 164 of file `iomanip`.

4.11.4.263 `_Setiosflags std::setiosflags (ios_base::fmtflags __mask)`
`[inline]`

Manipulator for `setf`.

Parameters

mask A format flags mask.

Sent to a stream object, this manipulator sets the format flags to *mask*.

Definition at line 95 of file `iomanip`.

4.11.4.264 `_Setprecision std::setprecision (int __n) [inline]`

Manipulator for `precision`.

Parameters

n The new precision.

Sent to a stream object, this manipulator calls `precision(n)` for that object.

Definition at line 194 of file `iomanip`.

4.11.4.265 `_Setw std::setw (int __n) [inline]`

Manipulator for `width`.

Parameters

n The new width.

Sent to a stream object, this manipulator calls `width(n)` for that object.

Definition at line 224 of file `iomanip`.

4.11.4.266 `ios_base& std::showbase (ios_base & __base) [inline]`

Calls `base.setf(ios_base::showbase)`.

Definition at line 813 of file `ios_base.h`.

References `std::ios_base::setf()`, and `std::ios_base::showbase`.

4.11.4.267 `ios_base& std::showpoint (ios_base & __base) [inline]`

Calls `base.setf(ios_base::showpoint)`.

Definition at line 829 of file `ios_base.h`.

References `std::ios_base::setf()`, and `std::ios_base::showpoint`.

4.11.4.268 `ios_base& std::showpos (ios_base & __base) [inline]`

Calls `base.setf(ios_base::showpos)`.

Definition at line 845 of file `ios_base.h`.

References `std::ios_base::setf()`, and `std::ios_base::showpos`.

4.11.4.269 ios_base& std::skipws (ios_base & __base) [inline]

Calls base.setf(ios_base::skipws).

Definition at line 861 of file ios_base.h.

References std::ios_base::setf(), and std::ios_base::skipws.

Referenced by operator>>().

**4.11.4.270 template<typename _Tp , typename _Tp1 , _Lock_policy _Lp>

4.11.4.282 `template<typename _CharT > _CharT std::tolower (_CharT __c,
const locale & __loc) [inline]`

Convenience interface to `ctype.tolower(__c)`.

Referenced by `std::regex_traits< _Ch_type >::translate_nocase()`.

4.11.4.283 `template<typename _CharT > _CharT std::toupper (_CharT __c,
const locale & __loc) [inline]`

Convenience interface to `ctype.toupper(__c)`.

4.11.4.284 `template<typename _InputIterator , typename _ForwardIterator >
_ForwardIterator std::uninitialized_copy (_InputIterator __first,
_InputIterator __last, _ForwardIterator __result) [inline]`

Copies the range `[first,last)` into `result`.

Parameters

first An input iterator.

last An input iterator.

result An output iterator.

Returns

`result + (first - last)`

Like `copy()`, but does not require an initialized output range.

Definition at line 109 of file `std_uninitialized.h`.

Referenced by `__gnu_parallel::parallel_sort_mwms_pu()`.

4.11.4.285 `template<typename _InputIterator , typename _Size , typename
_ForwardIterator > _ForwardIterator std::uninitialized_copy_n (
_InputIterator __first, _Size __n, _ForwardIterator __result)
[inline]`

Copies the range `[first,first+n)` into `result`.

Parameters

first An input iterator.
n The number of elements to copy.
result An output iterator.

Returns

`result + n`

Like [copy_n\(\)](#), but does not require an initialized output range.

Definition at line 631 of file `std_uninitialized.h`.

References `__iterator_category()`.

4.11.4.286 `template<typename _ForwardIterator , typename _Tp > void
std::uninitialized_fill (_ForwardIterator __first, _ForwardIterator
__last, const _Tp & __x) [inline]`

Copies the value `x` into the range `[first,last)`.

Parameters

first An input iterator.
last An input iterator.
x The source value.

Returns

Nothing.

Like fill(), but does not require an initialized output range.

Definition at line 166 of file stl_uninitialized.h.

4.11.4.287 `template<typename _ForwardIterator, typename _Size, typename
_Tp> void std::uninitialized_fill_n (_ForwardIterator __first,
_Size __n, const _Tp & __x) [inline]`

Copies the value *x* into the range [first,first+n).

Parameters

first An input iterator.

n The number of copies to make.

x The source value.

Returns

Nothing.

Like fill_n(), but does not require an initialized output range.

Definition at line 220 of file stl_uninitialized.h.

4.11.4.288 `ios_base& std::unitbuf (ios_base & __base) [inline]`

Calls base.setf(ios_base::unitbuf).

Definition at line 893 of file ios_base.h.

References std::ios_base::setf(), and std::ios_base::unitbuf.

4.11.4.289 `ios_base& std::uppercase (ios_base & __base) [inline]`

Calls base.setf(ios_base::uppercase).

Definition at line 877 of file ios_base.h.

References std::ios_base::setf(), and std::ios_base::uppercase.

4.11.4.290 `template<typename _Facet > const _Facet & std::use_facet (const locale & __loc)`

Return a facet.

`use_facet` looks for and returns a reference to a facet of type `Facet` where `Facet` is the template parameter. If `has_facet(locale)` is true, there is a suitable facet to return. It throws [std::bad_cast](#) if the locale doesn't contain a facet of type `Facet`.

Parameters

Facet The facet type to access.

locale The locale to use.

Returns

Reference to facet of type `Facet`.

Exceptions

[std::bad_cast](#) if locale doesn't contain a facet of type `Facet`.

Definition at line 107 of file `locale_classes.tcc`.

Referenced by `std::regex_traits< _Ch_type >::isctype()`, and `std::regex_traits< _Ch_type >::transform()`.

4.11.4.291 `template<typename _CharT, typename _Traits > basic_istream< _CharT, _Traits > & std::ws (basic_istream< _CharT, _Traits > & __is)`

Quick and easy way to eat whitespace.

This manipulator extracts whitespace characters, stopping when the next character is non-whitespace, or when the input sequence is empty. If the sequence is empty, `eofbit` is set in the stream, but not `failbit`.

The current locale is used to distinguish whitespace characters.

Example:

```
MyClass mc;

std::cin >> std::ws >> mc;
```

will skip leading whitespace before calling operator<>> on `cin` and your object. Note that the same effect can be achieved by creating a [std::basic_istream::sentry](#) inside your definition of operator<>>.

Definition at line 1018 of file istream.tcc.

References `std::ios_base::eofbit`, `std::ios_base::getloc()`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

4.11.5 Variable Documentation

4.11.5.1 `enable_if<(is_pointer<_Function>::value && is_function<typename remove_pointer<_Function>::type>::value), typename result_of<_Function(_Args...)>::type>::type std::__invoke [inline]`

Invoke a function object, which may be either a member pointer or a function object. The first parameter will tell which.

Definition at line 240 of file functional.

4.11.5.2 `ios_base::Init std::__ioinit [static]`

Linked to standard error (buffered).

Definition at line 75 of file iostream.

4.11.5.3 `ostream std::cerr`

Linked to standard output.

4.11.5.4 `istream std::cin`

Linked to standard input.

4.11.5.5 `ostream std::clog`

Linked to standard error (unbuffered).

4.11.5.6 `ostream std::cout`

Linked to standard input.

4.11.5.7 `constexpr piecewise_construct_t` `std::piecewise_construct`

`piecewise_construct`

Definition at line 75 of file `stl_pair.h`.

4.11.5.8 `wostream` `std::wcerr`

Linked to standard output.

4.11.5.9 `wistream` `std::wcin`

Linked to standard error (buffered).

4.11.5.10 `wostream` `std::wclog`

Linked to standard error (unbuffered).

4.11.5.11 `wostream` `std::wcout`

Linked to standard input.

4.12 `std::__debug` Namespace Reference

GNU debug code, replaces standard behavior with debug behavior.

Classes

- class [bitset](#)

Class `std::bitset` with additional safety/checking/debug instrumentation.

- class `deque`
Class `std::deque` with safety/checking/debug instrumentation.
- class `forward_list`
Class `std::forward_list` with safety/checking/debug instrumentation.
- class `list`
Class `std::list` with safety/checking/debug instrumentation.
- class `map`
Class `std::map` with safety/checking/debug instrumentation.
- class `multimap`
Class `std::multimap` with safety/checking/debug instrumentation.
- class `multiset`
Class `std::multiset` with safety/checking/debug instrumentation.
- class `set`
Class `std::set` with safety/checking/debug instrumentation.
- class `unordered_map`
Class `std::unordered_map` with safety/checking/debug instrumentation.
- class `unordered_multimap`
Class `std::unordered_multimap` with safety/checking/debug instrumentation.
- class `unordered_multiset`
Class `std::unordered_multiset` with safety/checking/debug instrumentation.
- class `unordered_set`
Class `std::unordered_set` with safety/checking/debug instrumentation.
- class `vector`
Class `std::vector` with safety/checking/debug instrumentation.

Functions

- `template<typename _Tp, typename _Alloc >`
`bool operator!= (const deque< _Tp, _Alloc > &__lhs, const deque< _Tp, _-`
`_Alloc > &__rhs)`

- `template<typename _Tp, typename _Alloc >`
`bool operator!= (const list< _Tp, _Alloc > &__lhs, const list< _Tp, _Alloc >`
`&__rhs)`
- `template<typename _Key, typename _Tp, typename _Hash, typename _Pred, typename _Alloc`

4.12.1 Detailed Description

GNU debug code, replaces standard behavior with debug behavior. Macros and namespaces used by the implementation outside of debug wrappers to verify certain properties. The `__glibcxx_requires_XXX` macros are merely wrappers around the `__glibcxx_check_XXX` wrappers when we are compiling with debug mode, but disappear when we are in release mode so that there is no checking performed in, e.g., the standard library algorithms.

4.12.2 Function Documentation

4.12.2.1 `template<typename _Tp, typename _Alloc> bool
std::__debug::operator<= (const forward_list< _Tp, _Alloc> &
__lx, const forward_list< _Tp, _Alloc> & __ly) [inline]`

Based on operator<.

Definition at line 712 of file debug/forward_list.

4.12.2.2 `template<typename _Tp, typename _Alloc> bool
std::__debug::operator> (const forward_list< _Tp, _Alloc> & __lx,
const forward_list< _Tp, _Alloc> & __ly) [inline]`

Based on operator<.

Definition at line 698 of file debug/forward_list.

4.12.2.3 `template<typename _Tp, typename _Alloc> bool
std::__debug::operator>= (const forward_list< _Tp, _Alloc> &
__lx, const forward_list< _Tp, _Alloc> & __ly) [inline]`

Based on operator<.

Definition at line 705 of file debug/forward_list.

4.12.2.4 `template<typename _Tp, typename _Alloc> void std::__debug::swap
(forward_list< _Tp, _Alloc> & __lx, forward_list< _Tp, _Alloc>
& __ly) [inline]`

See [std::forward_list::swap\(\)](#).

Definition at line 719 of file `debug/forward_list`.

4.13 std::__detail Namespace Reference

Implementation details not part of the namespace `std` interface.

Classes

- struct [_List_node_base](#)
Common part of a node in the list.

Functions

- `template<class _Iterator >`
`std::iterator_traits< _Iterator >::difference_type __distance_fw (_Iterator __first, _Iterator __last, std::input_iterator_tag)`
- `template<class _Iterator >`
`std::iterator_traits< _Iterator >::difference_type __distance_fw (_Iterator __first, _Iterator __last, std::forward_iterator_tag)`
- `template<class _Iterator >`
`std::iterator_traits< _Iterator >::difference_type __distance_fw (_Iterator __first, _Iterator __last)`
- `template<typename _InputIterator , typename _OutputIterator , typename _UnaryOperation >`
`_OutputIterator __transform (_InputIterator __first, _InputIterator __last, _OutputIterator __result, _UnaryOperation __unary_op)`
- `template<typename _Value , bool __cache>`
`bool operator!= (const _Node_iterator_base< _Value, __cache > &__x, const _Node_iterator_base< _Value, __cache > &__y)`
- `template<typename _Value , bool __cache>`
`bool operator!= (const _Hashtable_iterator_base< _Value, __cache > &__x, const _Hashtable_iterator_base< _Value, __cache > &__y)`
- `template<typename _Value , bool __cache>`
`bool operator== (const _Node_iterator_base< _Value, __cache > &__x, const _Node_iterator_base< _Value, __cache > &__y)`
- `template<typename _Value , bool __cache>`
`bool operator== (const _Hashtable_iterator_base< _Value, __cache > &__x, const _Hashtable_iterator_base< _Value, __cache > &__y)`

Variables

- `const unsigned long __prime_list []`

4.13.1 Detailed Description

Implementation details not part of the namespace `std` interface.

4.14 `std::__parallel` Namespace Reference

GNU parallel code, replaces standard behavior with parallel behavior.

Classes

- struct [`_CRandNumber`](#)
Functor wrapper for `std::rand()`.

Functions

- `template<typename _Iter, typename _Tp, typename _IteratorTag >`
`_Tp __accumulate_switch (_Iter __begin, _Iter __end, _Tp __init, _-`
`IteratorTag)`
- `template<typename _Iter, typename _Tp, typename _BinaryOperation, typename _IteratorTag >`
`_Tp __accumulate_switch (_Iter __begin, _Iter __end, _Tp __init, _-`
`BinaryOperation __binary_op, _IteratorTag)`

#### 4.14.1 Detailed Description

GNU parallel code, replaces standard behavior with parallel behavior.

### 4.15 `std::__profile` Namespace Reference

GNU profile code, replaces standard behavior with profile behavior.

#### Classes

- class [bitset](#)  
*Class `std::bitset` wrapper with performance instrumentation.*
- class [deque](#)  
*Class `std::deque` wrapper with performance instrumentation.*
- class [forward\\_list](#)  
*Class `std::forward_list` wrapper with performance instrumentation.*
- class [list](#)  
*List wrapper with performance instrumentation.*
- class [map](#)  
*Class `std::map` wrapper with performance instrumentation.*
- class [multimap](#)  
*Class `std::multimap` wrapper with performance instrumentation.*
- class [multiset](#)  
*Class `std::multiset` wrapper with performance instrumentation.*
- class [set](#)  
*Class `std::set` wrapper with performance instrumentation.*

- class [unordered\\_map](#)  
*Class `std::unordered_map` wrapper with performance instrumentation.*
- class [unordered\\_multimap](#)  
*Class `std::unordered_multimap` wrapper with performance instrumentation.*
- class [unordered\\_multiset](#)  
*Unordered\_multiset wrapper with performance instrumentation.*
- class [unordered\\_set](#)  
*Unordered\_set wrapper with performance instrumentation.*

#### 4.15.1 Detailed Description

GNU profile code, replaces standard behavior with profile behavior.

#### 4.15.2 Function Documentation

- ##### 4.15.2.1 `template<typename _Tp, typename _Alloc > bool` `std::__profile::operator<= ( const forward_list< _Tp, _Alloc > &` `__lx, const forward_list< _Tp, _Alloc > & __ly ) [inline]`

Based on operator<.

Definition at line 163 of file profile/forward\_list.

**4.15.2.2** `template<typename _Tp , typename _Alloc > bool  
std::__profile::operator> ( const forward_list< _Tp, _Alloc > & __lx,  
const forward_list< _Tp, _Alloc > & __ly ) [inline]`

Based on `operator<`.

Definition at line 149 of file `profile/forward_list`.

**4.15.2.3** `template<typename _Tp , typename _Alloc > bool  
std::__profile::operator>= ( const forward_list< _Tp, _Alloc > &  
__lx, const forward_list< _Tp, _Alloc > & __ly ) [inline]`

Based on `operator<`.

Definition at line 156 of file `profile/forward_list`.

**4.15.2.4** `template<typename _Tp , typename _Alloc > void std::__profile::swap  
( forward_list< _Tp, _Alloc > & __lx, forward_list< _Tp, _Alloc >  
& __ly ) [inline]`

See `std::forward_list::swap()`.

Definition at line 170 of file `profile/forward_list`.

## 4.16 `std::chrono` Namespace Reference

ISO C++ 0x entities sub namespace for time and date.

### Classes

- struct `duration`

### 4.17.1 Detailed Description

ISO/IEC TR 24733 Decimal floating-point arithmetic.

### 4.17.2 Function Documentation

#### 4.17.2.1 `long long std::decimal::decimal32_to_long_long ( decimal32 __d )`

Non-conforming extension: Conversion to integral type.

## 4.18 `std::placeholders` Namespace Reference

ISO C++ 0x entities sub namespace for functional.

Define a large number of placeholders. There is no way to simplify this with variadic templates, because we're introducing unique names for each.

### Variables

- `const _Placeholder< 1 > _1`
- `const _Placeholder< 10 > _10`
- `const _Placeholder< 11 > _11`
- `const _Placeholder< 12 > _12`
- `const _Placeholder< 13 > _13`
- `const _Placeholder< 14 > _14`
- `const _Placeholder< 15 > _15`
- `const _Placeholder< 16 > _16`
- `const _Placeholder< 17 > _17`
- `const _Placeholder< 18 > _18`
- `const _Placeholder< 19 > _19`
- `const _Placeholder< 2 > _2`

- `const _Placeholder< 7 > _7`
- `const _Placeholder< 8 > _8`
- `const _Placeholder< 9 > _9`

#### 4.18.1 Detailed Description

ISO C++ 0x entities sub namespace for functional.

Define a large number of placeholders. There is no way to simplify this with variadic templates, because we're introducing unique names for each.

### 4.19 `std::regex_constants` Namespace Reference

ISO C++-0x entities sub namespace for regex.

#### 5.1 Regular Expression Syntax Options

- `enum __syntax_option {`  
    `_S_icode, _S_nosubs, _S_optimize, _S_collate,`  
    `_S_ECMAScript, _S_basic, _S_extended, _S_awk,`  
    `_S_grep, _S_egrep, _S_syntax_last }`
- `typedef unsigned int syntax_option_type`
- `static const syntax_option_type icode`
- `static const syntax_option_type nosubs`
- `static const syntax_option_type optimize`
- `static const syntax_option_type collate`
- `static const syntax_option_type ECMAScript`
- `static const syntax_option_type basic`
- `static const syntax_option_type extended`
- `static const syntax_option_type awk`
- `static const syntax_option_type grep`
- `static const syntax_option_type egrep`

## 5.2 Matching Rules

Matching a regular expression against a sequence of characters [first, last) proceeds according to the rules of the grammar specified for the regular expression object, modified according to the effects listed below for any bitmask elements set.

- enum `__match_flag` {  
`_S_not_bol`, `_S_not_eol`, `_S_not_bow`, `_S_not_eow`,  
`_S_any`, `_S_not_null`, `_S_continuous`, `_S_prev_avail`,  
`_S_sed`, `_S_no_copy`, `_S_first_only`, `_S_match_flag_last` }
- typedef `std::bitset<_S_match_flag_last>` `match_flag_type`
- static const `match_flag_type` `match_default`
- static const `match_flag_type` `match_not_bol`
- static const `match_flag_type` `match_not_eol`
- static const `match_flag_type` `match_not_bow`
- static const `match_flag_type` `match_not_eow`
- static const `match_flag_type` `match_any`
- static const `match_flag_type` `match_not_null`
- static const `match_flag_type` `match_continuous`
- static const `match_flag_type` `match_prev_avail`
- static const `match_flag_type` `format_default`
- static const `match_flag_type` `format_sed`
- static const `match_flag_type` `format_no_copy`
- static const `match_flag_type` `format_first_only`

## 5.3 Error Types

- enum `error_type` {  
`_S_error_collate`, `_S_error_ctype`, `_S_error_escape`, `_S_error_backref`,  
`_S_error_brack`, `_S_error_paren`, `_S_error_brace`, `_S_error_badbrace`,  
`_S_error_range`, `_S_error_space`, `_S_error_badrepeat`, `_S_error_-complexity`,  
`_S_error_stack`, `_S_error_last` }
- static const `error_type` `error_collate` (`_S_error_collate`)
- static const `error_type` `error_ctype` (`_S_error_ctype`)
- static const `error_type` `error_escape` (`_S_error_escape`)
- static const `error_type` `error_backref` (`_S_error_backref`)
- static const `error_type` `error_brack` (`_S_error_brack`)
- static const `error_type` `error_paren` (`_S_error_paren`)
- static const `error_type` `error_brace` (`_S_error_brace`)
- static const `error_type` `error_badbrace` (`_S_error_badbrace`)

- static const `error_type error_range` (`_S_error_range`)
- static const `error_type error_space` (`_S_error_space`)
- static const `error_type error_badrepeat` (`_S_error_badrepeat`)
- static const `error_type error_complexity` (`_S_error_complexity`)
- static const `error_type error_stack` (`_S_error_stack`)

#### 4.19.1 Detailed Description

ISO C++-0x entities sub namespace for regex.

#### 4.19.2 Typedef Documentation

##### 4.19.2.1 `typedef std::bitset<_S_match_flag_last> std::regex_constants::match_flag_type`

This is a bitmask type indicating regex matching rules.

The `match_flag_type` is implementation defined but it is valid to perform bitwise operations on these values and expect the right thing to happen.

Definition at line 191 of file `regex_constants.h`.

##### 4.19.2.2 `typedef unsigned int std::regex_constants::syntax_option_type`

This is a bitmask type indicating how to interpret the regex.

The `syntax_option_type` is implementation defined but it is valid to perform bitwise operations on these values and expect the right thing to happen.

A valid value of type `syntax_option_type` shall have exactly one of the elements `ECMAScript`, `basic`, `extended`, `awk`, `grep`, `egrep` set.

Definition at line 73 of file `regex_constants.h`.

#### 4.19.3 Enumeration Type Documentation

##### 4.19.3.1 `enum std::regex_constants::__match_flag`

This is a bitmask type indicating regex matching rules.

The `match_flag_type` is implementation defined but it is valid to perform bitwise operations on these values and expect the right thing to happen.

Definition at line 168 of file `regex_constants.h`.

#### 4.19.3.2 `enum std::regex_constants::__syntax_option`

This is a bitmask type indicating how to interpret the regex.

The `syntax_option_type` is implementation defined but it is valid to perform bitwise operations on these values and expect the right thing to happen.

A valid value of type `syntax_option_type` shall have exactly one of the elements `ECMAScript`, `basic`, `extended`, `awk`, `grep`, `egrep` set.

Definition at line 47 of file `regex_constants.h`.

#### 4.19.3.3 `enum std::regex_constants::error_type`

The expression contained an invalid collating element name.

Definition at line 44 of file `regex_error.h`.

### 4.19.4 Function Documentation

#### 4.19.4.1 `static const error_type std::regex_constants::error_backref ( _S_error_backref ) [static]`

The expression contained an invalid back reference.

#### 4.19.4.2 `static const error_type std::regex_constants::error_badbrace ( _S_error_badbrace ) [static]`

The expression contained an invalid range in a `{ }` expression.

#### 4.19.4.3 `static const error_type std::regex_constants::error_badrepeat ( _S_error_badrepeat ) [static]`

One of `*?+{` was not preceded by a valid regular expression.

**4.19.4.4** `static const error_type std::regex_constants::error_brace (`  
`_S_error_brace ) [static]`

The expression contained mismatched { and }

**4.19.4.5** `static const error_type std::regex_constants::error_brack (`  
`_S_error_brack ) [static]`

The expression contained mismatched [ and ].

**4.19.4.6** `static const error_type std::regex_constants::error_collate (`  
`_S_error_collate ) [static]`

The expression contained an invalid collating element name.

**4.19.4.7** `static const error_type std::regex_constants::error_complexity (`  
`_S_error_complexity ) [static]`

The complexity of an attempted match against a regular expression exceeded a pre-set level.

**4.19.4.8** `static const error_type std::regex_constants::error_ctype (`  
`_S_error_ctype ) [static]`

The expression contained an invalid character class name.

**4.19.4.9** `static const error_type std::regex_constants::error_escape (`  
`_S_error_escape ) [static]`

The expression contained an invalid escaped character, or a trailing escape.

**4.19.4.10** `static const error_type std::regex_constants::error_paren (`  
`_S_error_paren ) [static]`

The expression contained mismatched ( and ).

**4.19.4.11** `static const error_type std::regex_constants::error_range (`  
`_S_error_range ) [static]`

The expression contained an invalid character range, such as [b-a] in most encodings.

#### 4.19.4.12 `static const error_type std::regex_constants::error_space (` `_S_error_space ) [static]`

There was insufficient memory to convert the expression into a finite state machine.

#### 4.19.4.13 `static const error_type std::regex_constants::error_stack (` `_S_error_stack ) [static]`

There was insufficient memory to determine whether the regular expression could match the specified character sequence.

### 4.19.5 Variable Documentation

#### 4.19.5.1 `const syntax_option_type std::regex_constants::awk [static]`

Specifies that the grammar recognized by the regular expression engine is that used by POSIX utility `awk` in IEEE Std 1003.1-2001. This option is identical to `syntax_option_type extended`, except that C-style escape sequences are supported. These sequences are: `\\`, `\a`, `\b`, `\f`, `\n`, `\r`, `\t`, `\v`, `\'`, `\`, and `\ddd` (where `ddd` is one, two, or three octal digits).

Definition at line 137 of file `regex_constants.h`.

#### 4.19.5.2 `const syntax_option_type std::regex_constants::basic [static]`

Specifies that the grammar recognized by the regular expression engine is that used by POSIX basic regular expressions in IEEE Std 1003.1-2001, Portable Operating System Interface (POSIX), Base Definitions and Headers, Section 9, Regular Expressions [IEEE, Information Technology -- Portable Operating System Interface (POSIX), IEEE Standard 1003.1-2001].

Definition at line 119 of file `regex_constants.h`.

#### 4.19.5.3 `const syntax_option_type std::regex_constants::collate [static]`

Specifies that character ranges of the form `[a-b]` should be locale sensitive.

Definition at line 100 of file `regex_constants.h`.

#### 4.19.5.4 `const syntax_option_type std::regex_constants::ECMAScript` `[static]`

Specifies that the grammar recognized by the regular expression engine is that used by ECMAScript in ECMA-262 [Ecma International, ECMAScript Language

Specification, Standard Ecma-262, third edition, 1999], as modified in section [28.13]. This grammar is similar to that defined in the PERL scripting language but extended with elements found in the POSIX regular expression grammar.

Definition at line 110 of file `regex_constants.h`.

#### 4.19.5.5 `const syntax_option_type std::regex_constants::egrep` `[static]`

Specifies that the grammar recognized by the regular expression engine is that used by POSIX utility `grep` when given the `-E` option in IEEE Std 1003.1-2001. This option is identical to `syntax_option_type` extended, except that newlines are treated as whitespace.

Definition at line 153 of file `regex_constants.h`.

#### 4.19.5.6 `const syntax_option_type std::regex_constants::extended` `[static]`

Specifies that the grammar recognized by the regular expression engine is that used by POSIX extended regular expressions in IEEE Std 1003.1-2001, Portable Operating System Interface (POSIX), Base Definitions and Headers, Section 9, Regular Expressions.

Definition at line 127 of file `regex_constants.h`.

#### 4.19.5.7 `const match_flag_type std::regex_constants::format_default` `[static]`

When a regular expression match is to be replaced by a new string, the new string is constructed using the rules used by the ECMAScript `replace` function in ECMA-262 [Ecma International, ECMAScript Language Specification, Standard Ecma-262, third edition, 1999], part 15.5.4.11 `String.prototype.replace`. In addition, during search and replace operations all non-overlapping occurrences of the regular expression are located and replaced, and sections of the input that did not match the expression are copied unchanged to the output string.

Format strings (from ECMA-262 [15.5.4.11]):

- `$$` The dollar-sign itself (`$`)
- `$&` The matched substring.
- `$'` The portion of *string* that precedes the matched substring. This would be [`match\_results::prefix\(\)`](#).
- `$'` The portion of *string* that follows the matched substring. This would be [`match\_results::suffix\(\)`](#).

- `$n` The *n*th capture, where *n* is in [1,9] and `$n` is not followed by a decimal digit. If *n*  $\leq$  `match_results::size()` and the *n*th capture is undefined, use the empty string instead. If *n*  $>$  `match_results::size()`, the result is implementation-defined.
- `$nn` The *nn*th capture, where *nn* is a two-digit decimal number on [01, 99]. If *nn*  $\leq$  `match_results::size()` and the *n*th capture is undefined, use the empty string instead. If *nn*  $>$  `match_results::size()`, the result is implementation-defined.

Definition at line 273 of file `regex_constants.h`.

#### 4.19.5.8 `const match_flag_type std::regex_constants::format_first_only` `[static]`

When specified during a search and replace operation, only the first occurrence of the regular expression shall be replaced.

Definition at line 294 of file `regex_constants.h`.

#### 4.19.5.9 `const match_flag_type std::regex_constants::format_no_copy` `[static]`

During a search and replace operation, sections of the character container sequence being searched that do not match the regular expression shall not be copied to the output string.

Definition at line 288 of file `regex_constants.h`.

#### 4.19.5.10 `const match_flag_type std::regex_constants::format_sed` `[static]`

When a regular expression match is to be replaced by a new string, the new string is constructed using the rules used by the POSIX `sed` utility in IEEE Std 1003.1- 2001 [IEEE, Information Technology -- Portable Operating System Interface (POSIX), IEEE Standard 1003.1-2001].

Definition at line 281 of file `regex_constants.h`.

#### 4.19.5.11 `const syntax_option_type std::regex_constants::grep` `[static]`

Specifies that the grammar recognized by the regular expression engine is that used by POSIX utility `grep` in IEEE Std 1003.1-2001. This option is identical to `syntax_option_type basic`, except that newlines are treated as whitespace.

Definition at line 145 of file `regex_constants.h`.

**4.19.5.12 `const syntax_option_type std::regex_constants::icase [static]`**

Specifies that the matching of regular expressions against a character sequence shall be performed without regard to case.

Definition at line 79 of file `regex_constants.h`.

**4.19.5.13 `const match_flag_type std::regex_constants::match_any [static]`**

If more than one match is possible then any match is an acceptable result.

Definition at line 228 of file `regex_constants.h`.

**4.19.5.14 `const match_flag_type std::regex_constants::match_continuous [static]`**

The expression only matches a sub-sequence that begins at first .

Definition at line 238 of file `regex_constants.h`.

**4.19.5.15 `const match_flag_type std::regex_constants::match_default [static]`**

The default matching rules.

Definition at line 196 of file `regex_constants.h`.

**4.19.5.16 `const match_flag_type std::regex_constants::match_not_bol [static]`**

The first character in the sequence [first, last) is treated as though it is not at the beginning of a line, so the character (^) in the regular expression shall not match [first, first).

Definition at line 203 of file `regex_constants.h`.

**4.19.5.17 `const match_flag_type std::regex_constants::match_not_bow [static]`**

The expression \b is not matched against the sub-sequence [first,first).

Definition at line 216 of file `regex_constants.h`.

**4.19.5.18 `const match_flag_type std::regex_constants::match_not_eol`  
`[static]`**

The last character in the sequence `[first, last)` is treated as though it is not at the end of a line, so the character `(\n)` in the regular expression shall not match `[last, last)`.

Definition at line 210 of file `regex_constants.h`.

**4.19.5.19 `const match_flag_type std::regex_constants::match_not_eow`  
`[static]`**

The expression `\b` should not be matched against the sub-sequence `[last,last)`.

Definition at line 222 of file `regex_constants.h`.

**4.19.5.20 `const match_flag_type std::regex_constants::match_not_null`  
`[static]`**

The expression does not match an empty sequence.

Definition at line 233 of file `regex_constants.h`.

**4.19.5.21 `const match_flag_type std::regex_constants::match_prev_avail`  
`[static]`**

`--first` is a valid iterator position. When this flag is set then the flags `match_not_bol` and `match_not_bow` are ignored by the regular expression algorithms 7.11 and iterators 7.12.

Definition at line 245 of file `regex_constants.h`.

**4.19.5.22 `const syntax_option_type std::regex_constants::nosubs` `[static]`**

Specifies that when a regular expression is matched against a character container sequence, no sub-expression matches are to be stored in the supplied `match_results` structure.

Definition at line 86 of file `regex_constants.h`.

**4.19.5.23 `const syntax_option_type std::regex_constants::optimize` `[static]`**

Specifies that the regular expression engine should pay more attention to the speed with which regular expressions are matched, and less to the speed with which regular expression objects are constructed. Otherwise it has no detectable effect on the program output.

Definition at line 94 of file `regex_constants.h`.

## 4.20 `std::rel_ops` Namespace Reference

The generated relational operators are sequestered here.

### Functions

- `template<class _Tp >`  
`bool operator!= (const _Tp &__x, const _Tp &__y)`
- `template<class _Tp >`  
`bool operator<= (const _Tp &__x, const _Tp &__y)`
- `template<class _Tp >`  
`bool operator> (const _Tp &__x, const _Tp &__y)`
- `template<class _Tp >`  
`bool operator>= (const _Tp &__x, const _Tp &__y)`

### 4.20.1 Detailed Description

The generated relational operators are sequestered here.

### 4.20.2 Function Documentation

#### 4.20.2.1 `template<class _Tp > bool std::rel_ops::operator!= ( const _Tp & __x, const _Tp & __y ) [inline]`

Defines `!=` for arbitrary types, in terms of `==`.

#### Parameters

- x* A thing.
- y* Another thing.

#### Returns

`x != y`

This function uses `==` to determine its result.

Definition at line 88 of file `stl_relops.h`.

**4.20.2.2** `template<class _Tp > bool std::rel_ops::operator<= ( const _Tp & __x, const _Tp & __y ) [inline]`

Defines `<=` for arbitrary types, in terms of `<`.

#### Parameters

- x* A thing.
- y* Another thing.

#### Returns

`x <= y`

This function uses `<` to determine its result.

Definition at line 114 of file `stl_relops.h`.

**4.20.2.3** `template<class _Tp > bool std::rel_ops::operator> ( const _Tp & __x, const _Tp & __y ) [inline]`

Defines `>` for arbitrary types, in terms of `<`.

#### Parameters

- x* A thing.
- y* Another thing.

#### Returns

`x > y`

This function uses `<` to determine its result.

Definition at line 101 of file `stl_relops.h`.

**4.20.2.4** `template<class _Tp > bool std::rel_ops::operator>= ( const _Tp & __x, const _Tp & __y ) [inline]`

Defines `>=` for arbitrary types, in terms of `<`.

**Parameters**

- x* A thing.
- y* Another thing.

**Returns**

`x >= y`

This function uses `<` to determine its result.

Definition at line 127 of file `std_relops.h`.

**4.21 `std::this_thread` Namespace Reference**

ISO C++ 0x entities sub namespace for thread. 30.2.2 Namespace [this\\_thread](#).

#### 4.22.1 Detailed Description

ISO C++ TR1 entities toplevel namespace is [std::tr1](#).

### 4.23 `std::tr1::__detail` Namespace Reference

Implementation details not part of the namespace [std::tr1](#) interface.

#### 4.23.1 Detailed Description

Implementation details not part of the namespace [std::tr1](#) interface.

## 5 Class Documentation

### 5.1 `__cxxabiv1::__forced_unwind` Class Reference

Thrown as part of forced unwinding.

A magic placeholder class that can be caught by reference to recognize forced unwinding.

## 5.2 `__gnu_cxx::__common_pool_policy<_PoolTp, _Thread>` Struct Template Reference 817

---

### 5.1.1 Detailed Description

Thrown as part of forced unwinding.

A magic placeholder class that can be caught by reference to recognize forced unwinding.

Definition at line 48 of file `cxxabi_forced.h`.

The documentation for this class was generated from the following file:

- [cxxabi\\_forced.h](#)

## 5.2 `__gnu_cxx::__common_pool_policy<_PoolTp, _Thread>` Struct Template Reference

Policy for shared `__pool` objects.

Inherits `__common_pool_base<_PoolTp, _Thread>`.

### 5.2.1 Detailed Description

`template<template< bool > class _PoolTp, bool _Thread> struct __gnu_cxx::__common_pool_policy<_PoolTp, _Thread>`

Policy for shared `__pool` objects.

Definition at line 458 of file `mt_allocator.h`.

The documentation for this struct was generated from the following file:

- [mt\\_allocator.h](#)

## 5.3 `__gnu_cxx::__detail::__mini_vector<_Tp>` Class Template Reference

`__mini_vector<>` is a stripped down version of the full-fledged `std::vector<>`.

### Public Types

- `typedef const _Tp & const_reference`
- `typedef ptrdiff_t difference_type`
- `typedef pointer iterator`
- `typedef _Tp * pointer`
- `typedef _Tp & reference`

## 5.4 `__gnu_cxx::__detail::_Bitmap_counter<_Tp>` Class Template Reference 818

- typedef `size_t` **size\_type**
- typedef `_Tp` **value\_type**

### Public Member Functions

- reference **back** () const throw ()
- [iterator](#) **begin** () const throw ()
- void **clear** () throw ()
- [iterator](#) **end** () const throw ()
- void **erase** ([iterator](#) \_\_pos) throw ()
- void **insert** ([iterator](#) \_\_pos, const\_reference \_\_x)
- reference **operator**[ ] (const size\_type \_\_pos) const throw ()
- void **pop\_back** () throw ()
- void **push\_back** (const\_reference \_\_x)
- size\_type **size** () const throw ()

### 5.3.1 Detailed Description

`template<typename _Tp> class __gnu_cxx::__detail::_mini_vector<_Tp>`

`_mini_vector<>` is a stripped down version of the full-fledged `std::vector<>`. It is to be used only for built-in types or PODs. Notable differences are:

1. Not all accessor functions are present. 2. Used ONLY for PODs. 3. No Allocator template argument. Uses [operator new\(\)](#) to get memory, and [operator delete\(\)](#) to free it. Caveat: The dtor does NOT free the memory allocated, so this a memory-leaking vector!

Definition at line 71 of file `bitmap_allocator.h`.

The documentation for this class was generated from the following file:

- [bitmap\\_allocator.h](#)

## 5.4 `__gnu_cxx::__detail::_Bitmap_counter<_Tp>` Class Template Reference

The bitmap counter which acts as the bitmap manipulator, and manages the bit-manipulation functions and the searching and identification functions on the bit-map.

## 5.4 `__gnu_cxx::__detail::_Bitmap_counter<_Tp>` Class Template Reference

Inheritance diagram for `__gnu_cxx::__detail::_Bitmap_counter<_Tp>`:

### Public Member Functions

- `_Bitmap_counter` (`_BPVector` &Rvbp, long `__index=-1`)
- `pointer _M_base` () const throw ()
- `bool _M_finished` () const throw ()
- `size_t * _M_get` () const throw ()
- `_Index_type _M_offset` () const throw ()
- `void _M_reset` (long `__index=-1`) throw ()
- `void _M_set_internal_bitmap` (size\_t \*`__new_internal_marker`) throw ()
- `_Index_type _M_where` () const throw ()
- `_Bitmap_counter` & `operator++` () throw ()

#### 5.4.1 Detailed Description

`template<typename _Tp> class __gnu_cxx::__detail::_Bitmap_counter<_Tp>`

The bitmap counter which acts as the bitmap manipulator, and manages the bit-manipulation functions and the searching and identification functions on the bit-map.

Definition at line 400 of file `bitmap_allocator.h`.

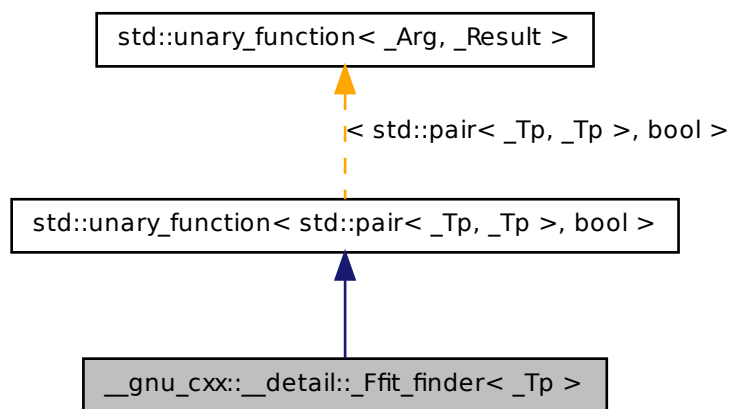

The documentation for this class was generated from the following file:

- [bitmap\\_allocator.h](#)

## 5.5 `__gnu_cxx::__detail::_Ffit_finder<_Tp>` Class Template Reference

The class which acts as a predicate for applying the first-fit memory allocation policy for the bitmap allocator.

Inheritance diagram for `__gnu_cxx::__detail::_Ffit_finder<_Tp>`:

### Public Types

- typedef `std::pair<_Tp, _Tp>` `argument_type`
- typedef `bool` `result_type`

### Public Member Functions

- `size_t * _M_get () const throw ()`
- `_Counter_type _M_offset () const throw ()`
- `bool operator() (_Block_pair __bp) throw ()`

### 5.5.1 Detailed Description

`template<typename _Tp> class __gnu_cxx::__detail::_Ffit_finder<_Tp>`

The class which acts as a predicate for applying the first-fit memory allocation policy for the bitmap allocator.

Definition at line 335 of file `bitmap_allocator.h`.

### 5.5.2 Member Typedef Documentation

**5.5.2.1** `typedef std::pair<_Tp, _Tp> std::unary_function< std::pair<_Tp, _Tp>, bool>::argument_type [inherited]`

`argument_type` is the type of the argument

Definition at line 105 of file `stl_function.h`.

**5.5.2.2** `typedef bool std::unary_function< std::pair<_Tp, _Tp>, bool>::result_type [inherited]`

`result_type` is the return type

Definition at line 108 of file `stl_function.h`.

The documentation for this class was generated from the following file:

- [bitmap\\_allocator.h](#)

## 5.6 `__gnu_cxx::__mt_alloc<_Tp, _Poolp>` Class Template Reference

This is a fixed size (power of 2) allocator which - when compiled with thread support - will maintain one freelist per size per thread plus a *global* one. Steps are taken to limit the per thread freelist sizes (by returning excess back to the *global* list).

Further details: <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt12ch32.html>.

Inheritance diagram for `__gnu_cxx::__mt_alloc<_Tp, _Poolp>`:

### Public Types

- `typedef _Poolp __policy_type`
- `typedef _Poolp::pool_type __pool_type`
- `typedef const _Tp * const_pointer`
- `typedef const _Tp & const_reference`
- `typedef ptrdiff_t difference_type`
- `typedef _Tp * pointer`
- `typedef _Tp & reference`
- `typedef size_t size_type`
- `typedef _Tp value_type`

### Public Member Functions

- `__mt_alloc` (`const __mt_alloc &`) `throw ()`
- `template<typename _Tp1, typename _Poolp1 >`  
`__mt_alloc` (`const __mt_alloc<_Tp1, _Poolp1> &`) `throw ()`
- `const __pool_base::_Tune _M_get_options ()`
- `void _M_set_options (__pool_base::_Tune __t)`
- `pointer address` (`reference __x`) `const`
- `const_pointer address` (`const_reference __x`) `const`
- `pointer allocate` (`size_type __n, const void * = 0`)
- `template<typename... _Args>`  
`void construct` (`pointer __p, _Args &&... __args`)
- `void construct` (`pointer __p, const _Tp & __val`)
- `void deallocate` (`pointer __p, size_type __n`)

- void **destroy** (pointer \_\_p)
- size\_type **max\_size** () const throw ()

### 5.6.1 Detailed Description

template<typename \_Tp, typename \_Poolp = \_\_common\_pool\_policy<\_\_pool, true >> class \_\_gnu\_cxx::\_\_mt\_alloc< \_Tp, \_Poolp >

This is a fixed size (power of 2) allocator which - when compiled with thread support - will maintain one freelist per size per thread plus a *global* one. Steps are taken to limit the per thread freelist sizes (by returning excess back to the *global* list).

Further details: <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt12ch32.html>.

Definition at line 627 of file mt\_allocator.h.

The documentation for this class was generated from the following file:

- [mt\\_allocator.h](#)

## 5.7 \_\_gnu\_cxx::\_\_mt\_alloc\_base< \_Tp > Class Template Reference

Base class for \_Tp dependent member functions.

Inheritance diagram for \_\_gnu\_cxx::\_\_mt\_alloc\_base< \_Tp >:

### Public Types

- typedef const \_Tp \* **const\_pointer**

- typedef const \_Tp & **const\_reference**
- typedef ptrdiff\_t **difference\_type**
- typedef \_Tp \* **pointer**
- typedef \_Tp & **reference**
- typedef size\_t **size\_type**
- typedef \_Tp **value\_type**

### Public Member Functions

- pointer **address** (reference \_\_x) const
- const\_pointer **address** (const\_reference \_\_x) const
- template<typename... \_Args>  
void **construct** (pointer \_\_p, \_Args &&...\_\_args)
- void **construct** (pointer \_\_p, const \_Tp &\_\_val)
- void **destroy** (pointer \_\_p)
- size\_type **max\_size** () const throw ()

#### 5.7.1 Detailed Description

`template<typename _Tp> class __gnu_cxx::__mt_alloc_base< _Tp >`

Base class for \_Tp dependent member functions.

Definition at line 568 of file `mt_allocator.h`.

The documentation for this class was generated from the following file:

- [mt\\_allocator.h](#)

### 5.8 `__gnu_cxx::__per_type_pool_policy< _Tp, _PoolTp, _Thread > Struct` **Template Reference**

Policy for individual \_\_pool objects.

Inherits `__per_type_pool_base< _Tp, _PoolTp, _Thread >`.

#### 5.8.1 Detailed Description

`template<typename _Tp, template< bool > class _PoolTp, bool _Thread> struct  
__gnu_cxx::__per_type_pool_policy< _Tp, _PoolTp, _Thread >`

Policy for individual \_\_pool objects.

Definition at line 553 of file `mt_allocator.h`.

The documentation for this struct was generated from the following file:

- [mt\\_allocator.h](#)

## 5.9 \_\_gnu\_cxx::\_\_pool< false > Class Template Reference

Specialization for single thread.

Inheritance diagram for \_\_gnu\_cxx::\_\_pool< false >:

### Public Types

- typedef unsigned short int **\_Binmap\_type**

### Public Member Functions

- **\_\_pool** (const \_\_pool\_base::\_\_Tune &\_\_tune)
- void **\_M\_adjust\_freelist** (const \_Bin\_record &, \_Block\_record \*, size\_t)
- bool **\_M\_check\_threshold** (size\_t \_\_bytes)

- char \* **\_M\_reserve\_block** (size\_t \_\_bytes, const size\_t \_\_thread\_id)
- void **\_M\_set\_options** (\_Tune \_\_t)

### Protected Attributes

- `_Binmap_type * _M_binmap`
- `bool _M_init`
- `_Tune _M_options`

### 5.9.1 Detailed Description

`template<> class __gnu_cxx::__pool< false >`

Specialization for single thread.

Definition at line 194 of file `mt_allocator.h`.

The documentation for this class was generated from the following file:

- [mt\\_allocator.h](#)

## 5.10 \_\_gnu\_cxx::\_\_pool< true > Class Template Reference

Specialization for thread enabled, via `gthreads.h`.

Inheritance diagram for `__gnu_cxx::__pool< true >`:

### Public Types

- `typedef unsigned short int _Binmap_type`

**Public Member Functions**

- `__pool` (const `__pool_base::__Tune &__tune`)
- `void _M_adjust_freelist` (const `_Bin_record &__bin`, `_Block_record *__block`, `size_t __thread_id`)
- `bool _M_check_threshold` (`size_t __bytes`)
- `void _M_destroy` () throw ()
- `void _M_destroy_thread_key` (`void *`) throw ()
- `size_t _M_get_align` ()
- `const _Bin_record & _M_get_bin` (`size_t __which`)
- `size_t _M_get_binmap` (`size_t __bytes`)
- `const _Tune & _M_get_options` () const
- `size_t _M_get_thread_id` ()
- `void _M_initialize` (`__destroy_handler`)
- `void _M_initialize_once` ()
- `void _M_reclaim_block` (`char *__p`, `size_t __bytes`) throw ()
- `char * _M_reserve_block` (`size_t __bytes`, const `size_t __thread_id`)
- `void _M_set_options` (`_Tune __t`)

**Protected Attributes**

- `_Binmap_type * _M_binmap`
- `bool _M_init`
- `_Tune _M_options`

**5.10.1 Detailed Description**

`template<> class __gnu_cxx::__pool< true >`

Specialization for thread enabled, via `gthreads.h`.

Definition at line 261 of file `mt_allocator.h`.

The documentation for this class was generated from the following file:

- [mt\\_allocator.h](#)

**5.11 `__gnu_cxx::__pool_alloc<_Tp>` Class Template Reference**

Allocator using a memory pool with a single lock.

Inheritance diagram for `__gnu_cxx::__pool_alloc<_Tp>`:

### Public Types

- `typedef const _Tp * const_pointer`
- `typedef const _Tp & const_reference`
- `typedef ptrdiff_t difference_type`
- `typedef _Tp * pointer`
- `typedef _Tp & reference`
- `typedef size_t size_type`
- `typedef _Tp value_type`

### Public Member Functions

- `__pool_alloc (const \_\_pool\_alloc &) throw ()`
- `template<typename _Tp1 >  
__pool_alloc (const \_\_pool\_alloc<_Tp1> &) throw ()`
- `pointer address (reference __x) const`
- `const_pointer address (const_reference __x) const`
- `pointer allocate (size_type __n, const void * = 0)`
- `template<typename... _Args>

#### 5.12.1 Detailed Description

Base class for `__pool_alloc`. Uses various allocators to fulfill underlying requests (and makes as few requests as possible when in default high-speed pool mode).

Important implementation properties: 0. If globally mandated, then allocate objects from new 1. If the clients request an object of size  $> \_S\_max\_bytes$ , the resulting object will be obtained directly from new 2. In all other cases, we allocate an object of size exactly `\_S_round_up(requested_size)`. Thus the client has enough size information that we can return the object to the proper free list without permanently losing part of the object.

Definition at line 76 of file `pool_allocator.h`.

The documentation for this class was generated from the following file:

- [pool\\_allocator.h](#)

### 5.13 `__gnu_cxx::__pool_base` Struct Reference

Base class for pool object.

#### 5.14.1 Detailed Description

`template<typename _CharT, typename _Traits, typename _Alloc> class __gnu_cxx::__rc_string_base<_CharT, _Traits, _Alloc>`

Documentation? What's that? Nathan Myers <[ncm@cantrip.org](mailto:ncm@cantrip.org)>.

A string looks like this:

|                                                                             |                                                                                  |
|-----------------------------------------------------------------------------|----------------------------------------------------------------------------------|
| <pre> [__rc_string_base&lt;char_type&gt;] _M_dataplus _M_p -----&gt; </pre> | <pre> [_Rep] _M_length _M_capacity _M_refcount unnamed array of char_type </pre> |
|-----------------------------------------------------------------------------|----------------------------------------------------------------------------------|

Where the `_M_p` points to the first character in the string, and you cast it to a pointer-to-`_Rep` and subtract 1 to get a pointer to the header.

This approach has the enormous advantage that a string object requires only one allocation. All the ugliness is confined within a single pair of inline functions, which each compile to a single *add* instruction: `_Rep::_M_refdata()`, and `__rc_string_base::_M_rep()`; and the allocation function which gets a block of raw bytes and with room enough and constructs a `_Rep` object at the front.

The reason you want `_M_data` pointing to the character array and not the `_Rep` is so that the debugger can see the string contents. (Probably we should add a non-inline

member to get the `_Rep` for the debugger to use, so users can check the actual string length.)

Note that the `_Rep` object is a POD so that you can have a static *empty string* `_Rep` object already *constructed* before static constructors have run. The reference-count encoding is chosen so that a 0 indicates one reference, so you never try to destroy the empty-string `_Rep` object.

All but the last paragraph is considered pretty conventional for a C++ string implementation.

#### 5.16.1 Detailed Description

`template<typename _CharT, typename _Traits, typename _Alloc, template<typename, typename, typename> class _Base> class __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>`

Template class `__versa_string`.

Data structure managing sequences of characters and character-like objects.

Definition at line 54 of file `vstring.h`.

#### 5.16.2 Constructor & Destructor Documentation

**5.16.2.1** `template<typename _CharT, typename _Traits, typename _Alloc, template<typename, typename, typename> class _Base> __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::__versa_string( ) [inline]`

Default constructor creates an empty string.

Definition at line 132 of file `vstring.h`.

Referenced by `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::substr()`.

**5.16.2.2** `template<typename _CharT, typename _Traits, typename _Alloc,  
template< typename, typename, typename > class _Base>  
__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base  
>::__versa_string( const _Alloc & __a ) [inline, explicit]`

Construct an empty string using allocator *a*.

Definition at line 139 of file `vstring.h`.

**5.16.2.3** `template<typename _CharT, typename _Traits, typename _Alloc,  
template< typename, typename, typename > class _Base>  
__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base  
>::__versa_string( const __versa_string< _CharT, _Traits, _Alloc,  
_Base > & __str ) [inline]`

Construct string with copy of value of *str*.

#### Parameters

`__str` Source string.

Definition at line 147 of file `vstring.h`.

**5.16.2.4** `template<typename _CharT, typename _Traits, typename _Alloc,  
template< typename, typename, typename > class _Base>  
__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base  
>::__versa_string( __versa_string< _CharT, _Traits, _Alloc, _Base >  
&& __str ) [inline]`

String move constructor.

#### Parameters

`__str` Source string.

The newly-constructed string contains the exact contents of *str*. The contents of *str* are a valid, but unspecified string.

Definition at line 159 of file `vstring.h`.

```
5.16.2.5 template<typename _CharT, typename _Traits, typename _Alloc,
 template< typename, typename, typename > class _Base>
 __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base
 >::__versa_string (std::initializer_list<_CharT> __l, const _Alloc
 & __a = _Alloc()) [inline]
```

Construct string from an initializer list.

#### Parameters

`__l` [std::initializer\\_list](#) of characters.  
`__a` Allocator to use (default is default allocator).

Definition at line 167 of file `vstring.h`.

```
5.16.2.6 template<typename _CharT, typename _Traits, typename _Alloc,
 template< typename, typename, typename > class _Base>
 __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base
 >::__versa_string (const __versa_string< _CharT, _Traits, _Alloc,
 _Base > & __str, size_type __pos, size_type __n = npos)
 [inline]
```

Construct string as copy of a substring.

#### Parameters

`__str` Source string.  
`__pos` Index of first character to copy from.  
`__n` Number of characters to copy (default remainder).

Definition at line 178 of file `vstring.h`.

```
5.16.2.7 template<typename _CharT, typename _Traits, typename _Alloc,
 template< typename, typename, typename > class _Base>
 __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base
 >::__versa_string (const __versa_string< _CharT, _Traits, _Alloc,
 _Base > & __str, size_type __pos, size_type __n, const _Alloc & __a
) [inline]
```

Construct string as copy of a substring.

**Parameters**

`__str` Source string.  
`__pos` Index of first character to copy from.  
`__n` Number of characters to copy.  
`__a` Allocator to use.

Definition at line 193 of file `vstring.h`.

```
5.16.2.8 template<typename _CharT, typename _Traits, typename _Alloc,
 template< typename, typename, typename > class _Base>
 __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base
 >::__versa_string(const _CharT * __s, size_type __n, const _Alloc
 & __a = _Alloc()) [inline]
```

Construct string initialized by a character array.

**Parameters**

`__s` Source character array.  
`__n` Number of characters to copy.  
`__a` Allocator to use (default is default allocator).

NB: `__s` must have at least `__n` characters, `'\0'` has no special meaning.

Definition at line 210 of file `vstring.h`.

```
5.16.2.9 template<typename _CharT, typename _Traits, typename _Alloc,
 template< typename, typename, typename > class _Base>
 __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base
 >::__versa_string(const _CharT * __s, const _Alloc & __a =
 _Alloc()) [inline]
```

Construct string as copy of a C string.

**Parameters**

`__s` Source C string.  
`__a` Allocator to use (default is default allocator).

Definition at line 219 of file `vstring.h`.

**5.16.2.10** `template<typename _CharT, typename _Traits, typename _Alloc,  
template< typename, typename, typename > class _Base>  
__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base  
>::__versa_string ( size_type __n, _CharT __c, const _Alloc & __a  
= _Alloc() ) [inline]`

Construct string as multiple characters.

**Parameters**

- `__n` Number of characters.
- `__c` Character to use.
- `__a` Allocator to use (default is default allocator).

Definition at line 229 of file `vstring.h`.

**5.16.2.11** `template<typename _CharT, typename _Traits, typename _Alloc,  
template< typename, typename, typename > class _Base>  
template<class _InputIterator > __gnu_cxx::__versa_string<  
_CharT, _Traits, _Alloc, _Base >::__versa_string ( _InputIterator  
__beg, _InputIterator __end, const _Alloc & __a = _Alloc() )  
[inline]`

Construct string as copy of a range.

**Parameters**

- `__beg` Start of range.
- `__end` End of range.
- `__a` Allocator to use (default is default allocator).

Definition at line 239 of file `vstring.h`.

**5.16.2.12** `template<typename _CharT, typename _Traits, typename _Alloc,  
template< typename, typename, typename > class _Base>  
__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base  
>::~~__versa_string ( ) [inline]`

Destroy the string instance.

Definition at line 246 of file `vstring.h`.

### 5.16.3 Member Function Documentation

**5.16.3.1** `template<typename _CharT, typename _Traits, typename _Alloc,  
template< typename, typename, typename > class _Base>  
__versa_string& __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc,  
_Base>::append ( const __versa_string<_CharT, _Traits, _Alloc,  
_Base> & __str ) [inline]`

Append a string to this string.

#### Parameters

`__str` The string to append.

#### Returns

Reference to this string.

Definition at line 678 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::size()`.

Referenced by `std::getline()`, `__gnu_cxx::operator+()`, `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::operator+=()`, and `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::resize()`.

**5.16.3.2** `template<typename _CharT, typename _Traits, typename _Alloc,  
template< typename, typename, typename > class _Base>  
__versa_string& __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc,  
_Base>::append ( const __versa_string<_CharT, _Traits, _Alloc,  
_Base> & __str, size_type __pos, size_type __n ) [inline]`

Append a substring.

#### Parameters

`__str` The string to append.

`__pos` Index of the first character of `str` to append.

`__n` The number of characters to append.

#### Returns

Reference to this string.

### Exceptions

[\*`std::out\_of\_range`\*](#) if *pos* is not a valid index.

This function appends *n* characters from *str* starting at *pos* to this string. If *n* is larger than the number of available characters in *str*, the remainder of *str* is appended.

Definition at line 695 of file `vstring.h`.

**5.16.3.3** `template<typename _CharT, typename _Traits, typename _Alloc,  
template< typename, typename, typename > class _Base>  
__versa_string& __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc,  
_Base>::append ( const _CharT * __s, size_type __n ) [inline]`

Append a C substring.

### Parameters

*\_\_s* The C string to append.  
*\_\_n* The number of characters to append.

### Returns

Reference to this string.

Definition at line 707 of file `vstring.h`.

**5.16.3.4** `template<typename _CharT, typename _Traits, typename _Alloc,  
template< typename, typename, typename > class _Base>  
__versa_string& __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc,  
_Base>::append ( const _CharT * __s ) [inline]`

Append a C string.

### Parameters

*\_\_s* The C string to append.

### Returns

Reference to this string.

Definition at line 720 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::length()`.

**5.16.3.5** `template<typename _CharT, typename _Traits, typename _Alloc,  
template< typename, typename, typename > class _Base>  
__versa_string& __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc,  
_Base>::append ( size_type __n, _CharT __c ) [inline]`

Append multiple characters.

**Parameters**

`__n` The number of characters to append.  
`__c` The character to use.

**Returns**

Reference to this string.

Appends `n` copies of `c` to this string.

Definition at line 737 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::size()`.

**5.16.3.6** `template<typename _CharT, typename _Traits, typename _Alloc,  
template< typename, typename, typename > class _Base>  
__versa_string& __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc,  
_Base>::append ( std::initializer_list<_CharT> __l ) [inline]`

Append an `initializer_list` of characters.

**Parameters**

`__l` The `initializer_list` of characters to append.

**Returns**

Reference to this string.

Definition at line 747 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::append()`.

Referenced by `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::append()`.

**5.16.3.7** `template<typename _CharT, typename _Traits, typename  
_Alloc, template< typename, typename, typename > class  
_Base> template<class _InputIterator > __versa_string&  
__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base  
>::append ( _InputIterator __first, _InputIterator __last )  
[inline]`

Append a range of characters.

**Parameters**

`__first` Iterator referencing the first character to append.

`__last` Iterator marking the end of the range.

**Returns**

Reference to this string.

Appends characters in the range [first,last) to this string.

Definition at line 761 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::replace()`.

**5.16.3.8** `template<typename _CharT, typename _Traits, typename _Alloc,  
template< typename, typename, typename > class _Base>  
__versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc,  
_Base >::assign ( const __versa_string< _CharT, _Traits, _Alloc,  
_Base > & __str ) [inline]`

Set value to contents of another string.

**Parameters**

`__str` Source string to use.

**Returns**

Reference to this string.

Definition at line 784 of file `vstring.h`.

Referenced by `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::operator=()`, and `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::push_back()`.

**5.16.3.9** `template<typename _CharT, typename _Traits, typename _Alloc,  
template< typename, typename, typename > class _Base>  
__versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc,  
_Base >::assign ( __versa_string< _CharT, _Traits, _Alloc, _Base >  
&& __str ) [inline]`

Set value to contents of another string.

#### Parameters

`__str` Source string to use.

#### Returns

Reference to this string.

This function sets this string to the exact contents of `__str`. `__str` is a valid, but unspecified string.

Definition at line 800 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::swap()`.

**5.16.3.10** `template<typename _CharT, typename _Traits, typename _Alloc,  
template< typename, typename, typename > class _Base>  
__versa_string& __gnu_cxx::__versa_string< _CharT, _Traits,  
_Alloc, _Base >::assign ( const __versa_string< _CharT, _Traits,  
_Alloc, _Base > & __str, size_type __pos, size_type __n )  
[inline]`

Set value to a substring of a string.

#### Parameters

`__str` The string to use.

`__pos` Index of the first character of str.

`__n` Number of characters to use.

#### Returns

Reference to this string.

#### Exceptions

[\*`std::out\_of\_range`\*](#) if `__pos` is not a valid index.

This function sets this string to the substring of `__str` consisting of `__n` characters at `__pos`. If `__n` is larger than the number of available characters in `__str`, the remainder of `__str` is used.

Definition at line 821 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::size()`.

**5.16.3.11** `template<typename _CharT, typename _Traits, typename _Alloc,`  
`template< typename, typename, typename > class _Base>`  
`__versa_string& __gnu_cxx::__versa_string<_CharT, _Traits,`  
`_Alloc, _Base>::assign ( const _CharT * __s, size_type __n )`  
`[inline]`

Set value to a C substring.

#### Parameters

`__s` The C string to use.

`__n` Number of characters to use.

#### Returns

Reference to this string.

This function sets the value of this string to the first `__n` characters of `__s`. If `__n` is larger than the number of available characters in `__s`, the remainder of `__s` is used.

Definition at line 838 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::size()`.

**5.16.3.12** `template<typename _CharT, typename _Traits, typename _Alloc,`  
`template< typename, typename, typename > class _Base>`  
`__versa_string& __gnu_cxx::__versa_string<_CharT, _Traits,`  
`_Alloc, _Base>::assign ( const _CharT * __s ) [inline]`

Set value to contents of a C string.

#### Parameters

`__s` The C string to use.

#### Returns

Reference to this string.

## 5.16 `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>` Class Template Reference 851

---

This function sets the value of this string to the value of `__s`. The data is copied, so there is no dependence on `__s` once the function returns.

Definition at line 854 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::size()`.

**5.16.3.13** `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string& __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::assign ( size_type __n, _CharT __c ) [inline]`

Set value to multiple characters.

### Parameters

`__n` Length of the resulting string.

`__c` The character to use.

### Returns

Reference to this string.

This function sets the value of this string to `__n` copies of character `__c`.

Definition at line 871 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::size()`.

**5.16.3.14** `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> template<class _InputIterator > __versa_string& __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::assign ( _InputIterator __first, _InputIterator __last ) [inline]`

Set value to a range of characters.

### Parameters

`__first` Iterator referencing the first character to append.

`__last` Iterator marking the end of the range.

### Returns

Reference to this string.

Sets value of string to characters in the range [first,last).

Definition at line 885 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::replace()`.

**5.16.3.15** `template<typename _CharT, typename _Traits, typename _Alloc,`  
`template< typename, typename, typename > class _Base>`  
`__versa_string& __gnu_cxx::__versa_string<_CharT, _Traits,`  
`_Alloc, _Base >::assign ( std::initializer_list<_CharT > __l )`  
`[inline]`

Set value to an `initializer_list` of characters.

#### Parameters

`__l` The `initializer_list` of characters to assign.

#### Returns

Reference to this string.

Definition at line 895 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::assign()`.

Referenced by `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::assign()`.

**5.16.3.16** `template<typename _CharT, typename _Traits, typename _Alloc,`  
`template< typename, typename, typename > class _Base>`  
`const_reference __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc,`  
`_Base >::at ( size_type __n ) const [inline]`

Provides access to the data contained in the string.

#### Parameters

`__n` The index of the character to access.

#### Returns

Read-only (const) reference to the character.

#### Exceptions

*[`std::out\_of\_range`](#)* If `__n` is an invalid index.

This function provides for safer data access. The parameter is first checked that it is in the range of the string. The function throws `out_of_range` if the check fails.

Definition at line 569 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::size()`.

**5.16.3.17** `template<typename _CharT, typename _Traits, typename _Alloc,`  
`template< typename, typename, typename > class _Base> reference`  
`__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::at (`  
`size_type __n ) [inline]`

Provides access to the data contained in the string.

#### Parameters

`__n` The index of the character to access.

#### Returns

Read/write reference to the character.

#### Exceptions

*`std::out_of_range`* If `__n` is an invalid index.

This function provides for safer data access. The parameter is first checked that it is in the range of the string. The function throws `out_of_range` if the check fails. Success results in unsharing the string.

Definition at line 588 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::size()`.

template< typename, typename, typename > class _Base> void  
__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::clear  
( ) [inline]`

Erases the string, making it empty.

Definition at line 508 of file `vstring.h`.

**5.16.3.27** `template<typename _CharT, typename _Traits, typename _Alloc,  
 template< typename, typename, typename > class _Base> int  
 __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base  
 >::compare ( const __versa_string< _CharT, _Traits, _Alloc, _Base  
 > & __str ) const [inline]`

Compare to a string.

#### Parameters

`__str` String to compare against.

#### Returns

Integer < 0, 0, or > 0.

Returns an integer < 0 if this string is ordered before `__str`, 0 if their values are equivalent, or > 0 if this string is ordered after `__str`. Determines the effective length `rlen` of the strings to compare as the smallest of `size()` and `str.size()`. The function then compares the two strings by calling `traits::compare(data(), str.data(), rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

Definition at line 1906 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::data()`, `std::min()`, and `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::size()`.

Referenced by `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::compare()`, `__gnu_cxx::operator<()`, `__gnu_cxx::operator<=()`, `__gnu_cxx::operator==()`, `__gnu_cxx::operator>()`, and `__gnu_cxx::operator>=()`.

**5.16.3.28** `template<typename _CharT, typename _Traits, typename _Alloc,  
 template< typename, typename, typename > class _Base> int  
 __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base  
 >::compare ( size_type __pos, size_type __n, const __versa_string<  
 _CharT, _Traits, _Alloc, _Base > & __str ) const`

Compare substring to a string.

#### Parameters

`__pos` Index of first character of substring.

`__n` Number of characters in substring.

`__str` String to compare against.

### Returns

Integer  $< 0$ ,  $0$ , or  $> 0$ .

Form the substring of this string from the `__n` characters starting at `__pos`. Returns an integer  $< 0$  if the substring is ordered before `__str`,  $0$  if their values are equivalent, or  $> 0$  if the substring is ordered after `__str`. Determines the effective length `rlen` of the strings to compare as the smallest of the length of the substring and `__str.size()`. The function then compares the two strings by calling `traits::compare(substring.data(), str.data(), rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

Definition at line 460 of file `vstring.tcc`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::compare()`, `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::data()`, `std::min()`, and `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::size()`.

**5.16.3.29** `template<typename _CharT, typename _Traits, typename _Alloc, template<typename, typename, typename> class _Base> int __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::compare ( size_type __pos1, size_type __n1, const __versa_string<_CharT, _Traits, _Alloc, _Base> & __str, size_type __pos2, size_type __n2 ) const`

Compare substring to a substring.

### Parameters

- `__pos1` Index of first character of substring.
- `__n1` Number of characters in substring.
- `__str` String to compare against.
- `__pos2` Index of first character of substring of `str`.
- `__n2` Number of characters in substring of `str`.

### Returns

Integer  $< 0$ ,  $0$ , or  $> 0$ .

Form the substring of this string from the `__n1` characters starting at `__pos1`. Form the substring of `__str` from the `__n2` characters starting at `__pos2`. Returns an integer  $< 0$  if this substring is ordered before the substring of `__str`,  $0$  if their values are equivalent, or  $> 0$  if this substring is ordered after the substring of `__str`. Determines the effective length `rlen` of the strings to compare as the smallest of

the lengths of the substrings. The function then compares the two strings by calling `traits::compare(substring.data(),str.substr(pos2,n2).data(),rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

Definition at line 477 of file `vstring.tcc`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::compare()`, `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::data()`, and `std::min()`.

**5.16.3.30** `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> int __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::compare ( const _CharT * __s ) const`

Compare to a C string.

#### Parameters

`__s` C string to compare against.

#### Returns

Integer  $< 0$ ,  $0$ , or  $> 0$ .

Returns an integer  $< 0$  if this string is ordered before `__s`,  $0$  if their values are equivalent, or  $> 0$  if this string is ordered after `__s`. Determines the effective length `rlen` of the strings to compare as the smallest of `size()` and the length of a string constructed from `__s`. The function then compares the two strings by calling `traits::compare(data(),s,rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

Definition at line 496 of file `vstring.tcc`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::compare()`, `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::length()`, `std::min()`, and `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::size()`.

**5.16.3.31** `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> int __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::compare ( size_type __pos, size_type __n1, const _CharT * __s ) const`

Compare substring to a C string.

#### Parameters

`__pos` Index of first character of substring.  
`__n1` Number of characters in substring.  
`__s` C string to compare against.

#### Returns

Integer  $< 0$ ,  $0$ , or  $> 0$ .

Form the substring of this string from the `__n1` characters starting at `__pos`. Returns an integer  $< 0$  if the substring is ordered before `__s`,  $0$  if their values are equivalent, or  $> 0$  if the substring is ordered after `__s`. Determines the effective length `r1en` of the strings to compare as the smallest of the length of the substring and the length of a string constructed from `__s`. The function then compares the two string by calling `traits::compare(substring.data(),s,r1en)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

Definition at line 512 of file `vstring.tcc`.

References `std::min()`.

**5.16.3.32** `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> int __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::compare( size_type __pos, size_type __n1, const _CharT* __s, size_type __n2 ) const`

Compare substring against a character array.

#### Parameters

`__pos1` Index of first character of substring.  
`__n1` Number of characters in substring.  
`__s` character array to compare against.  
`__n2` Number of characters of `s`.

#### Returns

Integer  $< 0$ ,  $0$ , or  $> 0$ .

Form the substring of this string from the `__n1` characters starting at `__pos1`. Form a string from the first `__n2` characters of `__s`. Returns an integer  $< 0$  if this substring

is ordered before the string from `__s`, 0 if their values are equivalent, or  $> 0$  if this substring is ordered after the string from `__s`. Determines the effective length `rlen` of the strings to compare as the smallest of the length of the substring and `__n2`. The function then compares the two strings by calling `traits::compare(substring.data(),s,rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

NB: `s` must have at least `n2` characters, `\0` has no special meaning.

Definition at line 529 of file `vstring.tcc`.

References `std::min()`.

**5.16.3.33** `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string< _CharT, _Traits, _Alloc, _Base >::size_type __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::copy ( _CharT * __s, size_type __n, size_type __pos = 0 ) const`

Copy substring into C string.

#### Parameters

`__s` C string to copy value into.

`__n` Number of characters to copy.

`__pos` Index of first character to copy.

#### Returns

Number of characters actually copied

#### Exceptions

[`std::out\_of\_range`](#) If `pos > size()`.

Copies up to `__n` characters starting at `__pos` into the C string `s`. If `__pos` is greater than `size()`, `out_of_range` is thrown.

Definition at line 255 of file `vstring.tcc`.

**5.16.3.34** `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> const_reverse_iterator __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::crbegin ( ) const [inline]`

Returns a read-only (constant) reverse iterator that points to the last character in the string. Iteration is done in reverse element order.

Definition at line 404 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::end()`.

 template< typename, typename, typename > class _Base>  
 __versa_string& __gnu_cxx::__versa_string< _CharT, _Traits,  
 _Alloc, _Base >::erase ( size_type __pos = 0, size_type __n = npos ) [inline]`

Remove characters.

#### Parameters

`__pos` Index of first character to remove (default 0).

`__n` Number of characters to remove (default remainder).

#### Returns

Reference to this string.

### Exceptions

*`std::out_of_range`* If `__pos` is beyond the end of this string.

Removes `__n` characters from this string starting at `__pos`. The length of the string is reduced by `__n`. If there are `< __n` characters to remove, the remainder of the string is truncated. If `__p` is beyond end of string, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1090 of file `vstring.h`.

Referenced by `std::getline()`.

template< typename, typename, typename > class _Base> iterator  
__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::erase  
( iterator __position ) [inline]`

Remove one character.

### Parameters

`__position` Iterator referencing the character to remove.

### Returns

iterator referencing same location after removal.

Removes the character at `__position` from this string. The value of the string doesn't change if an error is thrown.

Definition at line 1106 of file `vstring.h`.

**5.16.3.42** `template<typename _CharT, typename _Traits, typename _Alloc,  
template< typename, typename, typename > class _Base> iterator  
__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::erase  
( iterator __first, iterator __last ) [inline]`

Remove a range of characters.

### Parameters

`__first` Iterator referencing the first character to remove.

`__last` Iterator referencing the end of the range.

### Returns

Iterator referencing location of first after removal.

Removes the characters in the range [first,last) from this string. The value of the string doesn't change if an error is thrown.

Definition at line 1127 of file `vstring.h`.

**5.16.3.43** `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string< _CharT, _Traits, _Alloc, _Base >::size_type __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::find ( const _CharT * __s, size_type __pos, size_type __n ) const`

Find position of a C substring.

### Parameters

`__s` C string to locate.  
`__pos` Index of character to search from.  
`__n` Number of characters from `__s` to search for.

### Returns

Index of start of first occurrence.

Starting from `__pos`, searches forward for the first `__n` characters in `__s` within this string. If found, returns the index where it begins. If not found, returns `npos`.

Definition at line 270 of file `vstring.tcc`.

Find position of a string.

**Parameters**

`__str` String to locate.  
`__pos` Index of character to search from (default 0).

**Returns**

Index of start of first occurrence.

Starting from `__pos`, searches forward for value of `__str` within this string. If found, returns the index where it begins. If not found, returns `npos`.

__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base  
>::find_first_not_of ( const _CharT * __s, size_type __pos,  
size_type __n ) const`

Find position of a character not in C substring.

#### Parameters

`__s` C string containing characters to avoid.  
`__pos` Index of character to search from.  
`__n` Number of characters from `s` to consider.

#### Returns

Index of first occurrence.

Starting from `__pos`, searches forward for a character not contained in the first `__n` characters of `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Definition at line 392 of file `vstring.tcc`.

`>::find_last_of ( const __versa_string< _CharT, _Traits, _Alloc,`  
`_Base > & __str, size_type __pos = npos ) const [inline]`

Find last position of a character of string.

**Parameters**

- `__str` String containing characters to locate.
- `__pos` Index of character to search back from (default end).

**Returns**

Index of last occurrence.

Starting from `__pos`, searches backward for one of the characters of `__str` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Definition at line 1699 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::data()`, `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::find_last_of()`, and `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::size()`.

template< typename, typename, typename > class _Base> size_type  
__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base  
>::find_last_of ( const _CharT * __s, size_type __pos = npos )  
const [inline]`

Find last position of a character of C string.

#### Parameters

`__s` C string containing characters to locate.

`__pos` Index of character to search back from (default end).

#### Returns

Index of last occurrence.

Starting from `__pos`, searches backward for one of the characters of `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Definition at line 1728 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::find_last_of()`.

__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base  
>::find_last_of ( _CharT __c, size_type __pos = npos ) const  
[inline]`

Find last position of a character.

#### Parameters

`__c` Character to locate.

`__pos` Index of character to search back from (default end).

#### Returns

Index of last occurrence.

Starting from `__pos`, searches backward for `__c` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Note: equivalent to `rfind(c, pos)`.

Return copy of allocator used to construct this string.

Definition at line 1504 of file `vstring.h`.

**5.16.3.66** `template<typename _CharT, typename _Traits, typename _Alloc,  
template< typename, typename, typename > class _Base>  
__versa_string& __gnu_cxx::__versa_string< _CharT, _Traits,  
_Alloc, _Base >::insert ( size_type __pos, const _CharT * __s,  
size_type __n ) [inline]`

Insert a C substring.

#### Parameters

`__pos` Iterator referencing location in string to insert at.

`__s` The C string to insert.

`__n` The number of characters to insert.

#### Returns

Reference to this string.

#### Exceptions

[\*`std::length\_error`\*](#) If new length exceeds `max_size()`.

[\*`std::out\_of\_range`\*](#) If `__pos` is beyond the end of this string.

Inserts the first `__n` characters of `__s` starting at `__pos`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. If `__pos` is beyond `end()`, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1004 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::replace()`.

**5.16.3.67** `template<typename _CharT, typename _Traits, typename _Alloc,  
template< typename, typename, typename > class _Base> iterator  
__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::insert  
( iterator __p, _CharT __c ) [inline]`

Insert one character.

#### Parameters

`__p` Iterator referencing position in string to insert at.

`__c` The character to insert.

### Returns

Iterator referencing newly inserted char.

### Exceptions

*[std::length\\_error](#)* If new length exceeds `max_size()`.

Inserts character `__c` at position referenced by `__p`. If adding character causes the length to exceed `max_size()`, `length_error` is thrown. If `__p` is beyond end of string, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1065 of file `vstring.h`.

**5.16.3.68** `template<typename _CharT, typename _Traits, typename _Alloc,  
template< typename, typename, typename > class _Base>

_Alloc, _Base>::insert ( size_type __pos1, const __versa_string<  
_CharT, _Traits, _Alloc, _Base> & __str ) [inline]`

Insert value of a string.

### Parameters

`__pos1` Iterator referencing location in string to insert at.

`__str` The string to insert.

### Returns

Reference to this string.

### Exceptions

*[std::length\\_error](#)* If new length exceeds `max_size()`.

Inserts value of `__str` starting at `__pos1`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 958 of file `vstring.h`.

template< typename, typename, typename > class _Base> void  
__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::insert  
( iterator __p, size_type __n, _CharT __c ) [inline]`

Insert multiple characters.

#### Parameters

- `__p` Iterator referencing location in string to insert at.
- `__n` Number of characters to insert
- `__c` The character to insert.

#### Exceptions

[`std::length\_error`](#) If new length exceeds `max_size()`.

Inserts `__n` copies of character `__c` starting at the position referenced by iterator `__p`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 913 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::replace()`.

template<class _InputIterator > void __gnu_cxx::__versa_string<  
_CharT, _Traits, _Alloc, _Base >::insert ( iterator __p,  
_InputIterator __beg, _InputIterator __end ) [inline]`

Insert a range of characters.

#### Parameters

`__p` Iterator referencing location in string to insert at.  
`__beg` Start of range.  
`__end` End of range.

#### Exceptions

`std::length_error` If new length exceeds `max_size()`.

Inserts characters in range `[beg,end)`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 930 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::replace()`.

**5.16.3.72** `template<typename _CharT, typename _Traits, typename _Alloc,  
template< typename, typename, typename > class _Base>  
__versa_string& __gnu_cxx::__versa_string<_CharT, _Traits,  
_Alloc, _Base >::insert ( size_type __pos, size_type __n, _CharT  
__c ) [inline]`

Insert multiple characters.

#### Parameters

`__pos` Index in string to insert at.  
`__n` Number of characters to insert  
`__c` The character to insert.

#### Returns

Reference to this string.

### Exceptions

*`std::length_error`* If new length exceeds `max_size()`.

*`std::out_of_range`* If `__pos` is beyond the end of this string.

Inserts `__n` copies of character `__c` starting at index `__pos`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. If `__pos > length()`, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1047 of file `vstring.h`.

_Alloc, _Base>::insert ( size_type __pos1, const __versa_string<  
_CharT, _Traits, _Alloc, _Base> & __str, size_type __pos2,  
size_type __n ) [inline]`

Insert a substring.

### Parameters

`__pos1` Iterator referencing location in string to insert at.

`__str` The string to insert.

`__pos2` Start of characters in `str` to insert.

`__n` Number of characters to insert.

### Returns

Reference to this string.

### Exceptions

*`std::length_error`* If new length exceeds `max_size()`.

*`std::out_of_range`* If `__pos1 > size()` or `__pos2 > __str.size()`.

Starting at `__pos1`, insert `__n` character of `__str` beginning with `__pos2`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. If `__pos1` is beyond the end of this string or `__pos2` is beyond the end of `__str`, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

[inline]`

Insert a C string.

#### Parameters

`__pos` Iterator referencing location in string to insert at.

`__s` The C string to insert.

#### Returns

Reference to this string.

#### Exceptions

[\*`std::length\_error`\*](#) If new length exceeds `max_size()`.

[\*`std::out\_of\_range`\*](#) If `__pos` is beyond the end of this string.

Inserts the first `__n` characters of `__s` starting at `__pos`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. If `__pos` is beyond `end()`, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

_Traits, _Alloc, _Base >::replace ( iterator __i1, iterator __i2,  
std::initializer_list<_CharT> __l ) [inline]`

Replace range of characters with `initializer_list`.

#### Parameters

`__i1` Iterator referencing start of range to replace.

`__i2` Iterator referencing end of range to replace.

`__l` The `initializer_list` of characters to insert.

#### Returns

Reference to this string.

#### Exceptions

[\*`std::length\_error`\*](#) If new length exceeds `max_size()`.

Removes the characters in the range [i1,i2). In place, characters in the range [k1,k2) are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1423 of file `vstring.h`.

Replace range of characters with string.

#### Parameters

- `__i1` Iterator referencing start of range to replace.
- `__i2` Iterator referencing end of range to replace.
- `__str` String value to insert.

#### Returns

Reference to this string.

#### Exceptions

`std::length_error` If new length exceeds `max_size()`.

Removes the characters in the range [i1,i2). In place, the value of `__str` is inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1272 of file `vstring.h`.

_Alloc, _Base >::replace ( size_type __pos, size_type __n, const  
__versa_string< _CharT, _Traits, _Alloc, _Base > & __str )  
[inline]`

Replace characters with value from another string.

#### Parameters

`__pos` Index of first character to replace.  
`__n` Number of characters to be replaced.  
`__str` String to insert.

#### Returns

Reference to this string.

#### Exceptions

[\*std::out\\_of\\_range\*](#) If `__pos` is beyond the end of this string.  
[\*std::length\\_error\*](#) If new length exceeds `max_size()`.

Removes the characters in the range `[pos,pos+n)` from this string. In place, the value of `__str` is inserted. If `__pos` is beyond end of string, `out_of_range` is thrown. If the length of the result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1155 of file `vstring.h`.

_Alloc, _Base >::replace ( size_type __pos, size_type __n1,  
size_type __n2, _CharT __c ) [inline]`

Replace characters with multiple characters.

#### Parameters

- `__pos` Index of first character to replace.
- `__n1` Number of characters to be replaced.
- `__n2` Number of characters to insert.
- `__c` Character to insert.

#### Returns

Reference to this string.

#### Exceptions

- [\*`std::out\_of\_range`\*](#) If `__pos > size()`.
- [\*`std::length\_error`\*](#) If new length exceeds `max_size()`.

Removes the characters in the range `[pos, pos + n1)` from this string. In place, `__n2` copies of `__c` are inserted. If `__pos` is beyond end of string, `out_of_range` is thrown. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1254 of file `vstring.h`.

**5.16.3.97** `template<typename _CharT, typename _Traits, typename _Alloc,

__versa_string& __gnu_cxx::__versa_string<_CharT, _Traits,  
_Alloc, _Base>::replace ( iterator __i1, iterator __i2, size_type  
__n, _CharT __c ) [inline]`

Replace range of characters with multiple characters.

#### Parameters

- `__i1` Iterator referencing start of range to replace.
- `__i2` Iterator referencing end of range to replace.
- `__n` Number of characters to insert.
- `__c` Character to insert.

#### Returns

Reference to this string.

### Exceptions

*`std::length_error`* If new length exceeds `max_size()`.

Removes the characters in the range `[i1,i2)`. In place, `__n` copies of `__c` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

_Alloc, _Base >::replace ( iterator __i1, iterator __i2, const  
_CharT * __s ) [inline]`

Replace range of characters with C string.

### Parameters

`__i1` Iterator referencing start of range to replace.

`__i2` Iterator referencing end of range to replace.

`__s` C string value to insert.

### Returns

Reference to this string.

### Exceptions

*`std::length_error`* If new length exceeds `max_size()`.

Removes the characters in the range `[i1,i2)`. In place, the characters of `__s` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

_CharT * __s, size_type __n2 ) [inline]`

Replace characters with value of a C substring.

#### Parameters

- `__pos` Index of first character to replace.
- `__n1` Number of characters to be replaced.

`__s` C string to insert.

`__n2` Number of characters from `__s` to use.

### Returns

Reference to this string.

### Exceptions

*[std::out\\_of\\_range](#)* If `__pos1 > size()`.

*[std::length\\_error](#)* If new length exceeds `max_size()`.

Removes the characters in the range `[pos, pos + n1)` from this string. In place, the first `__n2` characters of `__s` are inserted, or all of `__s` if `__n2` is too large. If `__pos` is beyond end of string, `out_of_range` is thrown. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

const __versa_string<_CharT, _Traits, _Alloc, _Base> & __str,  
size_type __pos2, size_type __n2 ) [inline]`

Replace characters with value from another string.

#### Parameters

- `__pos1` Index of first character to replace.
- `__n1` Number of characters to be replaced.
- `__str` String to insert.
- `__pos2` Index of first character of `str` to use.
- `__n2` Number of characters from `str` to use.

#### Returns

Reference to this string.

#### Exceptions

- `std::out_of_range` If `__pos1 > size()` or `__pos2 > str.size()`.
- `std::length_error` If new length exceeds `max_size()`.

Removes the characters in the range `[pos1, pos1 + n)` from this string. In place, the value of `__str` is inserted. If `__pos` is beyond end of string, `out_of_range` is thrown. If the length of the result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

_Alloc, _Base >::replace ( iterator __i1, iterator __i2, const  
_CharT * __s, size_type __n ) [inline]`

Replace range of characters with C substring.

#### Parameters

`__i1` Iterator referencing start of range to replace.  
`__i2` Iterator referencing end of range to replace.  
`__s` C string value to insert.  
`__n` Number of characters from `s` to insert.

#### Returns

Reference to this string.

#### Exceptions

[\*std::length\\_error\*](#) If new length exceeds `max_size()`.

Removes the characters in the range `[i1,i2)`. In place, the first `n` characters of `__s` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1290 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::replace()`.

**5.16.3.104** `template<typename _CharT, typename _Traits, typename _Alloc,  
template< typename, typename, typename > class _Base> void  
__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base  
>::reserve ( size_type __res_arg = 0 ) [inline]`

Attempt to preallocate enough memory for specified number of characters.

#### Parameters

`__res_arg` Number of characters required.

#### Exceptions

[\*std::length\\_error\*](#) If `__res_arg` exceeds `max_size()`.

This function attempts to reserve enough memory for the string to hold the specified number of characters. If the number requested is more than `max_size()`, `length_error` is thrown.

The advantage of this function is that if optimal code is a necessity and the user can determine the string length that will be required, the user can reserve the memory in advance, and thus prevent a possible reallocation of memory and copying of string data.

Definition at line 501 of file `vstring.h`.

Referenced by `__gnu_cxx::operator+()`, and `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::shrink_to_fit()`.

**5.16.3.105** `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> void __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::resize ( size_type __n, _CharT __c )`

Resizes the string to the specified number of characters.

#### Parameters

- `__n` Number of characters the string should contain.
- `__c` Character to fill any new elements.

This function will resize the string to the specified number of characters. If the number is smaller than the string's current size the string is truncated, otherwise the string is extended and new elements are set to `__c`.

Definition at line 51 of file `vstring.tcc`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::append()`, and `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::size()`.

**5.16.3.106** `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> void __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::resize ( size_type __n ) [inline]`

Resizes the string to the specified number of characters.

#### Parameters

- `__n` Number of characters the string should contain.

This function will resize the string to the specified length. If the new size is smaller than the string's current size the string is truncated, otherwise the string is extended and new characters are default-constructed. For basic types such as char, this means setting them to 0.

Definition at line 460 of file `vstring.h`.

Find last position of a C substring.

#### Parameters

- `__s` C string to locate.
- `__pos` Index of character to search back from.
- `__n` Number of characters from `s` to search for.

#### Returns

Index of start of last occurrence.

Starting from `__pos`, searches backward for the first `__n` characters in `__s` within this string. If found, returns the index where it begins. If not found, returns `npos`.

Definition at line 313 of file `vstring.tcc`.

__versa_string __gnu_cxx::__versa_string< _CharT, _Traits,  
_Alloc, _Base >::substr ( size_type __pos = 0, size_type __n = npos  
) const [inline]`

Get a substring.

#### Parameters

`__pos` Index of first character (default 0).

`__n` Number of characters in substring (default remainder).

#### Returns

The new string.

## Exceptions

*`std::out_of_range`* If `pos > size()`.

Construct and return a new string using the `__n` characters starting at `__pos`. If the string is too short, use the remainder of the characters. If `__pos` is beyond the end of the string, `out_of_range` is thrown.

Definition at line 1885 of file `vstring.h`.

- [vstring.tcc](#)

## 5.17 `__gnu_cxx::_Caster<_ToType>` Struct Template Reference

### Public Types

- `typedef _ToType::element_type * type`

#### 5.17.1 Detailed Description

`template<typename _ToType> struct __gnu_cxx::_Caster<_ToType>`

These functions are here to allow containers to support non standard pointer types. For normal pointers, these resolve to the use of the standard cast operation. For other types the functions will perform the appropriate cast to/from the custom pointer class so long as that class meets the following conditions: 1) has a `typedef element_type` which names the type it points to. 2) has a `get()` const method which returns `element_type*`. 3) has a constructor which can take one `element_type*` argument. This type supports the semantics of the pointer cast operators (below.)

Definition at line 52 of file `cast.h`.

The documentation for this struct was generated from the following file:

- [cast.h](#)

## 5.18 `__gnu_cxx::_Char_types<_CharT>` Struct Template Reference

Mapping from character type to associated types.

### Public Types

- `typedef unsigned long int_type`

- typedef `std::streamoff` **off\_type**
- typedef `std::streampos` **pos\_type**
- typedef `std::mbstate_t` **state\_type**

### 5.18.1 Detailed Description

**template<typename \_CharT> struct `__gnu_cxx::_Char_types<_CharT>`**

Mapping from character type to associated types.

#### Note

This is an implementation class for the generic version of `char_traits`. It defines `int_type`, `off_type`, `pos_type`, and `state_type`. By default these are unsigned long, `streamoff`, `streampos`, and `mbstate_t`. Users who need a different set of types, but who don't need to change the definitions of any function defined in `char_traits`, can specialize `__gnu_cxx::_Char_types` while leaving `__gnu_cxx::char_traits` alone.

Definition at line 60 of file `char_traits.h`.

The documentation for this struct was generated from the following file:

- [char\\_traits.h](#)

## 5.19 `__gnu_cxx::_ExtPtr_allocator<_Tp>` Class Template Reference

An example allocator which uses a non-standard pointer type.

This allocator specifies that containers use a 'relative pointer' as it's pointer type. (See [ext/pointer.h](#)) Memory allocation in this example is still performed using `std::allocator`.

### Public Types

- typedef `_Pointer_adapter<_Relative_pointer_impl<const _Tp>>` **const\_pointer**
- typedef `const _Tp &` **const\_reference**
- typedef `std::ptrdiff_t` **difference\_type**
- typedef `_Pointer_adapter<_Relative_pointer_impl<_Tp>>` **pointer**
- typedef `_Tp &` **reference**
- typedef `std::size_t` **size\_type**
- typedef `_Tp` **value\_type**

## Public Member Functions

- `_ExtPtr_allocator` (const `_ExtPtr_allocator` &\_\_rarg) throw ()
- template<typename `_Up` >

### 5.19.1 Detailed Description

template<typename `_Tp`> class `__gnu_cxx::__ExtPtr_allocator`< `_Tp` >

An example allocator which uses a non-standard pointer type.

This allocator specifies that containers use a 'relative pointer' as it's pointer type. (See [ext/pointer.h](#)) Memory allocation in this example is still performed using `std::allocator`.

Definition at line 56 of file `extptr_allocator.h`.

The documentation for this class was generated from the following file:

- [extptr\\_allocator.h](#)

## 5.20 `__gnu_cxx::_Invalid_type` Struct Reference

### 5.20.1 Detailed Description

The specialization on this type helps resolve the problem of reference to void, and eliminates the need to specialize `_Pointer_adapter` for cases of void\*, const void\*, and so on.

Definition at line 209 of file `pointer.h`.

The documentation for this struct was generated from the following file:

- [pointer.h](#)

## 5.21 `__gnu_cxx::_Pointer_adapter< _Storage_policy >` Class Template Reference

### 5.21.1 Detailed Description

`template<typename _Storage_policy> class __gnu_cxx::_Pointer_adapter<_Storage_policy>`

The following provides an 'alternative pointer' that works with the containers when specified as the pointer typedef of the allocator.

The pointer type used with the containers doesn't have to be this class, but it must support the implicit conversions, pointer arithmetic, comparison operators, etc. that are supported by this class, and avoid raising compile-time ambiguities. Because creating a working pointer can be challenging, this pointer template was designed to wrapper an easier storage policy type, so that it becomes reusable for creating other pointer types.

A key point of this class is also that it allows container writers to 'assume' `Allocator::pointer` is a typedef for a normal pointer. This class supports most of the conventions of a true pointer, and can, for instance handle implicit conversion to const and base class pointer types. The only impositions on container writers to support extended pointers are: 1) use the `Allocator::pointer` typedef appropriately for pointer types. 2) if you need pointer casting, use the `__pointer_cast<>` functions from [ext/cast.h](#). This allows pointer cast operations to be overloaded is necessary by custom pointers.

Note: The const qualifier works with this pointer adapter as follows:

```
_Tp* == _Pointer_adapter<_Std_pointer_impl<_Tp>> >; const _Tp* == _Pointer_adapter<_Std_pointer_impl<const _Tp>> >;
_Tp* const == const _Pointer_adapter<_Std_pointer_impl<_Tp>> >; const _Tp* const == const _Pointer_adapter<_Std_pointer_impl<const _Tp>> >;
```

Definition at line 285 of file `pointer.h`.

The documentation for this class was generated from the following file:

## 5.22 `__gnu_cxx::_Relative_pointer_impl<_Tp>` Class Template Reference<sup>910</sup>

---

- [pointer.h](#)

## 5.22 `__gnu_cxx::_Relative_pointer_impl<_Tp>` Class Template Reference

A storage policy for use with `_Pointer_adapter<>` which stores the pointer's address as an offset value which is relative to its own address.

### Public Types

- `typedef _Tp element_type`

### Public Member Functions

- `_Tp * get () const`
- `bool operator< (const \_Relative\_pointer\_impl &__rarg) const`
- `bool operator== (const \_Relative\_pointer\_impl &__rarg) const`
- `void set (_Tp *__arg)`

### 5.22.1 Detailed Description

**template<typename \_Tp> class `__gnu_cxx::_Relative_pointer_impl<_Tp>`**

A storage policy for use with `_Pointer_adapter<>` which stores the pointer's address as an offset value which is relative to its own address. This is intended for pointers within shared memory regions which might be mapped at different addresses by different processes. For null pointers, a value of 1 is used. (0 is legitimate sometimes for nodes in circularly linked lists) This value was chosen as the least likely to generate an incorrect null. As there is no reason why any normal pointer would point 1 byte into its own pointer address.

Definition at line 105 of file `pointer.h`.

The documentation for this class was generated from the following file:

- [pointer.h](#)

## 5.23 `__gnu_cxx::_Relative_pointer_impl< const _Tp >` Class Template Reference

### Public Types

- `typedef const _Tp element_type`

**Public Member Functions**

- `const _Tp * get () const`
- `bool operator< (const \_Relative\_pointer\_impl &__rarg) const`
- `bool operator== (const \_Relative\_pointer\_impl &__rarg) const`
- `void set (const _Tp *__arg)`

**5.23.1 Detailed Description**

`template<typename _Tp> class __gnu_cxx::Relative_pointer_impl< const _Tp >`

`Relative_pointer_impl` needs a specialization for `const T` because of the casting done during pointer arithmetic.

Definition at line 157 of file `pointer.h`.

The documentation for this class was generated from the following file:

- [pointer.h](#)

**5.24 `__gnu_cxx::Std_pointer_impl<_Tp>` Class Template Reference**

A storage policy for use with `_Pointer_adapter<>` which yields a standard pointer.

**Public Types**

- `typedef _Tp element_type`

**Public Member Functions**

- `_Tp * get () const`
- `bool operator< (const \_Std\_pointer\_impl &__rarg) const`
- `bool operator== (const \_Std\_pointer\_impl &__rarg) const`
- `void set (element_type *__arg)`

**5.24.1 Detailed Description**

`template<typename _Tp> class __gnu_cxx::Std_pointer_impl< _Tp >`

A storage policy for use with `_Pointer_adapter<>` which yields a standard pointer. A `_Storage_policy` is required to provide 4 things: 1) A `get()` API for returning the stored

pointer value. 2) An `set()` API for storing a pointer value. 3) An `element_type` typedef to define the type this points to. 4) An `operator<()` to support pointer comparison. 5) An `operator==(())` to support pointer comparison.

Definition at line 62 of file `pointer.h`.

The documentation for this class was generated from the following file:

- [pointer.h](#)

## 5.25 `__gnu_cxx::_Unqualified_type<_Tp>` Struct Template Reference

### Public Types

- typedef `_Tp type`

#### 5.25.1 Detailed Description

`template<typename _Tp> struct __gnu_cxx::_Unqualified_type<_Tp>`

This structure accomodates the way in which `std::iterator_traits<>` is normally specialized for `const T*`, so that `value_type` is still `T`.

Definition at line 237 of file `pointer.h`.

The documentation for this struct was generated from the following file:

- [pointer.h](#)

## 5.26 `__gnu_cxx::annotate_base` Struct Reference

Base class for checking address and label information about allocations. Create a [std::map](#) between the allocated address (`void*`) and a datum for annotations, which are a pair of numbers corresponding to label and allocated size.

Inheritance diagram for `__gnu_cxx::annotate_base`:

## 5.27 `__gnu_cxx::array_allocator<_Tp, _Array>` Class Template Reference 913

#### 5.30.1 Detailed Description

`template<typename _Tp> class __gnu_cxx::bitmap_allocator<_Tp>`

Bitmap Allocator, primary template.

Definition at line 691 of file `bitmap_allocator.h`.

#### 5.30.2 Member Function Documentation

**5.30.2.1** `template<typename _Tp> pointer __gnu_cxx::bitmap_allocator<_Tp>::_M_allocate_single_object ( ) throw (std::bad_alloc)`  
**[inline]**

Allocates memory for a single object of size `sizeof(_Tp)`.

### Exceptions

*std::bad\_alloc*. If memory can not be allocated.

Complexity: Worst case complexity is  $O(N)$ , but that is hardly ever hit. If and when this particular case is encountered, the next few cases are guaranteed to have a worst case complexity of  $O(1)$ ! That's why this function performs very well on average. You can consider this function to have a complexity referred to commonly as: Amortized Constant time.

Definition at line 825 of file `bitmap_allocator.h`.

References `__gnu_cxx::__detail::__bit_allocate()`, `__gnu_cxx::__detail::__num_bitmaps()`, and `__gnu_cxx::_Bit_scan_forward()`.

#### 5.30.2.2 `template<typename _Tp> void __gnu_cxx::bitmap_allocator<_Tp>::__M_deallocate_single_object ( pointer __p ) throw () [inline]`

Deallocates memory that belongs to a single object of size `sizeof(_Tp)`.

Complexity:  $O(\lg(N))$ , but the worst case is not hit often! This is because containers usually deallocate memory close to each other and this case is handled in  $O(1)$  time by the `deallocate` function.

Definition at line 915 of file `bitmap_allocator.h`.

References `__gnu_cxx::__detail::__bit_free()`, `__gnu_cxx::__detail::__num_bitmaps()`, `std::__rotate()`, and `__gnu_cxx::free_list::_M_insert()`.

### 5.31.1 Detailed Description

`template<typename _CharT> struct __gnu_cxx::char_traits< _CharT >`

Base class used to implement [std::char\\_traits](#).

#### Note

For any given actual character type, this definition is probably wrong. (Most of the member functions are likely to be right, but the `int_type` and `state_type` typedefs, and the `eof()` member function, are likely to be wrong.) The reason this class exists is so users can specialize it. Classes in namespace `std` may not be specialized for fundamental types, but classes in namespace `__gnu_cxx` may be.

See <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt05ch13s03.html> for advice on how to make use of this class for *unusual* character types. Also, check out [include/ext/pod\\_char\\_traits.h](#).

Definition at line 85 of file `char_traits.h`.

The documentation for this struct was generated from the following file:

- [char\\_traits.h](#)

## 5.32 `__gnu_cxx::character< V, I, S >` Struct Template Reference

A POD class that serves as a character abstraction class.

### Public Types

- typedef `character< V, I, S > char_type`
- typedef `I int_type`
- typedef `S state_type`
- typedef `V value_type`

### Static Public Member Functions

- `template<typename V2 >`  
static `char_type` `from` (`const V2 &v`)
- `template<typename V2 >`  
static `V2` `to` (`const char_type &c`)

### Public Attributes

- `value_type` `value`

#### 5.32.1 Detailed Description

`template<typename V, typename I, typename S = std::mbstate_t> struct __gnu_cxx::character< V, I, S >`

A POD class that serves as a character abstraction class.

Definition at line 47 of file `pod_char_traits.h`.

The documentation for this struct was generated from the following file:

- [pod\\_char\\_traits.h](#)

## 5.33 `__gnu_cxx::condition_base` Struct Reference

Base struct for condition policy.

Inheritance diagram for `__gnu_cxx::condition_base`:

#### 5.33.1 Detailed Description

Base struct for condition policy. Requires a public member function with the signature `void throw_conditionally()`

Definition at line 255 of file `throw_allocator.h`.

The documentation for this struct was generated from the following file:

- [throw\\_allocator.h](#)

### 5.34 `__gnu_cxx::constant_binary_fun<_Result, _Arg1, _Arg2>` Struct Template Reference

An [SGI extension](#) .

Inherits `__gnu_cxx::Constant_binary_fun<_Result, _Arg1, _Arg2>`.

## 5.37 `__gnu_cxx::debug_allocator<_Alloc>` Class Template Reference

A meta-allocator with debugging bits, as per [20.4].

This is precisely the allocator defined in the C++ Standard.

- all allocation calls `operator new`
- all deallocation calls `operator delete`.

### Public Types

- `typedef _Alloc::const_pointer` **const\_pointer**
- `typedef _Alloc::const_reference` **const\_reference**
- `typedef _Alloc::difference_type` **difference\_type**
- `typedef _Alloc::pointer` **pointer**
- `typedef _Alloc::reference` **reference**
- `typedef _Alloc::size_type` **size\_type**
- `typedef _Alloc::value_type` **value\_type**

## Public Member Functions

- pointer **allocate** (size\_type \_\_n)
- pointer **allocate** (size\_type \_\_n, const void \*\_\_hint)
- void **deallocate** (pointer \_\_p, size\_type \_\_n)

### 5.37.1 Detailed Description

`template<typename _Alloc> class __gnu_cxx::debug_allocator<_Alloc>`

A meta-allocator with debugging bits, as per [20.4].

This is precisely the allocator defined in the C++ Standard.

- all allocation calls operator new
- all deallocation calls operator delete.

Definition at line 63 of file `debug_allocator.h`.

The documentation for this class was generated from the following file:

- [debug\\_allocator.h](#)

## 5.38 `__gnu_cxx::enc_filebuf<_CharT>` Class Template Reference

class [enc\\_filebuf](#).

Inheritance diagram for `__gnu_cxx::enc_filebuf<_CharT>`:

## Public Types

- typedef `codecvt<char_type, char, __state_type>` `__codecvt_type`
- typedef `__basic_file<char>` `__file_type`
- typedef `basic_filebuf<char_type, traits_type>` `__filebuf_type`
- typedef `traits_type::state_type` `__state_type`
- typedef `basic_streambuf<char_type, traits_type>` `__streambuf_type`

### 5.38.1 Detailed Description

`template<typename _CharT> class __gnu_cxx::enc_filebuf<_CharT>`

class `enc_filebuf`.

Definition at line 42 of file `enc_filebuf.h`.

### 5.38.2 Member Typedef Documentation

**5.38.2.1** `typedef basic_streambuf<char_type, traits_type> std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>::__streambuf_type [inherited]`

This is a non-standard type.

Reimplemented from `std::basic_streambuf<_CharT, encoding_char_traits<_CharT>>`.

Definition at line 79 of file `fstream`.

**5.38.2.2** `typedef _CharT std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>::char_type [inherited]`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from `std::basic_streambuf<_CharT, encoding_char_traits<_CharT>>`.

Definition at line 73 of file `fstream`.

**5.38.2.3** `typedef traits_type::int_type std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>::int_type [inherited]`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from `std::basic_streambuf<_CharT, encoding_char_traits<_CharT>>`.

Definition at line 75 of file `fstream`.

#### 5.38.2.4 `typedef traits_type::off_type std::basic_filebuf<_CharT, encoding_char_traits<_CharT>::off_type [inherited]`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from `std::basic_streambuf<_CharT, encoding_char_traits<_CharT>>`.

Definition at line 77 of file `fstream`.

#### 5.38.2.5 `template<typename _CharT> typedef traits_type::pos_type __gnu_cxx::enc_filebuf<_CharT>::pos_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from `std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>`.

Definition at line 48 of file `enc_filebuf.h`.

#### 5.38.2.6 `template<typename _CharT> typedef encoding_char_traits<_CharT> __gnu_cxx::enc_filebuf<_CharT>::traits_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from `std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>`.

Definition at line 46 of file `enc_filebuf.h`.

### 5.38.3 Member Function Documentation

#### 5.38.3.1 `void std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>::_M_create_pback( ) [inline, protected, inherited]`

Initializes pback buffers, and moves normal buffers to safety. Assumptions: `_M_in_cur` has already been moved back

Definition at line 174 of file `fstream`.

**5.38.3.2** `void std::basic_filebuf<_CharT, encoding_char_traits<_CharT>  
>::_M_destroy_pback ( ) throw () [inline, protected,  
inherited]`

Deactivates pback buffer contents, and restores normal buffer. Assumptions: The pback buffer has only moved forward.

Definition at line 191 of file `fstream`.

**5.38.3.3** `void std::basic_filebuf<_CharT, encoding_char_traits<_CharT>  
>::_M_set_buffer ( streamsize __off ) [inline, protected,  
inherited]`

This function sets the pointers of the internal buffer, both get and put areas. Typically: `__off == egptr() - eback()` upon underflow/uflow (**read** mode); `__off == 0` upon overflow (**write** mode); `__off == -1` upon open, setbuf, seekoff/pos (**uncommitted** mode).

NB: `epptr() - pbase() == _M_buf_size - 1`, since `_M_buf_size` reflects the actual allocated memory and the last cell is reserved for the overflow char of a full put area.

Definition at line 392 of file `fstream`.

**5.38.3.4** `__filebuf_type* std::basic_filebuf<_CharT, encoding_char_traits<  
_CharT> >::close ( ) [inherited]`

Closes the currently associated file.

#### Returns

`this` on success, `NULL` on failure

If no file is currently open, this function immediately fails.

If a *put buffer area* exists, `overflow(eof)` is called to flush all the characters. The file is then closed.

If any operations fail, this function also fails.

**5.38.3.5** `char_type* std::basic_streambuf<_CharT, encoding_char_traits<  
_CharT> >::eback ( ) const [inline, protected,  
inherited]`

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- `eback()` returns the beginning pointer for the input sequence
- `gptr()` returns the next pointer for the input sequence
- `egptr()` returns the end pointer for the input sequence

Definition at line 462 of file `streambuf`.

**5.38.3.6** `char_type* std::basic_streambuf<_CharT, encoding_char_traits<_CharT>>::egptr ( ) const` [`inline`, `protected`, `inherited`]

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- `eback()` returns the beginning pointer for the input sequence
- `gptr()` returns the next pointer for the input sequence
- `egptr()` returns the end pointer for the input sequence

Definition at line 468 of file `streambuf`.

**5.38.3.7** `char_type* std::basic_streambuf<_CharT, encoding_char_traits<_CharT>>::epptr ( ) const` [`inline`, `protected`, `inherited`]

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- `pbase()` returns the beginning pointer for the output sequence
- `pptr()` returns the next pointer for the output sequence
- `epptr()` returns the end pointer for the output sequence

Definition at line 515 of file `streambuf`.

**5.38.3.8** `void std::basic_streambuf<_CharT, encoding_char_traits<_CharT>>::gbump ( int __n ) [inline, protected, inherited]`

Moving the read position.

#### Parameters

*n* The delta by which to move.

This just advances the read position without returning any data.

Definition at line 478 of file streambuf.

**5.38.3.9** `locale std::basic_streambuf<_CharT, encoding_char_traits<_CharT>>::getloc ( ) const [inline, inherited]`

Locale access.

#### Returns

The current locale in effect.

If `pubimbue(loc)` has been called, then the most recent `loc` is returned. Otherwise the global locale in effect at the time of construction is returned.

Definition at line 224 of file streambuf.

**5.38.3.10** `char_type* std::basic_streambuf<_CharT, encoding_char_traits<_CharT>>::gptr ( ) const [inline, protected, inherited]`

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- `eback()` returns the beginning pointer for the input sequence
- `gptr()` returns the next pointer for the input sequence
- `egptr()` returns the end pointer for the input sequence

Definition at line 465 of file streambuf.

**5.38.3.11** `virtual void std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>::imbue ( const locale & ) [protected, virtual, inherited]`

Changes translations.

#### Parameters

*loc* A new locale.

Translations done during I/O which depend on the current locale are changed by this call. The standard adds, *Between invocations of this function a class derived from streambuf can safely cache results of calls to locale functions and to members of facets so obtained.*

#### Note

Base class version does nothing.

Reimplemented from `std::basic_streambuf<_CharT, encoding_char_traits<_CharT>>`.

**5.38.3.12** `streamsize std::basic_streambuf<_CharT, encoding_char_traits<_CharT>>::in_avail ( ) [inline, inherited]`

Looking ahead into the stream.

#### Returns

The number of characters available.

If a read position is available, returns the number of characters available for reading before the buffer must be refilled. Otherwise returns the derived `showmanyc()`.

Definition at line 264 of file `streambuf`.

**5.38.3.13** `bool std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>::is_open ( ) const throw ( ) [inline, inherited]`

Returns true if the external file is open.

Definition at line 224 of file `fstream`.

**5.38.3.16** `virtual int_type std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>::overflow ( int_type = _Traits::eof() )`  
[protected, virtual, inherited]

Consumes data from the buffer; writes to the controlled sequence.

#### Parameters

*c* An additional character to consume.

#### Returns

`eof()` to indicate failure, something else (usually *c*, or `not_eof()`)

Informally, this function is called when the output buffer is full (or does not exist, as buffering need not actually be done). If a buffer exists, it is *consumed*, with *some effect* on the controlled sequence. (Typically, the buffer is written out to the sequence verbatim.) In either case, the character *c* is also written out, if *c* is not `eof()`.

For a formal definition of this function, see a good text such as Langer & Kreft, or [27.5.2.4.5]/3-7.

A functioning output streambuf can be created by overriding only this function (no buffer area will be used).

#### Note

Base class version does nothing, returns `eof()`.

Reimplemented from `std::basic_streambuf<_CharT, encoding_char_traits<_CharT>>`.

**5.38.3.17** `virtual int_type std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>::pbackfail ( int_type = _Traits::eof() )`  
[protected, virtual, inherited]

Tries to back up the input sequence.

#### Parameters

*c* The character to be inserted back into the sequence.

#### Returns

`eof()` on failure, *some other value* on success

**Postcondition**

The constraints of `gptr()`, `eback()`, and `pptr()` are the same as for `underflow()`.

**Note**

Base class version does nothing, returns `eof()`.

Reimplemented from `std::basic_streambuf<_CharT, encoding_char_traits<_CharT>>`.

**5.38.3.18** `char_type* std::basic_streambuf<_CharT, encoding_char_traits<_CharT>>::pbase( ) const` [**inline, protected, inherited**]

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- `pbase()` returns the beginning pointer for the output sequence
- `pptr()` returns the next pointer for the output sequence
- `epptr()` returns the end pointer for the output sequence

Definition at line 509 of file `streambuf`.

**5.38.3.19** `void std::basic_streambuf<_CharT, encoding_char_traits<_CharT>>::pbump( int __n )` [**inline, protected, inherited**]

Moving the write position.

**Parameters**

*n* The delta by which to move.

This just advances the write position without returning any data.

Definition at line 525 of file `streambuf`.

**5.38.3.20** `char_type* std::basic_streambuf<_CharT, encoding_char_traits<_CharT>>::pptr( ) const` [`inline`, `protected`, `inherited`]

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- `pbase()` returns the beginning pointer for the output sequence
- `pptr()` returns the next pointer for the output sequence
- `epptr()` returns the end pointer for the output sequence

Definition at line 512 of file `streambuf`.

**5.38.3.21** `locale std::basic_streambuf<_CharT, encoding_char_traits<_CharT>>::pubimbue( const locale & __loc )` [`inline`, `inherited`]

Entry point for `imbue()`.

#### Parameters

*loc* The new locale.

#### Returns

The previous locale.

Calls the derived `imbue(loc)`.

Definition at line 207 of file `streambuf`.

**5.38.3.22** `pos_type std::basic_streambuf<_CharT, encoding_char_traits<_CharT>>::pubseekoff( off_type __off, ios_base::seekdir __way, ios_base::openmode __mode = ios_base::in | ios_base::out )` [`inline`, `inherited`]

Entry point for `imbue()`.

**Parameters**

*loc* The new locale.

**Returns**

The previous locale.

Calls the derived `imbue(loc)`.

Definition at line 241 of file `streambuf`.

**5.38.3.23** `pos_type std::basic_streambuf<_CharT, encoding_char_traits<_CharT>>::pubseekpos ( pos_type __sp, ios_base::openmode __mode = ios_base::in | ios_base::out ) [inline, inherited]`

Entry point for `imbue()`.

**Parameters**

*loc* The new locale.

**Returns**

The previous locale.

Calls the derived `imbue(loc)`.

Definition at line 246 of file `streambuf`.

**5.38.3.24** `__streambuf_type* std::basic_streambuf<_CharT, encoding_char_traits<_CharT>>::pubsetbuf ( char_type * __s, streamsize __n ) [inline, inherited]`

Entry points for derived buffer functions.

The public versions of `pubfoo` dispatch to the protected derived `foo` member functions, passing the arguments (if any) and returning the result unchanged.

Definition at line 237 of file `streambuf`.

**5.38.3.25** `int std::basic_streambuf<_CharT, encoding_char_traits<_CharT>>::pubsync ( ) [inline, inherited]`

Entry point for `imbue()`.

#### Parameters

*loc* The new locale.

#### Returns

The previous locale.

Calls the derived `imbue(loc)`.

Definition at line 251 of file `streambuf`.

#### 5.38.3.26 `int_type std::basic_streambuf<_CharT, encoding_char_traits<_CharT> >::sbumpc ( ) [inline, inherited]`

Getting the next character.

#### Returns

The next character, or `eof`.

If the input read position is available, returns that character and increments the read pointer, otherwise calls and returns `uflow()`.

Definition at line 296 of file `streambuf`.

#### 5.38.3.27 `virtual pos_type std::basic_filebuf<_CharT, encoding_char_traits<_CharT> >::seekoff ( off_type, ios_base::seekdir, ios_base::openmode = ios_base::in | ios_base::out ) [protected, virtual, inherited]`

Alters the stream positions.

Each derived class provides its own appropriate behavior.

#### Note

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Reimplemented from `std::basic_streambuf<_CharT, encoding_char_traits<_CharT> >`.

**5.38.3.28** `virtual pos_type std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>::seekpos( pos_type, ios_base::openmode = ios_base::in | ios_base::out ) [protected, virtual, inherited]`

Alters the stream positions.

Each derived class provides its own appropriate behavior.

#### Note

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Reimplemented from `std::basic_streambuf<_CharT, encoding_char_traits<_CharT>>`.

**5.38.3.29** `virtual __streambuf_type* std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>::setbuf( char_type * __s, streamsize __n ) [protected, virtual, inherited]`

Manipulates the buffer.

#### Parameters

*s* Pointer to a buffer area.

*n* Size of *s*.

#### Returns

`this`

If no file has been opened, and both *s* and *n* are zero, then the stream becomes unbuffered. Otherwise, *s* is used as a buffer; see <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch25s02.html> for more.

Reimplemented from `std::basic_streambuf<_CharT, encoding_char_traits<_CharT>>`.

**5.38.3.30** `void std::basic_streambuf<_CharT, encoding_char_traits<_CharT>>::setg( char_type * __gbeg, char_type * __gnext, char_type * __gend ) [inline, protected, inherited]`

Setting the three read area pointers.

#### Parameters

*gbeg* A pointer.

*gnext* A pointer.

*gend* A pointer.

#### Postcondition

*gbeg* == `eback()`, *gnext* == `gptr()`, and *gend* == `egptr()`

Definition at line 489 of file `streambuf`.

**5.38.3.31** `void std::basic_streambuf<_CharT, encoding_char_traits<_CharT> >::setp( char_type * __pbeg, char_type * __pend ) [inline, protected, inherited]`

Setting the three write area pointers.

#### Parameters

*pbeg* A pointer.

*pend* A pointer.

#### Postcondition

*pbeg* == `pbase()`, *pbeg* == `pptr()`, and *pend* == `epptr()`

Definition at line 535 of file `streambuf`.

**5.38.3.32** `int_type std::basic_streambuf<_CharT, encoding_char_traits<_CharT> >::sgetc( ) [inline, inherited]`

Getting the next character.

#### Returns

The next character, or `eof`.

If the input read position is available, returns that character, otherwise calls and returns `underflow()`. Does not move the read position after fetching the character.

Definition at line 318 of file `streambuf`.

**5.38.3.33** `streamsize std::basic_streambuf<_CharT, encoding_char_traits<_CharT> >::sgetn ( char_type * __s, streamsize __n )`  
`[inline, inherited]`

Entry point for `xsgetn`.

#### Parameters

*s* A buffer area.

*n* A count.

Returns `xsgetn(s,n)`. The effect is to fill `s[0]` through `s[n-1]` with characters from the input sequence, if possible.

Definition at line 337 of file `streambuf`.

**5.38.3.34** `virtual streamsize std::basic_filebuf<_CharT, encoding_char_traits<_CharT> >::showmanyc ( )` `[protected, virtual, inherited]`

Investigating the data available.

#### Returns

An estimate of the number of characters available in the input sequence, or -1.

*If it returns a positive value, then successive calls to `underflow()` will not return `traits::eof()` until at least that number of characters have been supplied. If `showmanyc()` returns -1, then calls to `underflow()` or `uflow()` will fail.*  
 [27.5.2.4.3]/1

#### Note

Base class version does nothing, returns zero.

The standard adds that *the intention is not only that the calls [to `underflow` or `uflow`] will not return `eof()` but that they will return immediately.*

The standard adds that *the morphemes of `showmanyc` are **es-how-many-see**, not **show-manic**.*

Reimplemented from `std::basic_streambuf<_CharT, encoding_char_traits<_CharT> >`.

**5.38.3.35** `int_type std::basic_streambuf<_CharT, encoding_char_traits<_CharT>>::snextc( ) [inline, inherited]`

Getting the next character.

**Returns**

The next character, or eof.

Calls `sbumpc()`, and if that function returns `traits::eof()`, so does this function. Otherwise, `sgetc()`.

Definition at line 278 of file `streambuf`.

**5.38.3.36** `int_type std::basic_streambuf<_CharT, encoding_char_traits<_CharT>>::sputbackc( char_type __c ) [inline, inherited]`

Pushing characters back into the input stream.

**Parameters**

*c* The character to push back.

**Returns**

The previous character, if possible.

Similar to `sungetc()`, but *c* is pushed onto the stream instead of *the previous character*. If successful, the next character fetched from the input stream will be *c*.

Definition at line 352 of file `streambuf`.

**5.38.3.37** `int_type std::basic_streambuf<_CharT, encoding_char_traits<_CharT>>::sputc( char_type __c ) [inline, inherited]`

Entry point for all single-character output functions.

**Parameters**

*c* A character to output.

**Returns**

*c*, if possible.

One of two public output functions.

If a write position is available for the output sequence (i.e., the buffer is not full), stores *c* in that position, increments the position, and returns `traits::to_int_type(c)`. If a write position is not available, returns `overflow(c)`.

Definition at line 404 of file `streambuf`.

**5.38.3.38** `streamsize std::basic_streambuf<_CharT, encoding_char_traits<_CharT>>::sputn ( const char_type * __s, streamsize __n )`  
`[inline, inherited]`

Entry point for all single-character output functions.

**Parameters**

*s* A buffer read area.

*n* A count.

One of two public output functions.

Returns `xputn(s,n)`. The effect is to write `s[0]` through `s[n-1]` to the output sequence, if possible.

Definition at line 430 of file `streambuf`.

**5.38.3.39** `int_type std::basic_streambuf<_CharT, encoding_char_traits<_CharT>>::sungetc ( )` `[inline, inherited]`

Moving backwards in the input stream.

**Returns**

The previous character, if possible.

If a putback position is available, this function decrements the input pointer and returns that character. Otherwise, calls and returns `pbckfail()`. The effect is to *unget* the last character *gotten*.

Definition at line 377 of file `streambuf`.

**5.38.3.40** `virtual int std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>::sync( void ) [protected, virtual, inherited]`

Synchronizes the buffer arrays with the controlled sequences.

#### Returns

-1 on failure.

Each derived class provides its own appropriate behavior, including the definition of *failure*.

#### Note

Base class version does nothing, returns zero.

Reimplemented from `std::basic_streambuf<_CharT, encoding_char_traits<_CharT>>`.

**5.38.3.41** `virtual int_type std::basic_streambuf<_CharT, encoding_char_traits<_CharT>>::uflow( ) [inline, protected, virtual, inherited]`

Fetches more data from the controlled sequence.

#### Returns

The first character from the *pending sequence*.

Informally, this function does the same thing as `underflow()`, and in fact is required to call that function. It also returns the new character, like `underflow()` does. However, this function also moves the read position forward by one.

Definition at line 680 of file `streambuf`.

**5.38.3.42** `virtual int_type std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>::underflow( ) [protected, virtual, inherited]`

Fetches more data from the controlled sequence.

**Returns**

The first character from the *pending sequence*.

Informally, this function is called when the input buffer is exhausted (or does not exist, as buffering need not actually be done). If a buffer exists, it is *refilled*. In either case, the next available character is returned, or `traits::eof()` to indicate a null pending sequence.

For a formal definition of the pending sequence, see a good text such as Langer & Kreft, or [27.5.2.4.3]/7-14.

A functioning input streambuf can be created by overriding only this function (no buffer area will be used). For an example, see <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch25.html>

**Note**

Base class version does nothing, returns `eof()`.

Reimplemented from `std::basic_streambuf<_CharT, encoding_char_traits<_CharT>>`.

**5.38.3.43** `virtual streamsize std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>::xsgetn( char_type * __s, streamsize __n )`  
**[protected, virtual, inherited]**

Multiple character extraction.

**Parameters**

*s* A buffer area.

*n* Maximum number of characters to assign.

**Returns**

The number of characters assigned.

Fills `s[0]` through `s[n-1]` with characters from the input sequence, as if by `sbumpc()`. Stops when either *n* characters have been copied, or when `traits::eof()` would be copied.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Reimplemented from `std::basic_streambuf<_CharT, encoding_char_traits<_CharT>>`.

**5.38.3.44** `virtual streamsize std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>::xsputn ( const char_type * __s, streamsize __n )`  
`[protected, virtual, inherited]`

Multiple character insertion.

#### Parameters

- s* A buffer area.
- n* Maximum number of characters to write.

#### Returns

The number of characters written.

Writes *s*[0] through *s*[*n*-1] to the output sequence, as if by `sputc()`. Stops when either *n* characters have been copied, or when `sputc()` would return `traits::eof()`.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Reimplemented from `std::basic_streambuf<_CharT, encoding_char_traits<_CharT>>`.

### 5.38.4 Member Data Documentation

**5.38.4.1** `char_type* std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>::_M_buf` `[protected, inherited]`

Pointer to the beginning of internal buffer.

Definition at line 111 of file `fstream`.

**5.38.4.2** `locale std::basic_streambuf<_CharT, encoding_char_traits<_CharT>>::_M_buf_locale` `[protected, inherited]`

Current locale setting.

Definition at line 190 of file `streambuf`.

#### 5.38.4.3 `size_t std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>::_M_buf_size` `[protected, inherited]`

Actual size of internal buffer. This number is equal to the size of the put area + 1 position, reserved for the overflow char of a full area.

Definition at line 118 of file `fstream`.

#### 5.38.4.4 `char* std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>::_M_ext_buf` `[protected, inherited]`

Buffer for external characters. Used for input when `codecvt::always_noconv() == false`. When valid, this corresponds to `eback()`.

Definition at line 153 of file `fstream`.

#### 5.38.4.5 `streamsize std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>::_M_ext_buf_size` `[protected, inherited]`

Size of buffer held by `_M_ext_buf`.

Definition at line 158 of file `fstream`.

#### 5.38.4.6 `const char* std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>::_M_ext_next` `[protected, inherited]`

Pointers into the buffer held by `_M_ext_buf` that delimit a subsequence of bytes that have been read but not yet converted. When valid, `_M_ext_next` corresponds to `egptr()`.

Definition at line 165 of file `fstream`.

#### 5.38.4.7 `char_type* std::basic_streambuf<_CharT, encoding_char_traits<_CharT>>::_M_in_beg` `[protected, inherited]`

This is based on `_IO_FILE`, just reordered to be more consistent, and is intended to be the most minimal abstraction for an internal buffer.

- `get == input == read`
- `put == output == write`

Definition at line 182 of file `streambuf`.

#### 5.38.4.8 `char_type* std::basic_streambuf<_CharT, encoding_char_traits<_CharT>>::_M_in_cur` `[protected, inherited]`

Entry point for `imbue()`.

##### Parameters

*loc* The new locale.

##### Returns

The previous locale.

Calls the derived `imbue(loc)`.

Definition at line 183 of file `streambuf`.

#### 5.38.4.9 `char_type* std::basic_streambuf<_CharT, encoding_char_traits<_CharT>>::_M_in_end` `[protected, inherited]`

Entry point for `imbue()`.

##### Parameters

*loc* The new locale.

##### Returns

The previous locale.

Calls the derived `imbue(loc)`.

Definition at line 184 of file `streambuf`.

#### 5.38.4.10 `ios_base::openmode std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>::_M_mode` `[protected, inherited]`

Place to stash in || out || in | out settings for current filebuf.

Definition at line 96 of file `fstream`.

**5.38.4.11** `char_type* std::basic_streambuf<_CharT, encoding_char_traits<_CharT>>::_M_out_beg` `[protected, inherited]`

Entry point for `imbue()`.

**Parameters**

*loc* The new locale.

**Returns**

The previous locale.

Calls the derived `imbue(loc)`.

Definition at line 185 of file `streambuf`.

**5.38.4.12** `char_type* std::basic_streambuf<_CharT, encoding_char_traits<_CharT>>::_M_out_cur` `[protected, inherited]`

Entry point for `imbue()`.

**Parameters**

*loc* The new locale.

**Returns**

The previous locale.

Calls the derived `imbue(loc)`.

Definition at line 186 of file `streambuf`.

**5.38.4.13** `char_type* std::basic_streambuf<_CharT, encoding_char_traits<_CharT>>::_M_out_end` `[protected, inherited]`

Entry point for `imbue()`.

**Parameters**

*loc* The new locale.

**Returns**

The previous locale.

Calls the derived `imbue(loc)`.

Definition at line 187 of file `streambuf`.

**5.38.4.14** `char_type std::basic_filebuf<_CharT, encoding_char_traits<_CharT> >::_M_pback` `[protected, inherited]`

Necessary bits for putback buffer management.

**Note**

pbacks of over one character are not currently supported.

Definition at line 139 of file `fstream`.

**5.38.4.15** `char_type* std::basic_filebuf<_CharT, encoding_char_traits<_CharT> >::_M_pback_cur_save` `[protected, inherited]`

Necessary bits for putback buffer management.

**Note**

pbacks of over one character are not currently supported.

Definition at line 140 of file `fstream`.

**5.38.4.16** `char_type* std::basic_filebuf<_CharT, encoding_char_traits<_CharT> >::_M_pback_end_save` `[protected, inherited]`

Necessary bits for putback buffer management.

**Note**

pbacks of over one character are not currently supported.

Definition at line 141 of file `fstream`.

**5.38.4.17** `bool std::basic_filebuf<_CharT, encoding_char_traits<_CharT> >::_M_pback_init` `[protected, inherited]`

Necessary bits for putback buffer management.

## 5.39 `__gnu_cxx::encoding_char_traits<_CharT>` Struct Template Reference

### Note

pbacks of over one character are not currently supported.

Definition at line 142 of file `fstream`.

### 5.38.4.18 `bool std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>::_M_reading` [protected, inherited]

`_M_reading == false && _M_writing == false` for **uncommitted** mode; `_M_reading == true` for **read** mode; `_M_writing == true` for **write** mode;

NB: `_M_reading == true && _M_writing == true` is unused.

Definition at line 130 of file `fstream`.

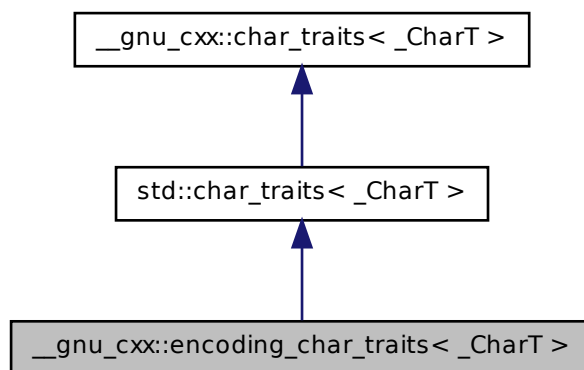

The documentation for this class was generated from the following file:

- [enc\\_filebuf.h](#)

## 5.39 `__gnu_cxx::encoding_char_traits<_CharT>` Struct Template Reference

- `void init ()`

### Protected Attributes

- `int _M_bytes`
- `int _M_ext_bom`
- `std::string _M_ext_enc`
- `descriptor_type _M_in_desc`
- `int _M_int_bom`
- `std::string _M_int_enc`
- `descriptor_type _M_out_desc`

### 5.40.1 Detailed Description

Extension to use `iconv` for dealing with character encodings.

Definition at line 52 of file `codecvt_specializations.h`.

The documentation for this class was generated from the following file:

- [codecvt\\_specializations.h](#)

## 5.41 `__gnu_cxx::forced_error` Struct Reference

Thrown by exception safety machinery.

Inheritance diagram for `__gnu_cxx::forced_error`:

### Public Member Functions

- virtual `const char * what () const throw ()`

### 5.41.1 Detailed Description

Thrown by exception safety machinery.

Definition at line 75 of file `throw_allocator.h`.

### 5.41.2 Member Function Documentation

#### 5.41.2.1 virtual const char\* std::exception::what ( ) const throw () [virtual, inherited]

Returns a C-style character string describing the general cause of the current error.

Reimplemented in [std::bad\\_exception](#), [std::bad\\_alloc](#), [std::bad\\_cast](#), [std::bad\\_typeid](#), [std::future\\_error](#), [std::logic\\_error](#), [std::runtime\\_error](#), [std::ios\\_base::failure](#), and [std::bad\\_weak\\_ptr](#).

The documentation for this struct was generated from the following file:

- [throw\\_allocator.h](#)

## 5.42 \_\_gnu\_cxx::free\_list Class Reference

The free list class for managing chunks of memory to be given to and returned by the [bitmap\\_allocator](#).

Inheritance diagram for \_\_gnu\_cxx::free\_list:

### Public Types

- typedef \_\_mutex **\_\_mutex\_type**
- typedef vector\_type::iterator **iterator**
- typedef size\_t \* **value\_type**
- typedef [\\_\\_detail::\\_\\_mini\\_vector](#)< value\_type > **vector\_type**

### Public Member Functions

- void `_M_clear` ()
- `size_t * _M_get` (size\_t `__sz`) throw (std::bad\_alloc)
- void `_M_insert` (size\_t \* `__addr`) throw ()

#### 5.42.1 Detailed Description

The free list class for managing chunks of memory to be given to and returned by the [bitmap\\_allocator](#).

Definition at line 525 of file `bitmap_allocator.h`.

#### 5.42.2 Member Function Documentation

##### 5.42.2.1 void `__gnu_cxx::free_list::_M_clear` ( )

This function just clears the internal Free List, and gives back all the memory to the OS.

##### 5.42.2.2 `size_t * __gnu_cxx::free_list::_M_get` ( `size_t __sz` ) throw (std::bad\_alloc)

This function gets a block of memory of the specified size from the free list.

#### Parameters

`__sz` The size in bytes of the memory required.

#### Returns

A pointer to the new memory block of size at least equal to that requested.

##### 5.42.2.3 void `__gnu_cxx::free_list::_M_insert` ( `size_t * __addr` ) throw () [inline]

This function returns the block of memory to the internal free list.

### 5.43 `__gnu_cxx::hash_map<_Key, _Tp, _HashFn, _EqualKey, _Alloc>` Class Template Reference 961

---

#### Parameters

`__addr` The pointer to the memory block that was given by a call to the `_M_get` function.

Definition at line 635 of file `bitmap_allocator.h`.

Referenced by `__gnu_cxx::bitmap_allocator<_Tp>::_M_deallocate_single_object()`.

The documentation for this class was generated from the following file:

- [bitmap\\_allocator.h](#)

### 5.43 `__gnu_cxx::hash_map<_Key, _Tp, _HashFn, _EqualKey, _Alloc>` Class Template Reference

## 5.47 `__gnu_cxx::limit_condition` Struct Reference

Base class for incremental control and throw.

Inheritance diagram for `__gnu_cxx::limit_condition`:

## Classes

- struct [always\\_adjustor](#)  
*Always enter the condition.*
- struct [limit\\_adjustor](#)

*Enter the  $n$ th condition.*

- struct `never_adjustor`

*Never enter the condition.*

### Static Public Member Functions

- static `size_t & count ()`
- static `size_t & limit ()`
- static void `set_limit (const size_t __l)`
- static void `throw_conditionally ()`

#### 5.47.1 Detailed Description

Base class for incremental control and throw.

Definition at line 264 of file `throw_allocator.h`.

The documentation for this struct was generated from the following file:

- [throw\\_allocator.h](#)

## 5.48 `__gnu_cxx::limit_condition::always_adjustor` Struct Reference

Always enter the condition.

Inherits `__gnu_cxx::limit_condition::adjustor_base`.

#### 5.48.1 Detailed Description

Always enter the condition.

Definition at line 288 of file `throw_allocator.h`.

The documentation for this struct was generated from the following file:

- [throw\\_allocator.h](#)

## 5.49 `__gnu_cxx::limit_condition::limit_adjustor` Struct Reference

Enter the  $n$ th condition.

Inherits `__gnu_cxx::limit_condition::adjustor_base`.

### Public Member Functions

- `limit_adjustor` (const size\_t \_\_l)

#### 5.49.1 Detailed Description

Enter the nth condition.

Definition at line 294 of file `throw_allocator.h`.

The documentation for this struct was generated from the following file:

- [throw\\_allocator.h](#)

### 5.50 `__gnu_cxx::limit_condition::never_adjustor` Struct Reference

Never enter the condition.

Inherits `__gnu_cxx::limit_condition::adjustor_base`.

#### 5.50.1 Detailed Description

Never enter the condition.

Definition at line 282 of file `throw_allocator.h`.

The documentation for this struct was generated from the following file:

- [throw\\_allocator.h](#)

### 5.51 `__gnu_cxx::malloc_allocator< _Tp >` Class Template Reference

An allocator that uses `malloc`.

This is precisely the allocator defined in the C++ Standard.

- all allocation calls `malloc`
- all deallocation calls `free`.

### Public Types

- `typedef const _Tp * const_pointer`

- `typedef const _Tp & const_reference`
- `typedef ptrdiff_t difference_type`
- `typedef _Tp * pointer`
- `typedef _Tp & reference`

- `template<typename... _Args> void construct` (pointer \_\_p, \_Args &&... \_\_args)
- `void deallocate` (pointer \_\_p, size\_type)
- `void destroy` (pointer \_\_p)
- `size_type max_size` () const throw ()

#### 5.51.1 Detailed Description

`template<typename _Tp> class __gnu_cxx::malloc_allocator<_Tp>`

An allocator that uses malloc.

This is precisely the allocator defined in the C++ Standard.

- all allocation calls malloc
- all deallocation calls free.

Definition at line 54 of file `malloc_allocator.h`.

The documentation for this class was generated from the following file:

- [malloc\\_allocator.h](#)

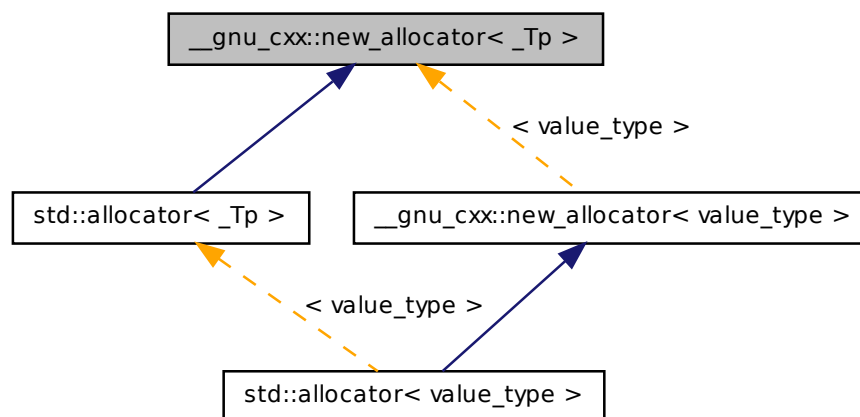

## 5.52 `__gnu_cxx::new_allocator<_Tp>` Class Template Reference

An allocator that uses global new, as per [20.4].

This is precisely the allocator defined in the C++ Standard.

- all allocation calls operator new
- all deallocation calls operator delete.

Inheritance diagram for `__gnu_cxx::new_allocator<_Tp>`:

### Public Types

- `typedef const _Tp * const_pointer`
- `typedef const _Tp & const_reference`
- `typedef ptrdiff_t difference_type`
- `typedef _Tp * pointer`
- `typedef _Tp & reference`
- `typedef size_t size_type`
- `typedef _Tp value_type`

**Public Member Functions**

- **new\_allocator** (const [new\\_allocator](#) &) throw ()
- `template<typename _Tp1 >`

## 5.60 `__gnu_cxx::recursive_init_error` Class Reference

Exception thrown by `__cxa_guard_acquire`.

6.7[stmt.dcl]/4: If control re-enters the declaration (recursively) while the object is being initialized, the behavior is undefined.

Inheritance diagram for `__gnu_cxx::recursive_init_error`:

### Public Member Functions

- virtual const char \* `what` () const throw ()

#### 5.60.1 Detailed Description

Exception thrown by `__cxa_guard_acquire`.

6.7[stmt.dcl]/4: If control re-enters the declaration (recursively) while the object is being initialized, the behavior is undefined. Since we already have a library function to handle locking, we might as well check for this situation and throw an exception. We use the second byte of the guard variable to remember that we're in the middle of an initialization.

Definition at line 615 of file `cxxabi.h`.

#### 5.60.2 Member Function Documentation

##### 5.60.2.1 virtual const char\* `std::exception::what` ( ) const throw () [virtual, inherited]

Returns a C-style character string describing the general cause of the current error.

Reimplemented in `std::bad_exception`, `std::bad_alloc`, `std::bad_cast`, `std::bad_typeid`, `std::future_error`, `std::logic_error`, `std::runtime_error`, `std::ios_base::failure`, and `std::bad_weak_ptr`.

The documentation for this class was generated from the following file:

- [cxxabi.h](#)

## 5.61 `__gnu_cxx::rope<_CharT, _Alloc>` Class Template Reference

Inherits `__gnu_cxx::Rope_base<_CharT, _Alloc>`.

### Public Types

- `typedef _Rope_RopeConcatenation<_CharT, _Alloc> __C`
- `typedef _Rope_RopeFunction<_CharT, _Alloc> __F`

- [slist](#)

**5.65 `__gnu_cxx::stdio_filebuf<_CharT, _Traits>` Class Template Reference**

Provides a layer of compatibility for C/POSIX.

This GNU extension provides extensions for working with standard C `FILE*`'s and POSIX file descriptors. It must be instantiated by the user with the type of character used in the file stream, e.g., `stdio_filebuf<char>`.

Inheritance diagram for `__gnu_cxx::stdio_filebuf<_CharT, _Traits>`:

### Public Types

- `typedef codecvt< char_type, char, __state_type > __codecvt_type`
- `typedef __basic_file< char > __file_type`
- `typedef basic_filebuf< char_type, traits_type > __filebuf_type`
- `typedef traits_type::state_type __state_type`
- `typedef basic_streambuf< char_type, traits_type > __streambuf_type`
- `typedef _CharT char_type`
- `typedef traits_type::int_type int_type`
- `typedef traits_type::off_type off_type`
- `typedef traits_type::pos_type pos_type`
- `typedef std::size_t size_t`
- `typedef _Traits traits_type`

### Public Member Functions

- `stdio_filebuf()`
- `stdio_filebuf(int __fd, std::ios_base::openmode __mode, size_t __size=static_cast< size_t >(BUFSIZ))`
- `stdio_filebuf(std::__c_file * __f, std::ios_base::openmode __mode, size_t __size=static_cast< size_t >(BUFSIZ))`

- virtual `~stdio_filebuf()`
- `__filebuf_type * close()`
- `int fd()`
- `std::__c_file * file()`
- `streamsize in_avail()`

## 5.65 `__gnu_cxx::stdio_filebuf<_CharT, _Traits>` Class Template Reference

### 5.65.1 Detailed Description

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>>
class __gnu_cxx::stdio_filebuf< _CharT, _Traits >
```

Provides a layer of compatibility for C/POSIX.

This GNU extension provides extensions for working with standard C FILE\*'s and POSIX file descriptors. It must be instantiated by the user with the type of character used in the file stream, e.g., `stdio_filebuf<char>`.

Definition at line 51 of file `stdio_filebuf.h`.

### 5.65.2 Member Typedef Documentation

**5.65.2.1** `template<typename _CharT, typename _Traits> typedef basic_streambuf<char_type, traits_type> std::basic_filebuf<_CharT, _Traits>::__streambuf_type [inherited]`

This is a non-standard type.

Reimplemented from [std::basic\\_streambuf<\\_CharT, \\_Traits>](#).

Definition at line 79 of file `fstream`.

**5.65.2.2** `template<typename _CharT, typename _Traits = std::char_traits<_CharT>> typedef _CharT __gnu_cxx::stdio_filebuf<_CharT, _Traits>::__char_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic\\_filebuf<\\_CharT, \\_Traits>](#).

Definition at line 55 of file `stdio_filebuf.h`.

**5.65.2.3** `template<typename _CharT, typename _Traits = std::char_traits<_CharT>> typedef traits_type::int_type __gnu_cxx::stdio_filebuf<_CharT, _Traits>::__int_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic\\_filebuf<\\_CharT, \\_Traits>](#).

## 5.65 `__gnu_cxx::stdio_filebuf<_CharT, _Traits>` Class Template Reference 1001

Definition at line 57 of file `stdio_filebuf.h`.

**5.65.2.4** `template<typename _CharT, typename _Traits =  
std::char_traits<_CharT>> typedef traits_type::off_type  
__gnu_cxx::stdio_filebuf<_CharT, _Traits>::off_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from `std::basic_filebuf<_CharT, _Traits>`.

Definition at line 59 of file `stdio_filebuf.h`.

**5.65.2.5** `template<typename _CharT, typename _Traits =  
std::char_traits<_CharT>> typedef traits_type::pos_type  
__gnu_cxx::stdio_filebuf<_CharT, _Traits>::pos_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from `std::basic_filebuf<_CharT, _Traits>`.

Definition at line 58 of file `stdio_filebuf.h`.

**5.65.2.6** `template<typename _CharT, typename _Traits = std::char_traits<_  
_CharT>> typedef _Traits __gnu_cxx::stdio_filebuf<_CharT, _Traits  
>::traits_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from `std::basic_filebuf<_CharT, _Traits>`.

Definition at line 56 of file `stdio_filebuf.h`.

### 5.65.3 Constructor & Destructor Documentation

**5.65.3.1** `template<typename _CharT, typename _Traits =  
std::char_traits<_CharT>> __gnu_cxx::stdio_filebuf<_CharT,  
_Traits>::stdio_filebuf( ) [inline]`

deferred initialization

Definition at line 66 of file `stdio_filebuf.h`.

**5.65.3.2** `template<typename _CharT, typename _Traits>  
 __gnu_cxx::stdio_filebuf<_CharT, _Traits>::stdio_filebuf  
 ( int __fd, std::ios_base::openmode __mode, size_t __size =  
 static_cast<size_t>(BUFSIZ) )`

#### Parameters

- fd* An open file descriptor.
- mode* Same meaning as in a standard filebuf.
- size* Optimal or preferred size of internal buffer, in chars.

This constructor associates a file stream buffer with an open POSIX file descriptor. The file descriptor will be automatically closed when the `stdio_filebuf` is closed/destroyed.

Definition at line 128 of file `stdio_filebuf.h`.

References `std::basic_filebuf<_CharT, _Traits>::_M_buf_size`, `std::basic_filebuf<_CharT, _Traits>::_M_mode`, `std::basic_filebuf<_CharT, _Traits>::_M_reading`, `std::basic_filebuf<_CharT, _Traits>::_M_set_buffer()`, and `std::basic_filebuf<_CharT, _Traits>::is_open()`.

**5.65.3.3** `template<typename _CharT, typename _Traits>  
 __gnu_cxx::stdio_filebuf<_CharT, _Traits>::stdio_filebuf (   
 std::_c_file * __f, std::ios_base::openmode __mode, size_t __size =  
 static_cast<size_t>(BUFSIZ) )`

#### Parameters

- f* An open `FILE*`.
- mode* Same meaning as in a standard filebuf.
- size* Optimal or preferred size of internal buffer, in chars. Defaults to system's `BUFSIZ`.

This constructor associates a file stream buffer with an open C `FILE*`. The `FILE*` will not be automatically closed when the `stdio_filebuf` is closed/destroyed.

Definition at line 144 of file `stdio_filebuf.h`.

References `std::basic_filebuf<_CharT, _Traits>::_M_buf_size`, `std::basic_filebuf<_CharT, _Traits>::_M_mode`, `std::basic_filebuf<_CharT, _Traits>::_M_reading`, `std::basic_filebuf<_CharT, _Traits>::_M_set_buffer()`, and `std::basic_filebuf<_CharT, _Traits>::is_open()`.

**5.65.3.4** `template<typename _CharT, typename _Traits>`  
`__gnu_cxx::stdio_filebuf<_CharT, _Traits>::~~stdio_filebuf ( )`  
`[virtual]`

Closes the external data stream if the file descriptor constructor was used.

Definition at line 123 of file `stdio_filebuf.h`.

#### 5.65.4 Member Function Documentation

**5.65.4.1** `template<typename _CharT, typename _Traits> void`  
`std::basic_filebuf<_CharT, _Traits>::_M_create_pback ( )`  
`[inline, protected, inherited]`

Initializes pback buffers, and moves normal buffers to safety. Assumptions: `_M_in_cur` has already been moved back

Definition at line 174 of file `fstream`.

Referenced by `std::basic_filebuf<_CharT, _Traits>::pbackfail()`.

**5.65.4.2** `template<typename _CharT, typename _Traits> void`  
`std::basic_filebuf<_CharT, _Traits>::_M_destroy_pback ( ) throw`  
`() [inline, protected, inherited]`

Deactivates pback buffer contents, and restores normal buffer. Assumptions: The pback buffer has only moved forward.

Definition at line 191 of file `fstream`.

Referenced by `std::basic_filebuf<_CharT, _Traits>::overflow()`, `std::basic_filebuf<_CharT, _Traits>::seekoff()`, `std::basic_filebuf<_CharT, _Traits>::seekpos()`, `std::basic_filebuf<_CharT, _Traits>::underflow()`, and `std::basic_filebuf<_CharT, _Traits>::xsgetn()`.

**5.65.4.3** `template<typename _CharT, typename _Traits> void`  
`std::basic_filebuf<_CharT, _Traits>::_M_set_buffer ( streamsize`  
`__off ) [inline, protected, inherited]`

This function sets the pointers of the internal buffer, both get and put areas. Typically: `__off == egptr() - eback()` upon underflow/uflow (**read** mode); `__off == 0` upon overflow (**write** mode); `__off == -1` upon open, setbuf, seekoff/pos (**uncommitted** mode).

NB: `epptr() - pbase() == _M_buf_size - 1`, since `_M_buf_size` reflects the actual allocated memory and the last cell is reserved for the overflow char of a full put area.

Definition at line 392 of file `fstream`.

## 5.65 `__gnu_cxx::stdio_filebuf<_CharT, _Traits>` Class Template Reference 1004

Referenced by `std::basic_filebuf<_CharT, _Traits>::imbue()`, `std::basic_filebuf<_CharT, _Traits>::open()`, `std::basic_filebuf<_CharT, _Traits>::overflow()`, `std::basic_filebuf<_CharT, _Traits>::pbackfail()`, `__gnu_cxx::stdio_filebuf<_CharT, _Traits>::stdio_filebuf()`, `std::basic_filebuf<_CharT, _Traits>::underflow()`, `std::basic_filebuf<_CharT, _Traits>::xsgetn()`, and `std::basic_filebuf<_CharT, _Traits>::xsputn()`.

### 5.65.4.4 `template<typename _CharT, typename _Traits> basic_filebuf<_CharT, _Traits>::_filebuf_type * std::basic_filebuf<_CharT, _Traits>::close ( ) [inherited]`

Closes the currently associated file.

#### Returns

`this` on success, `NULL` on failure

If no file is currently open, this function immediately fails.

If a *put buffer area* exists, `overflow(eof)` is called to flush all the characters. The file is then closed.

If any operations fail, this function also fails.

Definition at line 130 of file `fstream.tcc`.

References `std::basic_filebuf<_CharT, _Traits>::is_open()`.

Referenced by `std::basic_fstream<_CharT, _Traits>::close()`, `std::basic_ofstream<_CharT, _Traits>::close()`, `std::basic_ifstream<_CharT, _Traits>::close()`, `std::basic_filebuf<_CharT, _Traits>::open()`, and `std::basic_filebuf<char_type, traits_type>::~~basic_filebuf()`.

### 5.65.4.5 `template<typename _CharT, typename _Traits> char_type* std::basic_streambuf<_CharT, _Traits>::eback ( ) const [inline, protected, inherited]`

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- `eback()` returns the beginning pointer for the input sequence
- `gptr()` returns the next pointer for the input sequence

- `egptr()` returns the end pointer for the input sequence

Definition at line 462 of file `streambuf`.

Referenced by `std::basic_filebuf<char_type, traits_type>::_M_destroy_pback()`, `std::basic_filebuf<_CharT, _Traits>::_imbue()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::overflow()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::pbackfail()`, `std::basic_filebuf<_CharT, _Traits>::pbackfail()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekoff()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekpos()`, `std::basic_streambuf<char_type, traits_type>::sputbackc()`, `std::basic_streambuf<char_type, traits_type>::sungetc()`, `std::basic_filebuf<_CharT, _Traits>::underflow()`, and `std::basic_filebuf<_CharT, _Traits>::xsgetn()`.

**5.65.4.6** `template<typename _CharT, typename _Traits> char_type*  
std::basic_streambuf<_CharT, _Traits>::egptr ( ) const  
[inline, protected, inherited]`

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- `eback()` returns the beginning pointer for the input sequence
- `gptr()` returns the next pointer for the input sequence
- `egptr()` returns the end pointer for the input sequence

Definition at line 468 of file `streambuf`.

Referenced by `std::basic_filebuf<char_type, traits_type>::_M_create_pback()`, `std::basic_streambuf<char_type, traits_type>::in_avail()`, `std::basic_streambuf<char_type, traits_type>::sbumpc()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekoff()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekpos()`, `std::basic_streambuf<char_type, traits_type>::sgetc()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::showmanyc()`, `std::basic_filebuf<_CharT, _Traits>::showmanyc()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::str()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::underflow()`, `std::basic_filebuf<_CharT, _Traits>::underflow()`, `std::basic_streambuf<_CharT, _Traits>::xsgetn()`, and `std::basic_filebuf<_CharT, _Traits>::xsgetn()`.

**5.65.4.7** `template<typename _CharT, typename _Traits> char_type*  
std::basic_streambuf<_CharT, _Traits>::eptr ( ) const  
[inline, protected, inherited]`

## 5.65 `__gnu_cxx::stdio_filebuf<_CharT, _Traits>` Class Template Reference 1006

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- `pbase()` returns the beginning pointer for the output sequence
- `pptr()` returns the next pointer for the output sequence
- `epptr()` returns the end pointer for the output sequence

Definition at line 515 of file `streambuf`.

Referenced by `std::basic_stringbuf<_CharT, _Traits, _Alloc>::overflow()`, `std::basic_streambuf<char_type, traits_type>::sputc()`, `std::basic_streambuf<_CharT, _Traits>::xsputn()`, and `std::basic_filebuf<_CharT, _Traits>::xsputn()`.

**5.65.4.8** `template<typename _CharT, typename _Traits =  
std::char_traits<_CharT>> int __gnu_cxx::stdio_filebuf<_CharT,  
_Traits>::fd ( ) [inline]`

### Returns

The underlying file descriptor.

Once associated with an external data stream, this function can be used to access the underlying POSIX file descriptor. Note that there is no way for the library to track what you do with the descriptor, so be careful.

Definition at line 109 of file `stdio_filebuf.h`.

**5.65.4.9** `template<typename _CharT, typename _Traits =  
std::char_traits<_CharT>> std::_c_file* __gnu_cxx::stdio_filebuf<  
_CharT, _Traits>::file ( ) [inline]`

### Returns

The underlying `FILE*`.

This function can be used to access the underlying "C" file pointer. Note that there is no way for the library to track what you do with the file, so be careful.

Definition at line 119 of file `stdio_filebuf.h`.

**5.65.4.10** `template<typename _CharT, typename _Traits> void  
std::basic_streambuf<_CharT, _Traits>::gbump ( int __n )  
[inline, protected, inherited]`

Moving the read position.

#### Parameters

*n* The delta by which to move.

This just advances the read position without returning any data.

Definition at line 478 of file `streambuf`.

Referenced by `std::basic_stringbuf<_CharT, _Traits, _Alloc>::pbackfail()`, `std::basic_filebuf<_CharT, _Traits>::pbackfail()`, `std::basic_streambuf<char_type, traits_type>::sbumpc()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekoff()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekpos()`, `std::basic_streambuf<char_type, traits_type>::sputbackc()`, `std::basic_streambuf<char_type, traits_type>::sungetc()`, `std::basic_streambuf<char_type, traits_type>::uflow()`, `std::basic_streambuf<_CharT, _Traits>::xsgetn()`, and `std::basic_filebuf<_CharT, _Traits>::xsgetn()`.

**5.65.4.11** `template<typename _CharT, typename _Traits> locale  
std::basic_streambuf<_CharT, _Traits>::getloc ( ) const  
[inline, inherited]`

Locale access.

#### Returns

The current locale in effect.

If `pubimbue(loc)` has been called, then the most recent `loc` is returned. Otherwise the global locale in effect at the time of construction is returned.

Definition at line 224 of file `streambuf`.

Referenced by `std::basic_streambuf<char_type, traits_type>::pubimbue()`.

**5.65.4.12** `template<typename _CharT, typename _Traits> char_type*  
std::basic_streambuf<_CharT, _Traits>::gptr ( ) const  
[inline, protected, inherited]`

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- `eback()` returns the beginning pointer for the input sequence
- `gptr()` returns the next pointer for the input sequence
- `egptr()` returns the end pointer for the input sequence

Definition at line 465 of file `streambuf`.

Referenced by `std::basic_filebuf<char_type, traits_type>::_M_create_pback()`, `std::basic_filebuf<char_type, traits_type>::_M_destroy_pback()`, `std::basic_filebuf<_CharT, _Traits>::imbue()`, `std::basic_streambuf<char_type, traits_type>::in_avail()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::overflow()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::pbackfail()`, `std::basic_filebuf<_CharT, _Traits>::pbackfail()`, `std::basic_streambuf<char_type, traits_type>::sbumpc()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekoff()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekpos()`, `std::basic_streambuf<char_type, traits_type>::sgetc()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::showmanyc()`, `std::basic_filebuf<_CharT, _Traits>::showmanyc()`, `std::basic_streambuf<char_type, traits_type>::sputbackc()`, `std::basic_streambuf<char_type, traits_type>::sungetc()`, `std::basic_streambuf<char_type, traits_type>::uflow()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::underflow()`, `std::basic_filebuf<_CharT, _Traits>::underflow()`, `std::basic_streambuf<_CharT, _Traits>::xsgetn()`, and `std::basic_filebuf<_CharT, _Traits>::xsgetn()`.

**5.65.4.13** `template<typename _CharT, typename _Traits> void  
std::basic_filebuf<_CharT, _Traits>::imbue ( const locale & )  
[protected, virtual, inherited]`

Changes translations.

#### Parameters

*loc* A new locale.

Translations done during I/O which depend on the current locale are changed by this call. The standard adds, *Between invocations of this function a class derived from streambuf can safely cache results of calls to locale functions and to members of facets so obtained.*

#### Note

Base class version does nothing.

## 5.65 `__gnu_cxx::stdio_filebuf<_CharT, _Traits>` Class Template Reference

Reimplemented from `std::basic_streambuf<_CharT, _Traits>`.

Definition at line 914 of file `fstream.tcc`.

References `std::basic_filebuf<_CharT, _Traits>::_M_ext_buf`, `std::basic_filebuf<_CharT, _Traits>::_M_ext_next`, `std::basic_filebuf<_CharT, _Traits>::_M_mode`, `std::basic_filebuf<_CharT, _Traits>::_M_reading`, `std::basic_filebuf<_CharT, _Traits>::_M_set_buffer()`, `std::ios_base::cur`, `std::basic_streambuf<_CharT, _Traits>::eback()`, `std::basic_streambuf<_CharT, _Traits>::gptr()`, `std::basic_filebuf<_CharT, _Traits>::is_open()`, and `std::basic_filebuf<_CharT, _Traits>::seekoff()`.

### 5.65.4.14 `template<typename _CharT, typename _Traits> streamsize std::basic_streambuf<_CharT, _Traits>::in_avail ( ) [inline, inherited]`

Looking ahead into the stream.

#### Returns

The number of characters available.

If a read position is available, returns the number of characters available for reading before the buffer must be refilled. Otherwise returns the derived `showmanyc()`.

Definition at line 264 of file `streambuf`.

### 5.65.4.15 `template<typename _CharT, typename _Traits> bool std::basic_filebuf<_CharT, _Traits>::is_open ( ) const throw () [inline, inherited]`

Returns true if the external file is open.

Definition at line 224 of file `fstream`.

Referenced by `std::basic_filebuf<_CharT, _Traits>::close()`, `std::basic_filebuf<_CharT, _Traits>::imbue()`, `std::basic_fstream<_CharT, _Traits>::is_open()`, `std::basic_ofstream<_CharT, _Traits>::is_open()`, `std::basic_ifstream<_CharT, _Traits>::is_open()`, `std::basic_filebuf<_CharT, _Traits>::open()`, `std::basic_filebuf<_CharT, _Traits>::seekoff()`, `std::basic_filebuf<_CharT, _Traits>::seekpos()`, `std::basic_filebuf<_CharT, _Traits>::setbuf()`, `std::basic_filebuf<_CharT, _Traits>::showmanyc()`, and `__gnu_cxx::stdio_filebuf<_CharT, _Traits>::stdio_filebuf()`.

```

_CharT, _Traits >::__filebuf_type * std::basic_filebuf< _CharT,
_Traits >::open (const char * __s, ios_base::openmode __mode)
[inherited]

```

Opens an external file.

## Parameters

*s* The name of the file.

*mode* The open mode flags.

## Returns

this on success, NULL on failure

If a file is already open, this function immediately fails. Otherwise it tries to open the file named *s* using the flags given in *mode*.

Table 92, adapted here, gives the relation between openmode combinations and the equivalent fopen() flags. (NB: lines app, in/out|app, in|app, binary|app, binary|in/out|app, and binary|in|app per DR 596) +-----

```

-----+ | ios_base Flag combination stdio equivalent | |binary in out trunc app
| +-----+ | + w | | + a | | + a | | + w | | +

Definition at line 96 of file fstream.tcc.

References `std::basic_filebuf<_CharT, _Traits >::M_mode`, `std::basic_filebuf<_CharT, _Traits >::M_reading`, `std::basic_filebuf<_CharT, _Traits >::M_set_buffer()`, `std::ios_base::ate`, `std::basic_filebuf<_CharT, _Traits >::close()`, `std::ios_base::end`, `std::basic_filebuf<_CharT, _Traits >::is_open()`, and `std::basic_filebuf<_CharT, _Traits >::seekoff()`.

Referenced by `std::basic_fstream<_CharT, _Traits >::open()`, `std::basic_ofstream<_CharT, _Traits >::open()`, and `std::basic_ifstream<_CharT, _Traits >::open()`.

```
template<typename _CharT, typename _Traits> __filebuf_type*
std::basic_filebuf< _CharT, _Traits >::open (const std::string &
__s, ios_base::openmode __mode) [inline, inherited]
```

Opens an external file.

## 5.65 `__gnu_cxx::stdio_filebuf<_CharT, _Traits>` Class Template Reference 1011

### Parameters

- s* The name of the file.
- mode* The open mode flags.

### Returns

`this` on success, `NULL` on failure

Definition at line 277 of file `fstream`.

Referenced by `std::basic_filebuf<char_type, traits_type>::open()`.

**5.65.4.18** `template<typename _CharT, typename _Traits> basic_filebuf<_CharT, _Traits>::int_type std::basic_filebuf<_CharT, _Traits>::overflow ( int_type = _Traits::eof() ) [protected, virtual, inherited]`

Consumes data from the buffer; writes to the controlled sequence.

### Parameters

- c* An additional character to consume.

### Returns

`eof()` to indicate failure, something else (usually *c*, or `not_eof()`)

Informally, this function is called when the output buffer is full (or does not exist, as buffering need not actually be done). If a buffer exists, it is *consumed*, with *some effect* on the controlled sequence. (Typically, the buffer is written out to the sequence verbatim.) In either case, the character *c* is also written out, if *c* is not `eof()`.

For a formal definition of this function, see a good text such as Langer & Kreft, or [27.5.2.4.5]/3-7.

A functioning output streambuf can be created by overriding only this function (no buffer area will be used).

### Note

Base class version does nothing, returns `eof()`.

Reimplemented from `std::basic_streambuf<_CharT, _Traits>`.

Definition at line 424 of file `fstream.tcc`.

## 5.65 `__gnu_cxx::stdio_filebuf<_CharT, _Traits>` Class Template Reference

References `std::basic_filebuf<_CharT, _Traits>::_M_buf_size`, `std::basic_filebuf<_CharT, _Traits>::_M_destroy_pback()`, `std::basic_filebuf<_CharT, _Traits>::_M_mode`, `std::basic_filebuf<_CharT, _Traits>::_M_reading`, `std::basic_filebuf<_CharT, _Traits>::_M_set_buffer()`, `std::ios_base::cur`, `std::ios_base::out`, `std::basic_streambuf<_CharT, _Traits>::pbase()`, `std::basic_streambuf<_CharT, _Traits>::pbump()`, and `std::basic_streambuf<_CharT, _Traits>::pptr()`.

Referenced by `std::basic_filebuf<_CharT, _Traits>::pbackfail()`, `std::basic_filebuf<_CharT, _Traits>::sync()`, `std::basic_filebuf<_CharT, _Traits>::underflow()`, and `std::basic_filebuf<_CharT, _Traits>::xsgetn()`.

**5.65.4.19** `template<typename _CharT, typename _Traits> basic_filebuf<_CharT, _Traits>::int_type std::basic_filebuf<_CharT, _Traits>::pbackfail( int_type = _Traits::eof() )` [protected, virtual, inherited]

Tries to back up the input sequence.

### Parameters

*c* The character to be inserted back into the sequence.

### Returns

`eof()` on failure, *some other value* on success

### Postcondition

The constraints of `gptr()`, `eback()`, and `pptr()` are the same as for `underflow()`.

### Note

Base class version does nothing, returns `eof()`.

Reimplemented from `std::basic_streambuf<_CharT, _Traits>`.

Definition at line 365 of file `fstream.tcc`.

References `std::basic_filebuf<_CharT, _Traits>::_M_create_pback()`, `std::basic_filebuf<_CharT, _Traits>::_M_mode`, `std::basic_filebuf<_CharT, _Traits>::_M_pback_init`, `std::basic_filebuf<_CharT, _Traits>::_M_reading`, `std::basic_filebuf<_CharT, _Traits>::_M_set_buffer()`, `std::ios_base::cur`, `std::basic_streambuf<_CharT, _Traits>::eback()`, `std::basic_streambuf<_CharT, _Traits>::gbump()`, `std::basic_streambuf<_CharT, _Traits>::gptr()`, `std::ios_base::in`, `std::basic_filebuf<_CharT, _Traits>::overflow()`, `std::basic_filebuf<_CharT, _Traits>::seekoff()`, and `std::basic_filebuf<_CharT, _Traits>::underflow()`.

**5.65.4.20** `template<typename _CharT, typename _Traits> char_type*  
std::basic_streambuf<_CharT, _Traits>::pbase ( ) const  
[inline, protected, inherited]`

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- `pbase()` returns the beginning pointer for the output sequence
- `pptr()` returns the next pointer for the output sequence
- `epptr()` returns the end pointer for the output sequence

Definition at line 509 of file `streambuf`.

Referenced by `std::basic_stringbuf<_CharT, _Traits, _Alloc>::overflow()`, `std::basic_filebuf<_CharT, _Traits>::overflow()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekoff()`, `std::basic_filebuf<_CharT, _Traits>::seekoff()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekpos()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::str()`, `std::basic_filebuf<_CharT, _Traits>::sync()`, and `std::basic_filebuf<_CharT, _Traits>::xsputn()`.

**5.65.4.21** `template<typename _CharT, typename _Traits> void  
std::basic_streambuf<_CharT, _Traits>::pbump ( int __n )  
[inline, protected, inherited]`

Moving the write position.

#### Parameters

- `n` The delta by which to move.

This just advances the write position without returning any data.

Definition at line 525 of file `streambuf`.

Referenced by `std::basic_stringbuf<_CharT, _Traits, _Alloc>::overflow()`, `std::basic_filebuf<_CharT, _Traits>::overflow()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekoff()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekpos()`, `std::basic_streambuf<char_type, traits_type>::sputc()`, and `std::basic_streambuf<_CharT, _Traits>::xsputn()`.

**5.65.4.22** `template<typename _CharT, typename _Traits> char_type*  
std::basic_streambuf<_CharT, _Traits>::pptr ( ) const  
[inline, protected, inherited]`

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- `pbase()` returns the beginning pointer for the output sequence
- `pptr()` returns the next pointer for the output sequence
- `epptr()` returns the end pointer for the output sequence

Definition at line 512 of file `streambuf`.

Referenced by `std::basic_stringbuf<_CharT, _Traits, _Alloc>::overflow()`, `std::basic_filebuf<_CharT, _Traits>::overflow()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekoff()`, `std::basic_filebuf<_CharT, _Traits>::seekoff()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekpos()`, `std::basic_streambuf<char_type, traits_type>::sputc()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::str()`, `std::basic_filebuf<_CharT, _Traits>::sync()`, `std::basic_streambuf<_CharT, _Traits>::xsputn()`, and `std::basic_filebuf<_CharT, _Traits>::xsputn()`.

**5.65.4.23** `template<typename _CharT, typename _Traits> locale  
std::basic_streambuf<_CharT, _Traits>::pubimbue ( const locale  
& __loc ) [inline, inherited]`

Entry point for `imbue()`.

#### Parameters

*loc* The new locale.

#### Returns

The previous locale.

Calls the derived `imbue(loc)`.

Definition at line 207 of file `streambuf`.

**5.65.4.24** `template<typename _CharT, typename _Traits> pos_type  
std::basic_streambuf<_CharT, _Traits>::pubseekoff ( off_type  
__off, ios_base::seekdir __way, ios_base::openmode __mode =  
ios_base::in | ios_base::out ) [inline, inherited]`

Entry point for `imbue()`.

#### Parameters

*loc* The new locale.

#### Returns

The previous locale.

Calls the derived `imbue(loc)`.

Definition at line 241 of file `streambuf`.

**5.65.4.25** `template<typename _CharT, typename _Traits> pos_type  
std::basic_streambuf<_CharT, _Traits>::pubseekpos ( pos_type  
__sp, ios_base::openmode __mode = ios_base::in | ios_base::out )  
[inline, inherited]`

Entry point for `imbue()`.

#### Parameters

*loc* The new locale.

#### Returns

The previous locale.

Calls the derived `imbue(loc)`.

Definition at line 246 of file `streambuf`.

**5.65.4.26** `template<typename _CharT, typename _Traits> __streambuf_type*  
std::basic_streambuf<_CharT, _Traits>::pubsetbuf ( char_type *  
__s, streamsize __n ) [inline, inherited]`

Entry points for derived buffer functions.

## 5.65 \_\_gnu\_cxx::stdio\_filebuf<\_CharT, \_Traits> Class Template Reference 1016

The public versions of `pubfoo` dispatch to the protected derived `foo` member functions, passing the arguments (if any) and returning the result unchanged.

Definition at line 237 of file `streambuf`.

**5.65.4.27** `template<typename _CharT, typename _Traits> int  
std::basic_streambuf<_CharT, _Traits>::pubsync( ) [inline,  
inherited]`

Entry point for `imbue()`.

### Parameters

*loc* The new locale.

### Returns

The previous locale.

Calls the derived `imbue(loc)`.

Definition at line 251 of file `streambuf`.

Referenced by `std::basic_istream<_CharT, _Traits>::sync()`.

**5.65.4.28** `template<typename _CharT, typename _Traits> int_type  
std::basic_streambuf<_CharT, _Traits>::sbumpc( ) [inline,  
inherited]`

Getting the next character.

### Returns

The next character, or eof.

If the input read position is available, returns that character and increments the read pointer, otherwise calls and returns `uflow()`.

Definition at line 296 of file `streambuf`.

Referenced by `std::basic_istream<_CharT, _Traits>::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::istreambuf_iterator<_CharT, _Traits>::operator++()`, and `std::basic_streambuf<char_type, traits_type>::snextc()`.

**5.65.4.29** `template<typename _CharT, typename _Traits> basic_filebuf<_CharT, _Traits>::pos_type std::basic_filebuf<_CharT, _Traits>::seekoff ( off_type, ios_base::seekdir, ios_base::openmode = ios_base::in | ios_base::out ) [protected, virtual, inherited]`

Alters the stream positions.

Each derived class provides its own appropriate behavior.

#### Note

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Reimplemented from `std::basic_streambuf<_CharT, _Traits>`.

Definition at line 717 of file `fstream.tcc`.

References `std::basic_filebuf<_CharT, _Traits>::_M_destroy_pback()`, `std::basic_filebuf<_CharT, _Traits>::_M_reading`, `std::ios_base::cur`, `std::basic_filebuf<_CharT, _Traits>::is_open()`, `std::basic_streambuf<_CharT, _Traits>::pbase()`, and `std::basic_streambuf<_CharT, _Traits>::pptr()`.

Referenced by `std::basic_filebuf<_CharT, _Traits>::imbue()`, `std::basic_filebuf<_CharT, _Traits>::open()`, and `std::basic_filebuf<_CharT, _Traits>::pbackfail()`.

**5.65.4.30** `template<typename _CharT, typename _Traits> basic_filebuf<_CharT, _Traits>::pos_type std::basic_filebuf<_CharT, _Traits>::seekpos ( pos_type, ios_base::openmode = ios_base::in | ios_base::out ) [protected, virtual, inherited]`

Alters the stream positions.

Each derived class provides its own appropriate behavior.

#### Note

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Reimplemented from `std::basic_streambuf<_CharT, _Traits>`.

Definition at line 777 of file `fstream.tcc`.

References `std::basic_filebuf<_CharT, _Traits>::_M_destroy_pback()`, `std::ios_base::beg`, and `std::basic_filebuf<_CharT, _Traits>::is_open()`.

**5.65.4.31** `template<typename _CharT, typename _Traits> basic_filebuf<_CharT, _Traits>::__streambuf_type * std::basic_filebuf<_CharT, _Traits>::setbuf ( char_type * __s, streamsize __n )` `[protected, virtual, inherited]`

Manipulates the buffer.

#### Parameters

- s* Pointer to a buffer area.
- n* Size of *s*.

#### Returns

`this`

If no file has been opened, and both *s* and *n* are zero, then the stream becomes unbuffered. Otherwise, *s* is used as a buffer; see <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch25s02.html> for more.

Reimplemented from `std::basic_streambuf<_CharT, _Traits>`.

Definition at line 688 of file `fstream.tcc`.

References `std::basic_filebuf<_CharT, _Traits>::__M_buf`, `std::basic_filebuf<_CharT, _Traits>::__M_buf_size`, and `std::basic_filebuf<_CharT, _Traits>::is_open()`.

**5.65.4.32** `template<typename _CharT, typename _Traits> void std::basic_streambuf<_CharT, _Traits>::setg ( char_type * __gbeg, char_type * __gnext, char_type * __gend )` `[inline, protected, inherited]`

Setting the three read area pointers.

#### Parameters

- gbeg* A pointer.
- gnext* A pointer.
- gend* A pointer.

#### Postcondition

*gbeg* == `eback()`, *gnext* == `gptr()`, and *gend* == `egptr()`

## 5.65 `__gnu_cxx::stdio_filebuf<_CharT, _Traits>` Class Template Reference 1019

Definition at line 489 of file `streambuf`.

Referenced by `std::basic_filebuf< char_type, traits_type >::_M_create_pback()`, `std::basic_filebuf< char_type, traits_type >::_M_destroy_pback()`, and `std::basic_filebuf< char_type, traits_type >::_M_set_buffer()`.

**5.65.4.33** `template<typename _CharT, typename _Traits> void  
std::basic_streambuf< _CharT, _Traits >::setp ( char_type *  
__pbeg, char_type * __pend ) [inline, protected,  
inherited]`

Setting the three write area pointers.

### Parameters

*pbeg* A pointer.

*pend* A pointer.

### Postcondition

*pbeg* == `pbase()`, *pbeg* == `pptr()`, and *pend* == `epptr()`

Definition at line 535 of file `streambuf`.

Referenced by `std::basic_filebuf< char_type, traits_type >::_M_set_buffer()`.

**5.65.4.34** `template<typename _CharT, typename _Traits> int_type  
std::basic_streambuf< _CharT, _Traits >::sgetc ( ) [inline,  
inherited]`

Getting the next character.

### Returns

The next character, or eof.

If the input read position is available, returns that character, otherwise calls and returns `underflow()`. Does not move the read position after fetching the character.

Definition at line 318 of file `streambuf`.

Referenced by `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, and `std::basic_streambuf< char_type, traits_type >::snextc()`.

**5.65.4.35** `template<typename _CharT, typename _Traits> streamsize  
std::basic_streambuf<_CharT, _Traits>::sgetn ( char_type * __s,  
streamsize __n ) [inline, inherited]`

Entry point for `xsgetn`.

#### Parameters

*s* A buffer area.

*n* A count.

Returns `xsgetn(s,n)`. The effect is to fill `s[0]` through `s[n-1]` with characters from the input sequence, if possible.

Definition at line 337 of file `streambuf`.

**5.65.4.36** `template<typename _CharT, typename _Traits> streamsize  
std::basic_filebuf<_CharT, _Traits>::showmanyc ( )  
[protected, virtual, inherited]`

Investigating the data available.

#### Returns

An estimate of the number of characters available in the input sequence, or -1.

*If it returns a positive value, then successive calls to `underflow()` will not return `traits::eof()` until at least that number of characters have been supplied. If `showmanyc()` returns -1, then calls to `underflow()` or `uflow()` will fail.*  
[27.5.2.4.3]/1

#### Note

Base class version does nothing, returns zero.

The standard adds that *the intention is not only that the calls [to `underflow` or `uflow`] will not return `eof()` but that they will return immediately.*

The standard adds that *the morphemes of `showmanyc` are **es-how-many-see**, not **show-manic**.*

Reimplemented from `std::basic_streambuf<_CharT, _Traits>`.

Definition at line 180 of file `fstream.tcc`.

## 5.65 `__gnu_cxx::stdio_filebuf<_CharT, _Traits>` Class Template Reference

References `std::basic_filebuf<_CharT, _Traits>::_M_mode`, `std::ios_base::binary`, `std::basic_streambuf<_CharT, _Traits>::egptr()`, `std::basic_streambuf<_CharT, _Traits>::gptr()`, `std::ios_base::in`, and `std::basic_filebuf<_CharT, _Traits>::is_open()`.

**5.65.4.37** `template<typename _CharT, typename _Traits> int_type  
std::basic_streambuf<_CharT, _Traits>::snextc ( ) [inline,  
inherited]`

Getting the next character.

### Returns

The next character, or eof.

Calls `sbumpc()`, and if that function returns `traits::eof()`, so does this function. Otherwise, `sgetc()`.

Definition at line 278 of file `streambuf`.

Referenced by `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, and `std::basic_istream<_CharT, _Traits>::sentry::sentry()`.

**5.65.4.38** `template<typename _CharT, typename _Traits> int_type  
std::basic_streambuf<_CharT, _Traits>::sputbackc ( char_type  
_c ) [inline, inherited]`

Pushing characters back into the input stream.

### Parameters

*c* The character to push back.

### Returns

The previous character, if possible.

Similar to `sungetc()`, but *c* is pushed onto the stream instead of *the previous character*. If successful, the next character fetched from the input stream will be *c*.

Definition at line 352 of file `streambuf`.

Referenced by `std::basic_istream<_CharT, _Traits>::putback()`.

**5.65.4.39** `template<typename _CharT, typename _Traits> int_type  
std::basic_streambuf<_CharT, _Traits>::sputc ( char_type __c )  
[inline, inherited]`

Entry point for all single-character output functions.

#### Parameters

*c* A character to output.

#### Returns

*c*, if possible.

One of two public output functions.

If a write position is available for the output sequence (i.e., the buffer is not full), stores *c* in that position, increments the position, and returns `traits::to_int_type(c)`. If a write position is not available, returns `overflow(c)`.

Definition at line 404 of file `streambuf`.

Referenced by `std::basic_istream<_CharT, _Traits>::get()`, and `std::ostreambuf_iterator<_CharT, _Traits>::operator=()`.

**5.65.4.40** `template<typename _CharT, typename _Traits> streamsize  
std::basic_streambuf<_CharT, _Traits>::sputn ( const char_type *  
__s, streamsize __n ) [inline, inherited]`

Entry point for all single-character output functions.

#### Parameters

*s* A buffer read area.

*n* A count.

One of two public output functions.

Returns `xputn(s,n)`. The effect is to write `s[0]` through `s[n-1]` to the output sequence, if possible.

Definition at line 430 of file `streambuf`.

**5.65.4.41** `template<typename _CharT, typename _Traits> int_type  
std::basic_streambuf<_CharT, _Traits>::sungetc ( ) [inline,  
inherited]`

Moving backwards in the input stream.

#### Returns

The previous character, if possible.

If a putback position is available, this function decrements the input pointer and returns that character. Otherwise, calls and returns `pbackfail()`. The effect is to *unget* the last character *gotten*.

Definition at line 377 of file `streambuf`.

Referenced by `std::basic_istream<_CharT, _Traits>::unget()`.

**5.65.4.42** `template<typename _CharT, typename _Traits> int  
std::basic_filebuf<_CharT, _Traits>::sync ( ) [protected,  
virtual, inherited]`

Synchronizes the buffer arrays with the controlled sequences.

#### Returns

-1 on failure.

Each derived class provides its own appropriate behavior, including the definition of *failure*.

#### Note

Base class version does nothing, returns zero.

Reimplemented from `std::basic_streambuf<_CharT, _Traits>`.

Definition at line 897 of file `fstream.tcc`.

References `std::basic_filebuf<_CharT, _Traits>::overflow()`, `std::basic_streambuf<_CharT, _Traits>::pbase()`, and `std::basic_streambuf<_CharT, _Traits>::pptr()`.

**5.65.4.43** `template<typename _CharT, typename _Traits> virtual int_type  
std::basic_streambuf<_CharT, _Traits>::uflow( ) [inline,  
protected, virtual, inherited]`

Fetches more data from the controlled sequence.

#### Returns

The first character from the *pending sequence*.

Informally, this function does the same thing as `underflow()`, and in fact is required to call that function. It also returns the new character, like `underflow()` does. However, this function also moves the read position forward by one.

Reimplemented in `__gnu_cxx::stdio_sync_filebuf<_CharT, _Traits>`.

Definition at line 680 of file `streambuf`.

Referenced by `std::basic_streambuf<char_type, traits_type>::sbumpc()`, and `std::basic_streambuf<_CharT, _Traits>::xsgetn()`.

**5.65.4.44** `template<typename _CharT, typename _Traits> basic_filebuf<  
_CharT, _Traits>::int_type std::basic_filebuf<_CharT, _Traits  
>::underflow( ) [protected, virtual, inherited]`

Fetches more data from the controlled sequence.

#### Returns

The first character from the *pending sequence*.

Informally, this function is called when the input buffer is exhausted (or does not exist, as buffering need not actually be done). If a buffer exists, it is *refilled*. In either case, the next available character is returned, or `traits::eof()` to indicate a null pending sequence.

For a formal definition of the pending sequence, see a good text such as Langer & Kreft, or [27.5.2.4.3]/7-14.

A functioning input streambuf can be created by overriding only this function (no buffer area will be used). For an example, see <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch25.html>

#### Note

Base class version does nothing, returns `eof()`.

Reimplemented from `std::basic_streambuf<_CharT, _Traits>`.

Definition at line 206 of file `fstream.tcc`.

References `std::basic_filebuf<_CharT, _Traits>::_M_buf_size`, `std::basic_filebuf<_CharT, _Traits>::_M_destroy_pback()`, `std::basic_filebuf<_CharT, _Traits>::_M_ext_buf`, `std::basic_filebuf<_CharT, _Traits>::_M_ext_buf_size`, `std::basic_filebuf<_CharT, _Traits>::_M_ext_next`, `std::basic_filebuf<_CharT, _Traits>::_M_mode`, `std::basic_filebuf<_CharT, _Traits>::_M_reading`, `std::basic_filebuf<_CharT, _Traits>::_M_set_buffer()`, `std::basic_streambuf<_CharT, _Traits>::eback()`, `std::basic_streambuf<_CharT, _Traits>::egptr()`, `std::basic_streambuf<_CharT, _Traits>::gptr()`, `std::__codecvt_abstract_base<_InternT, _ExternT, _StateT>::in()`, `std::ios_base::in`, `std::min()`, and `std::basic_filebuf<_CharT, _Traits>::overflow()`.

Referenced by `std::basic_filebuf<_CharT, _Traits>::pbackfail()`.

**5.65.4.45** `template<typename _CharT, typename _Traits> streamsize  
std::basic_filebuf<_CharT, _Traits>::xsgetn ( char_type * __s,  
streamsize __n ) [protected, virtual, inherited]`

Multiple character extraction.

#### Parameters

- s* A buffer area.
- n* Maximum number of characters to assign.

#### Returns

The number of characters assigned.

Fills `s[0]` through `s[n-1]` with characters from the input sequence, as if by `sbumpc()`. Stops when either *n* characters have been copied, or when `traits::eof()` would be copied.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Reimplemented from `std::basic_streambuf<_CharT, _Traits>`.

Definition at line 551 of file `fstream.tcc`.

References `std::basic_filebuf<_CharT, _Traits>::_M_buf_size`, `std::basic_filebuf<_CharT, _Traits>::_M_destroy_pback()`, `std::basic_filebuf<_CharT, _Traits>::_M_mode`, `std::basic_filebuf<_CharT, _Traits>::_M_pback_init`, `std::basic_filebuf<_CharT, _Traits>::_M_reading`, `std::basic_filebuf<_CharT, _Traits>::_M_set_buffer()`, `std::basic_streambuf<_CharT, _Traits>::eback()`, `std::basic_streambuf<_CharT, _Traits>::egptr()`, `std::basic_streambuf<_CharT, _Traits>::gbump()`,

## 5.65 `__gnu_cxx::stdio_filebuf<_CharT, _Traits>` Class Template Reference 1026

`std::basic_streambuf<_CharT, _Traits>::gptr()`, `std::ios_base::in`, `std::basic_filebuf<_CharT, _Traits>::overflow()`, and `std::basic_streambuf<char_type, traits_type>::xsgetn()`.

**5.65.4.46** `template<typename _CharT, typename _Traits> streamsize  
std::basic_filebuf<_CharT, _Traits>::xspn( const char_type *  
__s, streamsize __n )` **[protected, virtual, inherited]**

Multiple character insertion.

### Parameters

- s* A buffer area.
- n* Maximum number of characters to write.

### Returns

The number of characters written.

Writes *s*[0] through *s*[*n*-1] to the output sequence, as if by `sputc()`. Stops when either *n* characters have been copied, or when `sputc()` would return `traits::eof()`.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Reimplemented from `std::basic_streambuf<_CharT, _Traits>`.

Definition at line 641 of file `fstream.tcc`.

References `std::basic_filebuf<_CharT, _Traits>::_M_buf_size`, `std::basic_filebuf<_CharT, _Traits>::_M_mode`, `std::basic_filebuf<_CharT, _Traits>::_M_reading`, `std::basic_filebuf<_CharT, _Traits>::_M_set_buffer()`, `std::basic_streambuf<_CharT, _Traits>::eptr()`, `std::min()`, `std::ios_base::out`, `std::basic_streambuf<_CharT, _Traits>::pbase()`, `std::basic_streambuf<_CharT, _Traits>::pptr()`, and `std::basic_streambuf<char_type, traits_type>::xspn()`.

## 5.65.5 Member Data Documentation

**5.65.5.1** `template<typename _CharT, typename _Traits> char_type*  
std::basic_filebuf<_CharT, _Traits>::_M_buf` **[protected,  
inherited]**

Pointer to the beginning of internal buffer.

## 5.65 `__gnu_cxx::stdio_filebuf<_CharT, _Traits>` Class Template Reference 1027

Definition at line 111 of file `fstream`.

Referenced by `std::basic_filebuf<char_type, traits_type>::_M_destroy_pback()`, `std::basic_filebuf<char_type, traits_type>::_M_set_buffer()`, and `std::basic_filebuf<_CharT, _Traits>::setbuf()`.

### 5.65.5.2 `template<typename _CharT, typename _Traits> locale` `std::basic_streambuf<_CharT, _Traits>::_M_buf_locale` `[protected, inherited]`

Current locale setting.

Definition at line 190 of file `streambuf`.

Referenced by `std::basic_filebuf<_CharT, _Traits>::basic_filebuf()`, `std::basic_streambuf<char_type, traits_type>::getloc()`, and `std::basic_streambuf<char_type, traits_type>::pubimbue()`.

### 5.65.5.3 `template<typename _CharT, typename _Traits> size_t` `std::basic_filebuf<_CharT, _Traits>::_M_buf_size` `[protected,` `inherited]`

Actual size of internal buffer. This number is equal to the size of the put area + 1 position, reserved for the overflow char of a full area.

Definition at line 118 of file `fstream`.

Referenced by `std::basic_filebuf<char_type, traits_type>::_M_set_buffer()`, `std::basic_filebuf<_CharT, _Traits>::overflow()`, `std::basic_filebuf<_CharT, _Traits>::setbuf()`, `__gnu_cxx::stdio_filebuf<_CharT, _Traits>::stdio_filebuf()`, `std::basic_filebuf<_CharT, _Traits>::underflow()`, `std::basic_filebuf<_CharT, _Traits>::xsgetn()`, and `std::basic_filebuf<_CharT, _Traits>::xsputn()`.

### 5.65.5.4 `template<typename _CharT, typename _Traits> char*` `std::basic_filebuf<_CharT, _Traits>::_M_ext_buf` `[protected,` `inherited]`

Buffer for external characters. Used for input when `codecvt::always_noconv() == false`. When valid, this corresponds to [eback\(\)](#).

Definition at line 153 of file `fstream`.

Referenced by `std::basic_filebuf<_CharT, _Traits>::imbue()`, and `std::basic_filebuf<_CharT, _Traits>::underflow()`.

**5.65.5.5** `template<typename _CharT, typename _Traits> streamsize  
std::basic_filebuf<_CharT, _Traits>::_M_ext_buf_size  
[protected, inherited]`

Size of buffer held by `_M_ext_buf`.

Definition at line 158 of file `fstream`.

Referenced by `std::basic_filebuf<_CharT, _Traits>::underflow()`.

**5.65.5.6** `template<typename _CharT, typename _Traits> const char*  
std::basic_filebuf<_CharT, _Traits>::_M_ext_next [protected,  
inherited]`

Pointers into the buffer held by `_M_ext_buf` that delimit a subsequence of bytes that have been read but not yet converted. When valid, `_M_ext_next` corresponds to `egptr()`.

Definition at line 165 of file `fstream`.

Referenced by `std::basic_filebuf<_CharT, _Traits>::imbue()`, and `std::basic_filebuf<_CharT, _Traits>::underflow()`.

**5.65.5.7** `template<typename _CharT, typename _Traits> char_type*  
std::basic_streambuf<_CharT, _Traits>::_M_in_beg  
[protected, inherited]`

This is based on `_IO_FILE`, just reordered to be more consistent, and is intended to be the most minimal abstraction for an internal buffer.

- `get == input == read`
- `put == output == write`

Definition at line 182 of file `streambuf`.

Referenced by `std::basic_streambuf<char_type, traits_type>::eback()`, and `std::basic_streambuf<char_type, traits_type>::setg()`.

**5.65.5.8** `template<typename _CharT, typename _Traits> char_type*  
std::basic_streambuf<_CharT, _Traits>::_M_in_cur  
[protected, inherited]`

Entry point for `imbue()`.

## 5.65 `__gnu_cxx::stdio_filebuf<_CharT, _Traits>` Class Template Reference 1029

---

### Parameters

*loc* The new locale.

### Returns

The previous locale.

Calls the derived `imbue(loc)`.

Definition at line 183 of file `streambuf`.

Referenced by `std::basic_streambuf<char_type, traits_type>::gbump()`, `std::basic_streambuf<char_type, traits_type>::gptr()`, and `std::basic_streambuf<char_type, traits_type>::setg()`.

**5.65.5.9** `template<typename _CharT, typename _Traits> char_type*  
std::basic_streambuf<_CharT, _Traits>::_M_in_end  
[protected, inherited]`

Entry point for [imbue\(\)](#).

### Parameters

*loc* The new locale.

### Returns

The previous locale.

Calls the derived `imbue(loc)`.

Definition at line 184 of file `streambuf`.

Referenced by `std::basic_streambuf<char_type, traits_type>::egptr()`, and `std::basic_streambuf<char_type, traits_type>::setg()`.

**5.65.5.10** `template<typename _CharT, typename _Traits> ios_base::openmode  
std::basic_filebuf<_CharT, _Traits>::_M_mode [protected,  
inherited]`

Place to stash in || out || in | out settings for current filebuf.

Definition at line 96 of file `fstream`.

Referenced by `std::basic_filebuf<char_type, traits_type>::_M_set_buffer()`, `std::basic_filebuf<_CharT, _Traits>::imbue()`, `std::basic_filebuf<_CharT, _Traits`

## 5.65 `__gnu_cxx::stdio_filebuf<_CharT, _Traits>` Class Template Reference 1030

`>::open()`, `std::basic_filebuf<_CharT, _Traits>::overflow()`, `std::basic_filebuf<_CharT, _Traits>::pbackfail()`, `std::basic_filebuf<_CharT, _Traits>::showmanyc()`, `__gnu_cxx::stdio_filebuf<_CharT, _Traits>::stdio_filebuf()`, `std::basic_filebuf<_CharT, _Traits>::underflow()`, `std::basic_filebuf<_CharT, _Traits>::xsgetn()`, and `std::basic_filebuf<_CharT, _Traits>::xsputn()`.

**5.65.5.11** `template<typename _CharT, typename _Traits> char_type*  
std::basic_streambuf<_CharT, _Traits>::_M_out_beg  
[protected, inherited]`

Entry point for [imbue\(\)](#).

### Parameters

*loc* The new locale.

### Returns

The previous locale.

Calls the derived `imbue(loc)`.

Definition at line 185 of file `streambuf`.

Referenced by `std::basic_streambuf<char_type, traits_type>::pbase()`, and `std::basic_streambuf<char_type, traits_type>::setp()`.

**5.65.5.12** `template<typename _CharT, typename _Traits> char_type*  
std::basic_streambuf<_CharT, _Traits>::_M_out_cur  
[protected, inherited]`

Entry point for [imbue\(\)](#).

### Parameters

*loc* The new locale.

### Returns

The previous locale.

Calls the derived `imbue(loc)`.

Definition at line 186 of file `streambuf`.

## 5.65 `__gnu_cxx::stdio_filebuf<_CharT, _Traits>` Class Template Reference 1031

Referenced by `std::basic_streambuf< char_type, traits_type >::pbump()`, `std::basic_streambuf< char_type, traits_type >::pptr()`, and `std::basic_streambuf< char_type, traits_type >::setp()`.

**5.65.5.13** `template<typename _CharT, typename _Traits> char_type*  
std::basic_streambuf< _CharT, _Traits >::_M_out_end  
[protected, inherited]`

Entry point for `imbue()`.

### Parameters

*loc* The new locale.

### Returns

The previous locale.

Calls the derived `imbue(loc)`.

Definition at line 187 of file `streambuf`.

Referenced by `std::basic_streambuf< char_type, traits_type >::epptr()`, and `std::basic_streambuf< char_type, traits_type >::setp()`.

**5.65.5.14** `template<typename _CharT, typename _Traits> char_type  
std::basic_filebuf< _CharT, _Traits >::_M_pback [protected,  
inherited]`

Necessary bits for putback buffer management.

### Note

pbacks of over one character are not currently supported.

Definition at line 139 of file `fstream`.

Referenced by `std::basic_filebuf< char_type, traits_type >::_M_create_pback()`.

**5.65.5.15** `template<typename _CharT, typename _Traits> char_type*  
std::basic_filebuf< _CharT, _Traits >::_M_pback_cur_save  
[protected, inherited]`

Necessary bits for putback buffer management.

## 5.65 \_\_gnu\_cxx::stdio\_filebuf< \_CharT, \_Traits > Class Template Reference 1032

### Note

pbacks of over one character are not currently supported.

Definition at line 140 of file fstream.

Referenced by `std::basic_filebuf< char_type, traits_type >::_M_create_pback()`, and `std::basic_filebuf< char_type, traits_type >::_M_destroy_pback()`.

**5.65.5.16** `template<typename _CharT, typename _Traits> char_type*  
std::basic_filebuf< _CharT, _Traits >::_M_pback_end_save  
[protected, inherited]`

Necessary bits for putback buffer management.

### Note

pbacks of over one character are not currently supported.

Definition at line 141 of file fstream.

Referenced by `std::basic_filebuf< char_type, traits_type >::_M_create_pback()`, and `std::basic_filebuf< char_type, traits_type >::_M_destroy_pback()`.

**5.65.5.17** `template<typename _CharT, typename _Traits> bool  
std::basic_filebuf< _CharT, _Traits >::_M_pback_init  
[protected, inherited]`

Necessary bits for putback buffer management.

### Note

pbacks of over one character are not currently supported.

Definition at line 142 of file fstream.

Referenced by `std::basic_filebuf< char_type, traits_type >::_M_create_pback()`, `std::basic_filebuf< char_type, traits_type >::_M_destroy_pback()`, `std::basic_filebuf< _CharT, _Traits >::pbackfail()`, and `std::basic_filebuf< _CharT, _Traits >::xsgetn()`.

**5.65.5.18** `template<typename _CharT, typename _Traits> bool  
std::basic_filebuf< _CharT, _Traits >::_M_reading [protected,  
inherited]`

`_M_reading == false` && `_M_writing == false` for **uncommitted** mode; `_M_reading == true` for **read** mode; `_M_writing == true` for **write** mode;

NB: `_M_reading == true && _M_writing == true` is unused.

Definition at line 130 of file `fstream`.

Referenced by `std::basic_filebuf<_CharT, _Traits>::imbue()`, `std::basic_filebuf<_CharT, _Traits>::open()`, `std::basic_filebuf<_CharT, _Traits>::overflow()`, `std::basic_filebuf<_CharT, _Traits>::pbackfail()`, `std::basic_filebuf<_CharT, _Traits>::seekoff()`, `__gnu_cxx::stdio_filebuf<_CharT, _Traits>::stdio_filebuf()`, `std::basic_filebuf<_CharT, _Traits>::underflow()`, `std::basic_filebuf<_CharT, _Traits>::xsgetn()`, and `std::basic_filebuf<_CharT, _Traits>::xsputn()`.

### 5.66.1 Detailed Description

`template<typename _CharT, typename _Traits = std::char_traits<_CharT>>`  
`class __gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >`

Provides a layer of compatibility for C.

This GNU extension provides extensions for working with standard C FILE\*'s. It must be instantiated by the user with the type of character used in the file stream, e.g., `stdio_filebuf<char>`.

Definition at line 57 of file `stdio_sync_filebuf.h`.

## 5.66.2 Member Typedef Documentation

**5.66.2.1** `template<typename _CharT, typename _Traits> typedef  
basic_streambuf<char_type, traits_type> std::basic_streambuf<  
_CharT, _Traits>::__streambuf_type [inherited]`

This is a non-standard type.

Reimplemented in `std::basic_filebuf<_CharT, _Traits>`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>`, `std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>`, and `std::basic_filebuf<char_type, traits_type>`.

Definition at line 135 of file `streambuf`.

**5.66.2.2** `template<typename _CharT, typename _Traits = std::char_traits<_CharT>> typedef _CharT __gnu_cxx::stdio_sync_filebuf<_CharT, _Traits>::__char_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from `std::basic_streambuf<_CharT, _Traits>`.

Definition at line 61 of file `stdio_sync_filebuf.h`.

**5.66.2.3** `template<typename _CharT, typename _Traits =  
std::char_traits<_CharT>> typedef traits_type::int_type  
__gnu_cxx::stdio_sync_filebuf<_CharT, _Traits>::int_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from `std::basic_streambuf<_CharT, _Traits>`.

Definition at line 63 of file `stdio_sync_filebuf.h`.

**5.66.2.4** `template<typename _CharT, typename _Traits =  
std::char_traits<_CharT>> typedef traits_type::off_type  
__gnu_cxx::stdio_sync_filebuf<_CharT, _Traits>::off_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic\\_streambuf<\\_CharT, \\_Traits>](#).

Definition at line 65 of file `stdio_sync_filebuf.h`.

**5.66.2.5** `template<typename _CharT , typename _Traits =  
std::char_traits<_CharT>> typedef traits_type::pos_type  
__gnu_cxx::stdio_sync_filebuf<_CharT, _Traits>::pos_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic\\_streambuf<\\_CharT, \\_Traits>](#).

Definition at line 64 of file `stdio_sync_filebuf.h`.

**5.66.2.6** `template<typename _CharT , typename _Traits = std::char_traits<_  
_CharT>> typedef _Traits __gnu_cxx::stdio_sync_filebuf<_CharT,  
_Traits>::traits_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic\\_streambuf<\\_CharT, \\_Traits>](#).

Definition at line 62 of file `stdio_sync_filebuf.h`.

### 5.66.3 Member Function Documentation

**5.66.3.1** `template<typename _CharT, typename _Traits> char_type*  
std::basic_streambuf<_CharT, _Traits>::eback ( ) const  
[inline, protected, inherited]`

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- [eback\(\)](#) returns the beginning pointer for the input sequence
- [gptr\(\)](#) returns the next pointer for the input sequence
- [egptr\(\)](#) returns the end pointer for the input sequence

Definition at line 462 of file streambuf.

Referenced by `std::basic_filebuf< char_type, traits_type >::_M_destroy_pback()`, `std::basic_filebuf< _CharT, _Traits >::imbue()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::pbackfail()`, `std::basic_filebuf< _CharT, _Traits >::pbackfail()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos()`, `std::basic_streambuf< char_type, traits_type >::sputbackc()`, `std::basic_streambuf< char_type, traits_type >::sungetc()`, `std::basic_filebuf< _CharT, _Traits >::underflow()`, and `std::basic_filebuf< _CharT, _Traits >::xsgetn()`.

**5.66.3.2 `template<typename _CharT, typename _Traits> char_type* std::basic_streambuf< _CharT, _Traits >::egptr ( ) const`**  
**`[inline, protected, inherited]`**

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- `eback()` returns the beginning pointer for the input sequence
- `gptr()` returns the next pointer for the input sequence
- `egptr()` returns the end pointer for the input sequence

Definition at line 468 of file streambuf.

Referenced by `std::basic_filebuf< char_type, traits_type >::_M_create_pback()`, `std::basic_streambuf< char_type, traits_type >::in_avail()`, `std::basic_streambuf< char_type, traits_type >::sbumpc()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos()`, `std::basic_streambuf< char_type, traits_type >::sgetc()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::showmanyc()`, `std::basic_filebuf< _CharT, _Traits >::showmanyc()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::str()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow()`, `std::basic_filebuf< _CharT, _Traits >::underflow()`, `std::basic_streambuf< _CharT, _Traits >::xsgetn()`, and `std::basic_filebuf< _CharT, _Traits >::xsgetn()`.

**5.66.3.3 `template<typename _CharT, typename _Traits> char_type* std::basic_streambuf< _CharT, _Traits >::eptr ( ) const`**  
**`[inline, protected, inherited]`**

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- `pbase()` returns the beginning pointer for the output sequence
- `pptr()` returns the next pointer for the output sequence
- `epptr()` returns the end pointer for the output sequence

Definition at line 515 of file `streambuf`.

Referenced by `std::basic_stringbuf<_CharT, _Traits, _Alloc>::overflow()`, `std::basic_streambuf<char_type, traits_type>::sputc()`, `std::basic_streambuf<_CharT, _Traits>::xspn()`, and `std::basic_filebuf<_CharT, _Traits>::xspn()`.

```
5.66.3.4 template<typename _CharT, typename _Traits =
std::char_traits<_CharT>> std::__c_file* const
__gnu_cxx::stdio_sync_filebuf<_CharT, _Traits>::file ()
[inline]
```

### Returns

The underlying `FILE*`.

This function can be used to access the underlying C file pointer. Note that there is no way for the library to track what you do with the file, so be careful.

Definition at line 89 of file `stdio_sync_filebuf.h`.

```
5.66.3.5 template<typename _CharT, typename _Traits> void
std::basic_streambuf<_CharT, _Traits>::gbump (int __n)
[inline, protected, inherited]
```

Moving the read position.

### Parameters

*n* The delta by which to move.

This just advances the read position without returning any data.

Definition at line 478 of file `streambuf`.

Referenced by `std::basic_stringbuf<_CharT, _Traits, _Alloc>::pbackfail()`, `std::basic_filebuf<_CharT, _Traits>::pbackfail()`, `std::basic_streambuf<char_type, traits_type>::sbumpc()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekoff()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekpos()`, `std::basic_streambuf<char_type, traits_type>::sputbackc()`, `std::basic_streambuf<char_type, traits_type>::sungetc()`, `std::basic_streambuf<char_type, traits_type>::uflow()`, `std::basic_streambuf<_CharT, _Traits>::xsgetn()`, and `std::basic_filebuf<_CharT, _Traits>::xsgetn()`.

**5.66.3.6 `template<typename _CharT, typename _Traits> locale std::basic_streambuf<_CharT, _Traits>::getloc ( ) const [inline, inherited]`**

Locale access.

**Returns**

The current locale in effect.

If `pubimbue(loc)` has been called, then the most recent `loc` is returned. Otherwise the global locale in effect at the time of construction is returned.

Definition at line 224 of file `streambuf`.

Referenced by `std::basic_streambuf<char_type, traits_type>::pubimbue()`.

**5.66.3.7 `template<typename _CharT, typename _Traits> char_type* std::basic_streambuf<_CharT, _Traits>::gptr ( ) const [inline, protected, inherited]`**

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- `eback()` returns the beginning pointer for the input sequence
- `gptr()` returns the next pointer for the input sequence
- `egptr()` returns the end pointer for the input sequence

Definition at line 465 of file `streambuf`.

Referenced by `std::basic_filebuf<char_type, traits_type>::_M_create_pback()`, `std::basic_filebuf<char_type, traits_type>::_M_destroy_pback()`, `std::basic_filebuf<`

`_CharT, _Traits >::imbue()`, `std::basic_streambuf< char_type, traits_type >::in_avail()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::pbackfail()`, `std::basic_filebuf< _CharT, _Traits >::pbackfail()`, `std::basic_streambuf< char_type, traits_type >::sbumpc()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos()`, `std::basic_streambuf< char_type, traits_type >::sgetc()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::showmanyc()`, `std::basic_filebuf< _CharT, _Traits >::showmanyc()`, `std::basic_streambuf< char_type, traits_type >::sputbackc()`, `std::basic_streambuf< char_type, traits_type >::sungetc()`, `std::basic_streambuf< char_type, traits_type >::uflow()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow()`, `std::basic_filebuf< _CharT, _Traits >::underflow()`, `std::basic_streambuf< _CharT, _Traits >::xsgetn()`, and `std::basic_filebuf< _CharT, _Traits >::xsgetn()`.

**5.66.3.8** `template<typename _CharT, typename _Traits> virtual void  
std::basic_streambuf< _CharT, _Traits >::imbue ( const locale & )  
[inline, protected, virtual, inherited]`

Changes translations.

#### Parameters

*loc* A new locale.

Translations done during I/O which depend on the current locale are changed by this call. The standard adds, *Between invocations of this function a class derived from streambuf can safely cache results of calls to locale functions and to members of facets so obtained.*

#### Note

Base class version does nothing.

Reimplemented in `std::basic_filebuf< _CharT, _Traits >`, `std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >`, and `std::basic_filebuf< char_type, traits_type >`.

Definition at line 556 of file streambuf.

Referenced by `std::basic_streambuf< char_type, traits_type >::pubimbue()`.

**5.66.3.9** `template<typename _CharT, typename _Traits> streamsize  
std::basic_streambuf< _CharT, _Traits >::in_avail ( ) [inline,  
inherited]`

Looking ahead into the stream.

### Returns

The number of characters available.

If a read position is available, returns the number of characters available for reading before the buffer must be refilled. Otherwise returns the derived `showmanyc()`.

Definition at line 264 of file `streambuf`.

```
5.66.3.10 template<typename _CharT , typename _Traits
 = std::char_traits<_CharT>> virtual int_type
 __gnu_cxx::stdio_sync_filebuf<_CharT, _Traits>::overflow (
 int_type = traits_type::eof()) [inline, protected,
 virtual]
```

Consumes data from the buffer; writes to the controlled sequence.

### Parameters

*c* An additional character to consume.

### Returns

`eof()` to indicate failure, something else (usually *c*, or `not_eof()`)

Informally, this function is called when the output buffer is full (or does not exist, as buffering need not actually be done). If a buffer exists, it is *consumed*, with *some effect* on the controlled sequence. (Typically, the buffer is written out to the sequence verbatim.) In either case, the character *c* is also written out, if *c* is not `eof()`.

For a formal definition of this function, see a good text such as Langer & Kreft, or [27.5.2.4.5]/3-7.

A functioning output `streambuf` can be created by overriding only this function (no buffer area will be used).

### Note

Base class version does nothing, returns `eof()`.

Reimplemented from `std::basic_streambuf<_CharT, _Traits>`.

Definition at line 142 of file `stdio_sync_filebuf.h`.

**5.66.3.11** `template<typename _CharT, typename _Traits  
= std::char_traits<_CharT>> virtual int_type  
__gnu_cxx::stdio_sync_filebuf<_CharT, _Traits>::pbackfail(  
int_type = traits_type::eof() ) [inline, protected,  
virtual]`

Tries to back up the input sequence.

#### Parameters

*c* The character to be inserted back into the sequence.

#### Returns

`eof()` on failure, *some other value* on success

#### Postcondition

The constraints of `gptr()`, `eback()`, and `pptr()` are the same as for `underflow()`.

#### Note

Base class version does nothing, returns `eof()`.

Reimplemented from `std::basic_streambuf<_CharT, _Traits>`.

Definition at line 117 of file `stdio_sync_filebuf.h`.

**5.66.3.12** `template<typename _CharT, typename _Traits> char_type*  
std::basic_streambuf<_CharT, _Traits>::pbase( ) const  
[inline, protected, inherited]`

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- `pbase()` returns the beginning pointer for the output sequence
- `pptr()` returns the next pointer for the output sequence
- `epptr()` returns the end pointer for the output sequence

Definition at line 509 of file streambuf.

Referenced by `std::basic_stringbuf<_CharT, _Traits, _Alloc>::overflow()`, `std::basic_filebuf<_CharT, _Traits>::overflow()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekoff()`, `std::basic_filebuf<_CharT, _Traits>::seekoff()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekpos()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::str()`, `std::basic_filebuf<_CharT, _Traits>::sync()`, and `std::basic_filebuf<_CharT, _Traits>::xsputn()`.

**5.66.3.13** `template<typename _CharT, typename _Traits> void  
std::basic_streambuf<_CharT, _Traits>::pbump ( int __n )  
[inline, protected, inherited]`

Moving the write position.

#### Parameters

*n* The delta by which to move.

This just advances the write position without returning any data.

Definition at line 525 of file streambuf.

Referenced by `std::basic_stringbuf<_CharT, _Traits, _Alloc>::overflow()`, `std::basic_filebuf<_CharT, _Traits>::overflow()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekoff()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekpos()`, `std::basic_streambuf<char_type, traits_type>::sputc()`, and `std::basic_streambuf<_CharT, _Traits>::xsputn()`.

**5.66.3.14** `template<typename _CharT, typename _Traits> char_type*  
std::basic_streambuf<_CharT, _Traits>::pptr ( ) const  
[inline, protected, inherited]`

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- `pbase()` returns the beginning pointer for the output sequence
- `pptr()` returns the next pointer for the output sequence
- `epptr()` returns the end pointer for the output sequence

Definition at line 512 of file `streambuf`.

Referenced by `std::basic_stringbuf<_CharT, _Traits, _Alloc>::overflow()`, `std::basic_filebuf<_CharT, _Traits>::overflow()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekoff()`, `std::basic_filebuf<_CharT, _Traits>::seekoff()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekpos()`, `std::basic_streambuf<char_type, traits_type>::sputc()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::str()`, `std::basic_filebuf<_CharT, _Traits>::sync()`, `std::basic_streambuf<_CharT, _Traits>::xsputn()`, and `std::basic_filebuf<_CharT, _Traits>::xsputn()`.

**5.66.3.15** `template<typename _CharT, typename _Traits> locale  
std::basic_streambuf<_CharT, _Traits>::pubimbue ( const locale  
& __loc ) [inline, inherited]`

Entry point for `imbue()`.

#### Parameters

*loc* The new locale.

#### Returns

The previous locale.

Calls the derived `imbue(loc)`.

Definition at line 207 of file `streambuf`.

**5.66.3.16** `template<typename _CharT, typename _Traits> pos_type  
std::basic_streambuf<_CharT, _Traits>::pubseekoff ( off_type  
__off, ios_base::seekdir __way, ios_base::openmode __mode =  
ios_base::in | ios_base::out ) [inline, inherited]`

Entry point for `imbue()`.

#### Parameters

*loc* The new locale.

#### Returns

The previous locale.

Calls the derived `imbue(loc)`.

Definition at line 241 of file `streambuf`.

**5.66.3.17** `template<typename _CharT, typename _Traits> pos_type  
std::basic_streambuf<_CharT, _Traits>::pubseekpos ( pos_type  
__sp, ios_base::openmode __mode = ios_base::in | ios_base::out )  
[inline, inherited]`

Entry point for `imbue()`.

#### Parameters

*loc* The new locale.

#### Returns

The previous locale.

Calls the derived `imbue(loc)`.

Definition at line 246 of file `streambuf`.

**5.66.3.18** `template<typename _CharT, typename _Traits> __streambuf_type*  
std::basic_streambuf<_CharT, _Traits>::pubsetbuf ( char_type *  
__s, streamsize __n ) [inline, inherited]`

Entry points for derived buffer functions.

The public versions of `pubfoo` dispatch to the protected derived `foo` member functions, passing the arguments (if any) and returning the result unchanged.

Definition at line 237 of file `streambuf`.

**5.66.3.19** `template<typename _CharT, typename _Traits> int  
std::basic_streambuf<_CharT, _Traits>::pubsync ( ) [inline,  
inherited]`

Entry point for `imbue()`.

#### Parameters

*loc* The new locale.

#### Returns

The previous locale.

Calls the derived `imbue(loc)`.

Definition at line 251 of file `streambuf`.

Referenced by `std::basic_istream<_CharT, _Traits>::sync()`.

**5.66.3.20** `template<typename _CharT, typename _Traits> int_type  
std::basic_streambuf<_CharT, _Traits>::sbumpc ( ) [inline,  
inherited]`

Getting the next character.

#### Returns

The next character, or `eof`.

If the input read position is available, returns that character and increments the read pointer, otherwise calls and returns `uflow()`.

Definition at line 296 of file `streambuf`.

Referenced by `std::basic_istream<_CharT, _Traits>::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::istreambuf_iterator<_CharT, _Traits>::operator++()`, and `std::basic_streambuf<char_type, traits_type>::snextc()`.

**5.66.3.21** `template<typename _CharT, typename _Traits> virtual  
pos_type std::basic_streambuf<_CharT, _Traits>::seekoff  
( off_type, ios_base::seekdir, ios_base::openmode =  
ios_base::in | ios_base::out ) [inline, protected,  
virtual, inherited]`

Alters the stream positions.

Each derived class provides its own appropriate behavior.

#### Note

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Reimplemented in `std::basic_filebuf<_CharT, _Traits>`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>`, `std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>`, and `std::basic_filebuf<char_type, traits_type>`.

Definition at line 582 of file `streambuf`.

Referenced by `std::basic_streambuf<char_type, traits_type>::pubseekoff()`.

**5.66.3.22** `template<typename _CharT, typename _Traits> virtual pos_type  
std::basic_streambuf<_CharT, _Traits>::seekpos ( pos_type,  
ios_base::openmode = ios_base::in | ios_base::out ) [inline,  
protected, virtual, inherited]`

Alters the stream positions.

Each derived class provides its own appropriate behavior.

**Note**

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Reimplemented in `std::basic_filebuf<_CharT, _Traits>`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>`, `std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>`, and `std::basic_filebuf<char_type, traits_type>`.

Definition at line 594 of file `streambuf`.

Referenced by `std::basic_streambuf<char_type, traits_type>::pubseekpos()`.

**5.66.3.23** `template<typename _CharT, typename _Traits> virtual  
basic_streambuf<char_type, _Traits>* std::basic_streambuf<  
_CharT, _Traits>::setbuf ( char_type*, streamsize ) [inline,  
protected, virtual, inherited]`

Manipulates the buffer.

Each derived class provides its own appropriate behavior. See the next-to-last paragraph of <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch25s02.html> for more on this function.

**Note**

Base class version does nothing, returns `this`.

Reimplemented in `std::basic_filebuf<_CharT, _Traits>`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>`, `std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>`, and `std::basic_filebuf<char_type, traits_type>`.

Definition at line 571 of file `streambuf`.

Referenced by `std::basic_streambuf<char_type, traits_type>::pubsetbuf()`.

**5.66.3.24** `template<typename _CharT, typename _Traits> void  
std::basic_streambuf<_CharT, _Traits>::setg ( char_type *  
__gbeg, char_type * __gnext, char_type * __gend ) [inline,  
protected, inherited]`

Setting the three read area pointers.

**Parameters**

*gbeg* A pointer.

*gnext* A pointer.

*gend* A pointer.

**Postcondition**

*gbeg* == `eback()`, *gnext* == `gptr()`, and *gend* == `egptr()`

Definition at line 489 of file `streambuf`.

Referenced by `std::basic_filebuf< char_type, traits_type >::_M_create_pback()`, `std::basic_filebuf< char_type, traits_type >::_M_destroy_pback()`, and `std::basic_filebuf< char_type, traits_type >::_M_set_buffer()`.

**5.66.3.25** `template<typename _CharT, typename _Traits> void  
std::basic_streambuf<_CharT, _Traits>::setp ( char_type *  
__pbeg, char_type * __pend ) [inline, protected,  
inherited]`

Setting the three write area pointers.

**Parameters**

*pbeg* A pointer.

*pend* A pointer.

**Postcondition**

*pbeg* == `pbase()`, *pbeg* == `pptr()`, and *pend* == `pptr()`

Definition at line 535 of file `streambuf`.

Referenced by `std::basic_filebuf< char_type, traits_type >::_M_set_buffer()`.

**5.66.3.26** `template<typename _CharT, typename _Traits> int_type  
std::basic_streambuf<_CharT, _Traits>::sgetc ( ) [inline,  
inherited]`

Getting the next character.

#### Returns

The next character, or eof.

If the input read position is available, returns that character, otherwise calls and returns `underflow()`. Does not move the read position after fetching the character.

Definition at line 318 of file `streambuf`.

Referenced by `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, and `std::basic_streambuf<char_type, traits_type>::snextc()`.

**5.66.3.27** `template<typename _CharT, typename _Traits> streamsize  
std::basic_streambuf<_CharT, _Traits>::sgetn ( char_type * __s,  
streamsize __n ) [inline, inherited]`

Entry point for `xsgetn`.

#### Parameters

*s* A buffer area.

*n* A count.

Returns `xsgetn(s,n)`. The effect is to fill `s[0]` through `s[n-1]` with characters from the input sequence, if possible.

Definition at line 337 of file `streambuf`.

**5.66.3.28** `template<typename _CharT, typename _Traits> virtual streamsize  
std::basic_streambuf<_CharT, _Traits>::showmanyc ( )  
[inline, protected, virtual, inherited]`

Investigating the data available.

### Returns

An estimate of the number of characters available in the input sequence, or -1.

*If it returns a positive value, then successive calls to `underflow()` will not return `traits::eof()` until at least that number of characters have been supplied. If `showmanyc()` returns -1, then calls to `underflow()` or `uflow()` will fail.*  
[27.5.2.4.3]/1

### Note

Base class version does nothing, returns zero.

The standard adds that *the intention is not only that the calls [to `underflow` or `uflow`] will not return `eof()` but that they will return immediately.*

The standard adds that *the morphemes of `showmanyc` are **es-how-many-see**, not **show-manic**.*

Reimplemented in `std::basic_filebuf<_CharT, _Traits>`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>`, `std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>`, and `std::basic_filebuf<char_type, traits_type>`.

Definition at line 629 of file `streambuf`.

Referenced by `std::basic_streambuf<char_type, traits_type>::in_avail()`.

**5.66.3.29** `template<typename _CharT, typename _Traits> int_type  
std::basic_streambuf<_CharT, _Traits>::snextc ( ) [inline,  
inherited]`

Getting the next character.

### Returns

The next character, or `eof`.

Calls `sbumpc()`, and if that function returns `traits::eof()`, so does this function. Otherwise, `sgetc()`.

Definition at line 278 of file `streambuf`.

Referenced by `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, and `std::basic_istream<_CharT, _Traits>::sentry::sentry()`.

**5.66.3.30** `template<typename _CharT, typename _Traits> int_type  
std::basic_streambuf<_CharT, _Traits>::sputbackc ( char_type  
__c ) [inline, inherited]`

Pushing characters back into the input stream.

#### Parameters

*c* The character to push back.

#### Returns

The previous character, if possible.

Similar to [sungetc\(\)](#), but *c* is pushed onto the stream instead of *the previous character*. If successful, the next character fetched from the input stream will be *c*.

Definition at line 352 of file streambuf.

Referenced by `std::basic_istream<_CharT, _Traits>::putback()`.

**5.66.3.31** `template<typename _CharT, typename _Traits> int_type  
std::basic_streambuf<_CharT, _Traits>::sputc ( char_type __c )  
[inline, inherited]`

Entry point for all single-character output functions.

#### Parameters

*c* A character to output.

#### Returns

*c*, if possible.

One of two public output functions.

If a write position is available for the output sequence (i.e., the buffer is not full), stores *c* in that position, increments the position, and returns `traits::to_int_type(c)`. If a write position is not available, returns `overflow(c)`.

Definition at line 404 of file streambuf.

Referenced by `std::basic_istream<_CharT, _Traits>::get()`, and `std::ostreambuf_iterator<_CharT, _Traits>::operator=()`.

**5.66.3.32** `template<typename _CharT, typename _Traits> streamsize  
std::basic_streambuf<_CharT, _Traits>::sputn ( const char_type *  
__s, streamsize __n ) [inline, inherited]`

Entry point for all single-character output functions.

#### Parameters

*s* A buffer read area.

*n* A count.

One of two public output functions.

Returns `xsputn(s,n)`. The effect is to write `s[0]` through `s[n-1]` to the output sequence, if possible.

Definition at line 430 of file `streambuf`.

**5.66.3.33** `template<typename _CharT, typename _Traits> int_type  
std::basic_streambuf<_CharT, _Traits>::sungetc ( ) [inline,  
inherited]`

Moving backwards in the input stream.

#### Returns

The previous character, if possible.

If a putback position is available, this function decrements the input pointer and returns that character. Otherwise, calls and returns `pbackfail()`. The effect is to *unget* the last character *gotten*.

Definition at line 377 of file `streambuf`.

Referenced by `std::basic_istream<_CharT, _Traits>::unget()`.

**5.66.3.34** `template<typename _CharT, typename _Traits = std::char_traits<_  
CharT>> virtual int __gnu_cxx::stdio_sync_filebuf<_CharT,  
_Traits>::sync ( void ) [inline, protected, virtual]`

Synchronizes the buffer arrays with the controlled sequences.

### Returns

-1 on failure.

Each derived class provides its own appropriate behavior, including the definition of *failure*.

### Note

Base class version does nothing, returns zero.

Reimplemented from `std::basic_streambuf<_CharT, _Traits>`.

Definition at line 161 of file `stdio_sync_filebuf.h`.

```
5.66.3.35 template<typename _CharT , typename _Traits
 = std::char_traits<_CharT>> virtual int_type
 __gnu_cxx::stdio_sync_filebuf<_CharT, _Traits>::uflow ()
 [inline, protected, virtual]
```

Fetches more data from the controlled sequence.

### Returns

The first character from the *pending sequence*.

Informally, this function does the same thing as `underflow()`, and in fact is required to call that function. It also returns the new character, like `underflow()` does. However, this function also moves the read position forward by one.

Reimplemented from `std::basic_streambuf<_CharT, _Traits>`.

Definition at line 109 of file `stdio_sync_filebuf.h`.

```
5.66.3.36 template<typename _CharT , typename _Traits
 = std::char_traits<_CharT>> virtual int_type
 __gnu_cxx::stdio_sync_filebuf<_CharT, _Traits>::underflow ()
 [inline, protected, virtual]
```

Fetches more data from the controlled sequence.

### Returns

The first character from the *pending sequence*.

Informally, this function is called when the input buffer is exhausted (or does not exist, as buffering need not actually be done). If a buffer exists, it is *refilled*. In either case, the next available character is returned, or `traits::eof()` to indicate a null pending sequence.

For a formal definition of the pending sequence, see a good text such as Langer & Kreft, or [27.5.2.4.3]/7-14.

A functioning input streambuf can be created by overriding only this function (no buffer area will be used). For an example, see <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch25.html>

#### Note

Base class version does nothing, returns `eof()`.

Reimplemented from `std::basic_streambuf<_CharT, _Traits>`.

Definition at line 102 of file `stdio_sync_filebuf.h`.

```
5.66.3.37 template<typename _CharT , typename _Traits =
 std::char_traits<_CharT>> virtual std::streamsize
 __gnu_cxx::stdio_sync_filebuf<_CharT, _Traits>::xsgetn (
 char_type * __s, std::streamsize __n) [protected, virtual]
```

Multiple character extraction.

#### Parameters

*s* A buffer area.

*n* Maximum number of characters to assign.

#### Returns

The number of characters assigned.

Fills `s[0]` through `s[n-1]` with characters from the input sequence, as if by `sbumpc()`. Stops when either *n* characters have been copied, or when `traits::eof()` would be copied.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Reimplemented from `std::basic_streambuf<_CharT, _Traits>`.

**5.66.3.38** `template<typename _CharT, typename _Traits =  
std::char_traits<_CharT>> virtual std::streamsize  
__gnu_cxx::stdio_sync_filebuf<_CharT, _Traits>::xspn( const  
char_type* __s, std::streamsize __n ) [protected, virtual]`

Multiple character insertion.

#### Parameters

- s* A buffer area.
- n* Maximum number of characters to write.

#### Returns

The number of characters written.

Writes *s*[0] through *s*[*n*-1] to the output sequence, as if by `sputc()`. Stops when either *n* characters have been copied, or when `sputc()` would return `traits::eof()`.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Reimplemented from `std::basic_streambuf<_CharT, _Traits>`.

#### 5.66.4 Member Data Documentation

**5.66.4.1** `template<typename _CharT, typename _Traits> locale  
std::basic_streambuf<_CharT, _Traits>::_M_buf_locale  
[protected, inherited]`

Current locale setting.

Definition at line 190 of file `streambuf`.

Referenced by `std::basic_filebuf<_CharT, _Traits>::basic_filebuf()`, `std::basic_streambuf<char_type, traits_type>::getloc()`, and `std::basic_streambuf<char_type, traits_type>::pubimbue()`.

**5.66.4.2** `template<typename _CharT, typename _Traits> char_type*  
std::basic_streambuf<_CharT, _Traits>::_M_in_beg  
[protected, inherited]`

This is based on `_IO_FILE`, just reordered to be more consistent, and is intended to be the most minimal abstraction for an internal buffer.

- `get == input == read`
- `put == output == write`

Definition at line 182 of file `streambuf`.

Referenced by `std::basic_streambuf< char_type, traits_type >::eback()`, and `std::basic_streambuf< char_type, traits_type >::setg()`.

**5.66.4.3** `template<typename _CharT, typename _Traits> char_type*  
std::basic_streambuf< _CharT, _Traits >::_M_in_cur  
[protected, inherited]`

Entry point for [imbue\(\)](#).

#### Parameters

*loc* The new locale.

#### Returns

The previous locale.

Calls the derived `imbue(loc)`.

Definition at line 183 of file `streambuf`.

Referenced by `std::basic_streambuf< char_type, traits_type >::gbump()`, `std::basic_streambuf< char_type, traits_type >::gptr()`, and `std::basic_streambuf< char_type, traits_type >::setg()`.

**5.66.4.4** `template<typename _CharT, typename _Traits> char_type*  
std::basic_streambuf< _CharT, _Traits >::_M_in_end  
[protected, inherited]`

Entry point for [imbue\(\)](#).

#### Parameters

*loc* The new locale.

#### Returns

The previous locale.

Calls the derived `imbue(loc)`.

Definition at line 184 of file `streambuf`.

Referenced by `std::basic_streambuf< char_type, traits_type >::egptr()`, and `std::basic_streambuf< char_type, traits_type >::setg()`.

**5.66.4.5** `template<typename _CharT, typename _Traits> char_type*  
std::basic_streambuf< _CharT, _Traits >::_M_out_beg  
[protected, inherited]`

Entry point for `imbue()`.

**Parameters**

*loc* The new locale.

**Returns**

The previous locale.

Calls the derived `imbue(loc)`.

Definition at line 185 of file `streambuf`.

Referenced by `std::basic_streambuf< char_type, traits_type >::pbase()`, and `std::basic_streambuf< char_type, traits_type >::setp()`.

**5.66.4.6** `template<typename _CharT, typename _Traits> char_type*  
std::basic_streambuf< _CharT, _Traits >::_M_out_cur  
[protected, inherited]`

Entry point for `imbue()`.

**Parameters**

*loc* The new locale.

**Returns**

The previous locale.

Calls the derived `imbue(loc)`.

Definition at line 186 of file `streambuf`.

Referenced by `std::basic_streambuf< char_type, traits_type >::pbump()`, `std::basic_streambuf< char_type, traits_type >::pptr()`, and `std::basic_streambuf< char_type, traits_type >::setp()`.

**5.66.4.7** `template<typename _CharT, typename _Traits> char_type*  
std::basic_streambuf< _CharT, _Traits >::_M_out_end  
[protected, inherited]`

Entry point for [imbue\(\)](#).

#### Parameters

*loc* The new locale.

#### Returns

The previous locale.

Calls the derived `imbue(loc)`.

Definition at line 187 of file `streambuf`.

Referenced by `std::basic_streambuf< char_type, traits_type >::epptr()`, and `std::basic_streambuf< char_type, traits_type >::setp()`.

The documentation for this class was generated from the following file:

- [stdio\\_sync\\_filebuf.h](#)

## 5.67 `__gnu_cxx::subtractive_rng` Class Reference

Inheritance diagram for `__gnu_cxx::subtractive_rng`:

### Public Types

- typedef `_Arg` [argument\\_type](#)
- typedef `_Result` [result\\_type](#)

### Public Member Functions

- [subtractive\\_rng](#) (unsigned int `__seed`)
- [subtractive\\_rng](#) ()
- void `_M_initialize` (unsigned int `__seed`)
- unsigned int [operator\(\)](#) (unsigned int `__limit`)

#### 5.67.1 Detailed Description

The [subtractive\\_rng](#) class is documented on [SGI's site](#). Note that this code assumes that `int` is 32 bits.

Definition at line 349 of file `ext/functional`.

### 5.67.2 Member Typedef Documentation

**5.67.2.1** `template<typename _Arg, typename _Result> typedef _Arg  
std::unary_function< _Arg, _Result >::argument_type  
[inherited]`

`argument_type` is the type of the argument

Definition at line 105 of file `stl_function.h`.

**5.67.2.2** `template<typename _Arg, typename _Result> typedef _Result  
std::unary_function< _Arg, _Result >::result_type [inherited]`

`result_type` is the return type

Definition at line 108 of file `stl_function.h`.

### 5.67.3 Constructor & Destructor Documentation

**5.67.3.1** `__gnu_cxx::subtractive_rng::subtractive_rng ( unsigned int __seed )  
[inline]`

Ctor allowing you to initialize the seed.

Definition at line 391 of file `ext/functional`.

**5.67.3.2** `__gnu_cxx::subtractive_rng::subtractive_rng ( ) [inline]`

Default ctor; initializes its state with some number you don't see.

Definition at line 395 of file `ext/functional`.

### 5.67.4 Member Function Documentation

**5.67.4.1** `unsigned int __gnu_cxx::subtractive_rng::operator() ( unsigned int  
__limit ) [inline]`

Returns a number less than the argument.

Definition at line 360 of file `ext/functional`.

The documentation for this class was generated from the following file:

- [ext/functional](#)

## 5.68 `__gnu_cxx::temporary_buffer<_ForwardIterator, _Tp>` Struct Template Reference

Inheritance diagram for `__gnu_cxx::temporary_buffer<_ForwardIterator, _Tp>`:

### Public Types

- typedef pointer **iterator**
- typedef value\_type \* **pointer**
- typedef ptrdiff\_t **size\_type**
- typedef \_Tp **value\_type**

### Public Member Functions

- [temporary\\_buffer](#) (`_ForwardIterator __first, _ForwardIterator __last`)
- [~temporary\\_buffer](#) ()
- [iterator begin](#) ()
- [iterator end](#) ()
- size\_type [requested\\_size](#) () const
- size\_type [size](#) () const

## Protected Attributes

- pointer `_M_buffer`
- size\_type `_M_len`
- size\_type `_M_original_len`

### 5.68.1 Detailed Description

```
template<class _ForwardIterator, class _Tp = typename std::iterator_traits<_ForwardIterator>::value_type> struct __gnu_cxx::temporary_buffer<_ForwardIterator, _Tp>
```

This class provides similar behavior and semantics of the standard functions [get\\_temporary\\_buffer\(\)](#) and [return\\_temporary\\_buffer\(\)](#), but encapsulated in a type vaguely resembling a standard container.

By default, a `temporary_buffer<Iter>` stores space for objects of whatever type the `Iter` iterator points to. It is constructed from a typical `[first,last)` range, and provides the [begin\(\)](#), [end\(\)](#), [size\(\)](#) functions, as well as [requested\\_size\(\)](#). For non-trivial types, copies of `*first` will be used to initialize the storage.

`malloc` is used to obtain underlying storage.

Like [get\\_temporary\\_buffer\(\)](#), not all the requested memory may be available. Ideally, the created buffer will be large enough to hold a copy of `[first,last)`, but if [size\(\)](#) is less than [requested\\_size\(\)](#), then this didn't happen.

Definition at line 184 of file `ext/memory`.

### 5.68.2 Constructor & Destructor Documentation

```
5.68.2.1 template<class _ForwardIterator , class _Tp = typename
std::iterator_traits<_ForwardIterator>::value_type>
__gnu_cxx::temporary_buffer<_ForwardIterator, _Tp
>::temporary_buffer (_ForwardIterator __first, _ForwardIterator
__last) [inline]
```

Requests storage large enough to hold a copy of `[first,last)`.

Definition at line 187 of file `ext/memory`.

**5.68.2.2** `template<class _ForwardIterator, class _Tp = typename  
std::iterator_traits<_ForwardIterator>::value_type>  
__gnu_cxx::temporary_buffer<_ForwardIterator, _Tp  
>::~~temporary_buffer ( ) [inline]`

Destroys objects and frees storage.

Definition at line 191 of file `ext/memory`.

### 5.68.3 Member Function Documentation

**5.68.3.1** `template<typename _ForwardIterator, typename _Tp> iterator  
std::_Temporary_buffer<_ForwardIterator, _Tp>::begin ( )  
[inline, inherited]`

As per Table mumble.

Definition at line 152 of file `stl_tempbuf.h`.

Referenced by `std::inplace_merge()`, `std::stable_partition()`, and `std::stable_sort()`.

**5.68.3.2** `template<typename _ForwardIterator, typename _Tp> iterator  
std::_Temporary_buffer<_ForwardIterator, _Tp>::end ( )  
[inline, inherited]`

As per Table mumble.

Definition at line 157 of file `stl_tempbuf.h`.

**5.68.3.3** `template<typename _ForwardIterator, typename _Tp> size_type  
std::_Temporary_buffer<_ForwardIterator, _Tp>::requested_size ( ) const [inline, inherited]`

Returns the size requested by the constructor; may be `>size()`.

Definition at line 147 of file `stl_tempbuf.h`.

Referenced by `std::stable_partition()`.

5.68.3.4 `template<typename _ForwardIterator, typename _Tp> size_type  
std::_Temporary_buffer< _ForwardIterator, _Tp >::size ( ) const  
[inline, inherited]`

As per Table mumble.

Definition at line 142 of file `stl_tempbuf.h`.

Referenced by `std::inplace_merge()`, `std::stable_partition()`, and `std::stable_sort()`.

The documentation for this struct was generated from the following file:

- [ext/memory](#)

## 5.69 `__gnu_cxx::throw_allocator_base< _Tp, _Cond >` Class Template Reference

Allocator class with logging and exception generation control. Intended to be used as an `allocator_type` in templated code.

Note: Deallocate not allowed to throw.

Inheritance diagram for `__gnu_cxx::throw_allocator_base< _Tp, _Cond >`:

### Public Types

- `typedef const value_type * const_pointer`
- `typedef const value_type & const_reference`
- `typedef ptrdiff_t difference_type`
- `typedef value_type * pointer`
- `typedef value_type & reference`
- `typedef size_t size_type`
- `typedef _Tp value_type`

### Public Member Functions

- `pointer address (reference __x) const`
- `const_pointer address (const_reference __x) const`

## 5.70 `__gnu_cxx::throw_allocator_limit< _Tp >` Struct Template Reference 067

- pointer **allocate** (size\_type \_\_n, [std::allocator](#)< void >::const\_pointer hint=0)
- void **check\_allocated** (pointer \_\_p, size\_type \_\_n)
- void **check\_allocated** (size\_type \_\_n)
- void **check\_allocated** (void \*p, size\_t size)
- void **check\_allocated** (size\_t label)
- void **construct** (pointer \_\_p, const value\_type &val)
- template<typename... \_Args>  
void **construct** (pointer \_\_p, \_Args &&...\_\_args)

- void **destroy** (pointer \_\_p)
- void **erase** (void \*p, size\_t size)
- void **insert** (void \*p, size\_t size)
- size\_type **max\_size** () const throw ()

### Static Public Member Functions

- static size\_t **get\_label** ()
- static void **set\_label** (size\_t l)

#### 5.69.1 Detailed Description

`template<typename _Tp, typename _Cond> class __gnu_cxx::throw_allocator_base< _Tp, _Cond >`

Allocator class with logging and exception generation control. Intended to be used as an allocator\_type in templated code.

Note: Deallocate not allowed to throw.

Definition at line 600 of file `throw_allocator.h`.

The documentation for this class was generated from the following file:

- [throw\\_allocator.h](#)

## 5.70 `__gnu_cxx::throw_allocator_limit< _Tp >` Struct Template Reference

Allocator throwing via limit condition.

## 5.70 `__gnu_cxx::throw_allocator_limit<_Tp>` Struct Template Reference 068

Inheritance diagram for `__gnu_cxx::throw_allocator_limit<_Tp>`:

### Public Types

- `typedef const value_type * const_pointer`
- `typedef const value_type & const_reference`
- `typedef ptrdiff_t difference_type`
- `typedef value_type * pointer`
- `typedef value_type & reference`
- `typedef size_t size_type`
- `typedef _Tp value_type`

### Public Member Functions

- `throw_allocator_limit` (const `throw_allocator_limit` &) `throw ()`
- `template<typename _Tp1 > throw_allocator_limit` (const `throw_allocator_limit`<\_Tp1 > &) `throw ()`
- `pointer address` (reference \_\_x) `const`

### 5.74.1 Detailed Description

Type throwing via random condition.

Definition at line 576 of file `throw_allocator.h`.

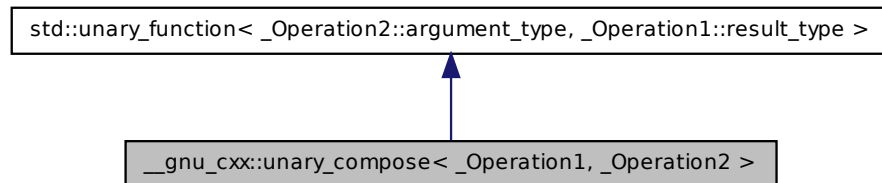

The documentation for this struct was generated from the following file:

- [throw\\_allocator.h](#)

## 5.75 `__gnu_cxx::unary_compose< _Operation1, _Operation2 >` Class Template Reference

An [SGI extension](#).

Inheritance diagram for `__gnu_cxx::unary_compose< _Operation1, _Operation2 >`:

## Public Types

- typedef `_Arg` [argument\\_type](#)
- typedef `_Result` [result\\_type](#)

## Public Member Functions

- **unary\_compose** (`const _Operation1 &__x, const _Operation2 &__y`)
- `_Operation1::result_type` **operator()** (`const typename _Operation2::argument_type &__x`) const

## 5.76 `__gnu_debug::After_nth_from<_Iterator>` Class Template Reference

### Protected Attributes

- `_Operation1 _M_fn1`
- `_Operation2 _M_fn2`

### 5.75.1 Detailed Description

`template<class _Operation1, class _Operation2> class __gnu_cxx::unary_compose<_Operation1, _Operation2>`

An [SGI extension](#).

Definition at line 126 of file `ext/functional`.

### 5.75.2 Member Typedef Documentation

**5.75.2.1** `template<typename _Arg, typename _Result> typedef _Arg std::unary_function<_Arg, _Result>::argument_type [inherited]`

`argument_type` is the type of the argument

Definition at line 105 of file `stl_function.h`.

**5.75.2.2** `template<typename _Arg, typename _Result> typedef _Result std::unary_function<_Arg, _Result>::result_type [inherited]`

`result_type` is the return type

Definition at line 108 of file `stl_function.h`.

The documentation for this class was generated from the following file:

- [ext/functional](#)

## 5.76 `__gnu_debug::After_nth_from<_Iterator>` Class Template Reference

### Public Member Functions

- `_After_nth_from` (const `difference_type` &\_\_n, const `_Iterator` &\_\_base)
- `bool operator()` (const `_Iterator` &\_\_x) const

### 5.76.1 Detailed Description

`template<typename _Iterator> class __gnu_debug::_After_nth_from<_Iterator>`

A function object that returns true when the given random access iterator is at least `n` steps away from the given iterator.

Definition at line 78 of file `safe_sequence.h`.

The documentation for this class was generated from the following file:

- [safe\\_sequence.h](#)

## 5.77 `__gnu_debug::_BeforeBeginHelper<_Sequence>` Struct Template Reference

### Public Types

- `typedef _It::iterator_type _BaseIt`
- `typedef _Sequence::const_iterator _It`

### Static Public Member Functions

- `static bool _M_Is(_BaseIt __it, const _Sequence *__seq)`

### 5.77.1 Detailed Description

`template<typename _Sequence> struct __gnu_debug::_BeforeBeginHelper<_Sequence>`

Helper struct to deal with sequence offering a `before_begin` iterator.

Definition at line 47 of file `safe_iterator.h`.

The documentation for this struct was generated from the following file:

- [safe\\_iterator.h](#)

## 5.78 `__gnu_debug::_Equal_to<_Type>` Class Template Reference

### Public Member Functions

- `_Equal_to(const _Type &__v)`

## 5.79 `__gnu_debug::_Not_equal_to<_Type>` Class Template Reference 1078

---

- `bool operator() (const _Type &__x) const`

### 5.78.1 Detailed Description

`template<typename _Type> class __gnu_debug::_Equal_to<_Type>`

A simple function object that returns true if the passed-in value is equal to the stored value.

Definition at line 63 of file `safe_sequence.h`.

The documentation for this class was generated from the following file:

- [safe\\_sequence.h](#)

## 5.79 `__gnu_debug::_Not_equal_to<_Type>` Class Template Reference

### Public Member Functions

- `_Not_equal_to (const _Type &__v)`
- `bool operator() (const _Type &__x) const`

### 5.79.1 Detailed Description

`template<typename _Type> class __gnu_debug::_Not_equal_to<_Type>`

A simple function object that returns true if the passed-in value is not equal to the stored value. It saves typing over using both `bind1st` and `not_equal`.

Definition at line 48 of file `safe_sequence.h`.

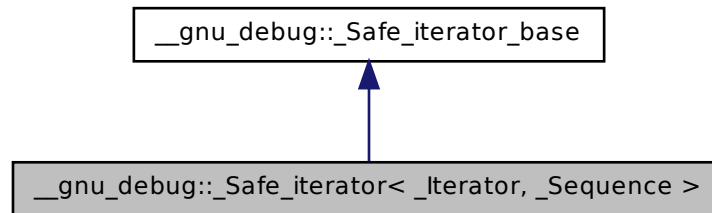

The documentation for this class was generated from the following file:

- [safe\\_sequence.h](#)

## 5.80 `__gnu_debug::_Safe_iterator<_Iterator, _Sequence>` Class Template Reference

Safe iterator wrapper.

Inheritance diagram for `__gnu_debug::_Safe_iterator<_Iterator, _Sequence>`:

### Public Types

- typedef `_Traits::difference_type` **difference\_type**
- typedef `_Traits::iterator_category` **iterator\_category**
- typedef `_Iterator` **iterator\_type**

#### 5.80.1 Detailed Description

`template<typename _Iterator, typename _Sequence> class __gnu_debug::_Safe_iterator<_Iterator, _Sequence>`

Safe iterator wrapper. The class template `_Safe_iterator` is a wrapper around an iterator that tracks the iterator's movement among sequences and checks that operations performed on the "safe" iterator are legal. In addition to the basic iterator operations (which are validated, and then passed to the underlying iterator), `_Safe_iterator` has member functions for iterator invalidation, attaching/detaching the iterator from sequences, and querying the iterator's state.

Definition at line 77 of file `safe_iterator.h`.

#### 5.80.2 Constructor & Destructor Documentation

**5.80.2.1** `template<typename _Iterator, typename _Sequence>  
__gnu_debug::_Safe_iterator<_Iterator, _Sequence>::_Safe_iterator  
( ) [inline]`

### Postcondition

the iterator is singular and unattached

Definition at line 113 of file `safe_iterator.h`.

**5.80.2.2** `template<typename _Iterator, typename _Sequence>  
__gnu_debug::_Safe_iterator<_Iterator, _Sequence>::_Safe_iterator  
( const _Iterator & __i, const _Sequence * __seq ) [inline]`

Safe iterator construction from an unsafe iterator and its sequence.

**Precondition**

seq is not NULL

**Postcondition**

this is not singular

Definition at line 122 of file safe\_iterator.h.

References \_GLIBCXX\_DEBUG\_VERIFY, and \_\_gnu\_debug::\_Safe\_iterator\_base::\_M\_singular().

**5.80.2.3** `template<typename _Iterator, typename _Sequence>  
__gnu_debug::_Safe_iterator<_Iterator, _Sequence>::_Safe_iterator  
( const _Safe_iterator<_Iterator, _Sequence> & __x ) [inline]`

Copy construction.

Definition at line 133 of file safe\_iterator.h.

References \_GLIBCXX\_DEBUG\_VERIFY, and \_\_gnu\_debug::\_Safe\_iterator\_base::\_M\_singular().

**5.80.2.4** `template<typename _Iterator, typename _Sequence>  
template<typename _MutableIterator> __gnu_debug::_ -  
Safe_iterator<_Iterator, _Sequence>::_Safe_iterator  
( const _Safe_iterator<_MutableIterator, typename  
__gnu_cxx::__enable_if<(std::__are_same<_MutableIterator,  
typename _Sequence::iterator::iterator_type>::_value), _Sequence  
>::_type> & __x ) [inline]`

Converting constructor from a mutable iterator to a constant iterator.

Definition at line 150 of file safe\_iterator.h.

References \_GLIBCXX\_DEBUG\_VERIFY.

### 5.80.3 Member Function Documentation

**5.80.3.1** `template<typename _Iterator, typename _Sequence> void  
__gnu_debug::_Safe_iterator<_Iterator, _Sequence>::_M_attach (  
_Safe_sequence_base * __seq ) [inline]`

Attach iterator to the given sequence.

Definition at line 335 of file `safe_iterator.h`.

Referenced by `__gnu_debug::_Safe_iterator<_Iterator, _Sequence>::operator=()`.

**5.80.3.2** `void __gnu_debug::_Safe_iterator_base::_M_attach (  
_Safe_sequence_base * __seq, bool __constant ) [inherited]`

Attaches this iterator to the given sequence, detaching it from whatever sequence it was attached to originally. If the new sequence is the NULL pointer, the iterator is left unattached.

Referenced by `__gnu_debug::_Safe_iterator_base::_Safe_iterator_base()`.

**5.80.3.3** `template<typename _Iterator, typename _Sequence>  
void __gnu_debug::_Safe_iterator<_Iterator, _Sequence  
>::_M_attach_single ( _Safe_sequence_base * __seq ) [inline]`

Likewise, but not thread-safe.

Definition at line 342 of file `safe_iterator.h`.

**5.80.3.4** `void __gnu_debug::_Safe_iterator_base::_M_attach_single  
( _Safe_sequence_base * __seq, bool __constant ) throw ()  
[inherited]`

Likewise, but not thread-safe.

**5.80.3.5** `bool __gnu_debug::_Safe_iterator_base::_M_attached_to ( const  
_Safe_sequence_base * __seq ) const [inline, inherited]`

Determines if we are attached to the given sequence.

Definition at line 130 of file `safe_base.h`.

References `__gnu_debug::_Safe_iterator_base::_M_sequence`.

**5.80.3.6** `template<typename _Iterator, typename _Sequence>  
bool __gnu_debug::_Safe_iterator<_Iterator, _Sequence  
>::_M_before_dereferenceable ( ) const [inline]`

Is the iterator before a dereferenceable one?

Definition at line 354 of file `safe_iterator.h`.

References `__gnu_debug::_Safe_iterator<_Iterator, _Sequence>::_M_dereferenceable()`, and `__gnu_debug::_Safe_iterator<_Iterator, _Sequence>::_M_incrementable()`.

**5.80.3.7** `bool __gnu_debug::_Safe_iterator_base::_M_can_compare ( const  
_Safe_iterator_base & __x ) const throw () [inherited]`

Can we compare this iterator to the given iterator `__x`? Returns true if both iterators are nonsingular and reference the same sequence.

**5.80.3.8** `template<typename _Iterator, typename _Sequence>  
bool __gnu_debug::_Safe_iterator<_Iterator, _Sequence  
>::_M_dereferenceable ( ) const [inline]`

Is the iterator dereferenceable?

Definition at line 349 of file `safe_iterator.h`.

References `__gnu_debug::_Safe_iterator<_Iterator, _Sequence>::_M_is_before_begin()`, `__gnu_debug::_Safe_iterator<_Iterator, _Sequence>::_M_is_end()`, and `__gnu_debug::_Safe_iterator_base::_M_singular()`.

Referenced by `__gnu_debug::_check_dereferenceable()`, `__gnu_debug::_Safe_iterator<_Iterator, _Sequence>::_M_before_dereferenceable()`, `__gnu_debug::_Safe_iterator<_Iterator, _Sequence>::operator*()`, and `__gnu_debug::_Safe_iterator<_Iterator, _Sequence>::operator->()`.

**5.80.3.9** `void __gnu_debug::_Safe_iterator_base::_M_detach ( )  
[inherited]`

Detach the iterator for whatever sequence it is attached to, if any.

**5.80.3.10** void \_\_gnu\_debug::\_Safe\_iterator\_base::\_M\_detach\_single ( )  
throw () [inherited]

Likewise, but not thread-safe.

Referenced by \_\_gnu\_debug::\_Safe\_sequence< \_Sequence >::\_M\_transfer\_from\_if().

**5.80.3.11** template<typename \_Iterator, typename \_Sequence>  
template<typename \_Iterator1, typename \_Iterator2 >  
static std::pair<difference\_type, Distance\_precision>  
\_\_gnu\_debug::\_Safe\_iterator< \_Iterator, \_Sequence  
>::\_M\_get\_distance ( const \_Iterator1 & \_\_lhs, const \_Iterator2 &  
\_\_rhs ) [inline, static]

Determine the distance between two iterators with some known precision.

Definition at line 388 of file safe\_iterator.h.

**5.80.3.12** \_\_gnu\_cxx::\_\_mutex& \_\_gnu\_debug::\_Safe\_iterator\_  
base::\_M\_get\_mutex ( ) throw () [protected,  
inherited]

For use in [\\_Safe\\_iterator](#).

**5.80.3.13** template<typename \_Iterator, typename \_Sequence>  
bool \_\_gnu\_debug::\_Safe\_iterator< \_Iterator, \_Sequence  
>::\_M\_incrementable ( ) const [inline]

Is the iterator incrementable?

Definition at line 362 of file safe\_iterator.h.

References \_\_gnu\_debug::\_Safe\_iterator< \_Iterator, \_Sequence >::\_M\_is\_end(), and  
\_\_gnu\_debug::\_Safe\_iterator\_base::\_M\_singular().

Referenced by \_\_gnu\_debug::\_Safe\_iterator< \_Iterator, \_Sequence >::\_M\_  
before\_dereferenceable(), and \_\_gnu\_debug::\_Safe\_iterator< \_Iterator, \_Sequence  
>::operator++().

**5.80.3.14** void \_\_gnu\_debug::\_Safe\_iterator\_base::\_M\_invalidate ( )  
[inline, inherited]

Invalidate the iterator, making it singular.

Definition at line 143 of file safe\_base.h.

References `__gnu_debug::_Safe_iterator_base::_M_version`.

**5.80.3.15** `template<typename _Iterator, typename _Sequence>`  
`bool __gnu_debug::_Safe_iterator< _Iterator, _Sequence`  
`>::_M_is_before_begin ( ) const [inline]`

Is this iterator equal to the sequence's `before_begin()` iterator if /// any?

Definition at line 417 of file safe\_iterator.h.

References `__gnu_debug::_Safe_iterator< _Iterator, _Sequence >::base()`.

Referenced by `__gnu_debug::_Safe_iterator< _Iterator, _Sequence >::_M_dereferenceable()`.

**5.80.3.16** `template<typename _Iterator, typename _Sequence> bool`  
`__gnu_debug::_Safe_iterator< _Iterator, _Sequence >::_M_is_begin`  
`( ) const [inline]`

Is this iterator equal to the sequence's `begin()` iterator?

Definition at line 408 of file safe\_iterator.h.

References `__gnu_debug::_Safe_iterator< _Iterator, _Sequence >::base()`.

**5.80.3.17** `template<typename _Iterator, typename _Sequence> bool`  
`__gnu_debug::_Safe_iterator< _Iterator, _Sequence >::_M_is_end (`  
`) const [inline]`

Is this iterator equal to the sequence's `end()` iterator?

Definition at line 412 of file safe\_iterator.h.

References `__gnu_debug::_Safe_iterator< _Iterator, _Sequence >::base()`.

Referenced by `__gnu_debug::_Safe_iterator< _Iterator, _Sequence >::_M_dereferenceable()`, and `__gnu_debug::_Safe_iterator< _Iterator, _Sequence >::_M_incrementable()`.

**5.80.3.18 void \_\_gnu\_debug::\_Safe\_iterator\_base::\_M\_reset ( ) throw ()**  
**[inherited]**

Reset all member variables

**5.80.3.19 bool \_\_gnu\_debug::\_Safe\_iterator\_base::\_M\_singular ( ) const**  
**throw () [inherited]**

Is this iterator singular?

Referenced by \_\_gnu\_debug::\_check\_singular(), \_\_gnu\_debug::\_check\_singular\_aux(), \_\_gnu\_debug::\_Safe\_iterator<\_Iterator, \_Sequence>::\_M\_dereferenceable(), \_\_gnu\_debug::\_Safe\_iterator<\_Iterator, \_Sequence>::\_M\_incrementable(), \_\_gnu\_debug::\_Safe\_iterator<\_Iterator, \_Sequence>::\_Safe\_iterator(), and \_\_gnu\_debug::\_Safe\_iterator<\_Iterator, \_Sequence>::operator=().

**5.80.3.20 void \_\_gnu\_debug::\_Safe\_iterator\_base::\_M\_unlink ( ) throw ()**  
**[inline, inherited]**

Unlink itself

Definition at line 152 of file safe\_base.h.

References \_\_gnu\_debug::\_Safe\_iterator\_base::\_M\_next, and \_\_gnu\_debug::\_Safe\_iterator\_base::\_M\_prior.

### 5.81.1 Detailed Description

Basic functionality for a *safe* iterator. The `_Safe_iterator_base` base class implements the functionality of a safe iterator that is not specific to a particular iterator type. It contains a pointer back to the sequence it references along with iterator version information and pointers to form a doubly-linked list of iterators referenced by the container.

This class must not perform any operations that can throw an exception, or the exception guarantees of derived iterators will be broken.

Definition at line 51 of file `safe_base.h`.

### 5.81.2 Constructor & Destructor Documentation

#### 5.81.2.1 `__gnu_debug::_Safe_iterator_base::_Safe_iterator_base ( )` [`inline`, `protected`]

Initializes the iterator and makes it singular.

Definition at line 77 of file `safe_base.h`.

#### 5.81.2.2 `__gnu_debug::_Safe_iterator_base::_Safe_iterator_base ( const _Safe_sequence_base * __seq, bool __constant )` [`inline`, `protected`]

Initialize the iterator to reference the sequence pointed to by `__seq`. `__constant` is true when we are initializing a constant iterator, and false if it is a mutable iterator. Note that `__seq` may be NULL, in which case the iterator will be singular. Otherwise, the iterator will reference `__seq` and be nonsingular.

Definition at line 88 of file `safe_base.h`.

References `_M_attach()`.

#### 5.81.2.3 `__gnu_debug::_Safe_iterator_base::_Safe_iterator_base ( const _Safe_iterator_base & __x, bool __constant )` [`inline`, `protected`]

Initializes the iterator to reference the same sequence that `__x` does. `__constant` is true if this is a constant iterator, and false if it is mutable.

Definition at line 95 of file `safe_base.h`.

References `_M_attach()`, and `_M_sequence`.

### 5.81.3 Member Function Documentation

#### 5.81.3.1 void \_\_gnu\_debug::\_Safe\_iterator\_base::\_M\_attach ( \_Safe\_sequence\_base \* \_\_seq, bool \_\_constant )

Attaches this iterator to the given sequence, detaching it from whatever sequence it was attached to originally. If the new sequence is the NULL pointer, the iterator is left unattached.

Referenced by `_Safe_iterator_base()`.

#### 5.81.3.2 void \_\_gnu\_debug::\_Safe\_iterator\_base::\_M\_attach\_single ( \_Safe\_sequence\_base \* \_\_seq, bool \_\_constant ) throw ()

Likewise, but not thread-safe.

#### 5.81.3.3 bool \_\_gnu\_debug::\_Safe\_iterator\_base::\_M\_attached\_to ( const \_Safe\_sequence\_base \* \_\_seq ) const [inline]

Determines if we are attached to the given sequence.

Definition at line 130 of file `safe_base.h`.

References `_M_sequence`.

#### 5.81.3.4 bool \_\_gnu\_debug::\_Safe\_iterator\_base::\_M\_can\_compare ( const \_Safe\_iterator\_base & \_\_x ) const throw ()

Can we compare this iterator to the given iterator `__x`? Returns true if both iterators are nonsingular and reference the same sequence.

#### 5.81.3.5 void \_\_gnu\_debug::\_Safe\_iterator\_base::\_M\_detach ( )

Detach the iterator for whatever sequence it is attached to, if any.

#### 5.81.3.6 void \_\_gnu\_debug::\_Safe\_iterator\_base::\_M\_detach\_single ( ) throw ()

Likewise, but not thread-safe.

Referenced by `__gnu_debug::_Safe_sequence<_Sequence>::_M_transfer_from_if()`.

### 5.81.3.7 `__gnu_cxx::mutex& __gnu_debug::_Safe_iterator_base::_M_get_mutex ( ) throw () [protected]`

For use in [\\_Safe\\_iterator](#).

### 5.81.3.8 `void __gnu_debug::_Safe_iterator_base::_M_invalidate ( ) [inline]`

Invalidate the iterator, making it singular.

Definition at line 143 of file `safe_base.h`.

References `_M_version`.

### 5.81.3.9 `void __gnu_debug::_Safe_iterator_base::_M_reset ( ) throw ()`

Reset all member variables

### 5.81.3.10 `bool __gnu_debug::_Safe_iterator_base::_M_singular ( ) const throw ()`

Is this iterator singular?

Referenced by `__gnu_debug::__check_singular()`, `__gnu_debug::__check_singular_aux()`, `__gnu_debug::_Safe_iterator<_Iterator, _Sequence>::_M_dereferenceable()`, `__gnu_debug::_Safe_iterator<_Iterator, _Sequence>::_M_incrementable()`, `__gnu_debug::_Safe_iterator<_Iterator, _Sequence>::_Safe_iterator()`, and `__gnu_debug::_Safe_iterator<_Iterator, _Sequence>::operator=()`.

### 5.81.3.11 `void __gnu_debug::_Safe_iterator_base::_M_unlink ( ) throw () [inline]`

Unlink itself

Definition at line 152 of file `safe_base.h`.

References `_M_next`, and `_M_prior`.

## 5.81.4 Member Data Documentation

### 5.81.4.1 `_Safe_iterator_base* __gnu_debug::_Safe_iterator_base::_M_next`

Pointer to the next iterator in the sequence's list of iterators. Only valid when `_M_sequence != NULL`.

## 5.82 `__gnu_debug::_Safe_sequence< _Sequence >` Class Template Reference

Definition at line 73 of file `safe_base.h`.

### 5.82.1 Detailed Description

**template<typename \_Sequence> class \_\_gnu\_debug::\_Safe\_sequence< \_Sequence >**

Base class for constructing a *safe* sequence type that tracks iterators that reference it. The class template `_Safe_sequence` simplifies the construction of *safe* sequences that track the iterators that reference the sequence, so that the iterators are notified of changes in the sequence that may affect their operation, e.g., if the container invalidates its iterators or is destructed. This class template may only be used by deriving from it and passing the name of the derived class as its template parameter via the curiously recurring template pattern. The derived class must have `iterator` and types that are instantiations of class template `_Safe_iterator` for this sequence. Iterators will then be tracked automatically.

Definition at line 112 of file `safe_sequence.h`.

### 5.82.2 Member Function Documentation

**5.82.2.1 void \_\_gnu\_debug::\_Safe\_sequence\_base::\_M\_attach (**  
    **`_Safe_iterator_base * __it, bool __constant` ) `[inherited]`**

Attach an iterator to this sequence.

**5.82.2.2 void \_\_gnu\_debug::\_Safe\_sequence\_base::\_M\_attach\_single**  
    **( `_Safe_iterator_base * __it, bool __constant` ) throw ()**  
    **`[inherited]`**

Likewise but not thread safe.

**5.82.2.3 void \_\_gnu\_debug::\_Safe\_sequence\_base::\_M\_detach (**  
    **`_Safe_iterator_base * __it` ) `[inherited]`**

Detach an iterator from this sequence

**5.82.2.4 void \_\_gnu\_debug::\_Safe\_sequence\_base::\_M\_detach\_all ( )**  
    **`[protected, inherited]`**

Detach all iterators, leaving them singular.

Referenced by `__gnu_debug::_Safe_sequence_base::~~_Safe_sequence_base()`.

## 5.82 `__gnu_debug::_Safe_sequence<_Sequence>` Class Template Reference 1099

**5.82.2.5** `void __gnu_debug::_Safe_sequence_base::_M_detach_single (   
_Safe_iterator_base * __it ) throw () [inherited]`

Likewise but not thread safe.

**5.82.2.6** `void __gnu_debug::_Safe_sequence_base::_M_detach_singular ( )   
[protected, inherited]`

Detach all singular iterators.

### Postcondition

for all iterators *i* attached to this sequence, `i->_M_version == _M_version`.

**5.82.2.7** `__gnu_cxx::mutex& __gnu_debug::_Safe_sequence_  
base::_M_get_mutex ( ) throw () [protected,  
inherited]`

For use in [\\_Safe\\_sequence](#).

Referenced by `__gnu_debug::_Safe_sequence<_Sequence>::_M_invalidate_if()`,  
and `__gnu_debug::_Safe_sequence<_Sequence>::_M_transfer_from_if()`.

**5.82.2.8** `void __gnu_debug::_Safe_sequence_base::_M_invalidate_all ( ) const   
[inline, inherited]`

Invalidates all iterators.

Definition at line 234 of file `safe_base.h`.

References `__gnu_debug::_Safe_sequence_base::_M_version`.

**5.82.2.9** `template<typename _Sequence> template<typename _Predicate>   
void __gnu_debug::_Safe_sequence<_Sequence>::_M_invalidate_if (   
_Predicate __pred )`

Invalidates all iterators *x* that reference  
this sequence, are not singular, and for which `pred(x)` returns `true`. `pred` will be  
invoked with the normal iterators nested in the safe ones.

Definition at line 38 of file `safe_sequence.tcc`.

References `__gnu_debug::_Safe_sequence_base::_M_const_iterators`, `__gnu_  
debug::_Safe_sequence_base::_M_get_mutex()`, and `__gnu_debug::_Safe_sequence_  
base::_M_iterators`.

## 5.82 `__gnu_debug::_Safe_sequence<_Sequence>` Class Template Reference

**5.82.2.10** `void __gnu_debug::_Safe_sequence_base::_M_revalidate_singular ( ) [protected, inherited]`

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

**5.82.2.11** `void __gnu_debug::_Safe_sequence_base::_M_swap ( _Safe_sequence_base & __x ) [protected, inherited]`

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

**5.82.2.12** `template<typename _Sequence> template<typename _Predicate> void __gnu_debug::_Safe_sequence<_Sequence>::_M_transfer_from_if ( _Safe_sequence<_Sequence> & __from, _Predicate __pred )`

Transfers all iterators `x` that reference `from` sequence, are not singular, and for which `pred(x)` returns `true`. `pred` will be invoked with the normal iterators nested in the safe ones.

Definition at line 69 of file `safe_sequence.tcc`.

References `__gnu_debug::_Safe_sequence_base::_M_const_iterators`, `__gnu_debug::_Safe_iterator_base::_M_detach_single()`, `__gnu_debug::_Safe_sequence_base::_M_get_mutex()`, `__gnu_debug::_Safe_sequence_base::_M_iterators`, `__gnu_debug::_Safe_iterator_base::_M_next`, `__gnu_debug::_Safe_iterator_base::_M_prior`, `__gnu_debug::_Safe_iterator_base::_M_sequence`, and `__gnu_debug::_Safe_sequence_base::_M_version`.

### 5.82.3 Member Data Documentation

**5.82.3.1** `_Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_const_iterators [inherited]`

The list of constant iterators that reference this container.

Definition at line 185 of file `safe_base.h`.

Referenced by `__gnu_debug::_Safe_sequence<_Sequence>::_M_invalidate_if()`, and `__gnu_debug::_Safe_sequence<_Sequence>::_M_transfer_from_if()`.

### 5.82.3.2 `_Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_iterators` [inherited]

The list of mutable iterators that reference this container.

Definition at line 182 of file `safe_base.h`.

Referenced by `__gnu_debug::_Safe_sequence<_Sequence>::_M_invalidate_if()`, and `__gnu_debug::_Safe_sequence<_Sequence>::_M_transfer_from_if()`.

### 5.82.3.3 `unsigned int __gnu_debug::_Safe_sequence_base::_M_version` [mutable, inherited]

The container version number. This number may never be 0.

Definition at line 188 of file `safe_base.h`.

Referenced by `__gnu_debug::_Safe_sequence_base::_M_invalidate_all()`, and `__gnu_debug::_Safe_sequence<_Sequence>::_M_transfer_from_if()`.

### 5.83.1 Detailed Description

Base class that supports tracking of iterators that reference a sequence. The `_Safe_sequence_base` class provides basic support for tracking iterators into a sequence. Sequences that track iterators must derived from `_Safe_sequence_base` publicly, so that safe iterators (which inherit `_Safe_iterator_base`) can attach to them. This class contains two linked lists of iterators, one for constant iterators and one for mutable iterators, and a version number that allows very fast invalidation of all iterators that reference the container.

This class must ensure that no operation on it may throw an exception, otherwise *safe* sequences may fail to provide the exception-safety guarantees required by the C++ standard.

Definition at line 178 of file `safe_base.h`.

### 5.83.2 Constructor & Destructor Documentation

#### 5.83.2.1 `__gnu_debug::_Safe_sequence_base::~~Safe_sequence_base ( )` [inline, protected]

Notify all iterators that reference this sequence that the sequence is being destroyed.

Definition at line 198 of file `safe_base.h`.

References `_M_detach_all()`.

### 5.83.3 Member Function Documentation

#### 5.83.3.1 `void __gnu_debug::_Safe_sequence_base::_M_attach (` `_Safe_iterator_base * __it, bool __constant )`

Attach an iterator to this sequence.

#### 5.83.3.2 `void __gnu_debug::_Safe_sequence_base::_M_attach_single (` `_Safe_iterator_base * __it, bool __constant ) throw ()`

Likewise but not thread safe.

#### 5.83.3.3 `void __gnu_debug::_Safe_sequence_base::_M_detach (` `_Safe_iterator_base * __it )`

Detach an iterator from this sequence

**5.83.3.4** `void __gnu_debug::_Safe_sequence_base::_M_detach_all ( )`  
**[protected]**

Detach all iterators, leaving them singular.

Referenced by `~_Safe_sequence_base()`.

**5.83.3.5** `void __gnu_debug::_Safe_sequence_base::_M_detach_single (`  
`_Safe_iterator_base * __it ) throw ()`

Likewise but not thread safe.

**5.83.3.6** `void __gnu_debug::_Safe_sequence_base::_M_detach_singular ( )`  
**[protected]**

Detach all singular iterators.

#### Postcondition

for all iterators `i` attached to this sequence, `i->_M_version == _M_version`.

**5.83.3.7** `__gnu_cxx::__mutex& __gnu_debug::_Safe_sequence_base::_M_get_-`  
`mutex ( ) throw ()` **[protected]**

For use in [\\_Safe\\_sequence](#).

Referenced by `__gnu_debug::_Safe_sequence< _Sequence >::_M_invalidate_if()`,  
and `__gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if()`.

**5.83.3.8** `void __gnu_debug::_Safe_sequence_base::_M_invalidate_all ( ) const`  
**[inline]**

Invalidates all iterators.

Definition at line 234 of file `safe_base.h`.

References `_M_version`.

**5.83.3.9** `void __gnu_debug::_Safe_sequence_base::_M_revalidate_singular ( )`  
**[protected]**

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

#### 5.83.3.10 `void __gnu_debug::_Safe_sequence_base::_M_swap (` `_Safe_sequence_base & __x ) [protected]`

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

### 5.83.4 Member Data Documentation

#### 5.83.4.1 `_Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_` `const_iterators`

The list of constant iterators that reference this container.

Definition at line 185 of file `safe_base.h`.

Referenced by `__gnu_debug::_Safe_sequence< _Sequence >::_M_invalidate_if()`, and `__gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if()`.

#### 5.83.4.2 `_Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_` `iterators`

The list of mutable iterators that reference this container.

Definition at line 182 of file `safe_base.h`.

Referenced by `__gnu_debug::_Safe_sequence< _Sequence >::_M_invalidate_if()`, and `__gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if()`.

#### 5.83.4.3 `unsigned int __gnu_debug::_Safe_sequence_base::_M_version` `[mutable]`

The container version number. This number may never be 0.

Definition at line 188 of file `safe_base.h`.

Referenced by `_M_invalidate_all()`, and `__gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if()`.

### 5.84.1 Detailed Description

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>,
typename _Allocator = std::allocator<_CharT>> class __gnu_debug::basic_
string<_CharT, _Traits, _Allocator>
```

Class `std::basic_string` with safety/checking/debug instrumentation.

Definition at line 42 of file `debug/string`.

### 5.84.2 Member Function Documentation

5.84.2.1 `void __gnu_debug::Safe_sequence_base::M_attach (`  
`_Safe_iterator_base * __it, bool __constant ) [inherited]`

Attach an iterator to this sequence.

5.84.2.2 `void __gnu_debug::Safe_sequence_base::M_attach_single`  
`( _Safe_iterator_base * __it, bool __constant ) throw ()`  
`[inherited]`

Likewise but not thread safe.

5.84.2.3 `void __gnu_debug::Safe_sequence_base::M_detach (`  
`_Safe_iterator_base * __it ) [inherited]`

Detach an iterator from this sequence

5.84.2.4 `void __gnu_debug::Safe_sequence_base::M_detach_all ( )`  
`[protected, inherited]`

Detach all iterators, leaving them singular.

Referenced by `__gnu_debug::Safe_sequence_base::~~Safe_sequence_base()`.

5.84.2.5 `void __gnu_debug::Safe_sequence_base::M_detach_single (`  
`_Safe_iterator_base * __it ) throw () [inherited]`

Likewise but not thread safe.

5.84.2.6 `void __gnu_debug::_Safe_sequence_base::_M_detach_singular ( )`  
`[protected, inherited]`

Detach all singular iterators.

**Postcondition**

for all iterators `i` attached to this sequence, `i->_M_version == _M_version`.

5.84.2.7 `__gnu_cxx::__mutex& __gnu_debug::_Safe_sequence_-`  
`base::_M_get_mutex ( ) throw ( ) [protected,`  
`inherited]`

For use in [\\_Safe\\_sequence](#).

Referenced by `__gnu_debug::_Safe_sequence<_Sequence>::_M_invalidate_if()`,  
and `__gnu_debug::_Safe_sequence<_Sequence>::_M_transfer_from_if()`.

5.84.2.8 `void __gnu_debug::_Safe_sequence_base::_M_invalidate_all ( ) const`  
`[inline, inherited]`

Invalidates all iterators.

Definition at line 234 of file `safe_base.h`.

References `__gnu_debug::_Safe_sequence_base::_M_version`.

5.84.2.9 `void __gnu_debug::_Safe_sequence<basic_string<_CharT,`  
`_Traits, _Allocator>>::_M_invalidate_if ( _Predicate __pred )`  
`[inherited]`

Invalidates all iterators `x` that reference  
this sequence, are not singular, and for which `pred(x)` returns `true`. `pred` will be  
invoked with the normal iterators nested in the safe ones.

5.84.2.10 `void __gnu_debug::_Safe_sequence_base::_M_revalidate_singular (`  
`) [protected, inherited]`

Revalidates all attached singular iterators. This method may be used to validate  
iterators that were invalidated before (but for some reason, such as an exception, need  
to become valid again).

5.84.2.11 `void __gnu_debug::_Safe_sequence_base::_M_swap (`  
`_Safe_sequence_base & __x ) [protected, inherited]`

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

5.84.2.12 `void __gnu_debug::_Safe_sequence< basic_string<_CharT,`  
`_Traits, _Allocator> >::_M_transfer_from_if ( _Safe_sequence<`  
`basic_string<_CharT, _Traits, _Allocator> > & __from,`  
`_Predicate __pred ) [inherited]`

Transfers all iterators `x` that reference `from` sequence, are not singular, and for which `pred(x)` returns `true`. `pred` will be invoked with the normal iterators nested in the safe ones.

5.84.2.13 `basic_string& std::basic_string<_CharT, _Traits, _Allocator`  
`>::append ( const basic_string<_CharT, _Traits, _Allocator> &`  
`__str ) [inherited]`

Append a string to this string.

#### Parameters

*str* The string to append.

#### Returns

Reference to this string.

5.84.2.14 `basic_string& std::basic_string<_CharT, _Traits, _Allocator`  
`>::append ( const basic_string<_CharT, _Traits, _Allocator> &`  
`__str, size_type __pos, size_type __n ) [inherited]`

Append a substring.

#### Parameters

*str* The string to append.

*pos* Index of the first character of *str* to append.

*n* The number of characters to append.

#### Returns

Reference to this string.

#### Exceptions

[\*std::out\\_of\\_range\*](#) if *pos* is not a valid index.

This function appends *n* characters from *str* starting at *pos* to this string. If *n* is larger than the number of available characters in *str*, the remainder of *str* is appended.

**5.84.2.15** `basic_string& std::basic_string<_CharT, _Traits, _Allocator>::append ( const _CharT * __s, size_type __n )` [inherited]

Append a C substring.

#### Parameters

*s* The C string to append.

*n* The number of characters to append.

#### Returns

Reference to this string.

**5.84.2.16** `basic_string& std::basic_string<_CharT, _Traits, _Allocator>::append ( const _CharT * __s )` [inline, inherited]

Append a C string.

#### Parameters

*s* The C string to append.

#### Returns

Reference to this string.

Definition at line 997 of file `basic_string.h`.

**5.84.2.17** `basic_string& std::basic_string<_CharT, _Traits, _Allocator>::append ( size_type __n, _CharT __c ) [inherited]`

Append multiple characters.

**Parameters**

- n* The number of characters to append.
- c* The character to use.

**Returns**

Reference to this string.

Appends *n* copies of *c* to this string.

**5.84.2.18** `basic_string& std::basic_string<_CharT, _Traits, _Allocator>::append ( initializer_list<_CharT> __l ) [inline, inherited]`

Append an `initializer_list` of characters.

**Parameters**

- l* The `initializer_list` of characters to append.

**Returns**

Reference to this string.

Definition at line 1021 of file `basic_string.h`.

**5.84.2.19** `basic_string& std::basic_string<_CharT, _Traits, _Allocator>::append ( _InputIterator __first, _InputIterator __last ) [inline, inherited]`

Append a range of characters.

**Parameters**

- first* Iterator referencing the first character to append.

*last* Iterator marking the end of the range.

#### Returns

Reference to this string.

Appends characters in the range [first,last) to this string.

Definition at line 1035 of file `basic_string.h`.

**5.84.2.20** `basic_string& std::basic_string<_CharT, _Traits, _Allocator>::assign ( const basic_string<_CharT, _Traits, _Allocator> & __str ) [inherited]`

Set value to contents of another string.

#### Parameters

*str* Source string to use.

#### Returns

Reference to this string.

**5.84.2.21** `basic_string& std::basic_string<_CharT, _Traits, _Allocator>::assign ( basic_string<_CharT, _Traits, _Allocator> && __str ) [inline, inherited]`

Set value to contents of another string.

#### Parameters

*str* Source string to use.

#### Returns

Reference to this string.

This function sets this string to the exact contents of *str*. *str* is a valid, but unspecified string.

Definition at line 1070 of file `basic_string.h`.

5.84.2.22 `basic_string& std::basic_string<_CharT, _Traits, _Allocator>::assign ( const basic_string<_CharT, _Traits, _Allocator> & __str, size_type __pos, size_type __n ) [inline, inherited]`

Set value to a substring of a string.

#### Parameters

*str* The string to use.  
*pos* Index of the first character of *str*.  
*n* Number of characters to use.

#### Returns

Reference to this string.

#### Exceptions

[\*std::out\\_of\\_range\*](#) if *pos* is not a valid index.

This function sets this string to the substring of *str* consisting of *n* characters at *pos*. If *n* is larger than the number of available characters in *str*, the remainder of *str* is used.

Definition at line 1090 of file `basic_string.h`.

5.84.2.23 `basic_string& std::basic_string<_CharT, _Traits, _Allocator>::assign ( const _CharT* __s, size_type __n ) [inherited]`

Set value to a C substring.

#### Parameters

*s* The C string to use.  
*n* Number of characters to use.

#### Returns

Reference to this string.

This function sets the value of this string to the first *n* characters of *s*. If *n* is larger than the number of available characters in *s*, the remainder of *s* is used.

**5.84.2.24** `basic_string& std::basic_string<_CharT, _Traits, _Allocator>::assign ( const _CharT * __s ) [inline, inherited]`

Set value to contents of a C string.

**Parameters**

*s* The C string to use.

**Returns**

Reference to this string.

This function sets the value of this string to the value of *s*. The data is copied, so there is no dependence on *s* once the function returns.

Definition at line 1118 of file `basic_string.h`.

**5.84.2.25** `basic_string& std::basic_string<_CharT, _Traits, _Allocator>::assign ( size_type __n, _CharT __c ) [inline, inherited]`

Set value to multiple characters.

**Parameters**

*n* Length of the resulting string.

*c* The character to use.

**Returns**

Reference to this string.

This function sets the value of this string to *n* copies of character *c*.

Definition at line 1134 of file `basic_string.h`.

**5.84.2.26** `basic_string& std::basic_string<_CharT, _Traits, _Allocator>::assign ( _InputIterator __first, _InputIterator __last ) [inline, inherited]`

Set value to a range of characters.

**Parameters**

*first* Iterator referencing the first character to append.

*last* Iterator marking the end of the range.

**Returns**

Reference to this string.

Sets value of string to characters in the range [first,last).

Definition at line 1147 of file basic\_string.h.

**5.84.2.27 `basic_string& std::basic_string<_CharT, _Traits, _Allocator>::assign ( initializer_list<_CharT> __l ) [inline, inherited]`**

Set value to an initializer\_list of characters.

**Parameters**

*l* The initializer\_list of characters to assign.

**Returns**

Reference to this string.

Definition at line 1157 of file basic\_string.h.

**5.84.2.28 `const_reference std::basic_string<_CharT, _Traits, _Allocator>::at ( size_type __n ) const [inline, inherited]`**

Provides access to the data contained in the string.

**Parameters**

*n* The index of the character to access.

**Returns**

Read-only (const) reference to the character.

**Exceptions**

*[std::out\\_of\\_range](#)* If *n* is an invalid index.

This function provides for safer data access. The parameter is first checked that it is in the range of the string. The function throws `out_of_range` if the check fails.

Definition at line 856 of file `basic_string.h`.

**5.84.2.29** `reference std::basic_string<_CharT, _Traits, _Allocator>::at (`  
`size_type __n ) [inline, inherited]`

Provides access to the data contained in the string.

#### Parameters

*n* The index of the character to access.

#### Returns

Read/write reference to the character.

#### Exceptions

*std::out\_of\_range* If *n* is an invalid index.

This function provides for safer data access. The parameter is first checked that it is in the range of the string. The function throws `out_of_range` if the check fails. Success results in unsharing the string.

Definition at line 909 of file `basic_string.h`.

**5.84.2.30** `reference std::basic_string<_CharT, _Traits, _Allocator>::back (`  
`) [inline, inherited]`

Returns a read/write reference to the data at the last element of the string.

Definition at line 885 of file `basic_string.h`.

**5.84.2.31** `const_reference std::basic_string<_CharT, _Traits, _Allocator`  
`>::back ( ) const [inline, inherited]`

Returns a read-only (constant) reference to the data at the last element of the string.

Definition at line 893 of file `basic_string.h`.

**5.84.2.32 iterator std::basic\_string< \_CharT, \_Traits, \_Allocator >::begin ( )**  
**[inline, inherited]**

Returns a read/write iterator that points to the first character in the string. Unshares the string.

Definition at line 600 of file basic\_string.h.

**5.84.2.33 const\_iterator std::basic\_string< \_CharT, \_Traits, \_Allocator >::begin ( ) const**  
**[inline, inherited]**

Returns a read-only (constant) iterator that points to the first character in the string.

Definition at line 611 of file basic\_string.h.

**5.84.2.34 const \_CharT\* std::basic\_string< \_CharT, \_Traits, \_Allocator >::c\_str ( ) const**  
**[inline, inherited]**

Return const pointer to null-terminated contents.

This is a handle to internal data. Do not modify or dire things may happen.

Definition at line 1766 of file basic\_string.h.

**5.84.2.35 size\_type std::basic\_string< \_CharT, \_Traits, \_Allocator >::capacity ( ) const**  
**[inline, inherited]**

Returns the total number of characters that the string can hold before needing to allocate more memory.

Definition at line 768 of file basic\_string.h.

**5.84.2.36 const\_iterator std::basic\_string< \_CharT, \_Traits, \_Allocator >::cbegin ( ) const**  
**[inline, inherited]**

Returns a read-only (constant) iterator that points to the first character in the string.

Definition at line 675 of file basic\_string.h.

**5.84.2.37 const\_iterator std::basic\_string< \_CharT, \_Traits, \_Allocator >::cend ( ) const**  
**[inline, inherited]**

Returns a read-only (constant) iterator that points one past the last character in the string.

Definition at line 683 of file `basic_string.h`.

**5.84.2.38** `void std::basic_string<_CharT, _Traits, _Allocator>::clear ( )`  
`[inline, inherited]`

Erases the string, making it empty.

Definition at line 795 of file `basic_string.h`.

**5.84.2.39** `int std::basic_string<_CharT, _Traits, _Allocator>::compare (`  
`const _CharT * __s ) const` `[inherited]`

Compare to a C string.

#### Parameters

*s* C string to compare against.

#### Returns

Integer  $< 0$ ,  $0$ , or  $> 0$ .

Returns an integer  $< 0$  if this string is ordered before *s*,  $0$  if their values are equivalent, or  $> 0$  if this string is ordered after *s*. Determines the effective length *rlen* of the strings to compare as the smallest of `size()` and the length of a string constructed from *s*. The function then compares the two strings by calling `traits::compare(data(),s,rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

**5.84.2.40** `int std::basic_string<_CharT, _Traits, _Allocator>::compare (`  
`const basic_string<_CharT, _Traits, _Allocator> & __str ) const`  
`[inline, inherited]`

Compare to a string.

#### Parameters

*str* String to compare against.

#### Returns

Integer  $< 0$ ,  $0$ , or  $> 0$ .

Returns an integer  $< 0$  if this string is ordered before *str*,  $0$  if their values are equivalent, or  $> 0$  if this string is ordered after *str*. Determines the effective length *rlen* of the strings to compare as the smallest of *size()* and *str.size()*. The function then compares the two strings by calling `traits::compare(data(), str.data(), rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

Definition at line 2173 of file `basic_string.h`.

**5.84.2.41** `int std::basic_string<_CharT, _Traits, _Allocator>::compare (`  
`size_type __pos, size_type __n, const basic_string<_CharT,`  
`_Traits, _Allocator> & __str ) const [inherited]`

Compare substring to a string.

#### Parameters

*pos* Index of first character of substring.

*n* Number of characters in substring.

*str* String to compare against.

#### Returns

Integer  $< 0$ ,  $0$ , or  $> 0$ .

Form the substring of this string from the *n* characters starting at *pos*. Returns an integer  $< 0$  if the substring is ordered before *str*,  $0$  if their values are equivalent, or  $> 0$  if the substring is ordered after *str*. Determines the effective length *rlen* of the strings to compare as the smallest of the length of the substring and *str.size()*. The function then compares the two strings by calling `traits::compare(substring.data(), str.data(), rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

**5.84.2.42** `int std::basic_string<_CharT, _Traits, _Allocator>::compare (`  
`size_type __pos1, size_type __n1, const basic_string<_CharT,`  
`_Traits, _Allocator> & __str, size_type __pos2, size_type __n2 )`  
`const [inherited]`

Compare substring to a substring.

#### Parameters

*pos1* Index of first character of substring.

*n1* Number of characters in substring.  
*str* String to compare against.  
*pos2* Index of first character of substring of *str*.  
*n2* Number of characters in substring of *str*.

**Returns**

Integer < 0, 0, or > 0.

Form the substring of this string from the *n1* characters starting at *pos1*. Form the substring of *str* from the *n2* characters starting at *pos2*. Returns an integer < 0 if this substring is ordered before the substring of *str*, 0 if their values are equivalent, or > 0 if this substring is ordered after the substring of *str*. Determines the effective length *rlen* of the strings to compare as the smallest of the lengths of the substrings. The function then compares the two strings by calling `traits::compare(substring.data(),str.substr(pos2,n2).data(),rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

**5.84.2.43** `int std::basic_string<_CharT, _Traits, _Allocator>::compare (`  
    `size_type __pos, size_type __n1, const _CharT * __s, size_type`  
    `__n2 ) const [inherited]`

Compare substring against a character array.

**Parameters**

*pos1* Index of first character of substring.  
*n1* Number of characters in substring.  
*s* character array to compare against.  
*n2* Number of characters of *s*.

**Returns**

Integer < 0, 0, or > 0.

Form the substring of this string from the *n1* characters starting at *pos1*. Form a string from the first *n2* characters of *s*. Returns an integer < 0 if this substring is ordered before the string from *s*, 0 if their values are equivalent, or > 0 if this substring is ordered after the string from *s*. Determines the effective length *rlen* of the strings to compare as the smallest of the length of the substring and *n2*. The function then compares the two strings by calling `traits::compare(substring.data(),s,rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

NB: *s* must have at least *n2* characters, `'\0'` has no special meaning.

**5.84.2.44** `int std::basic_string<_CharT, _Traits, _Allocator>::compare (`  
    `size_type __pos, size_type __n1, const _CharT* __s ) const`  
    `[inherited]`

Compare substring to a C string.

#### Parameters

- pos* Index of first character of substring.
- n1* Number of characters in substring.
- s* C string to compare against.

#### Returns

Integer < 0, 0, or > 0.

Form the substring of this string from the *n1* characters starting at *pos*. Returns an integer < 0 if the substring is ordered before *s*, 0 if their values are equivalent, or > 0 if the substring is ordered after *s*. Determines the effective length *rlen* of the strings to compare as the smallest of the length of the substring and the length of a string constructed from *s*. The function then compares the two string by calling `traits::compare(substring.data(),s,rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

**5.84.2.45** `size_type std::basic_string<_CharT, _Traits, _Allocator>::copy`  
    `( _CharT* __s, size_type __n, size_type __pos = 0 ) const`  
    `[inherited]`

Copy substring into C string.

#### Parameters

- s* C string to copy value into.
- n* Number of characters to copy.
- pos* Index of first character to copy.

#### Returns

Number of characters actually copied

#### Exceptions

*std::out\_of\_range* If *pos* > *size()*.

Copies up to *n* characters starting at *pos* into the C string *s*. If *pos* is greater than *size()*, *out\_of\_range* is thrown.

**5.84.2.46 const\_reverse\_iterator std::basic\_string<\_CharT, \_Traits, \_Allocator>::rbegin( ) const [inline, inherited]**

Returns a read-only (constant) reverse iterator that points to the last character in the string. Iteration is done in reverse element order.

Definition at line 692 of file *basic\_string.h*.

**5.84.2.47 const\_reverse\_iterator std::basic\_string<\_CharT, \_Traits, \_Allocator>::crend( ) const [inline, inherited]**

Returns a read-only (constant) reverse iterator that points to one before the first character in the string. Iteration is done in reverse element order.

Definition at line 701 of file *basic\_string.h*.

**5.84.2.48 const \_CharT\* std::basic\_string<\_CharT, \_Traits, \_Allocator>::data( ) const [inline, inherited]**

Return const pointer to contents.

This is a handle to internal data. Do not modify or dire things may happen.

Definition at line 1776 of file *basic\_string.h*.

**5.84.2.49 bool std::basic\_string<\_CharT, \_Traits, \_Allocator>::empty( ) const [inline, inherited]**

Returns true if the string is empty. Equivalent to *\*this* == "".

Definition at line 803 of file *basic\_string.h*.

**5.84.2.50 const\_iterator std::basic\_string<\_CharT, \_Traits, \_Allocator>::end( ) const [inline, inherited]**

Returns a read-only (constant) iterator that points one past the last character in the string.

Definition at line 630 of file *basic\_string.h*.

**5.84.2.51** `iterator std::basic_string<_CharT, _Traits, _Allocator>::end ( )`  
`[inline, inherited]`

Returns a read/write iterator that points one past the last character in the string.  
Unshares the string.

Definition at line 619 of file `basic_string.h`.

**5.84.2.52** `basic_string& std::basic_string<_CharT, _Traits, _Allocator>::erase ( size_type __pos = 0, size_type __n = npos )`  
`[inline, inherited]`

Remove characters.

**Parameters**

*pos* Index of first character to remove (default 0).

*n* Number of characters to remove (default remainder).

**Returns**

Reference to this string.

**Exceptions**

*std::out\_of\_range* If *pos* is beyond the end of this string.

Removes *n* characters from this string starting at *pos*. The length of the string is reduced by *n*. If there are  $< n$  characters to remove, the remainder of the string is truncated. If *p* is beyond end of string, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1347 of file `basic_string.h`.

**5.84.2.53** `iterator std::basic_string<_CharT, _Traits, _Allocator>::erase ( iterator __position )`  
`[inline, inherited]`

Remove one character.

**Parameters**

*position* Iterator referencing the character to remove.

### Returns

iterator referencing same location after removal.

Removes the character at *position* from this string. The value of the string doesn't change if an error is thrown.

Definition at line 1363 of file `basic_string.h`.

**5.84.2.54** `iterator std::basic_string<_CharT, _Traits, _Allocator>::erase (`  
`iterator __first, iterator __last ) [inherited]`

Remove a range of characters.

### Parameters

*first* Iterator referencing the first character to remove.

*last* Iterator referencing the end of the range.

### Returns

Iterator referencing location of first after removal.

Removes the characters in the range [first,last) from this string. The value of the string doesn't change if an error is thrown.

**5.84.2.55** `size_type std::basic_string<_CharT, _Traits, _Allocator>::find`  
`( const _CharT * __s, size_type __pos, size_type __n ) const`  
`[inherited]`

Find position of a C substring.

### Parameters

*s* C string to locate.

*pos* Index of character to search from.

*n* Number of characters from *s* to search for.

### Returns

Index of start of first occurrence.

Starting from *pos*, searches forward for the first *n* characters in *s* within this string. If found, returns the index where it begins. If not found, returns *npos*.

**5.84.2.56** `size_type std::basic_string<_CharT, _Traits, _Allocator>::find (`  
`const basic_string<_CharT, _Traits, _Allocator> & __str, size_type`  
`__pos = 0 ) const [inline, inherited]`

Find position of a string.

#### Parameters

*str* String to locate.

*pos* Index of character to search from (default 0).

#### Returns

Index of start of first occurrence.

Starting from *pos*, searches forward for value of *str* within this string. If found, returns the index where it begins. If not found, returns *npos*.

Definition at line 1811 of file `basic_string.h`.

**5.84.2.57** `size_type std::basic_string<_CharT, _Traits, _Allocator>::find (`  
`_CharT __c, size_type __pos = 0 ) const [inherited]`

Find position of a character.

#### Parameters

*c* Character to locate.

*pos* Index of character to search from (default 0).

#### Returns

Index of first occurrence.

Starting from *pos*, searches forward for *c* within this string. If found, returns the index where it was found. If not found, returns *npos*.

**5.84.2.58** `size_type std::basic_string<_CharT, _Traits, _Allocator>::find`  
`( const _CharT * __s, size_type __pos = 0 ) const [inline,`  
`inherited]`

Find position of a C string.

**Parameters**

*s* C string to locate.

*pos* Index of character to search from (default 0).

**Returns**

Index of start of first occurrence.

Starting from *pos*, searches forward for the value of *s* within this string. If found, returns the index where it begins. If not found, returns *npos*.

Definition at line 1825 of file `basic_string.h`.

**5.84.2.59** `size_type std::basic_string<_CharT, _Traits, _Allocator>::find_first_not_of ( const basic_string<_CharT, _Traits, _Allocator> & __str, size_type __pos = 0 ) const` `[inline, inherited]`

Find position of a character not in string.

**Parameters**

*str* String containing characters to avoid.

*pos* Index of character to search from (default 0).

**Returns**

Index of first occurrence.

Starting from *pos*, searches forward for a character not contained in *str* within this string. If found, returns the index where it was found. If not found, returns *npos*.

Definition at line 2035 of file `basic_string.h`.

**5.84.2.60** `size_type std::basic_string<_CharT, _Traits, _Allocator>::find_first_not_of ( const _CharT* __s, size_type __pos, size_type __n ) const` `[inherited]`

Find position of a character not in C substring.

**Parameters**

*s* C string containing characters to avoid.

*pos* Index of character to search from.  
*n* Number of characters from *s* to consider.

**Returns**

Index of first occurrence.

Starting from *pos*, searches forward for a character not contained in the first *n* characters of *s* within this string. If found, returns the index where it was found. If not found, returns *npos*.

**5.84.2.61** `size_type std::basic_string<_CharT, _Traits, _Allocator>::find_first_not_of ( _CharT __c, size_type __pos = 0 ) const`  
`[inherited]`

Find position of a different character.

**Parameters**

*c* Character to avoid.  
*pos* Index of character to search from (default 0).

**Returns**

Index of first occurrence.

Starting from *pos*, searches forward for a character other than *c* within this string. If found, returns the index where it was found. If not found, returns *npos*.

**5.84.2.62** `size_type std::basic_string<_CharT, _Traits, _Allocator>::find_first_not_of ( const _CharT * __s, size_type __pos = 0 ) const`  
`[inline, inherited]`

Find position of a character not in C string.

**Parameters**

*s* C string containing characters to avoid.  
*pos* Index of character to search from (default 0).

**Returns**

Index of first occurrence.

Starting from *pos*, searches forward for a character not contained in *s* within this string. If found, returns the index where it was found. If not found, returns *npos*.

Definition at line 2064 of file `basic_string.h`.

**5.84.2.63** `size_type std::basic_string<_CharT, _Traits, _Allocator>::find_first_of( _CharT __c, size_type __pos = 0 ) const`  
[inline, inherited]

Find position of a character.

#### Parameters

- c* Character to locate.
- pos* Index of character to search from (default 0).

#### Returns

Index of first occurrence.

Starting from *pos*, searches forward for the character *c* within this string. If found, returns the index where it was found. If not found, returns *npos*.

Note: equivalent to `find(c, pos)`.

Definition at line 1960 of file `basic_string.h`.

**5.84.2.64** `size_type std::basic_string<_CharT, _Traits, _Allocator>::find_first_of( const _CharT * __s, size_type __pos = 0 ) const`  
[inline, inherited]

Find position of a character of C string.

#### Parameters

- s* String containing characters to locate.
- pos* Index of character to search from (default 0).

#### Returns

Index of first occurrence.

Starting from *pos*, searches forward for one of the characters of *s* within this string. If found, returns the index where it was found. If not found, returns *npos*.

Definition at line 1941 of file `basic_string.h`.

**5.84.2.65** `size_type std::basic_string<_CharT, _Traits, _Allocator  
>::find_first_of ( const basic_string<_CharT, _Traits, _Allocator>  
& __str, size_type __pos = 0 ) const [inline, inherited]`

Find position of a character of string.

**Parameters**

*str* String containing characters to locate.  
*pos* Index of character to search from (default 0).

**Returns**

Index of first occurrence.

Starting from *pos*, searches forward for one of the characters of *str* within this string.  
If found, returns the index where it was found. If not found, returns *npos*.

Definition at line 1913 of file `basic_string.h`.

**5.84.2.66** `size_type std::basic_string<_CharT, _Traits, _Allocator  
>::find_first_of ( const _CharT * __s, size_type __pos, size_type  
__n ) const [inherited]`

Find position of a character of C substring.

**Parameters**

*s* String containing characters to locate.  
*pos* Index of character to search from.  
*n* Number of characters from *s* to search for.

**Returns**

Index of first occurrence.

Starting from *pos*, searches forward for one of the first *n* characters of *s* within this  
string. If found, returns the index where it was found. If not found, returns *npos*.

**5.84.2.67** `size_type std::basic_string<_CharT, _Traits, _Allocator  
>::find_last_not_of ( const _CharT * __s, size_type __pos,  
size_type __n ) const [inherited]`

Find last position of a character not in C substring.

**Parameters**

- s* C string containing characters to avoid.
- pos* Index of character to search back from.
- n* Number of characters from *s* to consider.

**Returns**

Index of last occurrence.

Starting from *pos*, searches backward for a character not contained in the first *n* characters of *s* within this string. If found, returns the index where it was found. If not found, returns *npos*.

**5.84.2.68** `size_type std::basic_string<_CharT, _Traits, _Allocator  
>::find_last_not_of( _CharT __c, size_type __pos = npo`  
`s ) const`  
`[inherited]`

Find last position of a different character.

**Parameters**

- c* Character to avoid.
- pos* Index of character to search back from (default end).

**Returns**

Index of last occurrence.

Starting from *pos*, searches backward for a character other than *c* within this string. If found, returns the index where it was found. If not found, returns *npos*.

**5.84.2.69** `size_type std::basic_string<_CharT, _Traits, _Allocator  
>::find_last_not_of( const _CharT * __s, size_type __pos = npo`  
`st ) const`  
`[inline, inherited]`

Find last position of a character not in C string.

**Parameters**

- s* C string containing characters to avoid.

*pos* Index of character to search back from (default end).

#### Returns

Index of last occurrence.

Starting from *pos*, searches backward for a character not contained in *s* within this string. If found, returns the index where it was found. If not found, returns *npos*.

Definition at line 2123 of file `basic_string.h`.

**5.84.2.70** `size_type std::basic_string<_CharT, _Traits, _Allocator>::find_last_not_of ( const basic_string<_CharT, _Traits, _Allocator> & __str, size_type __pos = npos ) const` [`inline`, `inherited`]

Find last position of a character not in string.

#### Parameters

*str* String containing characters to avoid.

*pos* Index of character to search back from (default end).

#### Returns

Index of last occurrence.

Starting from *pos*, searches backward for a character not contained in *str* within this string. If found, returns the index where it was found. If not found, returns *npos*.

Definition at line 2094 of file `basic_string.h`.

**5.84.2.71** `size_type std::basic_string<_CharT, _Traits, _Allocator>::find_last_of ( const basic_string<_CharT, _Traits, _Allocator> & __str, size_type __pos = npos ) const` [`inline`, `inherited`]

Find last position of a character of string.

#### Parameters

*str* String containing characters to locate.

*pos* Index of character to search back from (default end).

**Returns**

Index of last occurrence.

Starting from *pos*, searches backward for one of the characters of *str* within this string. If found, returns the index where it was found. If not found, returns *npos*.

Definition at line 1974 of file `basic_string.h`.

**5.84.2.72** `size_type std::basic_string<_CharT, _Traits, _Allocator>::find_last_of( const _CharT * __s, size_type __pos = npos ) const` `[inline, inherited]`

Find last position of a character of C string.

**Parameters**

*s* C string containing characters to locate.

*pos* Index of character to search back from (default end).

**Returns**

Index of last occurrence.

Starting from *pos*, searches backward for one of the characters of *s* within this string. If found, returns the index where it was found. If not found, returns *npos*.

Definition at line 2002 of file `basic_string.h`.

**5.84.2.73** `size_type std::basic_string<_CharT, _Traits, _Allocator>::find_last_of( _CharT __c, size_type __pos = npos ) const` `[inline, inherited]`

Find last position of a character.

**Parameters**

*c* Character to locate.

*pos* Index of character to search back from (default end).

**Returns**

Index of last occurrence.

Starting from *pos*, searches backward for *c* within this string. If found, returns the index where it was found. If not found, returns *npos*.

Note: equivalent to `rfind(c, pos)`.

Definition at line 2021 of file `basic_string.h`.

**5.84.2.74** `size_type std::basic_string<_CharT, _Traits, _Allocator>::find_last_of ( const _CharT * __s, size_type __pos, size_type __n ) const` `[inherited]`

Find last position of a character of C substring.

#### Parameters

*s* C string containing characters to locate.

*pos* Index of character to search back from.

*n* Number of characters from *s* to search for.

#### Returns

Index of last occurrence.

Starting from *pos*, searches backward for one of the first *n* characters of *s* within this string. If found, returns the index where it was found. If not found, returns *npos*.

**5.84.2.75** `reference std::basic_string<_CharT, _Traits, _Allocator>::front ( )` `[inline, inherited]`

Returns a read/write reference to the data at the first element of the string.

Definition at line 869 of file `basic_string.h`.

**5.84.2.76** `const_reference std::basic_string<_CharT, _Traits, _Allocator>::front ( ) const` `[inline, inherited]`

Returns a read-only (constant) reference to the data at the first element of the string.

Definition at line 877 of file `basic_string.h`.

**5.84.2.77** `allocator_type std::basic_string<_CharT, _Traits, _Allocator>::get_allocator ( ) const` `[inline, inherited]`

Return copy of allocator used to construct this string.

Definition at line 1783 of file `basic_string.h`.

**5.84.2.78** `void std::basic_string<_CharT, _Traits, _Allocator>::insert  
( iterator __p, size_type __n, _CharT __c ) [inline,  
inherited]`

Insert multiple characters.

#### Parameters

*p* Iterator referencing location in string to insert at.

*n* Number of characters to insert

*c* The character to insert.

#### Exceptions

[\*std::length\\_error\*](#) If new length exceeds `max_size()`.

Inserts *n* copies of character *c* starting at the position referenced by iterator *p*. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1174 of file `basic_string.h`.

**5.84.2.79** `basic_string& std::basic_string<_CharT, _Traits, _Allocator  
>::insert ( size_type __pos1, const basic_string<_CharT,  
_Traits, _Allocator> & __str, size_type __pos2, size_type __n )  
[inline, inherited]`

Insert a substring.

#### Parameters

*pos1* Iterator referencing location in string to insert at.

*str* The string to insert.

*pos2* Start of characters in *str* to insert.

*n* Number of characters to insert.

#### Returns

Reference to this string.

### Exceptions

*`std::length_error`* If new length exceeds `max_size()`.

*`std::out_of_range`* If `pos1 > size()` or `pos2 > str.size()`.

Starting at `pos1`, insert `n` character of `str` beginning with `pos2`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. If `pos1` is beyond the end of this string or `pos2` is beyond the end of `str`, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1242 of file `basic_string.h`.

**5.84.2.80** `void std::basic_string<_CharT, _Traits, _Allocator>::insert  
( iterator __p, initializer_list<_CharT> __l ) [inline,  
inherited]`

Insert an `initializer_list` of characters.

### Parameters

*`p`* Iterator referencing location in string to insert at.

*`l`* The `initializer_list` of characters to insert.

### Exceptions

*`std::length_error`* If new length exceeds `max_size()`.

Definition at line 1201 of file `basic_string.h`.

**5.84.2.81** `iterator std::basic_string<_CharT, _Traits, _Allocator>::insert (  
iterator __p, _CharT __c ) [inline, inherited]`

Insert one character.

### Parameters

*`p`* Iterator referencing position in string to insert at.

*`c`* The character to insert.

### Returns

Iterator referencing newly inserted char.

### Exceptions

*[std::length\\_error](#)* If new length exceeds `max_size()`.

Inserts character *c* at position referenced by *p*. If adding character causes the length to exceed `max_size()`, `length_error` is thrown. If *p* is beyond end of string, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1323 of file `basic_string.h`.

**5.84.2.82** `basic_string& std::basic_string<_CharT, _Traits, _Allocator>::insert ( size_type __pos1, const basic_string<_CharT, _Traits, _Allocator> & __str ) [inline, inherited]`

Insert value of a string.

### Parameters

*pos1* Iterator referencing location in string to insert at.

*str* The string to insert.

### Returns

Reference to this string.

### Exceptions

*[std::length\\_error](#)* If new length exceeds `max_size()`.

Inserts value of *str* starting at *pos1*. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1220 of file `basic_string.h`.

**5.84.2.83** `basic_string& std::basic_string<_CharT, _Traits, _Allocator>::insert ( size_type __pos, const _CharT* __s ) [inline, inherited]`

Insert a C string.

### Parameters

*pos* Iterator referencing location in string to insert at.

*s* The C string to insert.

#### Returns

Reference to this string.

#### Exceptions

*[std::length\\_error](#)* If new length exceeds `max_size()`.

*[std::out\\_of\\_range](#)* If *pos* is beyond the end of this string.

Inserts the first *n* characters of *s* starting at *pos*. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. If *pos* is beyond `end()`, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1283 of file `basic_string.h`.

**5.84.2.84** `basic_string& std::basic_string<_CharT, _Traits, _Allocator>::insert( size_type __pos, size_type __n, _CharT __c )`  
`[inline, inherited]`

Insert multiple characters.

#### Parameters

*pos* Index in string to insert at.

*n* Number of characters to insert

*c* The character to insert.

#### Returns

Reference to this string.

#### Exceptions

*[std::length\\_error](#)* If new length exceeds `max_size()`.

*[std::out\\_of\\_range](#)* If *pos* is beyond the end of this string.

Inserts *n* copies of character *c* starting at index *pos*. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. If *pos* > `length()`, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1306 of file `basic_string.h`.

5.84.2.85 `basic_string& std::basic_string<_CharT, _Traits, _Allocator>::insert ( size_type __pos, const _CharT* __s, size_type __n )`  
[`inherited`]

Insert a C substring.

**Parameters**

- pos* Iterator referencing location in string to insert at.
- s* The C string to insert.
- n* The number of characters to insert.

**Returns**

Reference to this string.

**Exceptions**

- [\*std::length\\_error\*](#) If new length exceeds `max_size()`.
- [\*std::out\\_of\\_range\*](#) If *pos* is beyond the end of this string.

Inserts the first *n* characters of *s* starting at *pos*. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. If *pos* is beyond `end()`, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

5.84.2.86 `void std::basic_string<_CharT, _Traits, _Allocator>::insert ( iterator __p, _InputIterator __beg, _InputIterator __end )`  
[`inline`, `inherited`]

Insert a range of characters.

**Parameters**

- p* Iterator referencing location in string to insert at.
- beg* Start of range.
- end* End of range.

**Exceptions**

- [\*std::length\\_error\*](#) If new length exceeds `max_size()`.

Inserts characters in range [beg,end). If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1190 of file `basic_string.h`.

**5.84.2.87** `size_type std::basic_string<_CharT, _Traits, _Allocator>::length ( ) const [inline, inherited]`

Returns the number of characters in the string, not including any /// null-termination.

Definition at line 716 of file `basic_string.h`.

**5.84.2.88** `size_type std::basic_string<_CharT, _Traits, _Allocator>::max_size ( ) const [inline, inherited]`

Returns the `size()` of the largest possible string.

Definition at line 721 of file `basic_string.h`.

**5.84.2.89** `basic_string& std::basic_string<_CharT, _Traits, _Allocator>::operator+=( const basic_string<_CharT, _Traits, _Allocator> & __str ) [inline, inherited]`

Append a string to this string.

#### Parameters

*str* The string to append.

#### Returns

Reference to this string.

Definition at line 924 of file `basic_string.h`.

**5.84.2.90** `basic_string& std::basic_string<_CharT, _Traits, _Allocator>::operator+=( const _CharT * __s ) [inline, inherited]`

Append a C string.

**Parameters**

*s* The C string to append.

**Returns**

Reference to this string.

Definition at line 933 of file `basic_string.h`.

**5.84.2.91** `basic_string& std::basic_string<_CharT, _Traits, _Allocator>::operator+=( _CharT __c )` [`inline`, `inherited`]

Append a character.

**Parameters**

*c* The character to append.

**Returns**

Reference to this string.

Definition at line 942 of file `basic_string.h`.

**5.84.2.92** `basic_string& std::basic_string<_CharT, _Traits, _Allocator>::operator+=( initializer_list<_CharT> __l )` [`inline`, `inherited`]

Append an `initializer_list` of characters.

**Parameters**

*l* The `initializer_list` of characters to be appended.

**Returns**

Reference to this string.

Definition at line 955 of file `basic_string.h`.

**5.84.2.93** `const_reference std::basic_string<_CharT, _Traits, _Allocator>::operator[]( size_type __pos ) const` `[inline, inherited]`

Subscript access to the data contained in the string.

**Parameters**

*pos* The index of the character to access.

**Returns**

Read-only (constant) reference to the character.

This operator allows for easy, array-style, data access. Note that data access with this operator is unchecked and `out_of_range` lookups are not defined. (For checked lookups see `at()`.)

Definition at line 818 of file `basic_string.h`.

**5.84.2.94** `reference std::basic_string<_CharT, _Traits, _Allocator>::operator[]( size_type __pos )` `[inline, inherited]`

Subscript access to the data contained in the string.

**Parameters**

*pos* The index of the character to access.

**Returns**

Read/write reference to the character.

This operator allows for easy, array-style, data access. Note that data access with this operator is unchecked and `out_of_range` lookups are not defined. (For checked lookups see `at()`.) Unshares the string.

Definition at line 835 of file `basic_string.h`.

**5.84.2.95** `void std::basic_string<_CharT, _Traits, _Allocator>::push_back ( _CharT __c )` `[inline, inherited]`

Append a single character.

**Parameters**

*c* Character to append.

Definition at line 1043 of file `basic_string.h`.

**5.84.2.96** `const_reverse_iterator` `std::basic_string<_CharT, _Traits, _Allocator>::rbegin( )` `const` `[inline, inherited]`

Returns a read-only (constant) reverse iterator that points to the last character in the string. Iteration is done in reverse element order.

Definition at line 648 of file `basic_string.h`.

**5.84.2.97** `reverse_iterator` `std::basic_string<_CharT, _Traits, _Allocator>::rbegin( )` `[inline, inherited]`

Returns a read/write reverse iterator that points to the last character in the string. Iteration is done in reverse element order. Unshares the string.

Definition at line 639 of file `basic_string.h`.

**5.84.2.98** `const_reverse_iterator` `std::basic_string<_CharT, _Traits, _Allocator>::rend( )` `const` `[inline, inherited]`

Returns a read-only (constant) reverse iterator that points to one before the first character in the string. Iteration is done in reverse element order.

Definition at line 666 of file `basic_string.h`.

**5.84.2.99** `reverse_iterator` `std::basic_string<_CharT, _Traits, _Allocator>::rend( )` `[inline, inherited]`

Returns a read/write reverse iterator that points to one before the first character in the string. Iteration is done in reverse element order. Unshares the string.

Definition at line 657 of file `basic_string.h`.

**5.84.2.100** `basic_string&` `std::basic_string<_CharT, _Traits, _Allocator>::replace( iterator __i1, iterator __i2, const _CharT* __s )` `[inline, inherited]`

Replace range of characters with C string.

### Parameters

- i1* Iterator referencing start of range to replace.
- i2* Iterator referencing end of range to replace.
- s* C string value to insert.

### Returns

Reference to this string.

### Exceptions

[\*std::length\\_error\*](#) If new length exceeds `max_size()`.

Removes the characters in the range `[i1,i2)`. In place, the characters of *s* are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1547 of file `basic_string.h`.

**5.84.2.101** `basic_string& std::basic_string<_CharT, _Traits, _Allocator>::replace ( iterator __i1, iterator __i2, const _CharT * __s, size_type __n ) [inline, inherited]`

Replace range of characters with C substring.

### Parameters

- i1* Iterator referencing start of range to replace.
- i2* Iterator referencing end of range to replace.
- s* C string value to insert.
- n* Number of characters from *s* to insert.

### Returns

Reference to this string.

### Exceptions

[\*std::length\\_error\*](#) If new length exceeds `max_size()`.

Removes the characters in the range `[i1,i2)`. In place, the first *n* characters of *s* are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1526 of file `basic_string.h`.

**5.84.2.102** `basic_string& std::basic_string<_CharT, _Traits, _Allocator>::replace ( iterator __i1, iterator __i2, _InputIterator __k1, _InputIterator __k2 ) [inline, inherited]`

Replace range of characters with range.

#### Parameters

- i1* Iterator referencing start of range to replace.
- i2* Iterator referencing end of range to replace.
- k1* Iterator referencing start of range to insert.
- k2* Iterator referencing end of range to insert.

#### Returns

Reference to this string.

#### Exceptions

*std::length\_error* If new length exceeds `max_size()`.

Removes the characters in the range `[i1,i2)`. In place, characters in the range `[k1,k2)` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1591 of file `basic_string.h`.

**5.84.2.103** `basic_string& std::basic_string<_CharT, _Traits, _Allocator>::replace ( iterator __i1, iterator __i2, size_type __n, _CharT __c ) [inline, inherited]`

Replace range of characters with multiple characters.

#### Parameters

- i1* Iterator referencing start of range to replace.
- i2* Iterator referencing end of range to replace.
- n* Number of characters to insert.
- c* Character to insert.

#### Returns

Reference to this string.

### Exceptions

*[std::length\\_error](#)* If new length exceeds `max_size()`.

Removes the characters in the range `[i1,i2)`. In place, *n* copies of *c* are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1568 of file `basic_string.h`.

**5.84.2.104** `basic_string& std::basic_string<_CharT, _Traits, _Allocator>::replace ( size_type __pos, size_type __n, const basic_string<_CharT, _Traits, _Allocator> & __str ) [inline, inherited]`

Replace characters with value from another string.

### Parameters

*pos* Index of first character to replace.  
*n* Number of characters to be replaced.  
*str* String to insert.

### Returns

Reference to this string.

### Exceptions

*[std::out\\_of\\_range](#)* If *pos* is beyond the end of this string.

*[std::length\\_error](#)* If new length exceeds `max_size()`.

Removes the characters in the range `[pos,pos+n)` from this string. In place, the value of *str* is inserted. If *pos* is beyond end of string, `out_of_range` is thrown. If the length of the result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1402 of file `basic_string.h`.

**5.84.2.105** `basic_string& std::basic_string<_CharT, _Traits, _Allocator>::replace ( size_type __pos1, size_type __n1, const basic_string<_CharT, _Traits, _Allocator> & __str, size_type __pos2, size_type __n2 ) [inline, inherited]`

Replace characters with value from another string.

#### Parameters

*pos1* Index of first character to replace.  
*n1* Number of characters to be replaced.  
*str* String to insert.  
*pos2* Index of first character of *str* to use.  
*n2* Number of characters from *str* to use.

#### Returns

Reference to this string.

#### Exceptions

*std::out\_of\_range* If *pos1* > size() or *pos2* > str.size().  
*std::length\_error* If new length exceeds `max_size()`.

Removes the characters in the range [*pos1*, *pos1* + *n*) from this string. In place, the value of *str* is inserted. If *pos* is beyond end of string, *out\_of\_range* is thrown. If the length of the result exceeds `max_size()`, *length\_error* is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1424 of file `basic_string.h`.

**5.84.2.106** `basic_string& std::basic_string<_CharT, _Traits, _Allocator>::replace ( iterator __i1, iterator __i2, const basic_string<_CharT, _Traits, _Allocator> & __str ) [inline, inherited]`

Replace range of characters with string.

#### Parameters

*i1* Iterator referencing start of range to replace.  
*i2* Iterator referencing end of range to replace.  
*str* String value to insert.

#### Returns

Reference to this string.

### Exceptions

*[std::length\\_error](#)* If new length exceeds `max_size()`.

Removes the characters in the range `[i1,i2)`. In place, the value of *str* is inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1508 of file `basic_string.h`.

**5.84.2.107** `basic_string& std::basic_string<_CharT, _Traits, _Allocator>::replace ( size_type __pos, size_type __n1, const _CharT* __s ) [inline, inherited]`

Replace characters with value of a C string.

### Parameters

*pos* Index of first character to replace.  
*n1* Number of characters to be replaced.  
*s* C string to insert.

### Returns

Reference to this string.

### Exceptions

*[std::out\\_of\\_range](#)* If *pos* > `size()`.

*[std::length\\_error](#)* If new length exceeds `max_size()`.

Removes the characters in the range `[pos,pos + n1)` from this string. In place, the characters of *s* are inserted. If *pos* is beyond end of string, `out_of_range` is thrown. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1467 of file `basic_string.h`.

**5.84.2.108** `basic_string& std::basic_string<_CharT, _Traits, _Allocator>::replace ( size_type __pos, size_type __n1, size_type __n2, _CharT __c ) [inline, inherited]`

Replace characters with multiple characters.

### Parameters

*pos* Index of first character to replace.  
*n1* Number of characters to be replaced.  
*n2* Number of characters to insert.  
*c* Character to insert.

### Returns

Reference to this string.

### Exceptions

*std::out\_of\_range* If *pos* > size().  
*std::length\_error* If new length exceeds `max_size()`.

Removes the characters in the range [*pos*, *pos* + *n1*) from this string. In place, *n2* copies of *c* are inserted. If *pos* is beyond end of string, `out_of_range` is thrown. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1490 of file `basic_string.h`.

**5.84.2.109** `basic_string& std::basic_string<_CharT, _Traits, _Allocator>::replace ( iterator __i1, iterator __i2, initializer_list<_CharT> __l ) [inline, inherited]`

Replace range of characters with `initializer_list`.

### Parameters

*i1* Iterator referencing start of range to replace.  
*i2* Iterator referencing end of range to replace.  
*l* The `initializer_list` of characters to insert.

### Returns

Reference to this string.

### Exceptions

*std::length\_error* If new length exceeds `max_size()`.

Removes the characters in the range [*i1*, *i2*). In place, characters in the range [*k1*, *k2*) are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1659 of file `basic_string.h`.

**5.84.2.110** `basic_string& std::basic_string<_CharT, _Traits, _Allocator>::replace ( size_type __pos, size_type __n1, const _CharT * __s, size_type __n2 ) [inherited]`

Replace characters with value of a C substring.

#### Parameters

*pos* Index of first character to replace.  
*n1* Number of characters to be replaced.  
*s* C string to insert.  
*n2* Number of characters from *s* to use.

#### Returns

Reference to this string.

#### Exceptions

*std::out\_of\_range* If *pos1* > size().  
*std::length\_error* If new length exceeds `max_size()`.

Removes the characters in the range [*pos*, *pos* + *n1*) from this string. In place, the first *n2* characters of *s* are inserted, or all of *s* if *n2* is too large. If *pos* is beyond end of string, *out\_of\_range* is thrown. If the length of result exceeds `max_size()`, *length\_error* is thrown. The value of the string doesn't change if an error is thrown.

**5.84.2.111** `void std::basic_string<_CharT, _Traits, _Allocator>::reserve ( size_type __res_arg = 0 ) [inherited]`

Attempt to preallocate enough memory for specified number of characters.

#### Parameters

*res\_arg* Number of characters required.

#### Exceptions

*std::length\_error* If *res\_arg* exceeds `max_size()`.

This function attempts to reserve enough memory for the string to hold the specified number of characters. If the number requested is more than `max_size()`, *length\_error* is thrown.

The advantage of this function is that if optimal code is a necessity and the user can determine the string length that will be required, the user can reserve the memory in advance, and thus prevent a possible reallocation of memory and copying of string data.

**5.84.2.112** `void std::basic_string<_CharT, _Traits, _Allocator>::resize (`  
`size_type __n, _CharT __c ) [inherited]`

Resizes the string to the specified number of characters.

#### Parameters

- n* Number of characters the string should contain.
- c* Character to fill any new elements.

This function will resize the string to the specified number of characters. If the number is smaller than the string's current size the string is truncated, otherwise the string is extended and new elements are set to *c*.

**5.84.2.113** `void std::basic_string<_CharT, _Traits, _Allocator>::resize (`  
`size_type __n ) [inline, inherited]`

Resizes the string to the specified number of characters.

#### Parameters

- n* Number of characters the string should contain.

This function will resize the string to the specified length. If the new size is smaller than the string's current size the string is truncated, otherwise the string is extended and new characters are default-constructed. For basic types such as `char`, this means setting them to 0.

Definition at line 748 of file `basic_string.h`.

**5.84.2.114** `size_type std::basic_string<_CharT, _Traits, _Allocator>::rfind`  
`( const basic_string<_CharT, _Traits, _Allocator> & __str,`  
`size_type __pos = npos ) const [inline, inherited]`

Find last position of a string.

**Parameters**

*str* String to locate.

*pos* Index of character to search back from (default end).

**Returns**

Index of start of last occurrence.

Starting from *pos*, searches backward for value of *str* within this string. If found, returns the index where it begins. If not found, returns *npos*.

Definition at line 1855 of file `basic_string.h`.

**5.84.2.115** `size_type std::basic_string<_CharT, _Traits, _Allocator>::rfind (`  
`_CharT __c, size_type __pos = npos ) const [inherited]`

Find last position of a character.

**Parameters**

*c* Character to locate.

*pos* Index of character to search back from (default end).

**Returns**

Index of last occurrence.

Starting from *pos*, searches backward for *c* within this string. If found, returns the index where it was found. If not found, returns *npos*.

**5.84.2.116** `size_type std::basic_string<_CharT, _Traits, _Allocator>::rfind (`  
`const _CharT* __s, size_type __pos = npos ) const [inline,`  
`inherited]`

Find last position of a C string.

**Parameters**

*s* C string to locate.

*pos* Index of character to start search at (default end).

**Returns**

Index of start of last occurrence.

Starting from *pos*, searches backward for the value of *s* within this string. If found, returns the index where it begins. If not found, returns *npos*.

Definition at line 1883 of file `basic_string.h`.

**5.84.2.117** `size_type std::basic_string<_CharT, _Traits, _Allocator>::rfind`  
( `const _CharT*` *s*, `size_type` *pos*, `size_type` *n* ) `const`  
[*inherited*]

Find last position of a C substring.

**Parameters**

*s* C string to locate.

*pos* Index of character to search back from.

*n* Number of characters from *s* to search for.

**Returns**

Index of start of last occurrence.

Starting from *pos*, searches backward for the first *n* characters in *s* within this string. If found, returns the index where it begins. If not found, returns *npos*.

**5.84.2.118** `void std::basic_string<_CharT, _Traits, _Allocator>::shrink_to_fit`  
( ) [*inline, inherited*]

A non-binding request to reduce `capacity()` to `size()`.

Definition at line 754 of file `basic_string.h`.

**5.84.2.119** `size_type std::basic_string<_CharT, _Traits, _Allocator>::size` ( )  
`const` [*inline, inherited*]

Returns the number of characters in the string, not including any /// null-termination.

Definition at line 710 of file `basic_string.h`.

**5.84.2.120** `basic_string` `std::basic_string<_CharT, _Traits, _Allocator>::substr ( size_type __pos = 0, size_type __n = npos ) const`  
[inline, inherited]

Get a substring.

#### Parameters

*pos* Index of first character (default 0).  
*n* Number of characters in substring (default remainder).

#### Returns

The new string.

#### Exceptions

[\*std::out\\_of\\_range\*](#) If *pos* > *size()*.

Construct and return a new string using the *n* characters starting at *pos*. If the string is too short, use the remainder of the characters. If *pos* is beyond the end of the string, *out\_of\_range* is thrown.

Definition at line 2155 of file `basic_string.h`.

**5.84.2.121** `void` `std::basic_string<_CharT, _Traits, _Allocator>::swap`  
( `basic_string<_CharT, _Traits, _Allocator> & __s` )  
[inherited]

Swap contents with another string.

#### Parameters

*s* String to swap with.

Exchanges the contents of this string with that of *s* in constant time.

### 5.84.3 Member Data Documentation

**5.84.3.1** `_Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_const_iterators` [inherited]

## 5.85 `__gnu_parallel::__accumulate_binop_reduct<_BinOp>` Struct Template Reference 1161

---

The list of constant iterators that reference this container.

Definition at line 185 of file `safe_base.h`.

Referenced by `__gnu_debug::_Safe_sequence<_Sequence>::_M_invalidate_if()`, and `__gnu_debug::_Safe_sequence<_Sequence>::_M_transfer_from_if()`.

### 5.84.3.2 `_Safe_iterator_base*` `__gnu_debug::_Safe_sequence_base::_M_iterators` [inherited]

The list of mutable iterators that reference this container.

Definition at line 182 of file `safe_base.h`.

Referenced by `__gnu_debug::_Safe_sequence<_Sequence>::_M_invalidate_if()`, and `__gnu_debug::_Safe_sequence<_Sequence>::_M_transfer_from_if()`.

### 5.84.3.3 `unsigned int` `__gnu_debug::_Safe_sequence_base::_M_version` [mutable, inherited]

The container version number. This number may never be 0.

Definition at line 188 of file `safe_base.h`.

Referenced by `__gnu_debug::_Safe_sequence_base::_M_invalidate_all()`, and `__gnu_debug::_Safe_sequence<_Sequence>::_M_transfer_from_if()`.

### 5.84.3.4 `const size_type` `std::basic_string<_CharT, _Traits, _Allocator>::npos` [static, inherited]

Value returned by various member functions when they fail.

Definition at line 280 of file `basic_string.h`.

The documentation for this class was generated from the following file:

- [debug/string](#)

## 5.85 `__gnu_parallel::__accumulate_binop_reduct<_BinOp>` Struct Template Reference

General reduction, using a binary operator.

## 5.86 `__gnu_parallel::__accumulate_selector<_It>` Struct Template Reference

### Public Member Functions

- `__accumulate_binop_reduct` (`_BinOp` & `__b`)
- `template<typename _Result, typename _Addend>`  
`_Result operator()` (`const _Result` & `__x`, `const _Addend` & `__y`)

### Public Attributes

- `_BinOp` & `__binop`

#### 5.85.1 Detailed Description

`template<typename _BinOp> struct __gnu_parallel::__accumulate_binop_reduct<_BinOp>`

General reduction, using a binary operator.

Definition at line 335 of file `for_each_selectors.h`.

The documentation for this struct was generated from the following file:

- [for\\_each\\_selectors.h](#)

## 5.86 `__gnu_parallel::__accumulate_selector<_It>` Struct Template Reference

[std::accumulate\(\)](#) selector.

Inheritance diagram for `__gnu_parallel::__accumulate_selector<_It>`:

## 5.86 `__gnu_parallel::__accumulate_selector<_It>` Struct Template Reference

### Public Member Functions

- `template<typename _Op>  
std::iterator_traits<_It>::value_type operator() (_Op __o, _It __i)`

### Public Attributes

- `_It __M_finish_iterator`

#### 5.86.1 Detailed Description

`template<typename _It> struct __gnu_parallel::__accumulate_selector<_It>`

`std::accumulate()` selector.

Definition at line 208 of file `for_each_selectors.h`.

#### 5.86.2 Member Function Documentation

**5.86.2.1** `template<typename _It> template<typename _Op> std::iterator_traits<_It>::value_type __gnu_parallel::__accumulate_selector<_It>::operator() ( _Op __o, _It __i ) [inline]`

Functor execution.

##### Parameters

- `__o` Operator (unused).
- `__i` iterator referencing object.

##### Returns

The current value.

Definition at line 216 of file `for_each_selectors.h`.

#### 5.86.3 Member Data Documentation

**5.86.3.1** `template<typename _It> _It __gnu_parallel::__generic_for_each_selector<_It>::__M_finish_iterator [inherited]`

## 5.87 `__gnu_parallel::__adjacent_difference_selector<_It>` Struct Template Reference 1164

---

`_Iterator` on last element processed; needed for some algorithms (e. g. `std::transform()`).

Definition at line 47 of file `for_each_selectors.h`.

The documentation for this struct was generated from the following file:

- [for\\_each\\_selectors.h](#)

## 5.87 `__gnu_parallel::__adjacent_difference_selector<_It>` Struct Template Reference

Selector that returns the difference between two adjacent `__elements`.

Inheritance diagram for `__gnu_parallel::__adjacent_difference_selector<_It>`:

### Public Member Functions

- `template<typename _Op>`  
`bool operator() (_Op &__o, _It __i)`

### Public Attributes

### 5.87.1 Detailed Description

**template<typename `_It`> struct `__gnu_parallel::__adjacent_difference_selector<_It>`**

Selector that returns the difference between two adjacent `__elements`.

Definition at line 269 of file `for_each_selectors.h`.

### 5.87.2 Member Data Documentation

**5.87.2.1 `template<typename _It> _It __gnu_parallel::__generic_for_each_selector<_It>::M_finish_iterator [inherited]`**

`_Iterator` on last element processed; needed for some algorithms (e.g. `std::transform()`).

Definition at line 47 of file `for_each_selectors.h`.

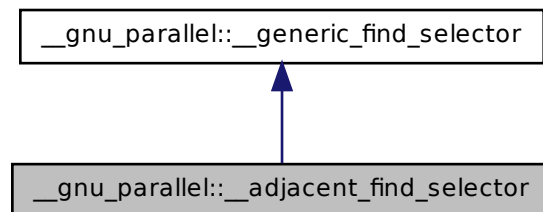

The documentation for this struct was generated from the following file:

- [for\\_each\\_selectors.h](#)

## 5.88 `__gnu_parallel::__adjacent_find_selector` Struct Reference

Test predicate on two adjacent elements.

Inheritance diagram for `__gnu_parallel::__adjacent_find_selector`:

## Public Member Functions

- `template<typename _RAIter1, typename _RAIter2, typename _Pred >`  
`std::pair< _RAIter1, _RAIter2 > \_M\_sequential\_algorithm (_RAIter1 __-`  
`begin1, _RAIter1 __end1, _RAIter2 __begin2, _Pred __pred)`
- `template<typename _RAIter1, typename _RAIter2, typename _Pred >`  
`bool operator\(\) (_RAIter1 __i1, _RAIter2 __i2, _Pred __pred)`

### 5.88.1 Detailed Description

Test predicate on two adjacent elements.

Definition at line 80 of file `find_selectors.h`.

### 5.88.2 Member Function Documentation

**5.88.2.1** `template<typename _RAIter1, typename _RAIter2, typename _Pred > std::pair<_RAIter1, _RAIter2>`  
`__gnu_parallel::__adjacent_find_selector::_M_sequential_algorithm (`  
`__RAIter1 __begin1, _RAIter1 __end1, _RAIter2 __begin2, _Pred`  
`__pred ) [inline]`

Corresponding sequential algorithm on a sequence.

#### Parameters

- `__begin1` Begin iterator of first sequence.
- `__end1` End iterator of first sequence.
- `__begin2` Begin iterator of second sequence.
- `__pred` Find predicate.

Definition at line 105 of file `find_selectors.h`.

References `std::make_pair()`.

**5.88.2.2** `template<typename _RAIter1, typename _RAIter2, typename _Pred > bool __gnu_parallel::__adjacent_find_selector::operator() (`  
`__RAIter1 __i1, _RAIter2 __i2, _Pred __pred ) [inline]`

Test on one position.

## 5.89 `__gnu_parallel::__binder1st< _Operation, _FirstArgumentType, _SecondArgumentType, _ResultType >` Class Template Reference 1167

### Parameters

- `__i1` Iterator on first sequence.
- `__i2` Iterator on second sequence (unused).
- `__pred` Find predicate.

Definition at line 90 of file `find_selectors.h`.

The documentation for this struct was generated from the following file:

- [find\\_selectors.h](#)

## 5.89 `__gnu_parallel::__binder1st< _Operation, _FirstArgumentType, _SecondArgumentType, _ResultType >` Class Template Reference

Similar to [std::binder1st](#), but giving the argument types explicitly.

Inheritance diagram for `__gnu_parallel::__binder1st< _Operation, _FirstArgumentType, _SecondArgumentType, _ResultType >`:

### Public Types

- typedef `_SecondArgumentType` [argument\\_type](#)
- typedef `_ResultType` [result\\_type](#)

### Public Member Functions

- `__binder1st` (const `_Operation` &\_\_x, const `_FirstArgumentType` &\_\_y)

## 5.89 `__gnu_parallel::__binder1st<_Operation, _FirstArgumentType, _SecondArgumentType, _ResultType>` Class Template Reference 1168

---

- `_ResultType operator() (_SecondArgumentType &__x) const`
- `_ResultType operator() (const _SecondArgumentType &__x)`

### Protected Attributes

- `_Operation _M_op`
- `_FirstArgumentType _M_value`

### 5.89.1 Detailed Description

`template<typename _Operation, typename _FirstArgumentType, typename _SecondArgumentType, typename _ResultType> class __gnu_parallel::__binder1st< _Operation, _FirstArgumentType, _SecondArgumentType, _ResultType >`

Similar to [std::binder1st](#), but giving the argument types explicitly.

Definition at line 192 of file `parallel/base.h`.

### 5.89.2 Member Typedef Documentation

**5.89.2.1** `typedef _SecondArgumentType std::unary_function< _SecondArgumentType , _ResultType >::argument_type [inherited]`

`argument_type` is the type of the argument

Definition at line 105 of file `stl_function.h`.

**5.89.2.2** `typedef _ResultType std::unary_function< _SecondArgumentType , _ResultType >::result_type [inherited]`

`result_type` is the return type

Definition at line 108 of file `stl_function.h`.

The documentation for this class was generated from the following file:

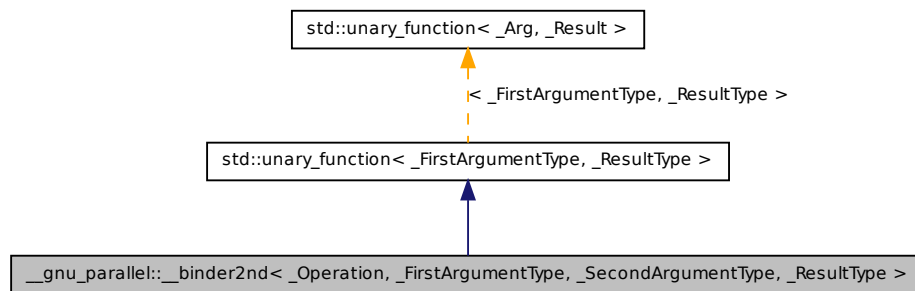

- [parallel/base.h](#)

## 5.90 `__gnu_parallel::__binder2nd<_Operation, _FirstArgumentType, _SecondArgumentType, _ResultType>` Class Template Reference 1169

### 5.90 `__gnu_parallel::__binder2nd<_Operation, _FirstArgumentType, _SecondArgumentType, _ResultType>` Class Template Reference

Similar to [std::binder2nd](#), but giving the argument types explicitly.

Inheritance diagram for `__gnu_parallel::__binder2nd<_Operation, _FirstArgumentType, _SecondArgumentType, _ResultType>`:

#### Public Types

- typedef `_FirstArgumentType` [argument\\_type](#)
- typedef `_ResultType` [result\\_type](#)

#### Public Member Functions

- `__binder2nd` (`const _Operation &__x, const _SecondArgumentType &__y`)
- `_ResultType operator()` (`_FirstArgumentType &__x`)
- `_ResultType operator()` (`const _FirstArgumentType &__x`) `const`

#### Protected Attributes

- `_Operation` `_M_op`
- `_SecondArgumentType` `_M_value`

### 5.90.1 Detailed Description

```
template<typename _Operation, typename _FirstArgumentType, typename
_SecondArgumentType, typename _ResultType> class __gnu_parallel::__-
binder2nd< _Operation, _FirstArgumentType, _SecondArgumentType, _-
ResultType >
```

Similar to [std::binder2nd](#), but giving the argument types explicitly.

Definition at line 220 of file `parallel/base.h`.

### 5.90.2 Member Typedef Documentation

**5.90.2.1** `typedef _FirstArgumentType std::unary_function<_FirstArgumentType , _ResultType >::argument_type [inherited]`

`argument_type` is the type of the argument

Definition at line 105 of file `stl_function.h`.

**5.90.2.2** `typedef _ResultType std::unary_function<_FirstArgumentType , _ResultType >::result_type [inherited]`

`result_type` is the return type

Definition at line 108 of file `stl_function.h`.

The documentation for this class was generated from the following file:

- [parallel/base.h](#)

## 5.91 `__gnu_parallel::__count_if_selector<_It, _Diff>` Struct Template Reference

`std::count_if()` selector.

Inheritance diagram for `__gnu_parallel::__count_if_selector<_It, _Diff>`:

## Public Member Functions

- `template<typename _Op> _Diff operator() (_Op &__o, _It __i)`

## Public Attributes

- `_It _M_finish_iterator`

### 5.91.1 Detailed Description

`template<typename _It, typename _Diff> struct __gnu_parallel::__count_if_selector<_It, _Diff>`

`std::count_if()` selector.

Definition at line 194 of file `for_each_selectors.h`.

### 5.91.2 Member Function Documentation

**5.91.2.1** `template<typename _It, typename _Diff> template<typename _Op> > _Diff __gnu_parallel::__count_if_selector<_It, _Diff>::operator() ( _Op & __o, _It __i ) [inline]`

Functor execution.

## 5.92 `__gnu_parallel::__count_selector<_It, _Diff>` Struct Template Reference 1172

### Parameters

- `__o` Operator.
- `__i` iterator referencing object.

### Returns

1 if count, 0 if does not count.

Definition at line 202 of file `for_each_selectors.h`.

### 5.91.3 Member Data Documentation

#### 5.91.3.1 `template<typename _It> _It __gnu_parallel::__generic_for_each_selector<_It>::__M_finish_iterator` [`inherited`]

`_Iterator` on last element processed; needed for some algorithms (e.g. `std::transform()`).

Definition at line 47 of file `for_each_selectors.h`.

The documentation for this struct was generated from the following file:

- [for\\_each\\_selectors.h](#)

## 5.92 `__gnu_parallel::__count_selector<_It, _Diff>` Struct Template Reference

`std::count()` selector.

## 5.92 `__gnu_parallel::__count_selector<_It, _Diff>` Struct Template Reference

Inheritance diagram for `__gnu_parallel::__count_selector<_It, _Diff>`:

### Public Member Functions

- `template<typename _ValueType > _Diff operator() (_ValueType &__v, _It __i)`

### Public Attributes

- `_It _M_finish_iterator`

#### 5.92.1 Detailed Description

`template<typename _It, typename _Diff> struct __gnu_parallel::__count_selector<_It, _Diff>`

`std::count()` selector.

Definition at line 180 of file `for_each_selectors.h`.

#### 5.92.2 Member Function Documentation

**5.92.2.1** `template<typename _It, typename _Diff> template<typename _ValueType > _Diff __gnu_parallel::__count_selector<_It, _Diff>::operator() ( _ValueType & __v, _It __i ) [inline]`

Functor execution.

## 5.93 `__gnu_parallel::__fill_selector<_It>` Struct Template Reference 1174

---

### Parameters

- `__v` Current value.
- `__i` iterator referencing object.

### Returns

- 1 if count, 0 if does not count.

Definition at line 188 of file `for_each_selectors.h`.

### 5.92.3 Member Data Documentation

#### 5.92.3.1 `template<typename _It> _It __gnu_parallel::__generic_for_each_selector<_It>::__M_finish_iterator` [`inherited`]

`_Iterator` on last element processed; needed for some algorithms (e.g. `std::transform()`).

Definition at line 47 of file `for_each_selectors.h`.

The documentation for this struct was generated from the following file:

- [for\\_each\\_selectors.h](#)

## 5.93 `__gnu_parallel::__fill_selector<_It>` Struct Template Reference

`std::fill()` selector.

Inheritance diagram for `__gnu_parallel::__fill_selector<_It>`:

### Public Member Functions

- `template<typename _ValueType > bool operator() (_ValueType &__v, _It __i)`

### Public Attributes

- `_It _M_finish_iterator`

#### 5.93.1 Detailed Description

`template<typename _It> struct __gnu_parallel::__fill_selector<_It>`

`std::fill()` selector.

Definition at line 84 of file `for_each_selectors.h`.

#### 5.93.2 Member Function Documentation

**5.93.2.1** `template<typename _It > template<typename _ValueType > bool __gnu_parallel::__fill_selector<_It>::operator() ( _ValueType & __v, _It __i ) [inline]`

Functor execution.

## 5.94 `__gnu_parallel::__find_first_of_selector<_FIterator>` Struct Template Reference 1176

---

### Parameters

- `__v` Current value.
- `__i` iterator referencing object.

Definition at line 91 of file `for_each_selectors.h`.

### 5.93.3 Member Data Documentation

#### 5.93.3.1 `template<typename _It> _It __gnu_parallel::__generic_for_each_selector<_It>::__M_finish_iterator` [`inherited`]

`_Iterator` on last element processed; needed for some algorithms (e.g. `std::transform()`).

Definition at line 47 of file `for_each_selectors.h`.

The documentation for this struct was generated from the following file:

- [for\\_each\\_selectors.h](#)

## 5.94 `__gnu_parallel::__find_first_of_selector<_FIterator>` Struct Template Reference

Test predicate on several elements.

Inheritance diagram for `__gnu_parallel::__find_first_of_selector<_FIterator>`:

## Public Member Functions

- `__find_first_of_selector` (`_FIterator __begin`, `_FIterator __end`)
- `template<typename _RAIter1, typename _RAIter2, typename _Pred>`  
`std::pair<_RAIter1, _RAIter2> __M_sequential_algorithm` (`_RAIter1 __begin1`, `_RAIter1 __end1`, `_RAIter2 __begin2`, `_Pred __pred`)
- `template<typename _RAIter1, typename _RAIter2, typename _Pred>`  
`bool operator()` (`_RAIter1 __i1`, `_RAIter2 __i2`, `_Pred __pred`)

## Public Attributes

- `_FIterator __M_begin`
- `_FIterator __M_end`

### 5.94.1 Detailed Description

`template<typename _FIterator> struct __gnu_parallel::__find_first_of_selector<_FIterator>`

Test predicate on several elements.

Definition at line 153 of file `find_selectors.h`.

### 5.94.2 Member Function Documentation

**5.94.2.1** `template<typename _FIterator> template<typename _RAIter1, typename _RAIter2, typename _Pred> std::pair<_RAIter1, _RAIter2> __gnu_parallel::__find_first_of_selector<_FIterator>::__M_sequential_algorithm` (`_RAIter1 __begin1`, `_RAIter1 __end1`, `_RAIter2 __begin2`, `_Pred __pred`) [`inline`]

Corresponding sequential algorithm on a sequence.

#### Parameters

- `__begin1` Begin iterator of first sequence.
- `__end1` End iterator of first sequence.
- `__begin2` Begin iterator of second sequence.
- `__pred` Find predicate.

Definition at line 186 of file `find_selectors.h`.

References `std::make_pair()`.

**5.94.2.2** `template<typename _FIterator > template<typename  
_RAIter1 , typename _RAIter2 , typename _Pred > bool  
__gnu_parallel::__find_first_of_selector< _FIterator >::operator() (  
_RAIter1 __i1, _RAIter2 __i2, _Pred __pred ) [inline]`

Test on one position.

#### Parameters

- `__i1` Iterator on first sequence.
- `__i2` Iterator on second sequence (unused).
- `__pred` Find predicate.

Definition at line 169 of file `find_selectors.h`.

The documentation for this struct was generated from the following file:

- [find\\_selectors.h](#)

## 5.95 \_\_gnu\_parallel::\_\_find\_if\_selector Struct Reference

Test predicate on a single element, used for `std::find()` and `std::find_if()`.

Inheritance diagram for `__gnu_parallel::__find_if_selector`:

#### Public Member Functions

- `template<typename _RAIter1 , typename _RAIter2 , typename _Pred >`

```
std::pair<_RAIter1, _RAIter2 > _M_sequential_algorithm (_RAIter1 __-
begin1, _RAIter1 __end1, _RAIter2 __begin2, _Pred __pred)
```

- `template<typename _RAIter1, typename _RAIter2, typename _Pred >`  
`bool operator() (_RAIter1 __i1, _RAIter2 __i2, _Pred __pred)`

### 5.95.1 Detailed Description

Test predicate on a single element, used for `std::find()` and `std::find_if()`.

Definition at line 50 of file `find_selectors.h`.

### 5.95.2 Member Function Documentation

**5.95.2.1** `template<typename _RAIter1, typename _RAIter2, typename _Pred > std::pair<_RAIter1, _RAIter2>`  
`__gnu_parallel::__find_if_selector::_M_sequential_algorithm (`  
`_RAIter1 __begin1, _RAIter1 __end1, _RAIter2 __begin2, _Pred`  
`__pred ) [inline]`

Corresponding sequential algorithm on a sequence.

#### Parameters

- `__begin1` Begin iterator of first sequence.
- `__end1` End iterator of first sequence.
- `__begin2` Begin iterator of second sequence.
- `__pred` Find predicate.

Definition at line 72 of file `find_selectors.h`.

References `std::make_pair()`.

**5.95.2.2** `template<typename _RAIter1, typename _RAIter2, typename _Pred`  
`> bool __gnu_parallel::__find_if_selector::operator() ( _RAIter1`  
`__i1, _RAIter2 __i2, _Pred __pred ) [inline]`

Test on one position.

#### Parameters

- `__i1` Iterator on first sequence.

## 5.96 `__gnu_parallel::__for_each_selector<_It>` Struct Template Reference 180

`__i2` Iterator on second sequence (unused).

`__pred` Find predicate.

Definition at line 60 of file `find_selectors.h`.

The documentation for this struct was generated from the following file:

- [find\\_selectors.h](#)

## 5.96 `__gnu_parallel::__for_each_selector<_It>` Struct Template Reference

`std::for_each()` selector.

Inheritance diagram for `__gnu_parallel::__for_each_selector<_It>`:

### Public Member Functions

- `template<typename _Op>`  
`bool operator() (_Op &__o, _It __i)`

### Public Attributes

- `_It __M_finish_iterator`

## 5.97 `__gnu_parallel::__generate_selector<_It>` Struct Template Reference 181

### 5.96.1 Detailed Description

`template<typename _It> struct __gnu_parallel::__for_each_selector<_It>`

`std::for_each()` selector.

Definition at line 52 of file `for_each_selectors.h`.

### 5.96.2 Member Function Documentation

**5.96.2.1** `template<typename _It> template<typename _Op> bool  
__gnu_parallel::__for_each_selector<_It>::operator()( _Op & __o,  
_It __i ) [inline]`

Functor execution.

#### Parameters

`__o` Operator.

`__i` iterator referencing object.

Definition at line 59 of file `for_each_selectors.h`.

### 5.96.3 Member Data Documentation

**5.96.3.1** `template<typename _It> _It __gnu_parallel::__-  
generic_for_each_selector<_It>::__M_finish_iterator  
[inherited]`

`_Iterator` on last element processed; needed for some algorithms (e. g. `std::transform()`).

Definition at line 47 of file `for_each_selectors.h`.

The documentation for this struct was generated from the following file:

- [for\\_each\\_selectors.h](#)

## 5.97 `__gnu_parallel::__generate_selector<_It>` Struct Template Reference

`std::generate()` selector.

## 5.97 `__gnu_parallel::__generate_selector<_It>` Struct Template Reference 182

Inheritance diagram for `__gnu_parallel::__generate_selector<_It>`:

### Public Member Functions

- `template<typename _Op>`  
`bool operator() (_Op &__o, _It __i)`

### Public Attributes

- `_It _M_finish_iterator`

#### 5.97.1 Detailed Description

`template<typename _It> struct __gnu_parallel::__generate_selector<_It>`

`std::generate()` selector.

Definition at line 68 of file `for_each_selectors.h`.

#### 5.97.2 Member Function Documentation

**5.97.2.1** `template<typename _It> template<typename _Op> bool`  
`__gnu_parallel::__generate_selector<_It>::operator() ( _Op & __o,`  
`_It __i ) [inline]`

Functor execution.

**Parameters**

- `__o` Operator.
- `__i` iterator referencing object.

Definition at line 75 of file `for_each_selectors.h`.

**5.97.3 Member Data Documentation**
**5.97.3.1** `template<typename _It > _It __gnu_parallel::__generic_for_each_selector< _It >::__M_finish_iterator [inherited]`

`_Iterator` on last element processed; needed for some algorithms (e.g. `std::transform()`).

Definition at line 47 of file `for_each_selectors.h`.

The documentation for this struct was generated from the following file:

- [for\\_each\\_selectors.h](#)

**5.98 \_\_gnu\_parallel::\_\_generic\_find\_selector Struct Reference**

Base class of all [\\_\\_gnu\\_parallel::\\_\\_find\\_template](#) selectors.

Inheritance diagram for `__gnu_parallel::__generic_find_selector`:

## 5.99 `__gnu_parallel::__generic_for_each_selector<_It>` Struct Template Reference 1184

---

### 5.98.1 Detailed Description

Base class of all `__gnu_parallel::__find_template` selectors.

Definition at line 43 of file `find_selectors.h`.

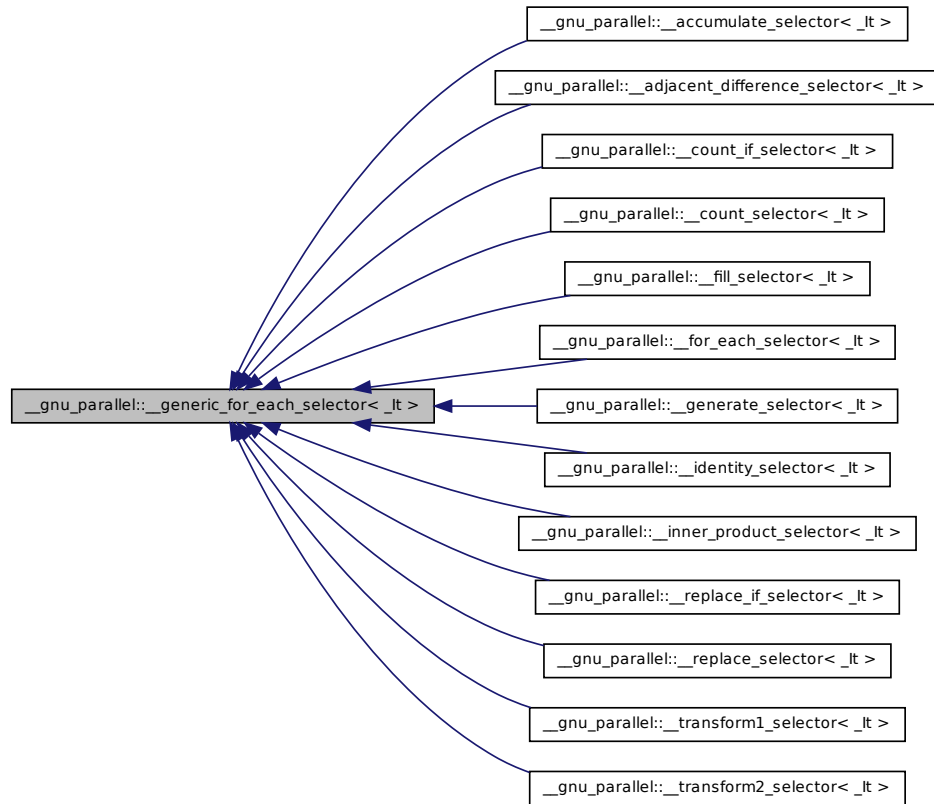

The documentation for this struct was generated from the following file:

- [find\\_selectors.h](#)

## 5.99 `__gnu_parallel::__generic_for_each_selector<_It>` Struct Template Reference

Generic `__selector` for embarrassingly parallel functions.

Inheritance diagram for `__gnu_parallel::__generic_for_each_selector<_It>`:

## Public Attributes

- `_It` [\\_M\\_finish\\_iterator](#)

### 5.99.1 Detailed Description

`template<typename _It> struct __gnu_parallel::__generic_for_each_selector<_It>`

Generic `__selector` for embarrassingly parallel functions.

Definition at line 42 of file `for_each_selectors.h`.

## 5.100 `__gnu_parallel::__identity_selector<_It>` Struct Template Reference

### 5.99.2 Member Data Documentation

#### 5.99.2.1 `template<typename _It> _It __gnu_parallel::__generic_for_each_selector<_It>::__M_finish_iterator`

`_Iterator` on last element processed; needed for some algorithms (e.g. `std::transform()`).

Definition at line 47 of file `for_each_selectors.h`.

The documentation for this struct was generated from the following file:

- [for\\_each\\_selectors.h](#)

## 5.100 `__gnu_parallel::__identity_selector<_It>` Struct Template Reference

Selector that just returns the passed iterator.

Inheritance diagram for `__gnu_parallel::__identity_selector<_It>`:

### Public Member Functions

- `template<typename _Op> _It operator() (_Op __o, _It __i)`

### Public Attributes

- `_It M\_finish\_iterator`

## 5.100 `__gnu_parallel::__identity_selector<_It>` Struct Template Reference

### 5.100.1 Detailed Description

`template<typename _It> struct __gnu_parallel::__identity_selector<_It>`

Selector that just returns the passed iterator.

Definition at line 253 of file `for_each_selectors.h`.

### 5.100.2 Member Function Documentation

**5.100.2.1** `template<typename _It> template<typename _Op> _It  
__gnu_parallel::__identity_selector<_It>::operator()( _Op __o,  
_It __i ) [inline]`

Functor execution.

#### Parameters

`__o` Operator (unused).

`__i` iterator referencing object.

#### Returns

Passed iterator.

Definition at line 261 of file `for_each_selectors.h`.

### 5.100.3 Member Data Documentation

**5.100.3.1** `template<typename _It> _It __gnu_parallel::__-  
generic_for_each_selector<_It>::_M_finish_iterator  
[inherited]`

`_Iterator` on last element processed; needed for some algorithms (e.g. `std::transform()`).

Definition at line 47 of file `for_each_selectors.h`.

The documentation for this struct was generated from the following file:

- [for\\_each\\_selectors.h](#)

## 5.101 `__gnu_parallel::__inner_product_selector<_It, _It2, _Tp>` Struct Template Reference

[std::inner\\_product\(\)](#) selector.

Inheritance diagram for `__gnu_parallel::__inner_product_selector<_It, _It2, _Tp>`:

### Public Member Functions

- [\\_\\_inner\\_product\\_selector](#) (`_It __b1, _It2 __b2`)
- `template<typename _Op>`  
`_Tp operator() (_Op __mult, _It __current)`

### Public Attributes

- `_It __begin1_iterator`
- `_It2 __begin2_iterator`
- `_It __M_finish_iterator`

#### 5.101.1 Detailed Description

`template<typename _It, typename _It2, typename _Tp> struct __gnu_parallel::__inner_product_selector<_It, _It2, _Tp>`

[std::inner\\_product\(\)](#) selector.

Definition at line 222 of file `for_each_selectors.h`.

### 5.101.2 Constructor & Destructor Documentation

5.101.2.1 `template<typename _It, typename _It2, typename _Tp>  
__gnu_parallel::__inner_product_selector<_It, _It2, _Tp  
>::__inner_product_selector( _It __b1, _It2 __b2 ) [inline,  
explicit]`

Constructor.

#### Parameters

- b1* Begin iterator of first sequence.
- b2* Begin iterator of second sequence.

Definition at line 234 of file `for_each_selectors.h`.

### 5.101.3 Member Function Documentation

5.101.3.1 `template<typename _It, typename _It2, typename _Tp>  
template<typename _Op> _Tp __gnu_parallel::__inner_product_  
selector<_It, _It2, _Tp>::operator()( _Op __mult, _It __current )  
[inline]`

Functor execution.

#### Parameters

- \_\_mult* Multiplication functor.
- \_\_current* iterator referencing object.

#### Returns

Inner product elemental `__result`.

Definition at line 243 of file `for_each_selectors.h`.

References `__gnu_parallel::__inner_product_selector<_It, _It2, _Tp>::__begin1_`-iterator, and `__gnu_parallel::__inner_product_selector<_It, _It2, _Tp>::__begin2_`-iterator.

#### 5.101.4 Member Data Documentation

**5.101.4.1** `template<typename _It, typename _It2, typename _Tp>  
_It __gnu_parallel::__inner_product_selector<_It, _It2, _Tp>::__begin1_iterator`

Begin iterator of first sequence.

Definition at line 225 of file `for_each_selectors.h`.

Referenced by `__gnu_parallel::__inner_product_selector<_It, _It2, _Tp>::operator()`.

**5.101.4.2** `template<typename _It, typename _It2, typename _Tp>  
_It2 __gnu_parallel::__inner_product_selector<_It, _It2, _Tp>::__begin2_iterator`

Begin iterator of second sequence.

Definition at line 228 of file `for_each_selectors.h`.

Referenced by `__gnu_parallel::__inner_product_selector<_It, _It2, _Tp>::operator()`.

**5.101.4.3** `template<typename _It> _It __gnu_parallel::__-  
generic_for_each_selector<_It>::__M_finish_iterator  
[inherited]`

`_Iterator` on last element processed; needed for some algorithms (e. g. `std::transform()`).

Definition at line 47 of file `for_each_selectors.h`.

The documentation for this struct was generated from the following file:

- [for\\_each\\_selectors.h](#)

## 5.102 `__gnu_parallel::__max_element_reduct<_Compare, _It>` Struct Template Reference

Reduction for finding the maximum element, using a comparator.

#### Public Member Functions

- `__max_element_reduct` (`_Compare &__c`)
- `_It operator()` (`_It __x, _It __y`)

#### Public Attributes

- `_Compare & __comp`

##### 5.102.1 Detailed Description

`template<typename _Compare, typename _It> struct __gnu_parallel::__max_element_reduct<_Compare, _It>`

Reduction for finding the maximum element, using a comparator.

Definition at line 321 of file `for_each_selectors.h`.

The documentation for this struct was generated from the following file:

- [for\\_each\\_selectors.h](#)

#### 5.103 `__gnu_parallel::__min_element_reduct<_Compare, _It> Struct` Template Reference

Reduction for finding the maximum element, using a comparator.

#### Public Member Functions

- `__min_element_reduct` (`_Compare &__c`)
- `_It operator()` (`_It __x, _It __y`)

#### Public Attributes

- `_Compare & __comp`

##### 5.103.1 Detailed Description

`template<typename _Compare, typename _It> struct __gnu_parallel::__min_element_reduct<_Compare, _It>`

Reduction for finding the maximum element, using a comparator.

Definition at line 307 of file `for_each_selectors.h`.

The documentation for this struct was generated from the following file:

- [for\\_each\\_selectors.h](#)

## 5.104 `__gnu_parallel::__mismatch_selector` Struct Reference

Test inverted predicate on a single element.

Inheritance diagram for `__gnu_parallel::__mismatch_selector`:

### Public Member Functions

- `template<typename _RAIter1, typename _RAIter2, typename _Pred >`  
`std::pair< _RAIter1, _RAIter2 > \_M\_sequential\_algorithm (_RAIter1 __-`  
`begin1, _RAIter1 __end1, _RAIter2 __begin2, _Pred __pred)`
- `template<typename _RAIter1, typename _RAIter2, typename _Pred >`  
`bool operator\(\) (_RAIter1 __i1, _RAIter2 __i2, _Pred __pred)`

#### 5.104.1 Detailed Description

Test inverted predicate on a single element.

Definition at line 119 of file `find_selectors.h`.

#### 5.104.2 Member Function Documentation

**5.104.2.1** `template<typename _RAIter1, typename _RAIter2, typename _Pred > std::pair<_RAIter1, _RAIter2> __gnu_parallel::__mismatch_selector::__M_sequential_algorithm ( _RAIter1 __begin1, _RAIter1 __end1, _RAIter2 __begin2, _Pred __pred ) [inline]`

Corresponding sequential algorithm on a sequence.

##### Parameters

`__begin1` Begin iterator of first sequence.  
`__end1` End iterator of first sequence.  
`__begin2` Begin iterator of second sequence.  
`__pred` Find predicate.

Definition at line 143 of file `find_selectors.h`.

**5.104.2.2** `template<typename _RAIter1, typename _RAIter2, typename _Pred > bool __gnu_parallel::__mismatch_selector::operator() ( _RAIter1 __i1, _RAIter2 __i2, _Pred __pred ) [inline]`

Test on one position.

##### Parameters

`__i1` Iterator on first sequence.  
`__i2` Iterator on second sequence (unused).  
`__pred` Find predicate.

Definition at line 130 of file `find_selectors.h`.

The documentation for this struct was generated from the following file:

- [find\\_selectors.h](#)

**5.105** `__gnu_parallel::__multiway_merge_3_variant_sentinel_switch< __sentinels, _RAIterIterator, _RAIter3, _DifferenceTp, _Compare > Struct` Template Reference

Switch for 3-way merging with `__sentinels` turned off.

## 5.106 `__gnu_parallel::__multiway_merge_3_variant_sentinel_switch< true, _RAIterIterator, _RAIter3, _DifferenceTp, _Compare >` Struct Template Reference 1194

### Public Member Functions

- `_RAIter3 operator() (_RAIterIterator __seqs_begin, _RAIterIterator __seqs_end, _RAIter3 __target, _DifferenceTp __length, _Compare __comp)`

#### 5.105.1 Detailed Description

`template<bool __sentinels, typename _RAIterIterator, typename _RAIter3, typename _DifferenceTp, typename _Compare> struct __gnu_parallel::__multiway_merge_3_variant_sentinel_switch< __sentinels, _RAIterIterator, _RAIter3, _DifferenceTp, _Compare >`

Switch for 3-way merging with `__sentinels` turned off. Note that 3-way merging is always stable!

Definition at line 748 of file `multiway_merge.h`.

The documentation for this struct was generated from the following file:

- [multiway\\_merge.h](#)

## 5.106 `__gnu_parallel::__multiway_merge_3_variant_sentinel_switch< true, _RAIterIterator, _RAIter3, _DifferenceTp, _Compare >` Struct Template Reference

Switch for 3-way merging with `__sentinels` turned on.

### Public Member Functions

- `_RAIter3 operator() (_RAIterIterator __seqs_begin, _RAIterIterator __seqs_end, _RAIter3 __target, _DifferenceTp __length, _Compare __comp)`

#### 5.106.1 Detailed Description

`template<typename _RAIterIterator, typename _RAIter3, typename _DifferenceTp, typename _Compare> struct __gnu_parallel::__multiway_merge_3_variant_sentinel_switch< true, _RAIterIterator, _RAIter3, _DifferenceTp, _Compare >`

Switch for 3-way merging with `__sentinels` turned on. Note that 3-way merging is always stable!

Definition at line 768 of file `multiway_merge.h`.

The documentation for this struct was generated from the following file:

**5.107 `__gnu_parallel::__multiway_merge_4_variant_sentinel_switch<__sentinels, _RAIterIterator, _RAIter3, _DifferenceTp, _Compare > Struct` Template Reference** 1195

**5.107 `__gnu_parallel::__multiway_merge_4_variant_sentinel_switch< __sentinels, _RAIterIterator, _RAIter3, _DifferenceTp, _Compare > Struct` Template Reference**

Switch for 4-way merging with `__sentinels` turned off.

**Public Member Functions**

- `_RAIter3 operator() (_RAIterIterator __seqs_begin, _RAIterIterator __seqs_end, _RAIter3 __target, _DifferenceTp __length, _Compare __comp)`

**5.107.1 Detailed Description**

`template<bool __sentinels, typename _RAIterIterator, typename _RAIter3, typename _DifferenceTp, typename _Compare> struct __gnu_parallel::__multiway_merge_4_variant_sentinel_switch< __sentinels, _RAIterIterator, _RAIter3, _DifferenceTp, _Compare >`

Switch for 4-way merging with `__sentinels` turned off. Note that 4-way merging is always stable!

Definition at line 791 of file `multiway_merge.h`.

The documentation for this struct was generated from the following file:

- [multiway\\_merge.h](#)

**5.108 `__gnu_parallel::__multiway_merge_4_variant_sentinel_switch< true, _RAIterIterator, _RAIter3, _DifferenceTp, _Compare > Struct` Template Reference**

Switch for 4-way merging with `__sentinels` turned on.

**Public Member Functions**

- `_RAIter3 operator() (_RAIterIterator __seqs_begin, _RAIterIterator __seqs_end, _RAIter3 __target, _DifferenceTp __length, _Compare __comp)`

**5.109** `__gnu_parallel::__multiway_merge_k_variant_sentinel_switch<__sentinels, __stable, _RAIterIterator, _RAIter3, _DifferenceTp, _Compare >`  
Struct Template Reference 1196

---

#### 5.108.1 Detailed Description

`template<typename _RAIterIterator, typename _RAIter3, typename _DifferenceTp, typename _Compare> struct __gnu_parallel::__multiway_merge_4_variant_sentinel_switch< true, _RAIterIterator, _RAIter3, _DifferenceTp, _Compare >`

Switch for 4-way merging with `__sentinels` turned on. Note that 4-way merging is always stable!

Definition at line 811 of file `multiway_merge.h`.

The documentation for this struct was generated from the following file:

- [multiway\\_merge.h](#)

**5.109** `__gnu_parallel::__multiway_merge_k_variant_sentinel_switch< __sentinels, __stable, _RAIterIterator, _RAIter3, _DifferenceTp, _Compare >` Struct Template Reference

Switch for k-way merging with `__sentinels` turned on.

#### Public Member Functions

- `_RAIter3 operator() (_RAIterIterator __seqs_begin, _RAIterIterator __seqs_end, _RAIter3 __target, const typename std::iterator_traits< typename std::iterator_traits< _RAIterIterator >::value_type::first_type >::value_type &__sentinel, _DifferenceTp __length, _Compare __comp)`

#### 5.109.1 Detailed Description

`template<bool __sentinels, bool __stable, typename _RAIterIterator, typename _RAIter3, typename _DifferenceTp, typename _Compare> struct __gnu_parallel::__multiway_merge_k_variant_sentinel_switch< __sentinels, __stable, _RAIterIterator, _RAIter3, _DifferenceTp, _Compare >`

Switch for k-way merging with `__sentinels` turned on.

Definition at line 833 of file `multiway_merge.h`.

The documentation for this struct was generated from the following file:

- [multiway\\_merge.h](#)

**5.110** `__gnu_parallel::__multiway_merge_k_variant_sentinel_switch< false, __stable, _RAIterIterator, _RAIter3, _DifferenceTp, _Compare > Struct`  
Template Reference 1197

**5.110** `__gnu_parallel::__multiway_merge_k_variant_sentinel_switch< false, __stable, _RAIterIterator, _RAIter3, _DifferenceTp, _Compare > Struct` Template Reference

Switch for k-way merging with `__sentinels` turned off.

#### Public Member Functions

- `_RAIter3 operator() (_RAIterIterator __seqs_begin, _RAIterIterator __seqs_end, _RAIter3 __target, const typename std::iterator_traits< typename std::iterator_traits< _RAIterIterator >::value_type::first_type >::value_type &__sentinel, _DifferenceTp __length, _Compare __comp)`

##### 5.110.1 Detailed Description

`template<bool __stable, typename _RAIterIterator, typename _RAIter3, typename _DifferenceTp, typename _Compare> struct __gnu_parallel::__multiway_merge_k_variant_sentinel_switch< false, __stable, _RAIterIterator, _RAIter3, _DifferenceTp, _Compare >`

Switch for k-way merging with `__sentinels` turned off.

Definition at line 868 of file `multiway_merge.h`.

The documentation for this struct was generated from the following file:

- [multiway\\_merge.h](#)

**5.111** `__gnu_parallel::__replace_if_selector< _It, _Op, _Tp >`  
Struct Template Reference

`std::replace()` selector.

Inheritance diagram for `__gnu_parallel::__replace_if_selector<_It, _Op, _Tp>`:

#### Public Member Functions

- `__replace_if_selector` (const `_Tp` & `__new_val`)
- bool `operator()` (`_Op` & `__o`, `_It` `__i`)

#### Public Attributes

- const `_Tp` & `__new_val`
- `_It` `__M_finish_iterator`

#### 5.111.1 Detailed Description

`template<typename _It, typename _Op, typename _Tp> struct __gnu_parallel::__replace_if_selector<_It, _Op, _Tp>`

`std::replace()` selector.

Definition at line 156 of file `for_each_selectors.h`.

#### 5.111.2 Constructor & Destructor Documentation

**5.111.2.1** `template<typename _It, typename _Op, typename _Tp>  
> __gnu_parallel::__replace_if_selector<_It, _Op, _Tp>:  
>::__replace_if_selector ( const _Tp & __new_val ) [inline,  
explicit]`

Constructor.

#### Parameters

*\_\_new\_val* Value to replace with.

Definition at line 164 of file `for_each_selectors.h`.

### 5.111.3 Member Function Documentation

**5.111.3.1** `template<typename _It, typename _Op, typename _Tp> bool  
__gnu_parallel::__replace_if_selector<_It, _Op, _Tp>::operator()(  
_Op & __o, _It __i ) [inline]`

Functor execution.

#### Parameters

*\_\_o* Operator.

*\_\_i* iterator referencing object.

Definition at line 170 of file `for_each_selectors.h`.

References `__gnu_parallel::__replace_if_selector<_It, _Op, _Tp>::__new_val`.

### 5.111.4 Member Data Documentation

**5.111.4.1** `template<typename _It, typename _Op, typename _Tp> const  
_Tp& __gnu_parallel::__replace_if_selector<_It, _Op, _Tp>::__new_val`

Value to replace with.

Definition at line 159 of file `for_each_selectors.h`.

Referenced by `__gnu_parallel::__replace_if_selector<_It, _Op, _Tp>::operator()()`.

**5.111.4.2** `template<typename _It> _It __gnu_parallel::__-  
generic_for_each_selector<_It>::__M_finish_iterator  
[inherited]`

### 5.112 `__gnu_parallel::__replace_selector<_It, _Tp>` Struct Template Reference

1200

`_Iterator` on last element processed; needed for some algorithms (e. g. `std::transform()`).

Definition at line 47 of file `for_each_selectors.h`.

The documentation for this struct was generated from the following file:

- [for\\_each\\_selectors.h](#)

### 5.112 `__gnu_parallel::__replace_selector<_It, _Tp>` Struct Template Reference

`std::replace()` selector.

Inheritance diagram for `__gnu_parallel::__replace_selector<_It, _Tp>`:

#### Public Member Functions

- [\\_\\_replace\\_selector](#) (const `_Tp` & [\\_\\_new\\_val](#))
- bool [operator\(\)](#) (`_Tp` & `__v`, `_It` `__i`)

#### Public Attributes

- const `_Tp` & [\\_\\_new\\_val](#)
- `_It` [\\_M\\_finish\\_iterator](#)

### 5.112.1 Detailed Description

**template<typename \_It, typename \_Tp> struct \_\_gnu\_parallel::\_\_replace\_selector<\_It, \_Tp>**

std::replace() selector.

Definition at line 132 of file for\_each\_selectors.h.

### 5.112.2 Constructor & Destructor Documentation

**5.112.2.1 template<typename \_It, typename \_Tp> \_\_gnu\_parallel::\_\_replace\_selector<\_It, \_Tp>::\_\_replace\_selector ( const \_Tp & \_\_new\_val ) [inline, explicit]**

Constructor.

#### Parameters

**\_\_new\_val** Value to replace with.

Definition at line 140 of file for\_each\_selectors.h.

### 5.112.3 Member Function Documentation

**5.112.3.1 template<typename \_It, typename \_Tp> bool \_\_gnu\_parallel::\_\_replace\_selector<\_It, \_Tp>::operator() ( \_Tp & \_\_v, \_It \_\_i ) [inline]**

Functor execution.

#### Parameters

**\_\_v** Current value.

**\_\_i** iterator referencing object.

Definition at line 146 of file for\_each\_selectors.h.

References `__gnu_parallel::__replace_selector<_It, _Tp>::__new_val`.

**5.112.4 Member Data Documentation**

**5.112.4.1 `template<typename _It, typename _Tp> const _Tp& __gnu_parallel::__replace_selector<_It, _Tp>::__new_val`**

Value to replace with.

Definition at line 135 of file `for_each_selectors.h`.

Referenced by `__gnu_parallel::__replace_selector<_It, _Tp>::operator()`.

**5.112.4.2 `template<typename _It> _It __gnu_parallel::__generic_for_each_selector<_It>::__M_finish_iterator [inherited]`**

`_Iterator` on last element processed; needed for some algorithms (e.g. `std::transform()`).

Definition at line 47 of file `for_each_selectors.h`.

The documentation for this struct was generated from the following file:

- [for\\_each\\_selectors.h](#)

**5.113 `__gnu_parallel::__transform1_selector<_It>` Struct Template Reference**

`std::transform()` `__selector`, one input sequence variant.

Inheritance diagram for `__gnu_parallel::__transform1_selector<_It>`:

## Public Member Functions

- `template<typename _Op>`  
`bool operator() (_Op &__o, _It __i)`

## Public Attributes

- `_It _M_finish_iterator`

### 5.113.1 Detailed Description

`template<typename _It> struct __gnu_parallel::__transform1_selector<_It>`

`std::transform()` \_\_selector, one input sequence variant.

Definition at line 100 of file `for_each_selectors.h`.

### 5.113.2 Member Function Documentation

**5.113.2.1** `template<typename _It> template<typename _Op> bool`  
`__gnu_parallel::__transform1_selector<_It>::operator() ( _Op &`  
`__o, _It __i ) [inline]`

Functor execution.

#### Parameters

- `__o` Operator.
- `__i` iterator referencing object.

Definition at line 107 of file `for_each_selectors.h`.

#### 5.113.3 Member Data Documentation

##### 5.113.3.1 `template<typename _It> _It __gnu_parallel::__generic_for_each_selector<_It>::__M_finish_iterator` [inherited]

`_Iterator` on last element processed; needed for some algorithms (e.g. `std::transform()`).

Definition at line 47 of file `for_each_selectors.h`.

The documentation for this struct was generated from the following file:

- [for\\_each\\_selectors.h](#)

#### 5.114 `__gnu_parallel::__transform2_selector<_It>` Struct Template Reference

`std::transform()` `__selector`, two input sequences variant.

Inheritance diagram for `__gnu_parallel::__transform2_selector<_It>`:

## Public Member Functions

- `template<typename _Op > bool operator() (_Op &__o, _It __i)`

## Public Attributes

- `_It _M_finish_iterator`

### 5.114.1 Detailed Description

`template<typename _It> struct __gnu_parallel::__transform2_selector<_It>`

`std::transform()` \_\_selector, two input sequences variant.

Definition at line 116 of file `for_each_selectors.h`.

### 5.114.2 Member Function Documentation

**5.114.2.1** `template<typename _It> template<typename _Op > bool __gnu_parallel::__transform2_selector<_It>::operator() (_Op &__o, _It __i) [inline]`

Functor execution.

#### Parameters

- `__o` Operator.
- `__i` iterator referencing object.

Definition at line 123 of file `for_each_selectors.h`.

### 5.114.3 Member Data Documentation

**5.114.3.1** `template<typename _It > _It __gnu_parallel::__generic_for_each_selector<_It>::__M_finish_iterator [inherited]`

`_Iterator` on last element processed; needed for some algorithms (e. g. `std::transform()`).

### 5.115 `__gnu_parallel::__unary_negate< _Predicate, argument_type >` Class Template Reference 1206

---

Definition at line 47 of file `for_each_selectors.h`.

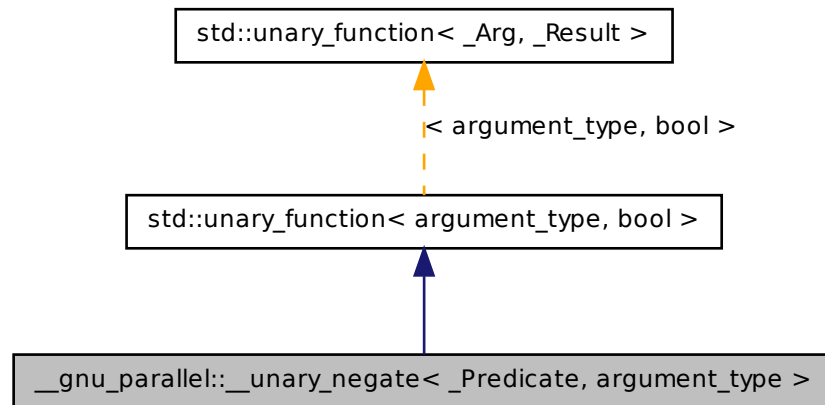

The documentation for this struct was generated from the following file:

- [for\\_each\\_selectors.h](#)

### 5.115 `__gnu_parallel::__unary_negate< _Predicate, argument_type >` Class Template Reference

Similar to [std::unary\\_negate](#), but giving the argument types explicitly.

Inheritance diagram for `__gnu_parallel::__unary_negate< _Predicate, argument_type >`:

#### Public Types

- typedef [argument\\_type](#) `argument_type`
- typedef bool [result\\_type](#)

#### Public Member Functions

- `__unary_negate` (`const _Predicate &__x`)
- bool `operator()` (`const argument\_type &__x`)

#### Protected Attributes

- `_Predicate _M_pred`

#### 5.115.1 Detailed Description

`template<typename _Predicate, typename argument_type> class __gnu_parallel::_unary_negate<_Predicate, argument_type>`

Similar to [std::unary\\_negate](#), but giving the argument types explicitly.

Definition at line 173 of file `parallel/base.h`.

#### 5.115.2 Member Typedef Documentation

**5.115.2.1** `typedef argument_type std::unary_function< argument_type , bool >::argument_type [inherited]`

`argument_type` is the type of the argument

Definition at line 105 of file `stl_function.h`.

**5.115.2.2** `typedef bool std::unary_function< argument_type , bool >::result_type [inherited]`

`result_type` is the return type

Definition at line 108 of file `stl_function.h`.

The documentation for this class was generated from the following file:

- [parallel/base.h](#)

### 5.116 `__gnu_parallel::_DRandomShufflingGlobalData<_RAIter>` Struct Template Reference

Data known to every thread participating in [\\_\\_gnu\\_parallel::\\_parallel\\_random\\_shuffle\(\)](#).

#### Public Types

- `typedef _TraitsType::difference_type _DifferenceType`

- `typedef std::iterator_traits<_RAIter> _TraitsType`
- `typedef _TraitsType::value_type _ValueType`

#### Public Member Functions

- [`\_DRandomShufflingGlobalData`](#) (`_RAIter &__source`)

#### Public Attributes

- [`\_ThreadIndex`](#) \* [`\_M\_bin\_proc`](#)
- `_DifferenceType` \*\* [`\_M\_dist`](#)
- `int` [`\_M\_num\_bins`](#)
- `int` [`\_M\_num\_bits`](#)
- `_RAIter &` [`\_M\_source`](#)
- `_DifferenceType` \* [`\_M\_starts`](#)
- `_ValueType` \*\* [`\_M\_temporaries`](#)

#### 5.116.1 Detailed Description

`template<typename _RAIter> struct __gnu_parallel::_DRandomShufflingGlobalData<_RAIter>`

Data known to every thread participating in [`\_\_gnu\_parallel::\_\_parallel\_random\_shuffle\(\)`](#).

Definition at line 52 of file `random_shuffle.h`.

#### 5.116.2 Constructor & Destructor Documentation

**5.116.2.1** `template<typename _RAIter> __gnu_parallel::_DRandomShufflingGlobalData<_RAIter>::__DRandomShufflingGlobalData ( _RAIter & __source )`  
`[inline]`

Constructor.

Definition at line 83 of file `random_shuffle.h`.

### 5.116.3 Member Data Documentation

#### 5.116.3.1 `template<typename _RAIter> _ThreadIndex* __gnu_parallel::_DRandomShufflingGlobalData<_RAIter >::_M_bin_proc`

Number of the thread that will further process the corresponding bin.

Definition at line 74 of file `random_shuffle.h`.

Referenced by `__gnu_parallel::__parallel_random_shuffle_drs()`.

#### 5.116.3.2 `template<typename _RAIter> _DifferenceType** __gnu_parallel::_DRandomShufflingGlobalData<_RAIter >::_M_dist`

Two-dimensional array to hold the thread-bin distribution.

Dimensions `( _M_num_threads + 1 ) __x ( _M_num_bins + 1 )`.

Definition at line 67 of file `random_shuffle.h`.

Referenced by `__gnu_parallel::__parallel_random_shuffle_drs()`, and `__gnu_parallel::__parallel_random_shuffle_drs_pu()`.

#### 5.116.3.3 `template<typename _RAIter> int __gnu_ parallel::_DRandomShufflingGlobalData<_RAIter >::_M_num_bins`

Number of bins to distribute to.

Definition at line 77 of file `random_shuffle.h`.

Referenced by `__gnu_parallel::__parallel_random_shuffle_drs()`, and `__gnu_parallel::__parallel_random_shuffle_drs_pu()`.

#### 5.116.3.4 `template<typename _RAIter> int __gnu_ parallel::_DRandomShufflingGlobalData<_RAIter >::_M_num_bits`

Number of bits needed to address the bins.

### 5.117 `__gnu_parallel::DRSSorterPU<_RAIter, _RandomNumberGenerator>` Struct Template Reference 1210

---

Definition at line 80 of file `random_shuffle.h`.

Referenced by `__gnu_parallel::__parallel_random_shuffle_drs()`, and `__gnu_parallel::__parallel_random_shuffle_drs_pu()`.

#### 5.116.3.5 `template<typename _RAIter> _RAIter& __gnu_parallel::_DRandomShufflingGlobalData<_RAIter>::__M_source`

Begin iterator of the `__source`.

Definition at line 59 of file `random_shuffle.h`.

#### 5.116.3.6 `template<typename _RAIter> _DifferenceType* __gnu_parallel::_DRandomShufflingGlobalData<_RAIter>::__M_starts`

Start indexes of the threads' `__chunks`.

Definition at line 70 of file `random_shuffle.h`.

Referenced by `__gnu_parallel::__parallel_random_shuffle_drs()`, and `__gnu_parallel::__parallel_random_shuffle_drs_pu()`.

#### 5.116.3.7 `template<typename _RAIter> _ValueType** __gnu_parallel::_DRandomShufflingGlobalData<_RAIter>::__M_temporaries`

Temporary arrays for each thread.

Definition at line 62 of file `random_shuffle.h`.

Referenced by `__gnu_parallel::__parallel_random_shuffle_drs()`.

The documentation for this struct was generated from the following file:

- [random\\_shuffle.h](#)

### 5.117 `__gnu_parallel::DRSSorterPU<_RAIter, _RandomNumberGenerator>` Struct Template Reference

Local data for a thread participating in `__gnu_parallel::__parallel_random_shuffle()`.

## Public Attributes

- [\\_BinIndex \\_\\_bins\\_end](#)
- [\\_BinIndex \\_M\\_bins\\_begin](#)
- [int \\_M\\_num\\_threads](#)
- [\\_DRandomShufflingGlobalData<\\_RAIter> \\* \\_M\\_sd](#)
- [uint32\\_t \\_M\\_seed](#)

### 5.117.1 Detailed Description

`template<typename _RAIter, typename _RandomNumberGenerator> struct __gnu_parallel::DRSSorterPU<_RAIter, _RandomNumberGenerator>`

Local data for a thread participating in [\\_\\_gnu\\_parallel::\\_\\_parallel\\_random\\_shuffle\(\)](#).

Definition at line 91 of file `random_shuffle.h`.

### 5.117.2 Member Data Documentation

**5.117.2.1** `template<typename _RAIter, typename _RandomNumberGenerator> _BinIndex __gnu_parallel::DRSSorterPU<_RAIter, _RandomNumberGenerator>::__bins_end`

End index for bins taken care of by this thread.

Definition at line 100 of file `random_shuffle.h`.

Referenced by [\\_\\_gnu\\_parallel::\\_\\_parallel\\_random\\_shuffle\\_drs\(\)](#).

**5.117.2.2** `template<typename _RAIter, typename _RandomNumberGenerator> _BinIndex __gnu_parallel::DRSSorterPU<_RAIter, _RandomNumberGenerator>::__M_bins_begin`

Begin index for bins taken care of by this thread.

Definition at line 97 of file `random_shuffle.h`.

Referenced by [\\_\\_gnu\\_parallel::\\_\\_parallel\\_random\\_shuffle\\_drs\(\)](#).

**5.117.2.3** `template<typename _RAIter, typename  
_RandomNumberGenerator> int __gnu_parallel::_DRSSorterPU<  
_RAIter, _RandomNumberGenerator >::_M_num_threads`

Number of threads participating in total.

Definition at line 94 of file `random_shuffle.h`.

Referenced by `__gnu_parallel::__parallel_random_shuffle_drs()`, and `__gnu_parallel::__parallel_random_shuffle_drs_pu()`.

**5.117.2.4** `template<typename _RAIter, typename  
_RandomNumberGenerator> _DRandomShufflingGlobalData<_  
RAIter>* __gnu_parallel::_DRSSorterPU< _RAIter,  
_RandomNumberGenerator >::_M_sd`

Pointer to global data.

Definition at line 106 of file `random_shuffle.h`.

Referenced by `__gnu_parallel::__parallel_random_shuffle_drs()`, and `__gnu_parallel::__parallel_random_shuffle_drs_pu()`.

**5.117.2.5** `template<typename _RAIter, typename  
_RandomNumberGenerator> uint32_t __gnu_parallel::_  
DRSSorterPU< _RAIter, _RandomNumberGenerator  
>::_M_seed`

Random `_M_seed` for this thread.

Definition at line 103 of file `random_shuffle.h`.

Referenced by `__gnu_parallel::__parallel_random_shuffle_drs()`, and `__gnu_parallel::__parallel_random_shuffle_drs_pu()`.

The documentation for this struct was generated from the following file:

- [random\\_shuffle.h](#)

## 5.118 `__gnu_parallel::_DummyReduct` Struct Reference

Reduction function doing nothing.

## Public Member Functions

- `bool operator()` (`bool`, `bool`) `const`

### 5.118.1 Detailed Description

Reduction function doing nothing.

Definition at line 298 of file `for_each_selectors.h`.

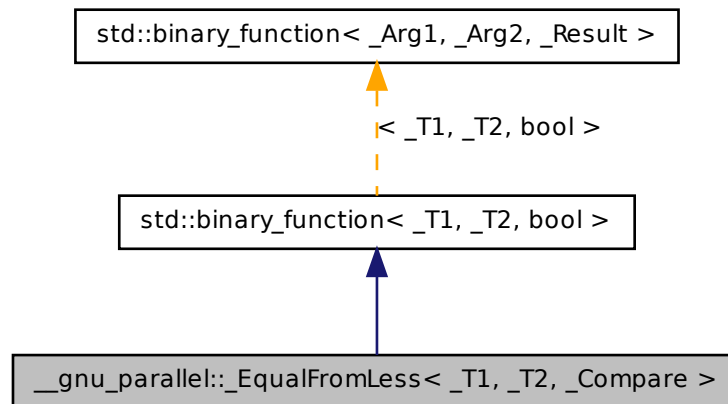

The documentation for this struct was generated from the following file:

- [for\\_each\\_selectors.h](#)

## 5.119 `__gnu_parallel::_EqualFromLess< _T1, _T2, _Compare >` Class Template Reference

Constructs predicate for equality from strict weak ordering predicate.

Inheritance diagram for `__gnu_parallel::_EqualFromLess< _T1, _T2, _Compare >`:

## Public Types

- `typedef _T1 first_argument_type`

- typedef bool [result\\_type](#)
- typedef \_T2 [second\\_argument\\_type](#)

#### **Public Member Functions**

- **\_EqualFromLess** (\_Compare &\_\_comp)
- bool **operator()** (const \_T1 &\_\_a, const \_T2 &\_\_b)

#### **5.119.1 Detailed Description**

**template<typename \_T1, typename \_T2, typename \_Compare> class \_\_gnu\_parallel::\_EqualFromLess< \_T1, \_T2, \_Compare >**

Constructs predicate for equality from strict weak ordering predicate.

Definition at line 157 of file parallel/base.h.

#### **5.119.2 Member Typedef Documentation**

**5.119.2.1 typedef \_T1 std::binary\_function< \_T1 , \_T2 , bool >::first\_argument\_type [inherited]**

`first_argument_type` is the type of the first argument

Definition at line 118 of file stl\_function.h.

**5.119.2.2 typedef bool std::binary\_function< \_T1 , \_T2 , bool >::result\_type [inherited]**

`result_type` is the return type

Definition at line 124 of file stl\_function.h.

**5.119.2.3 typedef \_T2 std::binary\_function< \_T1 , \_T2 , bool >::second\_argument\_type [inherited]**

`second_argument_type` is the type of the second argument

Definition at line 121 of file stl\_function.h.

## 5.120 `__gnu_parallel::_EqualTo< _T1, _T2 >` Struct Template Reference 1215

The documentation for this class was generated from the following file:

- [parallel/base.h](#)

## 5.120 `__gnu_parallel::_EqualTo< _T1, _T2 >` Struct Template Reference

Similar to [std::equal\\_to](#), but allows two different types.

Inheritance diagram for `__gnu_parallel::_EqualTo< _T1, _T2 >`:

### Public Types

- typedef `_T1` [first\\_argument\\_type](#)
- typedef `bool` [result\\_type](#)
- typedef `_T2` [second\\_argument\\_type](#)

### Public Member Functions

- `bool operator() (const _T1 &__t1, const _T2 &__t2) const`

#### 5.120.1 Detailed Description

`template<typename _T1, typename _T2> struct __gnu_parallel::_EqualTo<_T1, _T2>`

Similar to `std::equal_to`, but allows two different types.

Definition at line 244 of file `parallel/base.h`.

#### 5.120.2 Member Typedef Documentation

5.120.2.1 `typedef _T1 std::binary_function<_T1, _T2, bool>::first_argument_type [inherited]`

`first_argument_type` is the type of the first argument

Definition at line 118 of file `stl_function.h`.

5.120.2.2 `typedef bool std::binary_function<_T1, _T2, bool>::result_type [inherited]`

`result_type` is the return type

Definition at line 124 of file `stl_function.h`.

5.120.2.3 `typedef _T2 std::binary_function<_T1, _T2, bool>::second_argument_type [inherited]`

`second_argument_type` is the type of the second argument

Definition at line 121 of file `stl_function.h`.

The documentation for this struct was generated from the following file:

- [parallel/base.h](#)

### 5.121 `__gnu_parallel::_GuardedIterator<_RAIter, _Compare>` Class Template Reference

`_Iterator` wrapper supporting an implicit supremum at the end of the sequence, dominating all comparisons.

## Public Member Functions

- `_GuardedIterator` (`_RAIter __begin`, `_RAIter __end`, `_Compare &__comp`)
- `operator _RAIter` ()
- `std::iterator_traits<_RAIter>::value_type & operator*` ()
- `_GuardedIterator<_RAIter, _Compare> & operator++` ()

## Friends

- `bool operator<` (`_GuardedIterator<_RAIter, _Compare> &__bi1`, `_GuardedIterator<_RAIter, _Compare> &__bi2`)
- `bool operator<=` (`_GuardedIterator<_RAIter, _Compare> &__bi1`, `_GuardedIterator<_RAIter, _Compare> &__bi2`)

### 5.121.1 Detailed Description

`template<typename _RAIter, typename _Compare> class __gnu_parallel::_GuardedIterator<_RAIter, _Compare>`

`_Iterator` wrapper supporting an implicit supremum at the end of the sequence, dominating all comparisons. The implicit supremum comes with a performance cost.

Deriving from `_RAIter` is not possible since `_RAIter` need not be a class.

Definition at line 66 of file `multiway_merge.h`.

### 5.121.2 Constructor & Destructor Documentation

**5.121.2.1** `template<typename _RAIter, typename _Compare> __gnu_parallel::_GuardedIterator<_RAIter, _Compare>::_GuardedIterator ( _RAIter __begin, _RAIter __end, _Compare & __comp ) [inline]`

Constructor. Sets iterator to beginning of sequence.

#### Parameters

- `__begin` Begin iterator of sequence.
- `__end` End iterator of sequence.
- `__comp` Comparator provided for associated overloaded compare operators.

Definition at line 84 of file `multiway_merge.h`.

### 5.121.3 Member Function Documentation

**5.121.3.1** `template<typename _RAIter, typename _Compare>`  
`__gnu_parallel::_GuardedIterator<_RAIter, _Compare>::operator`  
`_RAIter ( ) [inline]`

Convert to wrapped iterator.

#### Returns

Wrapped iterator.

Definition at line 105 of file `multiway_merge.h`.

**5.121.3.2** `template<typename _RAIter, typename _Compare`  
`> std::iterator_traits<_RAIter>::value_type&`  
`__gnu_parallel::_GuardedIterator<_RAIter, _Compare`  
`>::operator* ( ) [inline]`

Dereference operator.

#### Returns

Referenced element.

Definition at line 100 of file `multiway_merge.h`.

**5.121.3.3** `template<typename _RAIter, typename _Compare`  
`> _GuardedIterator<_RAIter, _Compare>&`  
`__gnu_parallel::_GuardedIterator<_RAIter, _Compare`  
`>::operator++ ( ) [inline]`

Pre-increment operator.

#### Returns

This.

Definition at line 91 of file `multiway_merge.h`.

#### 5.121.4 Friends And Related Function Documentation

**5.121.4.1** `template<typename _RAIter, typename _Compare> bool  
operator< ( _GuardedIterator<_RAIter, _Compare> & __bi1,  
_GuardedIterator<_RAIter, _Compare> & __bi2 ) [friend]`

Compare two elements referenced by guarded iterators.

##### Parameters

`__bi1` First iterator.  
`__bi2` Second iterator.

##### Returns

`true` if less.

Definition at line 113 of file `multiway_merge.h`.

**5.121.4.2** `template<typename _RAIter, typename _Compare> bool  
operator<= ( _GuardedIterator<_RAIter, _Compare> & __bi1,  
_GuardedIterator<_RAIter, _Compare> & __bi2 ) [friend]`

Compare two elements referenced by guarded iterators.

##### Parameters

`__bi1` First iterator.  
`__bi2` Second iterator.

##### Returns

`True` if less equal.

Definition at line 128 of file `multiway_merge.h`.

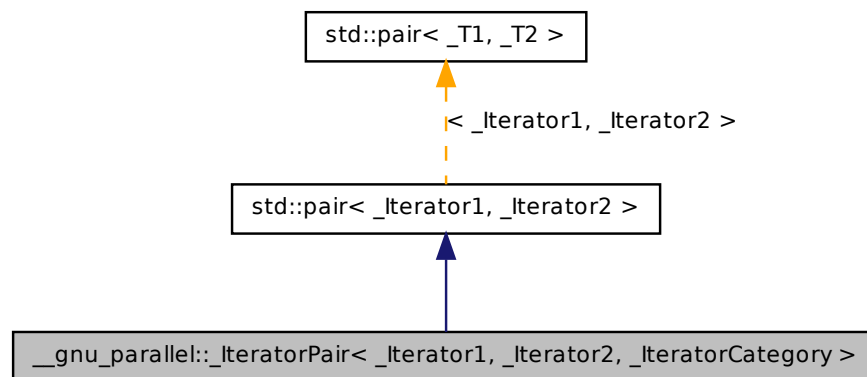

The documentation for this class was generated from the following file:

- [multiway\\_merge.h](#)

## 5.122 `__gnu_parallel::IteratorPair< _Iterator1, _Iterator2, _IteratorCategory >` Class Template Reference

A pair of iterators. The usual iterator operations are applied to both child iterators.

Inheritance diagram for `__gnu_parallel::IteratorPair< _Iterator1, _Iterator2, _IteratorCategory >`:

### Public Types

- `typedef std::iterator_traits< _Iterator1 > TraitsType`
- `typedef TraitsType::difference_type difference_type`
- `typedef _Iterator1 first_type`
- `typedef _IteratorCategory iterator_category`
- `typedef _IteratorPair * pointer`
- `typedef _IteratorPair & reference`
- `typedef _Iterator2 second_type`
- `typedef void value_type`

### Public Member Functions

- `_IteratorPair` (`const _Iterator1 &__first`, `const _Iterator2 &__second`)
- `operator _Iterator2` () `const`
- `_IteratorPair operator+` (`difference_type __delta`) `const`

- `const _IteratorPair operator++` (int)
- `_IteratorPair & operator++` ()
- `difference_type operator-` (const `_IteratorPair` &\_\_other) const
- `const _IteratorPair operator--` (int)
- `_IteratorPair & operator--` ()
- `_IteratorPair & operator=` (const `_IteratorPair` &\_\_other)
- `void swap` (pair &\_\_p)

#### Public Attributes

- `_Iterator1` `first`
- `_Iterator2` `second`

#### 5.122.1 Detailed Description

`template<typename _Iterator1, typename _Iterator2, typename _IteratorCategory> class __gnu_parallel::IteratorPair<_Iterator1, _Iterator2, _IteratorCategory>`

A pair of iterators. The usual iterator operations are applied to both child iterators.

Definition at line 45 of file `iterator.h`.

#### 5.122.2 Member Typedef Documentation

5.122.2.1 `typedef _Iterator2 std::pair<_Iterator1, _Iterator2>::second_type` `[inherited]`

`first_type` is the first bound type

Definition at line 90 of file `stl_pair.h`.

#### 5.122.3 Member Data Documentation

5.122.3.1 `_Iterator1 std::pair<_Iterator1, _Iterator2>::first` `[inherited]`

`second_type` is the second bound type

Definition at line 92 of file `stl_pair.h`.

5.122.3.2 `_Iterator2 std::pair<_Iterator1, _Iterator2>::second`  
[inherited]

`first` is a copy of the first object

Definition at line 93 of file `stl_pair.h`.

The documentation for this class was generated from the following file:

- [iterator.h](#)

5.123 `__gnu_parallel::IteratorTriple<_Iterator1, _Iterator2, _Iterator3, _IteratorCategory>` Class Template Reference

A triple of iterators. The usual iterator operations are applied to all three child iterators.

**Public Types**

- `typedef std::iterator_traits<_Iterator1>::difference_type` **difference\_type**
- `typedef _IteratorCategory` **iterator\_category**
- `typedef _IteratorTriple *` **pointer**
- `typedef _IteratorTriple &` **reference**
- `typedef void` **value\_type**

**Public Member Functions**

- `_IteratorTriple` (`const _Iterator1 &__first`, `const _Iterator2 &__second`, `const _Iterator3 &__third`)
- `operator _Iterator3` () `const`
- `_IteratorTriple operator+` (`difference_type __delta`) `const`
- `const _IteratorTriple operator++` (`int`)
- `_IteratorTriple & operator++` ()
- `difference_type operator-` (`const _IteratorTriple &__other`) `const`
- `_IteratorTriple & operator--` ()
- `const _IteratorTriple operator--` (`int`)
- `_IteratorTriple & operator=` (`const _IteratorTriple &__other`)

**Public Attributes**

- `_Iterator1` **\_M\_first**
- `_Iterator2` **\_M\_second**
- `_Iterator3` **\_M\_third**

## 5.124 `__gnu_parallel::__Job<_DifferenceTp>` Struct Template Reference 1223

### 5.123.1 Detailed Description

```
template<typename _Iterator1, typename _Iterator2, typename _Iterator3, type-
name _IteratorCategory> class __gnu_parallel::_IteratorTriple< _Iterator1, _-
Iterator2, _Iterator3, _IteratorCategory >
```

A triple of iterators. The usual iterator operations are applied to all three child iterators.  
Definition at line 120 of file `iterator.h`.

The documentation for this class was generated from the following file:

- [iterator.h](#)

## 5.124 `__gnu_parallel::__Job<_DifferenceTp>` Struct Template Reference

One `__job` for a certain thread.

### Public Types

- typedef `_DifferenceTp` `_DifferenceType`

### Public Attributes

- volatile `_DifferenceType` `_M_first`
- volatile `_DifferenceType` `_M_last`
- volatile `_DifferenceType` `_M_load`

### 5.124.1 Detailed Description

```
template<typename _DifferenceTp> struct __gnu_parallel::__Job< _-
DifferenceTp >
```

One `__job` for a certain thread.

Definition at line 54 of file `workstealing.h`.

### 5.124.2 Member Data Documentation

5.124.2.1 `template<typename _DifferenceTp> volatile _DifferenceType`  
`__gnu_parallel::__Job<_DifferenceTp>::__M_first`

First element.

Changed by owning and stealing thread. By stealing thread, always incremented.

Definition at line 62 of file `workstealing.h`.

Referenced by `__gnu_parallel::__for_each_template_random_access_workstealing()`.

**5.124.2.2 `template<typename _DifferenceTp> volatile _DifferenceType  
__gnu_parallel::_Job<_DifferenceTp>::__M_last`**

Last element.

Changed by owning thread only.

Definition at line 67 of file `workstealing.h`.

Referenced by `__gnu_parallel::__for_each_template_random_access_workstealing()`.

**5.124.2.3 `template<typename _DifferenceTp> volatile _DifferenceType  
__gnu_parallel::_Job<_DifferenceTp>::__M_load`**

Number of elements, i.e. `_M_last-_M_first+1`.

Changed by owning thread only.

Definition at line 72 of file `workstealing.h`.

Referenced by `__gnu_parallel::__for_each_template_random_access_workstealing()`.

The documentation for this struct was generated from the following file:

- [workstealing.h](#)

**5.125 `__gnu_parallel::__Less<_T1, _T2>` Struct Template Reference**

Similar to [std::less](#), but allows two different types.

Inheritance diagram for `__gnu_parallel::_Less<_T1, _T2>`:

### Public Types

- typedef `_T1` [first\\_argument\\_type](#)
- typedef `bool` [result\\_type](#)
- typedef `_T2` [second\\_argument\\_type](#)

### Public Member Functions

- `bool operator() (const _T1 &__t1, const _T2 &__t2) const`
- `bool operator() (const _T2 &__t2, const _T1 &__t1) const`

#### 5.125.1 Detailed Description

`template<typename _T1, typename _T2> struct __gnu_parallel::_Less<_T1, _T2>`

Similar to [std::less](#), but allows two different types.

Definition at line 252 of file `parallel/base.h`.

### 5.125.2 Member Typedef Documentation

**5.125.2.1** `typedef _T1 std::binary_function<_T1, _T2, bool >::first_argument_type [inherited]`

`first_argument_type` is the type of the first argument

Definition at line 118 of file `stl_function.h`.

**5.125.2.2** `typedef bool std::binary_function<_T1, _T2, bool >::result_type [inherited]`

`result_type` is the return type

Definition at line 124 of file `stl_function.h`.

**5.125.2.3** `typedef _T2 std::binary_function<_T1, _T2, bool >::second_argument_type [inherited]`

`second_argument_type` is the type of the second argument

Definition at line 121 of file `stl_function.h`.

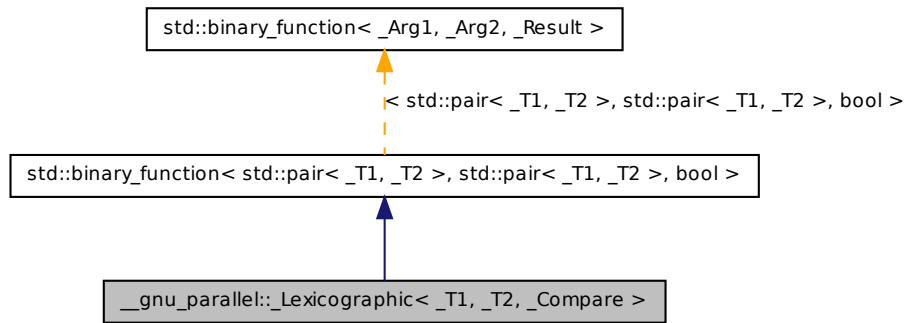

The documentation for this struct was generated from the following file:

- [parallel/base.h](#)

## 5.126 `__gnu_parallel::_Lexicographic<_T1, _T2, _Compare>` Class Template Reference

Compare \_\_a pair of types lexicographically, ascending.

Inheritance diagram for `__gnu_parallel::_Lexicographic<_T1, _T2, _Compare>`:

### Public Types

- typedef `std::pair<_T1, _T2>` `first_argument_type`
- typedef `bool` `result_type`
- typedef `std::pair<_T1, _T2>` `second_argument_type`

### Public Member Functions

- `_Lexicographic` (`_Compare` &`__comp`)
- `bool operator()` (`const std::pair<_T1, _T2>` &`__p1`, `const std::pair<_T1, _T2>` &`__p2`) `const`

#### 5.126.1 Detailed Description

`template<typename _T1, typename _T2, typename _Compare> class __gnu_parallel::_Lexicographic<_T1, _T2, _Compare>`

Compare \_\_a pair of types lexicographically, ascending.

Definition at line 55 of file `multiseq_selection.h`.

### 5.126.2 Member Typedef Documentation

**5.126.2.1** `typedef std::pair< _T1, _T2 > std::binary_function< std::pair< _T1, _T2 >, std::pair< _T1, _T2 >, bool >::first_argument_type`  
[`inherited`]

`first_argument_type` is the type of the first argument

Definition at line 118 of file `stl_function.h`.

**5.126.2.2** `typedef bool std::binary_function< std::pair< _T1, _T2 >, std::pair< _T1, _T2 >, bool >::result_type` [`inherited`]

`result_type` is the return type

Definition at line 124 of file `stl_function.h`.

**5.126.2.3** `typedef std::pair< _T1, _T2 > std::binary_function< std::pair< _T1, _T2 >, std::pair< _T1, _T2 >, bool >::second_argument_type`  
[`inherited`]

`second_argument_type` is the type of the second argument

Definition at line 121 of file `stl_function.h`.

The documentation for this class was generated from the following file:

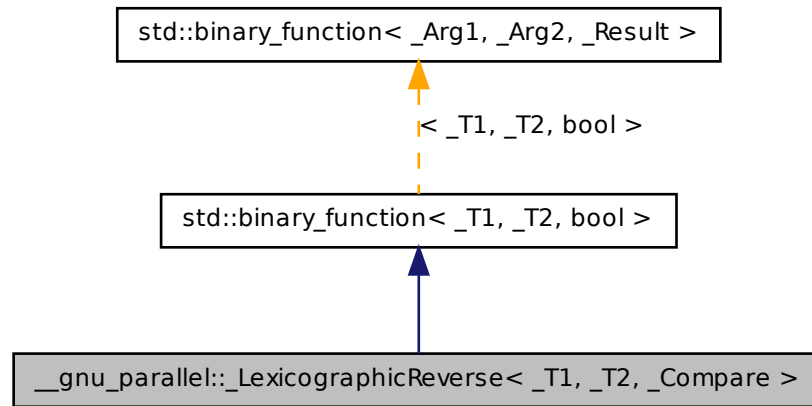

- [multiseq\\_selection.h](#)

## 5.127 `__gnu_parallel::_LexicographicReverse< _T1, _T2, _Compare >` Class Template Reference

Compare \_\_a pair of types lexicographically, descending.

Inheritance diagram for `__gnu_parallel::_LexicographicReverse< _T1, _T2, _-`

Compare >:

### Public Types

- `typedef _T1 first_argument_type`
- `typedef bool result_type`
- `typedef _T2 second_argument_type`

### Public Member Functions

- `_LexicographicReverse` (`_Compare &__comp`)
- `bool operator()` (`const std::pair<_T1, _T2> &__p1, const std::pair<_T1, _T2> &__p2`) `const`

#### 5.127.1 Detailed Description

`template<typename _T1, typename _T2, typename _Compare> class __gnu_parallel::_LexicographicReverse<_T1, _T2, _Compare>`

Compare \_\_a pair of types lexicographically, descending.

Definition at line 82 of file `multiseq_selection.h`.

### 5.127.2 Member Typedef Documentation

5.127.2.1 `typedef _T1 std::binary_function< _T1 , _T2 , bool  
>::first_argument_type [inherited]`

`first_argument_type` is the type of the first argument

Definition at line 118 of file `stl_function.h`.

5.127.2.2 `typedef bool std::binary_function< _T1 , _T2 , bool >::result_type  
[inherited]`

`result_type` is the return type

Definition at line 124 of file `stl_function.h`.

5.127.2.3 `typedef _T2 std::binary_function< _T1 , _T2 , bool  
>::second_argument_type [inherited]`

`second_argument_type` is the type of the second argument

Definition at line 121 of file `stl_function.h`.

The documentation for this class was generated from the following file:

- [multiseq\\_selection.h](#)

## 5.128 `__gnu_parallel::_LoserTree< __stable, _Tp, _Compare >` Class Template Reference
